COINPICKS · RESEARCH & EDUCATION

Master Direction Report

Five Pillars, One Table, One Number — Everything Re-Researched July 10, 2026

All four qualitative pillars re-researched July 10 with primary-source discipline; the quantitative Bitcoin TA sleeve recomputed on data through July 10. Full score lineage (June committed → July 8 draft → July 10 draft) preserved in every report. ***Draft scores and the blend mix await my stamp.***

THE FINAL NUMBER · JULY 10, 2026

+0.66

Mild Bull overall, time-arbitraged. Equal-weight mean of the five window signals (–10 max bear … +10 max bull). Horizon-weighted variant: **+1.13**. The structure underneath: Mild Bear for the next quarter, Neutral at six months, Bull from one year out. The number is positive because the far windows outweigh the near ones — it is *not* a buy-today signal; it is a "the storm is priced, the recovery isn't" signal.

COINPICKS MASTER BLEND · 50% QUALITATIVE PILLARS + 50% QUANT TAPE

Compiled July 10, 2026 · BTC $63,987 · Engine: master_blend.py (scoreset: July 10 drafts) · Not Financial Advice

The Master Table

The whole thesis in five rows, on the July 10 drafts. Signal range –10 (max bear) to +10 (max bull).

WINDOW	QUAL BLEND	QUANT (TA)	MASTER	JUL 8 MASTER	THE CALL
1 month	–0.62	–1.32	–0.97	–1.08	**Mild Bear** — hawkish Fed, CPI Tuesday, strike-pause-strike Iran
3 months	–0.06	–1.34	–0.70	–0.79	**Mild Bear** — Sept-hike window + Aug 7 recess cliff; watch $58,526
6 months	+0.84	–0.53	+0.16	+0.18	**Neutral** — basing; DTCC October, Nasdaq Dec 6, peak hawkishness passes
1 year	+2.62	+1.63	+2.12	+2.11	**Bull** — all five pillars positive; the thesis window
3 years	+3.74	+1.60	+2.67	+2.67	**Bull** — law + adoption + cycle + value

Formula: per pillar, Signal = ((P – 50) ÷ 50) × Quality × Impact. Qual Blend = weight-normalized mean of the four pillar signals (stated weights 25/25/30/25 sum to 105% — the blend divides by 1.05, so effective sleeve shares are 23.8/23.8/28.6/23.8%). MASTER = 50% Qual + 50% Quant — a "25%" pillar is ~11.9% of the final master. Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. Machine-verified two ways.

THE FINAL NUMBER — HOW IT'S BUILT, AND WHAT MOVED

+0.66 = the equal-weight mean of the five MASTER signals above ((–0.97 – 0.70 + 0.16 + 2.12 + 2.67) ÷ 5). Weighting the longer windows harder (10/15/20/30/25%) gives **+1.13**. Both read **Mild Bull**. On July 8 the same construction gave +0.62 / +1.11 — two days of news (a 2.8% BTC bounce through an Iran escalation, hawkish Fed minutes, a $132B reserve build, CLARITY odds slipping) nudged the near windows around but left the shape intact: **the near-term risk is real, and the 1-year-out case keeps outweighing it.**

The Full Pillar Matrix

Every pillar's signal on every window — July 10 draft scores (each report shows the full June → Jul 8 → Jul 10 lineage).

PILLAR (WEIGHT · IMPACT)	1 MO	3 MO	6 MO	1 YR	3 YR	STATUS
CLARITY Act (25% · 9)	0.00	+0.61	+1.53	+5.18	+7.18	Jul 10 draft
Iran War Risk (25% · 7)	–0.67	–0.09	+0.59	+1.82	+2.54	Jul 10 draft
Tokenization RWA (30% · 8)	+0.43	+1.13	+1.90	+3.00	+3.92	Jul 10 draft
Fed & Macro (25% · 9)	–2.45	–2.14	–0.86	+0.40	+1.29	Jul 10 draft
Bitcoin TA — quant (sleeve · 8)	–1.32	–1.34	–0.53	+1.63	+1.60	Jul 10 computed

P lineage (June → Jul 8 → Jul 10) — CLARITY 55/60/65/85/92 → 52/56/61/83/92 → **50/54/60/82/92** · Iran 50/55/62/75/85 → 40/47/55/70/83 → **42/49/56/70/83** · Tokenization 53/57/62/72/85 → 52/56/62/73/85 → **53/58/64/74/85** · Fed 38/40/46/54/61 → 35/36/42/52/61 → **34/36/44/53/61** · Bitcoin TA 37/37/46/67/70 → **39/38/44/67/70** (computed). Quality and Impact unchanged throughout.

