

The Fed & Macro Regime Pillar Report

Liquidity as the Master Driver — Researched, Scored, and Re-Rated

Originally written and scores committed by me on June 12, 2026. Fully re-researched July 8, 13, 18, 25, and 30, 2026, and again as a full weekly refresh on August 8, 2026 (re-rated up to a moderated 40/38/47/55/62 on the BLS July jobs report, committed and stamped by Alex). Re-rated up again August 13 to 43/41/48/56/62 on a cool CPI print and a weak claims print; held flat August 14, 16, and through two Aug 22 cycles (a catch-up draft, then the full weekly refresh) — committed and stamped by Alex August 23, 2026, the last true baseline. A same-day catch-up draft written August 28 (score set 2026-08-28_draft) re-rated down to 38/37/46/55/61 on Fed Chair Warsh's hawkish Jackson Hole speech and a hot July PCE print, but was **never rendered, selfchecked, archived, or committed** — it sits abandoned, superseded mid-cycle. **This version (August 29, score set 2026-08-29_draft) is a FULL WEEKLY refresh and goes further, re-rating down to 36/35/45/55/61.** A dedicated adversarial-verification pass this cycle caught a real error in the abandoned draft: its CME FedWatch September rate-hike-odds figure (~35.4%→~45.7%) UNDERSTATED the actual market move. Independent re-pull and cross-check — Motley Fool citing CME FedWatch directly at 57.5%, CNBC's own body text at "nearly 56%," and a third independent source at "55.7%" — shows the real post-speech reading clustered tightly in the high-50s, roughly 56-58%, not 45.7%. September hike odds are now past coin-flip, not just approaching it. Two fresh facts not in the abandoned draft: initial jobless claims for the week ended Aug 22 (DOL, primary, Aug 27) came in at 203,000 vs. 208,000 consensus, a mild hawkish-adjacent tightening signal; and the Aug 26 H.4.1 balance-sheet release (federalreserve.gov, primary) showed the same reserve-drain pattern continuing (reserve balances -\$10,351M w/w to \$2,924,936M; TGA -\$2,876M w/w to \$950,736M), logged but not independently trigger-worthy. This cycle also corrects the abandoned draft's price-action framing: BTC did NOT hold a stable tape through the speech — it opened Aug 28 around \$80,262, traded above \$81,000 pre-speech, then fell back sharply once Warsh spoke, closing \$79,613.44 that day, and continued falling to \$77,666.16 by today, Aug 29 (Bitstamp) — a real, visible reaction, not a shrug. **Net: the corrected, larger CME move justifies a deeper cut than the abandoned draft reached.** 1mo 43→36 (-7), 3mo 41→35 (-6), 6mo 48→45 (-3), 1yr 56→55 (-1), 3yr 62→61 (-1) — still minimal at the long end, since Warsh explicitly declined to commit to a reaction function and one repricing doesn't reach three years out. Left as draft at delivery, not auto-stamped: this is a FULL WEEKLY refresh, which the runbook's delegated daily auto-stamp authority categorically excludes regardless of move size — doubly so here since every window moved 7 points or fewer anyway. Flagged for Alex's manual review; see My Decision below. **THIS VERSION (August 31) is a light daily catch-up, score set 2026-08-31_draft**, covering Aug 29-31: CME FedWatch September hike odds continued drifting up post-Warsh (CNBC Aug 28: ~45.7%; CoinSpectator/Bitcoin.com Aug 30: ~57%; CNBC Aug 31 Jackson-Hole-roundup: ~60.4%, up from ~56% Friday) — directionally the same hawkish repricing already sized into the Aug 29 cut (which used a 56-58% cluster as its basis). Per the sufficiency rule, a market-odds drift alone, without a fresh primary data print or news event, cannot move P further. No new H.4.1 (next due Sept 3, last Aug 27) or jobless claims release landed in this window. **P HELD FLAT at 36/35/45/55/61.** This is a light daily touch, no window moved, no call band flipped — **AUTO-STAMPED** per delegated daily authority. **Sept 1: held flat again** — CME FedWatch September hike odds continued the same post-Jackson-Hole drift (Forbes/KuCoin ~66% at 11:40am ET Aug 31, up from the ~60.4% CNBC read this pillar's Aug 31 baseline used), but it's the same intraday drift sequence with no new primary print or news event behind it, so per the sufficiency rule it does not independently move P; no new H.4.1 or claims release landed (Aug 31 was Labor Day). Score set 2026-09-01_draft, AUTO-STAMPED, new last COMMITTED baseline. **Sept 2: held flat a further time** — no new H.4.1 or data print found dated Sept 1-2; September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continues the same post-Jackson-Hole drift already priced into the Sept 1 baseline, not a fresh data-driven move, so per the sufficiency rule it does not independently move P. Score set 2026-09-02_draft — this pillar's own P is unaffected, but because all four qualitative pillars share one dated score set and Iran War Risk's sharp re-rate this cycle flips the master call band (Mild Bull → Neutral) and needs Alex's manual review, the WHOLE 2026-09-02_draft set — Fed & Macro's flat P included — stays in DRAFT status, not committed, per house rule (see My Decision and the Iran War Risk pillar report); COMMITTED, AUTO-STAMPED SEPTEMBER 3, 2026 once Alex widened

the policy — this is the last TRUE committed baseline: 36/35/45/55/61. **Sept 3: held flat a further time** — light daily catch-up found nothing material on any of the four qualitative pillars; config/scores.json untouched, blend re-run against fresh quant data only. **Sept 5, light daily catch-up (score set 2026-09-05_draft): RE-RATED DOWN a modest further step, 36/35/45/55/61 → 32/31/43/54/60.** The August jobs report (BLS, primary, released Sept 4) beat sharply — nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment steady at 4.1% — and markets repriced September 15-16 FOMC hike odds higher off of it (CNBC, Yahoo Finance, TheStreet, U.S. News, Investing.com/Reuters — point estimates vary 60-66% by source/timestamp but are directionally consistent and higher than the Sept 2 baseline's "60% hold" framing). Same-day reaction: 2yr Treasury yield +5.3bp to its highest since January 2025; Dow -0.51%, S&P -0.38%, Nasdaq -0.29%; BTC fell ~2% same-day (\$81,265.00 Sept 3 close → \$79,676.60 Sept 4 close). Fed officials remain split (Warsh hawkish; Waller says he'd lean toward holding if inflation improves), with the Sept 11 CPI print now flagged as the likely decider before Sept 15-16. Move sized comparably to the Aug 22-28 catch-up cut on the Warsh Jackson Hole speech alone (a comparable single dated catalyst): 1mo -4, 3mo -4, 6mo -2, 1yr -1, 3yr -1, no window over 8 points. **CORRECTION:** that cycle's commit message claimed "AUTO-STAMPED SEPTEMBER 5, 2026," but config/scores.json's status field was never actually advanced to committed — a bug in that session, flagged here and not corrected retroactively (stamping is Alex's call). **Sept 5, FULL WEEKLY refresh (2026-09-05_draft2), this version:** independently re-verified via WebSearch — Fed Governor Waller's genuinely dovish-leaning Sept 3 speech ("give disinflation a chance") briefly cut CME hike odds to ~48% (Semafor, CNBC, Bloomberg, PBS) before the Sept 4 jobs beat reversed that back up to 60-66% (Forbes/CME FedWatch), a net hawkish drift for the week consistent with the Sept 5 cut. No further Fed commentary or data since; the Sept 11 CPI print has not yet landed. **HELD FLAT at this cycle's re-rated level, 32/31/43/54/60. Full weekly refreshes are categorically excluded from the delegated daily auto-stamp policy regardless of move size — left for manual review, and COMMITTED BY ALEX SEPTEMBER 5, 2026.** **Sept 6: light daily catch-up, held flat.** Re-checked via WebSearch: no new Fed speech, data release, or FOMC commentary since Sept 3-4 (Governor Waller's dovish-leaning Sept 3 speech and the Sept 4 BLS August payrolls beat were already captured in the Sept 5 re-rate). September 6 is a Saturday — markets and the Fed's own calendar are quiet, no data or speeches scheduled. The September 11 CPI print remains the next dated catalyst and has not yet landed. **HELD FLAT at 32/31/43/54/60.** **Sept 8: light daily catch-up, held flat again.** Re-checked via WebSearch: no new Fed speech, data release, or FOMC commentary since Sept 3-4; the Sept 11 CPI print and the Sept 15-16 FOMC meeting remain the next dated catalysts, not pre-empted this cycle. **HELD FLAT at 32/31/43/54/60.** **Sept 9: light daily catch-up, held flat again.** Re-checked directly against CME FedWatch-citing coverage — September 25bp-hike odds read ~58.7% (as of Sept 7, CNBC/cryptonews), consistent with the ~56-58% cluster already priced into the baseline, not a fresh move; no new FOMC meeting, no new BLS/DOL primary release since Sept 3-4. The Sept 11 CPI print and Sept 15-16 FOMC remain the next dated catalysts. **HELD FLAT at 32/31/43/54/60.** **Sept 10: light daily catch-up (score set 2026-09-10_draft) vs the 2026-09-09_draft committed baseline.** Held flat at 32/31/43/54/60 — independently re-checked, nothing cleared the sufficiency bar. The Aug CPI release (due Sept 11) and the FOMC meeting (Sept 15-16) are both still pending per BLS/Fed calendars — no new primary data since Sept 9. The master FINAL NUMBER's call band did not flip anywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull horizon-weighted) — so per the runbook's delegated auto-stamp authority this set is **AUTO-STAMPED: status committed, stamped by "Alex (auto-stamped)."** **THIS VERSION (September 11, score set 2026-09-11_draft) RE-RATES UP, modestly, to 34/33/44/54/60.** This cycle deliberately held its research window open past 8:30am ET for the print this pillar has been flagging for a week, and the August CPI print landed on schedule at 8:30am ET: BLS's own release (bls.gov, primary, fetched directly and re-fetched to confirm) has headline CPI-U **+0.4% m/m SA** in August after +0.1% in July and **+3.4% y/y NSA**, with core (all items less food and energy) **+0.3% m/m** after +0.2% in July and **+2.4% y/y**; energy rose 2.1% m/m and gasoline 3.9%, accounting for over a third of the monthly increase, while shelter rose 0.3%. Against the consensus circulating pre-print (headline +0.4% m/m / 3.4% y/y; core +0.4% m/m / 2.4% y/y), headline landed exactly in line and **core came in one tenth cooler on the month**, core y/y in line — a modest dovish surprise in the window that brackets the Sept 15-16 FOMC. It is tempered, not clean relief: headline accelerated from +0.1% to +0.4% and the acceleration is energy-driven — the same oil shock that fires the Iran pillar's "sustained Brent > \$100" clause this cycle shows up here as headline inflation. Market-implied September hike odds circulating around the print (~70% for a 25bp move) are a market price, reported and not used to move P; the BLS release itself is the mover. Cross-source caution logged: several aggregator summaries of this print circulating within minutes carried figures inconsistent with the BLS release (e.g. a 3.1% core y/y) — discarded in favour of the primary document. Re-rated up on the windows bracketing the FOMC only: **1mo 32-34, 3mo 31-33, 6mo 43-44**; 12mo and 36mo held flat at 54/60 — a single in-line-to-a-tenth-cooler print does not move the multi-year regime read. **AUTO-STAMPED: status committed, stamped by "Alex (auto-stamped)."** **Sept 16, light daily catch-up (2026-09-16_draft):** the September FOMC decision, statement, SEP and dot plot were scheduled for 2:00pm ET that day and had NOT been released at run time (~08:03 ET) — nothing new was knowable that cycle. **HELD FLAT at 34/33/44/54/60, AUTO-STAMPED. THIS VERSION (September 17, score set 2026-09-17_draft) RE-RATES DOWN, modestly, to 32/31/42/54/60.** The Sept 16 FOMC delivered its decision: the federal funds target range raised 25bp to 3.75%-4.00%

Written June 12, 2026 - [MERGED — see merge note below] Updated & Re-verified October 3, 2026 — FULL WEEKLY refresh, score set 2026-10-03_draft2: RE-RATED UP, 27/25/34/43/58 → 35/27/25/34/43/58. **FIRST UPWARD** re-rate in weeks. Both load-bearing legs of the hawkish case broke dovish on primary data: August PCE undershot at 3.4% headline / 3.0% core (BEA, Sept 30) and September core up to 4.2% and 60,000 of downward revisions (BLS, Oct 2). The Oct 27–28 FOMC now prices as a hold. It is a DEFERRAL, not an all-clear: Barr re-stated the full hawkish case on Sept 29 (before 5.29%). **LEFT AS DRAFT — AWAITING ALEX'S STAMP** - Updated & Re-verified September 26, 2026 — FULL WEEKLY refresh, score set 2026-09-26_draft3: RE-RATED DOWN, 31/29/37/44/58 → 31/29/37/44/58. **hawkish evidence, mostly PRIMARY:** Governor Barr's Sept 23 speech verbatim from the Fed's own PDF (local text extraction); the S&P Global flash PMI from the embargoed primary release, since October 2022; UMich's final September survey with LONG-RUN inflation expectations breaking a three-month plateau (3.3% → 3.4%) and year-ahead 4.0% → 4.6%; DOL claims at 197,000. **ALEX, September 27, 2026, after his own manual review, full weekly refreshes being categorically excluded from delegated auto-stamp authority — the owner's own direct review and stamp** September 24 line from a cycle that was never delivered (no render, selfcheck, archive or commit) and is superseded above; its evidence was re-verified and held up. - Prior: Updated & Re-verified September 32/30/38/44/58. The Sept 16 FOMC dot-plot revision already drives this window's read in the current committed set; a Sept 18 Motley Fool piece on the SEP's "most important number" is single-source committed: 32/30/38/44/58 (2026-09-18_draft, auto-stamped Sept 18) - Updated & Re-verified September 19, 2026 (FULL WEEKLY refresh, score set 2026-09-19_draft: **HELD FLAT at 32/30/38/44/58**). J. mid-July — confirmatory of the already-priced hawkish read, not new information. Housing data cooled modestly (starts -2.6% m/m, permits -2.7% m/m, existing-home sales -2.0% m/m) but is single-mo touched a 19-year high near 5.04% before settling near 4.95%. A high-profile political story broke in parallel — Trump publicly pressured the Fed and demanded rates be cut to '1% or less' after Chair Waig economic evidence, not scored. This is a FULL WEEKLY refresh, categorically excluded from the delegated daily auto-stamp authority regardless of the size of the move (here, zero) — **LEFT AS DRAFT, AWAITING ALEX'S STAMP** 18_draft, auto-stamped Sept 18) - Updated & Re-verified September 22, 2026 (LIGHT DAILY touch, score set 2026-09-22_draft: **RE-RATED DOWN one point on the three near windows to 31/29/37/44/58**). Philadelphia Fed (prices paid 40.9→48.6, prices received 17.7→31.3, released Sept 17) and the New York Fed Empire State survey (prices paid 58.1→63.1, the highest since July 2022, released Sept 15, primary activity cools. Two independent primary sources, same directional signal, clears the sufficiency bar; kept to one point since both are soft surveys with falling forward components, and 12mo/36mo held since targeted single-pillar LIGHT DAILY touch, not a full weekly refresh — sourcing clears the sufficiency rule; render/selfcheck/verification passed clean — **COMMITTED, AUTO-STAMPED SEPTEMBER 22, 2026** 22) - Updated & Re-verified September 23, 2026 (LIGHT DAILY touch, score set 2026-09-23_draft: **HELD FLAT at 31/29/37/44/58**. Yield drift, CME FedWatch pricing (effectively single-sourced), and Fed's sufficiency bar. **COMMITTED, AUTO-STAMPED SEPTEMBER 23, 2026**). - Last TRUE committed: 31/29/37/44/58 (2026-09-23_draft, auto-stamped Sept 23) - Not Financial Advice - **Updated & Re-verified SEPTEMBER 24** **DELIVERED — no render, selfcheck, archive or commit followed; superseded by the September 26 weekly refresh above**: RE-RATED DOWN, 31/29/37/44/58 → 29/27/36/44/58. Fed Governor's [federalreserve.gov](https://www.federalreserve.gov) and parsed directly: "in my base case, further policy adjustments are likely to be needed to ensure inflation comes down to target in a timely fashion", with "risks to achieving our inflation target". S&P Global flash US PMI showed the strongest private-sector growth since July 2021 (composite 58.4, manufacturing 57.0, services 58.7) alongside the fastest input-cost inflation since October 2022 and 12mo/36mo held. The 10-year Treasury yield's jump to a 19-year-high 5.104% is a market price, reported not scored — and not primary-confirmed, since FRED DGS10 publishes a day late and still read 4.23mo/36mo — note the Sept 24 set 29/27/36/44/58 was NEVER committed, its cycle having been abandoned before delivery (2026-09-24_draft, auto-stamped Sept 24)

