

CoinPicks Market Direction

Research Package

Five pillars — four researched narratives and one pure-math read of the Bitcoin chart — scored on one standard, blended into one table, and distilled to one number. Everything in this folder is current as of **September 15, 2026** — a light daily touch against yesterday's light daily touch (2026-09-14_draft, committed).

COMMITTED — AUTO-STAMPED (light daily touch, score set 2026-09-15_draft). Iran War Risk, Tokenization RWA and Fed & Macro were re-checked and held flat — nothing found cleared the sufficiency bar. **CLARITY Act RE-RATED UP** (32/47/58/82/92 → 37/53/62/83/92), its first upward move since June: the White House agreed an ethics package on **Sept 13** and sent it to Senate Republicans, and on **Sept 14** Lummis, Boozman and Scott posted the FINAL text one day before the cloture vote — it **drops the Jan 20, 2029 sunset, reverses the July bar on state-attorney-general enforcement, and raises civil penalties to 20% or \$500,000, whichever is greater** (6+ independent outlets: The Block, The Defiant, CNBC, crypto.news, BeInCrypto, CryptoBriefing, The Hill). Sized against four same-day counterweights: no divestment requirement, Warren's "weak fig leaf," lead negotiator Gallego saying the text "falls short," and a Democratic counteroffer sent late Monday — so today's 2:15pm ET cloture vote is still more likely than not to fail. Ordinary light daily touch, full research access, verification clean — auto-stamped per the runbook's delegated authority.

THE FINAL NUMBER · SEPTEMBER 15, 2026 (COMMITTED — AUTO-STAMPED, LIGHT DAILY TOUCH) · BTC
\$76,916.53 ON SEPT 15

+0.45 Neutral — up from yesterday's +0.33, no call-band flip

Equal-weight mean of the five window signals below — every pillar counts 20% (scale -10 to +10; horizon-weighted variant +0.97, versus yesterday's +0.87, still Mild Bull). Iran War Risk, Tokenization and Fed & Macro held flat; CLARITY Act re-rated up on the first genuine ethics concession of this fight; Bitcoin TA (computed) firmed on the cycle-analog clock even as price eased to \$76,916.53.

THE FIVE WINDOWS UNDERNEATH IT

WINDOW	MASTER SIGNAL	CALL
1 month	-1.41	Mild Bear — still the worst window, but it lifts as CLARITY's P goes 32→37; Iran alone accounts for most of what is left (-4.70)
3 months	-1.05	Mild Bear — the biggest improvement of the cycle: CLARITY crosses from -0.41 to +0.41. The Sept 15-16 FOMC and today's cloture vote both sit inside this window, undecided
6 months	+0.05	Neutral — crosses back above zero on CLARITY's P 58→62; a hair above zero is still a hair, so read it as balanced, not bullish
1 year	+1.74	Bull — four of five pillars positive; Iran alone negative here
3 years	+2.92	Bull — law + adoption + cycle + valuation, unmoved this cycle

Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. The leave-one-out range this cycle is -0.12 to +1.06 — the sign still flips negative when CLARITY or Tokenization are dropped individually; **dropping Iran alone moves the reading to +1.06, Mild Bull**, and dropping Fed & Macro alone also crosses into Mild Bull (+0.64). See the Master Report's Robustness section.

Reading order

Twenty minutes to the whole picture; each report stands alone and can be checked independently — every fact is dated with sources on its last page.

#	FILE	WHAT IT IS
1	CoinPicks_Master_Direction_Report.pdf	The summary. The final number, the five-window table, the full pillar matrix, where the lenses agree/fight, six weeks of dated triggers, sensitivity.
2	CoinPicks_Bitcoin_TA_Quant_Pillar_Report.pdf	The math pillar. 7 indicators on 16 years of data, halving-cycle analogs, power-law valuation — with charts. Fully reproducible from code.
3	reports/current/pdf/ — the four pillar PDFs	The story pillars. CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro. Each: thesis, dated facts, honest bear case, dated triggers, and the full score lineage (June committed → Aug 22 committed → Aug 28/29 drafts → Aug 31 committed → Sept 1 committed → Sept 2 committed → Sept 5 committed → Sept 6 committed → Sept 8 committed → Sept 9 committed → Sept 10 committed → Sept 11 committed → Sept 12 committed, auto-stamped, light daily → Sept 12 draft2, this full weekly refresh, draft, awaiting Alex's review).
4	reports/archive/ + prior-work/	Every earlier version, preserved untouched — the score history is fully auditable.
—	run.py · engine/blend.py · data/master_blend.json	The blend engine (runnable Python — reproduce any score set with <code>run.py blend --set NAME</code>), its output, and README.md for regeneration.

How the scoring works — one paragraph

Every pillar answers the same question on five windows (1 month / 3 months / 6 months / 1 year / 3 years): **P** = the odds (0–100) that this force is *good for crypto* by then, **Quality** = how trustworthy the evidence is (0–1), and **Impact** = how hard this force moves the whole market (0–10). These combine into a **Signal** = $((P - 50) \div 50) \times \text{Quality} \times \text{Impact}$ (Impact is a uniform 8 for every pillar), so a coin-flip view scores zero no matter how loud the headlines are, and weak evidence can't shout. **All five pillars are equal-weighted** — the master for each window is the simple mean of the five signals (20% each; add a pillar and it auto-rebalances to 1/N) — and the Final Number averages the five master windows.

