Iran War Risk Pillar Report

Middle East Conflict Risk — Researched, Scored, and Personally Committed

*Originally written June 19, 2026; scores committed by me June 19, 2026. Fully re-researched July 8, July 10, and July 13, 2026 against live primary sources; a daily catch-up July 17 and a light touch July 18 followed. **This version is a full weekly research refresh (July 18, superseding that same day's light touch)** that independently re-verified every claim carried since Jul 8: it confirms the 7th consecutive CENTCOM strike night, but corrects two load-bearing errors this report had been carrying — the "zero US casualties" framing (Pentagon confirms 13 KIA plus 1 non-hostile death from the broader war since March) and the "\$90 Brent hard-trigger" (Brent already exceeded \$120 intraday in April; current ~\$85-87 is elevated-but-off-peak, not a fresh record). The re-rated scores in this version are **DRAFT**, awaiting my stamp.*

COINPICKS PILLAR REPORT · WEIGHT: 25% OF MY THESIS

Written June 19, 2026 · Updated & Re-verified July 18, 2026 (full weekly refresh) · Not Financial Advice

The Scores — Committed vs. Drafts

June column committed by me June 19, 2026 · Jul 8 / Jul 10 / Jul 11 / Jul 12 / Jul 13 / Jul 17 drafts shown for lineage · Jul 18 is this week's full weekly re-research re-rate (supersedes the same-day light touch) — awaiting my stamp

WINDOW	MY JUNE P	JUL 8	JUL 10	JUL 11	JUL 12	JUL 13	JUL 17	JUL 18	QUALITY	IMPACT	SIGNAL	MY CALL
1 month	50	40	42	44	44	38	32	24	0.60	8	-2.50	Bear — 7th consecutive strike night, Kuwait/Iran desalination-plant strikes, "full-scale offensive" warning
3 months	55	47	49	50	50	45	39	33	0.65	8	-1.77	Bear
6 months	62	55	56	57	57	53	48	44	0.70	8	-0.67	Mild Bear
1 year	75	70	70	70	70	68	65	60	0.65	8	+1.04	Neutral (dip-buy thesis intact but thinner)
3 years	85	83	83	83	83	83	82	79	0.55	8	+2.55	Bull

Draft P (Jul 18, full weekly refresh): 24 / 33 / 44 / 60 / 79 · **Weight:** 20% (equal) · **Impact:** 8 (uniform) · **Formula:** Signal = ((P – 50) ÷ 50) × Quality × Impact. Lineage: June committed 50 / 55 / 62 / 75 / 85 (June 19, 2026) → July 8 draft 40 / 47 / 55 / 70 / 83 → July 10 draft 42 / 49 / 56 / 70 / 83 → July 11 draft 44 / 50 / 57 / 70 / 83 → July 12 draft 44 / 50 / 57 / 70 / 83 (held flat, in hindsight wrong) → July 13 draft 38 / 45 / 53 / 68 / 83 (full re-research, a genuine cut) → July 17 draft 32 / 39 / 48 / 65 / 82 (catch-up covering six strike nights) → July 18 draft — this week's full weekly refresh, cutting further on continued escalation and a corrected casualty/oil-trigger accounting, awaiting my stamp.

THE THREE INPUTS, IN PLAIN ENGLISH

P — the odds this is *good for crypto* by then. Near-term cut further this week: CENTCOM logged a 7th consecutive strike night into Jul 18, Iran's Jul 17 strike on Kuwait's Shuaiba desalination/power plant (knocking out ~90% of Kuwait's drinking-water supply) was mirrored by a US strike on an Iranian desalination site at Jask, and a top Iranian military adviser publicly warned of a "full-scale offensive" if the barrage continues. All multi-source (CENTCOM.mil, CNN, Al Jazeera, ABC, The Hill, Bloomberg). **Two corrections applied this cycle, both pulling 12mo/36mo down modestly:** first, the "zero US casualties" framing this report has carried since Jul 8 does not hold as stated — the Pentagon officially confirms **13 combat deaths from March plus 1 non-hostile death** (helicopter crash, Jul 1) from the broader war, with no *new* hostile-fire US death confirmed since the Jul 8 ceasefire collapse specifically (a viral claim of 3 US troops killed in Kuwait was debunked by CENTCOM). Second, the "\$90 Brent hard-trigger" this report has used as its escalation ceiling is stale — Brent already spiked past \$120 intraday in April 2026; current Brent (~\$85-87, up ~10% this week) is elevated relative to the recent lull but well off the war's actual peak, not a fresh record. These are corrections to the record, not fresh shocks — but they mean the dip-buy thesis was resting on a shakier foundation than stated, which is why 12mo and 36mo move down this cycle even though no new US casualty has occurred.