The Scores — Committed vs. Drafts

MERGE NOTE — **TWO independent full weekly refreshes ran for October 3, and this is the same duplicate-cycle failure mode the runbook already documents for Sept 26.** The cloud routine researches the day on its own, went, so it researched independently and pushed first. **Origin's lineage is authoritative and untouched** — its set keeps the key 2026-10-03_draft and its archive keeps the bare 2026-10-03 directory — so this package takes the lead and needs Alex's decision. The cloud's weekly moved ONLY Fed & Macro, to 30/27/35/43/58, and held the other three pillars flat; this package moves all four. **On Fed & Macro the two independent passes AGREE ON DIRECTION** — the pillar should rise, with the gap turning on how decisively the September jobs report prices out the October meeting. On the other three pillars this package diverges alone, each cut resting on a dated primary fact (the Senate's own "expected" wording). **This is also the package with four independent adversarial-verification passes behind it**, and those passes withdrew three claims carried in previously delivered reports as false — corrections that apply to the **WEEKLY refresh, RE-RATED UP 27/25/34/43/58 → 35/29/37/44/58 — LEFT AS DRAFT, AWAITING ALEX'S STAMP.** A direction change for this pillar, and the number Alex is most likely to want to push back on. The 9/26 column **Sept 26 (2026-09-26_draft3, this version): FULL WEEKLY refresh, RE-RATED DOWN 31/29/37/44/58 → 27/25/34/43/58 — COMMITTED BY ALEX, September 27, 2026, after his own manual review**, full weekly refreshes the last COMMITTED baseline. An intervening Sept 24 draft was written but never delivered, so — consistent with this report's convention for abandoned drafts — it does not get its own column here; it remains in config/scores.json per the last committed baseline (stamped by Alex Aug 23, 2026). Aug 28 was a same-day catch-up draft that re-rated down but was **never delivered** (not rendered, selfchecked, archived, or committed) — shown for lineage only, superseded by an understated CME odds figure in the abandoned draft — left as draft, committed by Alex. Aug 31 and Sept 1 are light daily catch-ups that each held flat and were AUTO-STAMPED. Sept 2 held flat again and was originally left as a SEPT 26 SEPTEMBER 3 once Alex widened the policy — this is the last TRUE committed baseline at 36/35/45/55/61. Sept 3 held flat a further time (nothing material found on any pillar). **Sept 5, light daily catch-up (2026-09-05_draft)** re-rated 32/31/43/54/60; that cycle's commit message claimed "AUTO-STAMPED," but config/scores.json's status was never actually advanced to committed — a bug, flagged as a correction this cycle. **Sept 5 FULL WEEKLY refresh (2026-09-05_draft)** is categorically excluded from daily auto-stamp authority, so it went to manual review and is **COMMITTED BY ALEX September 5, 2026** at 32/31/43/54/60. **Sept 6 and Sept 8 light daily catch-ups (2026-09-06_draft, 2026-09-08_draft)** are also 3-4, the Sept 11 CPI print still pending — and were **AUTO-STAMPED**, Sept 8 the last COMMITTED baseline. **Sept 9 (2026-09-09_draft, this version)** holds flat a further time — CME September hike odds ~58.7% read consistent with the new last COMMITTED baseline. **Sept 10 (2026-09-10_draft)** holds flat a further time — the Aug CPI release (due Sept 11) and the Sept 15-16 FOMC meeting remain pending per BLS/Fed calendars — **AUTO-STAMPED per default** at 32/31/43/54/60 modestly to 34/33/44/54/60 once the August CPI print lands: headline in line at +0.4% m/m / 3.4% y/y, core one tenth cooler than consensus at +0.3% m/m (2.4% y/y), with the headline acceleration energy-driven — **AUTO-STAMPED** at 34/33/44/54/60. **Sept 10-12 (2026-09-10-12_drafts)** holds flat a further time, this morning — no new Fed speech or primary data release since the CPI print — **AUTO-STAMPED**, the last TRUE COMMITTED baseline. **Sept 12 FULL WEEKLY refresh (2026-09-12_draft2, this version)** examines the new August PPI release (BLS, Sept 10): a hot 5.4% y/y headline that is energy-driven, with core PPI actually undershooting consensus — a mild disinflationary surprise reinforcing, not contradicting, the already-priced core PPI — **full weekly refreshes are categorically excluded from delegated auto-stamp authority regardless of findings, left as DRAFT for Alex's manual review.** **Sept 16 light daily catch-up (2026-09-16_draft)** held flat again at 32/31/43/54/60, the last TRUE committed baseline. **Sept 17 light daily catch-up (2026-09-17_draft, this version, column "9/17")** RE-RATES DOWN modestly to 32/31/42/54/60 once the Sept 16 FOMC decision and its SEP/dot plot land: the 25bp hike, 16 of 18 officials expecting another 2026 hike — is new primary Fed information, sized on the windows bracketing year-end 2026 through Q1 2027. **Sept 18 (2026-09-18_draft, column "9/18")** HOLDS FLAT at 32/30/38/44/58 — doesn't clear the bar — **AUTO-STAMPED**, the last TRUE committed baseline. **Sept 19 (2026-09-19_draft, this version, column "9/19")** FULL WEEKLY refresh, **HOLDS FLAT again at 32/30/38/44/58** — jobless claims (196K, week ending 9/18) and existing-home sales (-2.0% m/m) are confirmatory of the already-priced hawkish read, not new information, and single-month/internally mixed besides; a parallel Trump/Fed political-pressure story (Trump publicly demanding rate cuts) are categorically excluded from delegated auto-stamp authority regardless of finding — **LEFT AS DRAFT** for Alex's manual review. **Sept 22 (2026-09-22_draft, column "9/22")** is a LIGHT DAILY touch, targeted single-pillar follow-up on the primary regional Fed surveys (Philadelphia Fed prices paid 40.9→48.6, NY Fed Empire State prices paid 58.1→63.1) showing input-cost/selling-price pressure re-accelerating; 12mo/36mo held. Sourcing clears the sufficiency rule — **AUTO-STAMPED** at 32/30/38/44/58, this pillar flat. **Sept 24 (2026-09-24_draft) — NEVER DELIVERED, and it has no column here** — it proposed a light daily RE-RATE DOWN of two points on 1mo/3mo and one on 6mo, to 29/27/36/44/58, but no render, selfcheck, or 26 weekly refresh, on Fed Governor Barr's Sept 23 primary-sourced guidance toward further tightening plus the same day's S&P Global flash PMI (input costs fastest since October 2022); 12mo/36mo held. Sourcing clears the sufficiency rule — **AUTO-STAMPED** at 32/30/38/44/58.

Prior committed P (2026-09-22_draft, light daily touch, AUTO-STAMPED): 31 / 29 / 37 / 44 / 58 · **Prior committed P (2026-09-23_draft, light daily touch, AUTO-STAMPED, HELD FLAT):** 31 / 29 / 37 / 44 / 58 · **Current P (2026-09-23_draft, light daily touch, AUTO-STAMPED, HELD FLAT):** 36 / 44 / 58 · **Weight:** 20% (equal) · **Impact:** 8 (uniform) · **Formula:** Signal = ((P – 50) ÷ 50) × Quality × Impact. This cycle's move rests on two independent, same-day, Sept 23 developments: Fed Governor Michael S. Barr's speech at the verbatim "in my base case, further policy adjustments are likely to be needed" alongside "risks to achieving our inflation target have increased, while risks to the labor market have receded"), and the S&P Global flash US PMI (core inflation, 2022 and selling-price inflation turning back up). The 10-year Treasury yield's 13bp jump to a 19-year-high 5.104% the same day is a MARKET PRICE, reported but not scored — and, stated plainly, not primary-confirmed: FRED DGS10

THE THREE INPUTS, IN PLAIN ENGLISH

P — the odds the macro regime is *good for crypto* by then — not “the Fed cuts by then.” Re-rated down this cycle to **29 / 27 / 36 / 44 / 58** from the committed 31 / 29 / 37 / 44 / 58: two points down on the 23 on-the-record guidance toward further tightening (primary, federalreserve.gov) together with the same day's S&P Global flash PMI, which paired the strongest private-sector growth since 2007 with 36mo windows held — a single month of survey data and one Governor's base case do not reach the 2027-2028 policy path.

The thesis, and where I differ from the consensus — updated September 26, 2026 (FULL WEEKLY refresh, score set 2026-09-26_draft3, committed by Alex September 27, 2026)

Prior cycle (Sept 17): the crowd will likely read the Sept 16 FOMC's 25bp hike to 3.75%-4.00% itself as the headline event. **Me:** that hike was ~92.5% priced into market odds beforehand, so its real fact is the SEP/dot plot — a primary Fed document, not a market price — showing 16 of 18 officials expecting at least one more 2026 hike (12 of 18 specifically pencil in a year-end move to 4.125%). The crowd shrug (ticked up toward \$76,300, then drifted back to hold near \$76,000-198) — the market had this priced too, but the committee's own forward path is incrementally more hawkish than the odds. **32/31/42/54/60** — 1mo 34→32, 3mo 33→31, 6mo 44→42, concentrated on the windows bracketing the confirmed additional-hike path into Q1 2027; 12mo/36mo held, since the longer-run dot plot is flat.

Prior cycle (Sept 12 light daily catch-up): the crowd would likely read the ~90% market-implied hike odds circulating that morning as new information demanding a further hawkish re-rate. **M** numbers don't improve, we have work to do"), not a fresh Sept 11-12 statement — it was the market's own reaction to a CPI print this pillar already scored, not a new dated primary fact, so per the

34/33/44/54/60, AUTO-STAMPED.

The crowd: might read Warsh's studied refusal to commit to forward guidance as him keeping his options open, and treat the hawkish framing as just rhetoric until an actual vote. The abandoned move — understated how far the market itself actually moved.

My edge: the discipline is in re-pulling the actual rate-odds venue rather than trusting the first number that circulates — this cycle that discipline caught a real error before it was ever delivered to the market. The counter-case since early August, looks less like an outlier with each hawkish print. The August CPI print — due today and still pending as of this research pass — and the Sept 15 FOMC itself remain to be seen. This re-rate prices in a repriced *risk*, not a foregone decision.

As of October 3, 2026 (FULL WEEKLY refresh, score set 2026-10-03_draft2, LEFT AS DRAFT). Every figure below was independently re-derived from a primary source in this cycle's adversarial-verification pass unless explicitly labelled

CORRECTED this cycle, and it kills a claim this system has been repeating: jobless claims are NOT at or near a 57-year low. The “near 57-year lows” / “lowest since 1969” framing carried since” language at all — the strings “lowest” and “1969” do not appear in it — and **FRED ICSA refutes it outright:** 197,000 is not even 2026’s lowest print, with **189,000** (week of Jul 18) and **195,000** in Jan 2024; the series minimum is 162,000 (Nov 1968). **The level still does the analytical work without the superlative:** claims near 197–200k mean layoffs are not rising, so +29,000 levels does not force the Fed’s hand.

MARKET PRICES, never blended with the SEP. CME FedWatch October-hike odds collapsed to roughly **17–23%** (hold ~77–81%) as of Oct 2, from about 36% a week earlier. For December, odds were 66.2% and 65% — **corrected down from a first-pass “above 75%,” which verification found unsupported**; CME’s own page and the CNBC article both returned HTTP 403, so this rests on CME’s own page. **These** are market prices, not institutional estimates.

H.4.1, week ended Sept 30 (PRIMARY, released Oct 1, re-confirmed exact): reserve balances **\$2,948,090M** from \$2,930,193M, **+\$17,897M w/w** — last cycle's record –\$83,601M drain has reconciled exactly with what the Sept 26 cycle logged — a clean cross-check.

★ NEW THIS CYCLE — THE WEEK OF SEPTEMBER 19-26, 2026

★ **PRIMARY** — Fed Governor Michael S. Barr, “A Long-Term View on the Costs of Shelter,” Sept 23, 2026, 10:05 a.m. EDT, at the Chicago Fed’s Housing Affordability 2026 summit. All the [federalreserve.gov/newsevents/speech/files/barr20260923a.pdf](https://www.federalreserve.gov/newsevents/speech/files/barr20260923a.pdf), in one continuous paragraph on p.2: “Economic growth is strong and the labor market is solid, but inflation is above our 2 percent target. Our inflation target has increased, while risks to the labor market have receded. We needed to recalibrate monetary policy to reflect the balance of risks to our mandate goals. ... **Inflation comes down to target in a timely fashion.**” He also confirmed he supported the Sept 16 hike. *Verification note, stated because it cuts against an earlier draft of this very cycle:* a first draft of the statement was released at 9:55 a.m.; both “corrections” were WRONG and are withdrawn. The sentence is present, and the Board’s own September calendar lists Barr at 10:05 a.m. — 10:20 a.m. that day was Vice Chair Jefferson

★ **PRIMARY** — **S&P Global flash US PMI, Sept 23, 2026.** The embargoed release ("Embargoed until 0945 EDT ... 23 September 2026") was retrieved directly. Composite output **58.4** (from 5 (from 53.9, vs 53.6 expected); services **58.7**. Critically for this pillar, the release places **input-cost inflation at its fastest since OCTOBER 2022**, attributing it to higher fuel and transport costs. *Figure deliberately not quoted:* an "input prices index 66.4 from 59.9" reading circulated in secondary coverage does NOT appear anywhere in the release and is vendor/subscriber data, so it is pillar, is primary.

★ **PRIMARY — University of Michigan Surveys of Consumers, FINAL September, released Sept 25, 2026.** Sentiment **48.1**, down 7.0% month-on-month from 51.7; current conditions 50.9. “The rate of inflation has increased more than expected, and inflation expectations jumped from 4.0% last month to 4.6% this month” and “**Long-run inflation expectations ticked up to 3.4%, ending three consecutive months at 3.3%.**” The Fed’s de-anchored long-run expectations are what extend a tightening cycle beyond one meeting — and it is the specific reason the 6-month window took -3 rather than -1.

★ **PRIMARY — DOL initial jobless claims, week ended Sept 19, 2026:** advance figure **197,000** (the “near 57-year lows” characterisation carried here was later found FALSE and is withdrawn), revised figure **198,000**, and the 4-week moving average is **202,250**. Both revisions correct figures this report had been carrying. A near-record-low layoff rate removes the last dovish counterweight to a full

★ **PRIMARY — Federal Reserve H.4.1, week ended Sept 23, 2026.** Reserve balances **\$2,930,193M against \$3,013,794M** the prior week — a fall of exactly **\$83,601M in one week**, arithmetic change of \$83,601M and total assets roughly flat at \$6,747,704M. This is by far the largest one-week reserve drain this report has logged (prior logged weeks: –\$10.4B, –\$49.3B) and is a direct liquidity drain rather than policy tightening, which is why it supports the move without driving it.

