

The Fed & Macro Regime Pillar Report

Liquidity as the Master Driver — Researched, Scored, and Re-Rated

Originally written and scores committed by me on June 12, 2026. Fully re-researched July 8, 13, 18, 25, and 30, 2026, and again as a full weekly refresh on August 8, 2026 (re-rated up to a moderated 40/38/47/55/62 on the BLS July jobs report, committed and stamped by Alex). Re-rated up again August 13 to 43/41/48/56/62 on a cool CPI print and a weak claims print; held flat August 14, 16, and through two Aug 22 cycles (a catch-up draft, then the full weekly refresh) — committed and stamped by Alex August 23, 2026, the last true baseline. A same-day catch-up draft written August 28 (score set 2026-08-28_draft) re-rated down to 38/37/46/55/61 on Fed Chair Warsh's hawkish Jackson Hole speech and a hot July PCE print, but was **never rendered, selfchecked, archived, or committed** — it sits abandoned, superseded mid-cycle. **This version (August 29, score set 2026-08-29_draft) is a FULL WEEKLY refresh and goes further, re-rating down to 36/35/45/55/61.** A dedicated adversarial-verification pass this cycle caught a real error in the abandoned draft: its CME FedWatch September rate-hike-odds figure (~35.4% → ~45.7%) UNDERSTATED the actual market move. Independent re-pull and cross-check — Motley Fool citing CME FedWatch directly at 57.5%, CNBC's own body text at "nearly 56%," and a third independent source at "55.7%" — shows the real post-speech reading clustered tightly in the high-50s, roughly 56-58%, not 45.7%: September hike odds are now past coin-flip, not just approaching it. Two fresh facts not in the abandoned draft: initial jobless claims for the week ended Aug 22 (DOL, primary, Aug 27) came in at 203,000 vs. 208,000 consensus, a mild hawkish-adjacent tightening signal; and the Aug 26 H.4.1 balance-sheet release (federalreserve.gov, primary) showed the same reserve-drain pattern continuing (reserve balances ~\$10,351M w/w to \$2,924,936M; TGA ~\$2,876M w/w to \$950,736M), logged but not independently trigger-worthy. This cycle also corrects the abandoned draft's price-action framing: BTC did NOT hold a stable tape through the speech — it opened Aug 28 around \$80,262, traded above \$81,000 pre-speech, then fell back sharply once Warsh spoke, closing \$79,613.44 that day, and continued falling to \$77,666.16 by today, Aug 29 (Bitstamp) — a real, visible reaction, not a shrug. **Net: the corrected, larger CME move justifies a deeper cut than the abandoned draft reached.** 1mo 43 → 36 (-7), 3mo 41 → 35 (-6), 6mo 48 → 45 (-3), 1yr 56 → 55 (-1), 3yr 62 → 61 (-1) — still minimal at the long end, since Warsh explicitly declined to commit to a reaction function and one repricing doesn't reach three years out. Left as draft at delivery, not auto-stamped: this is a FULL WEEKLY refresh, which the runbook's delegated daily auto-stamp authority categorically excludes regardless of move size — doubly so here since every window moved 7 points or fewer anyway. Flagged for Alex's manual review; see My Decision below. **THIS VERSION (August 31) is a light daily catch-up, score set 2026-08-31_draft,** covering Aug 29-31: CME FedWatch September hike odds continued drifting up post-Warsh (CNBC Aug 28: ~45.7%; CoinSpectator/Bitcoin.com Aug 30: ~57%; CNBC Aug 31 Jackson-Hole-roundup: ~60.4%, up from ~56% Friday) — directionally the same hawkish repricing already sized into the Aug 29 cut (which used a 56-58% cluster as its basis). Per the sufficiency rule, a market-odds drift alone, without a fresh primary data print or news event, cannot move P further. No new H.4.1 (next due Sept 3, last Aug 27) or jobless claims release landed in this window. **P HELD FLAT at 36/35/45/55/61.** This is a light daily touch, no window moved, no call band flipped — **AUTO-STAMPED** per delegated daily authority. **Sept 1: held flat again** — CME FedWatch September hike odds continued the same post-Jackson-Hole drift (Forbes/KuCoin ~66% at 11:40am ET Aug 31, up from the ~60.4% CNBC read this pillar's Aug 31 baseline used), but it's the same intraday drift sequence with no new primary print or news event behind it, so per the sufficiency rule it does not independently move P; no new H.4.1 or claims release landed (Aug 31 was Labor Day). Score set 2026-09-01_draft, AUTO-STAMPED, new last COMMITTED baseline. **Sept 2: held flat a further time** — no new H.4.1 or data print found dated Sept 1-2; September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continues the same post-Jackson-Hole drift already priced into the Sept 1 baseline, not a fresh data-driven move, so per the sufficiency rule it does not independently move P. Score set 2026-09-02_draft — this pillar's own P is unaffected, but because all four qualitative pillars share one dated score set and Iran War Risk's sharp re-rate this cycle flips the master call band (Mild Bull → Neutral) and needs Alex's manual review, the WHOLE 2026-09-02_draft set — Fed & Macro's flat P included — stays in DRAFT

status, not committed, per house rule (see My Decision and the Iran War Risk pillar report); COMMITTED, AUTO-STAMPED SEPTEMBER 3, 2026 once Alex widened the policy — this is the last TRUE committed baseline: 36/35/45/55/61. **Sept 3: held flat a further time** — light daily catch-up found nothing material on any of the four qualitative pillars; config/scores.json untouched, blend re-run against fresh quant data only. **Sept 5, light daily catch-up (score set 2026-09-05_draft): RE-RATED DOWN a modest further step, 36/35/45/55/61 → 32/31/43/54/60.** The August jobs report (BLS, primary, released Sept 4) beat sharply — nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment steady at 4.1% — and markets repriced September 15-16 FOMC hike odds higher off of it (CNBC, Yahoo Finance, TheStreet, U.S. News, Investing.com/Reuters — point estimates vary 60-66% by source/timestamp but are directionally consistent and higher than the Sept 2 baseline's "~-60% hold" framing). Same-day reaction: 2yr Treasury yield +5.3bp to its highest since January 2025; Dow -0.51%, S&P -0.38%, Nasdaq -0.29%; BTC fell ~2% same-day (\$81,265.00 Sept 3 close → \$79,676.60 Sept 4 close). Fed officials remain split (Warsh hawkish; Waller says he'd lean toward holding if inflation improves), with the Sept 11 CPI print now flagged as the likely decider before Sept 15-16. Move sized comparably to the Aug 22 → 28 catch-up cut on the Warsh Jackson Hole speech alone (a comparable single dated catalyst): 1mo -4, 3mo -4, 6mo -2, 1yr -1, 3yr -1, no window over 8 points. **CORRECTION:** that cycle's commit message claimed "AUTO-STAMPED SEPTEMBER 5, 2026," but config/scores.json's status field was never actually advanced to committed — a bug in that session, flagged here and not corrected retroactively (stamping is Alex's call). **Sept 5, FULL WEEKLY refresh (2026-09-05_draft2), this version:** independently re-verified via WebSearch — Fed Governor Waller's genuinely dovish-leaning Sept 3 speech ("give disinflation a chance") briefly cut CME hike odds to ~48% (Semafor, CNBC, Bloomberg, PBS) before the Sept 4 jobs beat reversed that back up to 60-66% (Forbes/CME FedWatch), a net hawkish drift for the week consistent with the Sept 5 cut. No further Fed commentary or data since; the Sept 11 CPI print has not yet landed. **HELD FLAT at this cycle's re-rated level, 32/31/43/54/60. Full weekly refreshes are categorically excluded from the delegated daily auto-stamp policy regardless of move size — left for manual review, and COMMITTED BY ALEX SEPTEMBER 5, 2026.** **Sept 6: light daily catch-up, held flat.** Re-checked via WebSearch: no new Fed speech, data release, or FOMC commentary since Sept 3-4 (Governor Waller's dovish-leaning Sept 3 speech and the Sept 4 BLS August payrolls beat were already captured in the Sept 5 re-rate). September 6 is a Saturday — markets and the Fed's own calendar are quiet, no data or speeches scheduled. The September 11 CPI print remains the next dated catalyst and has not yet landed. **HELD FLAT at 32/31/43/54/60.** **Sept 8: light daily catch-up, held flat again.** Re-checked via WebSearch: no new Fed speech, data release, or FOMC commentary since Sept 3-4; the Sept 11 CPI print and the Sept 15-16 FOMC meeting remain the next dated catalysts, not pre-empted this cycle. **HELD FLAT at 32/31/43/54/60.** **Sept 9: light daily catch-up, held flat again.** Re-checked directly against CME FedWatch-citing coverage — September 25bp-hike odds read ~58.7% (as of Sept 7, CNBC/cryptonews), consistent with the ~56-58% cluster already priced into the baseline, not a fresh move; no new FOMC meeting, no new BLS/DOL primary release since Sept 3-4. The Sept 11 CPI print and Sept 15-16 FOMC remain the next dated catalysts. **HELD FLAT at 32/31/43/54/60.** **Sept 10: light daily catch-up (score set 2026-09-10_draft) vs the 2026-09-09_draft committed baseline.** Held flat at 32/31/43/54/60 — independently re-checked, nothing cleared the sufficiency bar. The Aug CPI release (due Sept 11) and the FOMC meeting (Sept 15-16) are both still pending per BLS/Fed calendars — no new primary data since Sept 9. The master FINAL NUMBER's call band did not flip anywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull horizon-weighted) — so per the runbook's delegated auto-stamp authority this set is **AUTO-STAMPED: status committed, stamped by "Alex (auto-stamped)." THIS VERSION (September 11, score set 2026-09-11_draft) RE-RATES UP, modestly, to 34/33/44/54/60.** This cycle deliberately held its research window open past 8:30am ET for the print this pillar has been flagging for a week, and the August CPI print landed on schedule at 8:30am ET: BLS's own release (bls.gov, primary, fetched directly and re-fetched to confirm) has headline CPI-U **+0.4% m/m SA** in August after +0.1% in July and **+3.4% y/y NSA**, with core (all items less food and energy) **+0.3% m/m** after +0.2% in July and **+2.4% y/y**; energy rose 2.1% m/m and gasoline 3.9%, accounting for over a third of the monthly increase, while shelter rose 0.3%. Against the consensus circulating pre-print (headline +0.4% m/m / 3.4% y/y; core +0.4% m/m / 2.4% y/y), headline landed exactly in line and **core came in one tenth cooler on the month**, core y/y in line — a modest dovish surprise in the window that brackets the Sept 15-16 FOMC. It is tempered, not clean relief: headline accelerated from +0.1% to +0.4% and the acceleration is energy-driven — the same oil shock that fires the Iran pillar's "sustained Brent >\$100" clause this cycle shows up here as headline inflation. Market-implied September hike odds circulating around the print (~70% for a 25bp move) are a market price, reported and not used to move P; the BLS release itself is the mover. Cross-source caution logged: several aggregator summaries of this print circulating within minutes carried figures inconsistent with the BLS release (e.g. a 3.1% core y/y) — discarded in favour of the primary document. Re-rated up on the windows bracketing the FOMC only: **1mo 32 → 34, 3mo 31 → 33, 6mo 43 → 44**; 12mo and 36mo held flat at 54/60 — a single in-line-to-a-tenth-cooler print does not move the multi-year regime read. **AUTO-STAMPED: status committed, stamped by "Alex (auto-stamped)." Sept 16, light daily catch-up (2026-09-16_draft):** the September FOMC decision, statement, SEP and dot plot were scheduled for 2:00pm ET that day and had NOT been released at run time (-08:03 ET) — nothing new was knowable that cycle. **HELD FLAT at 34/33/44/54/60, AUTO-STAMPED. THIS VERSION (September 17, score set 2026-09-17_draft) RE-**

RATES DOWN, modestly, to 32/31/42/54/60. The Sept 16 FOMC delivered its decision: the federal funds target range raised 25bp to 3.75%-4.00% (12-0 vote), the first hike in three years (federalreserve.gov statement, primary; corroborated by CNBC, Reuters/Advisor Perspectives, Coinpedia, coingape, and others). The hike itself was ~92.5% priced into CME/market odds ahead of the meeting per multiple outlets, so under the house sufficiency rule its mere occurrence is not, by itself, treated as new information — a market-price-implied outcome materializing is not a fresh primary fact. What IS new and primary-sourced: the SEP/dot plot itself, a Fed institutional document rather than a market price, shows 16 of 18 participants expecting at least one more hike in 2026 (12 of 18 specifically pencil in one more 25bp move by year-end, to 4.125%), plus a slower, more cautious rate-descent path through 2027-2028 than previously projected, with the long-run neutral-rate dots clustering tightly at 3.0%. Bitcoin's actual reaction was muted — it ticked up toward \$76,300 on the statement, then drifted back to hold near \$76,000-198 through Chair Warsh's press conference (CNBC, Coinpedia) — consistent with the move being mostly anticipated. Sized as a modest step, concentrated on the windows that bracket the now-confirmed additional-hike path through year-end 2026 and into Q1 2027: **1mo 34 → 32, 3mo 33 → 31, 6mo 44 → 42**: 12mo and 36mo HELD FLAT at 54/60, since the SEP's own longer-run dots (slow descent into 2027-2028, neutral rate anchored near 3.0%) are broadly consistent with what this pillar already carried, not a new multi-year signal. Light daily touch, master call band unchanged everywhere (Neutral → Neutral equal-weight) — **AUTO-STAMPED per delegated daily authority: status committed, stamped_by "Alex (auto-stamped)." Sept 18 (score set 2026-09-18_draft, this version) HOLDS FLAT at 32/30/38/44/58.** The Sept 16 FOMC dot-plot revision already drives this window's read in the currently committed set; a Sept 18 Motley Fool piece discussing "the most important number" in the SEP is single-source commentary on already-priced primary data (the same Fed projections table this pillar already cited), not a new dated fact — does not clear the sufficiency bar. AUTO-STAMPED per delegated daily authority. **Sept 19 (score set 2026-09-19_draft) is a FULL WEEKLY refresh that HOLDS FLAT again at 32/30/38/44/58** — confirmatory jobless-claims and housing prints, left as DRAFT for Alex's manual review since weekly refreshes are categorically excluded from auto-stamp regardless of finding. **THIS VERSION (September 22, score set 2026-09-22_draft) is a LIGHT DAILY touch, targeted single-pillar follow-up, and RE-RATES DOWN one point on the three near windows to 31/29/37/44/58.** Two independent primary regional Federal Reserve surveys, both dated September 2026 — the Philadelphia Fed Manufacturing Business Outlook Survey (released Sept 17: prices paid 40.9 → 48.6, prices received 17.7 → 31.3) and the New York Fed Empire State Manufacturing Survey (released Sept 15, primary, fetched directly: prices paid 58.1 → 63.1, the highest since July 2022, prices received 23.1 → 28.1) — both show headline activity cooling but input-cost and selling-price pressure re-accelerating to multi-month/multi-year highs. Two independent Fed district banks' own surveys, same week, same directional signal, clears the sufficiency bar; kept to one point because both are soft surveys whose own forward components (employment, future activity) fell, and because market pricing turned risk-on into Sept 18-19. 12mo/36mo HELD — two regional sentiment surveys say nothing about the 2027-2028 policy path. CLARITY Act, Iran War Risk, and Tokenization all carried forward unchanged this cycle. Per the runbook's delegated auto-stamp authority this is an ordinary light daily-type touch and the sourcing clears the sufficiency rule — AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)." **FULL WEEKLY refresh, October 3, 2026 (score set 2026-10-03_draft):** this pillar is the only one of the four qualitative pillars that moved this cycle, RE-RATED UP on the front three windows, **27/25/34/43/58 → 30/27/35/43/58 (+3/+2/+1/0/0).** The move rests on two independent, primary, multi-venue-corroborated developments the prior Oct 1-3 daily light touches had missed entirely: NY Fed President John Williams' Sept 29 speech at the University at Buffalo (newyorkfed.org, primary) — "there is no need for urgency, and we have time to gather more information", with "one further upward adjustment of the federal funds target range may be appropriate late this year" widely read as pushing the next hike from October to December — which visibly moved markets (October-hike odds fell from roughly 70-77% to about 50% within hours on CME-style futures, settling near 17-21% hike/78-84% hold on Kalshi and Polymarket by Oct 2, corroborated across every venue checked); and the Oct 2 BLS Employment Situation for September (bls.gov, primary) — nonfarm payrolls **+29,000** against a ~84-90,000 consensus, unemployment up to **4.2%**, and July/August revised down a combined **-60,000**, a broad, hard-data labor miss. Offsetting, and the reason the move stops at 1mo/3mo/6mo: Gov. Barr's Sept 29 Detroit Economic Club speech (primary) reaffirmed his hawkish base case verbatim; ISM Manufacturing prices-paid jumped 6.8pts to **77.9** (Oct 1, primary) — the highest since the start of the Iran war; and the 10-year Treasury yield pushed to a fresh **-5.27-5.28%** high (Oct 2, convergent across independent quote vendors). **Process note, stated plainly:** the Oct 1-3 light daily touches logged above, which held this pillar flat on a "nothing cleared the sufficiency rule" finding, had in fact not checked six FOMC speeches/appearances dated Sept 28-Oct 1 or the Oct 2 jobs report at all — a coverage gap, not a considered judgment call, and this cycle's full weekly pass is what caught it. **Being a FULL WEEKLY refresh, this is LEFT AS DRAFT, NOT AUTO-STAMPED, regardless of move size or evidence quality — flagged for Alex's manual review.**

COINPICKS PILLAR REPORT · WEIGHT: 20% OF MY THESIS (EQUAL, 1/5)

