The Fed & Macro Regime Pillar Report

Liquidity as the Master Driver — Researched, Scored, and Re-Rated

*Originally written and scores committed by me on June 12, 2026. Fully re-researched July 8 and July 10, 2026; held flat July 11-13 pending fresh data; a daily catch-up July 17 moved the scores up on cooling CPI/PPI and Fed Chair Warsh's debut testimony, and a light touch July 18 nudged further on a fresh H.4.1 print. **This version is a full weekly research refresh (July 18, superseding that same day's light touch)** that independently re-verified the June CPI/PPI/testimony data and found a new, well-corroborated signal the daily touches missed: the Jul 28-29 FOMC's own hike odds collapsed to ~12-17% (from ~46-47%). It also found the September-hike figure the daily draft used does not reconcile with a same-day competing read — flagged, not resolved. Scores are **DRAFT**, awaiting my stamp.*

COINPICKS PILLAR REPORT · WEIGHT: 25% OF MY THESIS

Written June 12, 2026 · Updated & Re-verified July 18, 2026 (full weekly refresh) · Not Financial Advice

The Scores — Committed vs. Drafts

June column committed by me on June 12, 2026. The July 8-13 columns are re-rated DRAFTS from successive re-researches (held flat July 11-13 pending fresh data). July 17 moved up on cooling CPI/PPI and Warsh's testimony; July 18 is this week's full weekly refresh, adding a newly-corroborated July-FOMC dovish signal on top of the light touch's H.4.1 nudge. None of the drafts are stamped yet.

WINDOW	MY JUNE P	JUL 8	JUL 10	JUL 11	JUL 12	JUL 13	JUL 17	JUL 18	QUALITY	IMPACT	SIGNAL	MY CALL
1 month	38	35	34	34	34	34	38	42	0.85	8	-1.09	Mild Bear — but improving: Jul 28-29 FOMC hike odds collapsed to ~12-17%
3 months	40	36	36	36	36	36	40	40	0.85	8	-1.36	Mild Bear — Sept-hike figure unresolved between two conflicting reads
6 months	46	42	44	44	44	44	47	47	0.80	8	-0.38	Neutral (slight bear lean)
1 year	54	52	53	53	53	53	55	55	0.75	8	+0.60	Mild Bull — short hike cycle, then ease
3 years	61	61	61	61	61	61	62	62	0.65	8	+1.25	Mild Bull — structural accumulate

Draft P (Jul 18, full weekly refresh): 42 / 40 / 47 / 55 / 62 · **Weight:** 20% (equal) · **Impact:** 8 (uniform) · **Formula:** Signal = ((P – 50) ÷ 50) × Quality × Impact. Lineage: June committed 38 / 40 / 46 / 54 / 61 (June 12, 2026) → July 8 draft 35 / 36 / 42 / 52 / 61 → July 10 draft 34 / 36 / 44 / 53 / 61 → July 11/12/13: held flat (no fresh primary data) → July 17 draft 38 / 40 / 47 / 55 / 62 (cooling CPI/PPI, Warsh testimony) → July 18 light draft 39 / 40 / 47 / 55 / 62 (H.4.1 nudge) → July 18 full weekly refresh 42 / 40 / 47 / 55 / 62 (July-FOMC hike-odds collapse, newly corroborated) — awaiting my stamp.

THE THREE INPUTS, IN PLAIN ENGLISH

P — the odds the macro regime is *good for crypto* by then — not "the Fed cuts by then." Near-term improved this cycle on a genuinely new, well-corroborated signal (CNBC, Coinpedia, BelnCrypto, CryptoBriefing, Slatestone all independently confirm it): the Jul 28-29 FOMC's own hike odds collapsed to roughly **12-17%** (from ~46-47%) after the cooling June CPI (-0.4% m/m, largest drop since Apr 2020) and PPI (-0.3% m/m) prints and Fed Chair Warsh's measured Jul 14/15 congressional testimony — none of this was in the daily touches' framing, which focused only on the September question. The September figure itself remains genuinely unresolved: this cycle's independent re-check found the ~48.7% cumulative-hike figure the daily draft used does **not** reconcile with a same-day Investing.com Fed Rate Monitor read (~57.2% cumulative, more hawkish) or a third source (~41.5%) — three measures, no consensus,

so 3/6/12/36mo hold rather than move further on a contested number. Long-term still above water: the labor market is cracking and the plumbing remains loose.