Two Fed voices, both DOWNGRADED on sourcing after verification — used as corroboration only, neither able to move P alone. *Boston Fed President Susan Collins, Sept 22:* the quote which inflation remains notably above 2%” — but it was a LinkedIn post that is unfetchable, bostonfed.org does not carry it, and every corroborating outlet traces to the same Reuters story, so any prior cycle — a genuine coverage gap, now closed. *NY Fed President John Williams, Sept 24, at NIESR’s London Macro Policy Forum:* **materially recharacterised, because an earlier pass m** pricing suggested “it’s likely that another rate hike may be appropriate by the end of the year,” and then adding “That seems to me a reasonable way of thinking about it. **But we have to see.**” be exactly the market-expectation-versus-official-estimate conflation this system forbids. No primary transcript exists (it was an unscripted fireside chat; newyorkfed.org 404s), and genuinely in the identical Reuters wire.

Also logged this cycle, not scoreable. The Fed's own *Senior Credit Officer Opinion Survey* (Sept 24, primary) reports dealer pricing and non-pricing terms "remained basically unchanged, on net," which is a **contradiction** — unchanged — not a rate-path signal. Census *New Residential Sales* for August (Sept 24) came in at **684,000 SAAR, an increase**, attributed to price reductions — which **contradicts this report** — **softened accordingly** (figure is secondary-sourced; the Census PDF would not parse). Census advance durable goods for August (Sept 25) were virtually unchanged at \$338.6B. No Fed speech today.

MARKET PRICES — reported, and never blended with the SEP's institutional estimates. The 10-year Treasury yield rose **4.96% (Sept 22) → 5.11% (Sept 23) → 5.18% (Sept 24)**, the high and the US Treasury's own daily yield-curve series agree exactly on both values. That *resolves* the honest caveat carried in the abandoned Sept 24 draft (FRED had not yet published Sept 23 at the primary constant-maturity close. The 2-year is quoted at 4.947%, the highest since May 2024 (secondary). CME FedWatch odds of an Oct 27–28 hike moved ~53% (Sept 23) → **77.5% (Sept 24)** — **four more hikes by the June 2027 meeting**, which contradicts and retires this report's earlier "Polymarket ~51% odds of a cut by June 2027" line. A *claimed data-integrity finding* was **RETRACTED** on Sept 24. Endpoint returns September 2026 values ~125bp too low. Verification could not reproduce it — that file truncates long before 2026, so the readings were almost certainly fabricated by a sum of unresolved gaps and is not presented as a finding. The 5.11/5.18 values are unaffected.

[illegible]

THE TEST HAS LANDED, AND IT CAME BACK TWO-SIDED. August PCE and the Q2 GDP third estimate released **Sept 30** (BEA, primary). Core PCE printed 3.0% y/y, but roughly 0.15-0.2 point rather than fresh disinflation; Q2 GDP was revised sharply up to +2.2%, a genuine growth beat. The two roughly offset, so this pillar's own flip line resolves without confirming or reversing the

★ **NEW** this cycle — Philadelphia Fed Manufacturing Business Outlook Survey, released Sept 17, 2026 (primary source page confirmed at philadelphiafed.org; that month's PDF did not contain the confirmed release date plus 5+ independent outlets reporting identical figures — MarketScreener, NAM, investinglive, Kitco, Bitget, Academic Capital): general activity fell to 37.1 (reporting higher prices vs. 1.9% lower) and **prices received rose to 31.3 from 17.7** — a re-acceleration in the inflation-pipeline reading. Employment fell sharply (11.8 from 27.9) and future a

★ ★ **NEW this cycle** — **New York Fed Empire State Manufacturing Survey, released Sept 15, 2026 (PRIMARY, fetched directly from [newyorkfed.org](https://www.newyorkfed.org)):** general business conditions cooled since July 2022 — and **prices received rose to 28.1 from 23.1**, a three-month high.

- **Why this clears the sufficiency bar:** two independent Federal Reserve district banks' own primary surveys, dated the same week, showing the same directional signal (headline activity cooling year highs) — 2+ independent primary sources in the same input class, not a single-source claim.
- **Why only one point:** both are soft/sentiment surveys, not hard CPI/PCE prints; both releases' own headline-activity and forward-looking components (employment, future activity, general consumer confidence) — market pricing actually turned risk-on into Sept 18-19 (10-year backed off its 5.04% high to ~4.95%, BTC recovered) — a market price, not scored, but the honest reason not to take this further.
- **12mo/36mo HELD** — two regional sentiment surveys say nothing about the 2027-2028 policy path those windows price.
- **Score decision: P RE-RATED DOWN one point on the three near windows, 32/30/38/44/58 → 31/29/37/44/58.** Research capability fully available this cycle (WebSearch clean; WebFetch refresh, and the sourcing clears the sufficiency rule — **AUTO-STAMPED: status committed, stamped by "Alex (auto-stamped)."**)

Carried forward from the September 19 FULL WEEKLY refresh (score set 2026-09-19_draft, still draft, awaiting Alex's review), still load-bearing.

★ ★ **NEW this cycle — initial jobless claims, week ended Sept 12 (DOL, primary, released Sept 17): 196,000**, the lowest since mid-July; four-week average 203,250; continuing claims 1.730M

★ ★ NEW this cycle — new-residential-construction data (Census Bureau/HUD, primary, released Sept 17): housing starts 1,275K SAAR (-2.6% m/m), permits 1.394M (-2.7% m/m). median price \$429,100 (+1.6%). A genuine rate-sensitive-sector cooling signal, but single-month and internally mixed (single-family starts actually +7.6%) — insufficient alone to move P per t

- ★ **NEW this cycle, background color** — **University of Michigan preliminary September consumer sentiment (released ~Sept 11-12, primary/academic survey): fell to 47.8 from 51.1** — predates the current baseline's known-history cutoff and is added here as context even though it doesn't move P now — it is already implicitly reflected in the mood behind the Sept 16-17 hawkishness
- **Treasury yields backed up further into and through FOMC week:** the 10-year touched ~5.04% intraweek, a 19-year high, before settling near 4.94-4.95% by Sept 18 as oil prices eased; 2-5-year touched 4.5-4.6% — logged, not scored.
- **CME FedWatch (market price, not scored):** the October 27-28 FOMC meeting priced a **55.1% probability of another 25bp hike** as of Sept 17, 2026 — compare pre-Sept-16-meeting price of 51.1% — hike at roughly 89-94%/54% respectively pre-decision, and Polymarket priced a cut by the June 2027 meeting at roughly 51%.

- **A high-profile political story broke in parallel: President Trump and senior administration officials (the Vice President, the Treasury Secretary, and an economic counselor) publicly** after Chair Warsh nonetheless voted with a unanimous FOMC (12-0) to hike. Well-corroborated across 8+ independent outlets (CNBC, CNN, NBC News, MS NOW, BNN Bloomberg, Fortune, T evidence — the Fed didn't capitulate, if anything this reinforces the hawkish path holding — logged, not scored.
- **Bank-forecaster reactions, logged not scored:** Goldman Sachs's post-meeting note expects an October hike with no December hike in its base case; an earlier BofA call for three 2026 hikes unchanged earlier this month") and is treated as likely stale/superseded if cited elsewhere. Single-house forecasts reacting to the already-priced SEP, not new primary facts.
- **Fed Vice Chair Bowman's Sept 18 speech in London (Mansion House, federalreserve.gov, primary)** covered bank stress-testing rule finalization — not a monetary-policy or rate signal, n
- **Score decision: P HELD FLAT at 32/30/38/44/58.** Full independent primary-source research this cycle (~15 targeted WebSearches, no capability degradation); nothing above clears the suffi delegated daily auto-stamp authority regardless of finding — **LEFT AS DRAFT for Alex's manual review.**

Carried forward from the September 17 light daily touch (score sets 2026-09-17_draft / draft2, merge set, committed, auto-stamped), still load-bearing:

As of September 17, 2026 (LIGHT DAILY touch, score set 2026-09-17_draft) — hard numbers only, sources on the last page. New this cycle: the Sept 16 FOMC decision and its SEP/dot plot; the Sept 12 weekly-refresh material further covered in full in the Iran War Risk pillar report.

- ★ ★ **NEW this cycle — Sept 16 FOMC decision (federalreserve.gov, primary; corroborated by CNBC, Reuters/Advisor Perspectives, Coinpedia, coingape — 5+ independent outlets).** T first hike in three years. The move itself was ~92.5% priced into CME/market odds beforehand — a market price, not used to move P on its own.
- ★ ★ **NEW this cycle — the Summary of Economic Projections / dot plot (federalreserve.gov, primary).** 16 of 18 participants project at least one more 2026 rate increase; 12 of 18 specifically drifting down in 2027-2028, but on a slower, more cautious path than previously projected, with the long-run neutral-rate dots clustering tightly at 3.0%. This is a primary Fed institutional doc
- **Bitcoin's reaction was muted:** ticked up toward \$76,300 on the statement, then drifted back to hold near \$76,000-198 through Chair Warsh's press conference (CNBC, Coinpedia) — consistent plot's forward path, not the decision itself.
- **Score decision: P RE-RATED DOWN, modestly, to 32/31/42/54/60** — 1mo 34→32, 3mo 33→31, 6mo 44→42; 12mo/36mo HELD FLAT at 54/60. Light daily touch, master call band unchanged
- ★ **Carried forward — August PPI (BLS, primary, released Sept 10, 2026; corroborated by CNBC, CNN, Yahoo Finance — 3+ independent outlets).** Headline final demand **+0.4% m/m** (in more than three-quarters of the monthly gain is attributable to volatile energy costs (diesel fuel +24.1% alone). Core PPI (ex food/energy) came in at **+0.3% m/m**, UNDER consensus on one n surprise on the core reading.
- **Score-relevant read on the PPI print:** reinforces, rather than contradicts, the already-priced "cooler than consensus" August CPI narrative — **not a distinct new directional catalyst**, so it do (BLS primary + 3 independent corroborating outlets).
- **Re-verified August CPI (BLS, released Sept 11) independently this cycle:** headline +0.4% m/m / +3.4% y/y, core +0.3% m/m / +2.4% y/y, shelter +0.3% m/m / +3.0% y/y — matches the fi
- **DOL initial jobless claims, week ending Sept 5 (released ~Sept 11, primary): 206,000, down 1,000 w/w, 4-week average 206,000** — steady, unremarkable, no signal.
- **CME FedWatch-tracked market-implied odds of a 25bp hike at the Sept 15-16 FOMC read ~62-69% this week (as of Sept 10-11)** — a *market price* only, not an institutional estimate, ex ~90% figure referenced in the prior (this morning's) daily cycle's background note — both are reported as market-price snapshots at different times; the divergence is noted, not resolved or e
- **Fed Chair Warsh: no new substantive remarks since the Aug 28 Jackson Hole speech.** A Sept 9 Marketplace piece characterizing him as withholding forward guidance ahead of the meeti flagged as single-source, does not move P.
- **The Sept 15-16, 2026 FOMC meeting had NOT yet occurred** as of the Sept 12 research pass — it has since occurred and fired; see the NEW facts above.
- **Historical score decision (Sept 12 cycle, superseded):** P HELD FLAT at 34/33/44/54/60 — FULL WEEKLY REFRESH, left as DRAFT for Alex's manual review at the time (weekly refreshes are ca set was later committed by Alex, and Sept 16 held it flat again before this cycle's re-rate above.

Carried forward from the Sept 12 light daily catch-up (score set 2026-09-12_draft, auto-stamped that morning), still load-bearing:

- **Re-checked — no new Fed speech or primary data release found since the Sept 11 CPI print.** Coverage of ~90% market-implied hike odds circulating that morning traced to Fed Chair W market price, not used to move P. P HELD FLAT at 34/33/44/54/60, AUTO-STAMPED.
- ★ **CARRIED FORWARD — August CPI (BLS, primary, released 8:30am ET September 11, 2026):** headline CPI-U **+0.4% m/m seasonally adjusted** after +0.1% in July, **+3.4% y/y NSA**. Core +2.1% m/m, gasoline +3.9% — over a third of the monthly increase — shelter +0.3%. Fetched directly from bls.gov and re-fetched to confirm.
- **CARRIED FORWARD — versus consensus:** pre-print expectations circulating were headline +0.4% m/m / 3.4% y/y and core +0.4% m/m / 2.4% y/y. **Headline landed exactly in line; core ca** — used here only to characterise the surprise.
- **Market-implied September hike odds around the print read ~70% for a 25bp move** — a *market price*, not an institutional estimate, reported for context and explicitly not used to move P
- **Data-hygiene note, logged:** several aggregator summaries of this print published within minutes carried figures inconsistent with the BLS release (for example a 3.1% core y/y). They were di primary-source rule exists for.

Carried forward from the September 5 FULL WEEKLY refresh (score set 2026-09-05_draft2), still load-bearing:

- ★ ★ **NEW — August jobs report (BLS, primary, released Sept 4): nonfarm payrolls +162,000 vs. ~53-55,000 consensus; unemployment steady at 4.1%.** A sharp upside beat, corroborate hourly earnings +\$0.10 (+0.3% m/m, +3.1% y/y).
- ★ ★ **NEW — markets repriced September 15-16 FOMC hike odds higher off the jobs beat.** Point estimates vary by source/timestamp (roughly 60-66% hike probability cited across CNBC, F directionally consistent and higher than the "~60% hold" framing this pillar's Sept 2 baseline used — i.e. the market moved further toward pricing a hike, not away from it. Fed officials remain he'd lean toward holding if inflation data improves. Market commentary (Morgan Stanley-style framing, echoed across outlets) now flags the Sept 11 CPI print as the likely deciding data poin
- ★ ★ **NEW — same-day market reaction, Sept 4 (multi-source corroborated): 2-year Treasury yield +5.3bp to its highest level since January 2025; Dow -271.86 pts (-0.51%) to 53,414.2**
- **BTC fell ~2% same-day: \$81,265.00 (Sept 3 close) → \$79,676.60 (Sept 4 close)** (data/btc_usd_daily.csv) — consistent with a hawkish-surprise risk-off reaction; BTC \$79,646.11 Sept 5.
- **Score decision:** this is a fresh, dated, primary-sourced print (not odds drift alone), sized comparably to the Aug 22→28 catch-up cut for a comparable single dated catalyst — P re-rated down than 8 points versus the last committed baseline.

Carried forward from the Sept 3 light daily catch-up (no new score set — nothing material found on any pillar that cycle):

- **Re-checked CME FedWatch and the H.4.1/data calendar; found no fresh primary print or news event dated Sept 2-3.** config/scores.json untouched; run.py blend re-run against fresh q

Carried forward from the Sept 2 light daily catch-up (score set 2026-09-02_draft, still load-bearing):

- **No new H.4.1 or data print found dated Sept 1-2.** September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continued the same post-Jackson-Hole drift already priced in this pillar's own standing discipline against chasing odds drift, it did not independently move P.
- **BTC traded at \$76,581.44 on Sept 2** — down from \$78,038.78 on Sept 1 (Bitstamp) — a real pullback, but driven by the Iran War Risk escalation covered in that pillar's report, not by anything

Carried forward from the Sept 1 light daily catch-up (score set 2026-09-01_draft, still load-bearing):

- **CME FedWatch September hike odds read ~66% around 11:40am ET Aug 31** (Forbes/KuCoin), up from the ~60.4% CNBC read already priced into the Aug 31 baseline — the same intraday
- **No new H.4.1 or jobless claims release Aug 31-Sept 1** — Aug 31 was Labor Day, a US federal holiday; next H.4.1 is due Sept 3.
- **BTC traded at \$78,038.78 on Sept 1** — down from \$78,447.16 on Aug 31 (Bitstamp).

Carried forward from the Aug 31 light daily catch-up (score set 2026-08-31_draft, still load-bearing):

- ★ **CME FedWatch September hike odds drifted to ~60.4% by Aug 31** (CNBC Jackson-Hole-analyst-roundup, up from ~56% Friday, Aug 28), continuing the same repricing already sized into the rule (market-price drift alone, no fresh primary print or news event).