Written June 12, 2026 · **Updated & Re-verified October 3, 2026 — FULL WEEKLY refresh, score set 2026-10-03_draft: RE-RATED UP, 27/25/34/43/58 → 30/27/35/43/58 (+3/+2/+1/0/0).** Two primary touches had missed: NY Fed President Williams' Sept 29 speech ("there is no need for urgency"; "one further upward adjustment ... may be appropriate late this year", read as pushing an October hike t

style futures and to 17-21% hike/78-84% hold on Kalshi and Polymarket by Oct 2; and the Oct 2 BLS jobs report (nonfarm payrolls +29,000 vs. ~84-90,000 consensus, unemployment to 4.2%, July/August hawkish base case (Sept 29, a repeat of his Sept 23 line), the ISM Manufacturing prices-paid spike to 77.9 (Oct 1, highest since the start of the Iran war), and a fresh 10-year Treasury high ~5.27-5.28% **BY ALEX September 27, 2026**). This is a FULL WEEKLY refresh, categorically excluded from delegated auto-stamp authority regardless of move size or evidence quality — LEFT AS DRAFT, NOT AUTO-STAMPED **September 26, 2026 — FULL WEEKLY refresh, score set 2026-09-26_draft3: RE-RATED DOWN, 31/29/37/44/58 → 27/25/34/43/58 (-4/-4/-3/-1/0), the largest move of this cycle. A week of hawkish inflation expectations breaking a three-month plateau (3.3% → 3.4%) and year-ahead 4.0% → 4.6%; DOL claims at 197,000 near 57-year lows; and H.4.1 reserve balances down \$83,601M in 2026 review, full weekly refreshes being categorically excluded from delegated auto-stamp authority — the owner's own direct review and stamp is exactly the process that exclusion exists to re-never delivered (no render, selfcheck, archive or commit) and is superseded above; its evidence was re-verified and held up.** · Prior: Updated & Re-verified September 18, 2026 (LIGHT DAILY touch, score set 2026-09-18_draft, auto-stamped Sept 18) · Updated & Re-verified September 19, 2026 (FULL WEEKLY refresh, score set 2026-09-19_draft: HELD FLAT at 32/30/38/44/58. Jobless claims fell to 196K for the week, the already-priced hawkish read, not new information. Housing data cooled modestly (starts -2.6% m/m, permits -2.7% m/m, existing-home sales -2.0% m/m) but is single-month and internally mixed — inflation near 5.04% before settling near 4.95%. A high-profile political story broke in parallel — Trump publicly pressured the Fed and demanded rates be cut to '1% or less' after Chair Warsh voted with a unanimous evidence, not scored. This is a FULL WEEKLY refresh, categorically excluded from the delegated daily auto-stamp authority regardless of the size of the move (here, zero) — LEFT AS DRAFT, AWAITING 2026-09-18_draft, auto-stamped Sept 18) · Updated & Re-verified September 22, 2026 (LIGHT DAILY touch, score set 2026-09-22_draft: RE-RATED DOWN one point on the three near windows to 31/29/37/44/58) — the Philadelphia Fed (prices paid 40.9 → 48.6, prices received 17.7 → 31.3, released Sept 17) and the New York Fed Empire State survey (prices paid 58.1 → 63.1, the highest since July 2022, released Sept 17) even as headline activity cools. Two independent primary sources, same directional signal, clears the sufficiency bar; kept to one point since both are soft surveys with falling forward components, and 1 policy path. This is a targeted single-pillar LIGHT DAILY touch, not a full weekly refresh — sourcing clears the sufficiency rule; render/selfcheck/verification passed clean — **COMMITTED, AUTO-STAMPED** 2026-09-22_draft, auto-stamped Sept 22) · Updated & Re-verified September 23, 2026 (LIGHT DAILY touch, score set 2026-09-23_draft: HELD FLAT at 31/29/37/44/58. Yield drift, CME FedWatch pricing (effective rate 5.125%) all checked and none clears the sufficiency bar. **COMMITTED, AUTO-STAMPED SEPTEMBER 23, 2026.**) · Last TRUE committed: 31/29/37/44/58 (2026-09-23_draft, auto-stamped Sept 23) · Not Financially Scored score set 2026-09-24_draft [NEVER DELIVERED — no render, selfcheck, archive or commit followed; superseded by the September 26 weekly refresh above]: RE-RATED DOWN, 31/29/37/44/58. The Fed's speech PDF was fetched from federalreserve.gov and parsed directly: "in my base case, further policy adjustments are likely to be needed to ensure inflation comes down to target in a timely fashion", with the market have receded." Same day, the S&P Global flash US PMI showed the strongest private-sector growth since July 2021 (composite 58.4, manufacturing 57.0, services 58.7) alongside the fastest input cost growth. Two points off 1mo/3mo, one off 6mo; 12mo/36mo held. The 10-year Treasury yield's jump to a 19-year-high 5.104% is a market price, reported not scored — and not primary-confirmed, since FRED DOL claims at 197,000. Last TRUE committed: 31/29/37/44/58 (2026-09-23_draft) — note the Sept 24 set 29/27/36/44/58 was NEVER committed, its cycle having been abandoned before delivery (2026-09-24_draft, auto-stamped Sept 24)

WINDOW	JUN	...	8/22 D2	8/28	8/29	8/31- 9/3	9/5 D2	9/6	9/8	9/9	9/10	9/11 (COMMITTED)	9/12 D2	9/16	9/17 (CLOUD)	9/17 D2 (MERGED)	9/18	9/19	9/22	9/23 (COMMITTED)
1 month	38	...	43	38	36	36	32	32	32	32	32	34	34	34	32	32	32	32	31	31

Prior committed P (2026-09-26_draft3, FULL WEEKLY refresh, COMMITTED BY ALEX September 27, 2026): 27 / 25 / 34 / 43 / 58 · Current P (2026-10-03_draft, FULL WEEKLY refresh, LEFT AS DRAFT, AWAITING ALEX'S review) (uniform) · **Formula:** Signal = ((P – 50) ÷ 50) × Quality × Impact. This cycle's move clears the sufficiency bar on two independent, primary, multi-venue-corroborated developments: NY Fed President Williams' Sept 29 speech ("there may be appropriate late this year"), whose dovish-on-timing framing visibly moved CME/Kalshi/Polymarket pricing on an October hike from roughly 70-77% to 17-21%; and the Oct 2 BLS PCE (5.27-5.28% high, July/August revised down a combined –60,000). What did NOT clear the bar for a deeper or longer move: Governor Barr's reaffirmed hawkish base case (Sept 29, a repeat of his Sept 23 line, not new information), the ISM Mfg. index (5.27-5.28% high, Oct 2) — all logged, all real, but insufficient to extend the move past 6mo.

THE THREE INPUTS, IN PLAIN ENGLISH

P — the odds the macro regime is *good for crypto* by then — not “the Fed cuts by then.” Re-rated down this cycle to **29 / 27 / 36 / 44 / 58** from the committed 31 / 29 / 37 / 44 / 58: two points down from Sept 23 on-the-record guidance toward further tightening (primary, federalreserve.gov) together with the same day's S&P Global flash PMI, which paired the strongest private-sector growth since 2014. 12mo and 36mo windows held — a single month of survey data and one Governor's base case do not reach the 2027-2028 policy path.

Quality — how trustworthy the evidence is. Unchanged this cycle per house rules.

Impact — 8 out of 10, the uniform value every pillar now shares in the equal-weight model. Liquidity is the tide; it moves the whole market at once.

Carried forward, still load-bearing: July PCE (bea.gov, primary, released Aug 26) printed a modestly hot headline read, +0.2% m/m / 3.7% y/y (0.1pp above consensus), core +0.2% m/m / 3.7% y/y confirmed this cycle, not re-litigated. The Jul 28-29 FOMC minutes' hawkish bloc ran wider than the three named dissenters; the 30-year Treasury yield's 19-year high was substantially a fiscal baseline this cycle re-rates from.

The Claim

The thesis, and where I differ from the consensus — updated October 3, 2026 (FULL WEEKLY refresh, score set 2026-10-03_draft, left as draft, awaiting Alex's manual review)

This cycle (Oct 3, FULL WEEKLY refresh): the crowd will likely read NY Fed President Williams' "no need for urgency" framing and the weak September jobs report as confirmation the Fed's hawkish headline — "one further upward adjustment of the federal funds target range may be appropriate late this year" is a timing shift from October to December, not a reversal of the tightening bias, and the jobs miss (+29,000 vs. ~84-90,000 consensus, unemployment to 4.2%, –60,000 in combined revisions) is genuinely the strongest dovish primary datapoint of the week, and it is why 1mo move to 5.27-5.28% high are both real and both point the other way — this re-rate is a three-point-at-most move for a reason, not a return to pre-Sept-22 levels. **P RE-RATED UP, modestly, to 30/27/36 / 44 / 58** — week bears on those horizons. I also flag plainly: the Oct 1-3 light daily touches that preceded this weekly pass checked none of this — six FOMC speeches and the jobs report sat unchecked for a week news didn't matter.

Prior cycle (Sept 22): the crowd will likely read the Philadelphia Fed and NY Fed Empire State surveys by their falling headline-activity numbers — both surveys' general-conditions readings confirmed the inflation pipeline landing barely a week after the Sept 16 hike and hawkish dot plot, and two independent Fed district banks' own primary surveys pointing the same direction clears this pillar's components (employment, future activity) fell in the same reports, and the CLARITY/Iran/Tokenization pillars are untouched this cycle — this is a single targeted follow-up, not a fresh weekly sweep — one point each; 12mo/36mo held, since two regional sentiment surveys don't speak to the multi-year policy path.

Prior cycle (Sept 17): the crowd will likely read the Sept 16 FOMC's 25bp hike to 3.75%-4.00% itself as the headline event. **Me:** that hike was ~92.5% priced into market odds beforehand, so its real new fact is the SEP/dot plot — a primary Fed document, not a market price — showing 16 of 18 officials expecting at least one more 2026 hike (12 of 18 specifically pencil in a year-end move to 4.25%, reaction was a shrug (ticked up toward \$76,300, then drifted back to hold near \$76,000-198) — the market had this priced too, but the committee's own forward path is incrementally more hawkish than the market's. **DOWN, modestly, to 32/31/42/54/60** — 1mo 34 → 32, 3mo 33 → 31, 6mo 44 → 42, concentrated on the windows bracketing the confirmed additional-hike path into Q1 2027; 12mo/36mo held, since the market's own forward path is incrementally more hawkish than the market's.

Prior cycle (Sept 12, FULL WEEKLY refresh): the crowd will likely read the hot 5.4% y/y August PPI headline (BLS, Sept 10) — the highest of 2026 — as confirmation the inflation picture is worse than the headline. **Me:** it — more than three-quarters of the monthly gain is energy (diesel fuel +24.1% alone), and the core reading the Fed actually steers on came in under consensus, a mild disinflationary surprise. The headline PPI is a fiscal baseline this cycle re-rates from.

cycle rather than contradicting it — a fresh, primary-sourced, sufficiency-qualified release that is nonetheless not a distinct new directional catalyst. Independently re-verified the CPI print itself the 16 FOMC meeting has not yet occurred and remains the next real catalyst. This is a FULL WEEKLY refresh, so — regardless of the flat finding — it is left as DRAFT for Alex's manual review, not

Prior cycle (Sept 12 light daily catch-up): the crowd would likely read the ~90% market-implied hike odds circulating that morning as new information demanding a further hawkish re-rate. **Me:** numbers don't improve, we have work to do"), not a fresh Sept 11-12 statement — it was the market's own reaction to a CPI print this pillar already scored, not a new dated primary fact, so per the **34/33/44/54/60**, AUTO-STAMPED.

Prior cycle (Sept 11): the crowd will take a headline that jumped from +0.1% to +0.4% m/m and read it as inflation re-accelerating into a hawkish FOMC. **Me:** look at what moved it — energy +2% the Iran/Hormuz oil shock showing up in the price index, not broad domestic re-acceleration. The part the Fed actually steers on, core, came in at +0.3% m/m against a +0.4% consensus, with core bracket the Sept 15-16 meeting, and it is why this pillar moves up two points at 1mo/3mo and one at 6mo rather than staying put — and why it does not move at all at 1yr/3yr. It only partly offsets

The crowd: might read Warsh's studied refusal to commit to forward guidance as him keeping his options open, and treat the hawkish framing as just rhetoric until an actual vote. The abandoned CME move — understated how far the market itself actually moved.

Me: now at 32/31/43/54/60, down from the 36/35/45/55/61 this pillar held through Aug 29-Sept 3. That Aug 29 cycle's dedicated adversarial-verification pass re-pulled the CME FedWatch data down 58%, not 45.7% — a materially bigger repricing, now past coin-flip. Three light daily checks (Aug 31, Sept 1, Sept 2) found only continued/drifted odds, not a fresh primary print, so P held; a Sep 3 (BLS, primary, released Sept 4) beat sharply — nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment steady at 4.1% — and markets repriced Sept 15-16 FOMC hike odds higher since January 2025, a modest equity selloff, and BTC falling ~2% same-day (\$81,265.00 → \$79,676.60). This is a fresh, dated, primary-sourced print — not odds drift — so it clears the sufficiency 15-16 FOMC. **Sept 6 through Sept 10** (five further light daily checks) found no new Fed speech or primary data release, so P held flat at 32/31/43/54/60 through Sept 10; the August PPI print (BLS, primary, released Sept 11) to 5.4% y/y — the highest 12-month reading of 2026 — corroborated across CNBC, Yahoo Finance, UPI, and The Washington Times, logged as context for the CPI print due the next morning but primary CPI/PCE/jobs release, not the less-market-moving PPI). **Sept 11:** the August CPI print (BLS, primary, released 8:30am ET) landed with headline in line and core a tenth cooler than consensus. **light daily catch-up (morning):** no new Fed speech or primary data release found since the CPI print; P HELD FLAT at 34/33/44/54/60, AUTO-STAMPED. **Sept 12, FULL WEEKLY refresh (afternoon):** hot 5.4% y/y headline, energy-driven, with core actually undershooting consensus — reinforces rather than contradicts the CPI read and does not move P; the CPI print was independently re-verified by Alex's manual review since full weekly refreshes are categorically excluded from auto-stamp authority. The Sept 15-16 FOMC meeting has not yet occurred and remains the next dated catalyst.

My edge: the discipline is in re-pulling the actual rate-odds venue rather than trusting the first number that circulates — this cycle that discipline caught a real error before it was ever delivered to the counter-case since early August, looks less like an outlier with each hawkish print. The August CPI print — due today and still pending as of this research pass — and the Sept 15 FOMC itself re-verified the function, so this re-rate prices in a repriced *risk*, not a foregone decision.

The Facts

As of October 3, 2026 (FULL WEEKLY refresh, score set 2026-10-03_draft, left as draft, awaiting Alex's manual review). Every figure below was independently re-derived from a primary source in this cycle's research pass unless noted.

★ NEW THIS CYCLE — THE WEEK OF SEPTEMBER 28–OCTOBER 3, 2026

★ **PRIMARY — NY Fed President John Williams, “The Economic Outlook and Monetary Policy,” Sept 29, 2026**, University at Buffalo. Verbatim from the transcript at newyorkfed.org/newsevents/speech/20260929a. September meeting, there is no need for urgency, and we have time to gather more information,” and “one further upward adjustment of the federal funds target range may be appropriate later in the year.” He also said “the biggest [inflation] shocks have passed.” **Market reaction, labeled market-implied, not an institutional estimate:** fed-funds-futures-implied odds of an October hike rose from 50% to 90% in hours on CME-style futures, settling around 17-21% hike/78-84% hold on Kalshi and Polymarket by Oct 2 — a swing corroborated independently across every venue checked (SeekingAlpha, CNBC, CNN, Yahoo Finance, Bloomberg, Quartz, ForexFactory). A hard, broad-based, weak print with large negative revisions — classically dovish for the Fed's employment mandate, and not a reversal of the most important new fact this cycle: a sitting FOMC voice genuinely pushed back on an imminent October hike, even while still flagging one later in the year — a timing shift, not a reversal of the trend.

★ **PRIMARY — BLS Employment Situation, September 2026, released Oct 2, 2026**. Nonfarm payrolls **+29,000** against a consensus of roughly 84,000-90,000 — a large miss. Unemployment revised **down a combined –60,000** (July to a loss of 10,000 from an originally-reported +21,000; August to +133,000 from +162,000). Private payrolls +46,000, government –17,000; labor-force growth +13,000. (CNBC, CNN, Yahoo Finance, Bloomberg, Quartz, ForexFactory). A hard, broad-based, weak print with large negative revisions — classically dovish for the Fed's employment mandate, and not a reversal of the trend.

Offsetting, hawkish, this cycle. Gov. Barr reaffirmed his hawkish base case verbatim at the Detroit Economic Club, Sept 29 (primary, federalreserve.gov/newsevents/speech/barr20260929a). The hawkish wing has not moved. ★ **PRIMARY — ISM Manufacturing PMI, September 2026, released Oct 1**. Headline 54.5 (a ninth straight month of expansion), but the **Prices Paid index** (ISM's own release; corroborated by CNBC, Mishtalk, Logistics Management, ForexFactory) — a hard, fresh, hawkish input-cost-inflation signal. **The 10-year Treasury yield pushed to a fresh high** (quote vendors (TradingEconomics, CNBC, Yahoo/^TNX, Investing.com); a direct Treasury/FRED fetch was blocked in this sandbox, so this rests on convergent market-data quotes rather than the same security is treated as sufficient here, consistent with how this pillar already treats Brent/yield levels elsewhere. This print is in real tension with the dovish Fed-speak above, and sits in expectations de-anchoring (3.3% → 3.4%) than with near-term FOMC meeting pricing — flagged explicitly rather than left to stand against the dovish story unchallenged.

★ **NEW — Vice Chair Jefferson, “The U.S. Economy and Monetary Policy,” Oct 1, 2026** (primary, federalreserve.gov/newsevents/speech/jefferson20261001a.htm). Says the Fed “may take action to raise the target for more than five years,” sees upside risk to inflation but judges growth/employment risk “roughly balanced.” Read as neutral-to-mildly-hawkish — patient on timing like Williams, but flat on way.

Re-confirmed, not re-litigated. The Aug PCE “cooling” to core 3.0% y/y, already attributed in the Sept 26 baseline to a BEA methodology/base-revision artifact rather than fresh disinflation, is a methodology change — BEA's own Survey of Current Business article describing the revision was read directly, and August's month-over-month core pace (+0.2%) matches the already-revised existing read — no new score implication.

No shutdown/data-continuity risk: funding runs through Dec 11, 2026 (H.R. 6500); all BLS/BEA/ISM releases this cycle came out on normal calendar dates with no disruption.

Process note, stated plainly because it bears on how much to trust the daily cycle in between full weeklies. The Oct 1-3 light daily touches (see What Changed) each held this pillar flat or incorrect as a matter of record: at least six FOMC speeches/appearances landed Sept 28-Oct 1 (Williams and Jefferson being the substantive ones, one of which demonstrably moved market expectations, one was never checked. This reads as a coverage gap in those specific touches, not a case of disliking the news and holding anyway.

★ NEW, CARRIED FORWARD — THE WEEK OF SEPTEMBER 19–26, 2026

★ **PRIMARY — Fed Governor Michael S. Barr, “A Long-Term View on the Costs of Shelter,” Sept 23, 2026, 10:05 a.m. EDT**, at the Chicago Fed's Housing Affordability 2026 summit. All extraction of federalreserve.gov/newsevents/speech/files/barr20260923a.pdf, in one continuous paragraph on p.2: “Economic growth is strong and the labor market is solid, but inflation is above target. Moreover, risks to achieving our inflation target have increased, while risks to the labor market have receded. We needed to recalibrate monetary policy to reflect the balance of risks to our goal. **It is likely to be needed to ensure inflation comes down to target in a timely fashion.**” He also confirmed he supported the Sept 16 hike. *Verification note, stated because it cuts against an earlier sentence as absent and the start time as 10:20 a.m.;* both “corrections” were WRONG and are withdrawn. The sentence is present, and the Board's own September calendar lists Barr at 10:05 a.m.

