

CoinPicks Market Direction

Research Package

Five pillars — four researched narratives and one pure-math read of the Bitcoin chart — scored on one standard, blended into one table, and distilled to one number. Everything in this folder is current as of **July 18, 2026** (full weekly refresh).

THE FINAL NUMBER · JULY 18, 2026 · BTC \$63,992.32

+0.75 Mild Bull — time-arbitraged

Equal-weight mean of the five window signals below — every pillar counts 20% (scale -10 to +10; horizon-weighted variant +1.28). Positive because the far windows outweigh the near ones — **not a buy-today signal**: the same table says Mild Bear for the next 1 and 3 months. It is a "the storm is priced, the recovery isn't" number, and this week the storm got a little louder (down from +0.97 / +1.46 on July 13).

THE FIVE WINDOWS UNDERNEATH IT

WINDOW	MASTER SIGNAL	CALL
1 month	-1.12	Mild Bear — Iran War Risk escalation deepens further; Fed improved on a new July-FOMC dovish signal
3 months	-0.80	Mild Bear — Iran's continued deterioration is now the dominant driver of this window
6 months	+0.37	Neutral — CLARITY/Tokenization structural strength vs. Iran's widened drag
1 year	+2.18	Bull — all five pillars still positive
3 years	+3.14	Strong Bull — law + adoption + cycle + valuation

Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. The Mild Bull conclusion survives dropping any single pillar (leave-one-out: +0.38 to +1.01).

Reading order

Twenty minutes to the whole picture; each report stands alone and can be checked independently — every fact is dated with sources on its last page.

#	FILE	WHAT IT IS
1	CoinPicks_Master_Direction_Report.pdf	The summary. The final number, the five-window table, the full pillar matrix, where the lenses agree/fight, six weeks of dated triggers, sensitivity.
2	CoinPicks_Bitcoin_TA_Quant_Pillar_Report.pdf	The math pillar. 7 indicators on 16 years of data, halving-cycle analogs, power-law valuation — with charts. Fully reproducible from code.
3	reports/current/pdf/ — the four pillar PDFs	The story pillars. CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro. Each: thesis, dated facts, honest bear case, dated triggers, and the full score lineage (June → Jul 8 → Jul 10 → Jul 11 → Jul 12 → Jul 13 → Jul 17 → Jul 18).
4	reports/archive/ + prior-work/	Every earlier version, preserved untouched — the score history is fully auditable.
—	run.py · engine/blend.py · data/master_blend.json	The blend engine (runnable Python — reproduce any score set with <code>run.py blend --set NAME</code>), its output, and README.md for regeneration.

How the scoring works — one paragraph

Every pillar answers the same question on five windows (1 month / 3 months / 6 months / 1 year / 3 years): **P** = the odds (0–100) that this force is *good for crypto* by then, **Quality** = how trustworthy the evidence is (0–1), and **Impact** = how hard this force moves the whole market (0–10). These combine into a **Signal** = $((P - 50) \div 50) \times \text{Quality} \times \text{Impact}$ (Impact is a uniform 8 for every pillar), so a coin-flip view scores zero no matter how loud the headlines are, and weak evidence can't shout. **All five pillars are equal-weighted** — the master for each window is the simple mean of the five signals (20% each; add a pillar and it auto-rebalances to 1/N) — and the Final Number averages the five master windows.

The five pillars at a glance (July 18 draft P's — full weekly refresh)

PILLAR	1MO	3MO	6MO	1YR	3YR	ONE-LINE READ
CLARITY Act (law)	44	48	59	82	92	Held at the light-touch level — record-low prediction-market odds (~30-32%) independently confirmed across 3 outlets; an earlier Senate-floor-math inference (Graham's seat) corrected but offset by the unresolved ethics deadlock
Iran War Risk	24	33	44	60	79	The biggest move this cycle: 7th consecutive CENTCOM strike night, a tit-for-tat Kuwait/Iran desalination-plant exchange, plus a correction to this report's "zero US casualties" and "\$90 Brent trigger" framing (both were stale/wrong)
Tokenization (RWA)	50	56	65	74	85	Held at the light-touch level — the GENIUS Act rules-deadline miss (Jul 18) is confirmed exactly as expected; DTCC's Stellar-track launch confirmed live on schedule
Fed & Macro	42	40	47	55	62	Improved at the front end — a newly-corroborated collapse in the Jul 28-29 FOMC's own hike odds (~46-47% → ~12-17%); the September figure remains a contested three-way conflict, not re-rated
Bitcoin TA (quant)	40	37	46	67	70	Quant pillar refreshed (BTC \$63,992.32; weekly tape -45.9 moderate bearish, monthly -30.0 slight bearish, quarterly +9.1 neutral; cycle month 26.9)

P values shown (50 = coin flip). Fed & Macro (judged) and Bitcoin TA (computed) remain close through 6 months — 47 vs 46, a 1-point gap.

Status & honesty notes

- Score status:** July 18 scores are evidence-driven **drafts awaiting the author's stamp**; every report prints the full lineage (June committed → July 8 → July 10 → July 11 → July 12 → July 13 → July 17 → July 18). Nothing hides its history.
- Verification:** facts researched with primary-source discipline (Fed/BLS releases, CENTCOM press releases, Senate schedule, exchange APIs), independently fact-checked, and the whole package forensically audited; score math recomputed independently; price data cross-checked across two exchanges; models that failed out-of-sample testing were excluded and say so. This cycle's full refresh corrected two errors carried since July 8: the Iran pillar's "zero US casualties" framing (Pentagon confirms 13 KIA + 1 non-hostile death since March) and its "\$90 Brent hard-trigger" (the war's real peak already exceeded \$120 in April).
- Known limits, in print inside the reports:** cycle-analog claims rest on 3 completed cycles; the TA pillar caps its own conviction at $P = 50 \pm 25$; this cycle's clearest fragility example remains Iran War Risk, whose front-end P kept falling on confirmed continued escalation (32→24 at 1mo this cycle alone); single-source items are labeled in-line; current chart bars are partial and the completed-bar numbers are printed; the Fed & Macro pillar flags a genuine three-way conflict on the September-hike-odds figure that it declined to resolve or score on this cycle.
- The near-term calendar is the test:** CLARITY floor vote targeted week of Jul 20 (fallback Jul 27) · FOMC Jul 29 · Senate recess Aug 7 · MoU expiry ~Aug 16 · GENIUS Act 18-month backstop effective Jan 18, 2027. Each pillar's trigger table says in advance what each outcome does to the scores.

This is research and education, not financial advice. The scores are probabilistic opinions with dated evidence — built to be argued with. If you check one thing manually, check the trigger tables: they are the falsifiable part.
