The Fed & Macro Regime Pillar Report

Liquidity as the Master Driver — Researched, Scored, and Re-Rated

Originally written and scores committed by me on June 12, 2026. Fully re-researched July 8, 13, 18, 25, and 30, 2026, and again as a full weekly refresh on August 8, 2026 (re-rated up to a moderated 40/38/47/55/62 on the BLS July jobs report, committed and stamped by Alex). Re-rated up again August 13 to 43/41/48/56/62 on a cool CPI print and a weak claims print; held flat August 14, 16, and through two Aug 22 cycles (a catch-up draft, then the full weekly refresh) — committed and stamped by Alex August 23, 2026, the last true baseline. A same-day catch-up draft written August 28 (score set 2026-08-28_draft) re-rated down to 38/37/46/55/61 on Fed Chair Warsh's hawkish Jackson Hole speech and a hot July PCE print, but was **never rendered, selfchecked, archived, or committed** — it sits abandoned, superseded mid-cycle. **This version (August 29, score set 2026-08-29_draft) is a FULL WEEKLY refresh and goes further, re-rating down to 36/35/45/55/61.** A dedicated adversarial-verification pass this cycle caught a real error in the abandoned draft: its CME FedWatch September rate-hike-odds figure (~35.4%→~45.7%) UNDERSTATED the actual market move. Independent re-pull and cross-check — Motley Fool citing CME FedWatch directly at 57.5%, CNBC's own body text at "nearly 56%," and a third independent source at "55.7%" — shows the real post-speech reading clustered tightly in the high-50s, roughly 56-58%, not 45.7%. September hike odds are now past coin-flip, not just approaching it. Two fresh facts not in the abandoned draft: initial jobless claims for the week ended Aug 22 (DOL, primary, Aug 27) came in at 203,000 vs. 208,000 consensus, a mild hawkish-adjacent tightening signal; and the Aug 26 H.4.1 balance-sheet release (federalreserve.gov, primary) showed the same reserve-drain pattern continuing (reserve balances -\$10,351M w/w to \$2,924,936M; TGA -\$2,876M w/w to \$950,736M), logged but not independently trigger-worthy. This cycle also corrects the abandoned draft's price-action framing: BTC did NOT hold a stable tape through the speech — it opened Aug 28 around \$80,262, traded above \$81,000 pre-speech, then fell back sharply once Warsh spoke, closing \$79,613.44 that day, and continued falling to \$77,666.16 by today, Aug 29 (Bitstamp) — a real, visible reaction, not a shrug. **Net: the corrected, larger CME move justifies a deeper cut than the abandoned draft reached.** 1mo 43→36 (-7), 3mo 41→35 (-6), 6mo 48→45 (-3), 1yr 56→55 (-1), 3yr 62→61 (-1) — still minimal at the long end, since Warsh explicitly declined to commit to a reaction function and one repricing doesn't reach three years out. Left as draft at delivery, not auto-stamped: this is a FULL WEEKLY refresh, which the runbook's delegated daily auto-stamp authority categorically excludes regardless of move size — doubly so here since every window moved 7 points or fewer anyway. Flagged for Alex's manual review; see My Decision below. **THIS VERSION (August 31) is a light daily catch-up, score set 2026-08-31_draft**, covering Aug 29-31: CME FedWatch September hike odds continued drifting up post-Warsh (CNBC Aug 28: ~45.7%; CoinSpectator/Bitcoin.com Aug 30: ~57%; CNBC Aug 31 Jackson-Hole-roundup: ~60.4%, up from ~56% Friday) — directionally the same hawkish repricing already sized into the Aug 29 cut (which used a 56-58% cluster as its basis). Per the sufficiency rule, a market-odds drift alone, without a fresh primary data print or news event, cannot move P further. No new H.4.1 (next due Sept 3, last Aug 27) or jobless claims release landed in this window. **P HELD FLAT at 36/35/45/55/61.** This is a light daily touch, no window moved, no call band flipped — **AUTO-STAMPED** per delegated daily authority. **Sept 1: held flat again** — CME FedWatch September hike odds continued the same post-Jackson-Hole drift (Forbes/KuCoin ~66% at 11:40am ET Aug 31, up from the ~60.4% CNBC read this pillar's Aug 31 baseline used), but it's the same intraday drift sequence with no new primary print or news event behind it, so per the sufficiency rule it does not independently move P; no new H.4.1 or claims release landed (Aug 31 was Labor Day). Score set 2026-09-01_draft, AUTO-STAMPED, new last COMMITTED baseline. **Sept 2: held flat a further time** — no new H.4.1 or data print found dated Sept 1-2; September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continues the same post-Jackson-Hole drift already priced into the Sept 1 baseline, not a fresh data-driven move, so per the sufficiency rule it does not independently move P. Score set 2026-09-02_draft — this pillar's own P is unaffected, but because all four qualitative pillars share one dated score set and Iran War Risk's sharp re-rate this cycle flips the master call band (Mild Bull → Neutral) and needs Alex's manual review, the WHOLE 2026-09-02_draft set — Fed & Macro's flat P included — stays in DRAFT status, not committed, per house rule (see My Decision and the Iran War Risk pillar report); COMMITTED, AUTO-STAMPED SEPTEMBER 3, 2026 once Alex widened

the policy — this is the last TRUE committed baseline: 36/35/45/55/61. **Sept 3: held flat a further time** — light daily catch-up found nothing material on any of the four qualitative pillars; config/scores.json untouched, blend re-run against fresh quant data only. **Sept 5, light daily catch-up (score set 2026-09-05_draft): RE-RATED DOWN a modest further step, 36/35/45/55/61 → 32/31/43/54/60.** The August jobs report (BLS, primary, released Sept 4) beat sharply — nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment steady at 4.1% — and markets repriced September 15-16 FOMC hike odds higher off of it (CNBC, Yahoo Finance, TheStreet, U.S. News, Investing.com/Reuters — point estimates vary 60-66% by source/timestamp but are directionally consistent and higher than the Sept 2 baseline's "60% hold" framing). Same-day reaction: 2yr Treasury yield +5.3bp to its highest since January 2025; Dow -0.51%, S&P -0.38%, Nasdaq -0.29%; BTC fell ~2% same-day (\$81,265.00 Sept 3 close → \$79,676.60 Sept 4 close). Fed officials remain split (Warsh hawkish; Waller says he'd lean toward holding if inflation improves), with the Sept 11 CPI print now flagged as the likely decider before Sept 15-16. Move sized comparably to the Aug 22-28 catch-up cut on the Warsh Jackson Hole speech alone (a comparable single dated catalyst): 1mo -4, 3mo -4, 6mo -2, 1yr -1, 3yr -1, no window over 8 points. **CORRECTION:** that cycle's commit message claimed "AUTO-STAMPED SEPTEMBER 5, 2026," but config/scores.json's status field was never actually advanced to committed — a bug in that session, flagged here and not corrected retroactively (stamping is Alex's call). **Sept 5, FULL WEEKLY refresh (2026-09-05_draft2), this version:** independently re-verified via WebSearch — Fed Governor Waller's genuinely dovish-leaning Sept 3 speech ("give disinflation a chance") briefly cut CME hike odds to ~48% (Semafor, CNBC, Bloomberg, PBS) before the Sept 4 jobs beat reversed that back up to 60-66% (Forbes/CME FedWatch), a net hawkish drift for the week consistent with the Sept 5 cut. No further Fed commentary or data since; the Sept 11 CPI print has not yet landed. **HELD FLAT at this cycle's re-rated level, 32/31/43/54/60. Full weekly refreshes are categorically excluded from the delegated daily auto-stamp policy regardless of move size — left for manual review, and COMMITTED BY ALEX SEPTEMBER 5, 2026.** **Sept 6: light daily catch-up, held flat.** Re-checked via WebSearch: no new Fed speech, data release, or FOMC commentary since Sept 3-4 (Governor Waller's dovish-leaning Sept 3 speech and the Sept 4 BLS August payrolls beat were already captured in the Sept 5 re-rate). September 6 is a Saturday — markets and the Fed's own calendar are quiet, no data or speeches scheduled. The September 11 CPI print remains the next dated catalyst and has not yet landed. **HELD FLAT at 32/31/43/54/60.** **Sept 8: light daily catch-up, held flat again.** Re-checked via WebSearch: no new Fed speech, data release, or FOMC commentary since Sept 3-4; the Sept 11 CPI print and the Sept 15-16 FOMC meeting remain the next dated catalysts, not pre-empted this cycle. **HELD FLAT at 32/31/43/54/60.** **Sept 9: light daily catch-up, held flat again.** Re-checked directly against CME FedWatch-citing coverage — September 25bp-hike odds read ~58.7% (as of Sept 7, CNBC/cryptonews), consistent with the ~56-58% cluster already priced into the baseline, not a fresh move; no new FOMC meeting, no new BLS/DOL primary release since Sept 3-4. The Sept 11 CPI print and Sept 15-16 FOMC remain the next dated catalysts. **HELD FLAT at 32/31/43/54/60.** **Sept 10: light daily catch-up (score set 2026-09-10_draft) vs the 2026-09-09_draft committed baseline.** Held flat at 32/31/43/54/60 — independently re-checked, nothing cleared the sufficiency bar. The Aug CPI release (due Sept 11) and the FOMC meeting (Sept 15-16) are both still pending per BLS/Fed calendars — no new primary data since Sept 9. The master FINAL NUMBER's call band did not flip anywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull horizon-weighted) — so per the runbook's delegated auto-stamp authority this set is **AUTO-STAMPED: status committed, stamped by "Alex (auto-stamped)."** **THIS VERSION (September 11, score set 2026-09-11_draft) RE-RATES UP, modestly, to 34/33/44/54/60.** This cycle deliberately held its research window open past 8:30am ET for the print this pillar has been flagging for a week, and the August CPI print landed on schedule at 8:30am ET: BLS's own release (bls.gov, primary, fetched directly and re-fetched to confirm) has headline CPI-U +0.4% m/m SA in August after +0.1% in July and +3.4% y/y NSA, with core (all items less food and energy) +0.3% m/m after +0.2% in July and +2.4% y/y; energy rose 2.1% m/m and gasoline 3.9%, accounting for over a third of the monthly increase, while shelter rose 0.3%. Against the consensus circulating pre-print (headline +0.4% m/m / 3.4% y/y; core +0.4% m/m / 2.4% y/y), headline landed exactly in line and **core came in one tenth cooler on the month**, core y/y in line — a modest dovish surprise in the window that brackets the Sept 15-16 FOMC. It is tempered, not clean relief: headline accelerated from +0.1% to +0.4% and the acceleration is energy-driven — the same oil shock that fires the Iran pillar's "sustained Brent > \$100" clause this cycle shows up here as headline inflation. Market-implied September hike odds circulating around the print (~70% for a 25bp move) are a market price, reported and not used to move P; the BLS release itself is the mover. Cross-source caution logged: several aggregator summaries of this print circulating within minutes carried figures inconsistent with the BLS release (e.g. a 3.1% core y/y) — discarded in favour of the primary document. Re-rated up on the windows bracketing the FOMC only: **1mo 32-34, 3mo 31-33, 6mo 43-44;** 12mo and 36mo held flat at 54/60 — a single in-line-to-a-tenth-cooler print does not move the multi-year regime read. **AUTO-STAMPED: status committed, stamped by "Alex (auto-stamped)."** **Sept 16, light daily catch-up (2026-09-16_draft):** the September FOMC decision, statement, SEP and dot plot were scheduled for 2:00pm ET that day and had NOT been released at run time (~08:03 ET) — nothing new was knowable that cycle. **HELD FLAT at 34/33/44/54/60, AUTO-STAMPED. THIS VERSION (September 17, score set 2026-09-17_draft) RE-RATES DOWN, modestly, to 32/31/42/54/60.** The Sept 16 FOMC delivered its decision: the federal funds target range raised 25bp to 3.75%-4.00%

(12-0 vote), the first hike in three years (federalreserve.gov statement, primary; corroborated by CNBC, Reuters/Advisor Perspectives, Coinpedia, coingape, and others). The hike itself was ~92.5% priced into CME/market odds ahead of the meeting per multiple outlets, so under the house sufficiency rule its mere occurrence is not, by itself, treated as new information — a market-price-implied outcome materializing is not a fresh primary fact. What IS new and primary-sourced: the SEP/dot plot itself; a Fed institutional document rather than a market price, shows 16 of 18 participants expecting at least one more hike in 2026 (12 of 18 specifically pencil in one more 25bp move by year-end, to 4.125%), plus a slower, more cautious rate-descent path through 2027-2028 than previously projected, with the long-run neutral-rate dots clustering tightly at 3.0%. Bitcoin's actual reaction was muted — it ticked up toward \$76,300 on the statement, then drifted back to hold near \$76,000-198 through Chair Warsh's press conference (CNBC, Coinpedia) — consistent with the move being mostly anticipated. Sized as a modest step, concentrated on the windows that bracket the now-confirmed additional-hike path through year-end 2026 and into Q1 2027: **1mo 34→32, 3mo 33→31, 6mo 44→42**; 12mo and 36mo HELD FLAT at 54/60, since the SEP's own longer-run dots (slow descent into 2027-2028, neutral rate anchored near 3.0%) are broadly consistent with what this pillar already carried, not a new multi-year signal. Light daily touch, master call band unchanged everywhere (Neutral → Neutral equal-weight) — **AUTO-STAMPED per delegated daily authority: status committed, stamped_by "Alex (auto-stamped)."**

COINPICKS PILLAR REPORT · WEIGHT: 20% OF MY THESIS (EQUAL, 1/5)

Written June 12, 2026 · Updated & Re-verified September 17, 2026 (LIGHT DAILY touch, MERGE SET **2026-09-17_draft2: RE-RATED DOWN to 32/30/38/44/58** from the 34/33/44/54/60 baseline. Two independent Sept 17 runs occurred — the cloud routine's (committed as 2026-09-17_draft) and a local run — and this set takes the cloud's committed set as its baseline, carries its CLARITY, Iran and Tokenization values forward untouched, and corrects THIS pillar only. Both runs agree the Sept 16 FOMC fired this pillar's central trigger, that the 12-0 hike to 3¾-4% was already priced, and that the SEP was the mover. They differ on reach. PRIMARY, fetched directly from federalreserve.gov Table 1: the median federal funds rate is **4.1% for end-2026 AND 4.1% for end-2027**, that second figure revised up from **3.6%** in the June SEP — no net easing across all of 2027. The cloud set read the 2027-28 path as "a slower descent" and held 12mo/36mo flat at 54/60; against the actual table a 50bp upward revision to the one-year-out median is precisely new information about the one-year window, so 12mo takes -10 and flips this pillar to Mild Bear there. Counterweight sized in: Warsh filed *no dot at all* and said "I'm not changing the forward guidance business.") · Baseline: 32/31/42/54/60 (2026-09-17_draft, cloud, committed) · Not Financial Advice

The Scores — Committed vs. Drafts

June column committed by me on June 12, 2026. Aug 22 draft2 is the last committed baseline (stamped by Alex Aug 23, 2026). Aug 28 was a same-day catch-up draft that re-rated down but was **never delivered** (not rendered, self-archived, or committed) — shown for lineage only, superseded. Aug 29 was a FULL WEEKLY refresh that went further, after an adversarial-verification pass corrected an understated CME odds figure in the abandoned draft — left as committed by Alex. Aug 31 and Sept 1 are light daily catch-ups that each held flat and were AUTO-STAMPED. Sept 2 held flat again and was originally left as draft only because Iran War Risk's re-rate flipped the master call band; CME odds were advanced to committed — a bug, flagged as a correction this cycle. **Sept 5 FULL WEEKLY refresh (2026-09-05_draft2, this version)** independently re-confirms the re-rate via fresh WebSearch research; categorically excluded from delegated stamp authority, so it went to manual review and is **COMMITTED BY ALEX September 5, 2026** at 32/31/43/54/60. **Sept 6 and Sept 8 light daily catch-ups (2026-09-06_draft, 2026-09-08_draft)** each independently re-checked and held flat — no new Fed speech or data release since Sept 3-4, the Sept 11 CPI print still pending — and were **AUTO-STAMPED**, Sept 8 the last COMMITTED baseline. **Sept 9 (2026-09-09_draft, this version)** holds flat a further time — September hike odds ~58.7% read consistent with the already-priced cluster, not a fresh move — **AUTO-STAMPED per delegated daily authority**, the new last COMMITTED baseline. **Sept 10 (2026-09-10_draft)** holds flat a further time, this morning — no new Fed speech or primary data release since the CPI print — **AUTO-STAMPED**, the last TRUE committed baseline. **Sept 11 (2026-09-11_draft)** RE-RATES DOWN modestly to 34/33/44/54/60 once the August CPI print lands: headline in line at +0.4% m/m / 3.4% y/y, core one tenth cooler than consensus at +0.3% m/m (2.4% y/y), with the headline acceleration energy-driven — **AUTO-STAMPED**, the committed baseline. **Sept 12 FULL WEEKLY refresh (2026-09-12_draft2, this version, column "9/12 d2")** independently re-verifies the August CPI print (no discrepancy) and examines the new August PPI release (BLS, 5.4% y/y headline that is energy-driven, with core PPI actually undershooting consensus — a mild disinflationary surprise reinforcing, not contradicting, the already-priced cooler CPI read, so it does not clear the bar as a distinct new move). **HELD FLAT at 34/33/44/54/60 — full weekly refreshes are categorically excluded from delegated auto-stamp authority regardless of findings, left as DRAFT for Alex's manual review. Sept 16 light daily catch-up (2026-09-16_draft)** held flat again at 34/33/44/54/60 — the FOMC decision itself had not landed at run time — **AUTO-STAMPED**, the last TRUE committed baseline. **Sept 17 light daily catch-up (2026-09-17_draft, this version, column "9/17 d2")** RE-RATES DOWN modestly to 32/31/42/54/60 once the Sept 16 FOMC decision and its SEP/dot plot land: the 25bp hike itself was already priced (market odds, not scored), but the dot plot's hawkish forward guidance — 16 of 18 officials expect another 2026 hike — is new primary Fed information, sized on the windows bracketing year-end 2026 through Q1 2027.

