CoinPicks Market Direction

Research Package

Five pillars — four researched narratives and one pure-math read of the Bitcoin chart — scored on one standard, blended into one table, and distilled to one number. Everything in this folder is current as of **September 12, 2026 (FULL WEEKLY REFRESH, score set 2026-09-12_draft3)**. **This cycle's score set is a DRAFT — AWAITING ALEX'S STAMP — see the note below.**

DRAFT — AWAITING ALEX'S STAMP (full weekly refresh, score set 2026-09-12_draft3). Full weekly refreshes are categorically excluded from the delegated auto-stamp policy, regardless of how small the moves are — so unlike this week's daily cycles, this one is *not* self-approved. Four independent per-pillar research passes ran, plus an adversarial verification pass that re-pulled primary sources rather than the reports' own citations; three of its corrections changed the outcome. **CLARITY Act RE-RATED DOWN** (32/47/58/82/92 → 30/46/58/82/92): a Sept 10 revised ~630-page text — missed by both daily cycles since — added DeFi/CFTC-registration language but left the ethics title and the stablecoin-yield provision untouched five days before Tuesday's cloture vote. **Tokenization RE-RATED BOTH WAYS** (52/60/66/74/85 → 51/59/66/76/86): up at 1yr/3yr on the SEC's proposed rule 34-106246, which would let a blockchain be a transfer agent's official ownership record; down at 1mo/3mo on a third consecutive negative tokenized-Treasury reading ($15.74B, −3.05%/30d). **Iran War Risk and Fed & Macro both held flat** — Iran because a new IAEA/UN Security Council referral and a new diplomatic track genuinely offset, Fed because this morning's cut already priced the evidence. THE FINAL NUMBER is +0.22, versus +0.23 at the day's committed baseline.

THE FINAL NUMBER · SEPTEMBER 12, 2026, FULL WEEKLY REFRESH (DRAFT — AWAITING ALEX'S STAMP) · BTC $77,282.35 ON SEPT 12

+0.22 Neutral — a hair below the day's committed +0.23, on small front-end cuts to CLARITY and Tokenization

Equal-weight mean of the five window signals below — every pillar counts 20% (scale −10 to +10; horizon-weighted variant +0.81, up a hair from +0.80, still Mild Bull). CLARITY Act re-rated down at the front end; Tokenization re-rated down at the front and up at the back; Iran War Risk and Fed & Macro both held flat on genuinely offsetting or already-priced evidence; Bitcoin TA (computed) is unchanged at 54/47/59/68/69 — BTC $77,282.35 on Sept 12 (local full quant refresh).

THE FIVE WINDOWS UNDERNEATH IT

WINDOW	MASTER SIGNAL	CALL
1 month	**−1.93**	**Bear** — deeper still; two small judged cuts (CLARITY, Tokenization) add to Iran's chokepoint drag
3 months	**−1.52**	**Bear** — the one call-band flip this cycle, from Mild Bear, by 0.02; both the cloture vote and the FOMC sit inside this window
6 months	**−0.16**	**Neutral** — unchanged; CLARITY/Tokenization structural strength against Fed and Iran drag, well inside the Neutral band
1 year	**+1.74**	**Bull** — improved on the SEC transfer-agent rulemaking; four of five pillars positive, Iran alone negative
3 years	**+2.95**	**Bull** — law + adoption + cycle + valuation, nudged up on the same SEC rulemaking

Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. The leave-one-out range this cycle is −0.27 to +0.91 — the sign still flips negative when CLARITY or Tokenization are dropped individually, the same fragile-reading pattern as recent cycles; **dropping Iran alone moves the reading to +0.91, Mild Bull**, and dropping Fed & Macro alone also crosses into Mild Bull (+0.55). Note that neither of those two pillars moved this cycle. See the Master Report's Robustness section.

Reading order

Twenty minutes to the whole picture; each report stands alone and can be checked independently — every fact is dated with sources on its last page.

#	FILE	WHAT IT IS
1	`CoinPicks_Master_Direction_Report.pdf`	**The summary.** The final number, the five-window table, the full pillar matrix, where the lenses agree/fight, six weeks of dated triggers, sensitivity.
2	`CoinPicks_Bitcoin_TA_Quant_Pillar_Report.pdf`	**The math pillar.** 7 indicators on 16 years of data, halving-cycle analogs, power-law valuation — with charts. Fully reproducible from code.
3	`reports/current/pdf/ — the four pillar PDFs`	**The story pillars.** CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro. Each: thesis, dated facts, honest bear case, dated triggers, and the full score lineage (June committed → Aug 22 committed → Aug 28/29 drafts → Aug 31 committed → Sept 1 committed → Sept 2 committed → Sept 5 committed → Sept 6 committed → Sept 8 committed → Sept 9 committed → Sept 10 committed → Sept 11 committed → Sept 12 draft2 committed → **Sept 12 draft3, this full weekly refresh, left as a DRAFT for Alex's review**).
4	`reports/archive/ + prior-work/`	Every earlier version, preserved untouched — the score history is fully auditable.
—	`run.py · engine/blend.py · data/master_blend.json`	The blend engine (runnable Python — reproduce any score set with run.py blend --set NAME), its output, and README.md for regeneration.

