Master Direction Report

Five Pillars, One Table, One Number — Updated & Re-verified September 16, 2026 (light daily touch) · COMMITTED — AUTO-STAMPED

*This is a light daily touch (score set **2026-09-16_draft**, committed, auto-stamped) against yesterday's light daily touch (2026-09-15_draft, committed). **CLARITY Act RE-RATED DOWN** (37/53/62/83/92 → 15/28/45/72/92) — the Sept 15, 2:15pm ET cloture vote on the motion to proceed to H.R. 3633 FAILED 49-50. **Iran War Risk RE-RATED DOWN modestly** on the 6/12/36mo windows (1/1/18/38/70 → 1/1/14/33/66) on an IAEA UN Security Council referral and a 130-lawmaker NPT-withdrawal push. Tokenization RWA and Fed & Macro both held flat; the FOMC decision (2:00pm ET today) had not landed at run time.*

THE FINAL NUMBER · SEPTEMBER 17, 2026 · EQUAL-WEIGHT MODEL (COMMITTED — AUTO-STAMPED)

−0.13

Neutral overall, and below zero — −0.13, versus −0.05 on the cloud routine's own Sept 17 set and −0.01 yesterday. No call-band flip on the headline, but the horizon-weighted variant does flip, Mild Bull → Neutral, at +0.42 versus +0.53. Equal-weight mean of the five master window signals (scale −10 to +10). This is a MERGE cycle. Two independent runs researched today — the cloud routine's, which committed and pushed first as 2026-09-17_draft, and a local run. This set (2026-09-17_draft2) takes the cloud's committed set as its baseline and corrects exactly one pillar: Fed & Macro, 32/31/42/54/60 → 32/30/38/44/58. CLARITY Act, Iran War Risk and Tokenization are carried forward from it untouched. The whole difference comes from one line of the FOMC's projections table — see below.

COINPICKS MASTER BLEND · ALL FIVE PILLARS EQUAL-WEIGHTED · 20% EACH

Compiled September 17, 2026 (light daily touch, committed, auto-stamped) · BTC \$76,440.74 (full local run.py quant refresh, September 17, 2026) · Engine: engine/blend.py — run.py blend (equal-weight, 2026-09-17_draft2 MERGE SET, committed; prior set: 2026-09-16_draft, committed) · Not Financial Advice

The Master Table

The whole thesis in five rows, on the September 17 MERGE set (2026-09-17_draft2, committed, auto-stamped) vs. the cloud routine's own committed Sept 17 set (2026-09-17_draft), which is this set's baseline. Only the Fed & Macro pillar differs between them. Signals on the -10 to +10 scale.

WINDOW	MASTER (EQUAL- WT)	BASELINE MASTER (CLOUD SEPT 17 SET)	THE CALL
1 month	-2.13	-2.13	Bear — identical to the baseline: both runs sized the near-term Fed drag the same way, because the 25bp hike was already priced and only the dot plot is new. CLARITY (-4.76) and Iran (-4.70) dominate this window
3 months	-1.79	-1.76	Bear — a hair deeper. Fed goes -2.58→-2.72: both remaining 2026 FOMC meetings sit inside this window, and a further 25bp is now the Committee's own median expectation rather than a risk
6 months	-0.66	-0.55	Mild Bear — Fed -1.02→-1.54 as the SEP holds 4.1% straight through 2027, removing the pause-then-pivot this window was carrying
1 year	+1.10	+1.34	Mild Bull — the one materially different window, and the reason this merge set exists. Fed crosses negative here (+0.48→-0.72) because June's 3.6% end-2027 median, revised to 4.1%, is exactly what this window was underwriting. Tokenization (+3.00), CLARITY (+3.17) and Bitcoin TA (+1.82) still carry it
3 years	+2.81	+2.85	Bull — barely moved, every pillar still positive. Deferring an easing cycle by a year does not reach three years out

Formula: per pillar, Signal = ((P - 50) ÷ 50) × Quality × Impact, with Impact a uniform **8** for every pillar. **MASTER = the simple mean of all five pillar signals** — equal weight, 20% each (add a pillar and it auto-rebalances to 1/N). Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. Machine-verified two ways (hand recompute of every pillar signal and every master window, cross-checked against run.py blend's own output).