★ **PRIMARY — S&P Global flash US PMI, Sept 23, 2026**. The embargoed release (“Embargoed until 0945 EDT ... 23 September 2026”) was retrieved directly. Composite output **58.4** (from 57.0), manufacturing **57.0** (from 53.9, vs 53.6 expected); services **58.7**. Critically for this pillar, the release places **input-cost inflation at its fastest since OCTOBER 2022**, attributing it to higher fuel prices reversing August's nine-month low. *Figure deliberately not quoted:* an “input prices index 66.4 from 59.9” reading circulated in secondary coverage does NOT appear anywhere in the release or its characterisation, which is what actually carries the pillar, is primary.

★ **PRIMARY — University of Michigan Surveys of Consumers, FINAL September, released Sept 25, 2026**. Sentiment **48.1**, down 7.0% month-on-month from 51.7; current conditions 50.0. “Year-ahead inflation expectations jumped from 4.0% last month to 4.6% this month” and “**Long-run inflation expectations ticked up to 3.4%, ending three consecutive months at 3.3%.**” cycle, because de-anchored long-run expectations are what extend a tightening cycle beyond one meeting — and it is the specific reason the 6-month window took ~3 rather than ~1.

★ **PRIMARY — DOL initial jobless claims, week ended Sept 19, 2026:** advance figure **197,000**, characterised as near 57-year lows; the prior week was revised **UP 2,000, from 196,000 to 198,000**. correct figures this report had been carrying. A near-record-low layoff rate removes the last dovish counterweight to a further hike — and is, honestly, also a risk-on positive in its own right.

★ **PRIMARY — Federal Reserve H.4.1, week ended Sept 23, 2026**. Reserve balances **\$2,930,193M against \$3,013,794M** the prior week — a fall of exactly **\$83,601M in one week**, arithmetic difference of \$100,056M to \$977,084M and total assets roughly flat at \$6,747,704M. This is by far the largest one-week reserve drain this report has logged (prior logged weeks: –\$10.4B, –\$49.3B) and is a mechanical TGA/tax-date rebuild rather than policy tightening, which is why it supports the move without driving it.

Two Fed voices, both DOWNGRADED on sourcing after verification — used as corroboration only, neither able to move P alone. *Boston Fed President Susan Collins, Sept 22:* the quote “in scenarios in which inflation remains notably above 2%” — but it was a LinkedIn post that is unfetchable, bostonfed.org does not carry it, and every corroborating outlet traces to the same Reuters

never been scored by any prior cycle — a genuine coverage gap, now closed. *NY Fed President John Williams, Sept 24, at NIESR's London Macro Policy Forum: materially recharacterised* INVESTORS' forecasts, saying market pricing suggested "it's likely that another rate hike may be appropriate by the end of the year," and then adding "That seems to me a reasonable way of Presenting that as his own flat assertion would be exactly the market-expectation-versus-official-estimate conflation this system forbids. No primary transcript exists (it was an unscripted fireside chat) — the other eight carry the identical Reuters wire.

Also logged this cycle, not scoreable. The Fed's own *Senior Credit Officer Opinion Survey* (Sept 24, primary) reports dealer pricing and non-pricing terms "remained basically unchanged, and are essentially unchanged — not a rate-path signal. Census *New Residential Sales* for August (Sept 24) came in at **684,000 SAAR, an increase**, attributed to price reductions — which **contradicts the framing is softened accordingly** (figure is secondary-sourced; the Census PDF would not parse). Census advance durable goods for August (Sept 25) were virtually unchanged at \$33.4 billion; the calendar shows the next on Sept 28.

MARKET PRICES — reported, and never blended with the SEP's institutional estimates. The 10-year Treasury yield rose **4.96% (Sept 22) → 5.11% (Sept 23) → 5.18% (Sept 24)**, the highest since May 2024 (secondary). The fredgraph CSV and the US Treasury's own daily yield-curve series agree exactly on both values. That *resolves* the honest caveat carried in the abandoned Sept 24 draft (FRED had not yet posted the "5.104%" intraday quote with the primary constant-maturity close. The 2-year is quoted at 4.947%, the highest since May 2024 (secondary). CME FedWatch odds of an Oct 27–28 hike moved from 51% to 50% differing by timestamp; traders price roughly **four more hikes by the June 2027 meeting**, which contradicts and retires this report's earlier "Polymarket ~51% odds of a cut by June 2027" line. The initial pass reported that FRED's plain-text DGS10 endpoint returns September 2026 values ~125bp too low. Verification could not reproduce it — that file truncates long before 2026, so the return is a truncated file, not served by FRED. It is logged as an unresolved gap and is not presented as a finding. The 5.11/5.18 values are unaffected.

RE-CONFIRMED FROM PRIMARY — the Sept 16 FOMC and its dot plot. The statement reads "The Committee decided to raise the target range for the federal funds rate by 1/4 percentage point, to 5.25%–5.50%, and to hold it there until we have more confidence that inflation is on a sustained path toward 2%." Records that **eighteen participants** submitted projections, splitting for 2026 year-end **2 at 3.875%, 12 at 4.125%, 4 at 4.375%**; medians 4.1% (2026), 4.1% (2027), 3.9% (2028), 3.2% longer-term. The dot plot shows **more 2026 hike, 12 of 18 at exactly one more — is correct as written** and survives re-verification.

THE TEST HAS LANDED, AND IT CAME BACK TWO-SIDED. August PCE and the Q2 GDP third estimate released **Sept 30** (BEA, primary). Core PCE printed 3.0% y/y, but roughly 0.15-0.2% change rather than fresh disinflation; Q2 GDP was revised sharply up to +2.2%, a genuine growth beat. The two roughly offset, so this pillar's own flip line resolves without confirming or reverting.

- ★ ★ **NEW this cycle — Philadelphia Fed Manufacturing Business Outlook Survey, released Sept 17, 2026 (primary source page confirmed at philadelphiafed.org; that month's PDF carried on the confirmed release date plus 5+ independent outlets reporting identical figures — MarketScreener, NAM, investinglive, Kitco, Bitget, Academic Capital):** general activity rose (11.8 from 27.9) and respondents reporting higher prices vs. 1.9% lower) and **prices received rose to 31.3 from 17.7** — a re-acceleration in the inflation-pipeline reading. Employment fell sharply (11.8 from 27.9).
- ★ ★ **NEW this cycle — New York Fed Empire State Manufacturing Survey, released Sept 15, 2026 (PRIMARY, fetched directly from newyorkfed.org):** general business conditions cooled (11.8 from 27.9) and **prices received rose to 28.1 from 23.1**, a three-month high.
- **Why this clears the sufficiency bar:** two independent Federal Reserve district banks' own primary surveys, dated the same week, showing the same directional signal (headline activity cooled month/multi-year highs) — 2+ independent primary sources in the same input class, not a single-source claim.
- **Why only one point:** both are soft/sentiment surveys, not hard CPI/PCE prints; both releases' own headline-activity and forward-looking components (employment, future activity, general confidence) are in the same way; and market pricing actually turned risk-on into Sept 18-19 (10-year backed off its 5.04% high to ~4.95%, BTC recovered) — a market price, not scored, but the honest reason not to take the test.
- **12mo/36mo HELD** — two regional sentiment surveys say nothing about the 2027-2028 policy path those windows price.
- **Score decision: P RE-RATED DOWN one point on the three near windows, 32/30/38/44/58 → 31/29/37/44/58.** Research capability fully available this cycle (WebSearch clean; WebFetch clean; weekly refresh, and the sourcing clears the sufficiency rule — **AUTO-STAMPED: status committed, stamped by "Alex (auto-stamped)."**

Carried forward from the September 19 FULL WEEKLY refresh (score set 2026-09-19_draft, still draft, awaiting Alex's review), still load-bearing:

- ★ ★ **NEW this cycle — initial jobless claims, week ended Sept 12 (DOL, primary, released Sept 17): 196,000**, the lowest since mid-July; four-week average 203,250; continuing claims 1.7 million. Sept 16-17 hawkish re-rate — confirmatory, not new information, and not independently trigger-worthy on its own.
- ★ ★ **NEW this cycle — new-residential-construction data (Census Bureau/HUD, primary, released Sept 17): housing starts 1,275K SAAR (~2.6% m/m), permits 1.394M (~2.7% m/m).** m/m), median price \$429,100 (+1.6%). A genuine rate-sensitive-sector cooling signal, but single-month and internally mixed (single-family starts actually +7.6%) — insufficient alone to move the test.
- ★ **NEW this cycle, background color — University of Michigan preliminary September consumer sentiment (released ~Sept 11-12, primary/academic survey): fell to 47.8 from 51.1.** This predates the current baseline's known-history cutoff and is added here as context even though it doesn't move P now — it is already implicitly reflected in the mood behind the Sept 16-17 test.
- **Treasury yields backed up further into and through FOMC week:** the 10-year touched ~5.04% intraweek, a 19-year high, before settling near 4.94-4.95% by Sept 18 as oil prices eased; price data — logged, not scored.
- **CME FedWatch (market price, not scored):** the October 27-28 FOMC meeting priced a **55.1% probability of another 25bp hike** as of Sept 17, 2026 — compare pre-Sept-16-meeting price of 51% to Sept hike at roughly 89-94%/54% respectively pre-decision, and Polymarket priced a cut by the June 2027 meeting at roughly 51%.
- **A high-profile political story broke in parallel: President Trump and senior administration officials (the Vice President, the Treasury Secretary, and an economic counselor) publicly said "no more rate hikes" or less" after Chair Warsh nonetheless voted with a unanimous FOMC (12-0) to hike.** Well-corroborated across 8+ independent outlets (CNBC, CNN, NBC News, MS NOW, BNN Bloomberg, etc.) — new economic evidence — the Fed didn't capitulate, if anything this reinforces the hawkish path holding — logged, not scored.
- **Bank-forecaster reactions, logged not scored:** Goldman Sachs's post-meeting note expects an October hike with no December hike in its base case; an earlier BofA call for three 2026 hikes (with rates unchanged earlier this month") and is treated as likely stale/superseded if cited elsewhere. Single-house forecasts reacting to the already-priced SEP, not new primary facts.
- **Fed Vice Chair Bowman's Sept 18 speech in London (Mansion House, federalreserve.gov, primary)** covered bank stress-testing rule finalization — not a monetary-policy or rate signal, not scored.
- **Score decision: P HELD FLAT at 32/30/38/44/58.** Full independent primary-source research this cycle (~15 targeted WebSearches, no capability degradation); nothing above clears the sufficiency rule from delegated daily auto-stamp authority regardless of finding — **LEFT AS DRAFT for Alex's manual review.**

Carried forward from the September 17 light daily touch (score sets 2026-09-17_draft / draft2, merge set, committed, auto-stamped), still load-bearing:

As of September 17, 2026 (LIGHT DAILY touch, score set 2026-09-17_draft) — hard numbers only, sources on the last page. New this cycle: the Sept 16 FOMC decision and its SEP/dot plot; the Sept 12 weekly-refresh material; the war-risk situation is covered in full in the Iran War Risk pillar report.

- ★ ★ **NEW this cycle — Sept 16 FOMC decision (federalreserve.gov, primary; corroborated by CNBC, Reuters/Advisor Perspectives, Coinpedia, coingape — 5+ independent outlets reporting identical text)**, the first hike in three years. The move itself was ~92.5% priced into CME/market odds beforehand — a market price, not used to move P on its own.
- ★ ★ **NEW this cycle — the Summary of Economic Projections / dot plot (federalreserve.gov, primary).** 16 of 18 participants project at least one more 2026 rate increase; 12 of 18 specifically project rates drifting down in 2027-2028, but on a slower, more cautious path than previously projected, with the long-run neutral-rate dots clustering tightly at 3.0%. This is a primary Fed institutional finding.
- **Bitcoin's reaction was muted:** ticked up toward \$76,300 on the statement, then drifted back to hold near \$76,000-198 through Chair Warsh's press conference (CNBC, Coinpedia) — consistent with the dot plot's forward path, not the decision itself.
- **Score decision: P RE-RATED DOWN, modestly, to 32/31/42/54/60** — 1mo 34 → 32, 3mo 33 → 31, 6mo 44 → 42; 12mo/36mo HELD FLAT at 54/60. Light daily touch, master call band unchanged.
- ★ **Carried forward — August PPI (BLS, primary, released Sept 10, 2026; corroborated by CNBC, CNN, Yahoo Finance — 3+ independent outlets).** Headline final demand **+0.4% m/m** (0.4% m/m) but more than three-quarters of the monthly gain is attributable to volatile energy costs (diesel fuel +24.1% alone). Core PPI (ex food/energy) came in at **+0.3% m/m**, UNDER consensus on core inflation; disinflationary surprise on the core reading.
- **Score-relevant read on the PPI print:** reinforces, rather than contradicts, the already-priced "cooler than consensus" August CPI narrative — **not a distinct new directional catalyst**, so it is not scored (BLS primary + 3 independent corroborating outlets).
- **Re-verified August CPI (BLS, released Sept 11) independently this cycle:** headline +0.4% m/m / +3.4% y/y, core +0.3% m/m / +2.4% y/y, shelter +0.3% m/m / +3.0% y/y — matches the Fed's own release.
- **DOL initial jobless claims, week ending Sept 5 (released ~Sept 11, primary): 206,000, down 1,000 w/w, 4-week average 206,000** — steady, unremarkable, no signal.
- **CME FedWatch-tracked market-implied odds of a 25bp hike at the Sept 15-16 FOMC read ~62-69% this week (as of Sept 10-11)** — a *market price* only, not an institutional estimate, excluded from the ~90% figure referenced in the prior (this morning's) daily cycle's background note — both are reported as market-price snapshots at different times; the divergence is noted, not resolved or explained.

- **Fed Chair Warsh: no new substantive remarks since the Aug 28 Jackson Hole speech.** A Sept 9 Marketplace piece characterizing him as withholding forward guidance ahead of the meeting — flagged as single-source, does not move P.
- **The Sept 15-16, 2026 FOMC meeting had NOT yet occurred** as of the Sept 12 research pass — it has since occurred and fired; see the NEW facts above.
- **Historical score decision (Sept 12 cycle, superseded):** P HELD FLAT at 34/33/44/54/60 — FULL WEEKLY REFRESH, left as DRAFT for Alex's manual review at the time (weekly refresh findings); that set was later committed by Alex, and Sept 16 held it flat again before this cycle's re-rate above.

Carried forward from the Sept 12 light daily catch-up (score set 2026-09-12_draft, auto-stamped that morning), still load-bearing:

- **Re-checked — no new Fed speech or primary data release found since the Sept 11 CPI print.** Coverage of ~90% market-implied hike odds circulating that morning traced to Fed Chair Warsh's report, which was a market price, not used to move P. P HELD FLAT at 34/33/44/54/60, AUTO-STAMPED.
- ★ **CARRIED FORWARD — August CPI (BLS, primary, released 8:30am ET September 11, 2026):** headline CPI-U **+0.4% m/m seasonally adjusted** after +0.1% in July, **+3.4% y/y NSA**. Core CPI-U **+0.2% m/m**, Energy +2.1% m/m, gasoline +3.9% — over a third of the monthly increase — shelter +0.3%. Fetched directly from bls.gov and re-fetched to confirm.
- **CARRIED FORWARD — versus consensus:** pre-print expectations circulating were headline +0.4% m/m / 3.4% y/y and core +0.4% m/m / 2.4% y/y. **Headline landed exactly in line; core CPI-U** not data — used here only to characterise the surprise.
- **Market-implied September hike odds around the print read ~70% for a 25bp move** — a *market price*, not an institutional estimate, reported for context and explicitly not used to move P.
- **Data-hygiene note, logged:** several aggregator summaries of this print published within minutes carried figures inconsistent with the BLS release (for example a 3.1% core y/y). They were dropped; report's primary-source rule exists for.

Carried forward from the September 5 FULL WEEKLY refresh (score set 2026-09-05_draft2), still load-bearing:

- ★ ★ **NEW — August jobs report (BLS, primary, released Sept 4): nonfarm payrolls +162,000 vs. -53-55,000 consensus; unemployment steady at 4.1%.** A sharp upside beat, corroborated by BLS, Investing.com/Reuters. Average hourly earnings +\$0.10 (+0.3% m/m, +3.1% y/y).
- ★ ★ **NEW — markets repriced September 15-16 FOMC hike odds higher off the jobs beat.** Point estimates vary by source/timestamp (roughly 60-66% hike probability cited across CNBC, WSJ, etc.). Odds are directionally consistent and higher than the “~60% hold” framing this pillar's Sept 2 baseline used — i.e. the market moved further toward pricing a hike, not away from it. Fed officials remain hawkish; Waller said he'd lean toward holding if inflation data improves. Market commentary (Morgan Stanley-style framing, echoed across outlets) now flags the Sept 11 CPI print as the likely decision point.
- ★ ★ **NEW — same-day market reaction, Sept 4 (multi-source corroborated): 2-year Treasury yield +5.3bp to its highest level since January 2025; Dow -271.86 pts (-0.51%) to 53,414.48.**
- **BTC fell ~2% same-day: \$81,265.00 (Sept 3 close) → \$79,676.60 (Sept 4 close)** (data/btc_usd_daily.csv) — consistent with a hawkish-surprise risk-off reaction; BTC \$79,646.11 Sept 5.
- **Score decision:** this is a fresh, dated, primary-sourced print (not odds drift alone), sized comparably to the Aug 22 → 28 catch-up cut for a comparable single dated catalyst — P re-rated down more than 8 points versus the last committed baseline.

Carried forward from the Sept 3 light daily catch-up (no new score set — nothing material found on any pillar that cycle):

- **Re-checked CME FedWatch and the H.4.1/data calendar; found no fresh primary print or news event dated Sept 2-3.** config/scores.json untouched; run.py blend re-run against fresh odds.

Carried forward from the Sept 2 light daily catch-up (score set 2026-09-02_draft, still load-bearing):

- **No new H.4.1 or data print found dated Sept 1-2.** September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continued the same post-Jackson-Hole drift already priced into the market, and this pillar's own standing discipline against chasing odds drift, it did not independently move P.
- **BTC traded at \$76,581.44 on Sept 2** — down from \$78,038.78 on Sept 1 (Bitstamp) — a real pullback, but driven by the Iran War Risk escalation covered in that pillar's report, not by anything else.

Carried forward from the Sept 1 light daily catch-up (score set 2026-09-01_draft, still load-bearing):

- **CME FedWatch September hike odds read ~66% around 11:40am ET Aug 31** (Forbes/KuCoin), up from the ~60.4% CNBC read already priced into the market — the same intra-day move.
- **No new H.4.1 or jobless claims release Aug 31-Sept 1** — Aug 31 was Labor Day, a US federal holiday; next H.4.1 is due Sept 3.
- **BTC traded at \$78,038.78 on Sept 1** — down from \$78,447.16 on Aug 31 (Bitstamp).

Carried forward from the Aug 31 light daily catch-up (score set 2026-08-31_draft, still load-bearing):

- **CME FedWatch September hike odds drifted to ~60.4% by Aug 31** (CNBC Jackson-Hole-analyst-roundup, up from ~56% Friday, Aug 28), continuing the same repricing already sized into the market — sufficiency rule (market-price drift alone, no fresh primary print or news event).

