

CoinPicks Market Direction

Research Package

Five pillars — four researched narratives and one pure-math read of the Bitcoin chart — scored on one standard, blended into one table, and distilled to one number. Everything in this folder is current as of **September 11, 2026** — a light daily catch-up against the Sept 10 committed baseline. **This cycle's score set is COMMITTED — AUTO-STAMPED SEPTEMBER 11, 2026 — see the note below.**

COMMITTED — AUTO-STAMPED SEPTEMBER 11, 2026 (light daily catch-up, score set 2026-09-11_draft). CLARITY Act and Tokenization RWA were independently re-checked and held flat — nothing found cleared the sufficiency bar. **Two pillars moved, in opposite directions. Iran War Risk RE-RATED DOWN, modestly** (1/5/22/42/72 → 1/4/20/40/71): this pillar's own "sustained Brent close above \$100" flip-line clause FIRED on a third consecutive session — Brent ended Thursday Sept 10 up more than 6% above \$107 after trading above \$108 intraday, its highest since May 19, with WTI closing above \$102 for the first time since May (Rigzone/Bloomberg wire, TradingEconomics, Vantage Markets, NAI500), and Brent was still ~\$104.36 midday Friday, ~9% higher on the week. Fuller reporting also landed on Iran's Sept 9 shipping wave — 10 vessels attacked near Hormuz, at least one seafarer killed — but a merchant seafarer is not a US service member, so the confirmed-US-combat-death clause does not fire. **Fed & Macro RE-RATED UP, modestly** (32/31/43/54/60 → 34/33/44/54/60): this cycle held its research window open past 8:30am ET for the August CPI print, and BLS's own release has headline +0.4% m/m / +3.4% y/y (in line) with core +0.3% m/m / +2.4% y/y — one tenth cooler on the month than consensus — tempered by an energy-driven headline (gasoline +3.9%), the same oil shock firing Iran's clause. The two roughly cancel: THE FINAL NUMBER is +0.36, versus +0.34 at the last stamped set.

THE FINAL NUMBER · SEPTEMBER 11, 2026 (COMMITTED — AUTO-STAMPED, LIGHT DAILY CATCH-UP) · BTC \$77,063.25 ON SEPT 11

+0.36 Neutral — essentially unchanged from the last stamped set's (Sept 10) +0.34, no call-band flip

Equal-weight mean of the five window signals below — every pillar counts 20% (scale -10 to +10; horizon-weighted variant +0.90, a hair below Sept 10's +0.91, still Mild Bull). CLARITY and Tokenization held flat; Iran War Risk re-rated down modestly as its Brent flip-line clause fired; Fed & Macro re-rated up modestly on a core-CPI print a tenth cooler than consensus; Bitcoin TA (computed) firmed at the front end as its 1-month analog flipped back positive — BTC \$77,063.25 on Sept 11, down from Sept 10's \$77,993.99.

THE FIVE WINDOWS UNDERNEATH IT

WINDOW	MASTER SIGNAL	CALL
1 month	-1.62	Bear — a touch shallower; Iran holds at the near-floor drag, Fed improved on the CPI print and Bitcoin TA firmed as its 1-month analog flipped back positive
3 months	-1.29	Mild Bear — Fed's CPI-driven improvement roughly offsets Iran's further cut; the September FOMC still sits inside this window
6 months	-0.01	Neutral — CLARITY/Tokenization structural strength against Iran's deepening drag, with Fed a shade less negative; a hair below zero, well inside the Neutral band
1 year	+1.75	Bull — four of five pillars positive; Iran alone negative here
3 years	+2.94	Bull — law + adoption + cycle + valuation, barely moved

Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. The leave-one-out range this cycle is -0.11 to +1.00 — the sign still flips when Tokenization, CLARITY, or Iran are dropped individually, the same fragile-reading pattern as Sept 9; **dropping Iran alone moves the reading to +1.00, Mild Bull**, and dropping Fed & Macro alone also crosses into Mild Bull (+0.65). See the Master Report's Robustness section.

Reading order

Twenty minutes to the whole picture; each report stands alone and can be checked independently — every fact is dated with sources on its last page.

#	FILE	WHAT IT IS
1	CoinPicks_Master_Direction_Report.pdf	The summary. The final number, the five-window table, the full pillar matrix, where the lenses agree/fight, six weeks of dated triggers, sensitivity.
2	CoinPicks_Bitcoin_TA_Quant_Pillar_Report.pdf	The math pillar. 7 indicators on 16 years of data, halving-cycle analogs, power-law valuation — with charts. Fully reproducible from code.
3	reports/current/pdf/ — the four pillar PDFs	The story pillars. CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro. Each: thesis, dated facts, honest bear case, dated triggers, and the full score lineage (June committed → Aug 22 committed → Aug 28/29 drafts → Aug 31 committed → Sept 1 committed → Sept 2 committed → Sept 5 committed → Sept 6 committed → Sept 8 committed → Sept 9 committed → Sept 10 committed → Sept 11 committed, auto-stamped, this light daily catch-up cycle).
4	reports/archive/ + prior-work/	Every earlier version, preserved untouched — the score history is fully auditable.
—	run.py · engine/blend.py · data/master_blend.json	The blend engine (runnable Python — reproduce any score set with run.py blend --set NAME), its output, and README.md for regeneration.

