

CoinPicks Market Direction

Research Package

Five pillars — four researched narratives and one pure-math read of the Bitcoin chart — scored on one standard, blended into one table, and distilled to one number. Everything in this folder is current as of **September 5, 2026** — a FULL WEEKLY refresh against the Sept 2 TRUE committed baseline. **This cycle's score set is COMMITTED BY ALEX SEPTEMBER 5, 2026 — see the note below.**

COMMITTED BY ALEX SEPTEMBER 5, 2026 (FULL WEEKLY REFRESH, score set 2026-09-05_draft2). Three qualitative pillars (CLARITY Act, Tokenization RWA, Iran War Risk) were independently re-checked and held flat — nothing found cleared the sufficiency bar to move a score. A Sept 3 second Iranian retaliatory wave hit repeat targets (Kuwait, UAE) with no US-manned facility struck; a Reuters weapons-expert analysis corroborated the Sept 1 Kuhestak wedding strike as a likely direct US-munition hit, but that confirms attribution of an already-priced event, not new escalation. The Sept 5 tanker report has firmed up since a same-day earlier daily touch — the vessel is now identified as the Iranian-flagged NITC tanker STARK 1, with Iran International separately corroborating via video that US radio warnings were issued — but AP itself frames it as an Iranian accusation, not a confirmed fact, and CENTCOM has still not confirmed or denied it, so it remains NOT used to move P. **Fed & Macro re-confirmed its re-rate down** (36/35/45/55/61 → 32/31/43/54/60): the August jobs report (BLS, primary, Sept 4) beat sharply — nonfarm payrolls +162,000 vs. ~53-55,000 consensus — and markets repriced Sept 15-16 FOMC hike odds higher off of it, net of Fed Governor Waller's offsetting Sept 3 dovish-leaning speech, with a same-day 2yr-yield move to a high since January 2025 and a ~2% BTC pullback. **This IS a full weekly refresh** — categorically excluded from the delegated daily auto-stamp policy regardless of research quality or move size — so it went to Alex for manual review and is **COMMITTED BY ALEX SEPTEMBER 5, 2026. CORRECTION:** a same-day earlier light daily catch-up (2026-09-05_draft) reported itself as auto-stamped in its commit message, but config/scores.json's status field for that set was never actually advanced from "draft" — a bug in that session, flagged here, not corrected retroactively. See the Master Report's "My Decision" section for the full rationale.

THE FINAL NUMBER · SEPTEMBER 5, 2026 (DRAFT — AWAITING ALEX'S MANUAL REVIEW, FULL WEEKLY REFRESH) · BTC \$79,646.11 ON SEPT 5

+0.43 Neutral — down modestly from the last stamped set's (Sept 2) +0.49, no call-band flip

Equal-weight mean of the five window signals below — every pillar counts 20% (scale -10 to +10; horizon-weighted variant +1.00, down from Sept 2's +1.04, still Mild Bull). Three qualitative pillars held flat this cycle; Fed & Macro re-rated down on a hot jobs print and higher FOMC hike-odds pricing; Bitcoin TA (computed) firmed slightly — BTC \$79,646.11 on Sept 5, essentially flat vs. Sept 4's \$79,676.60 after a ~2% jobs-day pullback from Sept 3's \$81,265.00.

THE FIVE WINDOWS UNDERNEATH IT

WINDOW	MASTER SIGNAL	CALL
1 month	-1.65	Bear — Fed & Macro's fresh cut adds to Iran's already-sharp drag on the near end
3 months	-1.21	Mild Bear — Fed drags harder alongside Iran; the September FOMC still sits inside this window
6 months	+0.13	Neutral — CLARITY/Tokenization structural strength vs. Fed's and Iran's drag
1 year	+1.90	Bull — four of five pillars positive; Iran alone negative here
3 years	+3.00	Strong Bull — law + adoption + cycle + valuation, barely moved

Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. Every leave-one-out drop stays non-negative (+0.00 to +1.03); **dropping Iran alone moves the reading to +1.03, Mild Bull**, and dropping Fed & Macro alone now also crosses into Mild Bull (+0.76) after this cycle's cut. See the Master Report's Robustness section.

Reading order

Twenty minutes to the whole picture; each report stands alone and can be checked independently — every fact is dated with sources on its last page.

#	FILE	WHAT IT IS
1	CoinPicks_Master_Direction_Report.pdf	The summary. The final number, the five-window table, the full pillar matrix, where the lenses agree/fight, six weeks of dated triggers, sensitivity.
2	CoinPicks_Bitcoin_TA_Quant_Pillar_Report.pdf	The math pillar. 7 indicators on 16 years of data, halving-cycle analogs, power-law valuation — with charts. Fully reproducible from code.
3	reports/current/pdf/ — the four pillar PDFs	The story pillars. CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro. Each: thesis, dated facts, honest bear case, dated triggers, and the full score lineage (June committed → Aug 22 committed → Aug 28/29 drafts → Aug 31 committed → Sept 1 committed → Sept 2 committed → Sept 5 committed, this light daily catch-up cycle).
4	reports/archive/ + prior-work/	Every earlier version, preserved untouched — the score history is fully auditable.
—	run.py · engine/blend.py · data/master_blend.json	The blend engine (runnable Python — reproduce any score set with <code>run.py blend --set NAME</code>), its output, and README.md for regeneration.