THE FINAL NUMBER — HOW IT'S BUILT, AND WHAT MOVED THIS CYCLE

-0.13 = the equal-weight mean of the five MASTER signals above ((-2.13 - 1.79 - 0.66 + 1.10 + 2.81) ÷ 5). Weighting the longer windows harder (10/15/20/30/25%) gives **+0.42**, which flips that variant from Mild Bull to Neutral. **What moved, and why there are two Sept 17 sets.** The cloud routine and a local run both researched today and both re-rated Fed & Macro down on the September FOMC. They agree on the facts that matter most: the Committee hiked 25bp to 3¾-4% on a 12-0 vote, that hike was already priced and so is *not* the mover, and the Summary of Economic Projections is. They disagree on how far out it reaches. The cloud set read the 2027-28 path as "a slower, more cautious descent" and held the 1-year and 3-year windows flat. This run fetched the projections table directly: the median federal funds rate for **end-2027 is 4.1%, revised up from 3.6% in June** — not a slower descent but *no net easing across all of 2027*. A 50bp upward revision to the one-year-out median is specifically information about the one-year window, so it could not be held flat: 12mo takes -10 points of P and the pillar flips Mild Bull → Mild Bear there. **What the number is not:** it is not a crash call. It is -0.13, a hair below flat, with the 3-year window essentially unmoved and every pillar still positive there.

The Trend — Final Number, Cycle by Cycle

Every committed reading of THE FINAL NUMBER, in sequence — the record of how the call has actually moved, not just where it sits today. (Today's reading joins this history once archived.)

Generated by engine/history.py from every committed master_blend snapshot in reports/archive/. Rebuilt automatically on every run.py archive (or manually via run.py history).

The Full Pillar Matrix

Every pillar's signal on every window — September 17 light daily touch (2026-09-17_draft), COMMITTED — AUTO-STAMPED. Each pillar report shows its own full score lineage.

PILLAR (WEIGHT · IMPACT)	1 MO	3 MO	6 MO	1 YR	3 YR	STATUS
CLARITY Act (20% · 8)	−4.76	−2.99	−0.68	+3.17	+6.38	Held flat — no new dated development since the Sept 15 cloture-vote failure; lame-duck speculation already priced
Iran War Risk (20% · 8)	−4.70	−5.10	−4.03	−1.77	+1.41	Held flat — no new development beyond the Sept 9 IAEA referral and the Sept 12-13 NPT statement already priced
Tokenization RWA (20% · 8)	+0.29	+1.41	+2.18	+3.00	+3.92	Held flat — Aave's Sept 16 RWA-hub announcement is single-product continuation, doesn't clear the bar
Fed & Macro (20% · 8)	−2.45	−2.72	−1.54	−0.72	+0.83	RE-RATED DOWN to 32/30/38/44/58 — the only pillar this merge set changes from the cloud baseline (32/31/42/54/60). The Sept 16 FOMC hiked 12-0 to 3¾-4% (already priced); its SEP moved the 2027 median fed funds rate 3.6% → 4.1% (not priced)
Bitcoin TA — quant (20% · 8)	+0.96	+0.45	+0.79	+1.82	+1.52	Computed fresh on a full LOCAL run.py quant pass: P 58/54/59/69/69, BTC \$76,440.74. Near term eased (weekly composite +30.4 as-is, +31.3 completed bars); the long end firmed as the cycle clock reached month 28.94
MASTER — mean of the five	−2.13	−1.79	−0.66	+1.10	+2.81	equal-wt

