

CoinPicks Market Direction

Research Package

Five pillars — four researched narratives and one pure-math read of the Bitcoin chart — scored on one standard, blended into one table, and distilled to one number. Everything in this folder is current as of **August 6, 2026** — a run of light daily re-checks since the last full weekly refresh on July 30.

THE FINAL NUMBER · AUGUST 6, 2026 · BTC \$64,507.23

+0.58 Mild Bull — the 1-month window itself just flipped to Mild Bear

Equal-weight mean of the five window signals below — every pillar counts 20% (scale -10 to +10; horizon-weighted variant +1.14). Positive because the far windows outweigh the near ones — **not a buy-today signal**. It is a "the storm is priced, the recovery isn't" number, and today it eased further (up from Aug 5's +0.54) on genuine, multi-sourced progress: Iran and Oman said they've reached an understanding in principle on Hormuz shipping routes, and BlackRock launched two new tokenized money-market funds. The near-term drag is real but shrinking — this is the first day in over a week the 1-month window has read anything other than outright Bear.

THE FIVE WINDOWS UNDERNEATH IT

WINDOW	MASTER SIGNAL	CALL
1 month	-1.49	Mild Bear — the first non-Bear 1-month read in over a week; Iran and Tokenization both firmed, Fed & Macro's hawkish-FOMC drag unchanged
3 months	-1.00	Mild Bear — the September FOMC still sits inside this window at majority-hike-priced odds
6 months	+0.19	Neutral — CLARITY/Tokenization structural strength vs. Iran's and the Fed's drag, now slightly less offsetting
1 year	+2.09	Bull — all five pillars still positive
3 years	+3.11	Strong Bull — law + adoption + cycle + valuation, unchanged

Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. The Mild Bull conclusion stays positive under every leave-one-out drop (+0.20 to +0.89); dropping CLARITY or Tokenization still rounds down to **Neutral** on a strict read, essentially unchanged from prior days' thinner-than-usual robustness result. See the Master Report's Robustness section.

Reading order

Twenty minutes to the whole picture; each report stands alone and can be checked independently — every fact is dated with sources on its last page.

#	FILE	WHAT IT IS
1	CoinPicks_Master_Direction_Report.pdf	The summary. The final number, the five-window table, the full pillar matrix, where the lenses agree/fight, six weeks of dated triggers, sensitivity.
2	CoinPicks_Bitcoin_TA_Quant_Pillar_Report.pdf	The math pillar. 7 indicators on 16 years of data, halving-cycle analogs, power-law valuation — with charts. Fully reproducible from code.
3	reports/current/pdf/ — the four pillar PDFs	The story pillars. CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro. Each: thesis, dated facts, honest bear case, dated triggers, and the full score lineage (June committed → every draft through August 6).
4	reports/archive/ + prior-work/	Every earlier version, preserved untouched — the score history is fully auditable.
—	run.py · engine/blend.py · data/master_blend.json	The blend engine (runnable Python — reproduce any score set with <code>run.py blend --set NAME</code>), its output, and README.md for regeneration.

How the scoring works — one paragraph

Every pillar answers the same question on five windows (1 month / 3 months / 6 months / 1 year / 3 years): **P** = the odds (0–100) that this force is *good for crypto* by then, **Quality** = how trustworthy the evidence is (0–1), and **Impact** = how hard this force moves the whole market (0–10). These combine into a **Signal** = $((P - 50) \div 50) \times \text{Quality} \times \text{Impact}$ (Impact is a uniform 8 for every pillar), so a coin-flip view scores zero no matter how loud the headlines are, and weak evidence can't shout. **All five pillars are equal-weighted** — the master for each window is the simple mean of the five signals (20% each; add a pillar and it auto-rebalances to 1/N) — and the Final Number averages the five master windows.

