# Tokenization of Real-World Assets Pillar Report

Real Money On-Chain — Researched, Scored, and Personally Committed

*Originally written **June 19, 2026**; scores committed by me on **June 19, 2026**. Re-researched July 8 and July 10, 2026 against live primary sources; light 1-day re-checks on July 11 and July 12; given a full weekly re-research pass on **July 13, 2026** — re-rated **DRAFT** scores below, held flat for a third day, awaiting my stamp.*

**COINPICKS PILLAR REPORT · WEIGHT: 30% OF MY THESIS**

Written June 19, 2026 · Updated & Re-verified July 13, 2026 · Not Financial Advice

## The Scores — Committed vs. Drafts

*June P's committed by me June 19, 2026 (last committed Jun 12 cycle). Full lineage of every draft since shown below. July 13 is a full weekly re-research pass — held flat for a third straight day.*

| WINDOW | MY JUNE P | JUL 8 | JUL 10 | JUL 11 | JUL 12 | JUL 13 | QUALITY | IMPACT | SIGNAL | MY CALL |
|---|---|---|---|---|---|---|---|---|---|---|
| **1 month** | 53 | 52 | 53 | 54 | 54 | **54** | 0.90 | 8 | **+0.58** | Neutral — July 18 rules gate still ahead |
| **3 months** | 57 | 56 | 58 | 59 | 59 | **59** | 0.88 | 8 | **+1.27** | Mild Bull |
| **6 months** | 62 | 62 | 64 | 65 | 65 | **65** | 0.85 | 8 | **+2.04** | Bull |
| **1 year** | 72 | 73 | 74 | 74 | 74 | **74** | 0.78 | 8 | **+3.00** | Strong Bull (right at the boundary) |
| **3 years** | 85 | 85 | 85 | 85 | 85 | **85** | 0.70 | 8 | **+3.92** | Strong Bull |

**Draft P (Jul 13):** 54 / 59 / 65 / 74 / 85 · **Weight:** 20% (equal) · **Impact:** 8 (uniform) · **Formula:** Signal = ((P − 50) ÷ 50) × Quality × Impact. **Full lineage:** June committed 53 / 57 / 62 / 72 / 85 (committed Jun 12, 2026) → July 8 draft 52 / 56 / 62 / 73 / 85 → July 10 draft 53 / 58 / 64 / 74 / 85 → July 11 draft 54 / 59 / 65 / 74 / 85 → July 12 draft 54 / 59 / 65 / 74 / 85 (held flat) → July 13 draft 54 / 59 / 65 / 74 / 85 (held flat again) — three separate dated checks landing on the same numbers, awaiting my stamp.

### THE THREE INPUTS, IN PLAIN ENGLISH

**P** — the odds this is *good for crypto* by then. Held flat for a third day at **54 / 59 / 65 / 74 / 85** — but "flat" this week is the output of a full re-research pass, not a shortcut. New bullish infrastructure proof landed: Circle won final OCC approval for a national trust bank (direct federal oversight for digital-asset custody), Swift's blockchain ledger went live with 17 global banks doing 24/7 tokenized-deposit payments over Chainlink CCIP, and DTCC confirmed Stellar as the first public blockchain in its multi-chain strategy (H1 2027 target) — a real answer to the "permissioned-only" worry. That's offset by new bearish signal: total stablecoin market cap has fallen roughly $10B since the May peak (the sharpest drawdown since 2023), and the 140+-institution OUSD stablecoin coalition is developing a credibility problem as named members publicly deny involvement. Those roughly cancel out — nothing here moves the near-term needle enough to shift P, and the dominant near-term catalyst remains unresolved: the July 18 GENIUS Act deadline, five days out with zero final rules.

**Quality** — how trustworthy the evidence is. This is a full weekly re-verification, not a light touch: live rwa.xyz pulls across treasuries, the broader RWA aggregate, and private credit (all Jul 13); primary-source press releases for Circle's OCC charter, Swift's ledger launch, and the May 27 DTCC-Stellar announcement, each cross-checked against at least one independent outlet; CoinDesk/PYMNTS/Cryptonomist corroboration on the stablecoin-cap decline; and a methodological correction of our own: last week's single-day BUIDL and treasury reads are being explicitly re-framed against 30-day trends, which are the more reliable signal.

**Impact** — 8 out of 10, the uniform value shared by every pillar in the equal-weight model. If tokenization compounds, it pulls trillions of TradFi assets onto rails crypto controls.

