Master Direction Report

Five Pillars, One Table — Every Pillar Re-Researched and Re-Dated July 8, 2026

All four qualitative pillars (CLARITY Act, Iran War Risk, Tokenization, Fed & Macro) were ***fully re-researched on July 8, 2026*** *— fired triggers applied, scores re-rated as drafts — and blended with the quantitative Bitcoin TA sleeve (computed July 8). June-committed values are preserved in every report for the record.* ***Draft scores and the blend mix await my stamp.***

COINPICKS MASTER BLEND · 50% QUALITATIVE PILLARS + 50% QUANT TAPE

Compiled July 8, 2026 · BTC $62,274 · Engine: master_blend.py (scoreset: July 8 drafts) · Not Financial Advice

The Master Table

The whole thesis in five rows, on the July 8 re-rated drafts. Signal range –10 (max bear) to +10 (max bull).

WINDOW	QUAL BLEND	QUANT (TA)	MASTER	JUNE-CMTE MASTER	THE CALL
1 month	–0.59	–1.56	–1.08	–0.85	**Mild Bear** — tape broken, macro headwind, Iran shooting
3 months	–0.12	–1.46	–0.79	–0.54	**Mild Bear** — the final-flush window; watch $58,526
6 months	+0.71	–0.35	+0.18	+0.40	**Neutral** — basing; catalysts stack up late in the window
1 year	+2.59	+1.63	+2.11	+2.22	**Bull** — all five pillars positive; the thesis window
3 years	+3.74	+1.60	+2.67	+2.69	**Bull** — law + adoption + cycle + value

Formula: per pillar, Signal = ((P – 50) ÷ 50) × Quality × Impact. Qual Blend = weight-normalized mean of the four pillar signals (stated weights 25/25/30/25 sum to 105% — the blend divides by 1.05, so effective sleeve shares are 23.8/23.8/28.6/23.8%). MASTER = 50% Qual + 50% Quant — so a "25%" pillar is ~11.9% of the final master. Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. "June-Cmte Master" = same engine on the June-committed scores, for comparison. Machine-verified.

WHAT THE JULY 8 RE-RESEARCH CHANGED

Same five calls, harder near-term edge: the 1-month master moved **–0.85** → **–1.08** and 3-month **–0.54** → **–0.79** (Iran ceasefire broke; Fed hike odds jumped past 75%; CLARITY missed its July 1 checkpoint). The 6-month Neutral softened (+0.40 → +0.18), and the 1-year/3-year Bull barely moved (+2.22 → +2.11, +2.69 → +2.67) — the long thesis is intact; the near-term risk got real.

The Full Pillar Matrix

Every pillar's signal on every window — July 8 draft scores (each report shows June committed vs. draft side by side).

PILLAR (WEIGHT · IMPACT)	1 MO	3 MO	6 MO	1 YR	3 YR	STATUS
CLARITY Act (25% · 9)	+0.31	+0.92	+1.68	+5.35	+7.18	Jul 8 draft
Iran War Risk (25% · 7)	–0.84	–0.27	+0.49	+1.82	+2.54	Jul 8 draft
Tokenization RWA (30% · 8)	+0.29	+0.84	+1.63	+2.87	+3.92	Jul 8 draft
Fed & Macro (25% · 9)	–2.29	–2.14	–1.15	+0.27	+1.29	Jul 8 draft
Bitcoin TA — quant (sleeve · 8)	–1.56	–1.46	–0.35	+1.63	+1.60	Jul 8 computed

Draft P paths (June committed → July 8 draft) — CLARITY 55/60/65/85/92 → **52/56/61/83/92** · Iran 50/55/62/75/85 → **40/47/55/70/83** · Tokenization 53/57/62/72/85 → **52/56/62/73/85** · Fed & Macro 38/40/46/54/61 → **35/36/42/52/61** · Bitcoin TA **37/37/46/67/70** (computed). Quality and Impact unchanged everywhere.