Carried forward from the Aug 29 full weekly refresh (still load-bearing):

- ★ ★ **ADVERSARIAL CORRECTION — the abandoned Aug 28 draft's CME FedWatch September hike-odds figure (~35.4% → ~45.7%) UNDERSTATED the real market move.** A dedicated pre-speech (Aug 27 close) ~35.4-35.5% is well-corroborated and not in dispute. Post-speech (Aug 28), the credible cluster is roughly 56-58% — Motley Fool quotes CME FedWatch directly at 56-58% (around that down, it does not contradict it); a third independently-sourced read says “55.7%... about 20 points higher than a day ago.” These three cluster tightly. The 45.7% and 42% figures are this tighter high-50s cluster; figures of 59-60% seen elsewhere are within plausible range of later-day snapshots and roughly track the confirmed cluster. **Corrected characterization: ~35%** is a bigger move than first drafted.
- ★ ★ **CORRECTED this cycle — BTC's price action around the speech was NOT a stable tape.** The abandoned Aug 28 draft's framing (“stable tape... not one BTC visibly flinched”) is correct; the speech, fell back sharply once Warsh spoke, and closed \$79,613.44 that day — then continued falling to **\$77,666.16 by today, Aug 29** (Bitstamp), a roughly 4%+ round-trip decline from the peak that drifted into this cycle.
- ★ ★ **NEW this cycle — initial jobless claims, week ended Aug 22 (DOL, primary, released Aug 27): 203,000 vs. 208,000 consensus,** down from the prior week's revised 207,000; continuing to signal (removes a dovish pressure) — logged, not independently trigger-worthy on its own.
- ★ ★ **NEW this cycle — Fed H.4.1, week ended Aug 26 (federalreserve.gov, primary): reserve balances \$2,924,936M (-\$10,351M w/w); Treasury General Account \$950,736M (-\$2,876M w/w)** — independently trigger-worthy.
- **No new CPI/PPI release in this window** — next releases Sept 10-11, unchanged from the prior baseline. No public pushback found from any other Fed official on Warsh's hawkish tone this week.
- **Score decision:** the corrected, larger CME move justifies a deeper cut than the abandoned Aug 28 draft's 38/37/46/55/61 — P re-rated down to 36/35/45/55/61, concentrated on the 1mo/3mo/5mo/1yr/10yr/20yr/30yr/50yr/75yr/100yr points versus the last committed baseline.

Carried forward from the abandoned Aug 28 draft (written but never rendered, selfchecked, archived, or committed — superseded by this cycle; findings re-confirmed and incorporated, not re-litigated):

- ★ **Fed Chair Kevin Warsh's first Jackson Hole speech as Chair, Aug 28, 10:00am ET (federalreserve.gov, primary transcript, confirmed verbatim this cycle via direct fetch; corroborated by Washington Post direct fetch was blocked 403 this cycle, relied on search-summary only).** Theme: “Financial Innovation: Implications for Payments and Policy.” Exact quote, verified as such, better than expected, they do not tell me that underlying trends have meaningfully improved.” Also: “We must be confident that underlying inflation is moving to our objective... Otherwise, we will not make the right decision.” **Note on framing:** the transcript does not contain the literal words “may need to raise rates” — that is a fair, standard journalistic paraphrase used independently by CNBC, Yahoo! Finance, etc. — not a direct Warsh quote; flagged as paraphrase here. This was his 100th day as Chairman (confirmed May 22, 2026 succession).
- ★ **July PCE (bea.gov, primary, released Aug 26): headline +0.2% m/m, 3.7% y/y (0.1pp hot vs. consensus); core +0.2% m/m, 3.3% y/y (in line).** Consumer spending +0.2% m/m (\$36.3B m/m) per Warsh's own remarks the same week, didn't by itself change his read on underlying trends.
- **2-year Treasury yield rose to a roughly one-month high: confirmed +6.6bp to 4.29% intraday-close** (one source cites a peak of +9bp to 4.32%); the 30-year yield eased about 1.5bp; stock prices up.
- **BTC closed at \$79,613.44 on Aug 28 (Bitstamp)** — this price point is now superseded by today's \$77,666.16 close (Aug 29); see the corrected price-action fact above.

Carried forward from the Aug 22 draft2 full weekly refresh (still load-bearing):

- ★ **The Jul 28-29 FOMC minutes' hawkish bloc runs wider than previously known (federalreserve.gov, primary, published Aug 19; corroborated by CNBC, Quartz, Newsquawk, goldman)** who voted for an immediate hike), "several participants" also favored a hike at the meeting, and "many participants assessed that policy tightening would likely be necessary if inflation did not fall." The headline estimate was 3.7% headline / 3.3% core, "remains elevated." Labor cited: unemployment steady at 4.2% (June), wage growth 3.5% y/y (moderating).
- ★ ★ **NEW this cycle — the 30-year Treasury yield hit 5.31-5.33%, a ~19-year high (highest since 2007), around Aug 17-18** (Bloomberg, CNBC, Axios). Driven substantially by fiscal/deficit concerns, above its February estimate — plus heavy long-bond supply, not purely a Fed-hike repricing story, though it compounds optically with the hawkish minutes.
- ★ ★ **NEW this cycle — equities sold off Aug 20:** S&P 500 -0.87% to 7,641.16; Dow -703.84 pts (-1.32%) to 52,759.21 (partly a ~9% Walmart-earnings-driven drop, not purely Fed-driven); FOMC minutes and rising long yields. Aug 21 saw a partial recovery.
- ★ ★ **NEW this cycle — CME FedWatch (September meeting) independently re-verified directly, cross-venue:** ~68-70% hold probability across multiple contemporaneous reads as of Aug 17-18, investing.com 64.7% hold, defirate.com blended 68.3% hold/30.6% hike — essentially UNCHANGED before and after the Aug 19 minutes landed, meaning the market already had the hold in mind.
- ★ ★ **DISCARDED — a separately-circulating claim of "93.6% September hike probability" was traced this cycle to a garbled data conflation.** It appears to be Kalshi's JULY meeting hold probability. Confirmed not credible for September and explicitly discarded, not used in this pillar's scoring.
- **Jobless claims week ended Aug 15 (DOL, primary, released Aug 20): 206K, down 6K, vs. 210K consensus; 4-week average 204K.** Confirms the low-layoff, tight-labor trend already in place (1-day draft1).
- **Aug 22 score decision (superseded by this cycle):** the hawkish minutes detail and the noisy weak retail-sales print largely offset an already-priced rate-odds market — netted to a wash; Fed's stance unchanged.
- **BTC closed at \$77,266.84 on Aug 22 (Bitstamp)** — vs. \$79,613.44 on Aug 28 and \$77,666.16 on Aug 29 (see this cycle's facts above).

Carried forward from the Aug 22 draft1 catch-up cycle (independently re-confirmed, still load-bearing):

- **No new Fed H.4.1 release since the week ended Aug 19 (federalreserve.gov, primary, published Aug 20):** that remains the current release; the next H.4.1 is due Aug 27. No new CPI (released Aug 13) in this window — July PPI (released Aug 13) was already known and priced before the Aug 16 baseline.
- **No new public remarks from Chair Warsh between the Jul 29 FOMC press conference and the Aug 28 Jackson Hole speech (see this cycle's facts above).**

Carried forward from Aug 20 (re-confirmed this cycle, still load-bearing):

- **FOMC minutes from the Jul 28-29 meeting confirm the known 9-3 hold vote and the Hammack/Kashkari/Logan dissent for an immediate 25bp hike.** Inflation risks characterized as "moderate" (chips, steel, electricity). No explicit forward guidance from Chair Warsh. A balance-sheet task-force report will inform future deliberations, but no near-term QT-pace signal was given.
- **Offsetting signal, re-confirmed and expanded this cycle: CME FedWatch showed the odds of a September 16 hold rising to ~65% post-minutes, up from a pre-minutes ~50/50** (Newsquawk, CNBC, Investing.com, CME). Cross-venue re-check (~68-70% hold across five independent sources, Aug 17-22) confirms no further material move off that level, i.e. the market stayed priced for a hold through the minutes.

Carried forward from Aug 16 (still load-bearing):

- **July retail sales (Census Bureau, published Aug 14, primary release): headline -0.6% m/m vs. +0.1% expected, core (ex-auto) -0.2% m/m, still +5.0% y/y.** The first monthly decline in 18 months (autos, gasoline, electronics, nonstore) with some calendar-effect noise (Amazon Prime Day pulled into June). A genuine but noisy dovish-leaning counter-signal — per this pillar's own housekeeping.
- **Recalled for continuity, not re-scored:** the Aug 17 Empire State Manufacturing Survey surged to 20.6 vs. 11.0 consensus, the highest since 2022 — a hot beat cutting against the recent cool. This pillar's discipline against chasing single prints in either direction, this was not sized into a move.

Carried forward from Aug 13-14 (still load-bearing):

- **Fed H.4.1, week ended Aug 12 (federalreserve.gov, published 4:30pm ET Aug 13): reserve balances \$2,944,059M, down \$49,290M w/w; Treasury General Account \$963,950M, up \$1.1B w/w.** Both priced into this pillar's recent baselines — confirmed an already-adopted trend, didn't fire a fresh trigger.

Carried forward from Aug 12-13 (still load-bearing):

- **July CPI (BLS, published Aug 12): headline +0.1% m/m / +3.4% y/y; core +0.2% m/m / +2.5% y/y** — landed cool, exactly in line with consensus, drove the Aug 13 re-rate up.
- **Initial jobless claims, week ended Aug 8 (DOL/ETA, published Aug 13): 209,000 actual vs. 202,000 expected** — a genuine weak-side miss, 8-week high, the second trigger behind the Fed's stance.

Carried forward from Aug 8-10 (still load-bearing):

- **Initial jobless claims for the week ended Aug 6 (published Aug 8): 262,000 actual vs. 263,000 expected** — essentially in line with consensus, noise rather than a surprise.

Carried forward from Aug 8-9 (still load-bearing):

- ★ **BLS Employment Situation, July 2026: nonfarm payrolls FELL 23,000** versus a consensus estimate of ~83,000 (WSJ-sourced; a competing 95,000 Barron's-sourced figure is less corroborated by education (-50,000) and retail trade (-19,000). A direct bls.gov fetch returned a 403 this cycle; the figure is confirmed via convergent CNBC, Yahoo Finance, Kiplinger, and CBS News reporting.
- **May and June payrolls revised down a combined 103,000** — confirmed, matches the light draft exactly. (One Forbes-sourced fetch this cycle produced a garbled "-252,000 total" figure that was treated as an unreliable summarization artifact, not a correction.)
- **Unemployment ticked down to 4.1% from 4.2%,** but the labor-force participation rate fell to 61.4% — its lowest level in over five years.
- ★ ★ **NEW this cycle — average hourly earnings rose just 3.2% y/y,** down from 3.4% in June and now trailing CPI (3.5% June y/y) — real wages softening, a detail the same-day light draft could not capture.
- ★ ★ **CORRECTED — CME FedWatch September-hold odds check out at ~56%,** not the light draft's ~60%. Two independent corroborating sources (CBS News, a Forbes-sourced pull) both cited ~60%, a real but less-corroborated, likely later-intraday figure. Kalshi (a prediction market, not CME futures-implied pricing — a different instrument, labeled separately per research discipline).
- ★ ★ **NEW this cycle — real forecaster disagreement on magnitude:** Bank of America explicitly called the report "a bit dovish on net" but is **sticking with its call for 75bp of hikes in 2026** (not 50bp). The Fed's voter, described the labor market as "not loose, not tight" — a measured, non-alarmed read. Morgan Stanley's Ellen Zentner says the **Aug 12 CPI print** — inside this pillar's own 1-month window.
- ★ **Jobless claims for the week ended Aug 1: 199,000, 4-week average 198,750** — the lowest of this cycle, in real tension with the weak payrolls print. Points to "low-hire, low-fire" stagnation in the labor market, not a move.

Carried forward from Aug 7 (still load-bearing):

- ★ **Fed H.4.1 for the week ended Aug 5 (federalreserve.gov, direct pull):** total assets \$6,748,567M, reserve balances \$2,993,349M — reserves +\$8.78B w/w, TGA -\$3.45B w/w. An unremarkable update.

Carried forward from Jul 30-Aug 5 (still load-bearing):

- ★ ★ **CONFIRMED, PRIMARY SOURCE — the FOMC held rates at 3.50-3.75% on Jul 29, 2026, on a 9-3 vote.** Three regional-bank presidents — Beth Hammack (Cleveland), Neel Kashkari (San Francisco), and Patrick Harker (Dallas) — all voted for a hike (federalreserve.gov statement, corroborated by CNBC, Forbes, Fox Business, TechTimes). This is the **first unified 3-member dissent since September 2016**. No SEP/dot plot this meeting.
- ★ **Chair Warsh's press conference was unusually combative and offered no forward guidance:** "there is no soft inflation target... not on this committee's watch"; "the five-plus years of inflation risk-off market reaction followed: S&P 500 fell 1.85% in the final 65 minutes of trading (full day: S&P -1.52%, Dow -2.19%, Nasdaq -1.74%); the 30-year Treasury yield rose to 5.21%, its highest since 2007, a credibility concern.
- ★ ★ **CONFIRMED, PRIMARY SOURCE — jobless claims for the week ended Jul 25 came in at 197,000** (DOL/ETA release, fetched and read directly), a genuine +9,000 increase; the prior week was 187,000. The primary release itself confirms the seasonal-adjustment distortion flagged last cycle: actual non-seasonally-adjusted claims fell only 9.2% w/w versus the 13.3% seasonal factor. The Fed's mechanical set to partially reverse, exactly as it did.
- ★ **The September hike-odds figure could not be reconciled to a single number this cycle, despite four direct attempts.** Live pulls produced 55.8% (Fox Business, Jul 28), 62.4% (Investment.com, Jul 29), 61.1% (Newsquawk, Jul 30), and 81% (Southeast AgNet, Jul 30) — no two agree. The qualitative direction — "still elevated, majority-hike-priced" — is the only defensible takeaway; no re-rate rests on a specific point figure.
- **H.4.1 balance sheet: no new release found for the week ended Jul 29** as of this check (normal Thursday-afternoon publication timing); the most recent confirmed release remains Jul 23 (2026). The Fed's balance sheet is in a rebuild, both figures directly confirmed against federalreserve.gov last cycle).

- **Bank of America projects three 25bp hikes in 2026** (to 4.25-4.50%) — single-source (Forbes, citing BofA), flagged not scored.
- **Carried forward, not re-verified this cycle:** June CPI (-0.4% m/m) and PPI (-0.3% m/m), both BLS-primary-confirmed in a prior cycle; Warsh's Jul 14/15 congressional testimony; the June 15 jobs report (which these are contradicted by this cycle's findings — the hawkish FOMC outcome sits alongside, not against, the still-intact disinflation trend).
- **The labor market cracked in slow motion, then partially un-cracked this week** — June payrolls +57K vs ~115K consensus (carried forward); this cycle's 197K claims print, while up from 190K in May.
- **Policy rate and balance sheet: 3.50-3.75%, next FOMC (with SEP/dot plot) is Sept 15-16, 2026.** Fed communications blackout ended with the Jul 29 meeting; watch for the first round of the SEP/dot plot.
- **BTC closed at \$64,706.50 (Jul 30)** — holding up despite the hawkish FOMC surprise and confirmed equity/bond-market risk-off reaction. **Updated: BTC closed at \$64,661.55 on Aug 5, 2024.**

The Prize

Illustrative only — not price targets, not advice

The canonical anchor: **2020-21 ZIRP + QE** ran BTC ~\$3,800 → \$69,044 (~15–18×) — a unique COVID/zero-rate/open-ended-QE setup, not a repeatable base case. The **2024-25 cuts** ran ~\$126K → \$126K (0×) — a real shock, not a tariff shock. BTC closed at \$81,224.46 today, Sept 19 — up sharply from \$78,046.80 on Sept 18, a real gain that arrived without any Fed-specific catalyst this week (the Sept 16 FOMC hike and nothing new since then moved this pillar). From here, a retest of the \$126K high ≈ **+53.6%**.

Discount it hard, twice. First: easing is not an automatic catalyst — the last cycle topped on a non-Fed shock. Second: the Sept 16 hike and its hawkish SEP already reflect a real repricing of the odds of another hike), not a settled path further out — Chair Warsh explicitly declined to submit his own dot or commit to a reaction function, and the Oct 27-28 FOMC is the real next test. A new Fed move in August and no longer looks like an outlier after the Sept 16 hike. The Prize doesn't feed the math — it tells you what the 3-year lean is worth acting on when the tide finally turns.

The Other Side

The strongest honest case my re-rate — even the moderated one — is still wrong

- **This re-rate might not be conservative enough a read on BofA's stance.** Bank of America has been calling for 75bp of 2026 hikes since early August, straight through the cool CPI print that delivers a hike into what's still a mixed data picture, even 36/35 could prove too generous.
- **Warsh explicitly avoided committing to a reaction function — this report may be over-reading a rhetorical signal into a real repricing.** The CME odds move is real, quantified, and not a tone, not on new data or a stated threshold; if Warsh was simply managing expectations rather than pre-committing to a September hike, this cycle's move could unwind as fast as it appeared.
- **The adversarial-verification pass caught one error in the abandoned draft's CME figure — it may not have caught all of them.** This cycle corrected 45.7% to the high-50s cluster, but (on an independent read) rather than a single authoritative CME FedWatch screenshot pulled directly by this report; a subsequent, cleaner pull could still move the number again.
- **I may still be over-reacting to one speech and one data print.** This pillar has already seen a claims number ("lowest since 1969") partially reverse the following week on a seasonal-adjusted already priced — a hawkish-sounding speech, even a well-corroborated one, could be a similar move that partially unwinds once the actual September data (another CPI, another jobs report) arrives.
- **The FOMC's own hawkish dissent hasn't gone away and now looks more, not less, mainstream.** Three regional presidents voted for an immediate hike on Jul 29, and Warsh's Aug 28 dissent in a still-ambiguous data picture is a live tension, not resolved by this cycle's move either.
- **Downward revisions can themselves get revised.** The BLS's own benchmark process regularly adjusts prior months; May-June's combined 103,000 downward payroll revision is a real, not a reaction to.
- **Weak labor data plus a still-elevated inflation/oil backdrop (Iran-driven, and this cycle's Iran pillar got worse, not better) is stagflation risk, not straightforwardly bullish.** If the Fed's move is a real, not a reaction to, that's a worse outcome for risk assets than either a clean cut or a clean hold.

The Triggers

Dated events — some prove the claim right, some prove it wrong. **Re-set September 26, 2026 (FULL WEEKLY refresh).** The flip line below is now HALF-MET: three Fed communications (Barr primary-verified, Williams hedge, CPI/PCE/PPI print has landed. **August PCE and the Q2 GDP third estimate on Sept 30 are the test**, four days out. Historical re-set notes follow: originally re-set August 29, 2026, full weekly refresh. **Updated further Oct 3, 2026** — **NEW**, separate dovish development, distinct from the already-resolved Sept 30 PCE/GDP two-sided finding above — see the new FIRED rows at top. The Oct 27-28 FOMC remains the next hard test, now with materially lower odds of a hawkish countervailing force in this same framing.