## The Claim

*The thesis, and where I differ from the consensus — updated July 13, 2026*

**The crowd:** tokenization is inevitable and accelerating — the SEC greenlit Nasdaq (Mar 18, 2026), DTCC's Russell 1000 pilot is live with a public-chain (Stellar) roadmap now attached, Circle just won a federal bank charter, Swift got 17 global banks live on a tokenized-deposit ledger, and the July 18 GENIUS deadline makes stablecoin rails official. Trillions incoming.

**Me:** it's real, institutional, and now broadening well beyond treasuries — but this week's full research pass found the bull and bear cases both got stronger at the same time. Circle's OCC charter, Swift's bank consortium, and DTCC's public-chain commitment are genuine institutional-rails proof; against that, total stablecoin market cap has slid ~$10B since May (the sharpest pullback since 2023) and the OUSD coalition is fielding public denials from named members. Net: no change. I score it **~54% good-for-crypto near-term**, climbing to **~85% over three years** — with the July 18 rules deadline still the dominant near-term swing factor, five days out and unresolved.

**My edge:** the crowd still conflates "adoption" with "good for crypto assets." The biggest institutional moves keep splitting both ways — DTCC's pilot seats Circle and Ondo *alongside* the banks and now has a stated path onto a public chain, while Swift's 17-bank ledger, the JPMorgan/Citi/BofA/Wells Fargo Tokenized Deposit Network, a 140+-institution OUSD stablecoin coalition, and Crédit Agricole's EURXT are institutions building their *own* coins and rails explicitly framed as a stablecoin bypass. The signal isn't headlines — it's whether the money lands on public, crypto-controlled chains.

## The Facts

*As of July 13, 2026 — hard numbers with exact dates, sources on the last page. Full weekly re-research pass: every figure below was re-pulled or re-checked against primary sources this cycle, not carried forward.*

- ★ **A methodology correction, on ourselves.** Today's live rwa.xyz pull puts tokenized US Treasuries at **$15.52B** — actually slightly *below* July 11's single-day read of $15.58B. That's not a reversal; it's a reminder that day-to-day snapshots are noisy and shouldn't be over-read. The trustworthy signal is the **30-day trend: +4.01%**, still solidly positive. Going forward this report will lean on 30-day trends over single-day deltas for exactly this reason.
- **The treasury leaderboard, July 13 (rwa.xyz):** Circle's **USYC $3.00B** > BlackRock's **BUIDL $2.869B** > Ondo's **USDY $2.159B** > Franklin Templeton's **iBENJI $1.625B** > Janus Henderson's **JTRSY $881.8M** > WisdomTree's **WTGXX $764.5M** > Franklin Templeton's **BENJI $760.9M** > Invesco/Superstate's **USTB $695.3M**. 84 assets, 62,843 holders, 7-day average yield **3.44%**.
- ★ **BUIDL's ~21% jump is now corroborated by persistence.** The one-day move flagged "single-source, unconfirmed" on July 11 has held at $2.869B for two-plus days without reversing — that pattern is much more consistent with a real large subscription than a data error, so we're upgrading its status from flagged to corroborated-by-persistence.
- ★ **New — "Distributed" vs. "Represented" are different metrics; we're defining both going forward.** rwa.xyz's headline RWA figure is **Distributed Value: $34.19B** (+3.90% 30d) — tokens actually issued and held by wallets. Separately, rwa.xyz tracks **Represented Value: $374.94B** (+9.57% 30d), which includes locked, permissioned, or committed tokenization not freely distributed. The gap is mostly one thing: **Figure Technologies' ~$20B tokenized HELOC book**, the single largest tokenized-credit pool in existence, sitting in "Represented," not "Distributed" — and not previously mentioned in this report. It reinforces a point we've already been making: most tokenized value isn't liquid or retail-accessible. A Yahoo Finance piece (~Jul 12) put a number on that directly — of a broader "$60B across 7,000+ products" figure, only **~3%** is accessible to US retail. Total stablecoin value per rwa.xyz: **$300.54B** (+0.94% 30d).
- **Private credit: $6.93B distributed, +2.84% 30d** (this narrower rwa.xyz page excludes Figure). Maple $1.4B, STOKR $1.3B, Centrifuge $746M, Realiz $500M, Securitize $488M (+0.28% 30d). **Retracting a prior claim:** the "Securitize +106.4% single-day spike" flagged in the July 10 report does not appear anywhere in the current 30-day trend — it was likely noise or a since-reversed spike, and we're dropping it as a standing fact.
- **Stablecoins: market cap down, usage up — a real divergence.** Total stablecoin market cap has fallen roughly **$10B since the May 2026 peak** (−$7.7B in June alone, ~−3%) — the largest decline since 2023, though far short