Quality — how trustworthy the evidence is. This cycle's research was independently re-verified against primary sources (CENTCOM.mil, Pentagon casualty accounting, Wikipedia's "2026 Iran war" and "Casualties of the 2026 Iran war" pages cross-checked against The Hill/ABC/Washington Times) rather than carried forward from prior cycles' framing. Quality still tops at 0.70 (6mo) and falls to 0.55 on the 3-year window given how much of the long-run read still rests on historical analogy rather than fresh data; Quality itself is unchanged this cycle per house rules (no Quality changes without an explicit owner decision) even though the underlying facts it's rated against were corrected.

Impact — 8 out of 10, the uniform value shared by every pillar in the equal-weight model. BTC has held up remarkably well through this week's escalation — \$63,796 (Jul 12) to \$63,992 (Jul 18), essentially flat — a genuine, if partial, decoupling from a war that the qualitative read treats as materially worse. A war shock can still hit crypto hard for days, but this week it mostly didn't.

The Claim

The thesis, and where I differ from the consensus — updated July 18, 2026, full weekly refresh

The crowd: increasingly numb to a war that keeps setting new records. Seven consecutive CENTCOM strike nights through Jul 18, a tit-for-tat exchange of desalination/power-plant strikes (Iran on Kuwait's Shuaiba plant Jul 17, the US on Iran's Jask facility), and a top Iranian adviser's public warning of a "full-scale offensive" — yet Brent sits at ~\$85-87 (well off its own April peak above \$120) and BTC has barely moved (\$63,796 → \$63,992 this week). The market has stopped pricing each new strike night as a discrete shock.

Me: I'm cutting further near-term — 24% good-for-crypto at 1 month, down from 32% on Jul 17 — because the escalation is real and multi-source, not because I think this is the worst week of the war (it isn't; that was mid-July's mediator strike and Hormuz-closure declaration). More importantly, this cycle I corrected two things this report had been carrying since Jul 8 that I should have caught sooner: the "zero US casualties" framing is wrong as a whole-war statement (Pentagon confirms 13 KIA + 1 non-hostile death since March), and the "\$90 Brent trigger" I'd been treating as the escalation ceiling was already blown past in April. Correcting those pulls the 12-month and 3-year scores down a notch each (68→60, 83→79) — not because anything new happened to the dip-buy thesis this week, but because it was standing on a shakier foundation than I'd been reporting.

My edge: the crowd and I actually agree on the direction now — this is a genuinely bad and lengthening war — but I still don't think it's the flip line. No new hostile-fire US death has been confirmed since the Jul 8 ceasefire collapse specifically (a viral claim of 3 US KIA in Kuwait was debunked by CENTCOM), Brent remains well below its own war-era peak, and Oman/Qatar mediation (Araghchi in Muscat) is still active despite everything. The risk isn't the headlines; it's a confirmed new US combat death, a full Hormuz closure that actually stops the ~10 vessels/day still transiting, or Brent retesting its April highs. I watch those, not the strike-count treadmill.

The Facts

As of July 18, 2026 — hard numbers only, sources on the last page. This is a full weekly research refresh covering the Jul 13-18 gap, independently re-verified against primary sources (CENTCOM.mil, Pentagon casualty accounting, Wikipedia's crisis pages cross-checked against named outlets) rather than carried forward. Two corrections to the standing record are marked ★.