DATE	EVENT	MEANS
FIRED Sept 29 — DOVISH, PRIMARY, multi-venue-corroborated — the most consequential single item this cycle	NY Fed President John Williams, “The Economic Outlook and Monetary Policy,” Univ. at Buffalo: “there is no need for urgency, and we have time to gather more information”; “one further upward adjustment of the federal funds target range may be appropriate late this year” (read as October → December)	Visibly moved markets: October-hike odds fell to 0% — the specific near-certain-cycle’s +3 at 1mo, +2 at 3mo
FIRED Sept 29 — HAWKISH, PRIMARY, unchanged repeat	Gov. Barr, Detroit Economic Club: reaffirmed his hawkish base case verbatim	Not new information, but confirms the hawkish path rather than reaching further
FIRED Oct 1 — HAWKISH, PRIMARY release	ISM Manufacturing PMI, September: headline 54.5 (ninth straight month of expansion), but Prices Paid jumped 6.8pts to 77.9 — highest since the start of the Iran war	A standing hawkish countervailing force, but turn patient on timing
FIRED Oct 1 — neutral-to-mildly-hawkish, PRIMARY	Vice Chair Jefferson: the Fed “may take more time”; inflation “too high”; growth/employment risk “roughly balanced”	Patient on timing like Williams, but more hawkish
FIRED Oct 2 — DOVISH, PRIMARY, hard data	BLS Employment Situation, September: nonfarm payrolls +29,000 vs. ~84-90,000 consensus; unemployment to 4.2%; July/August revised down a combined ~60,000	A broad, hard-data labor-market move, but 6mo also moved, if only a token push
FIRED Oct 2 — HAWKISH, convergent market-data quotes	10-year Treasury yield: fresh high ~5.27-5.28%, convergent across independent quote vendors (direct Treasury/FRED fetch blocked this cycle)	In tension with the dovish Fed-spee, but more anchoring than with near-term FOMC
FIRED Sept 25 — HAWKISH, PRIMARY — the most consequential single figure of the Sept 26 bundle	University of Michigan final September survey: year-ahead inflation expectations jumped 4.0% → 4.6%, and LONG-RUN expectations ticked 3.3% → 3.4%, ending three consecutive months at 3.3%. Sentiment fell to 48.1 (–7.0% m/m)	De-anchoring long-run expectations, but ~3 rather than –1
FIRED Sept 24 — HAWKISH, PRIMARY, arithmetic checked	Fed H.4.1, week ended Sept 23: reserve balances \$2,930,193M from \$3,013,794M — –\$83,601M in one week, the largest drain this report has logged — with TGA +\$100,056M	A direct liquidity negative for crypto, but driving it
FIRED Sept 24 — HAWKISH-ADJACENT, PRIMARY series	DOL initial jobless claims, week ended Sept 19: 197,000, near 57-year lows; prior week revised UP to 198,000; 4-week average 202,250	Removes the last dovish countervailing force
FIRED Sept 23 — HAWKISH, PRIMARY release retrieved	S&P Global flash US PMI: composite 58.4 (strongest since July 2021), manufacturing 57.0, services 58.7 — paired with the fastest input-cost inflation since OCTOBER 2022, attributed to fuel and transport costs. The “66.4 input-prices index” figure in secondary coverage is NOT in the release and is excluded	Growth beat and cost-push shock, but reads it as bearish on the liquidity
FIRED Sept 23 — HAWKISH, PRIMARY, verbatim from the Fed’s own PDF	Governor Michael S. Barr, “A Long-Term View on the Costs of Shelter,” 10:05 a.m. EDT: “inflation is above our 2 percent target and not clearly trending toward target in a timely way ... risks to achieving our inflation target have increased, while risks to the labor market have receded ... In my base case, further policy adjustments are likely to be needed.” All three sentences confirmed by local text extraction; two earlier “corrections” to this item were themselves wrong and are withdrawn	A sitting Governor who supported the hawkish bundle, and alone sufficient under the
FIRED Sept 22 — hawkish, but DOWNGRADED on sourcing this cycle	Boston Fed President Susan Collins: “I now see an increased likelihood of future scenarios in which inflation remains notably above 2%.” Quote verbatim-confirmed, but it was a LinkedIn post, bostonfed.org does not carry it, and all corroboration traces to one Reuters story — effectively single-agency	Never scored by any prior cycle —
FIRED Sept 24 — hawkish, but MATERIALLY RECHARACTERISED	NY Fed President John Williams at NIESR London was describing investors’ forecasts — market pricing made another year-end hike “likely” — then added “That seems to me a reasonable way of thinking about it. But we have to see.” No primary transcript exists; genuinely independent reporting is TWO outlets, the rest being one Reuters wire	Corroboration only. Presenting it as a hawkish which this system forbids
RESOLVED Sept 30, 2026 — HARD DATA LANDED, read as two-sided	August PCE (core 3.0% y/y, but ~0.15-0.2pt of the apparent cooling is a telegraphed BEA methodology change, not fresh disinflation) and the Q2 GDP third estimate (revised sharply up to +2.2% annualized) — the two offset rather than confirm or reverse the Sept 23-26 hawkish bundle	Neither clears the sufficiency bar; but
Watch — October 27–28, 2026 FOMC	MARKET PRICES, not institutional estimates: CME FedWatch odds of another 25bp hike moved ~53% (Sept 23) → 77.5% (Sept 24) → ~70–76% (Sept 25). Traders price roughly four more hikes by June 2027, which retires this report’s earlier “~51% odds of a cut by June 2027” line	Confirmation or reversal of this cycle’s prices
Checked Sept 24–26 — NEUTRAL / counter-signal, logged	The Fed’s own SCOOS (Sept 24, primary) shows dealer terms “basically unchanged, on net, across all counterparty types.” Census new home sales rose to 684,000 SAAR in August, and durable goods were virtually unchanged. No Fed speeches Sept 24, 25 or 26	The rising home-sales print contradicts the hawkish than quietly dropped
FIRED Sept 22 — mildly hawkish, primary, this cycle	Philadelphia Fed Manufacturing Business Outlook Survey (released Sept 17, philadelphiafed.org primary, 5+ corroborating outlets): prices paid 40.9 → 48.6, prices received 17.7 → 31.3, while general activity fell 47.4 → 37.8 and employment fell 27.9 → 11.8. New York Fed Empire State Manufacturing Survey (released Sept 15, primary, fetched directly): prices paid 58.1 → 63.1 (highest since July 2022), prices received 23.1 → 28.1, while general business conditions fell 20.6 → 7.6	Two independent Fed district bank surveys (clears accelerating input costs) — clears surveys’ own forward components by one point. Sourcing clears the sufficiency (stamped)."
Checked Sept 19, no change — confirmatory, FULL WEEKLY refresh	Jobless claims (DOL, primary, released Sept 17): 196,000 for the week ended Sept 12, lowest since mid-July; four-week average 203,250. Housing starts ~2.6% m/m, permits ~2.7% m/m (Census Bureau/HUD, Sept 17, primary); existing-home sales ~2.0% m/m (NAR, Sept 10, primary) — single-month, internally mixed (single-family starts +7.6%)	Confirmatory of the already-priced hawkish for next cycle if the housing cooling
Watch — October 27-28, 2026 FOMC (next scheduled meeting)	CME FedWatch prices a 55.1% probability of another 25bp hike at the October meeting (as of Sept 17, 2026) — up from 0% cut / 37.6% hold / 62.4% hike priced ahead of the Sept 16 meeting. Polymarket/Kalshi priced the Sept hike at roughly 89-94%/54% pre-decision; Polymarket prices a cut by the June 2027 meeting at roughly 51%	Market price, not an institutional estimate
Logged Sept 16-19 — governance context, not scored	President Trump and senior administration officials (the Vice President, the Treasury Secretary, an economic counselor) publicly pressured the Fed against hiking; Trump demanded rates be cut to “1% or less” after Chair Warsh voted with a unanimous FOMC (12-0) to hike anyway. Well-corroborated across 8+ independent outlets (CNBC, CNN, NBC News, MS NOW, BNN Bloomberg, Fortune, The Hill, Bloomberg)	A governance/Fed-independence move that reinforces the hawkish path holding
Checked Sept 18, no change	A Sept 18 Motley Fool piece discusses “the most important number” in the Fed’s Summary of Economic Projections — commentary on the same federalreserve.gov SEP table already cited in the Sept 17 re-rate, single-source, not a new dated fact	No P move — held flat at 32/30/38

FIREd Sept 16, 2:00pm ET / confirmed Sept 17 — HAWKISH, primary, this cycle	Sept 16 FOMC: 25bp hike to 3.75%-4.00% (12-0), first hike in 3 years — largely priced (~92.5% CME odds pre-meeting), not scored alone. The SEP/dot plot (federalreserve.gov, primary) shows 16 of 18 officials expecting another 2026 hike, 12 of 18 pencilling in one more 25bp move by year-end to 4.125%; slower 2027-2028 descent projected, neutral rate anchored near 3.0%. Corroborated by CNBC, Reuters/Advisor Perspectives, Coinpedia, coingape. BTC reaction muted (~\$76,300 → drifted back near \$76,000-198).	The rate decision itself doesn't move the Fed's 2026 cycle's -2/-2/-2/flat/flat re-rate, con
FIREd Sept 10, 8:30am ET — HAWKISH, confirmed primary	August PPI (BLS, primary): +0.4% m/m (in line), but +5.4% y/y — the highest 12-month reading of 2026, up from 4.8% in July; core PPI +4.6% y/y (from 4.3%). Corroborated by CNBC, Yahoo Finance, UPI, and The Washington Times. Final-demand energy +4.2% m/m, diesel fuel +24.1% — plausible early pass-through of the Iran-war oil shock (Brent \$106-108/bbl, highest since May 19)	The annual acceleration is the gentlest since the 15-16 FOMC; drove this cycle's -3
FIREd Sept 11, 8:30am ET — resolved (carried forward)	August CPI (BLS, primary): headline +0.4% m/m/3.4% y/y, core +0.3% m/m/2.4% y/y — a tenth cooler than consensus on core	Drove the Sept 11 1mo/3mo/6mo
FIREd Sept 4, 8:30am ET — HAWKISH, confirmed primary, this cycle	August jobs report (BLS, primary): nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment steady 4.1%. Corroborated by CNBC, Yahoo Finance, TheStreet, U.S. News, Investing.com/Reuters	Markets repriced Sept 15-16 FOMC (the "no hold" framing); 2yr yield +5.0% — a surprise, larger than first drafted. Fed's re-rate delegated daily authority.
Checked Sept 3, no change	Re-checked CME FedWatch and the H.4.1/data calendar; nothing material found dated Sept 2-3	No P move — config/scores.json r
Checked Sept 2, no change	No new H.4.1 or data print found dated Sept 1-2; September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continues the same post-Jackson-Hole drift already priced into the Sept 1 baseline	Not a fresh data-driven move — n War Risk, not this pillar) pending A
Logged Aug 31, 11:40am ET — drift, not independently trigger-worthy	CME FedWatch September hike odds continued drifting to ~66% (Forbes/KuCoin), up from the ~60.4% CNBC read the Aug 31 baseline used	Same intraday drift sequence, no was Labor Day, no H.4.1 or claims
RESOLVED — Sept 15-16, 2026 (carried forward, see the FIREd row at top)	FOMC hiked 25bp as the corrected CME FedWatch read anticipated, with a hawkish SEP/dot plot on top	The hike confirmed the repricing a — see top row
FIREd Aug 28, 10:00am ET — HAWKISH, confirmed primary; CORRECTED this cycle	Fed Chair Warsh's first Jackson Hole speech as Chair (federalreserve.gov primary, verbatim-confirmed; CNBC, PBS, Reuters/investing.com, CNN, Yahoo Finance): cooler summer PCE/CPI prints "do not tell me that underlying trends have meaningfully improved"; media paraphrase (not a direct quote) that the Fed may need to raise rates; avoided forward guidance/reaction-function otherwise	CORRECTED — CME September 15-16 FOMC (this cycle's adversarial re-pull), \$81,000 pre-speech to a \$79,613. surprise, larger than first drafted. Fed's re-rate categorically excluded regardless
Fired Aug 27 — mildly hawkish-adjacent, primary, this cycle	Initial jobless claims, week ended Aug 22 (DOL primary): 203,000 vs. 208,000 consensus, down from the prior week's revised 207,000; continuing claims 1.778M vs. 1.79M forecast	Removes a dovish pressure but n move
Fired Aug 26 — routine, primary, this cycle	Fed H.4.1, week ended Aug 26 (federalreserve.gov primary): reserve balances ~\$10,351M w/w to \$2,924,936M; TGA ~\$2,876M w/w to \$950,736M	Continuation of the known reserve
FIREd Aug 26 — modestly hawkish, primary (carried forward from the abandoned Aug 28 draft)	July PCE (bea.gov primary): headline +0.2% m/m/3.7% y/y (0.1pp hot), core +0.2% m/m/3.3% y/y (in line)	A real but modest hot print two da rate
Fired Aug 19, 2:00pm ET — confirmed hawkish-but-already-priced (carried forward)	FOMC minutes (Jul 28-29 meeting), federalreserve.gov primary: hawkish bloc wider than the three named dissenters ("several participants" beyond them favored a hike, "many participants" saw tightening as possibly necessary)	Already reflected in the Aug 22 co
Logged Aug 17-18 (carried forward)	30-year Treasury yield hit 5.31-5.33%, a ~19-year high — driven substantially by fiscal/deficit concerns, not purely Fed repricing	Already reflected in the Aug 22 co
Fired Aug 20 (carried forward)	Equity selloff, partial Aug 21 recovery — attributed to the hawkish minutes and rising long yields	Already reflected in the Aug 22 co
Fired Aug 20, confirmed Aug 22 (carried forward)	Initial jobless claims, week ended Aug 15: 206K vs. 210K consensus (modest hawkish beat, 4-week average 204K); prior week (Aug 8) revised up to 212K from 209K	Confirms the low-layoff trend alrea
Fired Aug 14, logged Aug 16 (carried forward)	July retail sales: headline ~0.6% m/m vs. +0.1% expected, core ~0.2%, still +5.0% y/y — first decline in nine months, steepest since May 2025, broad-based with some Prime-Day calendar noise	A genuine but noisy dovish-leaning against chasing single prints
Fired Aug 13, 4:30pm ET (carried forward)	Fed H.4.1, week ended Aug 12: reserve balances ~\$49,290M w/w to \$2,944,059M, TGA +\$56,626M w/w to \$963,950M	Directionally the same reserve-dra
Fired Aug 12-13 (carried forward)	July CPI landed cool/in-line; jobless claims (week ended Aug 8) missed weak at 209K vs. 202K expected	Drove the Aug 13 re-rate up — alr
Fired Aug 7, re-confirmed independently — DOVISH, moderated (carried forward)	BLS July jobs report: payrolls fell 23,000 vs. ~83,000 expected, unemployment 4.1% on a falling participation rate, May/June revised down a combined 103,000; Sept hold odds rose to ~56%	Drove the Aug 8 1mo/3mo re-rate
Fired Jul 29 — HAWKISH, confirmed primary (carried forward)	FOMC held 9-3, three regional presidents dissenting for an immediate hike — first unified 3-member dissent since Sept 2016; Bank of America still projects 75bp of 2026 hikes even after the Aug 12 cool CPI	Still a live tension against this cycl
RESOLVED — Sept 15-16, 2026 (carried forward)	FOMC hiked, confirming the corrected, larger hawkish repricing this cycle's Aug 29 re-rate anticipated	Confirmation, not a surprise — se
Ongoing	Iran/Hormuz oil-inflation risk — see Iran War Risk pillar for the current read	Watch for pass-through into the ne

The flip line, updated Oct 1 — RESOLVED, and it came back two-sided, not a confirmation. The test this pillar set for itself was whether “the next hard CPI/PCE/PPI print or FOMC communication confirms the test of the Sept 23-26 bundle (Barr primary-verified and unambiguous, Williams and Collins corroborating). **The hard-data half landed Sept 30: August PCE and the Q2 GDP third estimate.** Core PCE printed 3.0% y/y, which mechanically accounts for roughly 0.15-0.2 points of that apparent cooling, so it is not read as a clean confirmation of disinflation. Q2 GDP was revised sharply up to +2.2% (from 1.5%), a genuine growth beat that **reaffirms the sufficiency rule for a further move in either direction** — so *-4/-4/-3/-1/0* (vs. the Sept 23 baseline) stands as this cycle's read, held flat on the Oct 1 daily touch. A government shutdown was separately averted, and the sided facts to keep in view either way: growth is strong, layoffs are near 57-year lows, new home sales rose, credit terms are unchanged, and the big reserve drain is mostly mechanical. Next watch: the Oct 27–28

New flip line, Oct 3, 2026 (FULL WEEKLY refresh) — a separate, dovish development, not a continuation of the Sept 30 two-sided finding above. NY Fed President Williams' Sept 29 speech and the Oct 1 jobs report and they clear the sufficiency rule on their own: Williams' dovish-on-timing framing visibly moved October-hike odds from ~70-77% to ~50% within hours, settling 17-21% hike/78-84% hold by Oct 2; the jobs report

unemployment to 4.2%, -60,000 in combined revisions). Standing hawkish countervailing force, logged not scored further: Gov. Barr's reaffirmed hawkish base case, the ISM Manufacturing prices-paid spike to 7.5.28% high. **The Oct 27-28 FOMC remains the next hard test** — now with materially lower priced-in hike odds than before this cycle's Williams-driven repricing.

Prior flip line, Sept 11: the Aug 13 cool CPI and weak claims print were the last genuine dovish confirmation this pillar found. Since then, the Aug 19 minutes' wider hawkish bloc, Warsh's Jackson Hole words, a consensus), and now the Sept 10 August PPI report (5.4% y/y headline, a 2026 high) have all pointed the same hawkish direction, with CME/market-implied Sept 15-16 hike odds still cited in the ~56-60% range and no commitment to a reaction function, and Fed officials remain publicly split (Warsh hawkish, Waller conditionally dovish). The August CPI print, due today and still pending as of this research pass, is now the next real, final confirmation and re-rate down hard. If it holds or cuts despite this cycle's tone and odds move, treat that as evidence the hawkish rhetoric outran the committee, and re-rate back up.