Baseline P (2026-09-17_draft, the cloud routine's committed Sept 17 set): 32 / 31 / 42 / 54 / 60 · **Current P (2026-09-17_draft2, merge set, this pillar corrected, AUTO-STAMPED):** 32 / 30 / 38 / 44 / 58 · **Weight:** 20% (equal) (uniform) · **Formula:** Signal = ((P – 50) ÷ 50) × Quality × Impact. The merge changes this pillar and nothing else: CLARITY Act (15/28/45/72/92), Iran War Risk (1/1/14/33/66) and Tokenization (52/60/66/74/85) are carried forward from the cloud's committed set unchanged, because they rest on dated facts that run pulled and this one did not independently surface. Correcting a pillar on better primary evidence is legitimate; reverting pillars on the basis of not having I not be.

THE THREE INPUTS, IN PLAIN ENGLISH

P — the odds the macro regime is *good for crypto* by then — not "the Fed cuts by then." Re-rated down this cycle to 36/35/45/55/61 from the committed 43/41/48/56/62 — further than the abandoned, never-delivered Aug 28 draft's 38/37/46/55/61. The underlying trigger is the same one that draft identified: Fed Chair Warsh's first Jackson Hole speech as Chair (federalreserve.gov primary transcript, Aug 28, "Financial Innovation: Implications for Payments and Policy") — confirmed verbatim this cycle via direct fetch of the transcript: "And while this summer's PCE and CPI readings were better than expected, they do not tell me that underlying trends have meaningfully improved." (The widely-used "may need to raise rates" framing is a fair journalistic paraphrase independently by CNBC, Yahoo Finance, Forbes, and Spectrum News — not a direct Warsh quote; flagged as paraphrase here per this pillar's own sourcing discipline.) Corroborated overall by PBS, Reuters/investing.com, CNN, and Yahoo Finance (a Washington Post direct fetch was blocked 403 this cycle; relied on search-summary only for that one outlet). **What changed the size of the re-rate: a dedicated adversarial-verification pass this cycle caught that the abandoned Aug 28 draft's CME FedWatch figure was wrong.** That draft cited September rate-hike odds jumped from ~35.4% to ~45.7% same-day. Independent re-pull and cross-check instead shows the real post-speech reading clustered tightly in the high-50s: Motley Fool quotes CME FedWatch directly at 57.5%; CNBC's own body text says "nearly 56%" (its "coin flip" headline rounds that down, it doesn't contradict it); a third independently-sourced read puts it at "55.7%... about 20 points higher a day ago." Those three cluster tightly and are treated as the credible read; the 45.7%/42% figures that circulated are treated as a stale or garbled snapshot and explicitly discarded. Corrected characterization: CME September hike odds moved from ~35% to roughly 56-58% — past coin-flip, into hike-more-likely-than-not territory, a materially bigger repricing than first drafted. The Treasury yield's move is confirmed at roughly +6.6bp to 4.29% intraday-close (one source cites a peak of +9bp to 4.32%), a roughly one-month high. This clears the sufficiency bar — a primary source, 4+ independent corroborating outlets, and a corrected, clean quantified market-odds shift — and the deeper re-rate is concentrated on the windows that bracket the Sept 15 FOMC decision: the odds move is actually about: 1mo and 3mo take the largest cuts, 6mo a smaller one, and 1yr/3yr move only marginally since one speech and one odds-repricing doesn't reach that far out. Warsh explicitly declined to commit to a reaction function that would let this report treat it as a durable regime shift. **Updated Sept 5:** re-rated down a further modest step, 36/35/45/55/61 → 32/31/43/54/60, on the hot August jobs report (BLS, primary, Sept 4: nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment steady 4.1%) and the resulting move higher in Sept FOMC hike-odds pricing — see The Facts and The Triggers below for the full sourcing. **Updated Sept 11:** re-rated *up* a modest step, 32/31/43/54/60 → 34/33/44/54/60, once the August CPI print landed on schedule (BLS, primary): headline CPI-U +0.4% m/m SA, +3.4% y/y NSA; core +0.3% m/m, +2.4% y/y. Against the pre-print consensus (headline +0.4% / 3.4%; core +0.4% / 2.4%), headline landed exactly in line and **core came in one tenth cooler on the month** — a modest dovish surprise in the window that brackets the Sept 15-16 FOMC. Tempered, not clean relief: headline accelerated from +0.1% to +0.4% and the acceleration is energy-driven, the same oil shock that fires the Iran pillar's Brent clause. Moved only on the windows bracketing the FOMC: 1mo 32→33, 3mo 31→33, 6mo 43→44; 12mo/36mo held. **Correction, Sept 13:** this paragraph previously read that Sept 11 re-rated *down* to 29/28/41/54/60 on the August PPI print — text carried over from abandoned, never-delivered Sept 11 draft. That contradicted both config/scores.json and this report's own scores table, which correctly show 34/33/44/54/60. The August PPI print (released Sept 11) headline +5.4% y/y, core +4.6% y/y) is real and is logged in The Triggers, but the Sept 12 weekly refresh's independent re-check found its core reading undershot consensus, reinforcing rather than contradicting the cooler-CPI read — so it did not move P on its own. **Updated Sept 12 and Sept 13:** held flat at 34/33/44/54/60 — no new BLS/Fed/BEA primary release since those two prints. Sept 15-16 FOMC with SEP/dot plot is the next dated catalyst and has not occurred. Market-implied September hike odds circulated in a wide 56-90% band across sources this week — a market price, explicitly not used to move P. **Updated Sept 16:** held flat at 34/33/44/54/60 — the FOMC decision itself had not landed at run time. **Updated Sept 17:** re-rated down a modest step, 34/33/44/54/60 → 32/31/42/54/60, once the Sept 16 FOMC decision and its SEP/dot plot landed: the 25bp hike to 3.75%-4.00% was itself ~92.5% priced into market odds beforehand, so per the sufficiency rule it does not alone move P — but the SEP/dot plot is a primary Fed document, not a market price, and shows 16 of 18 officials expecting another 2026 hike (12 of 18 pencil in on 25bp move by year-end). Sized on the windows that bracket that confirmed additional-hike path: 1mo 34→32, 3mo 33→31, 6mo 44→42; 12mo/36mo held, since the SEP's longer-run dots (slow descent into 2027-2028, neutral rate near 3.0%) are consistent with what this pillar already carried.

Quality — how trustworthy the evidence is. Unchanged this cycle per house rules.

Impact — 8 out of 10, the uniform value every pillar now shares in the equal-weight model. Liquidity is the tide; it moves the whole market at once.

Carried forward, still load-bearing: July PCE (bea.gov, primary, released Aug 26) printed a modestly hot headline read, +0.2% m/m / 3.7% y/y (0.1pp above consensus), core +0.2% m/m / 3.0% y/y (in line) — first surfaced in the abandoned Aug 28 draft, re-confirmed this cycle, not re-litigated. The Jul 28-29 FOMC minutes' hawkish bloc ran wider than the three named dissenters; the 30-year Treasury yield's 19-year high was substantially a fiscal-deficit story, not a clean Fed signal; both already reflected in the committed baseline this cycle re-rates from.

The Claim

The thesis, and where I differ from the consensus — updated September 17, 2026 (LIGHT DAILY touch, re-rated down on the FOMC's hawkish dot plot; the Sept 12 full weekly refresh below remains load-bearing background)

This cycle (Sept 17): the crowd will likely read the Sept 16 FOMC's 25bp hike to 3.75%-4.00% itself as the headline event. **Me:** that hike was ~92.5% priced into market odds beforehand, so its market occurrence isn't new information under this pillar's sufficiency rule. The real new fact is the SEP/dot plot — a primary Fed document, not a market price — showing 16 of 18 officials expecting at least one more 2026 hike (12 of 18 specifically pencil in a year-end move to 4.125%), and a slower projected descent through 2027-2028. Bitcoin's own reaction was a shrug (ticked up toward \$76,300, then back to hold near \$76,000-198) — the market had this priced too, but the committee's own forward path is incrementally more hawkish than the odds-only tracking this pillar had been running on. **RATED DOWN, modestly, to 32/31/42/54/60** — 1mo 34→32, 3mo 33→31, 6mo 44→42, concentrated on the windows bracketing the confirmed additional-hike path into Q1 2027; 12mo/36mo and the longer-run dots don't change this pillar's multi-year read.

Prior cycle (Sept 12, FULL WEEKLY refresh): the crowd will likely read the hot 5.4% y/y August PPI headline (BLS, Sept 10) — the highest of 2026 — as confirmation the inflation picture is worse than ahead of the Sept 15-16 FOMC. **Me:** look at what's actually inside it — more than three-quarters of the monthly gain is energy (diesel fuel +24.1% alone), and the core reading the Fed actually studied came in under consensus, a mild disinflationary surprise. That reinforces the already-priced cooler-than-consensus CPI read from last cycle rather than contradicting it — a fresh, primary-sourced, sufficiency-qualified release that is nonetheless not a distinct new directional catalyst. Independently re-verified the CPI print itself this cycle too, with no discrepancy. **P HELD FLAT at 34/33/44/54/60** — Sept 15-16 FOMC meeting has not yet occurred and remains the next real catalyst. This is a FULL WEEKLY refresh, so — regardless of the flat finding — it is left as DRAFT for Alex's manual review, stamped.

Prior cycle (Sept 12 light daily catch-up): the crowd would likely read the ~90% market-implied hike odds circulating that morning as new information demanding a further hawkish re-rate. **Me:** the framing traced to Fed Chair Warsh's Aug 28 Jackson Hole remarks ("if the numbers don't improve, we have work to do"), not a fresh Sept 11-12 statement — it was the market's own reaction to a hawkish signal on this pillar already scored, not a new dated primary fact, so per the house sufficiency rule it did not independently move P. **P HELD FLAT at 34/33/44/54/60**, AUTO-STAMPED.

Prior cycle (Sept 11): the crowd will take a headline that jumped from +0.1% to +0.4% m/m and read it as inflation re-accelerating into a hawkish FOMC. **Me:** look at what moved it — energy +3.9% gasoline +3.9% carried more than a third of the monthly gain, which is the Iran/Hormuz oil shock showing up in the price index, not broad domestic re-acceleration. The part the Fed actually studied, core, came in at +0.3% m/m against a +0.4% consensus, with core y/y in line at 2.4%. That is a modest dovish surprise in the windows that bracket the Sept 15-16 meeting, and it is why this pillar held flat at 1mo/3mo and one at 6mo rather than staying put — and why it does not move at all at 1yr/3yr. It only partly offsets the Sept 5 cut; this is a nudge, not a regime change.

The crowd: might read Warsh's studied refusal to commit to forward guidance as him keeping his options open, and treat the hawkish framing as just rhetoric until an actual vote. The abandoned draft's own first read of the market reaction — a ~35.4%-to-~45.7% CME move — understated how far the market itself actually moved.

Me: now at 32/31/43/54/60, down from the 36/35/45/55/61 this pillar held through Aug 29-Sept 3. That Aug 29 cycle's dedicated adversarial-verification pass re-pulled the CME FedWatch data and found the real September hike-odds move was roughly 35% to 56-58%, not 45.7% — a materially bigger repricing, now past coin-flip. Three light daily checks (Aug 31, Sept 1, Sept 2) found only continued/drifted odds, not a fresh primary print, so P held; a Sept 3 check found nothing material on any pillar. **Sept 5:** the August jobs report (BLS, primary, released Sept 4) beat sharply — nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment steady at 4.1% — and markets repriced Sept 15-16 FOMC hike odds higher off of it, corroborated by a same-day 2yr Treasury yield move to highest since January 2025, a modest equity selloff, and BTC falling ~2% same-day (\$81,265.00 → \$79,676.60). This is a fresh, dated, primary-sourced print — not odds drift — so it clears the sufficiency bar for a further modest cut, concentrated on the windows bracketing the Sept 15-16 FOMC. **Sept 6 through Sept 10** (five further light daily checks) found no new Fed speech or primary data release that would move P; held flat at 32/31/43/54/60 through Sept 10; the August PPI print (BLS, primary, released Sept 10) showed annual wholesale inflation accelerating to 5.4% y/y — the highest 12-month reading of inflation since 2008, corroborated across CNBC, Yahoo Finance, UPI, and The Washington Times, logged as context for the CPI print due the next morning but not itself used to move P (the sufficiency bar for this pillar is the primary CPI/PCE/jobs release, not the less-market-moving PPI). **Sept 11:** the August CPI print (BLS, primary, released 8:30am ET) landed with headline in line and core a tenth cooler than consensus. See This Cycle above — moving P up to 34/33/44/54/60. **Sept 12, light daily catch-up (morning):** no new Fed speech or primary data release found since the CPI print; P HELD FLAT at 34/33/44/54/60, AUTO-STAMPED. **Sept 12, FULL WEEKLY refresh (afternoon, this version):** the August PPI print (BLS, Sept 10) examined in full — hot 5.4% y/y headline, energy-driven, with core actually under consensus — reinforces rather than contradicts the CPI read and does not move P; the CPI print was independently re-verified with no discrepancy. P HELD FLAT at 34/33/44/54/60, left as DRAFT for manual review since full weekly refreshes are categorically excluded from auto-stamp authority. The Sept 15-16 FOMC meeting has not yet occurred and remains the next dated catalyst.

My edge: the discipline is in re-pulling the actual rate-odds venue rather than trusting the first number that circulates — this cycle that discipline caught a real error before it was ever delivered to the Bank of America's standing 75bp-of-2026-hikes call, flagged as the honest counter-case since early August, looks less like an outlier with each hawkish print. The August CPI print — due today and pending as of this research pass — and the Sept 15 FOMC itself remain the real tests — Warsh explicitly declined to pre-commit to a reaction function, so this re-rate prices in a repriced risk, not a decision.

The Facts

As of September 17, 2026 (LIGHT DAILY touch, score set 2026-09-17_draft) — hard numbers only, sources on the last page. New this cycle: the Sept 16 FOMC decision and its SEP/dot plot; the Sept 12 weekly-refresh material further remains load-bearing and is carried forward unchanged. The Iran/Hormuz war-risk situation is covered in full in the Iran War Risk pillar report.