- ★ **Strike tempo confirmed: 7 consecutive CENTCOM strike nights through Jul 18** (multi-source: CNN, ABC, Al Jazeera, The Hill, Bloomberg, JPost liveblogs), up from six as of the Jul 17 check. No 8th-night CENTCOM release found as of this research — the pace has not visibly accelerated further since Jul 17-18, even as it remains active.
- ★ **Desalination/power-plant strikes now run both directions.** Iran struck Kuwait's Shuaiba desalination/power plant (Jul 17), knocking out roughly 90% of Kuwait's drinking-water supply — the IRGC called it "Wave 15 of Operation Nasr 2," implying a longer, numbered retaliatory campaign than prior reports conveyed. The US mirrored this with a strike on an Iranian desalination site at Jask. A top Iranian military adviser publicly warned of a "full-scale offensive" if the barrage continues.
- ★ ★ **CORRECTION — the "zero US casualties" framing this report has carried since Jul 8 does not hold as a whole-war statement.** The Pentagon officially confirms **13 combat deaths (all from March) plus 1 non-hostile death** (Navy Cmdr. Gabriel Edwards, helicopter crash, Arabian Sea, Jul 1) — 14 total US dead since the war began in ~Feb-Mar 2026 — with official wounded figures of roughly 365-414 (multi-source: The Hill, ABC News, Washington Times, Wikipedia's "Casualties of the 2026 Iran war"). Separate investigative reporting alleges the Pentagon undercounted wounded (as high as 520-625+, including 200+ USS Gerald R. Ford fire injuries from March) — reported here as a contested allegation, not verified fact. **What remains true and load-bearing: no new hostile-fire US death has been confirmed specifically since the Jul 8 ceasefire collapse** — a viral claim of 3 US troops killed at a Kuwait base (Jul 12-13) was investigated and debunked by CENTCOM (traced to a repurposed 2019 Saudi Arabia fire photo). This is a correction of historical accounting carried since early in this report's life, not a new casualty event this cycle — but it means the 3-year "zero casualties" anchor was never as clean as stated, which is why 12mo/36mo move down this cycle.
- ★ ★ **CORRECTION — the "\$90 Brent hard-trigger" this report has used as its escalation ceiling is stale.** Brent already spiked well past **\$120/bbl intraday in April 2026** (per Wikipedia's "Economic impact of the 2026 Iran war," corroborated by CNBC and Al Jazeera) — months before this report's own Jul 8-13 cycle ever mentioned a "\$90" ceiling. Current Brent is **~\$85-87** (up ~10% this week), elevated relative to the

recent lull but well off the war's actual peak, not a fresh record. The trigger table is being re-leveled this cycle to reflect the real historical range rather than a threshold that was already obsolete when this report started citing it.

- **Iranian casualty claims continue rising, still single-source and unverified:** Iran's Health Ministry now claims **50 killed, 500+ wounded since Jul 6** — up sharply from 17/115 as of Jul 13 — still an unverified government figure, reported here as a claim, not fact.
- **Strait of Hormuz remains effectively closed to normal commercial traffic** — not a new development this cycle, but re-confirmed: shipping-tracking data (PortWatch, corroborated by NPR and Al Jazeera) shows roughly 10 transits/day versus a normal baseline near 88/day, consistent with the collapse first flagged around Jul 12.
- **Mediation remains active, not collapsed.** Iran's FM Araghchi was in Muscat working an Oman-drafted Hormuz-management proposal as of this week, with Qatar and Pakistan mediating in parallel to try to save the June ceasefire memorandum — multi-source, consistent with every prior cycle's read that diplomacy has not formally ended despite the strikes.
- **Congress has still not moved.** The House (Jun 3, 215-208) and Senate (Jun 23-24, 50-48) War Powers Resolution votes remain the last congressional action; no new vote or resolution found this cycle despite the continued escalation.
- **No formal MoU withdrawal by either side** (still true as of Jul 18). The 60-day window to **~Aug 16** remains intact and un-triggered.
- **Oil re-sanctioned — wind-down deadline has now passed.** Treasury's revocation of the MoU oil waiver (GL X → GL X1, Jul 7) stood; the Jul 17 grace-period deadline for in-process deals has now elapsed — no fresh reporting found on the specific compliance outcome this cycle, flagged for next check.
- **Israel remains out of this round** — no confirmed direct Israel-Iran exchange since June 7–8; the strikes remain US (CENTCOM) and Iranian only.
- **The odds:** prior cycles' Polymarket "US invades Iran before 2027" reads were flagged as inconsistent aggregator relays (direct fetch failed repeatedly); not independently re-verified this cycle — treat any figure here as stale until a live re-pull succeeds.
- **The baseline (still true, still load-bearing):** June 2025 "12-Day War" — BTC dipped to a **~\$98,225 intraday low (June 22, 2025)**, reclaimed \$107k+ by June 25, a fast V. The far larger 2026 regime-change war (**Feb 28 → Apr 8, 2026**, with a peak Brent spike above \$120 in April) still didn't crater crypto on Iran-specific grounds, and this week's continued escalation — arguably worse in raw strike count than any single week before it — again barely moved BTC (\$63,796 → \$63,992).

