CoinPicks Market Direction
Research Package

Five pillars — four researched narratives and one pure-math read of the Bitcoin chart — scored on one standard, blended into one table, and distilled to one number. Everything in this folder is current as of **August 13, 2026** — Fed & Macro re-rated up on new data, off the Aug 12 committed set. **Today's score set has been auto-stamped under Alex's standing delegated daily authority — see the note below.**

✓ **Auto-stamped.** Three qualitative pillars held flat; Fed & Macro re-rated up after both of its named PENDING triggers fired (a cool CPI print and a weak jobless-claims print). No pillar's P moved more than 3 points, nothing rests on a single-source claim (CPI and claims are both primary BLS/DOL releases): exactly the routine, well-evidenced daily cycle Alex's 2026-08-06 delegated auto-stamp authority covers. See the Master Report's "My Decision" section for the full rationale.

THE FINAL NUMBER · AUGUST 13, 2026 (COMMITTED) · BTC $63,786.51

+0.68 **Mild Bull — the 1-month window improves from Bear to Mild Bear, the first window-level call-band move in nearly a week**

Equal-weight mean of the five window signals below — every pillar counts 20% (scale −10 to +10; horizon-weighted variant +1.22). Positive because the far windows outweigh the near ones — **not a buy-today signal**. It is a "the storm is priced, the recovery isn't" number, now with the storm itself modestly less severe. Today's move is real and research-driven: the July CPI print (BLS, Aug 12) landed cool and exactly in line with consensus, and initial jobless claims (DOL, Aug 13) missed to the weak side — two independent primary releases confirming, not reversing, the Fed's dovish direction, which lifted Fed & Macro's score. Bitcoin TA's quant pillar also moved, mostly on a disclosed cycle-analog fragility rather than tape strength. CLARITY, Iran, and Tokenization all held flat — Sept 15 cloture unchanged, Hormuz still unsigned, no new tokenization catalyst.

THE FIVE WINDOWS UNDERNEATH IT

WINDOW	MASTER SIGNAL	CALL
1 month	−1.37	**Mild Bear** — improved from Bear; Fed re-rate plus a quant cycle-analog swing
3 months	−0.82	**Mild Bear** — the September FOMC still sits inside this window; nudged up on the Fed re-rate
6 months	+0.31	**Neutral** — CLARITY/Tokenization structural strength vs. Iran's drag
1 year	+2.14	**Bull** — all five pillars still positive
3 years	+3.12	**Strong Bull** — law + adoption + cycle + valuation, essentially unchanged

Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. The Mild Bull conclusion stays positive under every leave-one-out drop (+0.31 to +1.01); only dropping Tokenization still rounds down to **Neutral** — dropping CLARITY now clears the Mild Bull bar too, an improvement in robustness vs. Aug 12. See the Master Report's Robustness section.

Reading order

Twenty minutes to the whole picture; each report stands alone and can be checked independently — every fact is dated with sources on its last page.

#	FILE	WHAT IT IS
1	`CoinPicks_Master_Direction_Report.pdf`	**The summary.** The final number, the five-window table, the full pillar matrix, where the lenses agree/fight, six weeks of dated triggers, sensitivity.
2	`CoinPicks_Bitcoin_TA_Quant_Pillar_Report.pdf`	**The math pillar.** 7 indicators on 16 years of data, halving-cycle analogs, power-law valuation — with charts. Fully reproducible from code.
3	`reports/current/pdf/ — the four pillar PDFs`	**The story pillars.** CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro. Each: thesis, dated facts, honest bear case, dated triggers, and the full score lineage (June committed → every draft through August 13).
4	`reports/archive/ + prior-work/`	Every earlier version, preserved untouched — the score history is fully auditable.
—	`run.py · engine/blend.py · data/master_blend.json`	The blend engine (runnable Python — reproduce any score set with run.py blend --set NAME), its output, and README.md for regeneration.

How the scoring works — one paragraph

Every pillar answers the same question on five windows (1 month / 3 months / 6 months / 1 year / 3 years): **P** = the odds (0–100) that this force is *good for crypto* by then, **Quality** = how trustworthy the evidence is (0–1), and **Impact** = how hard this force moves the whole market (0–10). These combine into a **Signal = ((P − 50) ÷ 50) × Quality × Impact** (Impact is a uniform 8 for every pillar), so a coin-flip view scores zero no matter how loud the headlines are, and weak evidence can't shout. **All five pillars are equal-weighted** — the master for each window is the simple mean of the five signals (20% each; add a pillar and it auto-rebalances to 1/N) — and the Final Number averages the five master windows.