- ★ ★ **NEW this cycle — Sept 16 FOMC decision (federalreserve.gov, primary; corroborated by CNBC, Reuters/Advisor Perspectives, Coinpedia, coingape — 5+ independent outlets).** The Fed raised the federal funds target range 25bp to **3.75%-4.00%** (12-0 vote), the first hike in three years. The move itself was ~92.5% priced into CME/market odds beforehand — a market price, not a decision — to move P on its own.
- ★ ★ **NEW this cycle — the Summary of Economic Projections / dot plot (federalreserve.gov, primary).** 16 of 18 participants project at least one more 2026 rate increase; 12 of 18 specifically project at least one more 25bp move by year-end, to 4.125%. Officials still project rates drifting down in 2027-2028, but on a slower, more cautious path than previously projected, with the long-run neutral rate dots clustering tightly at 3.0%. This is a primary Fed institutional document, not a market price, and clears the sufficiency bar on its own.
- **Bitcoin's reaction was muted:** ticked up toward \$76,300 on the statement, then drifted back to hold near \$76,000-198 through Chair Warsh's press conference (CNBC, Coinpedia) — consistent with the hike being largely anticipated; the incremental hawkish signal is in the dot plot's forward path, not the decision itself.
- **Score decision: P RE-RATED DOWN, modestly, to 32/31/42/54/60** — 1mo 34→32, 3mo 33→31, 6mo 44→42; 12mo/36mo HELD FLAT at 54/60. Light daily touch, master call band unchanged. **AUTO-STAMPED per delegated daily authority.**
- ★ **Carried forward — August PPI (BLS, primary, released Sept 10, 2026; corroborated by CNBC, CNN, Yahoo Finance — 3+ independent outlets).** Headline final demand **+0.4% m/m** (in consensus), **+5.4% y/y** — the highest annual PPI reading of 2026 — but more than three-quarters of the monthly gain is attributable to volatile energy costs (diesel fuel +24.1% alone). Core food/energy came in at **+0.3% m/m**, UNDER consensus on one reading (+0.2% m/m on a further core-ex-trade-services cut) — a mild disinflationary surprise on the core reading.
- **Score-relevant read on the PPI print:** reinforces, rather than contradicts, the already-priced "cooler than consensus" August CPI narrative — **not a distinct new directional catalyst**, so it does not move P despite being a fresh, primary-sourced, sufficiency-qualified release (BLS primary + 3 independent corroborating outlets).
- **Re-verified August CPI (BLS, released Sept 11) independently this cycle:** headline +0.4% m/m / +3.4% y/y, core +0.3% m/m / +2.4% y/y, shelter +0.3% m/m / +3.0% y/y — matches the figures already priced into the current set, no discrepancy found.
- **DOL initial jobless claims, week ending Sept 5 (released ~Sept 11, primary):** 206,000, down 1,000 w/w, 4-week average 206,000 — steady, unremarkable, no signal.
- **CME FedWatch-tracked market-implied odds of a 25bp hike at the Sept 15-16 FOMC read ~62-69% this week (as of Sept 10-11)** — a *market price* only, not an institutional estimate, and not used to move P. Flagged for the record: meaningfully lower than the ~90% figure referenced in the prior (this morning's) daily cycle's background note — both are reported as market-price snapshots at different times; the divergence is noted, not resolved or editorialized on.
- **Fed Chair Warsh: no new substantive remarks since the Aug 28 Jackson Hole speech.** A Sept 9 Marketplace piece characterizing him as withholding forward guidance ahead of the meeting is a single-source narrative characterization, not a new quantifiable dated event — flagged as single-source, does not move P.
- **The Sept 15-16, 2026 FOMC meeting had NOT yet occurred** as of the Sept 12 research pass — it has since occurred and fired; see the NEW facts above.
- **Historical score decision (Sept 12 cycle, superseded):** P HELD FLAT at 34/33/44/54/60 — FULL WEEKLY REFRESH, left as DRAFT for Alex's manual review at the time (weekly refreshes are categorically excluded from delegated auto-stamp authority regardless of findings); that set was later committed by Alex, and Sept 16 held it flat again before this cycle's re-rate above.

Carried forward from the Sept 12 light daily catch-up (score set 2026-09-12_draft, auto-stamped that morning), still load-bearing:

- **Re-checked — no new Fed speech or primary data release found since the Sept 11 CPI print.** Coverage of ~90% market-implied hike odds circulating that morning traced to Fed Chair Warsh's 28 Jackson Hole remarks, not a fresh Sept 11-12 statement, and was a market price, not used to move P. P HELD FLAT at 34/33/44/54/60, AUTO-STAMPED.
- ★ **CARRIED FORWARD — August CPI (BLS, primary, released 8:30am ET September 11, 2026):** headline CPI-U **+0.4% m/m seasonally adjusted** after +0.1% in July, **+3.4% y/y NSA**. Core (less food and energy) **+0.3% m/m** after +0.2% in July, **+2.4% y/y**. Energy +2.1% m/m, gasoline +3.9% — over a third of the monthly increase — shelter +0.3%. Fetched directly from bls.gov and fetched to confirm.
- **CARRIED FORWARD — versus consensus:** pre-print expectations circulating were headline +0.4% m/m / 3.4% y/y and core +0.4% m/m / 2.4% y/y. **Headline landed exactly in line; core came in tenth cooler on the month, y/y in line.** Consensus is a forecast, not data — used here only to characterise the surprise.
- **Market-implied September hike odds around the print read ~70% for a 25bp move** — a *market price*, not an institutional estimate, reported for context and explicitly not used to move P.
- **Data-hygiene note, logged:** several aggregator summaries of this print published within minutes carried figures inconsistent with the BLS release (for example a 3.1% core y/y). They were discarded in favour of the primary document — the kind of discrepancy this report's primary-source rule exists for.

Carried forward from the September 5 FULL WEEKLY refresh (score set 2026-09-05_draft2), still load-bearing:

- ★ ★ **NEW — August jobs report (BLS, primary, released Sept 4): nonfarm payrolls +162,000 vs. ~53-55,000 consensus; unemployment steady at 4.1%.** A sharp upside beat, corroborated by CNBC, Yahoo Finance, TheStreet, U.S. News, and Investing.com/Reuters. Average hourly earnings +\$0.10 (+0.3% m/m, +3.1% y/y).
- ★ ★ **NEW — markets repriced September 15-16 FOMC hike odds higher off the jobs beat.** Point estimates vary by source/timestamp (roughly 60-66% hike probability cited across CNBC, Forbes/CME-sourced, and Investing.com/Reuters pieces around Sept 3-4) but are directionally consistent and higher than the "~60% hold" framing this pillar's Sept 2 baseline used — i.e. the market moved further toward pricing a hike, not away from it. Fed officials remain split: Chair Warsh reiterated the need to keep fighting inflation; Governor Waller said he'd lean toward holding if inflation improves. Market commentary (Morgan Stanley-style framing, echoed across outlets) now flags the Sept 11 CPI print as the likely deciding data point before Sept 15-16.
- ★ ★ **NEW — same-day market reaction, Sept 4 (multi-source corroborated): 2-year Treasury yield +5.3bp to its highest level since January 2025;** Dow -271.86 pts (-0.51%) to 53,414.24; S&P 500 -0.38% to 7,718.60; Nasdaq -0.29% to 26,506.99.
- **BTC fell ~2% same-day: \$81,265.00 (Sept 3 close) → \$79,676.60 (Sept 4 close)** (data/btc_usd_daily.csv) — consistent with a hawkish-surprise risk-off reaction; BTC \$79,646.11 Sept 5.
- **Score decision:** this is a fresh, dated, primary-sourced print (not odds drift alone), sized comparably to the Aug 22→28 catch-up cut for a comparable single dated catalyst — P re-rated down to 3mo -4, 6mo -2, 1yr -1, 3yr -1 to 32/31/43/54/60. No window moved more than 8 points versus the last committed baseline.

Carried forward from the Sept 3 light daily catch-up (no new score set — nothing material found on any pillar that cycle):

- **Re-checked CME FedWatch and the H.4.1/data calendar; found no fresh primary print or news event dated Sept 2-3.** config/scores.json untouched; run.py blend re-run against fresh q only.

Carried forward from the Sept 2 light daily catch-up (score set 2026-09-02_draft, still load-bearing):

- **No new H.4.1 or data print found dated Sept 1-2.** September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continued the same post-Jackson-Hole drift already priced into the Sept 1 baseline, not a fresh data-driven move — per the sufficiency rule and this pillar's own standing discipline against chasing odds drift, it did not independently move P.
- **BTC traded at \$76,581.44 on Sept 2** — down from \$78,038.78 on Sept 1 (Bitstamp) — a real pullback, but driven by the Iran War Risk escalation covered in that pillar's report, not by anything on this pillar's own evidence.

Carried forward from the Sept 1 light daily catch-up (score set 2026-09-01_draft, still load-bearing):

- **CME FedWatch September hike odds read ~66% around 11:40am ET Aug 31** (Forbes/KuCoin), up from the ~60.4% CNBC read already priced into the Aug 31 baseline — the same intraday Jackson-Hole drift sequence, not a fresh primary print or news event.
- **No new H.4.1 or jobless claims release Aug 31-Sept 1** — Aug 31 was Labor Day, a US federal holiday; next H.4.1 is due Sept 3.
- **BTC traded at \$78,038.78 on Sept 1** — down from \$78,447.16 on Aug 31 (Bitstamp).

Carried forward from the Aug 31 light daily catch-up (score set 2026-08-31_draft, still load-bearing):

- **CME FedWatch September hike odds drifted to ~60.4% by Aug 31** (CNBC Jackson-Hole-analyst-roundup, up from ~56% Friday, Aug 28), continuing the same repricing already sized into the Aug 28 cut's 56-58% basis — not independently trigger-worthy per the sufficiency rule (market-price drift alone, no fresh primary print or news event).

Carried forward from the Aug 29 full weekly refresh (still load-bearing):

- ★ ★ **ADVERSARIAL CORRECTION — the abandoned Aug 28 draft's CME FedWatch September hike-odds figure (~35.4%→~45.7%) UNDERSTATED the real market move.** A dedicated adversarial-verification pass re-pulled and cross-checked the data directly: pre-speech (Aug 27 close) ~35.4-35.5% is well-corroborated and not in dispute. Post-speech (Aug 28), the credible market moved roughly 56-58% — Motley Fool quotes CME FedWatch directly at 57.5%; CNBC's own body text says "nearly 56%" (its "coin flip" headline rounds that down, it does not contradict it); a third independently-sourced read says "55.7%... about 20 points higher than a day ago." These three cluster tightly. The 45.7% and 42% figures that circulated appear to be a stale or mismatched source, contradicted by this tighter high-50s cluster; figures of 59-60% seen elsewhere are within plausible range of later-day snapshots and roughly track the confirmed cluster. **Corrected characterisation: ~35% to roughly 56-58%** — past coin-flip, into hike-more-likely-than-not territory, a bigger move than first drafted.
- ★ ★ **CORRECTED this cycle — BTC's price action around the speech was NOT a stable tape.** The abandoned Aug 28 draft's framing ("stable tape... not one BTC visibly flinched") is corrected. BTC opened Aug 28 around \$80,262, traded above \$81,000 pre-speech, fell back sharply once Warsh spoke, and closed \$79,613.44 that day — then continued falling to **\$77,666.16 by today, Aug 29** (Bitstamp), a roughly 4%+ round-trip decline from the day's high through today. BTC did react to the speech, with continued downward drift into this cycle.
- ★ ★ **NEW this cycle — initial jobless claims, week ended Aug 22 (DOL, primary, released Aug 27): 203,000 vs. 208,000 consensus,** down from the prior week's revised 207,000; continuing to track 1.778M vs. 1.79M forecast. A mildly hawkish-adjacent labor-tightness signal (removes a dovish pressure) — logged, not independently trigger-worthy on its own.
- ★ ★ **NEW this cycle — Fed H.4.1, week ended Aug 26 (federalreserve.gov, primary): reserve balances \$2,924,936M (–\$10,351M w/w); Treasury General Account \$950,736M (–\$2,876M w/w).** Routine continuation of the known reserve-drain pattern — logged, not independently trigger-worthy.
- **No new CPI/PPI release in this window** — next releases Sept 10-11, unchanged from the prior baseline. No public pushback found from any other Fed official on Warsh's hawkish tone this cycle (absence of evidence, not evidence of absence).
- **Score decision:** the corrected, larger CME move justifies a deeper cut than the abandoned Aug 28 draft's 38/37/46/55/61 — P re-rated down to 36/35/45/55/61, concentrated on the 1mo/3mo windows bracketing the Sept 15 FOMC. No window moved more than 8 points versus the last committed baseline.

Carried forward from the abandoned Aug 28 draft (written but never rendered, selfchecked, archived, or committed — superseded by this cycle; findings re-confirmed and incorporated, not re-litigated):

- ★ **Fed Chair Kevin Warsh's first Jackson Hole speech as Chair, Aug 28, 10:00am ET (federalreserve.gov, primary transcript, confirmed verbatim this cycle via direct fetch; corroborated by CNBC, PBS, Reuters/investing.com, CNN, Yahoo Finance — a Washington Post direct fetch was blocked 403 this cycle, relied on search-summary only).** Theme: "Financial Innovation: Implications for Payments and Policy." Exact quote, verified against the transcript: "And while this summer's PCE and CPI readings were better than expected, they do not tell me that underlying inflation have meaningfully improved." Also: "We must be confident that underlying inflation is moving to our objective... Otherwise, we have work to do," and "I stand here today committed to a decision to a decision." **Note on framing:** the transcript does not contain the literal words "may need to raise rates" — that is a fair, standard journalistic paraphrase used independently by CNBC, Yahoo Finance, Forbes, and Spectrum News (well-corroborated as a characterization), not a direct Warsh quote; flagged as paraphrase here. This was his 100th day as Chairman (confirmed May 22, 2026 succession).
- ★ **July PCE (bea.gov, primary, released Aug 26): headline +0.2% m/m, 3.7% y/y (0.1pp hot vs. consensus); core +0.2% m/m, 3.3% y/y (in line).** Consumer spending +0.2% m/m (\$36.3B) income +0.4% m/m (\$115.1B) — a modestly hot headline print that, per Warsh's own remarks the same week, didn't by itself change his read on underlying trends.

- **2-year Treasury yield rose to a roughly one-month high: confirmed +6.6bp to 4.29% intraday-close** (one source cites a peak of +9bp to 4.32%); the 30-year yield eased about 1.5bp; stocks were little changed on the day.
- **BTC closed at \$79,613.44 on Aug 28 (Bitstamp)** — this price point is now superseded by today's \$77,666.16 close (Aug 29); see the corrected price-action fact above.

Carried forward from the Aug 22 draft2 full weekly refresh (still load-bearing):

- ★ **The Jul 28-29 FOMC minutes' hawkish bloc runs wider than previously known (federalreserve.gov, primary, published Aug 19; corroborated by CNBC, Quartz, Newsquawk, goldsilo.com)** Beyond the three named dissenters (Hammack, Kashkari, Logan, who voted for an immediate hike), "several participants" also favored a hike at the meeting, and "many participants assessed that tightening would likely be necessary if inflation did not decline." Inflation cited: PCE 4.1% (May actual), core 3.4%; the June staff estimate was 3.7% headline / 3.3% core, "remains elevated." Labor unemployment steady at 4.2% (June), wage growth 3.5% y/y (moderating).
- ★ **★ NEW this cycle — the 30-year Treasury yield hit 5.31-5.33%, a ~19-year high (highest since 2007), around Aug 17-18** (Bloomberg, CNBC, Axios). Driven substantially by fiscal/deficit concerns — the CBO raised its FY deficit projection to \$2.1T, roughly \$200B above its February estimate — plus heavy long-bond supply, not purely a Fed-hike repricing story, though it compounds on the hawkish minutes.
- ★ **★ NEW this cycle — equities sold off Aug 20:** S&P 500 -0.87% to 7,641.16; Dow -703.84 pts (-1.32%) to 52,759.21 (partly a ~9% Walmart-earnings-driven drop, not purely Fed-driven); Nasdaq -1.2% to 26,067.17. Coverage attributes the move to a mix of the hawkish minutes and rising long yields. Aug 21 saw a partial recovery.
- ★ **★ NEW this cycle — CME FedWatch (September meeting) independently re-verified directly, cross-venue:** ~68-70% hold probability across multiple contemporaneous reads as of Aug 20: CME 68.4-69.4%, Kalshi 70.5% hold/28.5% hike, Polymarket ~68.5% hold, investing.com 64.7% hold, defirate.com blended 68.3% hold/30.6% hike — essentially UNCHANGED before and after the 19 minutes landed, meaning the market already had the hawkish content priced in.
- ★ **★ DISCARDED — a separately-circulating claim of "93.6% September hike probability" was traced this cycle to a garbled data conflation.** It appears to be Kalshi's JULY meeting hold probability (~92-93% hold, not a September hike figure) misattributed. Confirmed not credible for September and explicitly discarded, not used in this pillar's scoring.
- **Jobless claims week ended Aug 15 (DOL, primary, released Aug 20): 206K, down 6K, vs. 210K consensus; 4-week average 204K.** Confirms the low-layoff, tight-labor trend already in the market — not a new signal this cycle (previously confirmed in the same-day draft1).
- **Aug 22 score decision (superseded by this cycle):** the hawkish minutes detail and the noisy weak retail-sales print largely offset an already-priced rate-odds market — netted to a wash; P H 43/41/48/56/62 as of Aug 22.
- **BTC closed at \$77,266.84 on Aug 22 (Bitstamp)** — vs. \$79,613.44 on Aug 28 and \$77,666.16 on Aug 29 (see this cycle's facts above).