How the scoring works — one paragraph

Every pillar answers the same question on five windows (1 month / 3 months / 6 months / 1 year / 3 years): **P** = the odds (0–100) that this force is *good for crypto* by then, **Quality** = how trustworthy the evidence is (0–1), and **Impact** = how hard this force moves the whole market (0–10). These combine into a **Signal = ((P − 50) ÷ 50) × Quality × Impact** (Impact is a uniform 8 for every pillar), so a coin-flip view scores zero no matter how loud the headlines are, and weak evidence can't shout. **All five pillars are equal-weighted** — the master for each window is the simple mean of the five signals (20% each; add a pillar and it auto-rebalances to 1/N) — and the Final Number averages the five master windows.

The five pillars at a glance (September 12 P's, full weekly refresh — CLARITY down, Tokenization both ways, Iran and Fed flat — DRAFT)

PILLAR	1MO	3MO	6MO	1YR	3YR	ONE-LINE READ
CLARITY Act (law)	30	46	58	82	92	RE-RATED DOWN at 1mo/3mo: the Sept 10 revised text left ethics and stablecoin-yield untouched five days before the Sept 15 cloture vote
Iran War Risk	1	2	17	38	70	Held flat: the IAEA Board's referral of Iran to the UN Security Council (bearish, new) offsets Brent's give-back, Hormuz throughput, US restraint and the Salalah ministerial (bullish, new)
Tokenization (RWA)	51	59	66	76	86	RE-RATED BOTH WAYS: up at 1yr/3yr on SEC rule 34-106246 (blockchain as the official ownership record); down at 1mo/3mo on a third negative tokenized-Treasury reading
Fed & Macro	29	28	41	53	60	Held flat: the Goldman and JPMorgan hike-call reversals are analyst estimates downstream of the core-CPI print already priced this morning — re-cutting would double-count
Bitcoin TA (quant)	54	47	59	68	69	Unchanged on today's bar — BTC $77,282.35 (local full quant refresh)

P values shown (50 = coin flip). CLARITY Act and Tokenization moved this cycle; Iran War Risk and Fed & Macro held flat. This set (full weekly refresh, 2026-09-12_draft3) is a **DRAFT — AWAITING ALEX'S STAMP**.

Status & honesty notes

- **Score status:** the September 12 score set (2026-09-12_draft3) is a **FULL WEEKLY REFRESH** — the first deep multi-source re-dig since the Sept 5 weekly — and it is **a DRAFT, AWAITING ALEX'S MANUAL REVIEW**. That is not a judgement about the news: the runbook categorically excludes weekly refreshes from the delegated auto-stamp policy, so this cycle does not self-approve even though every move in it is small and every source clears the bar. The `status` field in config/scores.json says `draft` and no `stamped_by` was written. The last committed set is 2026-09-12_draft2 (auto-stamped earlier today). Every report prints the full lineage (June committed → Aug 22 committed → Aug 28/29 drafts → Aug 31 → Sept 1 → Sept 2 → Sept 5 draft → Sept 5 draft2 committed → Sept 6 → Sept 8 → Sept 9 → Sept 10 → Sept 11 → Sept 12 → Sept 12 draft2 committed → **Sept 12 draft3, this draft**).
- **Verification, and what it changed:** an independent adversarial pass re-checked every load-bearing new claim against PRIMARY sources rather than the reports' own citations, and it materially changed three things. (1) A proposed larger CLARITY cut rested partly on Sen. Moran's opposition — that dates to *early August*, so it was struck as a driver and is reported only. (2) The rwa.xyz net-flow figures behind the Tokenization cut turned out to be login-gated and unverifiable — they are quoted nowhere and carry none of the move, which rests only on the $15.74B level and the −3.05%/30d change. (3) A description of Bab al-Mandeb as "transits reduced but continuing" was rejected as materially understating a roughly 80% two-day collapse in transits. Also struck: a "WTI $83.11" figure (refuted — the Sept 11 futures settle was $100.05). The SEC's rule 34-106246 was read verbatim off sec.gov and confirmed *not* overstated.
- **Known limits, in print inside the reports:** cycle-analog claims rest on 3 completed cycles, a disclosed fragility; the TA pillar caps its own conviction at P = 50 ± 25; single-source items are labeled in-line and never move a score; current chart bars are partial and the completed-bar numbers are printed alongside; US combat deaths are stated as "no reported death Sept 10-12" rather than confirmed, because centcom.mil and defense.gov both blocked direct fetches this cycle; and the Robustness section shows dropping Iran alone flips the headline to Mild Bull, as does dropping Fed & Macro — with the leave-one-out range (−0.27 to +0.91) genuinely crossing zero.
- **The near-term calendar is the test:** the FOMC with SEP/dot plot, Sept 15-16, 2026 · the first CLARITY cloture vote, precisely dated 2:15pm ET Sept 15 · the Salalah GCC-Iran ministerial on Hormuz shipping, Sept 14 — the first real test of the diplomatic track this cycle declined to score · ECB Project Pontes go-live Sept 21 · DTCC's tokenization launch in October · the SEC transfer-agent comment period closing Nov 3 · GENIUS Act 18-month backstop effective Jan 18, 2027. Each pillar's trigger table says in advance what each outcome does to the scores.

This is research and education, not financial advice. The scores are probabilistic opinions with dated evidence — built to be argued with. If you check one thing manually this week, check the CLARITY Act pillar's trigger table against what actually happens at 2:15pm ET on Tuesday: this cycle bet, on the record and in advance, that a revised bill text which left both blockers untouched makes that vote harder. The prediction markets moved the other way on the same news. One of us is wrong, and Tuesday settles it.