The Prize

Illustrative only — not price targets, not advice

The upside is still the **"buy-the-invasion" rebound**. Anchors: Russia-Ukraine (Feb 24, 2022) — BTC fell ~8% to a **~\$34,300 intraday low**, posted a +14.5% up-day on Feb 28, ended **~+25–29% above the low within a week** (~+38% by late March). June 2025 rhymed: ~\$98k dip, fully recovered within a week.

This week's live test is the strongest evidence yet of desensitization. Seven consecutive strike nights, a tit-for-tat desalination-plant exchange, and a "full-scale offensive" warning — arguably the worst raw week of the conflict by strike count — and BTC moved from **\$63,796.08** (Jul 12 close) to **\$63,992.32** (Jul 18 close), essentially flat. That is a materially smaller reaction than the Jul 8 dip (~2-3%) or the Jul 11-13 pullback into the low-\$62-63Ks. Brent, too, sits at ~\$85-87 — elevated but far below its own April peak above \$120. A desensitized market means shallower dips and smaller Vs, and this week is the cleanest example of that pattern so far, even as the underlying war has gotten longer and, in absolute strike-count terms, arguably worse. The bigger prize is still the settlement scenario: a signed deal re-pricing the whole region after oil re-sanctioning. Still a thin sample; the Prize doesn't feed the math — it tells you what the lean is worth acting on.

The Other Side

The strongest honest case this is wrong

- **This report was wrong about "zero US casualties" for weeks, and only caught it this cycle.** If the casualty-accounting error survived multiple full re-research passes since Jul 8, what else might be stale? The correction this cycle (13 KIA + 1 non-hostile death from the broader war) is itself grounds for real skepticism about how carefully "load-bearing anchor" facts get re-checked versus just carried forward.
- **Seven strike nights and rising is not a war that's cooling — it's the longest sustained tempo yet.** The market's desensitization could just as easily be complacency: BTC barely moving through this week's tit-for-tat desalination-plant

strikes and a "full-scale offensive" warning looks a lot like the calm before a bigger shock, not evidence the war doesn't matter.

- **Brent at \$85-87 is still a real, live inflation input** even though it's below April's peak — Goldman's scenario work put Brent above \$100 in 2026 if Hormuz stays largely shut for a month, and JPMorgan flagged \$120-130 if disruption persists through Q3. Current shipping data (~10 transits/day vs. ~88 baseline) is consistent with exactly that kind of sustained disruption, not a one-off spike.
- **The casualty and desalination-strike data could escalate fast.** Iran's own casualty claim has roughly tripled since Jul 13 (17/115 → 50/500+); a confirmed new US combat death, or a further widening of infrastructure strikes (water, power) to a country the US treats as an ally, would be a genuine escalation the "zero new hostile deaths this wave" framing doesn't fully capture.
- **Thin sample, still.** The bullish long-term read rests on ~2 dip-and-recover events, both in a bull regime — geopolitical shocks don't always V-recover, and seven consecutive strike nights is already the most sustained tempo of the year.

The Triggers

Dated events ahead — some prove the claim right, some prove it wrong. Re-leveled July 18, 2026 (Brent trigger corrected to reflect the war's real historical range, not a stale \$90 ceiling).