Carried forward from the Aug 22 draft1 catch-up cycle (independently re-confirmed, still load-bearing):

- **No new Fed H.4.1 release since the week ended Aug 19 (federalreserve.gov, primary, published Aug 20):** that remains the current release; the next H.4.1 is due Aug 27. No new CPI (next release Sept 11, covering August data) or PPI (next release Sept 10) fell in this window — July PPI (released Aug 13) was already known and priced before the Aug 16 baseline.
- **No new public remarks from Chair Warsh between the Jul 29 FOMC press conference and the Aug 28 Jackson Hole speech (see this cycle's facts above).**

Carried forward from Aug 20 (re-confirmed this cycle, still load-bearing):

- **FOMC minutes from the Jul 28-29 meeting confirm the known 9-3 hold vote and the Hammack/Kashkari/Logan dissent for an immediate 25bp hike.** Inflation risks characterized as tilted toward the upside, with specific concern flagged about AI-related input costs (chips, steel, electricity). No explicit forward guidance from Chair Warsh. A balance-sheet task-force report will inform future deliberations, but no near-term QT-pace signal was given.
- **Offsetting signal, re-confirmed and expanded this cycle: CME FedWatch showed the odds of a September 16 hold rising to ~65% post-minutes, up from a pre-minutes ~50/50 (Newsquawk, investinglive)** — the two roughly cancelled at the time; this cycle's cross-venue re-check (~68-70% hold across five independent sources, Aug 17-22) confirms no further material move off the market stayed priced for a hold through the minutes' release.

Carried forward from Aug 16 (still load-bearing):

- **July retail sales (Census Bureau, published Aug 14, primary release): headline -0.6% m/m vs. +0.1% expected, core (ex-auto) -0.2% m/m, still +5.0% y/y.** The first monthly decline in 12 months and the steepest since May 2025 — a broad-based decline (autos, gasoline, electronics, nonstore) with some calendar-effect noise (Amazon Prime Day pulled into June). A genuine but dovish-leaning counter-signal — per this pillar's own house discipline against chasing single prints, this alone doesn't move P.
- **Recalled for continuity, not re-scored:** the Aug 17 Empire State Manufacturing Survey surged to 20.6 vs. 11.0 consensus, the highest since 2022 — a hot beat cutting against the recent cool economy read. Logged as complicating, unscored context; consistent with this pillar's discipline against chasing single prints in either direction, this was not sized into a move.

Carried forward from Aug 13-14 (still load-bearing):

- **Fed H.4.1, week ended Aug 12 (federalreserve.gov, published 4:30pm ET Aug 13): reserve balances \$2,944,059M, down \$49,290M w/w; Treasury General Account \$963,950M, up \$1.1B w/w.** Directionally the same reserve-drain/TGA-rebuild pattern already priced into this pillar's recent baselines — confirmed an already-adopted trend, didn't fire a fresh trigger.

Carried forward from Aug 12-13 (still load-bearing):

- **July CPI (BLS, published Aug 12): headline +0.1% m/m / +3.4% y/y; core +0.2% m/m / +2.5% y/y** — landed cool, exactly in line with consensus, drove the Aug 13 re-rate up.
- **Initial jobless claims, week ended Aug 8 (DOL/ETA, published Aug 13): 209,000 actual vs. 202,000 expected** — a genuine weak-side miss, 8-week high, the second trigger behind the Aug 13 re-rate.

Carried forward from Aug 8-10 (still load-bearing):

- **Initial jobless claims for the week ended Aug 6 (published Aug 8): 262,000 actual vs. 263,000 expected** — essentially in line with consensus, noise rather than a surprise.

Carried forward from Aug 8-9 (still load-bearing):

- ★ **BLS Employment Situation, July 2026: nonfarm payrolls FELL 23,000** versus a consensus estimate of ~83,000 (WSJ-sourced; a competing 95,000 Barron's-sourced figure is less corroborated than adopted) — job losses concentrated in local-government education (~50,000) and retail trade (~19,000). A direct bls.gov fetch returned a 403 this cycle; the figure is confirmed via convergent reporting from Yahoo Finance, Kiplinger, and CBS News reporting, all citing the same BLS release — meets the 2+ independent sufficiency bar.
- **May and June payrolls revised down a combined 103,000** — confirmed, matches the light draft exactly. (One Forbes-sourced fetch this cycle produced a garbled "-252,000 total" figure that doesn't reconcile with the BLS-consistent -103,000 figure elsewhere — treated as an unreliable summarization artifact, not a correction.)
- **Unemployment ticked down to 4.1% from 4.2%,** but the labor-force participation rate fell to 61.4% — its lowest level in over five years.
- ★ **★ NEW this cycle — average hourly earnings rose just 3.2% y/y,** down from 3.4% in June and now trailing CPI (3.5% June y/y) — real wages softening, a detail the same-day light draft did not capture.
- ★ **★ CORRECTED — CME FedWatch September-hold odds check out at ~56%,** not the light draft's ~60%. Two independent corroborating sources (CBS News, a Forbes-sourced pull) both cite a drop from 45% the previous day; a separate CNBC-sourced overview cited ~60%, a real but less-corroborated, likely later-intraday figure. Kalshi (a prediction market, not CME futures-implied price) shows a different instrument, labeled separately per research discipline) shows 65% hold.
- ★ **★ NEW this cycle — real forecaster disagreement on magnitude:** Bank of America explicitly called the report "a bit dovish on net" but is **sticking with its call for 75bp of hikes in 2026** (Sept/Oct/Dec) regardless. Richmond Fed President Barkin, an actual FOMC voter, described the labor market as "not loose, not tight" — a measured, non-alarmist read. Morgan Stanley's Ellie Berkowitz says the **Aug 12 CPI print** — inside this pillar's own 1-month window — will be the deciding factor for September, not this jobs report alone.
- ★ **Jobless claims for the week ended Aug 1: 199,000, 4-week average 198,750** — the lowest of this cycle, in real tension with the weak payrolls print. Points to "low-hire, low-fire" stagnation rather than an accelerating downturn, arguing for restraint on the size of the move.

Carried forward from Aug 7 (still load-bearing):

- ★ **Fed H.4.1 for the week ended Aug 5 (federalreserve.gov, direct pull):** total assets \$6,748,567M, reserve balances \$2,993,349M — reserves +\$8.78B w/w, TGA -\$3.45B w/w. An unremarkable print — no liquidity-stress signal either way; not used to move P.

Carried forward from Jul 30-Aug 5 (still load-bearing):

- ★ ★ **CONFIRMED, PRIMARY SOURCE — the FOMC held rates at 3.50-3.75% on Jul 29, 2026, on a 9-3 vote.** Three regional-bank presidents — Beth Hammack (Cleveland), Neel Kashkari (Minneapolis), Lorie Logan (Dallas) — dissented in favor of an immediate 25bp hike (federalreserve.gov statement, corroborated by CNBC, Forbes, Fox Business, TechTimes). This is the **first unanimous member dissent since September 2016**. No SEP/dot plot this meeting (not a projections meeting; next SEP is Sept 15-16, 2026).
- ★ **Chair Warsh's press conference was unusually combative and offered no forward guidance:** "there is no soft inflation target... not on this committee's watch"; "the five-plus years of inflation target cannot be cured in nine weeks." A confirmed (single-sourced) risk-off market reaction followed: S&P 500 fell 1.85% in the final 65 minutes of trading (full day: S&P -1.52%, Dow -2.19%, Nasdaq -1.74%); the 30-year Treasury yield rose to 5.21%, its highest since July 2007 — a "bear steepener" consistent with rising inflation-credibility concern.
- ★ ★ **CONFIRMED, PRIMARY SOURCE — jobless claims for the week ended Jul 25 came in at 197,000** (DOL/ETA release, fetched and read directly), a genuine +9,000 increase; the prior week (Jul 18) was revised *up* to **188,000** from the originally-reported 187,000. The primary release itself confirms the seasonal-adjustment distortion flagged last cycle: actual non-seasonally-adjusted fell only 9.2% w/w versus the 13.3% seasonal factors expected — meaning the "lowest since 1969" framing was real but mechanically set to partially reverse, exactly as it did.
- ★ **The September hike-odds figure could not be reconciled to a single number this cycle, despite four direct attempts.** Live pulls produced 55.8% (Fox Business, Jul 28), 62.4% (Investing.com, Jul 29), 70.2% (Rate Monitor, timestamped Jul 30), 70.2% (KuCoin, pre-meeting), and 81% (Southeast AgNet, Jul 30) — no two agree. The qualitative direction — "still elevated, majority-hike-priced" — is the defensible takeaway; no re-rate rests on a specific point figure.
- **H.4.1 balance sheet: no new release found for the week ended Jul 29** as of this check (normal Thursday-afternoon publication timing); the most recent confirmed release remains Jul 23 (vs. Jul 22: reserves fell \$80,572M w/w against a \$73,405M TGA rebuild, both figures directly confirmed against federalreserve.gov last cycle).
- **Bank of America projects three 25bp hikes in 2026** (to 4.25-4.50%) — single-source (Forbes, citing BofA), flagged not scored.
- **Carried forward, not re-verified this cycle:** June CPI (-0.4% m/m) and PPI (-0.3% m/m), both BLS-primary-confirmed in a prior cycle; Warsh's Jul 14/15 congressional testimony; the June FOMC minutes (unanimous 12-0 hold, dropped easing-bias language). None of these are contradicted by this cycle's findings — the hawkish FOMC outcome sits alongside, not against, the still-intact disinflation trend.
- **The labor market cracked in slow motion, then partially un-cracked this week** — June payrolls +57K vs ~115K consensus (carried forward); this cycle's 197K claims print, while up from 188K, remains historically low (4-week average 202,750).
- **Policy rate and balance sheet: 3.50-3.75%, next FOMC (with SEP/dot plot) is Sept 15-16, 2026.** Fed communications blackout ended with the Jul 29 meeting; watch for the first round of Fed president speeches, especially from the three dissenters.
- **BTC closed at \$64,706.50 (Jul 30)** — holding up despite the hawkish FOMC surprise and confirmed equity/bond-market risk-off reaction. **Updated: BTC closed at \$64,661.55 on Aug 5**, essentially flat vs. Jul 30 and up ~1.7% vs. the Jul 31 close of \$63,579.68.

The Prize

Illustrative only — not price targets, not advice

The canonical anchor: **2020-21 ZIRP + QE** ran BTC ~\$3,800 → \$69,044 (~15–18×) — a unique COVID/zero-rate/open-ended-QE setup, not a repeatable base case. The **2024-25 cuts** ran ~\$60K → ~\$126K ATH (Oct 6, 2025) — but that top came on a non-Fed tariff shock. BTC closed at \$77,666.16 today, Aug 29 — down from \$79,613.44 on Aug 28 and \$77,266.84 on Aug 22, a real reaction to a genuinely hawkish Jackson Hole surprise (BTC opened Aug 28 near \$80,262, traded above \$81,000 pre-speech, then fell back sharply once Warsh spoke and kept drifting down into today), not a market-wide stable tape first drafted. From here, a retest of the \$126K high ≈ **+62%**.

Discount it hard, twice. First: easing is not an automatic catalyst — the last cycle topped on a non-Fed shock. Second: this cycle's re-rate reflects a real repricing of near-term Fed risk (September 2026 odds now in the high-50s, past coin-flip, after Warsh's speech and this cycle's adversarial correction to the CME figure), not a settled hawkish pivot — Warsh explicitly declined to commit to a reaction function, and the Sept 15 FOMC vote itself is still the real test. A major forecaster (BofA) has been calling for 75bp of 2026 hikes since early August and looks less like an outlier this week than it did two weeks ago. The Prize doesn't feed the math — it tells you what the 3-year lean is worth acting on when the tide finally turns.

The Other Side

The strongest honest case my re-rate — even the moderated one — is still wrong

- **This re-rate might not be conservative enough a read on BofA's stance.** Bank of America has been calling for 75bp of 2026 hikes since early August, straight through the cool CPI print this week, once used to raise P. If BofA is right and the September meeting itself delivers a hike into what's still a mixed data picture, even 36/35 could prove too generous.
- **Warsh explicitly avoided committing to a reaction function — this report may be over-reading a rhetorical signal into a real repricing.** The CME odds move is real, quantified, and now confirmed larger than first drafted (~35% to ~56-58%), but it happened on tone, not on new data or a stated threshold; if Warsh was simply managing expectations rather than pre-committing to a September hike, this cycle's move could unwind as fast as it appeared.
- **The adversarial-verification pass caught one error in the abandoned draft's CME figure — it may not have caught all of them.** This cycle corrected 45.7% to the high-50s cluster, but the CME itself rests on three sources (Motley Fool, CNBC, one unnamed independent read) rather than a single authoritative CME FedWatch screenshot pulled directly by this report; a subsequent, clearer read could still move the number again.
- **I may still be over-reacting to one speech and one data print.** This pillar has already seen a claims number ("lowest since 1969") partially reverse the following week on a seasonal-adjustment distortion, and a hawkish FOMC-minutes read that turned out to be already priced — a hawkish-sounding speech, even a well-corroborated one, could be a similar move that partially unwinds the actual September data (another CPI, another jobs report) lands.
- **The FOMC's own hawkish dissent hasn't gone away and now looks more, not less, mainstream.** Three regional presidents voted for an immediate hike on Jul 29, and Warsh's Aug 28 remarks sound closer to their view than to the doves' — a hawkish Fed facing a still-ambiguous data picture is a live tension, not resolved by this cycle's move either.
- **Downward revisions can themselves get revised.** The BLS's own benchmark process regularly adjusts prior months; May-June's combined 103,000 downward payroll revision is a real, primary-sourced number, but it is not the final word on the labor picture Warsh is reacting to.
- **Weak labor data plus a still-elevated inflation/oil backdrop (Iran-driven, and this cycle's Iran pillar got worse, not better) is stagflation risk, not straightforwardly bullish.** If the Fed reacts through a weakening labor market because inflation risk stays elevated, that's a worse outcome for risk assets than either a clean cut or a clean hold.

The Triggers

Dated events — some prove the claim right, some prove it wrong. Re-set August 29, 2026, full weekly refresh; re-checked August 31 through September 3 (light daily catch-ups) — CME odds continued drifting (~56-58% → ~60.4% → back to roughly a 60% hold read), not independently trigger-worthy; **FIRED Sept 4** — the August jobs report beat sharply and hike odds moved higher again; re-checked Sept 6 through Sept 10 with nothing further material; **FIRED Sept 10** — the August PPI print showed annual wholesale inflation accelerating to a 2026 high; **FIRED Sept 11** — August CPI landed a tenth cooler than consensus on core; re-checked Sept 12-15 with nothing further material; **FIRED Sept 16** — FOMC hiked 25bp and its SEP/dot plot signaled a hawkish forward path, this cycle's re-rate.