P lineage (June → Jul 8 → ... → Sept 15 → Sept 16) — CLARITY 55/60/65/85/92 → ... → 37/53/62/83/92 (Sept 15, re-rated up on the ethics concession) → **15/28/45/72/92** (Sept 16, RE-RATED DOWN on the failed cloture vote; Sept 17, held flat, committed, auto-stamped). Iran War Risk 50/55/62/75/85 → ... → 1/1/18/38/70 (Sept 14-15, held flat) → **1/1/14/33/66** (Sept 16, RE-RATED DOWN on 6/12/36mo; Sept 17, held flat). Tokenization 53/57/62/72/85 → ... → 52/60/66/74/85 (held flat). Fed & Macro 38/40/46/54/61 → ... → 34/33/44/54/60 (Sept 11-16) → **32/31/42/54/60** (Sept 17, RE-RATED DOWN on the FOMC's hawkish dot plot). Bitcoin TA is computed every run: 60/54/59/69/69 (Sept 16) → **58/54/59/69/69** (Sept 17). Each pillar report carries its own full, column-by-column lineage table.

The Story, Window by Window

What the blend is saying on September 17, 2026, a light daily touch (comparisons below are vs. yesterday's light daily touch, 2026-09-16_draft, committed)

- **1 month — Bear (−2.13, down from −2.03). Fed & Macro eased to −2.45 from −2.18** as its P went 34→32 on the FOMC's hawkish dot plot; CLARITY (−4.76) and Iran (−4.70) hold flat near their floors; Bitcoin TA eased slightly (+0.96, from +1.20). The worst window this cycle.
- **3 months — Bear (−1.76, down from −1.71). Fed & Macro eased to −2.58 from −2.31** (P 33→31) on the same hawkish forward guidance. CLARITY (−2.99), Iran (−5.10) and Tokenization (+1.41) held flat; Bitcoin TA held (+0.45).

- **6 months — Mild Bear (−0.55, down from −0.50). Fed & Macro eased to −1.02 from −0.77** (P 44→42). CLARITY (−0.68) and Iran (−4.03) held flat; Tokenization (+2.18) and Bitcoin TA (+0.79) partly offset.
- **1 year — Mild Bull (+1.34, unchanged).** Four of five pillars still positive: CLARITY +3.17, Tokenization +3.00, Bitcoin TA +1.82, Fed +0.48 (unchanged). **Iran (−1.77) is the only negative.**
- **3 years — Bull (+2.85, unchanged).** Every pillar still positive: CLARITY +6.38, Tokenization +3.92, Iran +1.41, Bitcoin TA +1.52, Fed +1.04 (unchanged) — a single FOMC meeting doesn't move a multi-year read.

Where the Two Lenses Agree — and Where They Fight

The point of running qualitative and quantitative on the same standard

THE INDEPENDENT CONFIRMATION

Fed & Macro (judged) re-rates DOWN while Bitcoin TA (computed) barely moves — the tape is the calm lens today: the FOMC's hawkish dot plot is a news-driven event, while the TA pillar's P moved only two points at 1mo (60→58) on ordinary cycle-analog drift. That's the structure doing its job: a qualitative shock doesn't spill into the pure-math read, because the tape doesn't know why the Fed hiked, only that price barely moved on it. Consistent with the market's own muted reaction to a largely-priced decision.

THE REAL DISAGREEMENT

Near-term: Bitcoin TA (P 58) is now the strongest near-term pillar; Tokenization (P 52) sits next; Fed & Macro (P 32) and Iran (P 1) sit well below, and CLARITY (P 15) remains one of the two weakest near-term reads. The master resolves it honestly: Bear at 1 month and 3 months, as three pillars drag the same direction at once.

Long-term: the four story pillars average about +3.19 at 3 years (CLARITY +6.38, Tokenization +3.92, Fed +1.04, Iran +1.41) versus the Bitcoin-TA pillar's +1.52 — still roughly 2.1× higher. Remember why: the TA pillar is capped by construction (P never leaves 25–75) and its 3-year Quality is 0.50. Equal weight lets that gap show through honestly instead of burying it in a blend.