The five pillars at a glance (September 15 P's — light daily touch, CLARITY Act re-rated UP; COMMITTED — AUTO-STAMPED)

PILLAR	1MO	3MO	6MO	1YR	3YR	ONE-LINE READ
CLARITY Act (law)	37	53	62	83	92	RE-RATED UP — the White House conceded on ethics Sept 13 and the final Senate text posted Sept 14 dropped the Jan 2029 sunset, restored state-AG standing to sue and raised penalties (6+ independent outlets). Offset by no divestment requirement, zero public Democratic commitments and a live counteroffer. Polymarket ~34.5% is a market price — reported, not scored
Iran War Risk	1	1	18	38	70	Held flat: the Salalah ministerial is still postponed with no new date and the Saudi East–West pipeline is still offline — both already priced. Iran’s tanker-mine claim is an interested-party assertion and Brent >\$105 is a market price — both reported, neither scored
Tokenization (RWA)	52	60	66	74	85	Held flat: rwa.xyz mid-September \$38.89B vs the \$39.2B Sept 8 read already priced — inside noise; no rail failure or depeg; DTCC’s October launch unchanged
Fed & Macro	34	33	44	54	60	Held flat: the September FOMC convened today but the decision, SEP and dot plot do not land until Sept 16, 2:00pm ET; no new BLS/Fed/BEA primary release since the Aug CPI (Sept 11) and PPI (Sept 10) prints. Market-implied hike odds are market prices, not used to move P
Bitcoin TA (quant)	61	53	59	68	69	Recomputed on a local quant refresh (BTC \$76,916.53, Sept 15). 1mo +2 and 3mo +5 as the cycle-month clock advanced to 28.88 and the 3-month analog went 1-of-3 to 2-of-3 positive; no new weekly, monthly or quarterly bar closed, so completed-bar composites are unchanged

P values shown (50 = coin flip). Iran War Risk, Tokenization and Fed & Macro held flat this cycle; CLARITY Act re-rated up, and this set (light daily touch, 2026-09-15_draft) is COMMITTED — AUTO-STAMPED. The Sept 12 full weekly refresh (2026-09-12_draft2) remains a draft awaiting Alex’s manual review — weekly refreshes are categorically excluded from the delegated daily auto-stamp.

Status & honesty notes

- **Score status:** the September 15 light daily score set (2026-09-15_draft) builds on yesterday's light daily touch (2026-09-14_draft, committed). Iran War Risk, Tokenization RWA and Fed & Macro were re-checked and held flat. **CLARITY Act re-rated UP** (32/47/58/82/92 → 37/53/62/83/92). The move is deliberately partial: the 1-month window went only 32→37 and stays Bear because today's cloture vote is still more likely than not to fail, while the 3-month window took the largest step because a second attempt inside the quarter is now materially more plausible.
- **Verification:** facts researched with primary-source discipline, corroborated by multiple independent outlets per claim. This cycle's load-bearing fact — the contents of the final CLARITY ethics text — rests on 6+ independent outlets reporting the same three specific changes (sunset dropped, state-AG enforcement restored, penalties raised). Two claims were deliberately *not* used to move the score: CoinDesk's single-source report of a presidential carve-out in the state-AG language, and Polymarket's ~34.5% (a market price, per Forbes Sept 14, and not comparable to the ~23% Dec-31 read priced Sept 13 without a shared question basis). On the Iran pillar, Iran's claim that a tanker struck mines is an interested-party assertion and was also not scored.
- **Known limits, in print inside the reports:** cycle-analog claims rest on 3 completed cycles, a disclosed fragility this report has repeatedly flagged — and this cycle it cut *in favour* of the number, which is worth naming; the TA pillar caps its own conviction at $P = 50 \pm 25$; single-source items are labeled in-line; current chart bars are partial and the completed-bar numbers are printed; the Robustness section shows dropping Iran alone still flips the headline to Mild Bull (+1.06), and dropping Fed & Macro alone does too (+0.64) — two pillars this report flags as doing most of the work on the headline number, and the leave-one-out range this cycle (−0.09 to +1.06) genuinely crosses zero.
- **The near-term calendar is the test, and today is the densest day in weeks:** the first CLARITY cloture vote, precisely dated 2:15pm ET today, Sept 15, 60 votes required — a failure with no released next-step plan likely kills the bill for 2026 · August retail sales at 8:30am ET today · the FOMC decision with SEP and dot plot tomorrow, Sept 16 at 2:00pm ET · and, on the Iran pillar, whether Oman names a firm new date for the Salalah ministerial with Saudi and Bahraini attendance confirmed.

This is research and education, not financial advice. The scores are probabilistic opinions with dated evidence — built to be argued with. If you check one thing manually, check the Iran War Risk pillar's My Decision section and trigger table — this is the cycle where a diplomatic opening that had just moved the number was withdrawn a day later, and you can see exactly how much of the previous move was taken back, and how much was deliberately left standing.