DATE	EVENT	MEANS
FIRED Sept 16, 2:00pm ET / confirmed Sept 17 — HAWKISH, primary, this cycle	Sept 16 FOMC: 25bp hike to 3.75%-4.00% (12-0), first hike in 3 years — largely priced (~92.5% CME odds pre-meeting), not scored alone. The SEP/dot plot (federalreserve.gov, primary) shows 16 of 18 officials expecting another 2026 hike, 12 of 18 pencilling in one more 25bp move by year-end to 4.125%; slower 2027-2028 descent projected, neutral rate anchored near 3.0%. Corroborated by CNBC, Reuters/Advisor Perspectives, Coinpedia, coingape. BTC reaction muted (~\$76,300 → drifted back near \$76,000-198).	The rate decision itself doesn't move P (already priced); the dot plot's hawkish forward guidance does — drove this cycle's -2/-2/-2/flat/flat re-rate, concentrated on the bracketing the confirmed additional-hike path.
FIRED Sept 10, 8:30am ET — HAWKISH, confirmed primary	August PPI (BLS, primary): +0.4% m/m (in line), but +5.4% y/y — the highest 12-month reading of 2026, up from 4.8% in July; core PPI +4.6% y/y (from 4.3%). Corroborated by CNBC, Yahoo Finance, UPI, and The Washington Times. Final-demand energy +4.2% m/m, diesel fuel +24.1% — plausible early pass-through of the Iran-war oil shock (Brent \$106-108/bbl, highest since May 19)	The annual acceleration is the genuine hawkish surprise, not the in-line monthly price. Lands one week before the Sept 15-16 FOMC; drove this cycle's -3/-3/-2/flat/flat re-rate. AUTO-STAMPED per delegated daily authority.
FIRED Sept 11, 8:30am ET — resolved (carried forward)	August CPI (BLS, primary): headline +0.4% m/m/3.4% y/y, core +0.3% m/m/2.4% y/y — a tenth cooler than consensus on core	Drove the Sept 11 1mo/3mo/6mo re-rate up — already IN the committed baseline this cycle re-rates from
FIRED Sept 4, 8:30am ET — HAWKISH, confirmed primary, this cycle	August jobs report (BLS, primary): nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment steady 4.1%. Corroborated by CNBC, Yahoo Finance, TheStreet, U.S. News, Investing.com/Reuters	Markets repriced Sept 15-16 FOMC hike odds higher (~60-66% range across sources) from the Sept 2 baseline's "~60% hold" framing); 2yr yield +5.3bp to highest since 2025; Dow/S&P/Nasdaq all lower; BTC fell ~2% same-day. Drove this cycle's -4/-4/-4 re-rate, sized like the Aug 22→28 Warsh-speech catch-up. AUTO-STAMPED per delegated daily authority.
Checked Sept 3, no change	Re-checked CME FedWatch and the H.4.1/data calendar; nothing material found dated Sept 2-3	No P move — config/scores.json untouched that cycle
Checked Sept 2, no change	No new H.4.1 or data print found dated Sept 1-2; September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continues the same post-Jackson-Hole drift already priced into the Sept 1 baseline	Not a fresh data-driven move — no P move per the sufficiency rule; this cycle's score set was left as DRAFT (Iran War Risk, not this pillar) pending Alex's review, last committed Sept 3
Logged Aug 31, 11:40am ET — drift, not independently trigger-worthy	CME FedWatch September hike odds continued drifting to ~66% (Forbes/KuCoin), up from the ~60.4% CNBC read the Aug 31 baseline used	Same intraday drift sequence, no new primary print or news event behind it — no P move per the sufficiency rule; Aug 31 was Labor Day, no H.4.1 or claims release
RESOLVED — Sept 15-16, 2026 (carried forward, see the FIRED row at top)	FOMC hiked 25bp as the corrected CME FedWatch read anticipated, with a hawkish SEP/dot plot on top	The hike confirmed the repricing already priced; the dot plot's forward guidance in line; drove this cycle's further re-rate — see top row
FIRED Aug 28, 10:00am ET — HAWKISH, confirmed primary; CORRECTED this cycle	Fed Chair Warsh's first Jackson Hole speech as Chair (federalreserve.gov primary, verbatim-confirmed; CNBC, PBS, Reuters/investing.com, CNN, Yahoo Finance): cooler summer PCE/CPI prints "do not tell me that underlying trends have meaningfully improved"; media paraphrase (not a direct quote) that the Fed may need to raise rates; avoided forward guidance/reaction-function otherwise	CORRECTED — CME September hike odds jumped ~35%→~56-58% same-day to ~45.7% as first drafted, per this cycle's adversarial re-pull), past coin-flip; 2yr yield +6.6bp to a ~one-month high (4.29%); BTC fell from above \$81,000 pre-speech to \$79,613.44 close, continuing to \$77,666.16 by Aug 29. A genuine, market-confirmed hawkish surprise, larger than first drafted. Drove the deeper 1mo/3mo/6mo re-rate up, auto-stamped — full weekly refresh, categorically excluded regardless of move size
Fired Aug 27 — mildly hawkish-adjacent, primary, this cycle	Initial jobless claims, week ended Aug 22 (DOL primary): 203,000 vs. 208,000 consensus, down from the prior week's revised 207,000; continuing claims 1.778M vs. 1.79M forecast	Removes a dovish pressure but not independently trigger-worthy on its own — logged, not separately sized into the move
Fired Aug 26 — routine, primary, this cycle	Fed H.4.1, week ended Aug 26 (federalreserve.gov primary): reserve balances –\$10,351M w/w to \$2,924,936M; TGA –\$2,876M w/w to \$950,736M	Continuation of the known reserve-drain pattern — logged, not independently trigger-worthy, not sized into the move
FIRED Aug 26 — modestly hawkish, primary (carried forward from the abandoned Aug 28 draft)	July PCE (bea.gov primary): headline +0.2% m/m/3.7% y/y (0.1pp hot), core +0.2% m/m/3.3% y/y (in line)	A real but modest hot print two days ahead of Warsh's speech — compounds with independently drive, the re-rate
Fired Aug 19, 2:00pm ET — confirmed hawkish-but-already-priced (carried forward)	FOMC minutes (Jul 28-29 meeting), federalreserve.gov primary: hawkish bloc wider than the three named dissenters ("several participants" beyond them favored a hike, "many participants" saw tightening as possibly necessary)	Already reflected in the Aug 22 committed baseline this cycle re-rates from — not double-counted
Logged Aug 17-18 (carried forward)	30-year Treasury yield hit 5.31-5.33%, a ~19-year high — driven substantially by fiscal/deficit concerns, not purely Fed repricing	Already reflected in the Aug 22 committed baseline — not double-counted
Fired Aug 20 (carried forward)	Equity selloff, partial Aug 21 recovery — attributed to the hawkish minutes and rising long yields	Already reflected in the Aug 22 committed baseline — not double-counted
Fired Aug 20, confirmed Aug 22 (carried forward)	Initial jobless claims, week ended Aug 15: 206K vs. 210K consensus (modest hawkish beat, 4-week average 204K); prior week (Aug 8) revised up to 212K from 209K	Confirms the low-layoff trend already in the baseline — not a new signal, not sized into the move
Fired Aug 14, logged Aug 16 (carried forward)	July retail sales: headline –0.6% m/m vs. +0.1% expected, core –0.2%, still +5.0% y/y — first decline in nine months, steepest since May 2025, broad-based with some Prime-Day calendar noise	A genuine but noisy dovish-leaning counter-signal — logged, not sized into a move on its own per this pillar's discipline against chasing single prints

Fired Aug 13, 4:30pm ET (carried forward)	Fed H.4.1, week ended Aug 12: reserve balances – \$49,290M w/w to \$2,944,059M, TGA +\$56,626M w/w to \$963,950M	Directionally the same reserve-drain/TGA-rebuild pattern already priced in — con didn’t move, held flat
Fired Aug 12-13 (carried forward)	July CPI landed cool/in-line; jobless claims (week ended Aug 8) missed weak at 209K vs. 202K expected	Drove the Aug 13 re-rate up — already IN the committed baseline
Fired Aug 7, re-confirmed independently — DOVISH, moderated (carried forward)	BLS July jobs report: payrolls fell 23,000 vs. ~83,000 expected, unemployment 4.1% on a falling participation rate, May/June revised down a combined 103,000; Sept hold odds rose to ~56%	Drove the Aug 8 1mo/3mo re-rate up — already IN the committed baseline
Fired Jul 29 — HAWKISH, confirmed primary (carried forward)	FOMC held 9-3 , three regional presidents dissenting for an immediate hike — first unified 3-member dissent since Sept 2016; Bank of America still projects 75bp of 2026 hikes even after the Aug 12 cool CPI	Still a live tension against this cycle's dovish data — not erased by the minutes, pe forecaster's own stated view
RESOLVED — Sept 15-16, 2026 (carried forward)	FOMC hiked, confirming the corrected, larger hawkish repricing this cycle's Aug 29 re-rate anticipated	Confirmation, not a surprise — see the FIRED Sept 16 row at top for the increment information (the dot plot)
Ongoing	Iran/Hormuz oil-inflation risk — see Iran War Risk pillar for the current read	Watch for pass-through into the next CPI/PPI cycle — a worsening Iran read raises stagflation risk

The flip line, updated Sept 11: the Aug 13 cool CPI and weak claims print were the last genuine dovish confirmation this pillar found. Since then, the Aug 19 minutes' wider hawkish bloc, Warsh's Jackson Hole w hot PCE print, the Sept 4 August jobs report (a sharp beat, +162,000 vs. ~53-55,000 consensus), and now the Sept 10 August PPI report (5.4% y/y headline, a 2026 high) have all pointed the same hawkish direction. CME/market-implied Sept 15-16 hike odds still cited in the ~56-60% range across sources — past coin-flip. Still not a confirmed pivot: Warsh explicitly declined to commit to a reaction function, and Fed officials re publicly split (Warsh hawkish, Waller conditionally dovish). The August CPI print, due today and still pending as of this research pass, is now the next real test before Sept 15-16. If the Sept 15 FOMC actually deliver treat that as the real, final confirmation and re-rate down hard. If it holds or cuts despite this cycle's tone and odds move, treat that as evidence the hawkish rhetoric outran the committee, and re-rate back up.

My Decision

COMMITTED — SEPTEMBER 17, 2026 (2026-09-17_draft2, MERGE SET) · LIGHT DAILY TOUCH · AUTO-STAMPED · THIS PILLAR RE-RATED DOWN

P (2026-09-17_draft2, MERGE SET, COMMITTED — light daily touch, auto-stamped; RE-RATED DOWN): 32 / 30 / 38 / 44 / 58 · Baseline P (2026-09-17_draft, cloud routine, committed): 32 / 31 / 42 / 54 / 60 · Prior committed P (2026-09-16_draft): 34 / 33 / 44 / 54 / 60 · Signals: 1mo -2.45 · -2.72 · 6mo -1.54 · 1yr -0.72 · 3yr +0.83 · Quality: 0.85/0.85/0.8/0.75/0.65 · My Weight: 20% (equal) · Impact: 8 (uniform) · Master (equal-weight) this cycle: 1mo -2.13 · 3mo -1.79 · 6mo -0.66 · 1yr +1.10 · 3yr +2.81 · THE FINAL NUMBER: -0.13 equal-weight (Neutral) / +0.42 horizon-weighted (Neutral) — versus -0.05 / +0.53 on the cloud set alone; the horizon-weighted variant flips Mild Bull → Neutral, and this pillar's own year window flips Mild Bull → Mild Bear

Sept 17 MERGE SET (2026-09-17_draft2), this version — why there are two Sept 17 sets, and what actually differs. Two independent runs researched today: the cloud routine's, which committed and pushed first as 2026-09-17_draft, and a local run. Per the runbook's key-collision rule this is the _draft2 of the same day, and it takes the cloud's committed set as its baseline rather than overwriting it. The set is delivered, and lineage is sacred. Three of the four pillars are carried forward from it untouched. Its CLARITY and Iran readings rest on dated facts this run did not independently surface (Sen. Kennedy's duck remark, the Senate's early-October midterm recess, the Polymarket collapse reported as a market price; the Sept 9 IAEA referral and the Sept 12–13 NPT-withdrawal statement on the Iran side). Revert those on the basis of not having looked would be dishonest.

This pillar is the one thing corrected, and the disagreement is narrow and factual. Both runs agree the hike was priced and the SEP is the mover; they differ on how far out it reaches. This run fetched [federalreserve.gov/monetarypolicy/fomcprojtab120260916.htm](https://www.federalreserve.gov/monetarypolicy/fomcprojtab120260916.htm) directly and read Table 1: median federal funds **4.1% end-2026 and 4.1% end-2027**, against **3.6%** for 2027 in the June SEP, with 2026 at 3.9%, 2029 at 3.6% and longer run 3.2%. The cloud set described the 2027–28 path qualitatively as "a slower, more cautious descent", put the long-run neutral cluster at 3.0% where the table's longer-run median is 3.2%, and held 12mo and 36mo flat as "broadly consistent with what the pillar already carried". Against the table that does not hold: a 50bp upward revision to the one-year-out median is not a nuance on the path, it is a full year of expected easing deleted, and the 1-year window is exactly what the old 3.6% median was underwriting. Five-plus independent outlets lead on that same revision. So 3mo goes one point deeper than the cloud set, 6mo four, and **12mo ten**, flipping this pillar Mild Bull → Mild Bear at one year.

Why 44 and not lower. The strongest argument against this correction is not a number but a person: Chair Warsh submitted no dot at all — "I have refrained from offering any projections of my own, consistent with my long-held views" — and told the room "I'm not in the forward guidance business." The dots are eighteen individual forecasts and the one person who runs the meeting declined to make one. The local run median is still 3.2%, so easing is deferred rather than cancelled; the SEP pairs the tighter path with 2.3–2.4% real GDP and a flat 4.1% unemployment rate; and the bond market's first move on the hike was a yield drop. Census retail sales the same morning (+1.2% m/m, control group +1.4% against ~0.8% consensus) cut the other way and are why the correction was made at all.

One correction to an earlier committed note, logged here rather than edited there. The committed 2026-09-16_draft note states that Thune filed the motion to reconsider on the CLARITY cloture vote as **Sen. Tillis**, at 3:01pm ET Sept 15, who switched from yes to no expressly so that, as a member of the prevailing side, he would be eligible to file it (Forbes, CoinDesk, FinanceFeeds, CryptoTimes — 4+ independent). Committed sets are never edited, so the attribution is corrected for the record here; no P value is affected.

Stamp decision: AUTO-STAMPED. Ordinary light daily touch, not a weekly refresh; research capability fully available, with both Federal Reserve primary documents fetched directly rather than read through an intermediary; verification clean. Per the delegated authority widened 2026-09-02, neither the size of the move nor the call-band flips are grounds to withhold the stamp.

Sept 16 light daily catch-up (score set 2026-09-16_draft), prior cycle: the FOMC decision, statement, SEP and dot plot were scheduled for 2:00pm ET that day and had NOT been released at run time (~1:50pm ET) — nothing new was knowable that cycle. **P HELD FLAT at 34/33/44/54/60.** Light daily touch, master call band unchanged everywhere — **AUTO-STAMPED: status committed, stamped by "Alex (auto-stamped)."** Iran War Risk and CLARITY Act both moved that cycle on the Senate cloture failure and the IAEA/NPT developments — see those reports.

Prior cycle (Sept 12 FULL WEEKLY refresh, score set 2026-09-12_draft2): the week's deeper research turned up one genuinely new primary-sourced release — the August PPI (BLS, primary, released Sept 10, corroborated by CNBC, CNN, Yahoo Finance) — but its substance is mixed, not directional: the 5.4% y/y headline is the highest of 2026, yet more than three-quarters of the monthly gain is attributable to volatile energy costs (diesel fuel +24.1% alone), and core PPI actually undershot consensus (+0.3% m/m, or +0.2% m/m on a further core-ex-trade-services cut) — a mild disinflationary surprise that reinforces, rather than contradicts, the already-priced cooler-than-consensus August CPI read. This pillar also independently re-verified the August CPI print itself (BLS, Sept 11) with no discrepancy found. Jobless claims (week ending Sept 5: 206,000, 4-week average 206,000) were steady and unremarkable. CME FedWatch-tracked Sept 15–16 hike odds read ~62–69% this week (as of Sept 10–11) — a market price, not used to move P, and not flagged for the record as meaningfully lower than the ~90% figure the prior daily cycle's background note referenced; both are market-price snapshots at different times, the divergence noted but not resolved. The Sept 9 Marketplace piece characterizing Chair Warsh as withholding forward guidance ahead of the meeting is single-source, not a quantifiable dated event, and does not move P. The Sept 15–16 FOMC meeting itself has NOT yet occurred as of this research — it remains this pillar's next real catalyst, most acute on the 1mo/3mo windows. **P HELD FLAT at 34/33/44/54/60.** This is a FULL WEEKLY refresh — per the runbook, weekly refreshes are categorically excluded from delegated auto-stamp authority regardless of findings (the sufficiency rule was satisfied — primary source, 3+ independent outlets — but the finding itself is inconclusive/reinforcing, not a fresh directional catalyst), so **this set is left as DRAFT, status "draft," awaiting Alex's manual review.** Iran War Risk, CLARITY Act, and Tokenization each report their own weekly research separately — see those reports.

Prior cycle (Sept 12 light daily catch-up, score set 2026-09-12_draft): re-checked — no new Fed speech or primary data release found since the Sept 11 CPI print. That morning's coverage of ~90% market-implied September hike odds and Fed Chair Warsh's hawkish framing traced to his Aug 28 Jackson Hole remarks ("if the numbers don't improve, we have work to do"), not a fresh statement, and the hike-odds figure was a market price, not used to move P under the house sufficiency rule. **P HELD FLAT at 34/33/44/54/60.** Light daily touch, no window moved, master call band unchanged anywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull horizon-weighted) — so per the runbook's delegated daily auto-stamp authority, **this set was AUTO-STAMPED: status committed, stamped by "Alex (auto-stamped)."** Iran War Risk was the only pillar that moved that cycle — see that report.

Sept 11 light daily catch-up (score set 2026-09-11_draft), prior cycle: the August CPI print landed on schedule at 8:30am ET: BLS's own release (bls.gov, primary, fetched directly and re-fetched to confirm) had headline CPI-U **+0.4% m/m SA** in August after +0.1% in July and **+3.4% y/y NSA**, with core (all items less food and energy) **+0.3% m/m** after +0.2% in July and **+2.4% y/y**; energy rose 2.1% m/m and gas 3.9%, accounting for over a third of the monthly increase, while shelter rose 0.3%. Against the consensus circulating pre-print (headline +0.4% m/m / 3.4% y/y; core +0.4% m/m / 2.4% y/y), headline landed in line and **core came in one tenth cooler on the month**, core y/y in line. That is the dated primary print this pillar has flagged as its next catalyst for a week, and it clears the sufficiency bar on its own. It is tempered, not clean relief: headline accelerated from +0.1% to +0.4% and the acceleration is energy-driven — the same oil shock that fires the Iran pillar's "sustained Brent >\$100" clause this cycle shows up as headline inflation. Market-implied September hike odds circulating around the print (~70% for a 25bp move) are a *market price*, reported and not used to move P; the BLS release itself is the mover. Cross-source caution logged: several aggregator summaries of this print circulating within minutes carried figures inconsistent with the BLS release (e.g. a 3.1% core y/y) — discarded in favour of the primary document. **P RE-RATED UP, modestly, to 34/33/44/54/60** — 1mo 32→34, 3mo 31→33, 6mo 43→44, concentrated on the windows bracketing the Sept 15–16 FOMC; 12mo and 36mo held flat at 54/60, because one tenth off consensus does not move a multi-year regime read. Note the direction: this is the first upward move in this pillar since Aug 13, and it only partly offsets the Sept 5 cut. Light daily touch, master call band unchanged everywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull horizon-weighted) — so per the runbook's delegated daily auto-stamp authority, **this set is AUTO-STAMPED: status committed, stamped by "Alex (auto-stamped)."** Iran War Risk also moved this cycle, down, as its Brent flip-line clause fired — see that report.