Trigger Watch — The Next Six Weeks, Re-Dated

A light daily touch ran today. One trigger fired: the Sept 16 FOMC decision and its SEP/dot plot. CLARITY Act, Iran War Risk, and Tokenization held flat. These are the forward triggers; each pillar report carries the full table.

DATE / LEVEL	EVENT	RE-RATES
FIRED & RESOLVED — Sept 16, 2026, 2:00pm ET, CONFIRMED via federalreserve.gov (primary) plus 5+ independent outlets	The FOMC raised the federal funds target range 25bp to 3.75%-4.00% (12-0 vote), the first hike in three years — largely priced (~92.5% CME odds pre-meeting), not scored alone. The SEP/dot plot showed 16 of 18 officials expecting another 2026 hike, 12 of 18 pencilling in one more 25bp move by year-end; a slower 2027-2028 descent is projected. Bitcoin's reaction was muted (~\$76,300 → drifted back near \$76,000-198)	Fed & Macro: the sole driver of this cycle's move — 34/33/44/54/60 → 32/31/42/54/60 (1mo/3mo/6mo down, 12mo/36mo held). The dot plot's forward guidance, not the hike itself, is the new information
Checked Sept 17, no fresh catalyst	CLARITY Act: no new dated development since the Sept 15 cloture-vote failure; lame-duck speculation already priced	Held flat at 15/28/45/72/92

Checked Sept 17, no fresh catalyst	Iran War Risk: no new development beyond the Sept 9 IAEA referral and the Sept 12-13 NPT statement already priced; Pezeshkian's no-nukes stance unchanged	Held flat at 1/1/14/33/66
Checked Sept 17, no fresh catalyst	Tokenization: Aave's Sept 16 RWA-lending-hub announcement (Avalanche/USAT) is single-product continuation, doesn't clear the bar; no rail failure, depeg, or counterparty default	Held flat at 52/60/66/74/85
~Aug 31, now passed	Historical average cycle-bottom month has passed (cycle month now 28.94)	TA: higher low after this + improving momentum = basin, not cliff
Power-law fair value \$140,453	BTC \$76,440.74 sits ~46% below fair value	1yr/3yr windows: the structural bull case's core, essentially unmoved by this cycle's news

The master flip line — Iran's strikes clause fired Aug 30, escalated sharply Sept 1-2, and the Brent >\$100 clause fired Sept 10-11 and continues to hold: a confirmed new US combat death, a resumption of direct US strikes on Iran proper, independent confirmation the conflict has widened to a further new state, or a sustained Brent close above \$100. Two of the four clauses are still live. **A new, distinct nuclear-track escalation is now in view but has not itself fired a clause:** an actual NPT withdrawal filing, or a UNSC resolution/sanctions snapback, would be a fresh downside trigger for Iran; Pezeshkian's no-nukes line holding and no parliamentary vote materializing would support reversing part of this cycle's move. **On CLARITY, the flip line fired on the downside Sept 16** — cloture failed cleanly with no released next-step plan. A renewed floor vote that actually passes cloture would be the equivalent upside flip. **On Fed & Macro, the flip line is a durable dovish or hawkish reaction function** — a genuinely dovish Fed pivot (a cut, or explicit forward guidance toward one) would be the upside flip; a second consecutive hike confirming the dot plot's path would deepen this cycle's cut. The TA flip line (weekly close under \$50,000) remains unchanged and is now far from current price.

Robustness — Does Any One Pillar Drive the Call?

Equal weight is now the fixed model — there is no qual/quant mix knob to tune. The test that matters instead: drop any single pillar and see whether the conclusion holds.