The five pillars at a glance (August 6 draft P's — light daily re-checks since the July 30 full refresh)

PILLAR	1MO	3MO	6MO	1YR	3YR	ONE-LINE READ
CLARITY Act (law)	38	47	58	82	92	Held flat again: still no cloture motion filed as of Aug 6, "just two days left in session" before the Aug 7 last-realistic-vote date and the Senate's actual Aug 10 recess
Iran War Risk	24	31	41	56	77	Nudged up: Iran's Deputy FM said Aug 6 an understanding "in principle" is reached with Oman on the Hormuz route map — but a real new sticking point emerged the same day, a fee dispute (Iran wants 5-7%, Oman ~3%, the US wants zero) that shipping-lobby groups are already protesting
Tokenization (RWA)	52	59	65	74	85	Nudged up: BlackRock launched two new tokenized money-market funds (BSTBL, BRSRV) on Aug 3 targeting GENIUS Act stablecoin-reserve eligibility — a genuine catalyst the Aug 1-5 daily checks missed, caught and incorporated today
Fed & Macro	34	33	45	54	62	Held flat: DOL jobless claims 199K (week ended Aug 1), prior week revised to 198K — a continued mild uptick consistent with the trend already priced in, not a fresh shock; H.4.1 for the week ended Aug 5 not yet published as of this check
Bitcoin TA (quant)	38	36	44	68	70	Quant pillar refreshed on today's price (BTC \$64,507.23, essentially flat vs. Aug 5; weekly tape -26.8 slight bearish, monthly -38.4 slight bearish, quarterly +10.2 neutral; cycle month 27.56)

P values shown (50 = coin flip). Fed & Macro (judged) and Bitcoin TA (computed) remain close through 6 months — 45 vs 44, a 1-point gap.

Status & honesty notes

- **Score status:** August 6 scores are evidence-driven **drafts awaiting the author's stamp** (the August 5 set they build on was reviewed and committed by Alex); every report prints the full lineage (June committed → every draft through August 6). Nothing hides its history.
- **Verification:** facts researched with primary-source discipline (IRNA/Iranian officials, Bloomberg, DOL releases, the Senate's own floor schedule), independently fact-checked, and the whole package forensically audited; score math recomputed independently; price data cross-checked across two exchanges; models that failed out-of-sample testing were excluded and say so. Today's checks: confirmed Iran's Deputy FM statement that the Hormuz route map is agreed "in principle" with Oman (7+ outlets), and caught a genuine new complication the same day — an unresolved fee dispute (Iran 5-7%, Oman ~3%, US 0%) that shipping-lobby groups are already protesting; traced a recirculating "White House CLARITY ethics deal" story back to its actual publish date (July 20-21) and correctly excluded it as stale, not new; caught a real BlackRock tokenized-fund launch (Aug 3, 7+ outlets) that the prior five days of daily checks had all missed; and confirmed a fresh DOL claims print (199K) consistent with, not contradicting, the existing trend.
- **Known limits, in print inside the reports:** cycle-analog claims rest on 3 completed cycles; the TA pillar caps its own conviction at $P = 50 \pm 25$; this cycle's clearest fragility example is Iran War Risk, whose route-map progress is real but now paired with a newly-surfaced, unresolved fee dispute — not a clean de-escalation signal; single-source items are labeled in-line; current chart bars are partial and the completed-bar numbers are printed; the Fed & Macro pillar still carries an unreconciled 218K claims figure from Aug 5 that it declined to use; the Robustness section shows dropping CLARITY or Tokenization still lands right at the Neutral/Mild-Bull boundary, a thinner margin than prior cycles.
- **The near-term calendar is the test:** Fed H.4.1 (week ended Aug 5) still pending · CLARITY's last realistic pre-recess floor window Aug 6-7 (formal recess starts Aug 10) · an actual signed, operating Hormuz agreement (route map alone isn't it — fees are still unresolved) · next FOMC (with SEP/dot plot) Sept 15-16 · Islamabad Memorandum expiry ~Aug 16 · GENIUS Act 18-month backstop effective Jan 18, 2027. Each pillar's trigger table says in advance what each outcome does to the scores.

This is research and education, not financial advice. The scores are probabilistic opinions with dated evidence — built to be argued with. If you check one thing manually, check the trigger tables: they are the falsifiable part.