of 2022's 26% collapse (CoinDesk Jul 12, corroborated by PYMNTS/Cryptonomist). USDT: ~$190B (May peak) → ~$184B. USDC: ~$80B (March peak) → ~$73B. One analyst (Paul Howard, Wincent) calls it a normal seasonal pullback, pointing to a similar Dec 2025–Feb 2026 dip that fully recovered. **But transaction volume tells the opposite story:** stablecoin transaction volume hit a record **$1.79T in June 2026** (+63% MoM, +125% YoY — CoinDesk Jul 6), with USDC taking ~70% share ($1.21T) and overtaking USDT in *volume* (not market cap). Cap and usage are diverging — fewer dollars parked, more dollars moving.

- ★ **NEW — Circle won final OCC approval for a national trust bank (Jul 10).** "Circle National Trust" (First National Digital Currency Bank, N.A.) puts Circle under direct federal (OCC) oversight, initially for fiduciary digital-asset custody, with reserve management stated as a future capability (Circle press release, corroborated by American Banker/Banking Dive/BusinessWire). CRCL stock rose **+11%** on the news.
- ★ **NEW — Swift's blockchain ledger went live (Jul 9)** with **17 banks across 6 continents** — ANZ, BNP Paribas, BNY Mellon, Citi, DBS, First Abu Dhabi Bank, FirstRand, HSBC, Itaú Unibanco, Lloyds, Mashreq, MUFG, OCBC, Standard Chartered, UBS, UOB, Wells Fargo — running 24/7 cross-border tokenized-deposit payments over **Chainlink CCIP** (Swift press release, corroborated by CoinDesk/Bloomberg). Coverage frames this explicitly as a competitive response to stablecoins: banks building their own bypass rails.
- ★ **NEW — the OUSD stablecoin coalition has a credibility problem.** The 140+-institution "Open USD" coalition (launched Jun 30 — Visa, Mastercard, Stripe, Amex, BlackRock, Coinbase, Google Cloud, BNY, IBM, DoorDash, Fireblocks; CEO Zach Abrams of Stripe's Bridge) has seen named participants publicly deny involvement: Samsung and Dunamu denied any formal role (Jul 3), and Korean exchange Upbit denied involvement in issuance (Jul 4). The coalition's exact partner list and issuing entity/jurisdiction remain undisclosed. This is new since the July 10/11 reports.
- **Circle's stock round-trip.** CRCL fell ~40% from its June 3 high ($90.13) to $64.62 (Jul 2), driven largely by the OUSD threat (a single-day −17% on the Jun 30 launch); it has since partly recovered — +11% Jul 10 on the OCC charter, +4% on record June USDC volume.
- ★ **NEW — Crédit Agricole's EURXT launched with detail (Jul 1).** Issued by CACEIS on Ethereum, MiCA-compliant, ERC-20, with 20M tokens initial supply, 1:1 euro-backed, institutional/corporate clients only initially. Its first subscription used EURXT to buy into a tokenized Amundi money-market fund.
- **DTCC's production pilot is live and on schedule.** The Russell 1000 / major ETFs / Treasuries pilot with 50+ firms (BlackRock, Goldman, JPMorgan, Circle, Ondo, Robinhood, Kraken) is confirmed underway in July 2026; full launch remains targeted for **October 2026** — on schedule, no stumble reported this cycle.
- ★ **NEW background fact — DTCC confirmed Stellar as its first public-blockchain partner (announced May 27, not previously in this report).** DTCC and the Stellar Development Foundation confirmed Stellar as the **first public blockchain** in DTC's multi-chain tokenization strategy, targeting **H1 2027** for live deployment of DTC-custodied assets on Stellar. This is a meaningful counterweight to the "permissioned-only" concern raised in The Other Side: the DTCC pilot now has a stated path onto a public chain, not just bank-controlled rails.
- **Ondo keeps extending its franchise.** Ondo partnered with Broadridge (Jul 2) to extend proxy-voting rights to holders of 250+ tokenized securities; it has tokenized BlackRock's IVV ETF and Micron stock on Ethereum under its SEC-aligned framework, and launched "Ondo Perps" — 24/7 perpetual markets for equities, ETFs, and commodities (exact launch date unclear, directional only).
- **Securitize went public and is building NYSE-adjacent tokenized-trading rails.** Securitize completed its business combination and began trading on the NYSE on **July 2, 2026**, tokenizing ~$266–295M of its own common stock on Solana at listing. Separately, NYSE named Securitize a partner for a planned NYSE-affiliated "Digital Trading Platform" for issuer-sponsored tokenized securities (24/7 trading, fractional shares).
- **Nasdaq and the SEC: no change, one soft signal.** Nasdaq's 23/5 tokenized-trading target remains **Dec 6, 2026**, unchanged. The SEC's "crypto safe harbor" regulatory proposal is reported as expected "as soon as July 2026" (Cryptonomist — single-source-ish) but has not yet been published as a rule; treat as directional only.