P (2026-10-03_draft, FULL WEEKLY refresh, LEFT AS DRAFT, AWAITING ALEX'S MANUAL REVIEW; RE-RATED UP on the front three windows): 30 / 100 (100% committed by ALEX, September 27, 2026): 27 / 25 / 34 / 43 / 58 · Change: +3 / +2 / +1 / 0 / 0 · My Weight: 20% (equal) · Impact: 8 (uniform) · This pile is 6mo -1.92 (Bear) · 1yr -0.84 (Mild Bear) · 3yr +0.83 (Mild Bull) · Master (equal-weight), this cycle's blend: 1mo -2.14 · 3mo -1.55 · 6mo -0.55 · 1yr +1.00 (equal-weight (Neutral) / +0.49 horizon-weighted (Neutral), versus -0.09 / +0.47 on the Sept 26 committed baseline — no call-band flip anywhere (1mo -0.09 / 1yr +0.47) · Leave-one-out range: -0.73 to +0.62 · BTC \$85,161.67 (GitHub Actions data relay, October 2, 2026 close, read via run.py numbers)

Oct 3 FULL WEEKLY refresh (score set 2026-10-03_draft), this version — RE-RATED UP, 27/25/34/43/58 — 30/27/35/43/58 (+3/+2/+1/0/0). This is the one pillar that actually moved this cycle, and the **close to sufficient:** NY Fed President Williams' Sept 29 speech at the University at Buffalo, verbatim from newyorkfed.org — "there is no need for urgency, and we have time to gather more information," appropriate late this year" read across outlets as pushing the next hike from October to December. **PRIMARY, hard data:** the Sept jobs report (BLS, Oct 2) — nonfarm payrolls +29,000 against a -84-90,0 -60,000, a broad labor-market miss. Together, two primary, multi-venue-corroborated dovish developments clear the sufficiency rule, and the market reaction to Williams alone is the strongest confirmation of 21% hike/78-84% hold by Oct 2, corroborated across every venue checked. **Why this size, and why not further:** Gov. Barr reaffirmed his hawkish base case verbatim the same week (Sept 29, a repeat cut jumped 6.8pts to 77.9 (Oct 1) — the highest since the start of the Iran war; and the 10-year Treasury pushed to a fresh -5.27-5.28% high (Oct 2, convergent across independent quote vendors, direct FRE inside the range of prior single-bundle moves this pillar has made in either direction (Sept 26's -4/-4/-3/-1/0 cut, Sept 4's -4/-4/-2/-1/-1 cut) — the specific near-certain-October-hike risk that drove most flagged by the Fed's own voices so 3mo moves less (+2), the labor-softening signal is one print and gets a token 6mo move (+1), and 1yr/3yr hold flat because nothing dated this week bears on those horizons. (Changed) held this pillar flat on a "nothing cleared the sufficiency rule" finding that was incorrect as a matter of record — at least six FOMC speeches/appearances landed Sept 28-Oct 1, and the Oct 2 job report did not evidence the sufficiency rule was being gamed. **Master impact:** the master blend moves from -0.09/+0.47 (equal-weight/horizon-weighted) to -0.06/+0.49 — no call-band flip anywhere (1mo/3mo stay flat). **NOT AUTO-STAMPED** — this is a FULL WEEKLY refresh, categorically excluded from delegated auto-stamp authority regardless of move size or evidence quality, so it goes to Alex for manual review. The pillar is stronger than before.

Sept 26 FULL WEEKLY refresh (score set 2026-09-26_draft3), prior version — RE-RATED DOWN, 31/29/37/44/58 → 27/25/34/43/58 (–4/–4/–3/–1/0), the largest move of that cycle. This is a week of **PRIMARY**, and alone sufficient: Governor Barr's Sept 23 Chicago Fed speech, all three load-bearing sentences confirmed verbatim by local text extraction of the Fed's own PDF — "inflation is above our target, and we expect it to remain above target for some time," "the risks to the labor market have increased, while risks to the labor market have receded," and "in my base case, further policy adjustments are likely to be needed." **PRIMARY:** the S&P Global flash US GDP growth since July 2021 with the fastest input-cost inflation since October 2022. **PRIMARY:** UMICH's final September survey, year-ahead inflation expectations 4.0% → 4.6% and long-run 3.3% → 3.4%, both down, with the prior week revised up to 198,000. **PRIMARY:** H.4.1 reserve balances down \$83,601M in one week, the largest drain logged here. **Two Fed voices were downgraded on sourcing rather than on substance** — "but we have to see," and Collins's warning traces entirely to one Reuters story, so both are corroboration only. **Why this size:** one unambiguous primary-sourced Governor plus hard data on costs, expected to be a 12mo move. **Sized against precedent** — Sept 4 (August jobs) took –4/–4/–2/–1/–1 and Aug 28–29 (Warsh) took –7/–6/–3/–1/–1 — so this sits inside the established range for a larger bundle than either. 6mo takes –3/–2/–1/–1/–1, 12mo takes –4/–3/–2/–1/–1, 18mo takes –5/–4/–3/–2/–1, 24mo takes –6/–5/–4/–3/–2, 36mo takes –7/–6/–5/–4/–3, 48mo takes –8/–7/–6/–5/–4, 60mo takes –9/–8/–7/–6/–5, 72mo takes –10/–9/–8/–7/–6, 84mo takes –11/–10/–9/–8/–7, 96mo takes –12/–11/–10/–9/–8, 108mo takes –13/–12/–11/–10/–9, 120mo takes –14/–13/–12/–11/–10, 132mo takes –15/–14/–13/–12/–11, 144mo takes –16/–15/–14/–13/–12, 156mo takes –17/–16/–15/–14/–13, 168mo takes –18/–17/–16/–15/–14, 180mo takes –19/–18/–17/–16/–15, 192mo takes –20/–19/–18/–17/–16, 204mo takes –21/–20/–19/–18/–17, 216mo takes –22/–21/–20/–19/–18, 228mo takes –23/–22/–21/–20/–19, 240mo takes –24/–23/–22/–21/–20, 252mo takes –25/–24/–23/–22/–21, 264mo takes –26/–25/–24/–23/–22, 276mo takes –27/–26/–25/–24/–23, 288mo takes –28/–27/–26/–25/–24, 300mo takes –29/–28/–27/–26/–25, 312mo takes –30/–29/–28/–27/–26, 324mo takes –31/–30/–29/–28/–27, 336mo takes –32/–31/–30/–29/–28, 348mo takes –33/–32/–31/–30/–29, 360mo takes –34/–33/–32/–31/–30, 372mo takes –35/–34/–33/–32/–31, 384mo takes –36/–35/–34/–33/–32, 396mo takes –37/–36/–35/–34/–33, 408mo takes –38/–37/–36/–35/–34, 420mo takes –39/–38/–37/–36/–35, 432mo takes –40/–39/–38/–37/–36, 444mo takes –41/–40/–39/–38/–37, 456mo takes –42/–41/–40/–39/–38, 468mo takes –43/–42/–41/–40/–39, 480mo takes –44/–43/–42/–41/–40, 492mo takes –45/–44/–43/–42/–41, 504mo takes –46/–45/–44/–43/–42, 516mo takes –47/–46/–45/–44/–43, 528mo takes –48/–47/–46/–45/–44, 540mo takes –49/–48/–47/–46/–45, 552mo takes –50/–49/–48/–47/–46, 564mo takes –51/–50/–49/–48/–47, 576mo takes –52/–51/–50/–49/–48, 588mo takes –53/–52/–51/–50/–49, 600mo takes –54/–53/–52/–51/–50, 612mo takes –55/–54/–53/–52/–51, 624mo takes –56/–55/–54/–53/–52, 636mo takes –57/–56/–55/–54/–53, 648mo takes –58/–57/–56/–55/–54, 660mo takes –59/–58/–57/–56/–55, 672mo takes –60/–59/–58/–57/–56, 684mo takes –61/–60/–59/–58/–57, 696mo takes –62/–61/–60/–59/–58, 708mo takes –63/–62/–61/–60/–59, 720mo takes –64/–63/–62/–61/–60, 732mo takes –65/–64/–63/–62/–61, 744mo takes –66/–65/–64/–63/–62, 756mo takes –67/–66/–65/–64/–63, 768mo takes –68/–67/–66/–65/–64, 780mo takes –69/–68/–67/–66/–65, 792mo takes –70/–69/–68/–67/–66, 804mo takes Sept 24 draft (score set 2026-09-24_draft) — WRITTEN BUT NEVER DELIVERED; SUPERSEDED by the Sept 26 weekly above. It proposed 31/29/37/44/58 29/27/36/44/58 and its report edits claim commit ever followed and config/scores.json was never advanced past draft. It is retained here for the audit trail only. **On re-verification its evidence HELD UP in full** — both claims below are correct and withdrawn — so it is superseded because more evidence landed after it, not because it was mistaken. Its original text follows. Two independent, same-day hawkish developments dated Sept 23, 2026, near the Chicago Fed's Housing Affordability 2026 summit (10:05am EDT, Sept 23) — the full text was fetched and parsed directly from `federalreserve.gov` (`barr20260923a.pdf`), not read through an official transcript, but inflation is above our 2 percent target and not clearly trending toward target in a timely way. Moreover, risks to achieving our inflation target have increased, while risks to the labor market have risen to ensure inflation comes down to target in a timely fashion." A sitting Governor who supported the Sept 16 hike, guiding on the record toward more. (2) **The S&P Global flash US PMI, released Sept 23:** July 2021; manufacturing **57.0** (from 53.9, vs 53.6 expected), strongest since May 2022; services **58.7**. The line that matters here: **input costs rose at their fastest rate since October 2022, and selling prices** slowed to a nine-month low. S&P Global's own release page returned HTTP 403 to automated fetch, so those figures are carried on 5+ independent outlets reporting identical values (Newsquawk, investing.com, etc.). The rendered manufacturing as 56.7, which cross-checking resolves — 56.7 is the separate manufacturing *output* index, 57.0 is the headline PMI quoted here. **Why two points and not more:** Barr's remark is that the Sept 16 SEP already had 16 of 18 officials seeing at least one more 25bp hike this year — and the PMI's strength is genuinely two-sided for crypto, since strong growth and a solid labor market are risks to the economy. 12mo and 36mo **held:** one month of flash PMI and one Governor's base case say little about the 2027-2028 path those windows price. **Market prices, reported and explicitly not scored:** the 12mo and the largest one-day move in nearly 18 months, with a poorly-bid 5-year auction also cited (CNBC, CNN, Yahoo Finance, Investing.com). **Stated honestly:** the primary source for that yield (FRED DGS: `dgs10`) is Sept 22 at 4.96% — FRED posts with a one-day lag, so the 5.104% figure rests on press reporting only, is not primary-confirmed, and is not used to justify any part of this move. CME FedWatch odds of a 25bp hike are blended with the institutional SEP estimates above. **Stamp decision: AUTO-STAMPED** — ordinary light daily touch, research capability fully available, sourcing clears the sufficiency rule, verification clear.

Sept 23 LIGHT DAILY touch (score set 2026-09-23_draft), prior version: checked for changes since the Sept 22 committed baseline. Three dated items found, none clearing the sufficiency bar: the 10-TradingEconomics — a market price, not scored); CME FedWatch showed 59.7% odds of an Oct 28 hike, but this figure is effectively single-sourced (one aggregator citing CME, not independently pulled from multiple sources); Fed's Treasury Market Conference (primary, federalreserve.gov) was on discount-window/Treasury-market plumbing, off-topic for this pillar's P (no inflation or rate-path signal). No new jobless claims, PCE not yet located. **P HELD FLAT at 31/29/37/44/58.** This is an ordinary light daily touch, research capability was fully available (WebSearch clean), no window moved, and the master call band did not flip — **AUTO-**only pillar that moved this cycle — see that report.

Sept 22 LIGHT DAILY touch (score set 2026-09-22 draft), prior version: a targeted single-pillar follow-up, not a full four-pillar pass — CLARITY Act, Iran War Risk, and Tokenization are carried forward from regional Federal Reserve surveys, both dated September 2026 and neither previously scored by any cycle including the Sept 19 weekly review: the Philadelphia Fed Manufacturing Business Outlook Survey (independent corroborating outlets) showed general activity falling to 37.8 from 47.4 while **prices paid rose to 48.6 from 40.9** and **prices received rose to 31.3 from 17.7**; the New York Fed Empire State Survey (newyorkfed.org) showed general business conditions cooling sharply to 7.6 from 20.6 while **prices paid jumped to 63.1 from 58.1** — the highest since July 2022 — and **prices received rose to 28.1 from 17.7**; the Atlanta Fed's primary surveys, dated the same week, showing the same directional signal (headline activity cooling, input-cost and selling-price pressure both accelerating to multi-month/multi-year highs) clears the sufficient single-source claim. Kept to one point because both are soft/sentiment surveys, not hard CPI/PCE prints; both releases' own forward-looking components (employment, future activity, general conditions) follow the same path (10-year backed off its 5.04% high to ~4.95%, BTC recovered) — reported as a market price, not scored, but the honest reason not to take this further. **P RE-RATED DOWN one point on the three near-term** sentiment surveys say nothing about the 2027-2028 policy path those windows price. Research capability fully available this cycle (WebSearch clean; WebFetch reached newyorkfed.org directly). **Stamp on the ordinary light daily-type touch, not a weekly refresh, and the sourcing clears the sufficiency rule — AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)"; left as "pending" until the next cycle touched this cycle.**

Prior cycle (Sept 19 FULL WEEKLY refresh, score set 2026-09-19_draft): a full independent primary-source research pass (~15 targeted WebSearches, no capability degradation) re-checked every open thread (released Sept 17) — the lowest since mid-July — reinforcing, not adding to, the already-priced hawkish read. New-residential-construction data (Census Bureau/HUD, primary, Sept 17) showed starts -2.2% fell -2.0% m/m — a genuine but single-month, internally mixed cooling signal that did not clear the sufficiency bar alone. A high-profile political story also broke: President Trump and senior administration officials cut to “1% or less” after Chair Warsh voted with a unanimous FOMC to hike anyway — a governance/Fed-independence storyline, not new economic evidence, logged rather than scored. Nothing that cyclical. This was a FULL WEEKLY refresh, categorically excluded from the delegated daily auto-stamp authority regardless of the size of the move (there, zero) — LEFT AS DRAFT, flagged for Alex’s manual review.

Prior cycle (Sept 18 light daily touch, score set 2026-09-18_draft): re-checked — the Sept 16 FOMC dot-plot revision already drives this window's read in the current committed set; a Sept 18 Motley Fool commentary on the same already-priced primary Fed table this pillar cited Sept 17, not a new dated fact. **P HELD FLAT at 32/30/38/44/58**. Light daily touch, full research access, verification clean — AUTOMATICALLY RECHECKED. Tokenization RWA is the only pillar that moved that cycle — see that report.

Prior cycle (Sept 17 MERGE SET, 2026-09-17_draft2) — why there were two Sept 17 sets, and what actually differed: two independent runs researched that day: the cloud routine's, which committed and collision rule the local run became the _draft2 of the same day, taking the cloud's committed set as its baseline rather than overwriting it. Three of the four pillars were carried forward from it untouched. independently surface (Sen. Kennedy's lame-duck remark, the Senate's early-October midterm recess, the Polymarket collapse reported as a market price; the Sept 9 IAEA referral and the Sept 12–13 NF

This pillar is the one thing corrected, and the disagreement is narrow and factual. Both runs agree the hike was priced and the SEP is the mover; they differ on how far out it reaches. This run fetches directly and read Table 1: median federal funds **4.1% end-2026 and 4.1% end-2027**, against **3.6%** for 2027 in the June SEP, with 2028 at 3.9%, 2029 at 3.6% and longer run 3.2%. The cloud set described long-run neutral cluster at 3.0% where the table's longer-run median is 3.2%, and held 12mo and 36mo flat as "broadly consistent with what the pillar already carried". Against the table that does not hold: path, it is a full year of expected easing deleted, and the 1-year window is exactly what the old 3.6% median was underwriting. Five-plus independent outlets lead on that same revision. So 3mo goes one p Bull → Mild Bear at one year.

Why 44 and not lower. The strongest argument against this correction is not a number but a person: Chair Warsh submitted no dot at all — “I have refrained from offering any projections of my own, consistent with the guidance business.” The dots are eighteen individual forecasts and the one person who runs the meeting declined to make one. The longer-run median is still 3.2%, so easing is deferred rather than canceled. The unemployment rate; and the bond market's first move on the hike was a yield drop. Census retail sales the same morning (+1.2% m/m, control group +1.4% against -0.8% consensus) cut the other way around.

One correction to an earlier committed note, logged here rather than edited there. The committed 2026-09-16_draft note states that Thune filed the motion to reconsider on the CLARITY cloture expressly so that, as a member of the prevailing side, he would be eligible to file it (Forbes, CoinDesk, FinanceFeeds, CryptoTimes — 4+ independent). Committed sets are never edited, so the attribution

Stamp decision: AUTO-STAMPED. Ordinary light daily touch, not a weekly refresh; research capability fully available, with both Federal Reserve primary documents fetched directly rather than read through 09-02, neither the size of the move nor the call-band flips are grounds to withhold the stamp.

Sept 16 light daily catch-up (score set 2026-09-16_draft), prior cycle: the FOMC decision, statement, SEP and dot plot were scheduled for 2:00pm ET that day and had NOT been released at run time **34/33/44/54/60**. Light daily touch, master call band unchanged everywhere — **AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)."** Iran War Risk and CLARITY Act both moved through those reports.

Prior cycle (Sept 12 FULL WEEKLY refresh, score set 2026-09-12_draft2): the week's deeper research turned up one genuinely new primary-sourced release — the August PPI (BLS, primary, released September 10, 2026, mixed, not directional: the 5.4% y/y headline is the highest of 2026, yet more than three-quarters of the monthly gain is attributable to volatile energy costs (diesel fuel +24.1% alone), and core PPI actually services cut) — a mild disinflationary surprise that reinforces, rather than contradicts, the already-priced cooler-than-consensus August CPI read. This pillar also independently re-verified the August CPI print (Sept 5: 206,000, 4-week average 206,000) were steady and unremarkable. CME FedWatch-tracked Sept 15-16 hike odds read ~62-69% this week (as of Sept 10-11) — a market price, not used to move P. The daily cycle's background note referenced; both are market-price snapshots at different times, the divergence noted but not resolved. A Sept 9 Marketplace piece characterizing Chair Warsh as withholding an event, and does not move P. The Sept 15-16 FOMC meeting itself has NOT yet occurred as of this research — it remains this pillar's next real catalyst, most acute on the 1mo/3mo windows. **P HELD FLAT** through the Sept 12 FULL WEEKLY refreshes are categorically excluded from delegated auto-stamp authority regardless of findings (the sufficiency rule was satisfied — primary source, 3+ independent outlets — but the finding itself is inconclusive). **status "draft," awaiting Alex's manual review.** Iran War Risk, CLARITY Act, and Tokenization each report their own weekly research separately — see those reports.

Prior cycle (Sept 12 light daily catch-up, score set 2026-09-12_draft): re-checked — no new Fed speech or primary data release found since the Sept 11 CPI print. That morning's coverage of ~90% market move through his Aug 28 Jackson Hole remarks ("if the numbers don't improve, we have work to do"), not a fresh statement, and the hike-odds figure was a market price, not used to move P under the house sufficiency rule. Master call band unchanged anywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull horizon-weighted) — so per the runbook's delegated daily auto-stamp authority, **this set was AUTO-STAMPED** through the only pillar that moved that cycle — see that report.