Quality — how trustworthy the evidence is. This cycle's full refresh independently re-verified the June CPI (BLS primary, -0.4% m/m confirmed), PPI (BLS primary, -0.3% m/m confirmed), and Warsh's testimony (federalreserve.gov primary, confirms a measured, not hawkish-surprise, tone) — all multi-source. Two sub-claims from the daily drafts remain unverified against primary text and are flagged as such: the specific "core PPI 4.7% y/y vs 5.2% forecast" figure, and the exact Jul 16 H.4.1 reserve-balance print (\$3.143T) — both plausible but not independently confirmed this cycle.

Impact — 8 out of 10, the uniform value every pillar now shares in the equal-weight model. Liquidity is the tide; it moves the whole market at once.

The Claim

The thesis, and where I differ from the consensus — updated July 18, 2026, full weekly refresh

The crowd: caught between two stories that don't fully reconcile. The June CPI (-0.4% m/m, largest drop since Apr 2020) and PPI (-0.3% m/m) prints, plus Fed Chair Warsh's measured Jul 14/15 testimony, pushed **Jul 28-29 FOMC hike odds down to ~12-17%** (from ~46-47%) — a clean, multi-sourced dovish signal. But the September question is a mess: this cycle's independent re-check found three different market-implied reads that don't agree — a same-day Investing.com Fed Rate Monitor snapshot (~57.2% cumulative hike odds, more hawkish), a Slatestone-relayed figure (~17%, far more dovish), and a third source (~41.5%). Nobody has reconciled these.

Me: near-term improves to a genuine Mild Bear rather than outright Bear (34→42 at 1mo) on the July-meeting signal, which is real and well-corroborated. I'm holding 3/6/12/36mo rather than moving them further, because the September figure that would justify a bigger move is contested three ways and I don't have a way to adjudicate it independently this cycle — per the sufficiency rule, a genuinely unresolved market-implied number shouldn't drive a re-rate until it's pinned down.

My edge: the crowd is fixated on the September question; I think the July meeting itself was the more decisive near-term signal and it just resolved dovish. The plumbing story from prior cycles (TGA spend-down, reserve build, QT effectively dead) remains directionally intact — I did not find a fresh H.4.1 release with a primary-confirmed figure this cycle to update it further, so it's carried forward rather than re-verified from scratch. That's why the 6-month and 1-year windows still sit above the 1-month, and why the 3-year P holds near 61-62.

The Facts

As of July 18, 2026 — hard numbers only, sources on the last page. This is a full weekly research refresh covering the Jul 13-18 data gap, independently re-verified against primary sources (BLS, federalreserve.gov) rather than carried forward from the daily drafts. The Iran/Hormuz war-risk situation is covered in full in the Iran War Risk pillar report and is only referenced here as a macro input.

- ★ **NEW, confirmed primary source — June CPI fell 0.4% m/m, the largest monthly drop since April 2020 (BLS, Jul 14).** Headline CPI +3.5% y/y (below ~3.8% forecast). CoinDesk reports core easing to 2.6% y/y; the specific core *monthly* figure could not be independently confirmed against primary BLS text this cycle and is flagged, not asserted.
- ★ **NEW, confirmed primary source — Fed Chair Kevin Warsh's first congressional testimony, House Jul 14 / Senate Jul 15 (federalreserve.gov testimony page, primary).** Struck a firm-but-not-alarmist tone: "not mission accomplished" on inflation, asserted Fed independence — consistent with a measured, not hawkish-surprise, read.
- ★ **NEW, confirmed primary source — June PPI fell 0.3% m/m, the largest goods-index drop since 2022 (BLS, Jul 15),** driven by a 12% gasoline decline; core (ex food/energy/trade) +0.1% m/m. The specific "core PPI 4.7% y/y vs. 5.2% forecast" figure circulating in the daily drafts could not be independently confirmed against primary BLS text this cycle — plausible but flagged as unverified.
- ★ **NEW, confirmed multi-source (CNBC, Coinpedia, BelnCrypto, CryptoBriefing, Slatestone) — Jul 28-29 FOMC hike odds collapsed to roughly 12-17%** (from ~46-47%) following the CPI/PPI prints and Warsh's testimony. This is the clearest, best-corroborated dovish signal of this cycle and was not captured in either daily touch, which focused only on the September question.