- **GENIUS rules: still zero final, five days out.** The statutory implementing-rules deadline is **July 18, 2026**. As of July 13, the Chapman & Cutler tracker cross-checked against agency sites shows all ~10 rulemakings across Treasury, OCC, FDIC, NCUA, and FinCEN/OFAC **still proposed, none final**. Comment-window timing is unchanged: NCUA closes Jul 17, FDIC BSA Aug 4, FinCEN CIP Aug 21 — so the full suite remains arithmetically unable to finalize on time. Note: OCC Bulletin 2026-7 (joint with the Fed/FDIC, "Capital Treatment of Tokenized Securities," dated March 5, 2026) is a *separate* matter from GENIUS stablecoin-issuer rulemaking — we're flagging this explicitly so the two don't get conflated.
- **Risk check: clean window, one unresolved fragility.** No RWA-protocol hack, tokenized-treasury depeg, or counterparty failure found in the Jul 10–13 window. USYC's Binance/BNB-Chain concentration remains ~**96.3%** of USYC's global supply — essentially unchanged, still an unresolved fragility point.
- **The TAM anchor stands:** BCG × Ripple (Apr 7, 2025) projects **~$9.4T by 2030 / $18.9T by 2033**. Current on-chain value is still **<1%** of any endpoint. Macro: Fed held at **3.50–3.75%** (June 2026, hawkish dot plot) — next FOMC **July 29**.

## The Prize

*Illustrative only — not price targets, not advice*

The cleanest single-token anchor is still **ONDO**, the name most tied to the RWA narrative: from its early-trading price around **$0.22 (Jan 2024** — listing prints vary by venue**)** it ran to a **$2.14 all-time high (Dec 16, 2024)** — roughly **~10× in 11 months**.

The round-trip, re-checked July 13 (CoinGecko): **$0.3291** — 24h −0.90%, 7d +0.60%, market cap ~$1.6B, still ~85% below the high — even as the company keeps extending its franchise (Broadridge proxy-voting integration, IVV/Micron tokenization, 24/7 perp markets). Part of the Dec-2024 spike was a Trump-linked World Liberty Financial buy, not fundamentals. The durable signal stays structural, not one token: tokenized treasuries sit at $15.52B on a positive 30-day trend while the token trades 85% off its peak. The Prize doesn't feed the math — it tells you what the lean is worth acting on, euphoria and round-trip included.

## The Other Side

*The strongest honest case this is wrong — updated July 13, 2026*

- **The rate-trade critique still stands.** The 7-day average treasury yield sits at 3.44% — still consistent with AUM that's a rate trade, not adoption. If the Fed cuts from 3.50–3.75%, the yield engine weakens, and none of this week's infrastructure news changes that math.
- **The institutions building their own rails just got a lot more credible.** Swift's ledger went live with **17 global banks** running 24/7 tokenized-deposit payments — explicitly framed in coverage as a stablecoin bypass. Circle just became a federally chartered trust bank, which cuts both ways: it's validation for crypto-native issuers, but it's also crypto infrastructure becoming more bank-like, not banks becoming more crypto-like. Add the four-bank Tokenized Deposit Network (H1 2027), the 140+-institution OUSD coalition, and Crédit Agricole's EURXT, and the "TradFi-on-rails" failure mode keeps getting more resourced, not less.
- **Stablecoin market cap is genuinely shrinking, not just noisy.** Total cap is down ~$10B since the May peak — the sharpest decline since 2023 — even if one analyst calls it a seasonal pullback. Rising transaction *volume* doesn't refute this; a stablecoin can be used more while fewer dollars sit parked in it, which is exactly what the data shows.
- **The OUSD coalition's credibility is cracking before it launches.** Samsung, Dunamu, and Upbit have all publicly distanced themselves from a coalition that claims 140+ institutional members, and the issuing entity and

jurisdiction are still undisclosed. If a marquee bank-and-payments consortium can't keep its own member list straight, that's a real signal about how solid the "banks are organizing against stablecoins" narrative actually is.

