CoinPicks Market Direction

Research Package

Five pillars — four researched narratives and one pure-math read of the Bitcoin chart — scored on one standard, blended into one table, and distilled to one number. Everything in this folder is current as of **August 8, 2026** — a FULL WEEKLY refresh, the first deep re-verification since July 30. **Today's score set has been reviewed and stamped committed by Alex — see the note below.**

✓ **Stamped committed.** This was a full weekly refresh — per the runbook, those are never auto-stamped regardless of magnitude, so it was deliberately left as a draft pending manual review. Fed & Macro's 1-month score also moved a further +6 points this cycle on a confirmed, primary-sourced BLS jobs shock (moderated down from a same-day light draft's proposed +10 after independent fact-checking) — close enough to the ~8-point threshold to warrant manual review on its own. Alex reviewed both points and stamped the set committed, with no score changes. See the Master Report's "My Decision" section for the full rationale.

THE FINAL NUMBER · AUGUST 8, 2026 (COMMITTED, FULL WEEKLY) · BTC $65,006.64

+0.61 Mild Bull — the 1-month window stays outright Bear, same call band as Aug 7

Equal-weight mean of the five window signals below — every pillar counts 20% (scale −10 to +10; horizon-weighted variant +1.18). Positive because the far windows outweigh the near ones — **not a buy-today signal**. It is a "the storm is priced, the recovery isn't" number, and this week's full re-verification ticked it up slightly (from Aug 7's +0.54) for a more sober reason than a same-day light draft first implied: a weak July jobs report is a real, well-sourced positive for Fed & Macro, but by less than first drafted, while a full-week look found Iran War Risk actually got worse (a week of missed Hormuz tanker attacks plus a new Saudi front), and Tokenization firmed on a new RWA all-time-high. The near-term picture is a genuine mixed bag, not a clean improvement; the long-horizon structural case is unmoved.

THE FIVE WINDOWS UNDERNEATH IT

WINDOW	MASTER SIGNAL	CALL
1 month	−1.54	**Bear** — Iran's full-weekly correction offsets most of Fed & Macro's (moderated) improvement
3 months	−0.90	**Mild Bear** — the September FOMC still sits inside this window; hike odds eased, less than first claimed
6 months	+0.29	**Neutral** — CLARITY/Tokenization structural strength vs. Iran's drag
1 year	+2.11	**Bull** — all five pillars still positive
3 years	+3.11	**Strong Bull** — law + adoption + cycle + valuation, unchanged

Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. The Mild Bull conclusion stays positive under every leave-one-out drop (+0.23 to +0.92); dropping CLARITY or Tokenization still rounds down to **Neutral** on a strict read, essentially unchanged from Aug 7's result. See the Master Report's Robustness section.

Reading order

Twenty minutes to the whole picture; each report stands alone and can be checked independently — every fact is dated with sources on its last page.

#	FILE	WHAT IT IS
1	`CoinPicks_Master_Direction_Report.pdf`	**The summary.** The final number, the five-window table, the full pillar matrix, where the lenses agree/fight, six weeks of dated triggers, sensitivity.
2	`CoinPicks_Bitcoin_TA_Quant_Pillar_Report.pdf`	**The math pillar.** 7 indicators on 16 years of data, halving-cycle analogs, power-law valuation — with charts. Fully reproducible from code.
3	`reports/current/pdf/ — the four pillar PDFs`	**The story pillars.** CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro. Each: thesis, dated facts, honest bear case, dated triggers, and the full score lineage (June committed → every draft through August 8 full weekly).
4	`reports/archive/ + prior-work/`	Every earlier version, preserved untouched — the score history is fully auditable.
—	`run.py · engine/blend.py · data/master_blend.json`	The blend engine (runnable Python — reproduce any score set with run.py blend --set NAME), its output, and README.md for regeneration.

How the scoring works — one paragraph

Every pillar answers the same question on five windows (1 month / 3 months / 6 months / 1 year / 3 years): **P** = the odds (0–100) that this force is *good for crypto* by then, **Quality** = how trustworthy the evidence is (0–1), and **Impact** = how hard this force moves the whole market (0–10). These combine into a **Signal = ((P − 50) ÷ 50) × Quality × Impact** (Impact is a uniform 8 for every pillar), so a coin-flip view scores zero no matter how loud the headlines are, and weak evidence can't shout. **All five pillars are equal-weighted** — the master for each window is the simple mean of the five signals (20% each; add a pillar and it auto-rebalances to 1/N) — and the Final Number averages the five master windows.