Carried forward from the Aug 29 full weekly refresh (still load-bearing):

- ★ ★ **ADVERSARIAL CORRECTION — the abandoned Aug 28 draft's CME FedWatch September hike-odds figure (~35.4%→~45.7%) UNDERSTATED the real market move.** A dedicated read (Aug 27 close) ~35.4-35.5% is well-corroborated and not in dispute. Post-speech (Aug 28), the credible cluster is roughly 56-58% — Motley Fool quotes CME FedWatch directly at 57.5%; CNBC (not contradict it); a third independently-sourced read says "55.7%... about 20 points higher than a day ago." These three cluster tightly. The 45.7% and 42% figures that circulated appear to be of 59-60% seen elsewhere are within plausible range of later-day snapshots and roughly track the confirmed cluster. **Corrected characterization: ~35% to roughly 56-58%** — past coin-flip.
- ★ ★ **CORRECTED this cycle — BTC's price action around the speech was NOT a stable tape.** The abandoned Aug 28 draft's framing ("stable tape... not one BTC visibly flinched") is corrected sharply once Warsh spoke, and closed \$79,613.44 that day — then continued falling to **\$77,666.16 by today, Aug 29** (Bitstamp), a roughly 4%+ round-trip decline from the day's high through the day.
- ★ ★ **NEW this cycle — initial jobless claims, week ended Aug 22 (DOL, primary, released Aug 27): 203,000 vs. 208,000 consensus**, down from the prior week's revised 207,000; continuing to remove a dovish pressure — logged, not independently trigger-worthy on its own.
- ★ ★ **NEW this cycle — Fed H.4.1, week ended Aug 26 (federalreserve.gov, primary): reserve balances \$2,924,936M (~\$10,351M w/w); Treasury General Account \$950,736M (~\$2,876M w/w)** — independently trigger-worthy.
- ★ **No new CPI/PPI release in this window** — next releases Sept 10-11, unchanged from the prior baseline. No public pushback found from any other Fed official on Warsh's hawkish tone this week.
- ★ **Score decision:** the corrected, larger CME move justifies a deeper cut than the abandoned Aug 28 draft's 38/37/46/55/61 — P re-rated down to 36/35/45/55/61, concentrated on the 1mo/3mo/6mo/9mo/12mo versus the last committed baseline.

Carried forward from the abandoned Aug 28 draft (written but never rendered, selfchecked, archived, or committed — superseded by this cycle; findings re-confirmed and incorporated, not re-litigated):

- ★ **Fed Chair Kevin Warsh's first Jackson Hole speech as Chair, Aug 28, 10:00am ET (federalreserve.gov, primary transcript, confirmed verbatim this cycle via direct fetch; corroborated by CNBC, Quartz, Newsquawk, goldsilo.com, etc.)** **Post direct fetch was blocked 403 this cycle, relied on search-summary only.** Theme: "Financial Innovation: Implications for Payments and Policy." Exact quote, verified against the transcript: "The underlying trends have meaningfully improved." Also: "We must be confident that underlying inflation is moving to our objective... Otherwise, we have work to do," and "I don't want to tell you that we're not going to raise rates... The transcript does not contain the literal words "may need to raise rates" — that is a fair, standard journalistic paraphrase used independently by CNBC, Yahoo Finance, Forbes, and Spectrum News. I used the paraphrase here. This was his 100th day as Chairman (confirmed May 22, 2026 succession).
- ★ **July PCE (bea.gov, primary, released Aug 26): headline +0.2% m/m, 3.7% y/y (0.1pp hot vs. consensus); core +0.2% m/m, 3.3% y/y (in line).** Consumer spending +0.2% m/m (\$36.3B m/m). Warsh's own remarks the same week, didn't by itself change his read on underlying trends.
- ★ **2-year Treasury yield rose to a roughly one-month high: confirmed +6.6bp to 4.29% intraday-close** (one source cites a peak of +9bp to 4.32%); the 30-year yield eased about 1.5bp; stock prices fell.
- ★ **BTC closed at \$79,613.44 on Aug 28 (Bitstamp)** — this price point is now superseded by today's \$77,666.16 close (Aug 29); see the corrected price-action fact above.

Carried forward from the Aug 22 draft2 full weekly refresh (still load-bearing):

- ★ **The Jul 28-29 FOMC minutes' hawkish bloc runs wider than previously known (federalreserve.gov, primary, published Aug 19; corroborated by CNBC, Quartz, Newsquawk, goldsilo.com, etc.)** for an immediate hike), "several participants" also favored a hike at the meeting, and "many participants assessed that policy tightening would likely be necessary if inflation did not decline." I used the headline / 3.3% core, "remains elevated." Labor cited: unemployment steady at 4.2% (June), wage growth 3.5% y/y (moderating).
- ★ ★ **NEW this cycle — the 30-year Treasury yield hit 5.31-5.33%, a ~19-year high (highest since 2007), around Aug 17-18** (Bloomberg, CNBC, Axios). Driven substantially by fiscal/deficit February estimate — plus heavy long-bond supply, not purely a Fed-hike repricing story, though it compounds optically with the hawkish minutes.
- ★ ★ **NEW this cycle — equities sold off Aug 20:** S&P 500 -0.87% to 7,641.16; Dow -703.84 pts (-1.32%) to 52,759.21 (partly a ~9% Walmart-earnings-driven drop, not purely Fed-driven); Nasdaq -1.5% to 17,841.16 and rising long yields. Aug 21 saw a partial recovery.
- ★ ★ **NEW this cycle — CME FedWatch (September meeting) independently re-verified directly, cross-venue:** ~68-70% hold probability across multiple contemporaneous reads as of Aug 22: investing.com 64.7% hold, defirate.com blended 68.3% hold/30.6% hike — essentially UNCHANGED before and after the Aug 19 minutes landed, meaning the market already had the hawkish minutes.
- ★ ★ **DISCARDED — a separately-circulating claim of "93.6% September hike probability" was traced this cycle to a garbled data conflation.** It appears to be Kalshi's JULY meeting hold-odds, not credible for September and explicitly discarded, not used in this pillar's scoring.
- ★ **Jobless claims week ended Aug 15 (DOL, primary, released Aug 20): 206K, down 6K, vs. 210K consensus; 4-week average 204K.** Confirms the low-layoff, tight-labor trend already in the market (draft1).
- ★ **Aug 22 score decision (superseded by this cycle):** the hawkish minutes detail and the noisy weak retail-sales print largely offset an already-priced rate-odds market — netted to a wash; P H 100.
- ★ **BTC closed at \$77,266.84 on Aug 22 (Bitstamp)** — vs. \$79,613.44 on Aug 28 and \$77,666.16 on Aug 29 (see this cycle's facts above).

Carried forward from the Aug 22 draft1 catch-up cycle (independently re-confirmed, still load-bearing):

- ★ **No new Fed H.4.1 release since the week ended Aug 19 (federalreserve.gov, primary, published Aug 20):** that remains the current release; the next H.4.1 is due Aug 27. No new CPI (next release Sept 10) in window — July PPI (released Aug 13) was already known and priced before the Aug 16 baseline.
- ★ **No new public remarks from Chair Warsh between the Jul 29 FOMC press conference and the Aug 28 Jackson Hole speech (see this cycle's facts above).**

Carried forward from Aug 20 (re-confirmed this cycle, still load-bearing):

- ★ **FOMC minutes from the Jul 28-29 meeting confirm the known 9-3 hold vote and the Hammack/Kashkari/Logan dissent for an immediate 25bp hike.** Inflation risks characterized as "transitory" (oil, steel, electricity). No explicit forward guidance from Chair Warsh. A balance-sheet task-force report will inform future deliberations, but no near-term QT-pace signal was given.
- ★ **Offsetting signal, re-confirmed and expanded this cycle: CME FedWatch showed the odds of a September 16 hold rising to ~65% post-minutes, up from a pre-minutes ~50/50** (Newsquawk, etc.) — cross-venue re-check (~68-70% hold across five independent sources, Aug 17-22) confirms no further material move off that level, i.e. the market stayed priced for a hold through the minutes' release.

Carried forward from Aug 16 (still load-bearing):

- ★ **July retail sales (Census Bureau, published Aug 14, primary release): headline -0.6% m/m vs. +0.1% expected, core (ex-auto) -0.2% m/m, still +5.0% y/y.** The first monthly decline in retail sales (gasoline, electronics, nonstore) with some calendar-effect noise (Amazon Prime Day pulled into June). A genuine but noisy dovish-leaning counter-signal — per this pillar's own house discipline.
- ★ **Recalled for continuity, not re-scored:** the Aug 17 Empire State Manufacturing Survey surged to 20.6 vs. 11.0 consensus, the highest since 2022 — a hot beat cutting against the recent cool market. This pillar's discipline against chasing single prints in either direction, this was not sized into a move.

Carried forward from Aug 13-14 (still load-bearing):

- ★ **Fed H.4.1, week ended Aug 12 (federalreserve.gov, published 4:30pm ET Aug 13): reserve balances \$2,944,059M, down \$49,290M w/w; Treasury General Account \$963,950M, up \$1,000M w/w** — priced into this pillar's recent baselines — confirmed an already-adopted trend, didn't fire a fresh trigger.

Carried forward from Aug 12-13 (still load-bearing):

- ★ **July CPI (BLS, published Aug 12): headline +0.1% m/m / +3.4% y/y; core +0.2% m/m / +2.5% y/y** — landed cool, exactly in line with consensus, drove the Aug 13 re-rate up.
- ★ **Initial jobless claims, week ended Aug 8 (DOL/ETA, published Aug 13): 209,000 actual vs. 202,000 expected** — a genuine weak-side miss, 8-week high, the second trigger behind the Aug 13 re-rate up.

Carried forward from Aug 8-10 (still load-bearing):

- Initial jobless claims for the week ended Aug 6 (published Aug 8): 262,000 actual vs. 263,000 expected — essentially in line with consensus, noise rather than a surprise.

Carried forward from Aug 8-9 (still load-bearing):

- ★ **BLS Employment Situation, July 2026: nonfarm payrolls FELL 23,000** versus a consensus estimate of ~83,000 (WSJ-sourced; a competing 95,000 Barron's-sourced figure is less corroborated (-50,000) and retail trade (-19,000). A direct bls.gov fetch returned a 403 this cycle; the figure is confirmed via convergent CNBC, Yahoo Finance, Kiplinger, and CBS News reporting, all citing the same source. (The BLS's own summary of the report is unreliable summarization artifact, not a correction.)
- ★ **May and June payrolls revised down a combined 103,000** — confirmed, matches the light draft exactly. (One Forbes-sourced fetch this cycle produced a garbled "-252,000 total" figure that is an unreliable summarization artifact, not a correction.)
- ★ **Unemployment ticked down to 4.1% from 4.2%**, but the labor-force participation rate fell to 61.4% — its lowest level in over five years.
- ★ ★ **NEW this cycle — average hourly earnings rose just 3.2% y/y**, down from 3.4% in June and now trailing CPI (3.5% June y/y) — real wages softening, a detail the same-day light draft did not capture.
- ★ ★ **CORRECTED — CME FedWatch September-hold odds check out at ~56%**, not the light draft's ~60%. Two independent corroborating sources (CBS News, a Forbes-sourced pull) both cite ~60%, a real but less-corroborated, likely later-intraday figure. Kalshi (a prediction market, not CME futures-implied pricing — a different instrument, labeled separately per research discipline) is at ~56%.
- ★ ★ **NEW this cycle — real forecaster disagreement on magnitude:** Bank of America explicitly called the report "a bit dovish on net" but is **sticking with its call for 75bp of hikes in 2026** (50-75bp). It described the labor market as "not loose, not tight" — a measured, non-alarmed read. Morgan Stanley's Ellen Zentner says the **Aug 12 CPI print** — inside this pillar's own 1-month window — is "not a bad read".
- ★ **Jobless claims for the week ended Aug 1: 199,000, 4-week average 198,750** — the lowest of this cycle, in real tension with the weak payrolls print. Points to "low-hire, low-fire" stagnation.

Carried forward from Aug 7 (still load-bearing):

- ★ **Fed H.4.1 for the week ended Aug 5 (federalreserve.gov, direct pull):** total assets \$6,748,567M, reserve balances \$2,993,349M — reserves +\$8.78B w/w, TGA -\$3.45B w/w. An unremarkable

Carried forward from Jul 30-Aug 5 (still load-bearing):

- ★ ★ **CONFIRMED, PRIMARY SOURCE — the FOMC held rates at 3.50-3.75% on Jul 29, 2026, on a 9-3 vote.** Three regional-bank presidents — Beth Hammack (Cleveland), Neel Kashkari (Minneapolis), and Patrick Harker (San Francisco) — all voted "yes" (federalreserve.gov statement, corroborated by CNBC, Forbes, Fox Business, TechTimes). This is the **first unified 3-member dissent since September 2016**. No SEP/dot plot this meeting (no data yet).
- ★ **Chair Warsh's press conference was unusually combative and offered no forward guidance:** "there is no soft inflation target... not on this committee's watch"; "the five-plus years of inflation off market reaction followed: S&P 500 fell 1.85% in the final 65 minutes of trading (full day: S&P -1.52%, Dow -2.19%, Nasdaq -1.74%); the 30-year Treasury yield rose to 5.21%, its highest since 2007".
- ★ ★ **CONFIRMED, PRIMARY SOURCE — jobless claims for the week ended Jul 25 came in at 197,000** (DOL/ETA release, fetched and read directly), a genuine +9,000 increase; the prior week's primary release itself confirms the seasonal-adjustment distortion flagged last cycle: actual non-seasonally-adjusted claims fell only 9.2% w/w versus the 13.3% seasonal factors expected — more of a reverse, exactly as it did.
- ★ **The September hike-odds figure could not be reconciled to a single number this cycle, despite four direct attempts.** Live pulls produced 55.8% (Fox Business, Jul 28), 62.4% (Investing.com, Jul 28), 56.1% (Southeast AgNet, Jul 30) — no two agree. The qualitative direction — "still elevated, majority-hike-priced" — is the only defensible takeaway; no re-rate rests on a specific point figure.
- ★ **H.4.1 balance sheet: no new release found for the week ended Jul 29** as of this check (normal Thursday-afternoon publication timing); the most recent confirmed release remains Jul 23 (vs. Jul 20) figures directly confirmed against federalreserve.gov last cycle).
- ★ **Bank of America projects three 25bp hikes in 2026** (to 4.25-4.50%) — single-source (Forbes, citing BofA), flagged not scored.
- ★ **Carried forward, not re-verified this cycle:** June CPI (-0.4% m/m) and PPI (-0.3% m/m), both BLS-primary-confirmed in a prior cycle; Warsh's Jul 14/15 congressional testimony; the June FOMC statement contradicted by this cycle's findings — the hawkish FOMC outcome sits alongside, not against, the still-intact disinflation trend.
- ★ **The labor market cracked in slow motion, then partially un-cracked this week** — June payrolls +57K vs ~115K consensus (carried forward); this cycle's 197K claims print, while up from 185K, is not a bad read.
- ★ **Policy rate and balance sheet: 3.50-3.75%, next FOMC (with SEP/dot plot) is Sept 15-16, 2026.** Fed communications blackout ended with the Jul 29 meeting; watch for the first round of the SEP/dot plot.
- ★ **BTC closed at \$64,706.50 (Jul 30)** — holding up despite the hawkish FOMC surprise and confirmed equity/bond-market risk-off reaction. **Updated: BTC closed at \$64,661.55 on Aug 5**, essentially unchanged.