The Story, Window by Window

What the blend is saying on July 8, 2026

- **1 month — Mild Bear (–1.08).** Three of five pillars are now negative: the Fed (–2.29: hike odds >75%, core PCE at a 31-month high, DXY at new highs), Iran (–0.84: ceasefire declared "over," Hormuz shipping under fire, oil re-sanctioning July 17), and the tape (–1.56: all seven weekly indicators bearish). CLARITY and Tokenization are barely positive. July is for patience and trigger-watching, not buying.
- **3 months — Mild Bear (–0.79).** The qualitative blend is now flat (–0.12, was +0.39 in June) and the quant analog still says this exact cycle-month was negative over the next quarter in **3 of 3** prior cycles (median –12%). The window holds the September-hike risk (~58% priced), the CLARITY cloture make-or-break (~July 20–24), and the MoU expiry (~Aug 16). The final-flush window, now with more ways to flush.
- **6 months — Neutral (+0.18).** Still the crossover, but softer: CLARITY (+1.68) and Tokenization (+1.63) pull forward while the Fed drag persists longer (–1.15). The historical average cycle bottom (~Aug 30) and the GENIUS rules completing both land inside this window.
- **1 year — Bull (+2.11).** Still the first window where *all five pillars are positive* — that survived the re-research. Legislation (+5.35), cycle analogs 3-for-3, price 54% below power-law fair value, and a labor market cracking fast enough to force the easing cycle into view.
- **3 years — Bull (+2.67).** Effectively unchanged by three weeks of bad news — which is the point of the long windows. Rules law ~90% (timing fight, not direction), tokenization TAM path intact, cycle turn overdue, valuation floor far below.

Where the Two Lenses Agree — and Where They Fight

The point of running qualitative and quantitative on the same standard

THE INDEPENDENT CONFIRMATION — NOW TIGHTER

Fed & Macro (judged) and Bitcoin TA (computed) are nearly the same path: P 35/36/42/52/61 vs 37/37/46/67/70. After the July re-research the two most independent methods in the stack agree within 2 points at 1 and 3 months, and within 4 at 6 months. And Iran now votes with them near-term. When three lenses converge on "bearish quarter," believe it.

THE REAL DISAGREEMENT

Near-term: CLARITY and Tokenization still say the structural news is mildly good (P 52 at 1 month each); the macro, geopolitics, and the tape say risk-off (P 35–40). The master resolves it the same honest way: a Mild Bear that defers the bullish pillars to the windows where their evidence is strongest.

Long-term: the qualitative sleeve is ~2.3× the quant at 3 years (+3.74 vs +1.60) — remember the TA pillar is capped by construction (P never leaves 25–75) and its 3-year Quality is 0.50. If the story pillars are right, the blend is conservative, not wrong.

Trigger Watch — The Next Six Weeks Are Dense

Fired June triggers are already IN the July 8 draft scores. These are the forward triggers; each pillar report carries the full table.

DATE / LEVEL	EVENT	RE-RATES
Jul 13	Senate returns; NDAA eats week one	CLARITY clock starts — ~19 usable days
Jul 14	June CPI (nowcast ~3.96% headline)	Fed 1/3-month; hotter = hike closer

Jul 17	Iran oil-sale waiver wind-down completes	Iran/oil near-term; watch Brent >$90
Jul 18	GENIUS implementing-rules statutory deadline	Tokenization 1-month: partial rules = fine, silence = headwind
~Jul 20–24	CLARITY cloture filed (or not)	Filed → CLARITY 1mo snaps back to ~58–60; not filed → 2026 passage fading
Jul 28–29	FOMC (hawkish hold ~73% priced) + June PCE Jul 25	Fed all windows; any hike signal = re-rate down
Aug 7	Last Senate session day before recess	No CLARITY vote by now → 2026 signing in doubt
~Aug 16	Islamabad Memorandum 60-day window expires	Iran: extension/deal = up; formal collapse = down
~Aug 30	Historical average cycle-bottom month (28) passes	TA: higher low after this + improving momentum = basing confirmed
$58,526 / ~$62,900 / ~$69,800	TA levels: June-30 low · 200-week MA · 20-week MA	Break below = flush live; reclaims = repair signals