- ★ **The September-hike figure is contested three ways, unresolved this cycle.** The daily draft's ~48.7% cumulative-hike figure does not reconcile with a same-day Investing.com Fed Rate Monitor snapshot (~57.2% cumulative, more hawkish) or a third relayed figure (~17%, far more dovish). No independent adjudication was possible this cycle; treat the September number as an open question, not a settled input, until a direct CME FedWatch pull is completed next cycle.
- **Jobless claims: 208K for the week ended Jul 11 (Bloomberg, Washington Times, multi-source), "fewest in 10 weeks."** Consensus context differs slightly across outlets (~219K per Bloomberg/FactSet vs. ~217K cited in an earlier draft) — a minor discrepancy, not a material one.
- **H.4.1 balance sheet: the Jul 9 release (\$3.099T reserves, +\$132B w/w) is confirmed primary-source.** A claimed Jul 16 release (\$3.143T, +\$43.8B w/w) is arithmetically consistent with the Jul 9 base but could not be independently confirmed against a primary source this cycle (federalreserve.gov's release page was not directly accessible) — flagged as plausible, not verified.
- ★ **The June minutes landed hawkish — carried forward from Jul 8-13, not re-verified this cycle, but superseded in relevance by the CPI/PPI/testimony cluster above.** Released July 8, 2:00pm ET: unanimous 12–0 hold at 3.50–3.75%; the Committee **dropped its prior easing-bias language**; "a few" participants saw a case for hiking at the June meeting itself; risks to inflation judged tilted to the upside; Fed staff **raised 2026 and 2027 inflation forecasts** vs. April, citing the Middle East war and AI-buildout demand. The dot split stands: 9 members ≥1 hike by end-2026, 8 no change, 1 cut. No QT acceleration, no new balance-sheet signal, and no FOMC meeting falls inside this window (next is July 28–29).
- **Iran/Strait-of-Hormuz conflict remains a live macro/oil-inflation risk input — full details in the Iran War Risk pillar report.** Brent currently trades ~\$85-87 (elevated but off its own April peak above \$120); this pillar treats the war as a risk factor that hasn't yet shown up as a fresh inflation surprise in the CPI/PPI data confirmed above, not as its own scoring input.
- **Carried forward, not re-verified this cycle:** the July 9 H.4.1 (TGA \$749.2B, bank reserves \$3,098.9B, +\$132B w/w) and the July 9 jobless-claims print (215K) are prior-cycle facts superseded by the Jul 16 claims print (208K, confirmed above) and the unverified Jul 16 H.4.1 figure noted above. The July 8 30-year Treasury auction (5.058% high yield, highest since 2007, stop-through) remains a valid, not re-checked, dollar-demand data point.
- **The labor market cracked — in slow motion (carried forward, not re-verified this cycle).** June payrolls +57K vs ~115K consensus; participation dropped to **61.5%**, the lowest since March 2021.
- **Warsh's Sintra remarks (July 1) pre-dated his testimony:** "too elevated" on inflation, joined Lagarde/Bailey/Macklem against forward guidance — consistent with, not contradicted by, the measured tone of his confirmed Jul 14/15 testimony above.
- **Warsh chartered five new Fed task forces (July 9)** — communications, balance sheet, data sources, productivity/jobs, and inflation frameworks. *Single source (Bloomberg), not re-verified this cycle.* Still a medium-term wildcard for where QT's endpoint lands.
- **Policy rate and balance sheet: still 3.50–3.75%, no FOMC meeting has occurred since June.** Next is July 28–29, now priced at just ~12-17% hike odds (confirmed above). The eSLR recalibration (finalized Nov 25, 2025; effective April 1, 2026) remains a liquidity positive already delivered, not a pending catalyst.
- **BTC held up through the week:** \$63,796.08 (Jul 12 close) → \$63,992.32 (Jul 18 close) — essentially flat through a rough week of Iran-war headlines (see the Iran pillar) and ahead of the Jul 28-29 FOMC.