The five pillars at a glance (August 13 committed P's — Fed & Macro re-rated up off the Aug 12 baseline)

PILLAR	1MO	3MO	6MO	1YR	3YR	ONE-LINE READ
CLARITY Act (law)	32	47	58	82	92	Held flat: Senate remains in August recess; the Sept 15 2:15pm ET cloture vote is unchanged; Polymarket odds slide to ~15.5% logged, not scored
Iran War Risk	20	28	41	56	77	Held flat: Hormuz deal remains unsigned; Araghchi's "very close" comment today is a rephrased, not new, condition
Tokenization (RWA)	52	60	66	74	85	Held flat: a third-party $33.5B estimate circulating today doesn't reconcile with rwa.xyz's own $38.17B figure, not adopted
Fed & Macro	43	41	48	56	62	Re-rated up: July CPI landed cool/in-line (Aug 12) and jobless claims missed weak (209K vs. 202K expected, Aug 13) — two primary triggers fired, confirming the Aug 8 dovish move
Bitcoin TA (quant)	43	36	45	68	71	Quant pillar refreshed on today's price (BTC $63,786.51, −0.7% vs. Aug 12; weekly −25.7 slight bearish, monthly −39.7 slight bearish, quarterly +9.4 neutral; cycle month 27.8) — 1mo P moved on a cycle-analog swing, not tape strength

P values shown (50 = coin flip). Fed & Macro (judged) and Bitcoin TA (computed) both improved today, from different mechanisms — Fed on genuine new primary data, TA on a disclosed cycle-analog fragility.

Status & honesty notes

- **Score status:** August 13 scores — three pillars held flat, Fed & Macro re-rated up — after Step 6 verification passed clean, were **auto-stamped** under Alex's standing delegated daily authority (in effect since 2026-08-06): no pillar's P moved more than 3 points, no FINAL NUMBER call-band flip, and nothing rests on a single-source claim — exactly the routine, well-evidenced cycle that authority covers, even though it includes a genuine re-rate. Every report prints the full lineage (June committed → every draft through August 13, now committed). Nothing hides its history.
- **Verification:** facts researched with primary/wire-source discipline, independently fact-checked, and the whole package forensically audited; score math recomputed independently; price data cross-checked across two exchanges; models that failed out-of-sample testing were excluded and say so. This cycle's checks: read the BLS July CPI release directly (headline +0.1% m/m / +3.4% y/y, core +0.2% m/m / +2.5% y/y) and cross-checked against CNBC, NBC News, and Bloomberg; confirmed initial jobless claims for the week ended Aug 8 at 209K vs. 202K expected via DOL/ETA; reconfirmed the Senate remains in August recess and the CLARITY Sept 15 cloture date is unchanged; re-checked the Hormuz deal status (still unsigned) across 6 outlets; traced a third-party $33.5B tokenization estimate and confirmed it doesn't reconcile with rwa.xyz's own tracked figure.
- **Known limits, in print inside the reports:** cycle-analog claims rest on 3 completed cycles — and this cycle's own 1-month analog swung 8.5 points on pure day-count alignment between Aug 12 and Aug 13, exactly the fragility this report warns about; the TA pillar caps its own conviction at P = 50 ± 25; single-source items are labeled in-line; current chart bars are partial and the completed-bar numbers are printed; the Robustness section shows dropping Tokenization still lands at the Neutral/Mild-Bull boundary, though dropping CLARITY no longer does (an improvement vs. Aug 12).
- **The near-term calendar is the test:** the next Fed H.4.1 balance-sheet release, due 4:30pm ET Aug 13 · the first CLARITY cloture vote, precisely dated 2:15pm ET Sept 15 · an actual signed, operating Hormuz agreement the US accepts (route map alone isn't it — fees/compensation/sovereignty and continued attacks are the real test) · next FOMC (with SEP/dot plot), week of Sept 15 — the real test of whether today's dovish confirmation survives to an actual vote · GENIUS Act 18-month backstop effective Jan 18, 2027. Each pillar's trigger table says in advance what each outcome does to the scores.

This is research and education, not financial advice. The scores are probabilistic opinions with dated evidence — built to be argued with. If you check one thing manually, check the trigger tables: they are the falsifiable part.