The master flip line (unchanged): the Iran flip line (sustained wider war + Hormuz oil shock — now visibly closer) and the TA flip line (weekly close under $50,000) firing together turns the near-term Mild Bear into a full Bear and puts the 6-month Neutral under review. Either alone is a re-rate, not a regime change.

The Standard — Locked, and Now Fully Dated

Every report in the system now carries its full date lineage: written · committed · updated.

- **Windows:** 1mo / 3mo / 6mo / 1yr / 3yr. **Per window:** P (0–100) · Quality (0–1) · Impact (0–10) · Signal = ((P–50)/50) × Q × I.
- **Two score states:** *committed* (stamped by me, dated) and *draft* (evidence-driven re-rate, dated, awaiting stamp). Every July 8 report shows both side by side. The blend runs on drafts by default; flip one flag in master_blend.py to run committed-only.
- **Re-check discipline:** each report's trigger table is the contract — when a trigger fires, the affected window gets re-rated and the change is logged in "What Changed," with the date.
- **Quant pillars additionally:** reproducible scripts, out-of-sample validation (fail = excluded), honesty cap P = 50 ± 25.

SENSITIVITY (JULY 8 DRAFTS)	1 MO	3 MO	6 MO	1 YR	3 YR
60% qual / 40% quant	–0.98 Mild Bear	–0.65 Mild Bear	+0.29 Neutral	+2.21 Bull	+2.88 Bull
50 / 50 (headline)	**–1.08 Mild Bear**	**–0.79 Mild Bear**	**+0.18 Neutral**	**+2.11 Bull**	**+2.67 Bull**
40% qual / 60% quant	–1.17 Mild Bear	–0.92 Mild Bear	+0.07 Neutral	+2.01 Bull	+2.46 Bull

Every call is now identical across all three mixes — the July 8 re-research removed the June edge-wobbles. The table is mix-proof.

My Decision

◷ **COMPILED JULY 8, 2026 · ALL FIVE PILLARS CURRENT AS OF TODAY · AWAITING MY STAMP**

MASTER: –1.08 / –0.79 / +0.18 / +2.11 / +2.67 · Mild Bear → Neutral → Bull

Everything is now dated July 8, 2026, and the June-committed lineage is preserved in every report. Two things need my signature: **(1)** the five draft P-paths (each report shows June vs. draft side by side — override any P and re-run master_blend.py), **(2)** the 50/50 qual/quant mix (now immaterial to the calls — see sensitivity).

The trade plan comes from this table once stamped. The near-term message hardened: patience through the summer chop; the 1-year window is where all five pillars point the same way.

Sources

Each July 8 pillar report carries its full, freshly-verified source list. This master adds only the engine and price references.

- **The pillars (all re-dated July 8, 2026):** folder "Pillar Reports 2026-07-08" — CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro (each: June committed scores + July 8 draft re-rates + fired-trigger log + fresh sources) · Bitcoin TA Quant Pillar (this folder, computed July 8).
- **The engine:** master_blend.py + master_blend.json (this folder; scoreset flag: july8_draft / june_committed) · BTC-TA/pillar_mapping.py + data/pillar_scores.json · full quant pipeline in the BTC-TA folder (Bitstamp data through Jul 8, 2026).
- **Price:** Bitstamp BTC/USD daily close $62,274 (Jul 8, 2026); ATH $124,728 close (Oct 6, 2025); cycle low $58,526 close (Jun 30) / $57,735 intraday (Jul 1); cross-checked against Coinbase within ~0.1%.