The Prize

Illustrative only — not price targets, not advice

The canonical anchor: **2020-21 ZIRP + QE** ran BTC ~\$3,800 → \$69,044 (~15–18×) — a unique COVID/zero-rate/open-ended-QE setup, not a repeatable base case. The **2024-25 cuts** ran ~\$60K → a ~\$126K ATH (Oct 6, 2025) — but that top came on a non-Fed tariff shock and has since roughly halved to the low-\$60Ks (\$63,992.32 on the July 18 close). From here, a retest of the \$126K high ≈ **+95%**.

Discount it hard, twice. First: easing is not an automatic catalyst — the last cycle topped on a non-Fed shock. Second: the pivot that unlocks any of this is now less clearly pushed out than a week ago — the Jul 28-29 FOMC hike odds collapsed to ~12-17%, meaning a hold (not a hike) is now the heavily favored outcome — but the September question remains genuinely unresolved. The Prize doesn't feed the math — it tells you what the 3-year lean is worth acting on when the tide finally turns.

The Other Side

The strongest honest case my bearish lean is wrong

- **I may be over-crediting one dovish signal.** The July-meeting hike-odds collapse (~12-17%) is real and multi-sourced, but it's one data point; if the September figure resolves toward the more hawkish of the three conflicting reads found this cycle (~57.2% cumulative), the "improving" story could reverse quickly.
- **The labor market may still force the Fed's hand in the other direction.** The June payrolls miss (+57K, –74K of revisions) argues for cuts, not hikes — but a hike into a cracking labor market, if it does happen in September, would be a policy error that raises long-run conviction even as it hurts near-term.
- **Two of three unverified data points this cycle could each move the score if confirmed wrong.** If the daily draft's H.4.1 Jul 16 figure (\$3.143T) turns out inaccurate, or if the core PPI figure (4.7% y/y) is materially different from what BLS actually published, this cycle's read would need revisiting.
- **Crypto has now shrugged off a full week of Iran-war escalation, not just a few days.** BTC held flat (\$63,796→\$63,992) through the Iran pillar's worst week of the conflict — either genuine decoupling, or complacency ahead of a bigger shock.
- **Latent liquidity positives remain queued but unverified this cycle:** the TGA spend-down and Warsh's balance-sheet task force (still single-source) could loosen policy without a rate cut — not independently re-checked this cycle.

The Triggers

Dated events — some prove the claim right, some prove it wrong

DATE	EVENT	MEANS
Fired Jul 14 — DOVISH	CONFIRMED — June CPI fell 0.4% m/m, largest drop since Apr 2020 (BLS primary)	Already driving this cycle's 1mo P improvement
Fired Jul 14/15 — NEUTRAL-TO-DOVISH	CONFIRMED — Warsh's first congressional testimony struck a measured, not hawkish-surprise, tone (federalreserve.gov primary)	Removes a hawkish-surprise tail risk that was live as of Jul 13
Fired Jul 15 — DOVISH	CONFIRMED — June PPI fell 0.3% m/m (BLS primary)	Reinforces the CPI signal; already reflected in this cycle's P
Fired ~Jul 15-16 — the real move	CONFIRMED, multi-source — Jul 28-29 FOMC hike odds collapsed to ~12-17% (from ~46-47%)	The single biggest driver of this cycle's 1mo P improvement (34→42 vs. the held-flat Jul 13 baseline)
Ongoing, unresolved	CONTESTED — September hike odds: three sources disagree (~57.2% cumulative, ~41.5%, ~17%)	No re-rate on this number until a direct CME FedWatch pull reconciles it — flagged for next cycle
July 23, 2026	PENDING — next H.4.1 + jobless claims	First chance to independently confirm the Jul 16 H.4.1 figure this cycle could not verify against primary source
July 28-29	PENDING — FOMC (hold now heavily favored, ~83-88% per the confirmed odds collapse)	A hold confirms this cycle's read; a surprise hike would be a major re-rate down
September FOMC	PENDING / CONTESTED — see the three-way September-odds conflict above	A hike into a cracking labor market = policy error — 3-year conviction rises regardless of near-term pain
Ongoing	Iran/Hormuz oil-inflation risk — live, not yet a confirmed CPI/PPI surprise	Full details in the Iran War Risk pillar; watch for this to show up in the next CPI/PPI cycle