— drop CLARITY Act	-0.22	Neutral
— drop Iran War Risk	+0.54	Mild Bull · yes
— drop Tokenization RWA	-0.71	Mild Bear · yes
— drop Fed & Macro	+0.16	Neutral
— drop Bitcoin TA	-0.44	Neutral
all five in (headline)	-0.13	Neutral

Leave-one-out final (drop any one pillar): -0.71 to +0.54 — SIGN STILL FLIPS (fragile). Tokenization is now the pillar carrying the upside: drop it and the final number falls to -0.71, the largest single-pillar swing in the set and the only drop that changes the call band outright. Iran remains the largest single negative (drop it and the reading rises to +0.54), but it is no longer alone — CLARITY and Fed & Macro are now both meaningfully negative too, which is precisely why the headline sits below zero. Read the fragility honestly: at -0.13 the equal-weight number is a hair from flat and no single pillar is driving it. Note also that dropping Fed & Macro gives +0.16 either way — the pillar this merge cycle actually disputes is *not* the one holding up the answer.

My Decision

COMMITTED — SEPTEMBER 17, 2026 (2026-09-17_draft2, MERGE SET) · LIGHT DAILY TOUCH · AUTO-STAMPED

MASTER: -2.13 / -1.79 / -0.66 / +1.10 / +2.81 · THE FINAL NUMBER: -0.13 equal-weight (Neutral) / +0.42 horizon-weighted (Neutral) · Leave-one-out range: -0.71 to +0.54 · Score set 2026-09-17_draft2 (MERGE SET), COMMITTED — AUTO-STAMPED · Baseline: 2026-09-17_draft (cloud routine, committed), which read -0.05 / +0.53 · BTC \$76,440.74 (full local run.py quant refresh)

Two runs researched today, and this set is the merge of them. The cloud routine ran its own Sept 17 cycle and committed and pushed first as 2026-09-17_draft; a local run researched the same day independently. Per the runbook's key-collision rule this is the _draft2 of the same date, and it takes the cloud's committed set as its *baseline* rather than overwriting it. That set is delivered and lineage is sacred. Three pillars are carried forward from it completely untouched — CLARITY Act 15/28/45/72/92, Iran War Risk 1/1/14/33/66, Tokenization 52/60/66/74/85 — because they rest on dated facts the cloud run pulled and this one did not independently surface: Sen. Kennedy's lame-duck remark, the Senate's early-October midterm recess and the Polymarket collapse from ~35% to ~5% (reported as a market price, not scored) on the CLARITY side; the Sept 9 IAEA referral and the Sept 12–13 130-lawmaker NPT-withdrawal statement on the Iran side. Correcting a pillar on better primary evidence is legitimate. Reverting pillars on the basis of not having looked is not.

Exactly one pillar is corrected: Fed & Macro, 32/31/42/54/60 → 32/30/38/44/58. The two runs agree on almost everything here. Both record that the September FOMC hiked 25bp to 3¾–4% on a 12–0 vote with no dissents; both note, correctly, that this system had carried a hike as its base case since Warsh's August 28 Jackson Hole speech, so the hike's occurrence is not itself new information; and both identify the Summary of Economic Projections as the real mover. The disagreement is narrow and factual: how far out it reaches. The cloud set described the 2027–28 path qualitatively as “a slower, more cautious descent”, placed the long-run neutral cluster at 3.0%, and held the 1-year and 3-year windows flat at 54/60 as “broadly consistent with what the pillar already carried”. This run fetched federalreserve.gov/monetarypolicy/fomcproptab120260916.htm directly and read Table 1: median federal funds **4.1% for end-2026 and 4.1% for end-2027**, with 2028 at 3.9%, 2029 at 3.6% and a longer-run median of 3.2% (not 3.0%). The end-2027 median was **3.6% in June**. That is not a slower descent; it is no net easing across all of 2027 — a full year of expected easing deleted — and it is specifically a fact about the one-year window. Five-plus independent outlets lead on that same revision. So 3mo goes one point deeper, 6mo four, and 12mo ten, flipping the pillar Mild Bull → Mild Bear at one year and taking THE FINAL NUMBER from -0.05 to -0.13.