DATE	EVENT	MEANS
Fired Jul 17 — NEGATIVE	Iran struck Kuwait's Shuaiba desalination/power plant, cutting ~90% of Kuwait's drinking water; US mirrored with a strike on Iran's Jask desalination site (Jul 18)	Civilian-infrastructure escalation on both sides — driving this cycle's further P cut
Ongoing, strained	Oman-mediated Iran-US/Qatar talks continue (Araghchi in Muscat) despite 7 consecutive strike nights	Corridor/ceasefire deal reached = major de-escalation, re-rate up; mediation channel formally breaks down = re-rate near-term down hard
Passed, outcome unconfirmed	Iranian oil-sale waiver wind-down grace period (GL X1) expired Jul 17 — compliance outcome not yet re-verified this cycle	Flagged for next check; sanctions bite either way as pressure on Tehran
By ~Aug 16, 2026	Formal MoU withdrawal or 60-day window expires unsigned (not fired)	Diplomacy dead — re-rate 1/3/6-month down
Re-leveled this cycle	Brent trigger corrected: the war's real peak was >\$120 intraday (April 2026), not \$90. Current Brent ~\$85-87 is elevated-but-off-peak. New watch level: a sustained push back above ~\$100 (not \$90) would signal a fresh, not merely elevated, oil shock	A retest of the April highs = re-rate near-term down hard; holding under ~\$100 = the current "elevated but not crisis" read stands
Partially fired, corrected	US-casualty framing corrected: 13 KIA + 1 non-hostile death confirmed since March (not "zero"); no <i>new</i> hostile-fire US death confirmed since the Jul 8 ceasefire collapse specifically	A newly confirmed hostile-fire US death this wave would be the real escalation trigger — watch for that, not the corrected historical count
Quiet, not fired	Congressional War Powers Resolution action — no movement since the June House/Senate votes, despite continued escalation	Worth noting as a genuine non-event; a fresh vote would signal domestic political pressure rising
By Dec 31, 2026	Final US-Iran nuclear deal signed — not fired, pending	De-escalation confirmed — re-rate up across windows

The flip line, re-leveled: a US invasion / regime-change round two, a newly confirmed US combat death this wave, or a sustained oil shock retesting the April highs (~\$120+, not the stale \$90 figure) = treat the dip-buy thesis as broken. As of July 18 we are not past that line: Brent sits well under its own war-era peak, no new hostile-fire US death has been confirmed since Jul 8, and diplomacy hasn't formally collapsed — but seven consecutive strike nights and a widening target set (now including civilian water infrastructure on both sides) means the margin keeps compressing, not widening.

My Decision

🕒 **UPDATED DRAFT — JULY 18, 2026 (FULL WEEKLY REFRESH) · AWAITING MY STAMP**

Draft P: 24 / 33 / 44 / 60 / 79 · My Weight: 20% (equal) · Impact: 8 (uniform)

The June committed scores (50 / 55 / 62 / 75 / 85, committed June 19, 2026) remain the last human-stamped values. This cycle supersedes the same-day light-touch draft (which had cut to 27/35/45/63/81) with a fully independent re-verification. Near-term continues down on confirmed continued escalation: a 7th consecutive CENTCOM strike night, a tit-for-tat desalination/power-plant exchange (Iran on Kuwait's Shuaiba plant, the US on Iran's Jask facility), and a top Iranian adviser's public warning of a "full-scale offensive" (24/33/44, down from 27/35/45 in the light draft and 32/39/48 on Jul 17).

The bigger move this cycle is at 12-month and 3-year (63→60, 81→79 vs. the light draft; 65→60, 82→79 vs. Jul 17), and it's a correction, not a new shock: independent re-verification found that this report's "zero US casualties" anchor — used every cycle since Jul 8 to hold the long-horizon score up — does not hold as a whole-war statement (Pentagon confirms 13 KIA + 1 non-hostile death since March), and the "\$90 Brent hard-trigger" this report has cited as its escalation ceiling was already obsolete (Brent hit >\$120 intraday in April). Correcting both pulls the long-horizon dip-buy thesis down a notch, even though no new US combat death has been confirmed this specific wave and Brent (~\$85-87) remains well off its own war-era peak.

Still a **dip-watching pillar, not a panic-selling one** — the corrected facts don't change the near-term direction, they change how confident the long-horizon anchor should be. The real risk paths — a newly confirmed US combat death this wave, a full Hormuz closure that actually stops the ~10 vessels/day still transiting, or Brent retesting its April highs — remain unfired.

Override any P and re-stamp — the master blend recomputes.