The Story, Window by Window

What the blend is saying on July 10, 2026

- **1 month — Mild Bear (–0.97).** The Fed is now the dominant drag (–2.45: hawkish June minutes released July 8 — easing bias dropped, "a few" wanted a hike; ~66% Sept-hike odds; CPI lands Tuesday July 14 at ~4% headline). Iran improved but stays negative (–0.67: two more strike nights, but zero US casualties, oil *fell* to ~$76, and Tehran asked to keep talking). The tape (–1.32) put in its first repair signal — price reclaimed the 200-week average — but one line isn't a trend. CLARITY is a literal coin flip (0.00) into the merged-text week.
- **3 months — Mild Bear (–0.70).** The qualitative blend is flat (–0.06); the drag is the quant analog: at this cycle-month, prior cycles were 0-for-3 over the next quarter (median –12%). The window contains the Sept-hike decision (~66% priced), the Aug 7 Senate recess cliff, and the ~Aug 16 MoU expiry. Same call as July 8, slightly softer.
- **6 months — Neutral (+0.16).** The crossover window. Tokenization is now the strongest near-structural pillar (+1.90: DTCC's Russell-1000 pilot running this month, full launch October; Nasdaq Dec 6 target; treasuries growing again). Fed drag halves (–0.86) as peak hawkishness likely lands by year-end while reserves rebuild. Historical average cycle bottom (~Aug 30) sits inside this window.
- **1 year — Bull (+2.12).** All five pillars positive — this survived three rounds of re-research (Jun, Jul 8, Jul 10). Legislation +5.18, cycle analogs 3-for-3 (median +28%), price 53% below power-law fair value, labor cracking fast enough to force the easing cycle into view.
- **3 years — Bull (+2.67).** Identical to July 8 to the second decimal. Three weeks of war, hawkish minutes, and odds whipsaws moved it not at all — which is exactly what a structural window should do.

Where the Two Lenses Agree — and Where They Fight

The point of running qualitative and quantitative on the same standard

THE INDEPENDENT CONFIRMATION

Fed & Macro (judged) and Bitcoin TA (computed) still trace the same path: P 34/36/44/53/61 vs 39/38/44/67/70 — within 5 points at 1 month, 2 at 3 months, and an **exact match at 6 months (44 = 44)**. Two methods that share no inputs keep landing on "bearish quarter, neutral half-year." Iran votes with them near-term. Believe the shape.

THE REAL DISAGREEMENT

Near-term: Tokenization says the structural news is mildly good *right now* (P 53, records + DTCC pilot); macro and the tape say risk-off (P 34–39). The master resolves it honestly: Mild Bear now, and the bullish pillars get paid in the windows where their evidence is strongest.

Long-term: the qualitative sleeve is ~2.3× the quant at 3 years (+3.74 vs +1.60). Remember why: the TA pillar is capped by construction (P never leaves 25–75) and its 3-year Quality is 0.50. If the story pillars are right, the blend is conservative, not wrong.

Trigger Watch — The Next Six Weeks, Re-Dated

Fired July 8–10 triggers are already IN the draft scores. These are the forward triggers; each pillar report carries the full table.