The flip line: the July-meeting dovish resolution is now largely confirmed — the real remaining swing factor is the September question, contested three ways this cycle. If the more hawkish read (~57.2% cumulative) is the accurate one and a September hike lands into a cracking labor market, treat that as a policy error that raises 3-year conviction while hurting the 3/6-month windows further. If the more dovish reads are accurate, the near-term Mild Bear likely improves further next cycle once the CME figure is directly reconciled.

My Decision

🕒 **UPDATED DRAFT — JULY 18, 2026 (FULL WEEKLY REFRESH) · AWAITING MY STAMP**

Draft P: 42 / 40 / 47 / 55 / 62 · My Weight: 20% (equal) · Impact: 8 (uniform)

This week's full research refresh independently re-verified the CPI/PPI/testimony cluster the daily catch-up (Jul 17) and light touch (Jul 18) had already partially captured, and found one additional, well-corroborated signal neither daily touch used: the Jul 28-29 FOMC's own hike odds collapsed to ~12-17% (from ~46-47%), a genuinely new and strongly dovish data point. That drives the 1-month move (39→42 vs. the light draft). 3/6/12/36mo hold rather than move further, because the September-hike figure that would justify a bigger move is contested three ways in this cycle's independent research (a same-day Investing.com read at ~57.2% cumulative, a relayed ~17%, and a third at ~41.5%) — per the sufficiency rule, an unresolved number shouldn't drive a re-rate until it's pinned down, which I'm targeting for next cycle via a direct CME FedWatch pull.

The June committed scores (**38 / 40 / 46 / 54 / 61**, committed June 12, 2026) remain the last human-stamped values.

Override any P and re-stamp — the master blend recomputes.

What Changed Since Last Check

Full weekly research refresh, July 18, 2026, covering the Jul 13-18 gap (supersedes the same-day light-touch draft; catch-up daily check Jul 17 first captured the CPI/PPI/testimony cluster)

- ★ **Independently re-verified against primary sources: June CPI (-0.4% m/m, BLS), June PPI (-0.3% m/m, BLS), and Warsh's Jul 14/15 testimony (federalreserve.gov) — all confirmed as reported by the daily catch-up.** Two sub-claims (core PPI y/y figure, exact Jul 16 H.4.1 print) could not be independently confirmed and are flagged, not asserted.
- ★ **New this cycle, not captured by either daily touch: the Jul 28-29 FOMC's own hike odds collapsed to ~12-17%** (from ~46-47%), confirmed across five independent outlets (CNBC, Coinpedia, BelnCrypto, CryptoBriefing, Slatestone). This is the single biggest driver of this cycle's 1-month P improvement.
- ★ **The September-hike figure is now flagged as a genuine three-way conflict, not a settled number.** The daily draft's ~48.7% cumulative figure does not reconcile with a same-day Investing.com read (~57.2%, more hawkish) or a third relayed figure (~17%, more dovish) — no re-rate on this number until it's independently reconciled.
- **Score re-rates (July 13 held-flat baseline → July 17 → July 18 light → July 18 full refresh):** 1-month 34 → 38 → 39 → **42** · 3-month 36 → 40 → 40 → **40** (held) · 6-month 44 → 47 → 47 → **47** (held) · 1-year 53 → 55 → 55 → **55** (held) · 3-year 61 → 62 → 62 → **62** (held) — the July-FOMC signal drove this cycle's only additional move; everything else holds pending the September-odds reconciliation. Draft only — awaiting my stamp.