What Changed Since Last Check

Full weekly research refresh July 18, 2026, covering the Jul 13-18 gap (superseding the same-day light-touch draft; catch-up daily check Jul 17 covered six strike nights in between)

- ★ **Strike tempo confirmed at 7 consecutive nights through Jul 18** (was six as of Jul 17) — multi-source (CNN, ABC, Al Jazeera, The Hill, Bloomberg). No 8th-night release found; the pace hasn't visibly accelerated further since Jul 17.
- ★ **Civilian water/power infrastructure now struck on both sides.** Iran hit Kuwait's Shuaiba desalination/power plant (Jul 17, ~90% of Kuwait's drinking water knocked out, IRGC calling it "Wave 15 of Operation Nasr 2"); the US mirrored with a strike on Iran's Jask desalination site. A top Iranian adviser warned of a "full-scale offensive."
- ★ ★ **Correction, independently verified this cycle: "zero US casualties" does not hold as a whole-war claim.** This report has used that framing every cycle since Jul 8 to justify holding the 3-year score up. The Pentagon officially confirms 13 combat deaths (March) plus 1 non-hostile death (helicopter crash, Jul 1) — 14 total since the war began. No *new* hostile-fire US death is confirmed since the Jul 8 ceasefire collapse specifically (a viral 3-KIA Kuwait claim was debunked by CENTCOM) — that narrower claim remains true and is the real restraining fact going forward.
- ★ ★ **Correction, independently verified this cycle: the "\$90 Brent hard-trigger" was already stale.** Brent hit >\$120 intraday in April 2026, months before this report started citing \$90 as the escalation ceiling. Current Brent (~\$85-87) is elevated but well off that peak — the trigger table is re-leveled this cycle to a real watch level (a retest of ~\$100+) instead.
- **Iranian casualty claims roughly tripled since Jul 13:** Health Ministry now claims 50 killed / 500+ wounded since Jul 6 (was 17/115 Jul 13) — still single-source/unverified.
- **Mediation continues, unbroken:** Araghchi in Muscat working an Oman-drafted Hormuz proposal; Qatar/Pakistan mediating in parallel. No formal MoU withdrawal by either side; the ~Aug 16 window remains intact.
- **BTC barely moved through the worst raw-strike-count week of the conflict:** \$63,796.08 (Jul 12) → \$63,992.32 (Jul 18) — the clearest evidence yet of market desensitization to this war.
- **Score re-rates (July 13 draft → July 17 → July 18 full refresh):** 1mo 38 → 32 → **24** · 3mo 45 → 39 → **33** · 6mo 53 → 48 → **44** · 1yr 68 → 65 → **60** · 3yr 83 → 82 → **79** — near-term reflects continued confirmed escalation; the extra 12mo/36mo cuts this cycle reflect the casualty/oil-trigger corrections above, not a new shock. Draft only — awaiting my stamp.

Sources

Retrieved & graded July 18, 2026 (full weekly research refresh, independently re-verified; earlier sources below still stand for facts not re-checked this cycle) — click and judge the quality yourself. Official/primary sources first, then reporting, then prices, then betting markets (sentiment only).

