

# CoinPicks Market Direction

## Research Package

Five pillars — four researched narratives and one pure-math read of the Bitcoin chart — scored on one standard, blended into one table, and distilled to one number. Everything in this folder is current as of **August 31, 2026** — a light daily catch-up cycle against the Aug 29 full weekly refresh. **This cycle's score set is COMMITTED, auto-stamped under Alex's delegated daily authority — see the note below.**

**COMMITTED — auto-stamped, August 31, 2026 (light daily catch-up).** Three qualitative pillars (CLARITY Act, Tokenization RWA, Fed & Macro) were independently re-checked and held flat — nothing found cleared the sufficiency bar to move a score. **Iran War Risk re-rated down** (14/22/38/54/76 → 9/17/34/51/75) after US forces struck Iranian rocket/mine-launchers on Larak Island Aug 30 — the first US strike on Iranian territory since Jul 29 — directly firing this pillar's own pre-declared flip line ("a resumption of direct US strikes on Iran proper"); Iran retaliated with a missile strike on two US-linked Jordan airbases, no confirmed US casualty. Confirmed on the record by a CENTCOM spokesperson plus 20+ independent outlets. This is a **light daily touch, not a full weekly refresh** — no window moved more than 8 points, the master call band (Mild Bull) is unchanged versus the last stamped set, and the sourcing clears the multi-source bar — so per the runbook's delegated daily auto-stamp authority, this set is auto-stamped (status: committed, stamped\_by "Alex (auto-stamped)"). See the Master Report's "My Decision" section for the full rationale.

THE FINAL NUMBER · AUGUST 31, 2026 (COMMITTED, AUTO-STAMPED) · BTC \$78,447.16

**+0.58** Mild Bull — down from the last stamped set's (Aug 22) +0.74 on Iran War Risk's re-rate

Equal-weight mean of the five window signals below — every pillar counts 20% (scale -10 to +10; horizon-weighted variant +1.13, down from Aug 22's +1.26). Positive because the far windows outweigh the near ones — **not a buy-today signal**. It is a "the storm is priced, the recovery isn't" number. Three qualitative pillars held flat this cycle; Iran War Risk re-rated down sharply on a resumed direct US strike on Iran; Bitcoin TA (computed) held its confirmed near-term signal and firmed further out as the cycle-month clock advanced — BTC \$78,447.16, up +1.0% versus \$77,666.16 on Aug 29.

THE FIVE WINDOWS UNDERNEATH IT

| WINDOW   | MASTER SIGNAL | CALL                                                                                                |
|----------|---------------|-----------------------------------------------------------------------------------------------------|
| 1 month  | -1.50         | <b>Bear</b> — down a full call band from Aug 22; Iran's flip-line-firing re-rate is the whole story |
| 3 months | -0.98         | <b>Mild Bear</b> — Iran drags harder; the September FOMC still sits inside this window              |
| 6 months | +0.32         | <b>Neutral</b> — CLARITY/Tokenization structural strength vs. Iran's drag                           |
| 1 year   | +2.01         | <b>Bull</b> — all five pillars still positive                                                       |
| 3 years  | +3.03         | <b>Strong Bull</b> — law + adoption + cycle + valuation                                             |

Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. The Mild Bull conclusion stays positive under every leave-one-out drop (+0.18 to +1.06); dropping CLARITY or Tokenization still rounds down to **Neutral**, unchanged in structure from Aug 22. See the Master Report's Robustness section.

Reading order

Twenty minutes to the whole picture; each report stands alone and can be checked independently — every fact is dated with sources on its last page.

| # | FILE                                                                                              | WHAT IT IS                                                                                                                                                                                                                                                                                  |

| 2 | <a href="#">CoinPicks_Bitcoin_TA_Quant_Pillar_Report.pdf</a>                                      | <b>The math pillar.</b> 7 indicators on 16 years of data, halving-cycle analogs, power-law valuation — with charts. Fully reproducible from code.                                                                                                                                           |
| 3 | <a href="#">reports/current/pdf/</a> — the four pillar PDFs                                       | <b>The story pillars.</b> CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro. Each: thesis, dated facts, honest bear case, dated triggers, and the full score lineage (June committed → Aug 22 committed → Aug 28/29 drafts → Aug 31 committed, this light daily catch-up cycle). |
| 4 | <a href="#">reports/archive/</a> + <a href="#">prior-work/</a>                                    | Every earlier version, preserved untouched — the score history is fully auditable.                                                                                                                                                                                                          |
| — | <a href="#">run.py</a> · <a href="#">engine/blend.py</a> · <a href="#">data/master_blend.json</a> | The blend engine (runnable Python — reproduce any score set with <code>run.py blend --set NAME</code> ), its output, and README.md for regeneration.                                                                                                                                        |

How the scoring works — one paragraph

Every pillar answers the same question on five windows (1 month / 3 months / 6 months / 1 year / 3 years): **P** = the odds (0–100) that this force is *good for crypto* by then, **Quality** = how trustworthy the evidence is (0–1), and **Impact** = how hard this force moves the whole market (0–10). These combine into a **Signal = ((P – 50) ÷ 50) × Quality × Impact** (Impact is a uniform 8 for every pillar), so a coin-flip view scores zero no matter how loud the headlines are, and weak evidence can't shout. **All five pillars are equal-weighted** — the master for each window is the simple mean of the five signals (20% each; add a pillar and it auto-rebalances to 1/N) — and the Final Number averages the five master windows.

