

CoinPicks Market Direction

Research Package

Five pillars — four researched narratives and one pure-math read of the Bitcoin chart — scored on one standard, blended into one table, and distilled to one number. Everything in this folder is current as of **September 26, 2026** — a FULL WEEKLY refresh, against the Sept 26 committed daily baseline (2026-09-26_draft).

UPDATED DRAFT — SEPTEMBER 26, 2026 · AWAITING MY STAMP (FULL WEEKLY refresh, score set 2026-09-26_draft2). CLARITY Act, Iran War Risk, and Tokenization RWA were each independently re-researched this cycle and are **carried forward unchanged** — nothing found cleared the sufficiency bar. **Fed & Macro re-rated down** (31/29/37/44/58 → 27/25/35/43/57): independent full research surfaced a genuinely new primary-sourced cluster the intervening daily touches had missed — Fed Governor Barr's Sept 23 speech ("further policy adjustments are likely to be needed") plus the same-day S&P Global flash PMI showing inflation re-accelerating to its highest since October 2022, both corroborated across 5+ independent outlets each. CME's implied October-hike odds jumped from roughly 50% to 70-76% on this same cluster. This is a FULL WEEKLY refresh, categorically excluded from delegated auto-stamp authority regardless of the size of the move — **status draft, not stamped**, flagged prominently for Alex's manual review, after a clean render/selfcheck/verification pass.

THE FINAL NUMBER · SEPTEMBER 26, 2026 (UPDATED DRAFT — AWAITING MY STAMP, FULL WEEKLY REFRESH, 2026-09-26_DRAFT2) · BTC \$83,381.75 ON SEPT 25

-0.07 **Neutral** — essentially flat, barely changed from the Sept 26 committed read

Equal-weight mean of the five window signals below — every pillar counts 20% (scale -10 to +10). The headline reads -0.07 equal-weight; the horizon-weighted variant reads **+0.47**, versus +0.52 on Sept 26 (committed), still Neutral. **Only Fed & Macro moved among the qualitative pillars this cycle** — CLARITY Act, Iran War Risk, and Tokenization RWA all independently re-researched and held flat; the computed Bitcoin TA read is unchanged (no new quant refresh this cycle).

THE FIVE WINDOWS UNDERNEATH IT

WINDOW	MASTER SIGNAL	CALL
1 month	-2.10	Bear — slightly deeper than -1.99. Fed & Macro dropped to -3.13 as Fed Governor Barr's hawkish speech and a hot flash PMI landed; CLARITY (-4.76) and Iran (-4.70), held flat, remain the biggest drags here
3 months	-1.63	Bear — slightly deeper than -1.52
6 months	-0.59	Mild Bear — essentially unchanged from -0.54. Iran remains flat at -4.03, still the biggest drag
1 year	+1.13	Mild Bull — essentially unchanged from +1.16. Tokenization leads at +3.37, alongside CLARITY (+3.17) and Bitcoin TA (+1.73)
3 years	+2.81	Bull — essentially unchanged, every pillar still positive. This cycle's Fed & Macro re-rate was concentrated on the near/mid windows (1mo/3mo -4, 6mo -2, 1yr/3yr -1)

Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. The leave-one-out range this cycle is -0.76 to +0.62 — the sign flips positive (Mild Bull) when Iran War Risk is dropped (+0.62, the largest single standing negative even though it held flat this cycle); **dropping Tokenization alone pushes the reading further negative to -0.76, Mild Bear**. See the Master Report's Robustness section.

Reading order

Twenty minutes to the whole picture; each report stands alone and can be checked independently — every fact is dated with sources on its last page.

#	FILE	WHAT IT IS
1	CoinPicks_Master_Direction_Report.pdf	The summary. The final number, the five-window table, the full pillar matrix, where the lenses agree/fight, six weeks of dated triggers, sensitivity.
2	CoinPicks_Bitcoin_TA_Quant_Pillar_Report.pdf	The math pillar. 7 indicators on 16 years of data, halving-cycle analogs, power-law valuation — with charts. Fully reproducible from code.
3	reports/current/pdf/ — the four pillar PDFs	The story pillars. CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro. Each: thesis, dated facts, honest bear case, dated triggers, and the full score lineage (June committed → ... → Sept 26 committed, light daily → Sept 26 draft2, full weekly refresh, this version).
4	reports/archive/ + prior-work/	Every earlier version, preserved untouched — the score history is fully auditable.
—	run.py · engine/blend.py · data/master_blend.json	The blend engine (runnable Python — reproduce any score set with <code>run.py blend --set NAME</code>), its output, and README.md for regeneration.

How the scoring works — one paragraph

Every pillar answers the same question on five windows (1 month / 3 months / 6 months / 1 year / 3 years): **P** = the odds (0–100) that this force is *good for crypto* by then, **Quality** = how trustworthy the evidence is (0–1), and **Impact** = how hard this force moves the whole market (0–10). These combine into a **Signal** = $((P - 50) \div 50) \times \text{Quality} \times \text{Impact}$ (Impact is a uniform 8 for every pillar), so a coin-flip view scores zero no matter how loud the headlines are, and weak evidence can't shout. **All five pillars are equal-weighted** — the master for each window is the simple mean of the five signals (20% each; add a pillar and it auto-rebalances to 1/N) — and the Final Number averages the five master windows.