- July 18 additions (this week's full weekly refresh — corrections and continued-escalation confirmation):** CENTCOM.mil — press releases confirming the 7th consecutive strike night · Pentagon official casualty accounting — 13 combat deaths (March) + 1 non-hostile death (Cmdr. Gabriel Edwards, helicopter crash, Jul 1), ~365-414 wounded, cross-checked against The Hill, ABC News, Washington Times, and Wikipedia's "Casualties of the 2026 Iran war" page · Wikipedia — "2026 Iran war" and "Economic impact of the 2026 Iran war" pages (used to establish the war's actual timeline since ~Feb-Mar 2026 and the April Brent peak above \$120), cross-checked against CNBC and Al Jazeera · CNN, Al Jazeera, ABC, Bloomberg, JPost — liveblog coverage of the Jul 17-18 strike nights, the Kuwait Shuaiba desalination-plant strike and the mirrored US strike on Iran's Jask facility · The Hill, HNGN, Iran International, IranWire — debunking of the viral "3 US troops killed in Kuwait" claim (traced to a repurposed 2019 Saudi Arabia fire photo) · NPR, Al Jazeera, PortWatch shipping data — continued Strait of Hormuz transit collapse (~10/day vs. ~88 baseline).
- July 11–13 additions (prior full refresh — the escalation the light touches missed):** CENTCOM press releases — 3rd strike round (~140 targets, Jul 11) and 4th strike round (dozens more, first sea-launched attack drones, Jul 12) · Al Jazeera (multiple, Jul 12–13) — Hormuz-closed declaration, shipping-intelligence data via Windward, Oman strike coverage · Bloomberg (Jul 12) · NPR (Jul 11) · Washington Times (Jul 12) · The National (Jul 13) · Euronews (Jul 13) · Republic World and Peninsula Qatar (Jul 12) — Oman formal protest, ambassador summoned · Naharnet and Iran International — Iran/Oman/Qatar median-lane two-route corridor proposal · Business Recorder and RTÉ (Jul 13) — Iran FM spokesman Esmail Baqaei on continuing mediator talks · Middle East Eye and TASS — GFS Galaxy attack and rescue (Jul 11) · gCaptain — 3rd strike round detail · Kaieteur News — Iranian Health Ministry casualty figures (17 killed / 115 wounded, unverified government claim) · CryptoTimes, CoinDesk, Bitcoin.com, and Benzinga (Jul 13) — BTC weekend pullback to news-reported ~\$62,000–63,000 intraday range, mixed FOMC/CPI-vs-Iran attribution, first weekly BTC ETF inflow in nine weeks.
- July 11 additions (prior update):** CNN live — Araghchi in Oman on Hormuz, Trump MoU "over" + decimate threat, expected Iranian safe-passage statement (Jul 11) · CNBC — Brent context, UAE record production (referenced Jul 11).
- The escalation (official statements via wire reporting):** NPR — second-night US strikes (July 9) · Bloomberg — attacks traded for second day (July 9) · CENTCOM release — second strike round (403 at retrieval; cited via search) · Al Jazeera — second-night strikes & the peace process (July 9) · Gulf News — Bushehr/Chabahar/Iranshahr strikes, Kuwait intercepts (July 9) · The National — Iran attacks on Gulf states & Jordan (July 9) · RFE/RL — Hormuz/Jordan (403 at retrieval; cited via search) · NPR — Hormuz tanker attacks (July 7) · CBS live — Treasury waiver revocation, CENTCOM 80+ targets, IRGC 85-site claim (July 8) · Al Jazeera — Trump "ceasefire over" quotes (July 8).
- Diplomacy:** Al Jazeera — talks status, no formal MoU withdrawal, Khamenei burial (July 10) · Al Jazeera — mediators urge MoU compliance (July 9) · CNN live — Trump on talks / "Cease Fire is OVER", Qatari team to Tehran (July 10; 451 at retrieval, cited via search) · Times of Israel — July 11 talks date via Al Arabiya (single-source relay, unconfirmed) · Times of Israel liveblog — Israel-join-strikes report (July 10; single-source, unconfirmed) · Al Jazeera — Doha outcomes (July 2).
- The oil waiver:** CBS — GL X1 waiver rescission (July 7) · Axios — waiver revocation (July 7) · The Hill — sanctions detail (July 7).
- The prices:** Fortune — Brent ~\$76.00–76.80 (July 10) · Kitco/Reuters — oil fell as markets weigh strikes (July 9) · Sunday Guardian — Brent ~\$76 / WTI <\$72 (July 10; weaker source) · CNBC — Brent \$78.02 / WTI \$73.52 (July 8) · Insurance Journal — traffic near halt, war-risk 2–6% of hull value (July 9) · The New Arab — JMIC "severe" advisory · LMA — insurance availability vs safety concerns · (Hormuz traffic magnitude conflicts across outlets — ~50% of pre-war vs ~92% drop — transponders off; pre-attack throughput figures are from the unofficial straits.live tracker — single-source) · CoinDesk — BTC steady above \$62K (July 9) · CoinDesk — BTC to ~\$64K on chips/yen, not Iran (July 10) · Fortune — BTC ~\$61.7K (July 6, pre-escalation) · CoinDesk — ~\$450M liquidations (July 8).
- The odds (sentiment only, not fact):** Blockchain.News — invasion odds 11.5% → 14.5% (~July 8 print) · Blockchain.News — Hormuz-normal-by-July odds collapse to 4.5% (403 at retrieval; cited via search) · Direct Polymarket fetch failed twice this week (July 13); "US invades Iran before 2027" relayed via secondary aggregators only — inconsistent snapshots ~14.5% (Jul 8) → ~15.5% (~Jul 10) → ~17% (most recent), inconsistency itself flagged. "MoU withdrawal by Jul 31" reads (~5–7%, dated ~Jul 3–5) and "final deal by Dec 31" (35.5% last verified Jul 8) are stale and not re-verified this week.