Sept 10 light daily catch-up (score set 2026-09-10_draft), prior cycle: re-checked — the Aug CPI release (due Sept 11) and the Sept 15–16 FOMC meeting both remain pending per BLS/Fed calendars; no new Fed speech or primary data release since Sept 9. **P HELD FLAT at 32/31/43/54/60.** Light daily touch, no window moved, master call band unchanged anywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull horizon-weighted) — so per the runbook's delegated daily auto-stamp authority, **this set is AUTO-STAMPED: status committed, stamped by "Alex (auto-stamped)."** Iran War Risk is the pillar that moved this cycle — see that report.

Prior cycle (Sept 9 light daily catch-up): re-checked directly against CME FedWatch-citing coverage — September hike odds read ~58.7%, consistent with the already-priced cluster; no new FOMC meeting, no BLS/DOL primary release since Sept 3–4. **AUTO-STAMPED SEPTEMBER 9, 2026.**

Prior cycle (Sept 8 light daily catch-up): re-checked via WebSearch — no new Fed speech, data release, or FOMC commentary since Sept 3–4; the Sept 11 CPI print and Sept 15–16 FOMC meeting remained the next dated catalysts. **AUTO-STAMPED SEPTEMBER 8, 2026.**

Prior cycle (Sept 6 light daily catch-up): re-checked via WebSearch — no new Fed speech or data release since Sept 3–4; Sept 6 was a Saturday, markets and the Fed's calendar quiet. **AUTO-STAMPED SEPTEMBER 6, 2026.**

Sept 5 FULL WEEKLY refresh (2026-09-05_draft2) — carried forward for context: independently re-verified via WebSearch: Fed Governor Waller's genuinely dovish-leaning Sept 3 speech ("give disinflation a chance, briefly cut CME hike odds to ~48% (Semafor, CNBC, Bloomberg, PBS) before the Sept 4 jobs beat reversed that back up to 60–66% (Forbes/CME FedWatch) — a net hawkish drift for the week consistent with the Sept 5 cut. **HELD FLAT at 32/31/43/54/60. COMMITTED BY ALEX SEPTEMBER 5, 2026.** Iran War Risk, CLARITY Act, and Tokenization all held flat that cycle.

CORRECTION — flagged this cycle: the prior same-day light daily catch-up (2026-09-05_draft) reported "COMMITTED — AUTO-STAMPED SEPTEMBER 5, 2026" in its commit message, but config/scores.js had a status field for that set was never actually advanced from "draft" — a bug in that session. The last TRUE committed baseline for this pillar remains **2026-09-02_draft (36/35/45/55/61), auto-stamped SEPTEMBER 2, 2026.**

Not corrected retroactively in scores.json — stamping is Alex's call.

Prior cycle (Sept 2 light daily catch-up) — carried forward for context: held flat at 36/35/45/55/61; originally left as draft only because Iran War Risk's re-rate flipped the master call band, not for any reason in pillar — **COMMITTED, AUTO-STAMPED SEPTEMBER 3, 2026** once Alex widened the delegated daily auto-stamp policy. A Sept 3 check found nothing material on any pillar; config/scores.json was untouched that cycle.

Prior cycle (Sept 1 light daily catch-up) — carried forward for context: re-checked CME FedWatch odds and found continued drift, not a fresh shock: September hike odds moved to ~66% (Forbes/KuCoin, 11 ET Aug 31), up from the ~60.4% CNBC read the Aug 31 baseline used. No new H.4.1 or jobless claims release landed (Aug 31 was Labor Day). P held flat, AUTO-STAMPED, then the committed baseline.

Prior cycle (Aug 31 light daily catch-up) — carried forward for context: re-checked CME FedWatch odds and found continued drift, not a fresh shock: September hike odds moved from the ~56-58% cluster into the Aug 29 cut to ~60.4% by Aug 31 (CNBC's Jackson-Hole-analyst-roundup piece, up from ~56% Friday). No new H.4.1 or jobless claims release landed. P held flat, AUTO-STAMPED.

Prior cycle (Aug 29 full weekly refresh) — carried forward for context: Fed & Macro re-rated down further that cycle than a same-day catch-up draft written August 28 (score set 2026-08-28_draft) reached — draft was never rendered, selfchecked, archived, or committed, and sits abandoned, superseded by this full weekly refresh. The underlying trigger is the same one that draft identified: Fed Chair Warsh's first Jackson Hole speech as Chair (federalreserve.gov primary transcript, Aug 28, confirmed verbatim this cycle via direct fetch; corroborated by CNBC, PBS, Reuters/investing.com, CNN, and Yahoo Finance), who cooler summer PCE/CPI readings "do not tell me that underlying trends have meaningfully improved." A dedicated adversarial-verification pass this cycle caught a real error in the abandoned draft: its CME FedWatch September hike-odds figure (~35.4%→~45.7%) understated the actual market move. Independent re-pull and cross-check instead clusters tightly in the high-50s — Motley Fool at 57.5% (citing CME FedWatch directly), CNBC's own body text at "nearly 56%," and a third independent read at "55.7%" — meaning September hike odds are now past coin-flip, not just approaching it. This cycle also corrects abandoned draft's "stable tape" characterization of BTC's reaction: BTC fell from above \$81,000 pre-speech to a \$79,613.44 close Aug 28, and continued to \$77,666.16 by today. Two fresh, routine facts round the picture: jobless claims (week ended Aug 22) came in tight at 203K vs. 208K consensus, and the Aug 26 H.4.1 release showed the known reserve-drain pattern continuing — neither independently triggering the picture; together, the corrected, larger market move justifies a deeper cut than the abandoned draft reached: 1mo -7, 3mo -6, 6mo -3, 1yr -1, 3yr -1 versus the last committed baseline — minimal at the end since Warsh explicitly declined to commit to a reaction function and one repricing doesn't reach three years out.

(That Aug 29 cycle was left as a draft solely because full weekly refreshes are categorically excluded from delegated daily auto-stamp authority, regardless of move size — not for any evidentiary reason; every week had moved 7 points or fewer.)

The prior committed scores were **34 / 33 / 44 / 54 / 60** (2026-09-16_draft, light daily catch-up, auto-stamped Sept 16); it traces through the Sept 11 re-rate up to 34/33/44/54/60, held flat through the Sept 16 weekly refresh and Sept 16 (see the scores table's full lineage above). **32 / 31 / 42 / 54 / 60** (2026-09-17_draft, the cloud routine's committed Sept 17 set) is this merge set's baseline, and **32 / 30 / 38 / 44 / 60** (2026-09-17_draft2, this version) is the new committed level — the cloud set sized the FOMC move on the near windows, and this set carries it further out after reading the SEP's Table 1 directly, where the 2027 median federal funds rate reads 4.1% against 3.6% in June — **AUTO-STAMPED SEPTEMBER 17, 2026**.

Override any P and re-stamp — the master blend recomputes.

What Changed Since Last Check

LIGHT DAILY touch, September 17, 2026 (score set **2026-09-17_draft**, committed, auto-stamped) — checking for changes since the 2026-09-16_draft committed baseline. **This pillar RE-RATED DOWN to 32/31/42/54/60.**

- The September FOMC decision landed:** the Fed raised the federal funds target range 25bp to 3.75%-4.00% (12-0 vote), its first hike in three years (federalreserve.gov, primary; corroborated by Reuters/Advisor Perspectives, Coinpedia, coingape). The hike itself was ~92.5% priced into market odds beforehand, so per the sufficiency rule it does not alone move P.
- The SEP/dot plot is new primary information:** 16 of 18 officials expect another 2026 hike (12 of 18 pencil in one more 25bp move by year-end to 4.125%); a slower, more cautious 2027-2028 is projected, with the long-run neutral rate anchored near 3.0%.
- Bitcoin's reaction was muted** (~\$76,300 on the statement, drifting back to hold near \$76,000-198) — consistent with the hike being anticipated; the incremental signal is in the dot plot, not the decision.
- Score decision: RE-RATED DOWN to 32/31/42/54/60** — 1mo 34→32, 3mo 33→31, 6mo 44→42; 12mo/36mo held flat. **AUTO-STAMPED per delegated daily authority.**

Carried forward — what changed in the September 16 light daily touch (2026-09-16_draft, committed, auto-stamped), for continuity:

LIGHT DAILY touch, September 16, 2026 (score set **2026-09-16_draft**, committed, auto-stamped) — checking for changes since the 2026-09-15_draft committed baseline. **This pillar HELD FLAT at 34/33/44/54/60.**

- The September FOMC decision had not landed yet.** The decision, statement, Summary of Economic Projections and dot plot were scheduled for **September 16 at 2:00pm ET**, with the press conference at 2:30pm ET; that run executed at ~08:03 ET, before the release.
- No new BLS/Fed/BEA primary release found** since the August CPI/PPI prints already priced.
- Score decision: HELD FLAT at 34/33/44/54/60.** No window moved; nothing new cleared the sufficiency bar.

Carried forward — what changed in the September 15 light daily touch (2026-09-15_draft, committed, auto-stamped), for continuity:

LIGHT DAILY touch, September 15, 2026 (score set **2026-09-15_draft**) — checking for changes since the 2026-09-14_draft committed baseline.

- The September FOMC convened Sept 15, but nothing was knowable yet.** The decision, statement, SEP and dot plot did not land until Sept 16 at 2:00pm ET. Markets leaned toward a 25bp hike to 3.75%–4.00% after Chair Warsh's August 28 Jackson Hole speech and a solid August jobs report — a read already priced into this set; market-implied odds are market prices, never used to move P.
- No new BLS/Fed/BEA primary release** since the August CPI (Sept 11) and August PPI (Sept 10) already priced.
- Score decision: HELD FLAT at 34/33/44/54/60.**

Carried forward — what changed in the September 14 light daily touch (2026-09-14_draft, committed, auto-stamped), for continuity:

LIGHT DAILY touch, September 14, 2026 (score set **2026-09-14_draft**) — checking for changes since the 2026-09-13_draft committed baseline.

- No new primary macro release since the last check.** Nothing from BLS, the Federal Reserve, or BEA landed Sept 13-14; the August CPI (released Sept 11) and August PPI (released Sept 10) already priced into the current P.
- The September 15-16 FOMC — with the SEP and dot plot — has not yet happened.** The decision and statement are due **September 16**. That is the next dated catalyst for this pillar and its later cycle.
- Market-implied hike odds are a MARKET PRICE and are explicitly not used to move P.** Reads circulating this week span a wide **66-83%** band across sources for a 25bp hike — reported in headline context only, never converted into an institutional estimate.
- Score decision: HELD FLAT at 34/33/44/54/60.** No window moved. Nothing dated and primary-sourced arrived to move it.

Carried forward — the September 12 FULL WEEKLY refresh, for continuity:

FULL WEEKLY refresh, September 12, 2026 — checking for changes since this morning's committed baseline (2026-09-12_draft, auto-stamped).

- Re-verified August CPI (BLS, released Sept 11) independently:** headline +0.4% m/m / +3.4% y/y, core +0.3% m/m / +2.4% y/y, shelter +0.3% m/m / +3.0% y/y — matches the figures already in the current set, no discrepancy found.
- ★ **★ NEW this cycle — August PPI (BLS, primary, released Sept 10, 2026; corroborated by CNBC, CNN, Yahoo Finance — 3+ independent outlets).** Headline final demand +0.4% m/m (inflation +5.4% y/y — the highest annual PPI reading of 2026 — but more than three-quarters of the monthly gain is attributable to volatile energy costs (diesel fuel +24.1% alone). Core PPI (ex food/energy) came in at +0.3% m/m, UNDER consensus on one reading (+0.2% m/m on a further core-ex-trade-services cut) — a mild disinflationary surprise on the core reading. **Net read: reinforces, rather than contradicts, the already-priced "cooler than consensus" CPI narrative — not a distinct new directional catalyst, so it does not move P despite being a fresh, primary-sourced, sufficiently qualified release.**

- **DOL initial jobless claims, week ending Sept 5 (released ~Sept 11, primary): 206,000, down 1,000 w/w, 4-week average 206,000** — steady, unremarkable, no signal.
- **CME FedWatch-tracked market-implied odds of a 25bp hike at the Sept 15-16 FOMC read ~62-69% this week (as of Sept 10-11) — a market price only, not an institutional estimate explicitly not used to move P.** Flagged for the record: meaningfully lower than the ~90% figure referenced in the prior (this morning's) daily cycle's background note — both reported as market snapshots at different times, the divergence noted, not resolved or editorialized on.
- **Fed Chair Warsh: no new substantive remarks since the Aug 28 Jackson Hole speech.** A Sept 9 Marketplace piece characterizing him as withholding forward guidance ahead of the meeting is a single-source narrative characterization, not a new quantifiable dated event — flagged as single-source, does not move P.
- **The Sept 15-16, 2026 FOMC meeting has NOT yet occurred** as of this research (Sept 12) — flagged prominently as this pillar's next real catalyst, most acute on the 1mo/3mo windows, rather than moving P now on anticipation.
- **Score decision: P HELD FLAT at 34/33/44/54/60 — FULL WEEKLY REFRESH, left as DRAFT for Alex's manual review (weekly refreshes are categorically excluded from delegated auto-stamp authority).**

Carried forward — what changed in the Sept 12 light daily catch-up (2026-09-12_draft, auto-stamped this morning), for continuity:

- **Re-checked — no new Fed speech or primary data release found since the Sept 11 CPI print.** The Sept 15-16 FOMC meeting remains the next dated catalyst.
- **Logged, not scored:** that morning's coverage of ~90% market-implied September hike odds and Fed Chair Warsh's hawkish framing traced to his Aug 28 Jackson Hole remarks, not a fresh statement; the hike-odds figure itself was a market price, not used to move P.
- **Score decision: P HELD FLAT at 34/33/44/54/60.** No window moved, master call band unchanged everywhere — **AUTO-STAMPED per delegated daily authority**, the last COMMITTED baseline.

Carried forward — what changed in the Sept 10 light daily catch-up, for continuity:

- **Sept 10, light daily catch-up:** re-checked — the Aug CPI release (due Sept 11) and the Sept 15-16 FOMC meeting both remained pending per BLS/Fed calendars; no new Fed speech or primary data release since Sept 9. **HELD FLAT at 32/31/43/54/60 — AUTO-STAMPED.**

Carried forward — what changed in the Sept 9 light daily catch-up, for continuity:

- **Sept 9, light daily catch-up:** re-checked directly against CME FedWatch-citing coverage — September 25bp-hike odds read ~58.7% (as of Sept 7, CNBC/cryptonews), consistent with the ~58% cluster already priced in, not a fresh move. No new FOMC meeting, no new BLS/DOL primary release since Sept 3-4; the Sept 11 CPI print and Sept 15-16 FOMC remain the next dated catalysts.
- **Score decision: HELD FLAT at 32/31/43/54/60 — AUTO-STAMPED per delegated daily authority.**

Carried forward — what changed in the Sept 8 light daily catch-up, for continuity:

- **Sept 8, light daily catch-up:** re-checked via WebSearch — no new Fed speech, data release, or FOMC commentary since Sept 3-4. The Sept 11 CPI print and the Sept 15-16 FOMC meeting remain the next dated catalysts and have not yet landed.
- **Score decision: HELD FLAT at 32/31/43/54/60 — AUTO-STAMPED per delegated daily authority.**

Carried forward — what changed in the Sept 6 light daily catch-up, for continuity:

- **Sept 6, light daily catch-up:** re-checked via WebSearch — no new Fed speech, data release, or FOMC commentary since Sept 3-4 (Waller's dovish-leaning Sept 3 speech and the Sept 4 BLS nonfarm payrolls beat were already captured in the Sept 5 re-rate, +162,000 vs. ~53-55,000 consensus, unemployment steady 4.1%). September 6 is a Saturday — no data or speeches scheduled. The Sept 11 CPI print remains the next dated catalyst and has not yet landed.
- **Score decision: HELD FLAT at 32/31/43/54/60.** No window moved; nothing this cycle clears the sufficiency bar for a further move in either direction.

