# CoinPicks Market Direction

# Research Package

Five pillars — four researched narratives and one pure-math read of the Bitcoin chart — scored on one standard, blended into one table, and distilled to one number. Everything in this folder is current as of **August 16, 2026** — a light daily touch off the Aug 14 committed set (no daily cycle ran Aug 15); all four qualitative pillars held flat. **Today's score set has been auto-stamped under Alex's standing delegated daily authority — see the note below.**

✓ **Auto-stamped.** All four qualitative pillars held flat; nothing found today (three more ADNOC tanker incidents, a passed Hormuz soft-window marker, a cancelled SEC rulemaking vote, a retail sales miss) exceeded what the Aug 14 committed set already priced in. No pillar's P moved at all, nothing rests on a single-source claim: exactly the routine, well-evidenced daily cycle Alex's 2026-08-06 delegated auto-stamp authority covers. See the Master Report's "My Decision" section for the full rationale.

**THE FINAL NUMBER · AUGUST 16, 2026 (COMMITTED) · BTC $62,937.03**

**+0.67** **Mild Bull — same call band as Aug 14; today's move is quant mapping noise, not a research-driven change**

Equal-weight mean of the five window signals below — every pillar counts 20% (scale −10 to +10; horizon-weighted variant +1.22). Positive because the far windows outweigh the near ones — **not a buy-today signal**. It is a "the storm is priced, the recovery isn't" number. All four qualitative pillars held flat today: CLARITY's Sept 15 cloture date is unchanged, the Hormuz deal remains unsigned with three more tanker incidents logged, Tokenization found no new dated catalyst, and Fed & Macro logged a retail sales miss as reinforcing context rather than a fresh trigger. Bitcoin TA's quant pillar ticked down slightly at 1 month on pure mapping noise (BTC +0.2% today).

## THE FIVE WINDOWS UNDERNEATH IT

| WINDOW | MASTER SIGNAL | CALL |
|---|---|---|
| **1 month** | **−1.41** | **Mild Bear** — unchanged call band; quant mapping noise only |
| **3 months** | **−0.82** | **Mild Bear** — the September FOMC still sits inside this window; unchanged |
| **6 months** | +0.31 | **Neutral** — CLARITY/Tokenization structural strength vs. Iran's drag |
| **1 year** | **+2.14** | **Bull** — all five pillars still positive |
| **3 years** | **+3.12** | **Strong Bull** — law + adoption + cycle + valuation, essentially unchanged |

Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. The Mild Bull conclusion stays positive under every leave-one-out drop (+0.30 to +0.99); dropping CLARITY or Tokenization still rounds down to **Neutral**, unchanged from Aug 14. See the Master Report's Robustness section.

## Reading order

*Twenty minutes to the whole picture; each report stands alone and can be checked independently — every fact is dated with sources on its last page.*

| # | FILE | WHAT IT IS |
|---|---|---|
| 1 | `CoinPicks_Master_Direction_Report.pdf` | **The summary.** The final number, the five-window table, the full pillar matrix, where the lenses agree/fight, six weeks of dated triggers, sensitivity. |
| 2 | `CoinPicks_Bitcoin_TA_Quant_Pillar_Report.pdf` | **The math pillar.** 7 indicators on 16 years of data, halving-cycle analogs, power-law valuation — with charts. Fully reproducible from code. |
| 3 | `reports/current/pdf/ — the four pillar PDFs` | **The story pillars.** CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro. Each: thesis, dated facts, honest bear case, dated triggers, and the full score lineage (June committed → every draft through August 16). |
| 4 | `reports/archive/ + prior-work/` | Every earlier version, preserved untouched — the score history is fully auditable. |
| — | `run.py · engine/blend.py · data/master_blend.json` | The blend engine (runnable Python — reproduce any score set with run.py blend --set NAME), its output, and README.md for regeneration. |

## How the scoring works — one paragraph

Every pillar answers the same question on five windows (1 month / 3 months / 6 months / 1 year / 3 years): **P** = the odds (0–100) that this force is *good for crypto* by then, **Quality** = how trustworthy the evidence is (0–1), and **Impact** = how hard this force moves the whole market (0–10). These combine into a **Signal = ((P − 50) ÷ 50) × Quality × Impact** (Impact is a uniform 8 for every pillar), so a coin-flip view scores zero no matter how loud the headlines are, and weak evidence can't shout. **All five pillars are equal-weighted** — the master for each window is the simple mean of the five signals (20% each; add a pillar and it auto-rebalances to 1/N) — and the Final Number averages the five master windows.