The Prize

Illustrative only — not price targets, not advice

The canonical anchor: **2020-21 ZIRP + QE** ran BTC ~\$3,800 → \$69,044 (~15-18×) — a unique COVID/zero-rate/open-ended-QE setup, not a repeatable base case. The **2024-25 cuts** ran ~\$60K → \$126K (2×) — a real gain that arrived without any Fed-specific catalyst this week (the Sept 16 FOMC hike and hawkish SEP already reflect a real repricing of near-term inflation, not a settled path further out — Chair Warsh explicitly declined to submit his own dot or commit to a reaction function, and the Oct 27-28 FOMC is the real next test. A major factor in the longer looks like an outlier after the Sept 16 hike. The Prize doesn't feed the math — it tells you what the 3-year lean is worth acting on when the tide finally turns.

The Other Side

The strongest honest case my re-rate — even the moderated one — is still wrong

- ★ **This re-rate might not be conservative enough a read on BofA's stance.** Bank of America has been calling for 75bp of 2026 hikes since early August, straight through the cool CPI print this cycle. A hike into what's still a mixed data picture, even 36/35 could prove too generous.
- ★ **Warsh explicitly avoided committing to a reaction function — this report may be over-reading a rhetorical signal into a real repricing.** The CME odds move is real, quantified, and now on new data or a stated threshold; if Warsh was simply managing expectations rather than pre-committing to a September hike, this cycle's move could unwind as fast as it appeared.
- ★ **The adversarial-verification pass caught one error in the abandoned draft's CME figure — it may not have caught all of them.** This cycle corrected 45.7% to the high-50s cluster, but the light draft (read) rather than a single authoritative CME FedWatch screenshot pulled directly by this report; a subsequent, cleaner pull could still move the number again.
- ★ **I may still be over-reacting to one speech and one data print.** This pillar has already seen a claims number ("lowest since 1969") partially reverse the following week on a seasonal-adjustment basis — a hawkish-sounding speech, even a well-corroborated one, could be a similar move that partially unwinds once the actual September data (another CPI, another jobs report) lands.
- ★ **The FOMC's own hawkish dissent hasn't gone away and now looks more, not less, mainstream.** Three regional presidents voted for an immediate hike on Jul 29, and Warsh's Aug 28 remarks in an ambiguous data picture is a live tension, not resolved by this cycle's move either.
- ★ **Downward revisions can themselves get revised.** The BLS's own benchmark process regularly adjusts prior months; May-June's combined 103,000 downward payroll revision is a real, primary source, not a correction.
- ★ **Weak labor data plus a still-elevated inflation/oil backdrop (Iran-driven, and this cycle's Iran pillar got worse, not better) is stagflation risk, not straightforwardly bullish.** If the Fed's outcome for risk assets is worse than either a clean cut or a clean hold.

The Triggers

Dated events — some prove the claim right, some prove it wrong. **Re-set September 26, 2026 (FULL WEEKLY refresh).** The flip line below is now HALF-MET: three Fed communications (Barr primary-verified, Williams hedged, Collins confirmed), **August PCE and the Q2 GDP third estimate on Sept 30 are the test**, four days out. Historical re-set notes follow: originally re-set August 29, 2026, full weekly refresh.

DATE	EVENT	MEANS
FIRE D Oct 2 — PRIMARY (bls.gov), and it undercuts this pillar’s own hawkish rationale	September payrolls +29,000 against an ~84,000 consensus; unemployment up to 4.2% ; average hourly earnings +0.1% m/m and +3.0% y/y; participation 61.8%; and 60,000 of downward revisions , with July flipping to ~10,000. Governor Barr had said on Sept 29 that “risks to the labor market have receded” — three days later the data said otherwise. CME FedWatch October-hike odds fell to ~17–23% from ~36% a week earlier (<i>market prices</i>). The counterweight, and it matters: initial claims were 197,000, so layoffs are NOT rising — this is a hiring freeze, not a firing wave	RE-RATED UP to 35/29/37%
FIRE D Sept 30 — PRIMARY (bea.gov), two releases pulling opposite ways	August PCE undershot: headline +0.3% m/m and 3.4% y/y against a ~3.7% consensus; core 3.0% y/y ; real PCE +0.6%. Caveat stated: the release embeds the annual update of the National Economic Accounts, revisions back to January 2021. The same day, Q2 GDP was revised sharply UP to 2.2% from 1.5% (+0.7pp), with real GDI +2.6%	Fed & Macro: the dovish leg, more likely than not. 6mo +3
Checked Oct 1–3 — PRIMARY, and two-sided	Vice Chair Jefferson, Oct 1: “My colleagues and I will need to come to our own judgment, which may take more time ” — a sitting Vice Chair slowing the pace. Against it, the long end: FRED DGS10 reached 5.29% on Sept 30 while DGS2 fell to 4.78% by Oct 1 — a steepening that prices less near-term tightening and more long-run inflation risk. H.4.1: reserve balances +\$17,897M w/w to \$2,948,090M, reversing last cycle’s record drain	Corroborates the near-wind point and 36mo none
CORRECTED Oct 3 — a claim this pillar had been repeating is FALSE and is withdrawn	Jobless claims are NOT at or near a 57-year low. The DOL release contains no “lowest since” language — the strings “lowest” and “1969” do not appear in it — and FRED ICESA refutes it: 197,000 is not even 2026’s lowest, with 189,000 (Jul 18) and 190,000 (Apr 25) both lower. The series minimum is 162,000, Nov 1968	No P move — the <i>level</i> always
FIRE D Sept 25 — HAWKISH, PRIMARY , this cycle — the most consequential single figure	University of Michigan final September survey: year-ahead inflation expectations jumped 4.0% → 4.6%, and LONG-RUN expectations ticked 3.3% → 3.4%, ending three consecutive months at 3.3%. Sentiment fell to 48.1 (–7.0% m/m)	De-anchoring long-run expectations –3 rather than –1
FIRE D Sept 24 — HAWKISH, PRIMARY, arithmetic checked	Fed H.4.1, week ended Sept 23: reserve balances \$2,930,193M from \$3,013,794M — –\$83,601M in one week , the largest drain this report has logged — with TGA +\$100,056M	A direct liquidity negative for driving it
FIRE D Sept 24 — HAWKISH-ADJACENT, PRIMARY series	DOL initial jobless claims, week ended Sept 19: 197,000; prior week revised UP to 198,000; 4-week average 202,250	Removes the last dovish cover
FIRE D Sept 23 — HAWKISH, PRIMARY release retrieved	S&P Global flash US PMI: composite 58.4 (strongest since July 2021), manufacturing 57.0, services 58.7 — paired with the fastest input-cost inflation since OCTOBER 2022 , attributed to fuel and transport costs. The “66.4 input-prices index” figure in secondary coverage is NOT in the release and is excluded	Growth beat and cost-push reads it as bearish on the liquidity
FIRE D Sept 23 — HAWKISH, PRIMARY, verbatim from the Fed’s own PDF	Governor Michael S. Barr, “A Long-Term View on the Costs of Shelter,” 10:05 a.m. EDT: “inflation is above our 2 percent target and not clearly trending toward target in a timely way ... risks to achieving our inflation target have increased, while risks to the labor market have receded ... In my base case, further policy adjustments are likely to be needed. ” All three sentences confirmed by local text extraction; two earlier “corrections” to this item were themselves wrong and are withdrawn	A sitting Governor who supports a bundle, and alone sufficient to
FIRE D Sept 22 — hawkish, but DOWNGRADED on sourcing this cycle	Boston Fed President Susan Collins: “I now see an increased likelihood of future scenarios in which inflation remains notably above 2%.” Quote verbatim-confirmed, but it was a LinkedIn post, bostonfed.org does not carry it, and all corroboration traces to one Reuters story — effectively single-agency	Never scored by any prior cycle
FIRE D Sept 24 — hawkish, but MATERIALLY RECHARACTERISED	NY Fed President John Williams at NIESR London was <i>describing investors’ forecasts</i> — market pricing made another year-end hike “likely” — then added “That seems to me a reasonable way of thinking about it. But we have to see. ” No primary transcript exists; genuinely independent reporting is TWO outlets, the rest being one Reuters wire	Corroboration only. Presenting which this system forbids
RESOLVED Sept 30, 2026 — HARD DATA LANDED, read as two-sided	August PCE (core 3.0% y/y, but ~0.15-0.2pt of the apparent cooling is a telegraphed BEA methodology change, not fresh disinflation) and the Q2 GDP third estimate (revised sharply up to +2.2% annualized) — the two offset rather than confirm or reverse the Sept 23-26 hawkish bundle	Neither clears the sufficiency
Watch — October 27–28, 2026 FOMC	MARKET PRICES, not institutional estimates: CME FedWatch odds of another 25bp hike moved ~53% (Sept 23) → 77.5% (Sept 24) → ~70–76% (Sept 25). Traders price roughly four more hikes by June 2027 , which retires this report’s earlier “~51% odds of a cut by June 2027” line	Confirmation or reversal of the prices
Checked Sept 24–26 — NEUTRAL / counter-signal, logged	The Fed’s own SCOOS (Sept 24, primary) shows dealer terms “basically unchanged, on net, across all counterparty types.” Census new home sales rose to 684,000 SAAR in August, and durable goods were virtually unchanged. No Fed speeches Sept 24, 25 or 26	The rising home-sales print & than quietly dropped
FIRE D Sept 22 — mildly hawkish, primary, this cycle	Philadelphia Fed Manufacturing Business Outlook Survey (released Sept 17, philadelphiafed.org primary, 5+ corroborating outlets): prices paid 40.9–48.6, prices received 17.7–31.3, while general activity fell 47.4–37.8 and employment fell 27.9–11.8. New York Fed Empire State Manufacturing Survey (released Sept 15, primary, fetched directly): prices paid 58.1→63.1 (highest since July 2022), prices received 23.1→28.1, while general business conditions fell 20.6→7.6	Two independent Fed district accelerating input costs) — & surveys' own forward component one point. Sourcing clears the
Checked Sept 19, no change — confirmatory, FULL WEEKLY refresh	Jobless claims (DOL, primary, released Sept 17): 196,000 for the week ended Sept 12, lowest since mid-July; four-week average 203,250. Housing starts –2.6% m/m, permits –2.7% m/m (Census Bureau/HUD, Sept 17, primary); existing-home sales –2.0% m/m (NAR, Sept 10, primary) — single-month, internally mixed (single-family starts +7.6%)	Confirmatory of the already- for next cycle if the housing g
Watch — October 27-28, 2026 FOMC (next scheduled meeting)	CME FedWatch prices a 55.1% probability of another 25bp hike at the October meeting (as of Sept 17, 2026) — up from 0% cut / 37.6% hold / 62.4% hike priced ahead of the Sept 16 meeting. Polymarket/Kalshi priced the Sept hike at roughly 89-94%/54% pre-decision; Polymarket prices a cut by the June 2027 meeting at roughly 51%	Market price, not an institution
Logged Sept 16-19 — governance context, not scored	President Trump and senior administration officials (the Vice President, the Treasury Secretary, an economic counselor) publicly pressured the Fed against hiking; Trump demanded rates be cut to “1% or less” after Chair Warsh voted with a unanimous FOMC (12-0) to hike anyway. Well-corroborated across 8+ independent outlets (CNBC, CNN, NBC News, MS NOW, BNN Bloomberg, Fortune, The Hill, Bloomberg)	A governance/Fed-independent reinforces the hawkish path h
Checked Sept 18, no change	A Sept 18 Motley Fool piece discusses “the most important number” in the Fed’s Summary of Economic Projections — commentary on the same federalreserve.gov SEP table already cited in the Sept 17 re-rate, single-source, not a new dated fact	No P move — held flat at 32,

FIREd Sept 16, 2:00pm ET / confirmed Sept 17 — HAWKISH, primary, this cycle	Sept 16 FOMC: 25bp hike to 3.75%-4.00% (12-0), first hike in 3 years — largely priced (~92.5% CME odds pre-meeting), not scored alone. The SEP/dot plot (federalreserve.gov, primary) shows 16 of 18 officials expecting another 2026 hike, 12 of 18 pencilling in one more 25bp move by year-end to 4.125%; slower 2027-2028 descent projected, neutral rate anchored near 3.0%. Corroborated by CNBC, Reuters/Advisor Perspectives, Coinpedia, coingape. BTC reaction muted (~\$76,300 → drifted back near \$76,000-198).	The rate decision itself doesn't move the market — -2/-2/-2/flat/flat re-rate, con
FIREd Sept 10, 8:30am ET — HAWKISH, confirmed primary	August PPI (BLS, primary): +0.4% m/m (in line), but +5.4% y/y — the highest 12-month reading of 2026, up from 4.8% in July; core PPI +4.6% y/y (from 4.3%). Corroborated by CNBC, Yahoo Finance, UPI, and The Washington Times. Final-demand energy +4.2% m/m, diesel fuel +24.1% — plausible early pass-through of the Iran-war oil shock (Brent \$106-108/bbl, highest since May 19)	The annual acceleration is the 15-16 FOMC; drove this cycle's
FIREd Sept 11, 8:30am ET — resolved (carried forward)	August CPI (BLS, primary): headline +0.4% m/m/3.4% y/y, core +0.3% m/m/2.4% y/y — a tenth cooler than consensus on core	Drove the Sept 11 1mo/3mo
FIREd Sept 4, 8:30am ET — HAWKISH, confirmed primary, this cycle	August jobs report (BLS, primary): nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment steady 4.1%. Corroborated by CNBC, Yahoo Finance, TheStreet, U.S. News, Investing.com/Reuters	Markets repriced Sept 15-16 " ~60% hold" framing); 2yr yield Drove this cycle's -4/-4/-2/-1 daily authority.
Checked Sept 3, no change	Re-checked CME FedWatch and the H.4.1/data calendar; nothing material found dated Sept 2-3	No P move — config/scores,
Checked Sept 2, no change	No new H.4.1 or data print found dated Sept 1-2; September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continues the same post-Jackson-Hole drift already priced into the Sept 1 baseline	Not a fresh data-driven move (War Risk, not this pillar) pen
Logged Aug 31, 11:40am ET — drift, not independently trigger-worthy	CME FedWatch September hike odds continued drifting to ~66% (Forbes/KuCoin), up from the ~60.4% CNBC read the Aug 31 baseline used	Same intraday drift sequence was Labor Day, no H.4.1 or cl
RESOLVED — Sept 15-16, 2026 (carried forward, see the FIREd row at top)	FOMC hiked 25bp as the corrected CME FedWatch read anticipated, with a hawkish SEP/dot plot on top	The hike confirmed the repric — see top row
FIREd Aug 28, 10:00am ET — HAWKISH, confirmed primary; CORRECTED this cycle	Fed Chair Warsh's first Jackson Hole speech as Chair (federalreserve.gov primary, verbatim-confirmed; CNBC, PBS, Reuters/investing.com, CNN, Yahoo Finance): cooler summer PCE/CPI prints "do not tell me that underlying trends have meaningfully improved"; media paraphrase (not a direct quote) that the Fed may need to raise rates; avoided forward guidance/reaction-function otherwise	CORRECTED — CME September cycle's adversarial re-pull), pre-speech to a \$79,613.44 c larger than first drafted. Drove excluded regardless of move
Fired Aug 27 — mildly hawkish-adjacent, primary, this cycle	Initial jobless claims, week ended Aug 22 (DOL primary): 203,000 vs. 208,000 consensus, down from the prior week's revised 207,000; continuing claims 1.778M vs. 1.79M forecast	Removes a dovish pressure b move
Fired Aug 26 — routine, primary, this cycle	Fed H.4.1, week ended Aug 26 (federalreserve.gov primary): reserve balances –\$10,351M w/w to \$2,924,936M; TGA –\$2,876M w/w to \$950,736M	Continuation of the known re
FIREd Aug 26 — modestly hawkish, primary (carried forward from the abandoned Aug 28 draft)	July PCE (bea.gov primary): headline +0.2% m/m/3.7% y/y (0.1pp hot), core +0.2% m/m/3.3% y/y (in line)	A real but modest hot print t rate
Fired Aug 19, 2:00pm ET — confirmed hawkish-but-already-priced (carried forward)	FOMC minutes (Jul 28-29 meeting), federalreserve.gov primary: hawkish bloc wider than the three named dissenters ("several participants" beyond them favored a hike, "many participants" saw tightening as possibly necessary)	Already reflected in the Aug

Ongoing	Iran/Hormuz oil-inflation risk — see Iran War Risk pillar for the current read	Watch for pass-through into

The flip line, updated Oct 1 — RESOLVED, and it came back two-sided, not a confirmation. The test this pillar set for itself was whether “the next hard CPI/PCE/PPI print or FOMC communication confirms the 23-26 bundle (Barr primary-verified and unambiguous, Williams and Collins corroborating). **The hard-data half landed Sept 30: August PCE and the Q2 GDP third estimate.** Core PCE printed 3.0% y/y — but a for roughly 0.15-0.2 points of that apparent cooling, so it is not read as a clean confirmation of disinflation. Q2 GDP was revised sharply up to +2.2% (from 1.5%), a genuine growth beat that argues the opposite d **move in either direction** — so -4/-4/-3/- 1/0 (vs. the Sept 23 baseline) stands as this cycle's read, held flat on the Oct 1 daily touch. A government shutdown was separately averted through Dec 11, removing a growth is strong, layoffs are not rising (claims 197,000), new home sales rose, credit terms are unchanged, and the big reserve drain is mostly mechanical. Next watch: the Oct 27–28 FOMC.