How the scoring works — one paragraph

Every pillar answers the same question on five windows (1 month / 3 months / 6 months / 1 year / 3 years): **P** = the odds (0–100) that this force is *good for crypto* by then, **Quality** = how trustworthy the evidence is (0–1), and **Impact** = how hard this force moves the whole market (0–10). These combine into a **Signal = ((P – 50) ÷ 50) × Quality × Impact** (Impact is a uniform 8 for every pillar), so a coin-flip view scores zero no matter how loud the headlines are, and weak evidence can't shout. **All five pillars are equal-weighted** — the master for each window is the simple mean of the five signals (20% each; add a pillar and it auto-rebalances to 1/N) — and the Final Number averages the five master windows.

The five pillars at a glance (September 11 P's — light daily catch-up, Iran War Risk down and Fed & Macro up, both modestly, COMMITTED — AUTO-STAMPED)

PILLAR	1MO	3MO	6MO	1YR	3YR	ONE-LINE READ
CLARITY Act (law)	32	47	58	82	92	Held flat: Sept 15 2:15pm ET cloture vote unchanged; the whip-count writeup circulating this cycle is dated Sept 4, not new information
Iran War Risk	1	4	20	40	71	RE-RATED DOWN, modestly: the "sustained Brent close above \$100" flip-line clause FIRES — Brent closed above \$107 on Sept 10, its highest since May 19
Tokenization (RWA)	52	60	66	74	85	Held flat: no new dated rwa.xyz pull or rail event, no fresh dated catalyst
Fed & Macro	34	33	44	54	60	RE-RATED UP, modestly: August CPI core +0.3% m/m, a tenth cooler than consensus; headline in line but energy-driven
Bitcoin TA (quant)	58	47	59	68	69	Quant pillar recomputed on today's price (BTC \$77,063.25) — 1mo firmed as the cycle analog flipped back to 2-of-3 positive, the same n=3 fragility that moved it the other way yesterday

P values shown (50 = coin flip). CLARITY and Tokenization held flat this cycle; Iran War Risk re-rated down and Fed & Macro up, both modestly, and this set (light daily catch-up, 2026-09-11_draft) is COMMITTED — AUTO-STAMPED SEPTEMBER 11, 2026.

Status & honesty notes

- **Score status:** September 11 score set (2026-09-11_draft) — a **light daily catch-up** against the Sept 10 committed baseline (2026-09-10_draft, auto-stamped) — is **COMMITTED — AUTO-STAMPED SEPTEMBER 11, 2026**. CLARITY Act and Tokenization RWA were independently re-checked and held flat. **Iran War Risk re-rated down, modestly**, as its "sustained Brent close above \$100" flip-line clause fired; **Fed & Macro re-rated up, modestly**, after the August CPI print landed mid-cycle with core a tenth cooler than consensus. The master call band held Neutral → Neutral everywhere, sourcing clears the primary-source-plus-multi-outlet bar, and under the runbook's widened delegated authority the size of a move is not itself a reason to withhold — so this set is AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)." Every report prints the full lineage (June committed → Aug 22 committed → Aug 28/29 drafts → Aug 31 committed → Sept 1 committed → Sept 2 committed → Sept 5 draft → Sept 5 draft2 committed → Sept 6 committed → Sept 8 committed → Sept 9 committed → Sept 10 committed → Sept 11 committed, auto-stamped).
- **Verification:** facts researched with primary-source discipline corroborated by multiple independent outlets per claim. Results: the August CPI figures come from the BLS release itself (bls.gov, fetched directly and re-fetched to confirm) — several aggregator summaries circulating within minutes carried inconsistent numbers and were discarded; Brent's close above \$107 on Sept 10 is corroborated across Rigzone (Bloomberg wire), TradingEconomics, Vantage Markets and NAI500; Iran's 10-vessel Sept 9 shipping wave is corroborated across four outlets carrying the Reuters wire (U.S. News, RTE, Foreign Policy, The Hill); a single-source Hormuz-throughput compilation was reported but explicitly not used to move a score; no new dated catalyst was found for CLARITY Act or Tokenization RWA.
- **Known limits, in print inside the reports:** cycle-analog claims rest on 3 completed cycles, a disclosed fragility this report has repeatedly flagged (this cycle's own 1-month analog flipped from 2-of-3 to 1-of-3 positive on a single day's price move); the TA pillar caps its own conviction at $P = 50 \pm 25$; single-source items are labeled in-line; current chart bars are partial and the completed-bar numbers are printed; the Robustness section shows dropping Iran alone still flips the headline to Mild Bull, and dropping Fed & Macro alone does too — two pillars this report flags as doing most of the work on the headline number, and the leave-one-out range this cycle (-0.11 to $+1.00$) genuinely crosses zero.
- **The near-term calendar is the test:** the August CPI print, Sept 11, 2026, now widely flagged as the likely Fed decider · the next FOMC (with SEP/dot plot), Sept 15, 2026 · the first CLARITY cloture vote, precisely dated 2:15pm ET Sept 15 · whether Brent's above-\$100 run extends to a third session (now the closest this war has come to a sustained-close flip-line clause), whether the Houthis actually execute a blockade or closure at Bab el-Mandeb, and whether Iran actually declares and enforces the restricted zone beyond Hormuz — the real tests for Iran War Risk next cycle · GENIUS Act 18-month backstop effective Jan 18, 2027. Each pillar's trigger table says in advance what each outcome does to the scores.

This is research and education, not financial advice. The scores are probabilistic opinions with dated evidence — built to be argued with. If you check one thing manually, check the Iran War Risk pillar's My Decision section and trigger table — this is the cycle where its written-down "sustained Brent close above \$100" clause actually fired, after two cycles of calling it a near-miss. That is the falsifiable part.