## The five pillars at a glance (August 16 committed P's — all four qualitative pillars held flat)

| PILLAR | 1MO | 3MO | 6MO | 1YR | 3YR | ONE-LINE READ |
|---|---|---|---|---|---|---|
| **CLARITY Act** (law) | 32 | 47 | 58 | 82 | 92 | Held flat: Senate remains in August recess; the Sept 15 2:15pm ET cloture vote is unchanged; SEC's own separate Aug 14 rulemaking vote cancelled, not a CLARITY trigger |
| **Iran War Risk** | 20 | 28 | 41 | 56 | 77 | Held flat: three more ADNOC tanker incidents (Aug 14-15), comparable in kind; the "~Aug 16" 60-day window passed without a formal MoU withdrawal |
| **Tokenization (RWA)** | 52 | 60 | 66 | 74 | 85 | Held flat: no new dated catalyst found; a recirculating $33.5B figure from a different provider doesn't reconcile with rwa.xyz's own numbers |
| **Fed & Macro** | 43 | 41 | 48 | 56 | 62 | Held flat: July retail sales missed hard (−0.6% m/m) — reinforces the Aug 13 dovish direction but wasn't a named pending trigger, logged as context |
| **Bitcoin TA** (quant) | 41 | 36 | 45 | 68 | 71 | Quant pillar refreshed on today's price (BTC $62,937.03, +0.2% vs. Aug 14; weekly −29.0 slight bearish, monthly −41.9 slight bearish, quarterly +8.3 neutral; cycle month 27.9) — 1mo P ticked down on mapping noise |

P values shown (50 = coin flip). All four qualitative pillars held flat today; only Bitcoin TA's computed 1-month reading moved, on pure mapping noise from today's BTC close.

## Status & honesty notes

- **Score status:** August 16 scores — all four qualitative pillars held flat (no daily cycle ran Aug 15) — after Step 6 verification passed clean, were **auto-stamped** under Alex's standing delegated daily authority (in effect since 2026-08-06): no pillar's P moved at all, no FINAL NUMBER call-band flip, and nothing rests on a single-source claim — exactly the routine, well-evidenced cycle that authority covers. Every report prints the full lineage (June committed → every draft through August 16, now committed). Nothing hides its history.
- **Verification:** facts researched with primary/wire-source discipline, independently fact-checked, and the whole package forensically audited; score math recomputed independently; price data cross-checked across two exchanges; models that failed out-of-sample testing were excluded and say so. This cycle's checks: confirmed three more ADNOC tanker incidents (Al Jazeera, CBS/UKMTO) were comparable in kind to the established Aug 8-13 pattern; confirmed no formal Hormuz MoU withdrawal occurred despite the "~Aug 16" soft-window marker passing (Bloomberg Aug 15); reconfirmed the Senate remains in August recess and the CLARITY Sept 15 cloture date is unchanged, and separately confirmed the SEC's own Aug 14 rulemaking vote was cancelled (a different track, not a CLARITY trigger); read the Census Bureau's July retail sales release directly (−0.6% m/m) and confirmed it reinforces, without exceeding, the Aug 13 dovish direction; found no new dated RWA/tokenization catalyst.
- **Known limits, in print inside the reports:** cycle-analog claims rest on 3 completed cycles, a disclosed fragility this report has repeatedly flagged; the TA pillar caps its own conviction at P = 50 ± 25; single-source items are labeled in-line; current chart bars are partial and the completed-bar numbers are printed; the Robustness section shows dropping CLARITY or Tokenization still lands at the Neutral/Mild-Bull boundary, unchanged from Aug 14.
- **The near-term calendar is the test:** FOMC minutes from the Jul 28-29 meeting, due Aug 19 · the next Fed H.4.1 balance-sheet release and jobless-claims print, due Aug 20 · the first CLARITY cloture vote, precisely dated 2:15pm ET Sept 15 · an actual signed, operating Hormuz agreement the US accepts (route map alone isn't it — the compensation/blockade/sanctions disputes and continued attacks are the real test) · next FOMC (with SEP/dot plot), week of Sept 15 — the real test of whether the Aug 13 dovish confirmation survives to an actual vote · GENIUS Act 18-month backstop effective Jan 18, 2027. Each pillar's trigger table says in advance what each outcome does to the scores.

**This is research and education, not financial advice.** The scores are probabilistic opinions with dated evidence — built to be argued with. If you check one thing manually, check the trigger tables: they are the falsifiable part.