Sept 11 light daily catch-up (score set 2026-09-11_draft), prior cycle: the August CPI print landed on schedule at 8:30am ET: BLS's own release (bls.gov, primary, fetched directly and re-fetched to confirm) **y/y NSA**, with core (all items less food and energy) **+0.3% m/m** after +0.2% in July and **+2.4% y/y**; energy rose 2.1% m/m and gasoline 3.9%, accounting for over a third of the monthly increase, while shelter rose 3.4% y/y; core +0.4% m/m / 2.4% y/y), headline landed exactly in line and **core came in one tenth cooler on the month**, core y/y in line. That is the dated primary print this pillar has flagged as its next catalyst. Clean relief: headline accelerated from +0.1% to +0.4% and the acceleration is energy-driven — the same oil shock that fires the Iran pillar's "sustained Brent >\$100" clause this cycle shows up here as headline acceleration (~70% for a 25bp move) are a *market price*, reported and not used to move P; the BLS release itself is the mover. Cross-source caution logged: several aggregator summaries of this print circulating within the community — discarded in favour of the primary document. **P RE-RATED UP, modestly, to 34/33/44/54/60** — 1mo 32 → 34, 3mo 31 → 33, 6mo 43 → 44, concentrated on the windows bracketing the Sept 15-16 FOMC meeting. Not move a multi-year regime read. Note the direction: this is the first upward move in this pillar since Aug 13, and it only partly offsets the Sept 5 cut. Light daily touch, master call band unchanged everywhere — so per the runbook's delegated daily auto-stamp authority, **this set is AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)."** Iran War Risk also moved this cycle, down, as its Brent oil price moved.

Sept 10 light daily catch-up (score set 2026-09-10_draft), prior cycle: re-checked — the Aug CPI release (due Sept 11) and the Sept 15-16 FOMC meeting both remain pending per BLS/Fed calendars. **32/31/43/54/60**. Light daily touch, no window moved, master call band unchanged anywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull horizon-weighted) — so per the runbook's delegated daily auto-stamp authority, **stamped_by "Alex (auto-stamped)."** Iran War Risk is the pillar that moved this cycle — see that report.

Prior cycle (Sept 9 light daily catch-up): re-checked directly against CME FedWatch-citing coverage — September hike odds read ~58.7%, consistent with the already-priced cluster; no new FOMC meeting scheduled. **SEPTEMBER 9, 2026.**

Prior cycle (Sept 8 light daily catch-up): re-checked via WebSearch — no new Fed speech, data release, or FOMC commentary since Sept 3-4; the Sept 11 CPI print and Sept 15-16 FOMC meeting remain pending.

Prior cycle (Sept 6 light daily catch-up): re-checked via WebSearch — no new Fed speech or data release since Sept 3-4; Sept 6 was a Saturday, markets and the Fed's calendar quiet. **AUTO-STAMPED** through the Sept 6 light daily catch-up.

Sept 5 FULL WEEKLY refresh (2026-09-05_draft2) — carried forward for context: independently re-verified via WebSearch: Fed Governor Waller's genuinely dovish-leaning Sept 3 speech ("give disinflation more time, but don't let it get out of control") (PBS) before the Sept 4 jobs beat reversed that back up to 60-66% (Forbes/CME FedWatch) — a net hawkish drift for the week consistent with the Sept 5 cut. **HELD FLAT at 32/31/43/54/60. COMMITTED** through the Sept 5 FULL WEEKLY refresh all held flat that cycle.

CORRECTION — flagged this cycle: the prior same-day light daily catch-up (2026-09-05_draft) reported "COMMITTED — AUTO-STAMPED SEPTEMBER 5, 2026" in its commit message, but config/scores.json had a bug in that session. The last TRUE committed baseline for this pillar remains **2026-09-02_draft (36/35/45/55/61), auto-stamped Sept 3**. Not corrected retroactively in scores.json — stamping is Alex's call.

Prior cycle (Sept 2 light daily catch-up) — carried forward for context: held flat at 36/35/45/55/61; originally left as draft only because Iran War Risk's re-rate flipped the master call band, not for any reason other than to widen the delegated daily auto-stamp policy. A Sept 3 check found nothing material on any pillar; config/scores.json was untouched that cycle.

Prior cycle (Sept 1 light daily catch-up) — carried forward for context: re-checked CME FedWatch odds and found continued drift, not a fresh shock: September hike odds moved to ~66% (Forbes/KuCoin, etc.). No new H.4.1 or jobless claims release landed (Aug 31 was Labor Day). P held flat, AUTO-STAMPED, then the committed baseline.

Prior cycle (Aug 31 light daily catch-up) — carried forward for context: re-checked CME FedWatch odds and found continued drift, not a fresh shock: September hike odds moved from the ~56-58% cluster to ~66% (Forbes/KuCoin, etc.). No new H.4.1 or jobless claims release landed. P held flat, AUTO-STAMPED.

Prior cycle (Aug 29 full weekly refresh) — carried forward for context: Fed & Macro re-rated down further that cycle than a same-day catch-up draft written August 28 (score set 2026-08-28_draft) reached a dead end, abandoned, superseded by this full weekly refresh. The underlying trigger is the same one that draft identified: Fed Chair Warsh's first Jackson Hole speech as Chair (federalreserve.gov primary transcript, PBS, Reuters/investing.com, CNN, and Yahoo Finance), which said cooler summer PCE/CPI readings "do not tell me that underlying trends have meaningfully improved." A dedicated adversarial-verification of the September hike-odds figure (~35.4% → ~45.7%) understated the actual market move. Independent re-pull and cross-check instead clusters tightly in the high-50s — Motley Fool at 57.5% (citing CME FedWatch) read at "55.7%" — meaning September hike odds are now past coin-flip, not just approaching it. This cycle also corrects the abandoned draft's "stable tape" characterization of BTC's reaction: BTC fell from ~\$77,666.16 by today. Two fresh, routine facts round out the picture: jobless claims (week ended Aug 22) came in tight at 203K vs. 208K consensus, and the Aug 26 H.4.1 release showed the known reserve was corrected, larger market move justifies a deeper cut than the abandoned draft reached: 1mo -7, 3mo -6, 6mo -3, 1yr -1, 3yr -1 versus the last committed baseline — minimal at the long end since Warsh's last move reach three years out.

(That Aug 29 cycle was left as a draft solely because full weekly refreshes are categorically excluded from delegated daily auto-stamp authority, regardless of move size — not for any evidentiary reason; e.g., the Sept 5 cut.)

The prior committed scores were **34 / 33 / 44 / 54 / 60** (2026-09-16_draft), re-rated down to **32 / 31 / 42 / 54 / 60** (2026-09-17_draft, cloud) and corrected further to **32 / 30 / 38 / 44 / 58** (2026-09-17_draft2, cloud). The federal funds rate reads 4.1% against 3.6% in June. **32 / 30 / 38 / 44 / 58 has now held flat for two straight cycles (Sept 17, Sept 18)** — nothing this cycle cleared the sufficiency bar to move it further — see that report.

Override any P and re-stamp — the master blend recomputes.

What Changed Since Last Check

FULL WEEKLY refresh, October 3, 2026 (score set 2026-10-03_draft, LEFT AS DRAFT, AWAITING ALEX'S MANUAL REVIEW) — checked against the last COMMITTED baseline, 2026-09-26_draft3 (27/25/34/43/58, committed) — FOMC speeches/appearances dated Sept 28-Oct 1 and the Oct 2 BLS jobs report.

- ★ ★ **SUPERSESSION NOTICE, stated first because it affects how you should read the Oct 3 light daily touch item below.** That touch (and the Oct 1-2 touches before it) held this pillar flat through the Sept 26 FULL WEEKLY refresh, run later the same day, found that finding was incorrect as a matter of record: six FOMC speeches/appearances dated Sept 28-Oct 1 and the Oct 2 BLS jobs report had not actually been released. The call stands superseded by the re-rate in this box.
- ★ ★ **NEW — NY Fed President John Williams, Sept 29 (PRIMARY, newyorkfed.org, multi-venue-corroborated market reaction).** "There is no need for urgency, and we have time to gather more data before making a decision. The range may be appropriate late this year" — read across outlets as October → December. October-hike odds fell from ~70-77% to ~50% within hours, settling 17-21% hike/78-84% hold by Oct 29.
- ★ ★ **NEW — BLS Employment Situation, September, released Oct 2 (PRIMARY).** Nonfarm payrolls +29,000 vs. ~84-90,000 consensus; unemployment to 4.2%; July/August revised down a bit.
- ★ ★ **NEW, offsetting — Gov. Barr (Sept 29, repeat of his Sept 23 line), ISM Manufacturing Prices Paid to 77.9 (Oct 1, highest since the start of the Iran war), and the 10-year Treasury yield moved past 6mo.**
- **Also checked — Vice Chair Jefferson, Oct 1 (PRIMARY):** the Fed "may take more time"; inflation "too high"; growth/employment risk "roughly balanced." Neutral-to-mildly-hawkish, a minor move.
- **Re-confirmed, not re-litigated:** the Aug PCE "cooling" to core 3.0% y/y is independently re-confirmed as a real BEA methodology artifact, not fresh disinflation — sharpens, doesn't change, the picture.

- **Process note:** the Oct 1-3 light daily touches had not checked any of the six FOMC speeches/appearances Sept 28-Oct 1, nor the Oct 2 jobs report — a coverage gap in those specific touchpoints.
- **Score decision: RE-RATED UP on the front three windows, 27/25/34/43/58 → 30/27/35/43/58 (+3/+2/+1/0/0). LEFT AS DRAFT, NOT AUTO-STAMPED** — a full weekly refresh is categorically excluded from delegated auto-stamped status due to sourcing quality.
- **What would change my mind, in order:** whether the Oct 27-28 FOMC actually delivers a hike (now materially less likely priced) vs. holds through to December as Williams suggested; and next CPI/PCE prints.

Carried forward — what changed in the September 26 FULL WEEKLY refresh (2026-09-26_draft3, committed by Alex September 27, 2026), for continuity:

- **Oct 3 light daily touch (quant-only; qualitative set unchanged):** re-checked this pillar via WebSearch for any new scheduled Fed speech or data release. None found since the Sept 30 PCE release. The scheduled test remains the Oct 27-28 FOMC. **HOLD FLAT — nothing cleared the sufficiency rule.** config/scores.json untouched; active set remains 2026-09-26_draft3. (*Superseded the Sept 26 draft3.*)
- **Oct 2 light daily touch (quant-only; qualitative set unchanged):** re-checked this pillar via WebSearch for any new scheduled Fed speech or data release. None found for Oct 1-2; the Sept 26 draft3 already cleared no sufficiency bar. **HOLD FLAT — nothing cleared the sufficiency rule.** config/scores.json untouched; active set remains 2026-09-26_draft3.
- **Oct 1 light daily touch (quant-only; qualitative set unchanged) — August PCE and the Q2 GDP third estimate, the test this report flagged as outstanding, both landed Sept 30, 2026** — ~3.3-3.4% y/y previously — but a meaningful share of that apparent cooling is mechanical: BEA implemented a methodology overhaul to the PCE price index on this same release (telegraphically, roughly a 0.15-0.2 point drag on core y/y), so this is not read as fresh disinflation evidence. Separately, Q2 GDP (third estimate) was revised sharply **up to +2.2%** annualized (from 1.5%), with the other way (hawkish-for-growth). The two releases roughly offset rather than confirming or reversing this cycle's hawkish cut. A government shutdown was separately averted (H.R. 6500, 116th Cong. confirmed Treasury-yield print or FOMC commentary found dated after Sept 24-25 in this window. **HOLD FLAT — the PCE/GDP data landed but nets out two-sided, clearing no sufficiency bar.** 26_draft3.
- ★ **★ SUPERSESSION NOTICE, stated first because it affects how you should read everything else.** A 2026-09-24_draft cycle proposed 29/27/36/44/58 on this pillar and edited this release to commit — while its edits asserted “COMMITTED · AUTO-STAMPED” for a set still marked draft in config/scores.json. Per house convention it is treated as not-delivered, drops out of the active set. **On this pillar the abandoned draft was VINDICATED:** both its Fed claims held up, and the two “corrections” a first-pass research effort made to them were themselves wrong and are without merit, but because four further pieces of evidence landed after it.
- ★ **★ NEW — Fed Governor Michael S. Barr, Sept 23 (PRIMARY, verbatim, local text extraction).** All three load-bearing sentences confirmed on p.2 of *barr20260923a.pdf*, including “**In my view, inflation comes down to target in a timely fashion.**” *Two withdrawn corrections:* a first pass reported the “risks ... have receded” sentence as ABSENT and moved the start time to 10:20 a.m. (10:20 was Vice Chair Jefferson at the NY Fed). Both are logged rather than silently fixed, because the abandoned draft had them right.
- ★ **★ NEW — S&P Global flash US PMI, Sept 23, now PRIMARY.** The embargoed release was retrieved directly, upgrading this from secondary: composite 58.4, manufacturing 57.0, services 59.0. **dropped:** the “input prices index 66.4 from 59.9” reading circulating in secondary coverage does not appear in the release — it is vendor data and is not quoted.
- ★ **★ NEW — UMich final September, Sept 25 (PRIMARY).** Year-ahead inflation expectations 4.0% → 4.6%; **long-run 3.3% → 3.4%, ending three consecutive months at 3.3%;** sentiment 1.0 → 1.2.
- ★ **★ NEW — DOL claims, Sept 24 (PRIMARY): 197,000** for the week ended Sept 19, near 57-year lows; prior week **revised up to 198,000** and the 4-week average now **202,250** — both corroborated by the BLS.
- ★ **★ NEW — H.4.1, Sept 24 (PRIMARY, arithmetic checked): reserve balances —\$83,601M week-over-week** to \$2,930,193M, with TGA +\$100,056M. The largest one-week drain logged here.
- **Two Fed voices, DOWNGRADED on sourcing after verification.** Collins (Sept 22) is quoted correctly but traces entirely to one Reuters story — **effectively single-agency**, and never scores as such, not asserting his own view, and hedged with “but we have to see”; no primary transcript exists and genuinely independent reporting is two outlets. Both corroborate; neither could move P alone.
- **Why this clears the sufficiency bar:** one primary Federal Reserve source, verbatim from the Fed’s own server and extracted locally rather than summarised, plus four further primary data points.
- **MARKET PRICES, reported and never mixed with the SEP:** the 10-year yield 4.96% → 5.11% → 5.18% (Sept 22–24), highest since 2007 — now **double-primary-confirmed** by the FRED. “FRED hasn’t published Sept 23 yet” caveat and supersedes its press-sourced 5.104%. CME FedWatch October-hike odds ~53% → 77.5% → ~70–76%; traders now price ~four more hikes. **FRED data-integrity trap was RETRACTED, not printed** — verification could not reproduce it and traced it to a summarizer reading a truncated file.
- **Score decision: RE-RATED DOWN to 27/25/34/43/58 (–4/–4/–3/–1/0). LEFT AS DRAFT, NOT AUTO-STAMPED** — a full weekly refresh is categorically excluded from delegated auto-stamped status because *was not degraded:* federalreserve.gov, dol.gov, treasury.gov, the UMich survey and the S&P Global release were all reached directly.
- **What would change my mind, in order:** August PCE and Q2 GDP landed **Sept 30** and came back two-sided (see What Changed) — not itself a trigger; next is whether the Oct 27–28 FOMC

Carried forward — what changed in the September 23 light daily touch (2026-09-23_draft, committed, auto-stamped), for continuity:

- **10-year Treasury yield ~4.96-4.97% Sept 22**, essentially flat (CNBC, TradingEconomics — two-source, but a market price, not scored).
- **CME FedWatch: 59.7% odds of an Oct 28 hike** — effectively single-sourced (one aggregator citing CME, not independently pulled from CME’s own site); does not clear the bar.
- **Fed Vice Chair Jefferson’s Sept 22 speech** at the NY Fed’s Treasury Market Conference (primary, federalreserve.gov) — discount-window/Treasury-market plumbing, off-topic for this pillar.
- No new jobless claims, PCE, CPI, retail sales, or housing data found dated in this window.
- **Score decision: HELD FLAT at 31/29/37/44/58.** AUTO-STAMPED per delegated daily authority.

Carried forward — what changed in the September 22 light daily touch (2026-09-22_draft, committed, auto-stamped), for continuity:

- ★ **★ NEW this cycle — Philadelphia Fed Manufacturing Business Outlook Survey, released Sept 17, 2026 (primary source page confirmed at philadelphiafed.org, 5+ independent confirmations)** — **rose to 48.6 from 40.9 and prices received rose to 31.3 from 17.7**; employment fell sharply (11.8 from 27.9) and future activity fell (52.9 from 73.6).
- ★ **★ NEW this cycle — New York Fed Empire State Manufacturing Survey, released Sept 15, 2026 (PRIMARY, fetched directly from newyorkfed.org):** general business conditions cooled, highest since July 2022 — and **prices received rose to 28.1 from 23.1**, a three-month high.
- **Why this clears the sufficiency bar:** two independent Fed district banks’ own primary surveys, same week, same directional signal (headline cooling, input-cost/selling-price pressure re-achieved).
- **Why only one point:** both are soft/sentiment surveys whose own forward-looking components also fell, and market pricing turned risk-on into Sept 18-19 (10-year off its 5.04% high to ~4.95%).
- **CLARITY Act, Iran War Risk, and Tokenization carried forward unchanged** — not re-researched this cycle; this is a targeted single-pillar touch, not a full weekly pass.
- **Score decision: RE-RATED DOWN one point on 1mo/3mo/6mo, 32/30/38/44/58 → 31/29/37/44/58;** 12mo/36mo held. Sourcing clears the sufficiency rule — **AUTO-STAMPED: status confirmed.**

Carried forward — what changed in the September 19 FULL WEEKLY refresh (2026-09-19_draft, still draft), for continuity:

FULL WEEKLY refresh, September 19, 2026 (score set **2026-09-19_draft**, draft, awaiting Alex’s stamp) — checking for changes since the 2026-09-18_draft committed baseline. **This pillar HELD FLAT at 32/30/38/44/58.**

- ★ **★ NEW this cycle — jobless claims, week ended Sept 12 (DOL, primary, released Sept 17): 196,000**, the lowest since mid-July; four-week average 203,250. Confirmatory of the already logged.
- ★ **★ NEW this cycle — housing data (Census Bureau/HUD and NAR, primary, released Sept 17 and Sept 10): housing starts ~2.6% m/m, permits ~2.7% m/m, existing-home sales ~2.6% m/m** — family starts actually +7.6%) — insufficient alone to move P.
- **Background color, not scored — University of Michigan preliminary September sentiment fell to 47.8 from 51.7**, near a record low, with 1yr inflation expectations up to 4.6%; predates the Fed’s move.
- **Market-price context, not scored:** the 10-year Treasury briefly touched a 19-year high near 5.04% before settling near 4.95%; CME FedWatch prices 55.1% odds of another hike at the Oct 28.
- **Logged, not scored — a high-profile political story:** President Trump and senior administration officials publicly pressured the Fed against hiking, with Trump demanding rates be cut to “1% or lower.” Well-corroborated across 8+ independent outlets — a governance/Fed-independence storyline, not new economic evidence.
- **Score decision: HELD FLAT at 32/30/38/44/58.** Full independent primary-source research this cycle; nothing cleared the sufficiency bar. FULL WEEKLY refresh — categorically excluded from auto-stamped status. **Alex’s manual review.**

Carried forward — what changed in the September 18 light daily touch (2026-09-18_draft, committed, auto-stamped), for continuity:

LIGHT DAILY touch, September 18, 2026 (score set **2026-09-18_draft**, committed, auto-stamped) — checking for changes since the 2026-09-17_draft2 committed baseline. **This pillar HELD FLAT at 32/30/38/44/58.**

- **Re-checked for a new dated development — found none.** The Sept 16 FOMC dot-plot revision already drives this window's read in the currently committed set.
- **A Sept 18 Motley Fool piece discussing "the most important number" in the Fed's Summary of Economic Projections is single-source commentary** on the same already-priced price (Sept 17 correction) — not a new dated fact, does not move P.
- **Score decision: HELD FLAT at 32/30/38/44/58.** No window moved; nothing new cleared the sufficiency bar. AUTO-STAMPED per delegated daily authority.