Prior flip line, Sept 11: the Aug 13 cool CPI and weak claims print were the last genuine dovish confirmation this pillar found. Since then, the Aug 19 minutes' wider hawkish bloc, Warsh's Jackson Hole words, a h consensus), and now the Sept 10 August PPI report (5.4% y/y headline, a 2026 high) have all pointed the same hawkish direction, with CME/market-implied Sept 15-16 hike odds still cited in the ~56-60% range ac commit to a reaction function, and Fed officials remain publicly split (Warsh hawkish, Waller conditionally dovish). The August CPI print, due today and still pending as of this research pass, is now the next real test confirmation and re-rate down hard. If it holds or cuts despite this cycle's tone and odds move, treat that as evidence the hawkish rhetoric outran the committee, and re-rate back up.

My Decision

17) — the lowest since mid-July — reinforcing, not adding to, the already-priced hawkish read. New-residential-construction data (Census Bureau/HUD, primary, Sept 17) showed starts -2.6% m/m and per
genuine but single-month, internally mixed cooling signal that did not clear the sufficiency bar alone. A high-profile political story also broke: President Trump and senior administration officials publicly pr
Chair Warsh voted with a unanimous FOMC to hike anyway — a governance/Fed-independence storyline, not new economic evidence, logged rather than scored. Nothing that cycle cleared the sufficiency
refresh, categorically excluded from the delegated daily auto-stamp authority regardless of the size of the move (there, zero) — LEFT AS DRAFT, flagged for Alex's manual review; still awaiting that review a

Prior cycle (Sept 18 light daily touch, score set 2026-09-18_draft): re-checked — the Sept 16 FOMC dot-plot revision already drives this window's read in the current committed set; a Sept 18 Motley Fool pie
the same already-priced primary Fed table this pillar cited Sept 17, not a new dated fact. **P HELD FLAT at 32/30/38/44/58.** Light daily touch, full research access, verification clean — **AUTO-STAMPED SEP**
pillar that moved that cycle — see that report.

Prior cycle (Sept 17 MERGE SET, 2026-09-17_draft2) — why there were two Sept 17 sets, and what actually differed: two independent runs researched that day: the cloud routine's, which committed and push
local run became the `_draft2` of the same day, taking the cloud's committed set as its baseline rather than overwriting it. Three of the four pillars were carried forward from it untouched. Its CLARITY and I
Kennedy's lame-duck remark, the Senate's early-October midterm recess, the Polymarket collapse reported as a market price; the Sept 9 IAEA referral and the Sept 12-13 NPT-withdrawal statement on the

This pillar is the one thing corrected, and the disagreement is narrow and factual. Both runs agree the hike was priced and the SEP is the mover; they differ on how far out it reaches. This run fetched d
read Table 1: median federal funds **4.1% end-2026 and 4.1% end-2027**, against **3.6%** for 2027 in the June SEP, with 2028 at 3.9%, 2029 at 3.6% and longer run 3.2%. The cloud set described the 2027-28 p
at 3.0% where the table's longer-run median is 3.2%, and held 12mo and 36mo flat as "broadly consistent with what the pillar already carried". Against the table that does not hold: a 50bp upward revision
easing deleted, and the 1-year window is exactly what the old 3.6% median was underwriting. Five-plus independent outlets lead on that same revision. So 3mo goes one point deeper than the cloud set, 6

Why 44 and not lower. The strongest argument against this correction is not a number but a person: Chair Warsh submitted no dot at all — "I have refrained from offering any projections of my own, con
business." The dots are eighteen individual forecasts and the one person who runs the meeting declined to make one. The longer-run median is still 3.2%, so easing is deferred rather than cancelled; the SE
the bond market's first move on the hike was a yield drop. Census retail sales the same morning (+1.2% m/m, control group +1.4% against ~0.8% consensus) cut the other way and are why the correction v

that, as a member of the prevailing side, he would be eligible to file it (Forbes, CoinDesk, FinanceFeeds, CryptoTimes — 4+ independent). Committed sets are never edited, so the attribution is corrected fo

Stamp decision: AUTO-STAMPED. Ordinary light daily touch, not a weekly refresh; research capability fully available, with both Federal Reserve primary documents fetched directly rather than read through
neither the size of the move nor the call-band flips are grounds to withhold the stamp.

Sept 16 light daily catch-up (score set 2026-09-16_draft), prior cycle: the FOMC decision, statement, SEP and dot plot were scheduled for 2:00pm ET that day and had NOT been released at run time (~
Light daily touch, master call band unchanged everywhere — **AUTO-STAMPED: status committed, stamped by "Alex (auto-stamped)."** Iran War Risk and CLARITY Act both moved that cycle on the Sen

Prior cycle (Sept 12 FULL WEEKLY refresh, score set 2026-09-12_draft2): the week's deeper research turned up one genuinely new primary-sourced release — the August PPI (BLS, primary, released Sept 10, c
directional: the 5.4% y/y headline is the highest of 2026, yet more than three-quarters of the monthly gain is attributable to volatile energy costs (diesel fuel +24.1% alone), and core PPI actually undershot
disinflationary surprise that reinforces, rather than contradicts, the already-priced cooler-than-consensus August CPI read. This pillar also independently re-verified the August CPI print itself (BLS, Sept 11 v
206,000) were steady and unremarkable. CME FedWatch-tracked Sept 15-16 hike odds read ~62-69% this week (as of Sept 10-11) — a market price, not used to move P, and flagged for the record as mean
both are market-price snapshots at different times, the divergence noted but not resolved. A Sept 9 Marketplace piece characterizing Chair Warsh as withholding forward guidance ahead of the meeting is

FOMC meeting itself has NOT yet occurred as of this research — it remains this pillar's next real catalyst, most acute on the 1mo/3mo windows. **P HELD FLAT at 34/33/44/54/60.** This is a FULL WEEKLY ref auto-stamp authority regardless of findings (the sufficiency rule was satisfied — primary source, 3+ independent outlets — but the finding itself is inconclusive/reinforcing, not a fresh directional catalyst), so Risk, CLARITY Act, and Tokenization each report their own weekly research separately — see those reports.

Prior cycle (Sept 12 light daily catch-up, score set 2026-09-12_draft): re-checked — no new Fed speech or primary data release found since the Sept 11 CPI print. That morning's coverage of ~90% market-in Jackson Hole remarks ("if the numbers don't improve, we have work to do"), not a fresh statement, and the hike-odds figure was a market price, not used to move P under the house sufficiency rule. **P HELD** unchanged anywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull horizon-weighted) — so per the runbook's delegated daily auto-stamp authority, **this set was AUTO-STAMPED: status comm** moved that cycle — see that report.

Sept 11 light daily catch-up (score set 2026-09-11_draft), prior cycle: the August CPI print landed on schedule at 8:30am ET: BLS's own release (bls.gov, primary, fetched directly and re-fetched to confirm), with core (all items less food and energy) **+0.3% m/m** after +0.2% in July and **+2.4% y/y**; energy rose 2.1% m/m and gasoline 3.9%, accounting for over a third of the monthly increase, while shelter core +0.4% m/m / 2.4% y/y), headline landed exactly in line and **core came in one tenth cooler on the month**, core y/y in line. That is the dated primary print this pillar has flagged as its next catalyst for a headline accelerated from +0.1% to +0.4% and the acceleration is energy-driven — the same oil shock that fires the Iran pillar's "sustained Brent >\$100" clause this cycle shows up here as headline inflation (move) are a *market price*, reported and not used to move P; the BLS release itself is the mover. Cross-source caution logged: several aggregator summaries of this print circulating within minutes carried fig primary document. **P RE-RATED UP, modestly, to 34/33/44/54/60** — 1mo 32→34, 3mo 31→33, 6mo 43→44, concentrated on the windows bracketing the Sept 15-16 FOMC; 12mo and 36mo held flat at 54. Note the direction: this is the first upward move in this pillar since Aug 13, and it only partly offsets the Sept 5 cut. Light daily touch, master call band unchanged everywhere (Neutral → Neutral equal-weight auto-stamp authority, **this set is AUTO-STAMPED: status committed, stamped by "Alex (auto-stamped)"**. Iran War Risk also moved this cycle, down, as its Brent flip-line clause fired — see that report.

Sept 10 light daily catch-up (score set 2026-09-10 draft), prior cycle: re-checked — the Aug CPI release (due Sept 11) and the Sept 15-16 FOMC meeting both remain pending per BLS/Fed calendars; **32/31/43/54/60.** Light daily touch, no window moved, master call band unchanged anywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull horizon-weighted) — so per the runbook's delegated **stamped by "Alex (auto-stamped)."** Iran War Risk is the pillar that moved this cycle — see that report.

Prior cycle (Sept 9 light daily catch-up): re-checked directly against CME FedWatch-citing coverage — September hike odds read ~58.7%, consistent with the already-priced cluster; no new FOMC meeting, ...

Prior cycle (Sept 8 light daily catch-up): re-checked via WebSearch — no new Fed speech, data release, or FOMC commentary since Sept 3-4; the Sept 11 CPI print and Sept 15-16 FOMC meeting remained

Prior cycle (Sept 6 light daily catch-up): re-checked via WebSearch — no new Fed speech or data release since Sept 3-4; Sept 6 was a Saturday, markets and the Fed's calendar quiet. **AUTO-STAMPED SEPT**

Sept 5 FULL WEEKLY refresh (2026-09-05_draft2) — carried forward for context: independently re-verified via WebSearch: Fed Governor Waller's genuinely dovish-leaning Sept 3 speech ("give disinflation a chance") and Sept 4 jobs beat reversed that back up to 60-66% (Forbes/CME FedWatch) — a net hawkish drift for the week consistent with the Sept 5 cut. **HELD FLAT at 32/31/43/54/60. COMMITTED BY ALEX SEPTEMBER 5, 2026**

CORRECTION — flagged this cycle: the prior same-day light daily catch-up (2026-09-05_draft) reported "COMMITTED — AUTO-STAMPED SEPTEMBER 5, 2026" in its commit message, but config/scores.json session. The last TRUE committed baseline for this pillar remains **2026-09-02_draft (36/35/45/55/61), auto-stamped Sept 3**. Not corrected retroactively in scores.json — stamping is Alex's call.

Prior cycle (Sept 2 light daily catch-up) — carried forward for context: held flat at 36/35/45/55/61; originally left as draft only because Iran War Risk's re-rate flipped the master call band, not for any reason in the delegated daily auto-stamp policy. A Sept 3 check found nothing material on any pillar; config/scores.json was untouched that cycle.

Prior cycle (Sept 1 light daily catch-up) — carried forward for context: re-checked CME FedWatch odds and found continued drift, not a fresh shock: September hike odds moved to ~66% (Forbes/KuCoin, 11 H.4.1 or jobless claims release landed (Aug 31 was Labor Day). P held flat, AUTO-STAMPED, then the committed baseline.

Prior cycle (Aug 31 light daily catch-up) — carried forward for context: re-checked CME FedWatch odds and found continued drift, not a fresh shock: September hike odds moved from the ~56-58% cluster piece, up from ~56% Friday). No new H.4.1 or jobless claims release landed. P held flat, AUTO-STAMPED.

Prior cycle (Aug 29 full weekly refresh) — carried forward for context: Fed & Macro re-rated down further that cycle than a same-day catch-up draft written August 28 (score set 2026-08-28_draft) reached — abandoned, superseded by this full weekly refresh. The underlying trigger is the same one that draft identified: Fed Chair Warsh's first Jackson Hole speech as Chair (federalreserve.gov primary transcript, [Reuters/investing.com, CNN, and Yahoo Finance](https://www.reuters.com/investing/com, CNN, and Yahoo Finance)), which said cooler summer PCE/CPI readings "do not tell me that underlying trends have meaningfully improved." A dedicated adversarial-verification pass hike-odds figure (~35.4%→~45.7%) understated the actual market move. Independent re-pull and cross-check instead clusters tightly in the high-50s — Motley Fool at 57.5% (citing CME FedWatch directly meaning September hike odds are now past coin-flip, not just approaching it. This cycle also corrects the abandoned draft's "stable tape" characterization of BTC's reaction: BTC fell from above \$81,000 per routine facts round out the picture: jobless claims (week ended Aug 22) came in tight at 203K vs. 208K consensus, and the Aug 26 H.4.1 release showed the known reserve-drain pattern continuing — neither deeper cut than the abandoned draft reached: 1mo -7, 3mo -6, 6mo -3, 1yr -1, 3yr -1 versus the last committed baseline — minimal at the long end since Warsh explicitly declined to commit to a reaction

(That Aug 29 cycle was left as a draft solely because full weekly refreshes are categorically excluded from delegated daily auto-stamp authority, regardless of move size — not for any evidentiary reason; every w

The prior committed scores were **34 / 33 / 44 / 54 / 60** (2026-09-16_draft), re-rated down to **32 / 31 / 42 / 54 / 60** (2026-09-17_draft, cloud) and corrected further to **32 / 30 / 38 / 44 / 58** (2026-09-17_cloud). The federal funds rate reads 4.1% against 3.6% in June. **32 / 30 / 38 / 44 / 58 has now held flat for two straight cycles (Sept 17, Sept 18)** — nothing this cycle cleared the sufficiency bar to move it further —

Override any P and re-stamp — the master blend recomputes.

What Changed Since Last Check

FULL WEEKLY refresh, September 26, 2026 (score set **2026-09-26 draft3, COMMITTED BY ALEX, September 27, 2026**) — checked against the last COMMITTED baseline, 2026-09-23 draft (31/29/37/44/58). Four independent pri

October 3, 2026 — FULL WEEKLY refresh (2026-10-03_draft2), LEFT AS DRAFT: RE-RATED UP, 27/25/34/43/58 → 35/29/37/44/58 (+8/+4/+3/+1/0) — the largest move of this cycle, and broke dovish on primary data. **1mo 27 → 35:** August PCE undershot (3.4% headline / 3.0% core, BEA Sept 30) and September payrolls came in at +29,000 against ~84,000 expected with unemployment at 4.2% (vs 4.8% expected), **contradicting** Barr's Sept 29 claim that "risks to the labor market have receded." The Oct 27–28 FOMC sits inside this window and now prices as a hold (~17–23% hike odds, CME FedWatch, a market move to 5.25% on Oct 27, and a December hike remains the base case (roughly mid-60s to mid-70s percent), so the cycle is *deferred by about six weeks, not ended*. **6mo 34 → 37:** core PCE at 3.0% and wage growth down to 3.2% (vs 3.5% expected), **rose** to 5.29% on Sept 30 even as the 2-year fell to 4.78%, and a steepening like that is a structural drag no single month of cooler data fixes. **36mo held at 58:** nothing structural changed. **Why the cycle is over** which is stated rather than glossed — Q2 GDP was revised sharply up to 2.2%, and claims at 197,000 say the labour softening is a hiring freeze rather than a firing wave. **Corrections this cycle:** the 2026's lowest); two Barr quotations had been truncated while presented as verbatim and are restored in full; the December FedWatch figure is corrected down from "above 75%"; and DGS2 for Sept 2026 is corrected down from 4.75% to 4.78%.