- **Regulatory limbo, not regulatory clarity.** Zero GENIUS rules are final with five days to the deadline; mid-market issuers face compliance costs on July 18 with the rulebook incomplete. Partial rules can chill activity rather than de-risk it.
- **Single-counterparty fragility persists.** rwa.xyz still shows USYC's Binance/BNB-Chain concentration at ~**96.3%** of its global supply — essentially unchanged for weeks, still unresolved, still institutional plumbing rather than broad adoption.
- **The Treasury bid is two-sided.** Stablecoin T-bill demand eases front-end yields a little, but BIS finds outflows bite harder — a mass redemption forces **T-bill fire-sales** (the March 2023 USDC depeg was a near-miss), and the cap decline since May means that outflow risk, however modest, is already live rather than hypothetical.
- **"Represented" value is doing a lot of the bull case's heavy lifting.** Most of the eye-catching $374.94B "Represented Value" figure is locked or permissioned tokenization (Figure's ~$20B HELOC book alone), not liquid or retail-accessible — per Yahoo Finance, only ~3% of the broader tokenized-product universe is accessible to US retail. The narrower, real "Distributed Value" figure is $34.19B, an order of magnitude smaller.
- **It may not be "crypto."** Most volume is permissioned/institutional and may never accrue value to crypto majors. Durable market-structure law (CLARITY) still isn't passed.

## The Triggers

*Dated events ahead — some prove the claim right, some prove it wrong. Reset July 13, 2026.*

| DATE | EVENT | MEANS |
|---|---|---|
| Jul 2026 (now) | DTCC production pilot — Russell 1000, major ETFs, Treasuries; 50+ firms incl. BlackRock, Circle, Ondo — **firing as scheduled**, strengthened by the new Stellar/public-chain detail (below) | A clean pilot = institutional-rails proof at the market's core plumbing; stumbles = drag on the Oct full launch (1–3 mo) |
| Jul 2026 (now) | **NEW — bank-controlled-rails momentum:** Swift's 17-bank tokenized-deposit ledger and the 140+-institution OUSD coalition both **fired this cycle** — real institutional capital organizing around bank/consortium rails rather than public chains | The more this builds, the more tokenization's economics may accrue to TradFi rails instead of crypto-controlled ones — a headwind to the crypto-relevance thesis even as total tokenization grows (1–3 mo) |
| Jul 18, 2026 | GENIUS statutory rules deadline — zero of ~10 rules final as of Jul 13, five days out; **trending toward a partial miss**; full suite arithmetically impossible (three comment windows close on/after it) | Core Treasury/OCC finals on time = rails de-risked, bullish; a total whiff = compliance-limbo headwind (1-mo) |
| Jul 29, 2026 | FOMC rate decision | A hold sustains the tokenized-Treasury yield engine; cuts start eroding it (1-mo) |
| Jul 17–Aug 21, 2026 | Remaining GENIUS comment windows close (NCUA 7/17 · FDIC BSA 8/4 · FinCEN CIP 8/21) | Fast finalization after close = the slip was survivable; drift into Q4 = deeper limbo (3-mo) |
| Sep 30, 2026 | Q3 on-chain RWA data close | Does Distributed Value keep compounding on trend, or does the gap to Represented Value widen further? Composition is the tell (3-mo) |
| Oct 2026 | DTCC tokenization full launch — target unchanged | On time = the biggest institutional-rails catalyst of the year lands before Nasdaq; a slip = drift confirmed (3–6 mo) |
| Dec 6, 2026 | Nasdaq 23/5 tokenized trading — SEC-approved target launch (unchanged) | A live launch = landmark public-market proof; another slip toward H1 2027 = drift confirmed (6-mo) |
| H1 2027 | Nasdaq equity-token services "operational" · bank Tokenized Deposit Network go-live · **DTCC-Stellar public-chain deployment target (announced May 27, new to this report)** · BlackRock BSTBL/BRSRV still pending | Which rails win — public chains or bank ledgers — starts getting decided here; the Stellar deployment is the one entry in this cluster that points toward a public chain (1-yr) |
| Any time | Tokenized-treasury depeg / counterparty failure (USYC's Binance/BNB-Chain concentration ~96.3%, still unresolved) | Plumbing fragility realized — re-rate down immediately |

**The flip line:** if the GENIUS rules drift into Q4 unfinished, the DTCC and Nasdaq launches slip past their October and December windows, and the growth that remains keeps rotating to permissioned rails, bank deposit networks, and institution-controlled coins — treat the crypto-relevance thesis as failing. Adoption that never touches public, crypto-controlled rails is TradFi, not crypto.