How the scoring works — one paragraph

Every pillar answers the same question on five windows (1 month / 3 months / 6 months / 1 year / 3 years): **P** = the odds (0–100) that this force is *good for crypto* by then, **Quality** = how trustworthy the evidence is (0–1), and **Impact** = how hard this force moves the whole market (0–10). These combine into a **Signal = ((P – 50) ÷ 50) × Quality × Impact** (Impact is a uniform 8 for every pillar), so a coin-flip view scores zero no matter how loud the headlines are, and weak evidence can't shout. **All five pillars are equal-weighted** — the master for each window is the simple mean of the five signals (20% each; add a pillar and it auto-rebalances to 1/N) — and the Final Number averages the five master windows.

The five pillars at a glance (September 5 P's — FULL WEEKLY refresh, three pillars held flat, Fed & Macro re-confirmed its re-rate down, COMMITTED by Alex September 5)

PILLAR	1MO	3MO	6MO	1YR	3YR	ONE-LINE READ
CLARITY Act (law)	32	47	58	82	92	Held flat: Sept 15 2:15pm ET cloture vote remains the only scheduled action; no White House sign-off on the ethics text found
Iran War Risk	1	9	27	47	74	Held flat: Sept 3 second retaliatory wave hit repeat targets (Kuwait, UAE), no US-manned facility struck; Sept 5 Kharg Island tanker report unconfirmed, not used
Tokenization (RWA)	52	60	66	74	85	Held flat: no dated catalyst found Sept 3-5
Fed & Macro	32	31	43	54	60	RE-CONFIRMED re-rate down, DRAFT: hot August jobs report (BLS, Sept 4) pushed Sept 15-16 FOMC hike-odds pricing higher; left as draft, full weekly refresh
Bitcoin TA (quant)	59	48	60	68	69	Quant pillar recomputed on today's price (BTC \$79,646.11) — 1mo/6mo firmed slightly on the day's data refresh

P values shown (50 = coin flip). Three qualitative pillars held flat this cycle; Fed & Macro re-confirmed its re-rate down on a hot jobs print and this set (full weekly refresh, 2026-09-05_draft2) is COMMITTED by Alex, September 5, 2026.

Status & honesty notes

- **Score status:** September 5 score set (2026-09-05_draft2) — a **FULL WEEKLY refresh** against the Sept 2 TRUE committed baseline (2026-09-02_draft, auto-stamped Sept 3) — is **COMMITTED BY ALEX SEPTEMBER 5, 2026**. Three qualitative pillars (CLARITY Act, Tokenization RWA, Iran War Risk) were independently re-checked and held flat. **Fed & Macro re-confirmed its re-rate down** a further modest step on the hot August jobs report and higher FOMC hike-odds pricing. This IS a full weekly refresh — categorically excluded from the delegated daily auto-stamp policy regardless of research quality — so it went to Alex for manual review and was stamped. A same-day earlier light daily catch-up (2026-09-05_draft) wrongly reported itself as auto-stamped in its commit message; config/scores.json shows it was never actually advanced from draft — flagged as a correction, not itself edited. Every report prints the full lineage (June committed → Aug 22 committed → Aug 28/29 drafts → Aug 31 committed → Sept 1 committed → Sept 2 committed → Sept 5 draft → Sept 5 draft2 committed).
- **Verification:** facts researched with primary-source discipline corroborated by multiple independent outlets per claim. Results: the August jobs report (BLS primary, Sept 4) and its market reaction are confirmed across CNBC, Yahoo Finance, TheStreet, U.S. News, and Investing.com/Reuters; Iran's Sept 3 second retaliatory wave against repeat targets (Kuwait, UAE) is confirmed via GlobalSecurity and Critical Threats, with a US official confirming no US-manned facility was hit; the Reuters weapons-expert forensic analysis of the Sept 1 Kuhestak wedding strike is multi-source corroborated but explicitly logged as attribution-only, not a fresh escalatory event; the Sept 5 Kharg Island tanker report is explicitly flagged single-source (Iranian state media only) and is NOT used to move P; no new dated catalyst was found for CLARITY Act or Tokenization RWA.
- **Known limits, in print inside the reports:** cycle-analog claims rest on 3 completed cycles, a disclosed fragility this report has repeatedly flagged; the TA pillar caps its own conviction at $P = 50 \pm 25$; single-source items are labeled in-line — today's Kharg Island report is the clearest example, logged but explicitly not scored; current chart bars are partial and the completed-bar numbers are printed; the Robustness section shows dropping Iran alone still flips the headline to Mild Bull, and dropping Fed & Macro alone now does too after this cycle's cut — two pillars this report flags as doing most of the work on the headline number.
- **The near-term calendar is the test:** the August CPI print, Sept 11, 2026, now widely flagged as the likely Fed decider · the next FOMC (with SEP/dot plot), Sept 15, 2026 · the first CLARITY cloture vote, precisely dated 2:15pm ET Sept 15 · whether the still-unconfirmed Sept 5 Kharg Island tanker report is independently verified — the real test for Iran War Risk next cycle · GENIUS Act 18-month backstop effective Jan 18, 2027. Each pillar's trigger table says in advance what each outcome does to the scores.

This is research and education, not financial advice. The scores are probabilistic opinions with dated evidence — built to be argued with. If you check one thing manually, check the Fed & Macro pillar's My Decision section and the Iran War Risk pillar's trigger table (including the Sept 5 Kharg Island entry) — they are the falsifiable part.