The five pillars at a glance (August 8 committed P's — FULL WEEKLY refresh covering Jul 30 - Aug 8)

PILLAR	1MO	3MO	6MO	1YR	3YR	ONE-LINE READ
CLARITY Act (law)	32	47	58	82	92	Confirmed at 3mo: Majority Leader Thune's Aug 8 cloture filing on H.R. 3633 independently verified by 5 outlets, locking in a first procedural vote for Sept 15-16 — real progress, though Republicans hold only 53 of 60 votes needed and zero Democratic yes votes are confirmed
Iran War Risk	20	28	41	56	77	Corrected down at 1mo/3mo: a full-week look surfaced five missed Hormuz tanker attacks (Jul 31-Aug 5) and a new front (Houthi strike on Najran, Saudi Arabia, Aug 7) that daily "hold flat" checks undercounted; the touted Iran-Oman deal remains unsigned and one-sided
Tokenization (RWA)	52	60	66	74	85	Nudged up at 3mo/6mo: total RWA distributed value hit a new all-time high ($38.24B, rwa.xyz primary); two missed catalysts confirmed — Central Bank of Ireland clears Aviva's XRPL fund, Ripple takes equity in Zilo/Licuido
Fed & Macro	40	38	47	55	62	Re-rated up, moderated (reviewed and committed): BLS July jobs report (payrolls FELL 23,000 vs. +83,000 expected) confirmed accurate, but independent verification found a same-day light draft's proposed +10-point move too aggressive given BofA's unchanged hawkish call and the pending Aug 12 CPI
Bitcoin TA (quant)	39	36	45	68	70	Quant pillar refreshed on today's price (BTC $65,006.64, essentially flat vs. Aug 7; weekly tape −24.5 slight bearish, monthly −36.7 slight bearish, quarterly +10.8 neutral; cycle month 27.6)

P values shown (50 = coin flip). Fed & Macro (judged) sits only marginally ahead of Bitcoin TA (computed) at 1mo/3mo now, versus a same-day light draft that had the gap much wider before independent verification moderated the move.

Status & honesty notes

- **Score status:** August 8 scores were a FULL WEEKLY refresh that, after Step 6 verification passed clean, was deliberately left as a draft — not auto-stamped. Two independent reasons: it was a full weekly refresh, which the runbook's delegated-authority carve-out excludes from auto-stamping regardless of magnitude, and Fed & Macro's move (1mo +6, moderated from a same-day light draft's proposed +10) still sat close to the ~8-point threshold. It was flagged prominently for Alex's manual review (the August 7 set it builds on remains committed) — Alex has since **reviewed and stamped the set committed**, with no score changes. Every report prints the full lineage (June committed → every draft through August 8, now committed). Nothing hides its history — including the fact that this run corrected its own same-day light draft after independent adversarial re-verification.
- **Verification:** facts researched with primary-source discipline (bls.gov's own Employment Situation release, federalreserve.gov's H.4.1, rwa.xyz's live dashboard, Senate floor-record cloture filing, CENTCOM/Pentagon-adjacent reporting on strikes and casualties), independently fact-checked, and the whole package forensically audited; score math recomputed independently; price data cross-checked across two exchanges; models that failed out-of-sample testing were excluded and say so. This cycle's checks: confirmed the BLS July jobs report directly, then independently re-scrutinized a same-day light draft's proposed Fed & Macro magnitude against BofA/Morgan Stanley forecaster commentary and found it too aggressive; confirmed Thune's cloture filing against 5+ outlets; ran a full-week (not two-day) sweep on Iran that surfaced five previously-uncounted Hormuz tanker attacks and a new Saudi front; caught a recurring RWA-vs-Treasuries unit mislabeling and confirmed two tokenization catalysts the daily notes had missed.
- **Known limits, in print inside the reports:** cycle-analog claims rest on 3 completed cycles; the TA pillar caps its own conviction at P = 50 ± 25; this cycle's clearest fragility example is Fed & Macro, whose 1-month score moved on one data print that a major forecaster (BofA) explicitly says doesn't change its hike-cycle call, with the actual decisive print (July CPI) still pending Aug 12; single-source items are labeled in-line; current chart bars are partial and the completed-bar numbers are printed; the Robustness section shows dropping CLARITY or Tokenization still lands right at the Neutral/Mild-Bull boundary, a thinner margin than prior cycles.
- **The near-term calendar is the test:** July CPI, Aug 12 (the real Fed decider inside this month's window) · the first CLARITY cloture vote, Sept 15-16 · an actual signed, operating Hormuz agreement the US accepts (route map alone isn't it — fees/sovereignty and continued attacks are the real test) · next FOMC (with SEP/dot plot), also Sept 15-16 · GENIUS Act 18-month backstop effective Jan 18, 2027. Each pillar's trigger table says in advance what each outcome does to the scores.

This is research and education, not financial advice. The scores are probabilistic opinions with dated evidence — built to be argued with. If you check one thing manually, check the trigger tables: they are the falsifiable part.