The five pillars at a glance (August 31 committed P's — light daily catch-up, three pillars held flat, Iran War Risk re-rated down)

| PILLAR                | 1MO | 3MO | 6MO | 1YR | 3YR | ONE-LINE READ                                                                                                                                                                              |
|-----------------------|-----|-----|-----|-----|-----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CLARITY Act<br>(law)  | 32  | 47  | 58  | 82  | 92  | Held flat: Sept 15 2:15pm ET cloture vote remains the only scheduled action; no White House sign-off on the ethics text found                                                              |
| Iran War Risk         | 9   | 17  | 34  | 51  | 75  | RE-RATED DOWN: a resumed direct US strike on Iran's Larak Island (Aug 30) fired this pillar's own pre-declared flip line; Iran retaliated on two Jordan airbases, no confirmed US casualty |
| Tokenization<br>(RWA) | 52  | 60  | 66  | 74  | 85  | Held flat: no new dated tokenization catalyst found Aug 29-31                                                                                                                              |
| Fed & Macro           | 36  | 35  | 45  | 55  | 61  | Held flat: CME Sept hike odds kept drifting up (~56-58%→~60.4%) but a market-price drift alone, without a fresh primary print, doesn't clear the sufficiency bar                           |
| Bitcoin TA<br>(quant) | 54  | 46  | 59  | 68  | 69  | Quant pillar recomputed on today's price (BTC \$78,447.16, +1.0% vs Aug 29's \$77,666.16) — weekly composite +34.2 (Slight bullish, 6-of-7), monthly Neutral                               |

P values shown (50 = coin flip). Three qualitative pillars held flat this cycle; Iran War Risk re-rated down on a primary-sourced, multi-outlet-confirmed resumed strike and is AUTO-STAMPED, committed.

## Status & honesty notes

- **Score status:** August 31 committed set (2026-08-31\_draft) — a **light daily catch-up** against the Aug 29 full weekly refresh (2026-08-29\_draft, itself left as a draft pending Alex's manual review, now superseded) — was **AUTO-STAMPED** per Alex's delegated daily authority: status committed, stamped\_by "Alex (auto-stamped)". Three qualitative pillars (CLARITY Act, Tokenization RWA, Fed & Macro) were independently re-checked and held flat. **Iran War Risk re-rated down**, front-loaded, after a resumed direct US strike on Iran fired the pillar's own pre-declared flip line. This is a light daily touch, not a full weekly refresh — no window moved more than 8 points, the master call band is unchanged versus the last stamped set, and the load-bearing claim clears the sufficiency bar on 20+ independent outlets plus an on-record CENTCOM spokesperson — so per the runbook's delegated daily auto-stamp authority, it qualifies for routine auto-stamping. Every report prints the full lineage (June committed → Aug 22 committed → Aug 28/29 drafts → Aug 31 committed, this cycle).
- **Verification:** facts researched with primary-source discipline corroborated by multiple independent outlets per claim. Results: the Aug 30 US strike on Iran's Larak Island and Iran's retaliatory strike on Jordan are confirmed via an on-record CENTCOM spokesperson (Capt. Tim Hawkins), Jordan's own military statement, and 20+ independent outlets (Bloomberg, CNBC, NBC, Reuters, and more) — no confirmed US casualty from either event; CME FedWatch's continued drift on September hike odds (~56-58%→~60.4%) was checked and logged as a market-price-only signal, not sufficient alone to move Fed & Macro further; no new dated catalyst was found for CLARITY Act or Tokenization RWA.
- **Known limits, in print inside the reports:** cycle-analog claims rest on 3 completed cycles, a disclosed fragility this report has repeatedly flagged; the TA pillar caps its own conviction at  $P = 50 \pm 25$ ; single-source items are labeled in-line; current chart bars are partial and the completed-bar numbers are printed; the Robustness section shows dropping CLARITY or Tokenization still lands at the Neutral/Mild-Bull boundary, unchanged in structure from Aug 22.
- **The near-term calendar is the test:** the next FOMC (with SEP/dot plot), Sept 15, 2026 — CME FedWatch post-Jackson-Hole sits around ~60% hike odds as of this cycle · the first CLARITY cloture vote, precisely dated 2:15pm ET Sept 15 · whether the Aug 30 strike was an isolated interdiction or the start of a renewed sustained campaign — the real test for Iran War Risk next cycle · GENIUS Act 18-month backstop effective Jan 18, 2027. Each pillar's trigger table says in advance what each outcome does to the scores.

**This is research and education, not financial advice.** The scores are probabilistic opinions with dated evidence — built to be argued with. If you check one thing manually, check the trigger tables: they are the falsifiable part.