## My Decision

◷ **UPDATED DRAFT — JULY 13, 2026 · AWAITING MY STAMP**

### Draft P: 54 / 59 / 65 / 74 / 85 · My Weight: 20% (equal) · Impact: 8 (uniform)

Held flat for a third straight day — but this is a full weekly re-research pass, not a rubber stamp. Real new bullish infrastructure proof landed this cycle: Circle's OCC national trust charter, Swift's 17-bank tokenized-deposit ledger going live, and DTCC's confirmed Stellar public-chain roadmap (H1 2027) all strengthen the "this reaches crypto-controlled rails" side of the thesis. Real new bearish signal landed too: total stablecoin market cap is down ~$10B since May — the sharpest drawdown since 2023 — and the 140+-institution OUSD coalition is fielding public denials from named members, a genuine credibility gap. Those roughly offset, netting to no change in the qualitative read. The dominant near-term catalyst remains the July 18 GENIUS Act deadline — five days out, zero final rules, trending toward a partial miss — and I'm not moving P ahead of that outcome.

The June committed scores (**53 / 57 / 62 / 72 / 85**, committed June 19, 2026) remain the last human-stamped values. **Override any P and re-stamp — the master blend recomputes.**

## What Changed Since Last Check

*Full weekly re-research pass, July 13, 2026 (previous light re-checks July 11 and July 12; previous full re-research July 10, 2026)*

- ★ **New bullish infrastructure proof:** Circle won final OCC approval for a national trust bank (Jul 10, CRCL +11%); Swift's blockchain ledger went live with 17 global banks doing 24/7 tokenized-deposit payments via Chainlink CCIP (Jul 9); DTCC and the Stellar Development Foundation confirmed Stellar as the first public blockchain in DTC's multi-chain strategy, targeting H1 2027 (announced May 27, newly surfaced into this report) — a real counterweight to the "permissioned-only" critique.
- ★ **New bearish signal, roughly offsetting:** total stablecoin market cap down ~$10B since the May peak (largest decline since 2023 — CoinDesk Jul 12); the 140+-institution OUSD coalition is fielding public denials of involvement from Samsung, Dunamu, and Upbit — a genuine, new credibility gap.
- **Two methodology corrections made against our own prior citations:** (1) the $15.52B treasury read today is technically below July 11's $15.58B single-day snapshot — reframed as single-day noise, with the 30-day trend (+4.01%) as the real signal going forward; (2) the "Securitize +106.4% single-day spike" cited July 10 does not appear in the current 30-day trend and is retracted as a standing fact. BUIDL's ~21% jump, previously flagged single-source, is upgraded to corroborated-by-persistence after holding for 2+ days.
- **New background/context facts folded in:** the Distributed Value ($34.19B) vs. Represented Value ($374.94B) distinction, including Figure Technologies' ~$20B tokenized HELOC book (previously unmentioned, largest tokenized-credit pool in existence); stablecoin transaction volume hit a record $1.79T in June (+63% MoM), with USDC overtaking USDT in volume even as cap shrinks; Crédit Agricole's EURXT launch detail (Jul 1); Ondo-Broadridge proxy-voting integration and IVV/Micron tokenization; Securitize's July 2 NYSE listing and NYSE "Digital Trading Platform" partnership; OCC Bulletin 2026-7 clarified as a separate matter from GENIUS rulemaking.
- **Risk check, clean:** no RWA-protocol hack, depeg, or counterparty failure Jul 10–13; USYC's Binance/BNB-Chain concentration essentially unchanged at ~96.3%.
- **Score decision:** Draft P held flat for a third straight day at **54 / 59 / 65 / 74 / 85** — not because nothing happened, but because this cycle's new bullish and bearish evidence roughly offset, nets to no change in the qualitative read, pending the July 18 GENIUS Act deadline outcome, which remains the dominant near-term catalyst. Drafts awaiting my stamp; June values (committed Jun 12, 2026) remain the last committed.