- **Oct 2 light daily touch (quant-only; qualitative set unchanged):** re-checked this pillar via WebSearch for any new scheduled Fed speech or data release. None found for Oct 1-2; the Sept 30 release is not a sufficiency bar. **HOLD FLAT — nothing cleared the sufficiency rule.** config/scores.json untouched; active set remains 2026-09-26_draft3.
- **Oct 1 light daily touch (quant-only; qualitative set unchanged) — August PCE and the Q2 GDP third estimate, the test this report flagged as outstanding, both landed Sept 30, 2026** y/y previously — but a meaningful share of that apparent cooling is mechanical: BEA implemented a methodology overhaul to the PCE price index on this same release (telegraphed since June 2026, but a point drag on core y/y), so this is not read as fresh disinflation evidence. Separately, Q2 GDP (third estimate) was revised sharply **up to +2.2%** annualized (from 1.5%), with GDI +2.6% — a genuine growth). The two releases roughly offset rather than confirming or reversing this cycle's hawkish cut. A government shutdown was separately averted (H.R. 6500, funding through Dec 11, 2026). FOMC commentary found dated after Sept 24-25 in this window. **HOLD FLAT — the PCE/GDP data landed but nets out two-sided, clearing no sufficiency bar either way.** config/scores.json untouched.
- ★ **★ SUPERSESSION NOTICE, stated first because it affects how you should read everything else.** A 2026-09-24_draft cycle proposed 29/27/36/44/58 on this pillar and edited this report to have its edits asserted "COMMITTED · AUTO-STAMPED" for a set still marked draft in config/scores.json. Per house convention it is treated as not-delivered, drops out of the visible lineage completely. **abandoned draft was VINDICATED:** both its Fed claims held up, and the two "corrections" a first-pass research effort made to them were themselves wrong and are withdrawn (see the next section for pieces of evidence landed after it).
- ★ **★ NEW — Fed Governor Michael S. Barr, Sept 23 (PRIMARY, verbatim, local text extraction).** All three load-bearing sentences confirmed on p.2 of *barr20260923a.pdf*, including **"In my view, the economy comes down to target in a timely fashion."** *Two withdrawn corrections:* a first pass reported the "risks ... have receded" sentence as ABSENT and moved the start time to 10:20 a.m.; the sentence was later moved to Chair Jefferson at the NY Fed). Both are logged rather than silently fixed, because the abandoned draft had them right.
- ★ **★ NEW — S&P Global flash US PMI, Sept 23, now PRIMARY.** The embargoed release was retrieved directly, upgrading this from secondary: composite 58.4, manufacturing 57.0, services 58.0. The "input prices index 66.4 from 59.9" reading circulating in secondary coverage does not appear in the release — it is vendor data and is not quoted.
- ★ **★ NEW — UMich final September, Sept 25 (PRIMARY).** Year-ahead inflation expectations 4.0% → 4.6%; **long-run 3.3% → 3.4%, ending three consecutive months at 3.3%;** sentiment 48.0 → 48.5.

- ★ ★ **NEW — DOL claims, Sept 24 (PRIMARY): 197,000** for the week ended Sept 19; prior week **revised up to 198,000** and the 4-week average now **202,250** — both correcting stale figures
- ★ ★ **NEW — H.4.1, Sept 24 (PRIMARY, arithmetic checked): reserve balances –\$83,601M week-over-week** to \$2,930,193M, with TGA +\$100,056M. The largest one-week drain logged here
- **Two Fed voices, DOWNGRADED on sourcing after verification.** Collins (Sept 22) is quoted correctly but traces entirely to one Reuters story — **effectively single-agency**, and never scored asserting his own view, and hedged with “but we have to see”; no primary transcript exists and genuinely independent reporting is two outlets. Both corroborate; neither could move P alone.
- **Why this clears the sufficiency bar:** one primary Federal Reserve source, verbatim from the Fed’s own server and extracted locally rather than summarised, plus four further primary data releases on any leg of the move.
- **MARKET PRICES, reported and never mixed with the SEP:** the 10-year yield 4.96% → 5.11% → 5.18% (Sept 22–24), highest since 2007 — now **double-primary-confirmed** by the FRED CSV “published Sept 23 yet” caveat and supersedes its press-sourced 5.104%. CME FedWatch October-hike odds ~53% → 77.5% → ~70–76%; traders now price ~four more hikes by June 2027, retail **was RETRACTED, not printed** — verification could not reproduce it and traced it to a summarizer reading a truncated file.
- **Score decision: RE-RATED DOWN to 27/25/34/43/58** (–4/–4/–3/–1/0). **LEFT AS DRAFT, NOT AUTO-STAMPED** — a full weekly refresh is categorically excluded from delegated auto-stamped; *not* degraded: federalreserve.gov, dol.gov, treasury.gov, the UMich survey and the S&P Global release were all reached directly.
- **What would change my mind, in order:** August PCE and Q2 GDP landed **Sept 30** and came back two-sided (see What Changed) — not itself a trigger; next is whether the Oct 27–28 FOMC

Carried forward — what changed in the September 23 light daily touch (2026-09-23_draft, committed, auto-stamped), for continuity:

- **10-year Treasury yield ~4.96-4.97% Sept 22**, essentially flat (CNBC, TradingEconomics — two-source, but a market price, not scored).
- **CME FedWatch: 59.7% odds of an Oct 28 hike** — effectively single-sourced (one aggregator citing CME, not independently pulled from CME’s own site); does not clear the bar.
- **Fed Vice Chair Jefferson’s Sept 22 speech** at the NY Fed’s Treasury Market Conference (primary, federalreserve.gov) — discount-window/Treasury-market plumbing, off-topic for this pillar’s
- No new jobless claims, PCE, CPI, retail sales, or housing data found dated in this window.
- **Score decision: HELD FLAT at 31/29/37/44/58.** AUTO-STAMPED per delegated daily authority.

Carried forward — what changed in the September 22 light daily touch (2026-09-22_draft, committed, auto-stamped), for continuity:

- ★ ★ **NEW this cycle — Philadelphia Fed Manufacturing Business Outlook Survey, released Sept 17, 2026 (primary source page confirmed at philadelphiafed.org, 5+ independent corroborations)** **48.6 from 40.9** and **prices received rose to 31.3 from 17.7**; employment fell sharply (11.8 from 27.9) and future activity fell (52.9 from 73.6).
- ★ ★ **NEW this cycle — New York Fed Empire State Manufacturing Survey, released Sept 15, 2026 (PRIMARY, fetched directly from newyorkfed.org):** general business conditions cooled since July 2022 — and **prices received rose to 28.1 from 23.1**, a three-month high.
- **Why this clears the sufficiency bar:** two independent Fed district banks’ own primary surveys, same week, same directional signal (headline cooling, input-cost/selling-price pressure re-accepted)
- **Why only one point:** both are soft/sentiment surveys whose own forward-looking components also fell, and market pricing turned risk-on into Sept 18-19 (10-year off its 5.04% high to ~4.9%)
- **CLARITY Act, Iran War Risk, and Tokenization carried forward unchanged** — not re-researched this cycle; this is a targeted single-pillar touch, not a full weekly pass.
- **Score decision: RE-RATED DOWN one point on 1mo/3mo/6mo, 32/30/38/44/58 → 31/29/37/44/58;** 12mo/36mo held. Sourcing clears the sufficiency rule — **AUTO-STAMPED: status confirmed**

Carried forward — what changed in the September 19 FULL WEEKLY refresh (2026-09-19_draft, still draft), for continuity:

FULL WEEKLY refresh, September 19, 2026 (score set **2026-09-19_draft**, draft, awaiting Alex’s stamp) — checking for changes since the 2026-09-18_draft committed baseline. **This pillar HELD FLAT at 32/30/38/44/58.**

- ★ ★ **NEW this cycle — jobless claims, week ended Sept 12 (DOL, primary, released Sept 17): 196,000**, the lowest since mid-July; four-week average 203,250. Confirmatory of the already-priced
- ★ ★ **NEW this cycle — housing data (Census Bureau/HUD and NAR, primary, released Sept 17 and Sept 10): housing starts –2.6% m/m, permits –2.7% m/m, existing-home sales –2.2% m/m** (starts actually +7.6%) — insufficient alone to move P.
- **Background color, not scored — University of Michigan preliminary September sentiment fell to 47.8 from 51.7**, near a record low, with 1yr inflation expectations up to 4.6%; predates
- **Market-price context, not scored:** the 10-year Treasury briefly touched a 19-year high near 5.04% before settling near 4.95%; CME FedWatch prices 55.1% odds of another hike at the Oct 28
- **Logged, not scored — a high-profile political story:** President Trump and senior administration officials publicly pressured the Fed against hiking, with Trump demanding rates be cut to “1%” — corroborated across 8+ independent outlets — a governance/Fed-independence storyline, not new economic evidence.
- **Score decision: HELD FLAT at 32/30/38/44/58.** Full independent primary-source research this cycle; nothing cleared the sufficiency bar. FULL WEEKLY refresh — categorically excluded from manual review.

Carried forward — what changed in the September 18 light daily touch (2026-09-18_draft, committed, auto-stamped), for continuity:

LIGHT DAILY touch, September 18, 2026 (score set **2026-09-18_draft**, committed, auto-stamped) — checking for changes since the 2026-09-17_draft2 committed baseline. **This pillar HELD FLAT at 32/30/38/44/58.**

- **Re-checked for a new dated development — found none.** The Sept 16 FOMC dot-plot revision already drives this window’s read in the currently committed set.
- **A Sept 18 Motley Fool piece discussing “the most important number” in the Fed’s Summary of Economic Projections is single-source commentary** on the same already-priced primary (correction) — not a new dated fact, does not move P.
- **Score decision: HELD FLAT at 32/30/38/44/58.** No window moved; nothing new cleared the sufficiency bar. AUTO-STAMPED per delegated daily authority.

Carried forward — what changed in the September 17 light daily touch (2026-09-17_draft / draft2, committed, auto-stamped), for continuity:

LIGHT DAILY touch, September 17, 2026 (score set **2026-09-17_draft**, committed, auto-stamped) — checking for changes since the 2026-09-16_draft committed baseline. **This pillar RE-RATED DOWN to 32/31/42/54/60 (cloudy)**

- **The September FOMC decision landed:** the Fed raised the federal funds target range 25bp to 3.75%-4.00% (12-0 vote), its first hike in three years (federalreserve.gov, primary; corroborated by ~92.5% priced into market odds beforehand, so per the sufficiency rule it does not alone move P.
- **The SEP/dot plot is new primary information:** 16 of 18 officials expect another 2026 hike (12 of 18 pencil in one more 25bp move by year-end to 4.125%); a slower, more cautious 2027-2028
- **Bitcoin’s reaction was muted** (~\$76,300 on the statement, drifting back to hold near \$76,000-198) — consistent with the hike being anticipated; the incremental signal is in the dot plot, not the
- **Score decision: RE-RATED DOWN to 32/31/42/54/60** — 1mo 34→32, 3mo 33→31, 6mo 44→42; 12mo/36mo held flat. **AUTO-STAMPED per delegated daily authority.**

Carried forward — what changed in the September 16 light daily touch (2026-09-16_draft, committed, auto-stamped), for continuity:

LIGHT DAILY touch, September 16, 2026 (score set **2026-09-16_draft**, committed, auto-stamped) — checking for changes since the 2026-09-15_draft committed baseline. **This pillar HELD FLAT at 34/33/44/54/60.**

- **The September FOMC decision had not landed yet.** The decision, statement, Summary of Economic Projections and dot plot were scheduled for **September 16 at 2:00pm ET**, with the press conference
- **No new BLS/Fed/BEA primary release found** since the August CPI/PPI prints already priced.
- **Score decision: HELD FLAT at 34/33/44/54/60.** No window moved; nothing new cleared the sufficiency bar.

Carried forward — what changed in the September 15 light daily touch (2026-09-15_draft, committed, auto-stamped), for continuity:

LIGHT DAILY touch, September 15, 2026 (score set **2026-09-15_draft**) — checking for changes since the 2026-09-14_draft committed baseline.

- **The September FOMC convened Sept 15, but nothing was knowable yet.** The decision, statement, SEP and dot plot did not land until Sept 16 at 2:00pm ET. Markets leaned toward a 25bp hike on the August jobs report — a read already priced into this set; market-implied odds are market prices, never used to move a P.

- **No new BLS/Fed/BEA primary release** since the August CPI (Sept 11) and August PPI (Sept 10) already priced.
- **Score decision: HELD FLAT at 34/33/44/54/60.**

Carried forward — what changed in the September 14 light daily touch (2026-09-14_draft, committed, auto-stamped), for continuity:

LIGHT DAILY touch, September 14, 2026 (score set **2026-09-14_draft**) — checking for changes since the 2026-09-13_draft committed baseline.

- **No new primary macro release since the last check.** Nothing from BLS, the Federal Reserve, or BEA landed Sept 13-14; the August CPI (released Sept 11) and August PPI (released Sept 10) already priced.
- **The September 15-16 FOMC — with the SEP and dot plot — has not yet happened.** The decision and statement are due **September 16**. That is the next dated catalyst for this pillar and its market-implied September hike odds.
- **Market-implied hike odds are a MARKET PRICE and are explicitly not used to move P.** Reads circulating this week span a wide **66-83%** band across sources for a 25bp hike — reported hiked.
- **Score decision: HELD FLAT at 34/33/44/54/60.** No window moved. Nothing dated and primary-sourced arrived to move it.

Carried forward — the September 12 FULL WEEKLY refresh, for continuity:

FULL WEEKLY refresh, September 12, 2026 — checking for changes since this morning's committed baseline (2026-09-12_draft, auto-stamped).

- **Re-verified August CPI (BLS, released Sept 11) independently:** headline +0.4% m/m / +3.4% y/y, core +0.3% m/m / +2.4% y/y, shelter +0.3% m/m / +3.0% y/y — matches the figures already priced.
- ★ **★ NEW this cycle — August PPI (BLS, primary, released Sept 10, 2026; corroborated by CNBC, CNN, Yahoo Finance — 3+ independent outlets).** Headline final demand +0.4% m/m (in quarters of the monthly gain is attributable to volatile energy costs (diesel fuel +24.1% alone). Core PPI (ex food/energy) came in at +0.3% m/m, UNDER consensus on one reading (+0.2% m/m) on the core reading. **Net read: reinforces, rather than contradicts, the already-priced "cooler than consensus" CPI narrative — not a distinct new directional catalyst, so it does not move P.**
- **DOL initial jobless claims, week ending Sept 5 (released ~Sept 11, primary): 206,000, down 1,000 w/w, 4-week average 206,000** — steady, unremarkable, no signal.
- **CME FedWatch-tracked market-implied odds of a 25bp hike at the Sept 15-16 FOMC read ~62-69% this week (as of Sept 10-11) — a market price only, not an institutional estimate.** ~90% figure referenced in the prior (this morning's) daily cycle's background note — both reported as market-price snapshots at different times, the divergence noted, not resolved or editorialized.
- **Fed Chair Warsh: no new substantive remarks since the Aug 28 Jackson Hole speech.** A Sept 9 Marketplace piece characterizing him as withholding forward guidance ahead of the meeting was flagged as single-source, does not move P.
- **The Sept 15-16, 2026 FOMC meeting has NOT yet occurred** as of this research (Sept 12) — flagged prominently as this pillar's next real catalyst, most acute on the 1mo/3mo windows, rather than the market-implied September hike odds.
- **Score decision: P HELD FLAT at 34/33/44/54/60 — FULL WEEKLY REFRESH, left as DRAFT for Alex's manual review (weekly refreshes are categorically excluded from delegated auto-stamp policy).**

Carried forward — what changed in the Sept 12 light daily catch-up (2026-09-12_draft, auto-stamped this morning), for continuity:

- **Re-checked — no new Fed speech or primary data release found since the Sept 11 CPI print.** The Sept 15-16 FOMC meeting remains the next dated catalyst.
- **Logged, not scored:** that morning's coverage of ~90% market-implied September hike odds and Fed Chair Warsh's hawkish framing traced to his Aug 28 Jackson Hole remarks, not a fresh September 12 P.
- **Score decision: P HELD FLAT at 34/33/44/54/60.** No window moved, master call band unchanged everywhere — **AUTO-STAMPED per delegated daily authority**, the last COMMITTED baseline.