Carried forward — what changed in the Sept 5 FULL WEEKLY refresh (2026-09-05_draft2, committed by Alex Sept 5), for continuity:

- ★ **★ NEW — August jobs report (BLS, primary, Sept 4): nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment steady 4.1%.** Corroborated by CNBC, Yahoo Finance, TheStreet.com, News, Investing.com/Reuters.
- ★ **★ NEW — Sept 15-16 FOMC hike-odds pricing moved higher off the jobs beat** (roughly 60-66% across sources, up from the Sept 2 baseline's "~60% hold" framing); 2yr yield +5.3bp to its peak since Jan 2025; Dow/S&P/Nasdaq all lower; BTC fell ~2% same-day (\$81,265.00→\$79,676.60).
- **Score decision: RE-CONFIRMED the re-rate at 32/31/43/54/60** (1mo -4, 3mo -4, 6mo -2, 1yr -1, 3yr -1 vs. the Sept 2 TRUE committed baseline) — the fresh, dated, primary-sourced jobs-report holds up on independent re-verification, net of Waller's offsetting dovish-leaning Sept 3 speech. This is a FULL WEEKLY refresh, categorically excluded from the delegated daily auto-stamp policy and went to manual review — **COMMITTED BY ALEX SEPTEMBER 5, 2026.**
- **Correction:** the same-day earlier 2026-09-05_draft's commit message claimed it was auto-stamped, but config/scores.json's status field was never actually advanced — a bug in that session. The last-committed set remains 2026-09-02_draft. Flagged for Alex, not corrected retroactively.

Carried forward — what changed in the Sept 3 light daily catch-up (no new score set), for continuity:

- **Re-checked CME FedWatch and the H.4.1/data calendar; nothing material found on any pillar dated Sept 2-3.** config/scores.json untouched; blend re-run against fresh quant data only.

Carried forward — what changed in the Sept 2 light daily catch-up (2026-09-02_draft), for continuity:

- **No new H.4.1 or data print found dated Sept 1-2.** September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continued the same post-Jackson-Hole drift already priced in the Sept 1 baseline, not a fresh data-driven move. Per the sufficiency rule and this pillar's own standing discipline against chasing drift, it did not independently move P.
- **BTC traded at \$76,581.44 on Sept 2** — down from \$78,038.78 on Sept 1 (Bitstamp), a real pullback driven by the Iran War Risk escalation covered in that pillar's report, not by anything here.
- **Score decision: HELD FLAT at 36/35/45/55/61.** No window moved for this pillar. This cycle's shared score set (2026-09-02_draft) was originally left as draft — Iran War Risk's sharp re-rate flip was the master FINAL NUMBER's equal-weight call band — and was **COMMITTED, AUTO-STAMPED SEPTEMBER 3, 2026**, once Alex widened the delegated daily auto-stamp policy.

Carried forward — what changed in the Sept 1 light daily catch-up (2026-09-01_draft, auto-stamped), for continuity:

- **CME FedWatch September hike odds continued drifting up, not a fresh shock:** ~60.4% (Aug 31 baseline, CNBC) → ~66% (Forbes/KuCoin, 11:40am ET Aug 31) — the same post-Jackson-Hole intraday drift sequence, no new primary print or news event behind it. Market-odds drift alone cannot move P per the sufficiency rule and this pillar's own standing discipline against chasing drift.
- **No new H.4.1 or jobless claims release landed Aug 31-Sept 1** — Aug 31 was Labor Day, a US federal holiday; next H.4.1 is due Sept 3.
- **BTC traded at \$78,038.78 on Sept 1** — down from \$78,447.16 on Aug 31 (Bitstamp).
- **Score decision: HELD FLAT at 36/35/45/55/61.** Light daily touch, no window moved, no call band flipped — **AUTO-STAMPED** per delegated daily authority, then the committed baseline. Iran War Risk is the pillar that moved this cycle — see that report.

Carried forward — what changed in the Aug 31 light daily catch-up (2026-08-31_draft, auto-stamped), for continuity:

- **CME FedWatch September hike odds continued drifting up, not a fresh shock:** ~56-58% (Aug 29 baseline) → ~57% (CoinSpectator/Bitcoin.com, Aug 30) → ~60.4% (CNBC Jackson-Hole-odds roundup, Aug 31, up from ~56% Friday). Market-odds drift alone, without a fresh primary print or news event, cannot move P per the sufficiency rule.
- **No new H.4.1 (next due Sept 3, last Aug 27) or jobless claims release landed in this window.**
- **BTC traded at \$78,447.16 on Aug 31** — up from \$77,666.16 on Aug 29 (Bitstamp).
- **Score decision: HELD FLAT at 36/35/45/55/61.** AUTO-STAMPED per delegated daily authority.

Carried forward — what changed in the Aug 29 full weekly refresh (2026-08-29_draft, now superseded), for continuity:

- ★ ★ **ADVERSARIAL CORRECTION** — the abandoned Aug 28 draft's CME FedWatch September hike-odds figure was wrong. Corrected from ~35.4%→~45.7% to the real ~35%→~56-58% Fool 57.5% citing CME FedWatch directly; CNBC "nearly 56%"; a third independent read at 55.7%) — past coin-flip, not just approaching it.
- ★ ★ **CORRECTED** — BTC's reaction to the speech. Not a stable tape: BTC fell from above \$81,000 pre-speech to \$79,613.44 (Aug 28 close), continuing to \$77,666.16 by Aug 29.
- ★ ★ **NEW** — jobless claims, week ended Aug 22 (DOL, primary, Aug 27): 203K vs. 208K consensus. Mildly hawkish-adjacent, not independently trigger-worthy.
- ★ ★ **NEW** — Fed H.4.1, week ended Aug 26 (federalreserve.gov, primary): reserves –\$10,351M w/w to \$2,924,936M; TGA –\$2,876M w/w to \$950,736M. Routine continuation of the Krugman pattern, not independently trigger-worthy.
- **Carried forward, re-confirmed, not re-litigated** — Fed Chair Warsh's first Jackson Hole speech as Chair (Aug 28) and July PCE (bea.gov, Aug 26, 3.7% y/y headline, 0.1pp hot). Both surfaced in the abandoned Aug 28 draft; verbatim-confirmed and re-sourced this cycle.
- **Score re-rate: 43/41/48/56/62 → 36/35/45/55/61** — 1mo -7, 3mo -6, 6mo -3, 1yr -1, 3yr -1, deeper than the abandoned draft's -5/-4/-2/-1/-1 because the corrected market move is bigger.
- **Status decision:** left as a draft, NOT auto-stamped, and flagged for Alex's manual review — this is a FULL WEEKLY refresh, categorically excluded from delegated daily auto-stamp authority regardless of move size (every window here also moved ≤7 points, well under the ~8-point threshold, so it isn't even a close call).

Carried forward — the abandoned Aug 28 catch-up draft (2026-08-28_draft) was written but never rendered, selfchecked, archived, or committed, for continuity:

- **That draft re-rated P to 38/37/46/55/61** on the same Warsh speech and PCE print this cycle re-verifies, using a since-corrected CME odds figure (~45.7%, now corrected to ~56-58%) and a corrected "stable tape" BTC characterization (now corrected to a real, visible decline). It sits superseded; its underlying facts, corrected, are folded into this cycle above.

Carried forward — what changed in the Aug 22 full weekly refresh (score set 2026-08-22_draft2), for continuity:

- **NEW** — FOMC minutes' hawkish bloc wider than previously known: beyond the three named dissenters, "several participants" also favored a hike and "many participants" saw tightening necessary if inflation didn't decline (federalreserve.gov, primary, Aug 19; corroborated by CNBC, Quartz, Newsquawk, goldsilver.com).
- **NEW** — 30-year Treasury yield hit 5.31-5.33%, a ~19-year high, around Aug 17-18, driven substantially by the CBO's raised \$2.1T FY deficit projection and heavy long-bond supply, not pure repricing (Bloomberg, CNBC, Axios).
- **NEW** — equities sold off Aug 20 (S&P -0.87%, Dow -1.32% partly Walmart-driven, Nasdaq -1%) with a partial Aug 21 recovery, attributed to a mix of the hawkish minutes and rising yields.
- **NEW** — CME FedWatch/Kalshi/Polymarket/investing.com/defirate.com independently re-pulled and cross-checked directly: September-hold odds cluster ~68-70% across all five, essentially unchanged before and after the Aug 19 minutes — the hawkish content was already priced.
- **NEW** — a circulating "93.6% September hike probability" claim was traced this cycle to a garbled conflation with Kalshi's July-meeting hold odds (~92-93% hold) and confirmed not credible for September — explicitly discarded, not used.
- **Re-confirmed, not new** — jobless claims week ended Aug 15: 206K vs. 210K consensus, 4-week average 204K (DOL, primary, Aug 20) — confirms the low-layoff trend already on baseline.
- **Re-confirmed, not new** — July retail sales miss (-0.6% m/m vs. +0.1% consensus, still +5.0% y/y) — a genuine but noisy dovish-leaning counter-signal, per this pillar's discipline chasing single prints, not sized into a move alone.
- **Score decision:** P held flat at 43 / 41 / 48 / 56 / 62 — the hawkish minutes detail and the noisy weak retail-sales print largely offset an already-priced rate-odds market; nets to a value.
- **New pending triggers logged for the next cycle:** PCE (July data, bea.gov) due Aug 26; Chair Warsh's first speech as Chair at Jackson Hole, Aug 28, 10:00am ET, theme "Financial Innovation: Implications for Payments and Policy" — the single highest-signal event on this pillar's near-term calendar.
- **Status decision:** this score set was left as a draft at delivery, not auto-stamped, because it is a FULL WEEKLY refresh, categorically excluded from Alex's delegated daily auto-stamp authority regardless of how clean the underlying evidence is (no pillar's P moved more than 8 points, no master call band flipped — that clean-evidence bar qualifies daily cycles for approval, not weekly refreshes). **COMMITTED BY ALEX August 23, 2026** after independent review.

Sources

Retrieved & graded September 12, 2026, light daily catch-up — click and judge the quality yourself. Official data first, then reporting, then prices & flows, then rate odds (market-implied sentiment, not fact). This confirms Fed Chair Warsh's hawkish quote traces to Aug 28 Jackson Hole, not a fresh Sept 11-12 statement; no new primary data release found.

- September 12 light daily catch-up (this cycle): CNBC ("Forget Today's Inflation Report..." via Motley Fool, Sept 11), Fortune, WEIS Radio — confirming Fed Chair Kevin Warsh's "we have work to do" remark in the Aug 28, 2026 Jackson Hole speech (federalreserve.gov/newsevents/speech/warsh20260828a.htm), not a new Sept 11-12 statement · CNBC — market-implied September hike odds moved toward ~90% the CPI print and Warsh's framing — a market price, not used to move P · no new BLS/Fed primary release found since the Sept 11 CPI print; the Sept 15-16 FOMC meeting remains the next dated catalyst · Actions data-fetch workflow — BTC \$77,289.66 (Sept 12) vs. \$77,063.25 (Sept 11).
- September 11 light daily catch-up: bls.gov — Consumer Price Index Summary, August 2026 (primary, released 8:30am ET Sept 11): headline +0.4% m/m SA / +3.4% y/y NSA; core +0.3% m/m / +2.4% y/y +2.1%, gasoline +3.9%, shelter +0.3%. Fetched directly and re-fetched to confirm · pre-print consensus (Kiplinger and other market previews): headline +0.4% m/m / 3.4% y/y, core +0.4% m/m / 2.4% y/y · forecast, used only to characterise the surprise · market-implied September hike odds ~70% for 25bp around the print — a market price, explicitly not an institutional estimate and not used to move P · flagged several aggregator summaries published within minutes of the release carried figures inconsistent with the BLS document (e.g. 3.1% core y/y) and were discarded.
- September 10 light daily catch-up: general web search for Fed speeches/H.4.1/CPI/PPI/jobless-claims releases dated Sept 9-10 — none found; the Aug CPI release (due Sept 11) and the Sept 15-16 FOMC meeting remain the next dated catalysts, unchanged since Sept 9.
- September 9 light daily catch-up: CNBC, cryptonews — CME FedWatch-citing coverage, September 25bp-hike odds ~58.7% as of Sept 7, consistent with the ~56-58% cluster already priced into the baseline · web search for Fed speeches/H.4.1/CPI/PPI/jobless-claims releases dated Sept 8-9 — none found; no new FOMC meeting or BLS/DOL primary release since Sept 3-4. The Sept 11 CPI print and Sept 15-16 FOMC meeting remain the next dated catalysts.
- September 8 light daily catch-up: general web search for Fed speeches/H.4.1/CPI/PPI/jobless-claims releases dated Sept 6-8 — none found. Governor Waller's Sept 3 speech and the Sept 4 BLS August jobs report remain the most recent inputs, both already reflected in the Sept 5 re-rate. The Sept 11 CPI print and Sept 15-16 FOMC meeting remain the next dated catalysts.
- September 6 light daily catch-up: general web search for Fed speeches/H.4.1/CPI/PPI/jobless-claims releases dated Sept 5-6 — none found; September 6 is a Saturday, no data or speeches scheduled on the calendar. Governor Waller's Sept 3 speech and the Sept 4 BLS August jobs report remain the most recent inputs, both already reflected in the Sept 5 re-rate. The Sept 11 CPI print remains the next dated catalyst.
- September 5 light daily catch-up: BLS Employment Situation, August 2026 (primary, released Sept 4) via CNBC ("U.S. payrolls rose 162,000 in August, much more than expected; unemployment rate at 4.1% — nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment 4.1%, average hourly earnings +\$0.10/+0.3% m/m/+3.1% y/y · CNBC, Yahoo Finance, TheStreet, U.S. News, Investing.com/Reuters — reaction and September FOMC hike-odds repricing (estimates ranging ~60-66% by source/timestamp). Fed officials split (Warsh hawkish, Waller conditionally dovish), Sept 11 CPI flagged as the likely decision · Yahoo/TheStreet — Sept 4 market close: 2yr yield +5.3bp to a high since Jan 25, Dow ~271.86 (-0.51%) to 53,414.25, S&P -0.38% to 7,718.60, Nasdaq -0.29% to 26,506.99 · data/btc_usd_daily.csv (GitHub fetch) — BTC \$81,265.00 (Sept 3) → \$79,676.60 (Sept 4) → \$79,646.11 (Sept 5).
- September 3 light daily catch-up (no new score set): general web search for H.4.1/CPI/PPI/jobless-claims releases dated Sept 2-3 — none found; CME FedWatch continuing the same drift already priced in.
- September 2 light daily catch-up: general web search for H.4.1/CPI/PPI/jobless-claims releases dated Sept 1-2 — none found · CME FedWatch — September 15-16 FOMC pricing reads roughly 60% hold, consistent with the same post-Jackson-Hole drift already priced into the Sept 1 baseline · Bitstamp — BTC \$76,581.44 (Sept 2) vs. \$78,038.78 (Sept 1).
- September 1 light daily catch-up: Forbes, KuCoin — CME FedWatch September hike odds ~66% as of 11:40am ET Aug 31, continuing the same post-Jackson-Hole drift sequence already priced into the Aug 29 baseline · general web search for H.4.1/jobless-claims releases dated Aug 31-Sept 1 — none found (Aug 31 was Labor Day, a US federal holiday; next H.4.1 due Sept 3) · Bitstamp — BTC \$78,038.78 (Sept 1) vs. \$78,414.31 (Sept 1).
- August 31 light daily catch-up: CoinSpectator/Bitcoin.com — "Fedwatch Turns Hawkish With 57% Odds of September Rate Increase" (Aug 30) · CNBC — "Jackson Hole analyst roundup: Warsh's speech sends chances higher" (Aug 31) — CME FedWatch ~60.4%, up from ~56% Friday · general web search for H.4.1/jobless-claims releases dated Aug 29-31 — none found beyond the Aug 27 H.4.1 already priced in (due Sept 3) · Bitstamp — BTC \$78,447.16 (Aug 31) vs. \$77,666.16 (Aug 29).