Why the correction stops where it does. The strongest argument against it is not a number but a person: Chair Warsh submitted *no dot at all* — “I have refrained from offering any projections of my own, consistent with my long-held views” — and told the room “I’m not in the forward guidance business.” The dots are eighteen individual forecasts and the one person who chairs the meeting declines to be bound by them. Three further counterweights are sized in: the longer-run median is still 3.2%, so easing is deferred rather than cancelled; the SEP pairs the tighter path with 2.3–2.4% real GDP and a flat 4.1% unemployment rate, i.e. tightening into strength rather than recession; and the bond market's first move on the hike was a yield *drop*. Cutting the other way, and why the correction was made at all: Census advance retail sales the same morning came in at +1.2% m/m with the control group +1.4% against ~0.8% consensus, so there is no slowing consumer to force an early reversal. 12mo therefore lands at 44, not in the 30s.

One factual correction to an earlier committed note, logged here rather than edited there. The committed 2026-09-16_draft note states that Thune filed the motion to reconsider on the CLARITY cloture vote. It was **Sen. Tillis**, at 3:01pm ET on Sept 15, who switched his vote from yes to no expressly so that, as a member of the prevailing side, he would be eligible to file it (Forbes, CoinDesk, FinanceFeeds, CryptoTimes — 4+ independent). Committed sets are never edited, so the attribution is corrected for the record here. No P value is affected.

Quant note. This cycle used a full *local* run.py quant pass — a real Bitstamp/Coin Metrics fetch plus recompute of indicators, levels, scores, cycle, mapping and charts — rather than the data-relay read the cloud environment falls

back to. Data runs through Sept 17 at BTC **\$76,440.74**, model P 58/54/59/69/69. That fetch also revised prior closes on the exchange feed (Sept 14 to \$78,185.01, Sept 15 to \$75,577.29); the superseded values are named in the TA report rather than silently overwritten.

Stamp decision: AUTO-STAMPED. Ordinary light daily touch, not a weekly refresh. Research capability was fully available — both Federal Reserve primary documents behind the correction were fetched directly, and where outlets returned HTTP 403 the same facts were taken from alternatives and cross-checked against the primaries. Verification passed clean (332/332). Per the delegated authority widened 2026-09-02, neither the size of the move nor the horizon-weighted call-band flip is grounds to withhold the stamp.

What to watch next, in order: (1) whether the Fed delivers the further hike its own median projects, at either remaining 2026 meeting — that confirms this correction and takes the 6-month and 1-year windows lower; (2) any Warsh remarks distancing the Committee from dots he declined to contribute to, which would argue the cloud set had it right; (3) whether the Tillis motion to reconsider on CLARITY is ever actually called; (4) the October DTCC full-service tokenization launch, the next real test of the pillar currently holding up the whole blend.

Read as an investment posture: near windows are Bear and the one-year window is Mild Bull, so this is not a month to chase — but the number is -0.13 , a hair below flat, not a crash call, and the 3-year window barely moved. The windows that pay are still 6-plus months out.

This is a light daily touch (**2026-09-17_draft**) against yesterday's light daily touch (2026-09-16_draft, committed). One pillar moved. **Fed & Macro re-rated DOWN**, 34/33/44/54/60 → 32/31/42/54/60, on the near/mid windows. The Sept 16 FOMC raised the federal funds target range 25bp to 3.75%-4.00% (12-0), and its SEP/dot plot showed 16 of 18 officials expecting another 2026 hike (12 of 18 pencilling in one more 25bp move by year-end). CLARITY Act, Iran War Risk, and Tokenization RWA all held flat.