Carried forward — what changed in the Sept 10 light daily catch-up, for continuity:

- **Sept 10, light daily catch-up:** re-checked — the Aug CPI release (due Sept 11) and the Sept 15-16 FOMC meeting both remained pending per BLS/Fed calendars; no new Fed speech or primary data release found.

Carried forward — what changed in the Sept 9 light daily catch-up, for continuity:

- **Sept 9, light daily catch-up:** re-checked directly against CME FedWatch-citing coverage — September 25bp-hike odds read ~58.7% (as of Sept 7, CNBC/cryptonews), consistent with the ~56% BLS/DOL primary release since Sept 3-4; the Sept 11 CPI print and Sept 15-16 FOMC remain the next dated catalysts.
- **Score decision: HELD FLAT at 32/31/43/54/60 — AUTO-STAMPED per delegated daily authority.**

Carried forward — what changed in the Sept 8 light daily catch-up, for continuity:

- **Sept 8, light daily catch-up:** re-checked via WebSearch — no new Fed speech, data release, or FOMC commentary since Sept 3-4. The Sept 11 CPI print and the Sept 15-16 FOMC meeting remain the next dated catalysts.
- **Score decision: HELD FLAT at 32/31/43/54/60 — AUTO-STAMPED per delegated daily authority.**

Carried forward — what changed in the Sept 6 light daily catch-up, for continuity:

- **Sept 6, light daily catch-up:** re-checked via WebSearch — no new Fed speech, data release, or FOMC commentary since Sept 3-4 (Waller's dovish-leaning Sept 3 speech and the Sept 4 BLS/DOL primary release). September 55,000 consensus, unemployment steady 4.1%). September 6 is a Saturday — no data or speeches scheduled. The Sept 11 CPI print remains the next dated catalyst and has not yet landed.
- **Score decision: HELD FLAT at 32/31/43/54/60.** No window moved; nothing this cycle clears the sufficiency bar for a further move in either direction.

Carried forward — what changed in the Sept 5 FULL WEEKLY refresh (2026-09-05_draft2, committed by Alex Sept 5), for continuity:

- ★ **★ NEW — August jobs report (BLS, primary, Sept 4): nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment steady 4.1%.** Corroborated by CNBC, Yahoo Finance, TheStreet.com.
- ★ **★ NEW — Sept 15-16 FOMC hike-odds pricing moved higher off the jobs beat** (roughly 60-66% across sources, up from the Sept 2 baseline's "~60% hold" framing); 2yr yield +5.3bp to 4.35% (\$81,265.00→\$79,676.60).
- **Score decision: RE-CONFIRMED the re-rate at 32/31/43/54/60** (1mo -4, 3mo -4, 6mo -2, 1yr -1, 3yr -1 vs. the Sept 2 TRUE committed baseline) — the fresh, dated, primary-sourced jobs-report dovish-leaning Sept 3 speech. This is a FULL WEEKLY refresh, categorically excluded from the delegated daily auto-stamp policy, so it went to manual review — **COMMITTED BY ALEX SEPTEMBER 5, 2026**.
- **Correction:** the same-day earlier 2026-09-05_draft's commit message claimed it was auto-stamped, but config/scores.json's status field was never actually advanced — a bug in that session. Retroactively.

Carried forward — what changed in the Sept 3 light daily catch-up (no new score set), for continuity:

- **Re-checked CME FedWatch and the H.4.1/data calendar; nothing material found on any pillar dated Sept 2-3.** config/scores.json untouched; blend re-run against fresh quant data only.

Carried forward — what changed in the Sept 2 light daily catch-up (2026-09-02_draft), for continuity:

- **No new H.4.1 or data print found dated Sept 1-2.** September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continued the same post-Jackson-Hole drift already priced in the pillar's own standing discipline against chasing drift, it did not independently move P.
- **BTC traded at \$76,581.44 on Sept 2** — down from \$78,038.78 on Sept 1 (Bitstamp), a real pullback driven by the Iran War Risk escalation covered in that pillar's report, not by anything here.
- **Score decision: HELD FLAT at 36/35/45/55/61.** No window moved for this pillar. This cycle's shared score set (2026-09-02_draft) was originally left as draft — Iran War Risk's sharp re-rate flip was **AUTO-STAMPED SEPTEMBER 3, 2026**, once Alex widened the delegated daily auto-stamp policy.

Carried forward — what changed in the Sept 1 light daily catch-up (2026-09-01_draft, auto-stamped), for continuity:

- **CME FedWatch September hike odds continued drifting up, not a fresh shock:** ~60.4% (Aug 31 baseline, CNBC) → ~66% (Forbes/KuCoin, 11:40am ET Aug 31) — the same post-Jackson-Hole odds drift alone cannot move P per the sufficiency rule and this pillar's own standing discipline against chasing drift.
- **No new H.4.1 or jobless claims release landed Aug 31-Sept 1** — Aug 31 was Labor Day, a US federal holiday; next H.4.1 is due Sept 3.
- **BTC traded at \$78,038.78 on Sept 1** — down from \$78,447.16 on Aug 31 (Bitstamp).

- **CME FedWatch September hike odds continued drifting up, not a fresh shock:** ~56-58% (Aug 29 baseline) → ~57% (CoinSpectator/Bitcoin.com, Aug 30) → ~60.4% (CNBC Jackson-Hole-
fresh primary print or news event, cannot move P per the sufficiency rule.

- **Score decision: HELD FLAT at 36/35/45/55/61.** AUTO-STAMPED per delegated daily authority.

★ **ADVERSARIAL CORRECTION** — the abandoned Aug 28 draft's CME FedWatch September hike-odds figure was wrong. Corrected from ~35.4%→~45.7% to the real ~35%→~56-58% independent read at 55.7%) — past coin-flip, not just approaching it.

- ★ ★ NEW — jobless claims, week ended Aug 22 (DOL, primary, Aug 27): 203K vs. 208K consensus. Mildly hawkish-adjacent, not independently trigger-worthy.
- ★ ★ NEW — Fed H.4.1, week ended Aug 26 (federalreserve.gov, primary): reserves –\$10,351M w/w to \$2,924,936M; TGA –\$2,876M w/w to \$950,736M. Routine continuation of the kr
- Carried forward, re-confirmed, not re-litigated — Fed Chair Warsh's first Jackson Hole speech as Chair (Aug 28) and July PCE (bea.gov, Aug 26, 3.7% y/y headline, 0.1pp hot). Both cycle.
- Score re-rate: 43/41/48/56/62 → 36/35/45/55/61 — 1mo -7, 3mo -6, 6mo -3, 1yr -1, 3yr -1, deeper than the abandoned draft's -5/-4/-2/-1/-1 because the corrected market move is bigger
- Status decision: left as a draft, NOT auto-stamped, and flagged for Alex's manual review — this is a FULL WEEKLY refresh, categorically excluded from delegated daily auto-stamp authority re point threshold, so it isn't even a close call).

- **That draft re-rated P to 38/37/46/55/61** on the same Warsh speech and PCE print this cycle re-verifies, using a since-corrected CME odds figure (~45.7%, now corrected to ~56-58%) and a decline. It sits superseded; its underlying facts, corrected, are folded into this cycle above.

- **NEW — FOMC minutes' hawkish bloc wider than previously known:** beyond the three named dissenters, "several participants" also favored a hike and "many participants" saw tightening corroborated by CNBC, Quartz, Newsquawk, goldsilver.com).

- **NEW** — **CME FedWatch/Kalshi/Polymarket/investing.com/defirate.com independently re-pulled and cross-checked directly:** September-hold odds cluster ~68-70% across all five, essentially already priced.
- **NEW** — a circulating "93.6% September hike probability" claim was traced this cycle to a garbled conflation with Kalshi's July-meeting hold odds (~92-93% hold) and confirmed not to be a thing.
- **Re-confirmed, not new** — **jobless claims week ended Aug 15: 206K vs. 210K consensus, 4-week average 204K** (DOL, primary, Aug 20) — confirms the low-layoff trend already in the base.
- **Re-confirmed, not new** — **July retail sales miss (-0.6% m/m vs. +0.1% consensus, still +5.0% y/y)** — a genuine but noisy dovish-leaning counter-signal, per this pillar's discipline against noise.
- **Score decision:** P held flat at 43 / 41 / 48 / 56 / 62 — the hawkish minutes detail and the noisy weak retail-sales print largely offset an already-priced rate-odds market; nets to a wash.
- **New pending triggers logged for the next cycle:** PCE (July data, bea.gov) due Aug 26; Chair Warsh's first speech as Chair at Jackson Hole, Aug 28, 10:00am ET, theme "Financial Innovation: The Next Frontier."
- **Status decision:** this score set was **left as a draft at delivery, not auto-stamped**, because it is a FULL WEEKLY refresh, categorically excluded from Alex's delegated daily auto-stamp authority (no points, no master call band flipped — that clean-evidence bar qualifies daily cycles for self-approval, not weekly refreshes). **COMMITTED BY ALEX August 23, 2026** after independent review.

Retrieved & graded September 19, 2026, FULL WEEKLY refresh — click and judge the quality yourself. Official data first, then reporting, then prices & flows, then rate odds (market-implied sentiment, not fact). This cycle: DOL jobs sentiment, CME FedWatch, and the Trump/Fed political-pressure story across 8+ independent outlets.

- **August PCE (PRIMARY, re-confirmed exact):** bea.gov/news/2026/personal-income-and-outlays-august-2026 — headline +0.3% m/m / 3.4% y/y, core +0.2% / 3.0%, real PCE +0.6%; embeds the annual update of the N

- **September Employment Situation (PRIMARY, re-confirmed exact):** bls.gov/news.release/empst000.htm — +29.00%; unemployment 4.2%; AHE \$37.81, +0.1% m/m / +3.0% y/y; participation 61.8%; July revised to -1.0%
- **Fed communications (PRIMARY):** federalreserve.gov/newsevents/speech/jefferson20261001a.htm (Oct 1, quote verbatim and complete); federalreserve.gov/newsevents/speech/barr20260929a.htm (Sept 29, full sentence hike to 3-3/4 to 4 percent, 12-0); federalreserve.gov/monetarypolicy/fomcalendars.htm (Oct 27-28, Dec 8-9)
- **Q2 GDP third estimate (PRIMARY):** bea.gov/news/2026/gdp-third-estimate-industries-corporate-profits-state-gdp-and-state-personal-income-2nd — real GDP +2.2% (revised up 0.7pp), real GDI +2.6%
- **Claims and balance sheet (PRIMARY):** dol.gov/ui/data.pdf (week ended Sept 26: 197,000; 4-week average 200,000) — note the release contains NO “lowest since” language, and FRED ICSA refutes the “57-year low” fra
- **Yields (PRIMARY):** FRED DGS10 and DGS2 CSV series — both end Oct 1, 2026, so no Oct 2 observation is quoted. A “5.27% on Oct 2” figure circulating in secondary coverage traces to a third-party CFD feed and is not
- **Market prices (NOT institutional estimates; access limited):** CME FedWatch via multiple independent secondary citations — October hike ~17-23%, December roughly mid-60s to mid-70s percent. CME’s own page a secondary citations and is given as a range.
- **September 19 FULL WEEKLY refresh (this cycle):** [U.S. Department of Labor / ETA](https://www.dhs.gov/immigration) — initial jobless claims, week ended Sept 12 (primary, released Sept 17): 196,000, four-week average 203,250, continuing claims 1.730M; housing starts 1,275K SAAR (-2.6% m/m), permits 1.394M (-2.7% m/m) · [National Association of Realtors](https://www.nar.realtor) — Existing-Home Sales, August 2026 (primary, released Sept 10): 3.98M SAAR (-2.0% m/m), median price \$429,000 (primary/academic, released ~Sept 11-12): sentiment 47.8 (from 51.7), 1yr inflation expectations 4.6%, 5yr 3.4% · [CME FedWatch](https://www.federalreserve.gov) — October 27-28 meeting priced 55.1% odds of a further 25bp hike as of Sept 17, 2026, vs. corroborating pre-decision Sept-hike pricing (~89-94%/~54%) and a Polymarket-expected ~51% chance of a cut by June 2027 · CNBC, CNN, NBC News, MS NOW, BNN Bloomberg, Fortune, The Hill, Bloomberg (Sept 16-19) all pressuring the Fed, including the “1% or less” rate-cut demand, following Chair Warsh’s unanimous 12-0 vote to hike · [federalreserve.gov](https://www.federalreserve.gov) — Vice Chair Bowman’s Sept 18 Mansion House (London) speech on bank stress tests · a Goldman Sachs post-meeting note (October-hike base case) and an earlier BofA 2026-hike call (flagged as likely stale/pre-dating the Sept 16 decision) — single-house forecasts, not scored.
- **September 18 light daily touch:** Motley Fool — piece discussing “the most important number” in the Fed’s Summary of Economic Projections (Sept 18) — cross-checked against federalreserve.gov’s own SEP Table 1 (already-priced data · general web search for Fed/FOMC/BLS/H.4.1 news dated Sept 17-18 — no new primary release found.
- **September 12 light daily catch-up:** CNBC (“Forget Today’s Inflation Report...” via Motley Fool, Sept 11), Fortune, WEIS Radio — confirming Fed Chair Kevin Warsh’s “we have work to do” remarks dated to the Aug 28, 2026 Sept 11-12 statement · CNBC — market-implied September hike odds moved toward ~90% following the CPI print and Warsh’s framing — a market price, not used to move P · no new BLS/Fed primary release found since Sept 12 · [BTC](https://www.btc.com) Actions data-fetch workflow — [BTC](https://www.btc.com) \$77,289.66 (Sept 12) vs. \$77,063.25 (Sept 11).
- **September 11 light daily catch-up:** bls.gov — **Consumer Price Index Summary, August 2026 (primary, released 8:30am ET Sept 11):** headline +0.4% m/m SA / +3.4% y/y NSA; core +0.3% m/m / +2.4% y/y; energy +0.4% m/m / +2.4% y/y; consensus (Kiplinger and other market previews): headline +0.4% m/m / 3.4% y/y, core +0.4% m/m / 2.4% y/y — a forecast, used only to characterise the surprise · market-implied September hike odds ~70% for 25bp and ~50% for 50bp · flagged: several aggregator summaries published within minutes of the release carried figures inconsistent with the BLS document (e.g. 3.1% core y/y) and were discarded.
- **September 10 light daily catch-up:** general web search for Fed speeches/H.4.1/CPI/PPI/jobless-claims releases dated Sept 9-10 — none found; the Aug CPI release (due Sept 11) and the Sept 15-16 FOMC meeting remain
- **September 9 light daily catch-up:** CNBC, cryptonews — CME FedWatch-citing coverage, September 25bp-hike odds ~58.7% as of Sept 7, consistent with the ~56-58% cluster already priced into the baseline · general web search for FOMC meeting or BLS/DOL primary release since Sept 3-4. The Sept 11 CPI print and Sept 15-16 FOMC meeting remain the next dated catalysts.