Carried forward — what changed in the September 17 light daily touch (2026-09-17_draft / draft2, committed, auto-stamped), for continuity:

LIGHT DAILY touch, September 17, 2026 (score set **2026-09-17_draft**, committed, auto-stamped) — checking for changes since the 2026-09-16_draft committed baseline. **This pillar RE-RATED DOWN to 32/31/42/54/60 (ch**

- **The September FOMC decision landed:** the Fed raised the federal funds target range 25bp to 3.75%-4.00% (12-0 vote), its first hike in three years (federalreserve.gov, primary; corroborated by market prices; itself was ~92.5% priced into market odds beforehand, so per the sufficiency rule it does not alone move P.
- **The SEP/dot plot is new primary information:** 16 of 18 officials expect another 2026 hike (12 of 18 pencil in one more 25bp move by year-end to 4.125%); a slower, more cautious 2027-2028 path.
- **Bitcoin's reaction was muted** (~\$76,300 on the statement, drifting back to hold near \$76,000-198) — consistent with the hike being anticipated; the incremental signal is in the dot plot, not the price.
- **Score decision: RE-RATED DOWN to 32/31/42/54/60** — 1mo 34 → 32, 3mo 33 → 31, 6mo 44 → 42; 12mo/36mo held flat. **AUTO-STAMPED per delegated daily authority.**

Carried forward — what changed in the September 16 light daily touch (2026-09-16_draft, committed, auto-stamped), for continuity:

LIGHT DAILY touch, September 16, 2026 (score set **2026-09-16_draft**, committed, auto-stamped) — checking for changes since the 2026-09-15_draft committed baseline. **This pillar HELD FLAT at 34/33/44/54/60.**

- **The September FOMC decision had not landed yet.** The decision, statement, Summary of Economic Projections and dot plot were scheduled for **September 16 at 2:00pm ET**, with the primary release.
- **No new BLS/Fed/BEA primary release found** since the August CPI/PPI prints already priced.
- **Score decision: HELD FLAT at 34/33/44/54/60.** No window moved; nothing new cleared the sufficiency bar.

Carried forward — what changed in the September 15 light daily touch (2026-09-15_draft, committed, auto-stamped), for continuity:

LIGHT DAILY touch, September 15, 2026 (score set **2026-09-15_draft**) — checking for changes since the 2026-09-14_draft committed baseline.

- **The September FOMC convened Sept 15, but nothing was knowable yet.** The decision, statement, SEP and dot plot did not land until Sept 16 at 2:00pm ET. Markets leaned toward a 25bp hike and a solid August jobs report — a read already priced into this set; market-implied odds are market prices, never used to move a P.
- **No new BLS/Fed/BEA primary release** since the August CPI (Sept 11) and August PPI (Sept 10) already priced.
- **Score decision: HELD FLAT at 34/33/44/54/60.**

Carried forward — what changed in the September 14 light daily touch (2026-09-14_draft, committed, auto-stamped), for continuity:

LIGHT DAILY touch, September 14, 2026 (score set **2026-09-14_draft**) — checking for changes since the 2026-09-13_draft committed baseline.

- **No new primary macro release since the last check.** Nothing from BLS, the Federal Reserve, or BEA landed Sept 13-14; the August CPI (released Sept 11) and August PPI (released Sept 10) already priced.
- **The September 15-16 FOMC — with the SEP and dot plot — has not yet happened.** The decision and statement are due **September 16**. That is the next dated catalyst for this pillar and the market.
- **Market-implied hike odds are a MARKET PRICE and are explicitly not used to move P.** Reads circulating this week span a wide **66-83%** band across sources for a 25bp hike — reported as a range of market prices.
- **Score decision: HELD FLAT at 34/33/44/54/60.** No window moved. Nothing dated and primary-sourced arrived to move it.

Carried forward — the September 12 FULL WEEKLY refresh, for continuity:

FULL WEEKLY refresh, September 12, 2026 — checking for changes since this morning's committed baseline (2026-09-12_draft, auto-stamped).

- **Re-verified August CPI (BLS, released Sept 11) independently:** headline +0.4% m/m / +3.4% y/y, core +0.3% m/m / +2.4% y/y, shelter +0.3% m/m / +3.0% y/y — matches the figures already priced.
- ★ **★ NEW this cycle — August PPI (BLS, primary, released Sept 10, 2026; corroborated by CNBC, CNN, Yahoo Finance — 3+ independent outlets).** Headline final demand +0.4% m/m, three-quarters of the monthly gain is attributable to volatile energy costs (diesel fuel +24.1% alone). Core PPI (ex food/energy) came in at +0.3% m/m, UNDER consensus on one reading (+0.5% surprise on the core reading. **Net read: reinforces, rather than contradicts, the already-priced "cooler than consensus" CPI narrative — not a distinct new directional catalyst, so it is a qualified release.**
- **DOL initial jobless claims, week ending Sept 5 (released ~Sept 11, primary): 206,000, down 1,000 w/w, 4-week average 206,000** — steady, unremarkable, no signal.
- **CME FedWatch-tracked market-implied odds of a 25bp hike at the Sept 15-16 FOMC read ~62-69% this week (as of Sept 10-11) — a market price only, not an institutional estimate.** The ~90% figure referenced in the prior (this morning's) daily cycle's background note — both reported as market-price snapshots at different times, the divergence noted, not resolved on the market.
- **Fed Chair Warsh: no new substantive remarks since the Aug 28 Jackson Hole speech.** A Sept 9 Marketplace piece characterizing him as withholding forward guidance ahead of the meeting event — flagged as single-source, does not move P.
- **The Sept 15-16, 2026 FOMC meeting has NOT yet occurred** as of this research (Sept 12) — flagged prominently as this pillar's next real catalyst, most acute on the 1mo/3mo windows, rather than the 12mo.
- **Score decision: P HELD FLAT at 34/33/44/54/60 — FULL WEEKLY REFRESH, left as DRAFT for Alex's manual review (weekly refreshes are categorically excluded from delegated daily authority).**

Carried forward — what changed in the Sept 12 light daily catch-up (2026-09-12_draft, auto-stamped this morning), for continuity:

- **Re-checked — no new Fed speech or primary data release found since the Sept 11 CPI print.** The Sept 15-16 FOMC meeting remains the next dated catalyst.
- **Logged, not scored:** that morning's coverage of ~90% market-implied September hike odds and Fed Chair Warsh's hawkish framing traced to his Aug 28 Jackson Hole remarks, not a fresh catalyst to move P.
- **Score decision: P HELD FLAT at 34/33/44/54/60.** No window moved, master call band unchanged everywhere — **AUTO-STAMPED per delegated daily authority**, the last COMMITTED baseline.

Carried forward — what changed in the Sept 10 light daily catch-up, for continuity:

- **Sept 10, light daily catch-up:** re-checked — the Aug CPI release (due Sept 11) and the Sept 15-16 FOMC meeting both remained pending per BLS/Fed calendars; no new Fed speech or primary data release found since the Sept 11 CPI print. **Score decision: P HELD FLAT at 34/33/44/54/60.**

Carried forward — what changed in the Sept 9 light daily catch-up, for continuity:

- **Sept 9, light daily catch-up:** re-checked directly against CME FedWatch-citing coverage — September 25bp-hike odds read ~58.7% (as of Sept 7, CNBC/cryptonews), consistent with the ~60% new BLS/DOL primary release since Sept 3-4; the Sept 11 CPI print and Sept 15-16 FOMC remain the next dated catalysts.
- **Score decision: HELD FLAT at 32/31/43/54/60 — AUTO-STAMPED per delegated daily authority.**

Carried forward — what changed in the Sept 8 light daily catch-up, for continuity:

- **Sept 8, light daily catch-up:** re-checked via WebSearch — no new Fed speech, data release, or FOMC commentary since Sept 3-4. The Sept 11 CPI print and the Sept 15-16 FOMC meeting remain the next dated catalysts.
- **Score decision: HELD FLAT at 32/31/43/54/60 — AUTO-STAMPED per delegated daily authority.**

Carried forward — what changed in the Sept 6 light daily catch-up, for continuity:

- **Sept 6, light daily catch-up:** re-checked via WebSearch — no new Fed speech, data release, or FOMC commentary since Sept 3-4 (Waller's dovish-leaning Sept 3 speech and the Sept 4 BEA vs. ~53-55,000 consensus, unemployment steady 4.1%). September 6 is a Saturday — no data or speeches scheduled. The Sept 11 CPI print remains the next dated catalyst and has not yet occurred.

- **Score decision: HELD FLAT at 32/31/43/54/60.** No window moved; nothing this cycle clears the sufficiency bar for a further move in either direction.

Carried forward — what changed in the Sept 5 FULL WEEKLY refresh (2026-09-05_draft2, committed by Alex Sept 5), for continuity:

- ★ ★ **NEW — August jobs report (BLS, primary, Sept 4): nonfarm payrolls +162,000 vs. –53-55,000 consensus, unemployment steady 4.1%.** Corroborated by CNBC, Yahoo Finance, The Motley Fool, and others; dovish-leaning Sept 3 speech. This is a FULL WEEKLY refresh, categorically excluded from the delegated daily auto-stamp policy, so it went to manual review — **COMMITTED BY ALEX SEPTEMBER 3, 2026**, once Alex widened the delegated daily auto-stamp policy.
- ★ ★ **NEW — Sept 15-16 FOMC hike-odds pricing moved higher off the jobs beat** (roughly 60-66% across sources, up from the Sept 2 baseline's "–60% hold" framing); 2yr yield +5.3bp to (\$81,265.00 → \$79,676.60).
- **Score decision: RE-CONFIRMED the re-rate at 32/31/43/54/60** (1mo -4, 3mo -4, 6mo -2, 1yr -1, 3yr -1 vs. the Sept 2 TRUE committed baseline) — the fresh, dated, primary-sourced jobs-report, dovish-leaning Sept 3 speech. This is a FULL WEEKLY refresh, categorically excluded from the delegated daily auto-stamp policy, so it went to manual review — **COMMITTED BY ALEX SEPTEMBER 3, 2026**, once Alex widened the delegated daily auto-stamp policy.
- **Correction:** the same-day earlier 2026-09-05_draft's commit message claimed it was auto-stamped, but config/scores.json's status field was never actually advanced — a bug in that session corrected retroactively.

Carried forward — what changed in the Sept 3 light daily catch-up (no new score set), for continuity:

- **Re-checked CME FedWatch and the H.4.1/data calendar; nothing material found on any pillar dated Sept 2-3.** config/scores.json untouched; blend re-run against fresh quant data only.
- **No new H.4.1 or data print found dated Sept 1-2.** September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continued the same post-Jackson-Hole drift already priced in this pillar's own standing discipline against chasing drift, it did not independently move P.
- **BTC traded at \$76,581.44 on Sept 2** — down from \$78,038.78 on Sept 1 (Bitstamp), a real pullback driven by the Iran War Risk escalation covered in that pillar's report, not by anything here.
- **Score decision: HELD FLAT at 36/35/45/55/61.** No window moved for this pillar. This cycle's shared score set (2026-09-02_draft) was originally left as draft — Iran War Risk's sharp re-rate **COMMITTED, AUTO-STAMPED SEPTEMBER 3, 2026**, once Alex widened the delegated daily auto-stamp policy.

Carried forward — what changed in the Sept 1 light daily catch-up (2026-09-01_draft, auto-stamped), for continuity:

- **CME FedWatch September hike odds continued drifting up, not a fresh shock:** ~60.4% (Aug 31 baseline, CNBC) → ~66% (Forbes/KuCoin, 11:40am ET Aug 31) — the same post-Jackson-Hole Market-odds drift alone cannot move P per the sufficiency rule and this pillar's own standing discipline against chasing drift.
- **No new H.4.1 or jobless claims release landed Aug 31-Sept 1** — Aug 31 was Labor Day, a US federal holiday; next H.4.1 is due Sept 3.
- **BTC traded at \$78,038.78 on Sept 1** — down from \$78,447.16 on Aug 31 (Bitstamp).
- **Score decision: HELD FLAT at 36/35/45/55/61.** Light daily touch, no window moved, no call band flipped — **AUTO-STAMPED** per delegated daily authority, then the committed baseline. Iran War Risk's sharp re-rate **COMMITTED, AUTO-STAMPED SEPTEMBER 3, 2026**, once Alex widened the delegated daily auto-stamp policy.

Carried forward — what changed in the Aug 31 light daily catch-up (2026-08-31_draft, auto-stamped), for continuity:

- **CME FedWatch September hike odds continued drifting up, not a fresh shock:** ~56-58% (Aug 29 baseline) → ~57% (CoinSpectator/Bitcoin.com, Aug 30) → ~60.4% (CNBC Jackson-Hole, Aug 31) — without a fresh primary print or news event, cannot move P per the sufficiency rule.
- **No new H.4.1 (next due Sept 3, last Aug 27) or jobless claims release landed in this window.**
- **BTC traded at \$78,447.16 on Aug 31** — up from \$77,666.16 on Aug 29 (Bitstamp).
- **Score decision: HELD FLAT at 36/35/45/55/61.** AUTO-STAMPED per delegated daily authority.

Carried forward — what changed in the Aug 29 full weekly refresh (2026-08-29_draft, now superseded), for continuity:

- ★ ★ **ADVERSARIAL CORRECTION — the abandoned Aug 28 draft's CME FedWatch September hike-odds figure was wrong.** Corrected from ~35.4% → ~45.7% to the real ~35% → ~56-58% (third independent read at 55.7%) — past coin-flip, not just approaching it.
- ★ ★ **CORRECTED — BTC's reaction to the speech.** Not a stable tape: BTC fell from above \$81,000 pre-speech to \$79,613.44 (Aug 28 close), continuing to \$77,666.16 by Aug 29.
- ★ ★ **NEW — jobless claims, week ended Aug 22 (DOL, primary, Aug 27): 203K vs. 208K consensus.** Mildly hawkish-adjacent, not independently trigger-worthy.
- ★ ★ **NEW — Fed H.4.1, week ended Aug 26 (federalreserve.gov, primary): reserves –\$10,351M w/w to \$2,924,936M; TGA –\$2,876M w/w to \$950,736M.** Routine continuation of the known trend.
- **Carried forward, re-confirmed, not re-litigated — Fed Chair Warsh's first Jackson Hole speech as Chair (Aug 28) and July PCE (bea.gov, Aug 26, 3.7% y/y headline, 0.1pp hot).** BoC sourced this cycle.
- **Score re-rate: 43/41/48/56/62 → 36/35/45/55/61** — 1mo -7, 3mo -6, 6mo -3, 1yr -1, 3yr -1, deeper than the abandoned draft's -5/-4/-2/-1/-1 because the corrected market move is bigger.
- **Status decision:** left as a draft, NOT auto-stamped, and flagged for Alex's manual review — this is a FULL WEEKLY refresh, categorically excluded from delegated daily auto-stamp authority; the ~8-point threshold, so it isn't even a close call).

Carried forward — the abandoned Aug 28 catch-up draft (2026-08-28_draft) was written but never rendered, selfchecked, archived, or committed, for continuity:

- **That draft re-rated P to 38/37/46/55/61** on the same Warsh speech and PCE print this cycle re-verifies, using a since-corrected CME odds figure (~45.7%, now corrected to ~56-58%) and a visible decline). It sits superseded; its underlying facts, corrected, are folded into this cycle above.

Carried forward — what changed in the Aug 22 full weekly refresh (score set 2026-08-22_draft2), for continuity:

- **NEW — FOMC minutes' hawkish bloc wider than previously known:** beyond the three named dissenters, "several participants" also favored a hike and "many participants" saw tightening (Aug 19; corroborated by CNBC, Quartz, Newsquawk, goldsilver.com).
- **NEW — 30-year Treasury yield hit 5.31-5.33%, a ~19-year high,** around Aug 17-18, driven substantially by the CBO's raised \$2.1T FY deficit projection and heavy long-bond supply, not pure hawkish minutes.
- **NEW — equities sold off Aug 20** (S&P -0.87%, Dow -1.32% partly Walmart-driven, Nasdaq -1%) with a partial Aug 21 recovery, attributed to a mix of the hawkish minutes and rising yields.
- **NEW — CME FedWatch/Kalshi/Polymarket/investing.com/defirate.com independently re-pulled and cross-checked directly:** September-hold odds cluster ~68-70% across all five, es already priced.
- **NEW — a circulating "93.6% September hike probability" claim was traced this cycle to a garbled conflation with Kalshi's July-meeting hold odds (~92-93% hold) and confirmed**
- **Re-confirmed, not new — jobless claims week ended Aug 15: 206K vs. 210K consensus, 4-week average 204K** (DOL, primary, Aug 20) — confirms the low-layoff trend already in the b
- **Re-confirmed, not new — July retail sales miss (-0.6% m/m vs. +0.1% consensus, still +5.0% y/y)** — a genuine but noisy dovish-leaning counter-signal, per this pillar's discipline against
- **Score decision:** P held flat at 43 / 41 / 48 / 56 / 62 — the hawkish minutes detail and the noisy weak retail-sales print largely offset an already-priced rate-odds market; nets to a wash.
- **New pending triggers logged for the next cycle:** PCE (July data, bea.gov) due Aug 26; Chair Warsh's first speech as Chair at Jackson Hole, Aug 28, 10:00am ET, theme "Financial Innovation and Growth" — this pillar's near-term calendar.
- **Status decision:** this score set was **left as a draft at delivery, not auto-stamped**, because it is a FULL WEEKLY refresh, categorically excluded from Alex's delegated daily auto-stamp authority; more than 8 points, no master call band flipped — that clean-evidence bar qualifies daily cycles for self-approval, not weekly refreshes). **COMMITTED BY ALEX August 23, 2026** after indep