Why the hike itself doesn't move P, but the dot plot does. The 25bp hike was ~92.5% priced into CME/market odds ahead of the meeting per multiple outlets — under the house sufficiency rule, a market-price-implied outcome materializing is not by itself a fresh primary fact. The SEP/dot plot is different: it's a Fed institutional document, not a market price, and it reveals forward guidance — 16 of 18 officials expecting at least one more hike, a slower 2027-2028 descent than previously projected, and the long-run neutral-rate dots clustering tightly at 3.0%. That's genuinely new information beyond what odds-tracking alone had captured.

Why the move is concentrated on 1mo/3mo/6mo, not 12mo/36mo. The confirmed additional-hike path runs through year-end 2026 into Q1 2027 — squarely inside the windows that moved. The SEP's own longer-run dots (slow descent into 2027-2028, neutral rate near 3.0%) are broadly consistent with what this pillar already carried, so the 12mo/36mo windows held flat.

Stamp decision: AUTO-STAMPED. This is an ordinary light daily touch, not a weekly refresh; research capability (WebSearch fully available; no WebFetch needed) was fully available; and verification came back clean. Per the runbook's delegated auto-stamp authority as widened September 2, 2026, the size of a move is not a reason to withhold the stamp — the sourcing and sufficiency rules are the safeguard, and they were met. Status set to committed, stamped_by "Alex (auto-stamped)."

What to watch next, in order: (1) whether the market's next repricing tracks the SEP's projected year-end hike, or fades it; (2) whether Iran's parliament actually advances an NPT-withdrawal bill, or Pezeshkian's no-nukes line holds; (3) any signal on a CLARITY lame-duck attempt once the midterms clear the calendar.

Read as an investment posture: don't extrapolate the 1mo/3mo Bear calls into the 1yr/3yr Bull calls, which didn't move; the levels and dates that would change this are printed above — Tokenization is now the largest single swing pillar on the downside (see Robustness above: dropping it alone puts the reading at -0.60 , Mild Bear), with Iran the largest on the upside (dropping it alone gives $+0.65$); the leave-one-out range this cycle (-0.60 to $+0.65$) still crosses zero — the sign flips depending on which pillar is dropped — a genuinely fragile reading worth watching.

Sources

Each pillar report carries its full, freshly-checked source list. The master adds the engine and headline references for this September 17 light daily touch.

- **The pillars:** the sibling reports in this folder — CoinPicks_Fed_Macro (re-rated DOWN Sept 17) / CLARITY_Act / Iran_War / Tokenization_RWA Pillar Reports (all held flat, re-checked Sept 17) and the computed Bitcoin TA Quant Pillar Report.
- **The engine:** engine/blend.py → data/master_blend.json (score set 2026-09-17_draft in config/scores.json, status: committed, stamped_by "Alex (auto-stamped)", active_qual_set; full lineage back to 2026-06-19_committed; final-number window weights in config/settings.json "final_weights") · engine/mapping.py → data/pillar_scores.json (data through Sept 17, 2026).
- **September 17 light daily touch — the load-bearing new facts:** [CNBC — Fed rate decision September 2026: rates rise to 3.75%-4%](#) · [Coinpedia — Fed hikes rates 25bps for first time in 3 years, Bitcoin holds \\$76K](#) · [Advisor Perspectives — Fed's Interest Rate Decision: September 16, 2026](#) · [CoinGape — FOMC Meeting 2026 live updates Sept 16](#).
- **Price:** BTC/USD \$76,440.74 (Sept 17, 2026, data/btc_usd_daily.csv via a full local run.py quant refresh) — up 0.4% from \$76,138.60 (Sept 16), after intraday lows of \$74,913.43 on the Sept 15 cloture failure and \$74,962.49 on the Sept 16 FOMC; cycle low \$58,526 close (June 30, 2026). The local fetch supersedes the GitHub Actions relay reads the cloud run used (\$76,013.81 Sept 16, \$76,197.81 Sept 17) and also revised earlier closes; named here rather than silently overwritten.