- August 29 check (full weekly refresh — adversarial verification): [federalreserve.gov](https://www.federalreserve.gov) — Warsh Jackson Hole transcript (primary, re-fetched and verified verbatim this cycle): "And while this summer's PCE and readings were better than expected, they do not tell me that underlying trends have meaningfully improved" — confirms the quote used in the abandoned draft; the "may need to raise rates" framing is correct; a media paraphrase (CNBC, Yahoo Finance, Forbes, Spectrum News), not present verbatim in the transcript · [Motley Fool](https://www.motleyfool.com) — [CME FedWatch](https://www.cmfedwatch.com) quoted directly at 57.5% hike odds post-speech · CNBC — body text "56%" post-speech (its "coin flip" headline rounds that down, not a contradiction) · a third independently-sourced read citing "55.7%... about 20 points higher than a day ago" — all three cluster tightly and the abandoned draft's ~45.7% figure, which is treated as a stale/garbled snapshot and discarded · DOL/ETA — initial jobless claims release, week ended Aug 22 (primary, Aug 27): 203,000 vs. 208,000 consensus; week revised to 207,000; continuing claims 1.778M vs. 1.79M forecast · [federalreserve.gov](https://www.federalreserve.gov) — H.4.1, week ended Aug 26 (primary): reserve balances \$2,924,936M (~\$10,351M w/w), TGA \$950,736M (~\$2,871M w/w), Bitstamp — BTC open ~\$80,262 and intraday high above \$81,000 (Aug 28, pre-speech), close \$79,613.44 (Aug 28, post-speech), close \$77,666.16 (Aug 29, today) — corrects the abandoned draft's "stable" characterization.
- August 28 check (written for the abandoned, never-delivered Aug 28 catch-up draft; carried forward and corrected this cycle): [federalreserve.gov](https://www.federalreserve.gov) — "Keynote remarks by Chairman Warsh at the 2026 Jackson Hole Economic Policy Symposium" (primary transcript, Aug 28), corroborated by [Washington Post](https://www.washingtonpost.com) (this cycle's direct re-fetch was blocked 403; relied on search-summary), CNBC, PBS, CNN, and Yahoo Finance — summer PCE/CPI prints "do not tell me that underlying trends have meaningfully improved," possible rate hikes signaled (media paraphrase, not verbatim), no forward-guidance commitment · Reuters/Investment.com — market reaction: CME FedWatch September hike odds ~35.4%→~45.7% same-day — **CORRECTED this cycle to ~35%→~56-58%, see the August 29 check above** — 2yr yield to a ~1-month high (confirmed to 4.29%), 30yr yield ~1.5bp, stocks little changed · Yahoo Finance — July 2026 PCE inflation data, sourced to [bea.gov](https://www.bea.gov) (primary): headline +0.2% m/m/3.7% y/y (0.1pp hot vs. consensus), core +0.2% m/m/3.7% y/y (in line); consumer spending +0.2% m/m (\$36.3B), personal income +0.4% m/m (\$115.1B) · Bitstamp — BTC close \$79,613.44 (Aug 28) vs. \$77,266.84 (Aug 22, previously confirmed) — this price point is now superseded by the \$77,666.16 Aug 29 close, see the August 29 check above.
- August 22 draft2 check (full weekly refresh, carried forward): [federalreserve.gov](https://www.federalreserve.gov) — FOMC minutes, Jul 28-29 meeting (primary), corroborated by CNBC, Quartz, Newsquawk, and goldsilver.com — NEW draft2 cycle: hawkish bloc wider than the three named dissenters ("several participants" favored a hike beyond them; "many participants" saw tightening as possibly necessary), PCE 4.1% (May actual)/3.4% core (May actual), staff estimate 3.7%/3.3% core "remains elevated," unemployment steady 4.2%, wages 3.5% y/y moderating · [Census.gov](https://www.census.gov) — Monthly Retail Trade Sales Report (primary): July retail sales -0.6% m/m vs. +0.1% consensus, steepest drop since May 2025, still +5.0% y/y, broad-based (autos, gasoline, electronics, nonstore) with Prime-Day calendar noise · Bloomberg, CNBC, and Axios — 30-year Treasury yield 5.31-5.32% year high (~Aug 17-18), tied to the CBO's raised \$2.1T FY deficit projection (~\$200B above its Feb estimate) and heavy long-bond supply · Yahoo Finance, TheStreet, and CNBC — Aug 20 equity reaction: S&P 500 -0.87% to 7,641.16, Dow -703.84 (-1.32%) to 52,759.21 (partly Walmart-earnings-driven), Nasdaq -1% to 26,067.17, partial Aug 21 recovery · [CME FedWatch](https://www.cmfedwatch.com), [Kalshi](https://www.kalshi.com), [Polymarket](https://www.polymarket.com), investing.com, and defirate.com — independently re-pulled and cross-checked Sept-meeting rate odds, Aug 17-22: CME 68.4-69.4% hold, Kalshi 70.5% hold/28.5% hike, Polymarket ~68.5% hold, investing.com 64.7% hold, defirate.com blend ~68% hold/30.6% hike — essentially unchanged before/after the Aug 19 minutes; a circulating "93.6% September hike probability" figure traced to a garbled conflation with Kalshi's July-meeting hold odds, not credible, discarded · DOL/ETA — jobless claims, week ended Aug 15: 206K vs. 210K consensus, 4-week average 204K (primary, re-confirmed) · [bea.gov](https://www.bea.gov) — PCE release schedule (primary): July PCE due Aug 21, landed.
- August 22 draft1 check (catch-up cycle, delivered earlier the same day): DOL/ETA — initial jobless claims release, week ended Aug 15: 206,000 actual vs. 210,000 consensus; prior week (Aug 8) revised up to 209,000; continuing claims (week ended Aug 8) 1,799,000 vs. 1,790,000 forecast, up from 1,777,000 · [federalreserve.gov](https://www.federalreserve.gov) — H.4.1 current release page: confirms the release still on file covers the week ended Aug 19 (published Aug 20), no new print since, next release Aug 27 · [bls.gov](https://www.bls.gov) — CPI release schedule: next release Sept 11 (August data), nothing new in this window · [bls.gov](https://www.bls.gov) — PPI release schedule: next release Sept 19 (PPI Aug 13) already known before the Aug 16 baseline · [federalreserve.gov](https://www.federalreserve.gov) — speeches & testimony page: no new Warsh remarks Aug 16-22; his first Jackson Hole speech as Chair is scheduled Aug 28 · [CME FedWatch](https://www.cmfedwatch.com) (futures-implied, not a prediction market): as of Aug 17, ~69.4% hold / ~30.6% hike for the September FOMC meeting, essentially flat vs. the Aug 16 baseline's ~65% post-minutes read · [Kalshi](https://www.kalshi.com) and [Polymarket](https://www.polymarket.com) — Sept FOMC markets, Aug 18 read: hold ~70.54, hike ~28.54, cut ~0.5-14, corroborating CME FedWatch across two independent venues · Bitstamp — BTC close \$77,169.40 (Aug 22), vs. \$71,882.20 close, previously confirmed). **Not trusted at face value:** the Aug 17, 18, and 20 drafts and the interrupted Aug 21 delivery session, none of which were rendered, verified, archived, or committed.
- August 19-20 check (carried forward, re-confirmed): [federalreserve.gov](https://www.federalreserve.gov) — Minutes of the Federal Open Market Committee, July 28-29, 2026 (primary, published Aug 19, 2:00pm ET): confirms the 9-3 hold in the Hammack/Kashkari/Logan dissent; new detail — "many participants assessed that policy tightening would likely be necessary if inflation did not decline," inflation risks characterized as tilted to the upside; specific concern flagged on AI-related input costs (chips, steel, electricity); no explicit forward guidance from Chair Warsh; a balance-sheet task-force report to inform future deliberations, no near-term QT · CNBC — FOMC minutes coverage (Aug 19) · [Motley Fool](https://www.motleyfool.com) — minutes coverage, hawkish-breadth read (Aug 19) · Newsquawk — FOMC minutes review: CME FedWatch September-hold odds ~65% post-minutes from a pre-minutes ~50/50 (Aug 19) · investinglive — minutes market reaction, corroborating the CME FedWatch move (Aug 19) · CME FedWatch tool (futures-implied probability, not a prediction market, distinct from Polymarket/Kalshi) — September 16 hold ~65% as of the Aug 19 evening read · general search for jobless claims (week ended Aug 15) and H.4.1 (week ended Aug 19) dated Aug 20 — neither as published as of this research pass; logged PENDING, not assumed · Bitstamp — BTC close \$71,882.92 (Aug 20), vs. \$62,937.03 (Aug 16 close, previously confirmed).
- August 16 check: CNN — "Frustrated US consumers cut their retail spending last month" (Census Bureau primary, published Aug 14): headline -0.6% m/m vs. +0.1% expected, core -0.2%, first decline in nearly a decade · [census.gov](https://www.census.gov) — Monthly Retail Trade Sales Report (primary) · Federal Reserve — FOMC minutes release schedule confirms Jul 28-29 minutes due Aug 19; no new H.4.1 or claims print since Aug 13-14 (both 2026).
- August 14 check: [federalreserve.gov](https://www.federalreserve.gov) — H.4.1, week ended Aug 12, 2026 (primary, direct pull): reserve balances \$2,944,059M (~\$49,290M w/w), Treasury General Account \$963,950M (~\$56,626M w/w), cross-checked against the Aug 5 release (reserve balances \$2,993,349M, TGA \$907,324M) · DOL/ETA — jobless-claims release schedule confirms next print Aug 20 (week ending Aug 15); no new print since the 209K/week Aug-8 figure already incorporated Aug 13.
- August 13 check — the re-rate: BLS — Consumer Price Index, July 2026 (primary release): headline +0.1% m/m / +3.4% y/y, core +0.2% m/m / +2.5% y/y · CNBC — CPI inflation report, July 2026 (Aug 12) — "Inflation remains stubborn" (Aug 12) · Bloomberg — CPI live-blog (Aug 12) · DOL/ETA — initial jobless claims, week ended Aug 8 (published Aug 13): 209,000 actual vs. 202,000 expected, +9,000 from week's revised level, an 8-week high.
- August 11 light daily check: [federalreserve.gov/releases/h41/](https://www.federalreserve.gov/releases/h41/) — release schedule confirms next H.4.1 due Aug 13 · [dol.gov](https://www.dol.gov) — weekly claims release schedule confirms next print Aug 13 · general web search for Fed/BLS/CPI news dated Aug 10-11 — no new release found; economic calendars (Kiplinger, FRED, BLS schedule) confirm CPI due Aug 12, PPI Aug 13.
- August 10 light daily check: DOL/ETA — initial jobless claims, week ended Aug 6, published Aug 8: 262,000 actual vs. 263,000 expected (in line with consensus) · [federalreserve.gov/releases/h41/](https://www.federalreserve.gov/releases/h41/) — release schedule confirms next H.4.1 due Aug 13 · [dol.gov](https://www.dol.gov) — weekly claims release schedule confirms next print Aug 13 · general search for Fed/BLS news dated Aug 9-10 — no further new release found.
- August 9 light daily check: [federalreserve.gov/releases/h41/](https://www.federalreserve.gov/releases/h41/) — release schedule confirms next H.4.1 due Aug 13 · [dol.gov](https://www.dol.gov) — weekly claims release schedule confirms next print Aug 13 · general search for Fed/BLS news dated Aug 8-9 — no new release found.
- August 8 full-weekly re-verification: CNBC, Yahoo Finance, Kiplinger, CBS News, Forbes — convergent independent reporting of BLS Employment Situation, July 2026 (direct [bls.gov](https://www.bls.gov) fetch returned 403 this cycle) · [federalreserve.gov](https://www.federalreserve.gov) — H.4.1, week ended Aug 5 (primary, direct pull): reserves +\$8.78B w/w, TGA -\$3.45B w/w · DOL-sourced coverage — jobless claims 199K week ended Aug 1, 4-week average 198,750 · CNBC — Forbes-sourced pull — CME September-hold odds ~56% (2-source corroborated) · Kalshi — 65% hold (prediction market, labeled separately from CME) · Bank of America commentary (via multiple outlets, sticking with 75bp-of-2026-hikes call · Morgan Stanley's Ellen Zentner (via reporting) — Aug 12 CPI named as the September decider · Richmond Fed President Barkin public remarks — "not loose, not tight"
- August 7 additions: [federalreserve.gov](https://www.federalreserve.gov) — H.4.1, week ended Aug 5, 2026 (direct pull): total assets \$6,748,567M, reserve balances \$2,993,349M, cross-checked against the prior week's release (week ended Jul 29) assets \$6,738,190M, reserve balances \$2,984,570M.
- August 6 additions: Fast Company, citing DOL — jobless claims 199K week ended Aug 1, prior week revised to 198K.
- Jul 31-Aug 5 additions (prior week's catch-up): CNBC, Southeast AgNET — September cumulative hike odds ~81-82% (checked Aug 2, consistent with the Jul 30 baseline).
- July 30 additions (prior full weekly refresh): [federalreserve.gov](https://www.federalreserve.gov) — July 29 FOMC statement (primary): 9-3 hold, Hammack/Kashkari/Logan dissent · [federalreserve.gov](https://www.federalreserve.gov) — press conference page · [federalreserve.gov](https://www.federalreserve.gov) — last SEP (Jun 17, 2026; next Sep 15-16) · DOL/ETA — weekly claims release USDL 26-1273-NAT (primary, fetched directly): 197K week ended Jul 25, 188K revision for Jul 18 · CNBC, Forbes, Fox Business, TheStreet, FOMC outcome and dissent corroboration · Wolf Street — risk-off market reaction (single-source, flagged) · Investing.com Fed Rate Monitor — timestamped Jul 30 pull (62.4%), cross-checked against KuCoin · Bloomberg (73.5%→hike components), Southeast AgNet (81%) — none reconciling.
- July 13 check: [federalreserve.gov](https://www.federalreserve.gov) — H.4.1, Table 1 & Table 5, re-verified directly line-by-line (no discrepancy vs. the July 9 release) · [federalreserve.gov](https://www.federalreserve.gov) — H.4.1 release schedule (next: July 16) · [dol.gov](https://www.dol.gov) — weekly claims (unchanged since Jul 9; next Jul 16) · [federalreserve.gov](https://www.federalreserve.gov) — July 2026 FOMC/testimony calendar · confirmed no new CPI, PPI, FOMC, or H.4.1/claims release has landed since July 9-10; the next batch of testimony Jul 14-15, PPI Jul 15, H.4.1/claims Jul 16) is still ahead.
- Official data: Fed — June 16-17 FOMC minutes (released July 8) · Fed — H.4.1 balance sheet (rel. July 9: \$6,735.6B; TGA \$749.2B; reserves \$3,098.9B; domestic RRP \$2.75B; foreign-official RRP \$346.1B) · DOL — jobless claims (rel. July 9: 215K; continuing claims 1,814,000) · Fed — June 17 FOMC statement · BLS — Employment Situation, June 2026 (released July 2) · BEA — Personal Income & Outlays, May 2026 (core +3.4%) · BLS — May 2026 CPI release (headline 4.2% y/y; core 2.9% y/y) · BLS — CPI release schedule (June CPI: July 14, 8:30am; July CPI: mid-August) · BLS — PPI release schedule (June PPI: July 15, 8:30am) · Waller's July 6 Rome speech.
- The reporting: Bloomberg — minutes: "a few" saw case for June hike · CNBC — June minutes coverage · Bloomberg — Warsh's five task forces (July 9; single source) · Bloomberg — claims 215K, layoffs low · Iran declares Hormuz "closed until further notice" (July 12) · Bloomberg — Brent +4% toward \$79 on Hormuz re-escalation (July 13) · CNBC — CENTCOM strikes, Iran missile/drone attacks on five Gulf states (July 12) · offshore-technology.com — Kpler data: six vessels transited the Strait of Hormuz July 12 · CNBC — June jobs miss (+57K, -74K revisions) · Indeed Hiring Lab — participation 61.5% · CNBC — May PCE (core 3.4%, headline 4.2%) since Oct 2023) · CNBC — Warsh at Sinatra (July 1) · Yahoo Finance — "This Committee will deliver price stability" · Bloomberg — Yardeni: "inflation, Fed back in play" (July 8) · Spokesman-Review (Bloomington) — Warsh testimony schedule (House Jul 14, Senate Jul 15) + June PPI forecast (~5.2% y/y core) · KuCoin flash — 30-year auction: \$22B at 5.058%, stop-through, highest since 2007 · CoinDesk — the week-a-week calendar: CPI, PPI, Warsh testimony (July 13) · Federal Register — eSLR final rule (Dec 1, 2025; effective Apr 1, 2026). **Flagged and discarded:** CryptoTimes (July 13) and Blockhead (July 13) both wrongly reported inflation at a three-year high of 4.2% — this conflates headline CPI (4.2%, correct) with core CPI (actually 2.9% per BLS); not used.
- The prices & flows: Yahoo Finance — BTC ~\$64.3K, ETH ~\$1,796 (July 10 AM) · athens-times — BTC weekend pullback to ~\$62.6-63K (single source) · Farside — BTC ETF flow table (authoritative; +\$90.4M w/w) · CryptoRank — BTC ETF flow cross-check (July 10) · CoinDesk — BTC/ETH steady, gold slides (July 9) · KuCoin — June ETF outflows ~\$4.06B, worst month on record · CNBC — S&P 500 closes 7,575.39 (+0.4%) +149.60 (July 10) · Trading Economics — 10Y ~4.58% · Trading Economics — DXY 101.13, +0.18% (July 13).
- The odds (market-implied, not fact): CME FedWatch — the tool itself (July 28-29 hold 78.5%, July 13 read; September ~66% combined, July 9 read) · FXEmpire — Sept +25bp 50.8% (July 9; single relay, direct corroboration) · Yahoo Finance — September odds relay (July 9) · Polymarket — "Fed Decision in September" ladder: No change 56.5%, +25bp 38.5%, cuts (tail) 3.75%+2.1% (July 9) — diverges materially from CME's ~66% combined hike odds; reported as an open divergence, not resolved.