DATE / LEVEL	EVENT	RE-RATES

Weekend Jul 12	Weekly close vs the 200-week MA (~$62.9K)	Close above = TA repair signal #1 confirmed; below = bounce failed
Jul 13	Senate returns (NDAA eats week one) · merged CLARITY text expected this week	Text drops with White House sign-off = CLARITY up; without = timing risk stays
Jul 14	June CPI, 8:30am (nowcast ~3.96% headline)	Fed 1/3-month; cooler print = first crack in the hike case
Jul 17	Iran oil-waiver wind-down completes · NCUA GENIUS comments close	Iran/oil; Tokenization rules-sequencing
Jul 18	GENIUS implementing-rules statutory deadline	Core Treasury/OCC rules land = de-risked; total silence = headwind (partial miss is the base case)
~Jul 20–24	CLARITY floor action targeted (advocates); cloture by ~Jul 24 is the tell	Cloture filed → CLARITY 1mo snaps up; not filed → 2026 fading, market already at 40%
Jul 28–29	FOMC (hold ~70–77% priced) + June PCE Jul 25	Fed all windows; hike or hike-signal = re-rate down
Aug 7	Last Senate session day before recess	No CLARITY vote by now → 2026 signing in real doubt (Kalshi already prices EOY at ~35¢)
~Aug 16	Islamabad Memorandum 60-day window expires	Iran: deal/extension = up hard; formal collapse = down hard
~Aug 30	Historical average cycle-bottom month (28) passes	TA: higher low after this + improving momentum = basing confirmed
$58,526 / $64,432 / ~$69.9K	TA levels: June-30 low · falling weekly trendline (0.7% overhead) · 20-week MA	Break below the low = flush live; trendline + 20-week reclaims = repair #2 and #3

The master flip line (unchanged): the Iran flip line (sustained wider war + full Hormuz shock — the strait is already "severe"-rated) and the TA flip line (weekly close under $50,000) firing together turns the near-term Mild Bear into a full Bear and puts the 6-month Neutral under review. Either alone is a re-rate, not a regime change.

Sensitivity — The Calls Don't Depend on the Knobs

The two judgment knobs are the qual/quant mix and the final-number weighting. Neither changes the story.

MIX (JULY 10 DRAFTS)	1 MO	3 MO	6 MO	1 YR	3 YR	FINAL #
60% qual / 40% quant	−0.90 Mild Bear	−0.57 Mild Bear	+0.29 Neutral	+2.22 Bull	+2.88 Bull	+0.78
50 / 50 (headline)	**−0.97 Mild Bear**	**−0.70 Mild Bear**	**+0.16 Neutral**	**+2.12 Bull**	**+2.67 Bull**	**+0.66**
40% qual / 60% quant	−1.04 Mild Bear	−0.83 Mild Bear	+0.02 Neutral	+2.03 Bull	+2.46 Bull	+0.53

Every window call is identical across all three mixes, and the Final Number stays Mild Bull (+0.53 to +0.78) everywhere. On the June-committed scores (with today's quant) the master reads −0.73 / −0.48 / +0.31 / +2.22 / +2.69 — four of five calls identical; the 3-month softens from Mild Bear to Neutral (−0.48 sits inside the ±0.5 band). No mix or score set makes any window more bullish than shown. The conclusion is knob-proof in direction.

My Decision

◷ **COMPILED JULY 10, 2026 · ALL FIVE PILLARS CURRENT AS OF TODAY · AWAITING MY STAMP**

MASTER: −0.97 / −0.70 / +0.16 / +2.12 / +2.67 · THE FINAL NUMBER: +0.66 (Mild Bull, time-arbitraged)

Every pillar was re-researched today with primary-source discipline; the full lineage (June committed → July 8 → July 10) is printed in every report. Awaiting my signature: **(1)** the five draft P-paths, **(2)** the 50/50 mix and the final-number weighting (sensitivity shows neither moves the story). The near-term calendar is dense — CPI Tuesday, the GENIUS deadline Saturday the 18th, CLARITY cloture the week after — and each pillar's trigger table says exactly what to re-rate when those land.

Read as an investment posture: don't chase the bounce this month; the windows that pay are 6-plus months out; the levels and dates that would change this are printed above.

Sources

Each July 10 pillar report carries its full, freshly-verified source list. The master adds the engine and headline references.

- **The pillars (all re-dated July 10, 2026):** folder "Pillar Reports (updated 2026-07-10)" — CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro · Bitcoin TA Quant Pillar (this folder, computed July 10).