The five pillars at a glance (Fed & Macro updated September 26 — score set 2026-09-26_draft2, DRAFT, AWAITING ALEX'S STAMP)

PILLAR	1MO	3MO	6MO	1YR	3YR	ONE-LINE READ
CLARITY Act (law)	15	28	45	72	92	Held flat: independently re-researched Sept 26 — CFTC/SEC staff FAQs (Sept 24-25) apply existing rules, not evidence of legislative-passage odds; no new floor scheduling
Iran War Risk	1	1	14	33	66	Held flat: independently re-researched Sept 26 — the WSJ-rejection/Reuters-still-talking stories were already priced into the same-day baseline; continued Houthi-Saudi attacks are a continuation of an already-priced front
Tokenization (RWA)	58	65	70	77	86	Held flat: independently re-researched Sept 26 — a NYSE Group/Blockchain.com MOU (Sept 23-24) is pre-approval, no live product; logged, not scored
Fed & Macro	27	25	35	43	57	RE-RATED DOWN from 31/29/37/44/58. Fed Governor Barr's Sept 23 hawkish speech plus a hot flash PMI — a cluster the intervening daily touches missed — clears the sufficiency bar; CME's implied October-hike odds jumped to 70-76%
Bitcoin TA (quant)	58	61	61	68	69	Computed, unchanged methodology (BTC \$83,381.75, Sept 25). No new quant refresh this cycle — data-check only, per the cloud-sandbox network policy

P values shown (50 = coin flip). CLARITY Act, Iran War Risk, and Tokenization RWA are held flat after independent fresh research this cycle; Fed & Macro is re-rated down on a genuinely new primary-sourced cluster (score set 2026-09-26_draft2, full weekly refresh) — LEFT AS DRAFT, AWAITING ALEX'S MANUAL REVIEW.

Status & honesty notes

- **Score status — today is a full weekly refresh.** One score set, 2026-09-26_draft2, checked against today's earlier committed daily baseline (2026-09-26_draft). **One pillar re-rated:** Fed & Macro, 31/29/37/44/58 → 27/25/35/43/57, on a genuinely new primary-sourced cluster the intervening daily touches had missed. **Three pillars held flat** (CLARITY Act, Iran War Risk, Tokenization RWA) — each independently re-researched via WebSearch this cycle, nothing found cleared the sufficiency bar on any of them. Full weekly refreshes are categorically excluded from delegated auto-stamp authority regardless of finding — **LEFT AS DRAFT**, awaiting Alex's manual review.
- **Why Fed & Macro moved, in one paragraph, so you can judge it yourself.** Fed Governor Michael Barr — a sitting FOMC voter — said in a Chicago speech Sept 23, 2026 (PRIMARY: federalreserve.gov) that "further policy adjustments are likely to be needed" to bring inflation to target, citing inflation risk having "increased" while labor-market risk has "receded." The same day, S&P Global's flash September composite PMI (PRIMARY: pmi.spglobal.com) showed the strongest private-sector activity since 2021 alongside inflation re-accelerating to its highest combined reading since October 2022. Both were independently re-verified via separate searches, and are corroborated by 5+ independent outlets each. CME's implied October-hike odds jumped from roughly 50% to 70-76% on this same cluster (a market price, corroborating context only). This is stronger sourcing than the two regional soft surveys that drove the Sept 22 one-point move — and a genuine miss by the Sept 23/26 daily touches, which had both logged "no new FOMC speaker."
- **Why the other three held.** CLARITY Act: CFTC and SEC staff FAQs (Sept 24-25) apply existing rules, not evidence of legislative-passage odds — logged, not scored. Iran War Risk: the WSJ-rejection and Reuters-still-talking stories were already priced into the same-day committed baseline; continued Houthi attacks on Saudi Arabia are a continuation of an already-priced front, not a new state. Tokenization: a NYSE Group/Blockchain.com MOU (Sept 23-24) is a pre-approval MOU with zero live product — logged, not scored.
- **Verification:** facts researched with primary-source discipline, corroborated by multiple independent outlets per claim. This cycle's load-bearing facts — the Barr speech and the flash PMI — were each independently re-verified via separate searches before use, beyond the original research pass.
- **Known limits, in print inside the reports:** cycle-analog claims rest on 3 completed cycles, a disclosed fragility this report has repeatedly flagged; the TA pillar caps its own conviction at $P = 50 \pm 25$; single-source items are labeled in-line; current chart bars are partial and the completed-bar numbers are printed; the Robustness section shows dropping Iran alone flips the headline to Mild Bull (+0.62, the largest standing negative even though unchanged this cycle), while dropping Tokenization alone pushes it further negative to Mild Bear (-0.76) — the leave-one-out range this cycle (-0.76 to +0.62) genuinely crosses zero.
- **The near-term calendar is still active:** the August PCE print due Sept 30, the next hard test of this cycle's hawkish cluster · whether the Fed delivers the further 2026 hike its own SEP median projects at the Oct 27-28 FOMC · whether US strikes on Iran actually resume, or Iran's Hormuz proposal is formally answered either way · whether any Tokenized Securities Venue actually announces it is live and trading under the Sept 17 SEC exemption, or the NYSE/Blockchain.com MOU advances toward a filing · the October DTCC full-service tokenization launch.

This is research and education, not financial advice. The scores are probabilistic opinions with dated evidence — built to be argued with. If you check one thing manually, check any pillar's What Changed section this cycle — three ran independent fresh research and are honest about finding nothing that cleared the bar, while the Fed & Macro report explains exactly what the intervening daily touches missed and why. This score set is a draft awaiting Alex's stamp — the one thing this system leaves for a human, on purpose.
