CoinPicks Market Direction

Research Package

Five pillars — four researched narratives and one pure-math read of the Bitcoin chart — scored on one standard, blended into one table, and distilled to one number. Everything in this folder is current as of **July 10, 2026**.

THE FINAL NUMBER · JULY 10, 2026 · BTC $63,987

+0.66 **Mild Bull — time-arbitraged**

Equal-weight mean of the five window signals below (scale −10 to +10; horizon-weighted variant +1.13). Positive because the far windows outweigh the near ones — **not a buy-today signal**: the same table says Mild Bear for the next quarter. It is a "the storm is priced, the recovery isn't" number.

THE FIVE WINDOWS UNDERNEATH IT

WINDOW	MASTER SIGNAL	CALL
1 month	−0.97	**Mild Bear** — hawkish Fed minutes, CPI July 14, Iran strike-pause-strike
3 months	−0.70	**Mild Bear** — Sept-hike window + the historical final-flush quarter
6 months	+0.16	**Neutral** — basing; DTCC October + Nasdaq Dec 6 + peak hawkishness passes
1 year	+2.12	**Bull** — the first window where all five pillars agree
3 years	+2.67	**Bull** — law + adoption + cycle + valuation

Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. Calls identical at every blend mix tested.

Reading order

Twenty minutes to the whole picture; each report stands alone and can be checked independently — every fact is dated with sources on its last page.

#	FILE	WHAT IT IS
1	`CoinPicks_Master_Direction_Report.pdf`	**The summary.** The final number, the five-window table, the full pillar matrix, where the lenses agree/fight, six weeks of dated triggers, sensitivity.
2	`CoinPicks_Bitcoin_TA_Quant_Pillar_Report.pdf`	**The math pillar.** 7 indicators on 16 years of data, halving-cycle analogs, power-law valuation — with charts. Fully reproducible from code.
3	`Pillar Reports (updated 2026-07-10)/ — 4 PDFs`	**The story pillars.** CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro. Each: thesis, dated facts, honest bear case, dated triggers, and the full score lineage (June → Jul 8 → Jul 10).
4	`Prior versions (June 19 + July 8, for the record)/`	Every earlier version, preserved untouched — the score history is fully auditable.
—	`master_blend.py · master_blend.json · README.md`	The blend engine (runnable Python — flip one flag to reproduce any score set), its output, and regeneration instructions.

How the scoring works — one paragraph

Every pillar answers the same question on five windows (1 month / 3 months / 6 months / 1 year / 3 years): **P** = the odds (0–100) that this force is *good for crypto* by then, **Quality** = how trustworthy the evidence is (0–1), and **Impact** = how hard this force moves the whole market (0–10). These combine into a **Signal = ((P − 50) ÷ 50) × Quality × Impact**, so a coin-flip view scores zero no matter how loud the headlines are, and weak evidence can't shout. The four story pillars (weighted 25/25/30/25) blend into a qualitative signal; the Bitcoin TA pillar is the quantitative signal; the master is 50/50 of the two; and the Final Number averages the five master windows.

The five pillars at a glance (July 10 draft P's)

PILLAR	1MO	3MO	6MO	1YR	3YR	ONE-LINE READ
CLARITY Act (law)	50	54	60	82	92	Merged text imminent, ethics frozen, market at 40% — a coin flip with a July 24 tell
Iran War Risk	42	49	56	70	83	170 targets struck, zero US casualties, oil fell, talks requested — performative war
Tokenization (RWA)	53	58	64	74	85	Records + DTCC pilot this month; the densest catalyst pipeline of the five
Fed & Macro	34	36	44	53	61	Hawkish minutes, Sept hike ~66% priced — but reserves just jumped $132B
Bitcoin TA (quant)	39	38	44	67	70	Bounce reclaimed the 200-week line; prior cycles 3-for-3 up over 12 months from here

P values shown (50 = coin flip). Note Fed & Macro (judged) and Bitcoin TA (computed) — two methods sharing no inputs — match exactly at 6 months (44 = 44).

Status & honesty notes

- **Score status:** July 10 scores are evidence-driven **drafts awaiting the author's stamp**; every report prints the full lineage (June committed → July 8 → July 10). Nothing hides its history.
- **Verification:** facts researched with primary-source discipline (Fed releases, Senate schedule, DOL data, exchange APIs, prediction-market APIs), independently fact-checked, and the whole package forensically audited (243-claim audit July 8; re-audited July 10 on the updates); score math recomputed independently; price data cross-checked across two exchanges; models that failed out-of-sample testing were excluded and say so.
- **Known limits, in print inside the reports:** cycle-analog claims rest on 3 completed cycles (and the reports show a live example of that fragility); the TA pillar caps its own conviction at P = 50 ± 25; single-source items are labeled in-line; current chart bars are partial and the completed-bar numbers are printed.
- **The near-term calendar is the test:** CPI Jul 14 · GENIUS rules Jul 18 · CLARITY cloture ~Jul 20–24 · FOMC Jul 29 · Senate recess Aug 7 · MoU expiry ~Aug 16. Each pillar's trigger table says in advance what each outcome does to the scores.

This is research and education, not financial advice. The scores are probabilistic opinions with dated evidence — built to be argued with. If you check one thing manually, check the trigger tables: they are the falsifiable part.
