

CoinPicks Market Direction

Research Package

Five pillars — four researched narratives and one pure-math read of the Bitcoin chart — scored on one standard, blended into one table, and distilled to one number. Everything in this folder is current as of **July 30, 2026** (full weekly refresh).

THE FINAL NUMBER · JULY 30, 2026 · BTC \$64,706.50

+0.50 Mild Bull — time-arbitraged, thinner than usual

Equal-weight mean of the five window signals below — every pillar counts 20% (scale -10 to +10; horizon-weighted variant +1.08). Positive because the far windows outweigh the near ones — **not a buy-today signal**: the same table says outright Bear for next month. It is a "the storm is priced, the recovery isn't" number, and this week the storm got substantially louder (down from +0.75 / +1.28 on July 25) as Iran War Risk and Fed & Macro both delivered their worst readings of the cycle in the same week.

THE FIVE WINDOWS UNDERNEATH IT

WINDOW	MASTER SIGNAL	CALL
1 month	-1.62	Bear — Iran War Risk widened to two new countries; Fed delivered a rare hawkish FOMC dissent
3 months	-1.16	Mild Bear — the September FOMC now sits inside this window at majority-hike-priced odds
6 months	+0.14	Neutral — CLARITY/Tokenization structural strength vs. Iran's and the Fed's widened drag
1 year	+2.05	Bull — all five pillars still positive
3 years	+3.11	Strong Bull — law + adoption + cycle + valuation

Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. The Mild Bull conclusion stays positive under every leave-one-out drop (+0.11 to +0.85), but dropping CLARITY or Tokenization now rounds down to **Neutral** — a materially thinner robustness result than prior cycles. See the Master Report's Robustness section.

Reading order

Twenty minutes to the whole picture; each report stands alone and can be checked independently — every fact is dated with sources on its last page.

#	FILE	WHAT IT IS
1	CoinPicks_Master_Direction_Report.pdf	The summary. The final number, the five-window table, the full pillar matrix, where the lenses agree/fight, six weeks of dated triggers, sensitivity.
2	CoinPicks_Bitcoin_TA_Quant_Pillar_Report.pdf	The math pillar. 7 indicators on 16 years of data, halving-cycle analogs, power-law valuation — with charts. Fully reproducible from code.
3	reports/current/pdf/ — the four pillar PDFs	The story pillars. CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro. Each: thesis, dated facts, honest bear case, dated triggers, and the full score lineage (June committed → every draft through July 30).
4	reports/archive/ + prior-work/	Every earlier version, preserved untouched — the score history is fully auditable.
—	run.py · engine/blend.py · data/master_blend.json	The blend engine (runnable Python — reproduce any score set with <code>run.py blend --set NAME</code>), its output, and README.md for regeneration.

How the scoring works — one paragraph

Every pillar answers the same question on five windows (1 month / 3 months / 6 months / 1 year / 3 years): **P** = the odds (0–100) that this force is *good for crypto* by then, **Quality** = how trustworthy the evidence is (0–1), and **Impact** = how hard this force moves the whole market (0–10). These combine into a **Signal** = $((P - 50) \div 50) \times \text{Quality} \times \text{Impact}$ (Impact is a uniform 8 for every pillar), so a coin-flip view scores zero no matter how loud the headlines are, and weak evidence can't shout. **All five pillars are equal-weighted** — the master for each window is the simple mean of the five signals (20% each; add a pillar and it auto-rebalances to 1/N) — and the Final Number averages the five master windows.

The five pillars at a glance (July 30 draft P's — full weekly refresh)

PILLAR	1MO	3MO	6MO	1YR	3YR	ONE-LINE READ
CLARITY Act (law)	40	47	58	82	92	Cut further, its lowest reading yet — the Senate's own floor schedule confirms no path before the Aug 7 recess, though real (unconfirmed) Tillis-Gallego ethics progress keeps 3/6mo from cutting as hard
Iran War Risk	16	25	37	55	77	The biggest move this cycle: a real lull was overtaken by Iran's IRGC striking a US base in Jordan, US retaliation, and the war widening to two new fronts — Iraq (20 killed) and Egypt (unclaimed drone hit)
Tokenization (RWA)	50	57	65	74	85	Corrected upward — this cycle caught a recurring metric-mislabeling error (a total-RWA figure mistaken for tokenized Treasuries) that the daily touches had fallen for twice
Fed & Macro	34	33	45	54	62	Cut hard — the July 28-29 FOMC, verified directly against federalreserve.gov, held 9-3 with the first unified 3-member hawkish dissent since Sept 2016 and no forward guidance
Bitcoin TA (quant)	39	37	46	67	70	Quant pillar refreshed (BTC \$64,706.50; weekly tape −28.3 slight bearish, monthly −27.4 slight bearish, quarterly +10.3 neutral; cycle month 27.33)

P values shown (50 = coin flip). Fed & Macro (judged) and Bitcoin TA (computed) remain close through 6 months — 45 vs 46, a 1-point gap.

Status & honesty notes

- **Score status:** July 30 scores are evidence-driven **drafts awaiting the author's stamp**; every report prints the full lineage (June committed → every draft through July 30). Nothing hides its history.
- **Verification:** facts researched with primary-source discipline (Fed/DOL releases, CENTCOM-adjacent reporting, the Senate's own floor schedule, rwa.xyz direct pulls), independently fact-checked, and the whole package forensically audited; score math recomputed independently; price data cross-checked across two exchanges; models that failed out-of-sample testing were excluded and say so. This cycle's full refresh: verified the July 28-29 FOMC outcome directly against federalreserve.gov (a 9-3 hold, first unified 3-member hawkish dissent since Sept 2016); resolved a direct contradiction between two daily touches on the Iran War Risk pillar and caught the war's widening to Iraq and Egypt; pulled the Senate's own floor schedule to confirm CLARITY has no pre-recess path; and caught a recurring metric-mislabeling error in the Tokenization pillar (a total-RWA figure repeatedly mistaken for tokenized Treasuries).
- **Known limits, in print inside the reports:** cycle-analog claims rest on 3 completed cycles; the TA pillar caps its own conviction at $P = 50 \pm 25$; this cycle's clearest fragility example remains Iran War Risk, whose front-end P kept falling on confirmed widening escalation (20→16 at 1mo this cycle alone, its lowest reading yet); single-source items are labeled in-line; current chart bars are partial and the completed-bar numbers are printed; the Fed & Macro pillar flags an irreconcilable four-way conflict on the September-hike-odds figure that it declined to resolve or score on to a single point value this cycle; the Robustness section flags that dropping CLARITY or Tokenization now rounds the final call down to Neutral, a thinner margin than prior cycles.
- **The near-term calendar is the test:** next FOMC (with SEP/dot plot) Sept 15-16 · CLARITY's first realistic post-recess floor-time window is September · Senate recess through early Aug · Islamabad Memorandum expiry ~Aug 16 · GENIUS Act 18-month backstop effective Jan 18, 2027. Each pillar's trigger table says in advance what each outcome does to the scores.

This is research and education, not financial advice. The scores are probabilistic opinions with dated evidence — built to be argued with. If you check one thing manually, check the trigger tables: they are the falsifiable part.
