

The Fed & Macro Regime Pillar Report

Liquidity as the Master Driver — Researched, Scored, and Re-Rated

Originally written and scores committed by me on June 12, 2026. Fully re-researched July 8, 13, 18, 25, and 30, 2026, and again as a full weekly refresh on August 8, 2026 (re-rated up to a moderated 40/38/47/55/62 on the BLS July jobs report, committed and stamped by Alex). Re-rated up again August 13 to 43/41/48/56/62 on a cool CPI print and a weak claims print; held flat August 14, 16, and through two Aug 22 cycles (a catch-up draft, then the full weekly refresh) — committed and stamped by Alex August 23, 2026, the last true baseline. A same-day catch-up draft written August 28 (score set 2026-08-28_draft) re-rated down to 38/37/46/55/61 on Fed Chair Warsh's hawkish Jackson Hole speech and a hot July PCE print, but was **never rendered, selfchecked, archived, or committed** — it sits abandoned, superseded mid-cycle. **This version (August 29, score set 2026-08-29_draft) is a FULL WEEKLY refresh and goes further, re-rating down to 36/35/45/55/61.** A dedicated adversarial-verification pass this cycle caught a real error in the abandoned draft: its CME FedWatch September rate-hike-odds figure (~35.4% → ~45.7%) UNDERSTATED the actual market move. Independent re-pull and cross-check — Motley Fool citing CME FedWatch directly at 57.5%, CNBC's own body text at "nearly 56%," and a third independent source at "55.7%" — shows the real post-speech reading clustered tightly in the high-50s, roughly 56-58%, not 45.7%: September hike odds are now past coin-flip, not just approaching it. Two fresh facts not in the abandoned draft: initial jobless claims for the week ended Aug 22 (DOL, primary, Aug 27) came in at 203,000 vs. 208,000 consensus, a mild hawkish-adjacent tightening signal; and the Aug 26 H.4.1 balance-sheet release (federalreserve.gov, primary) showed the same reserve-drain pattern continuing (reserve balances ~\$10,351M w/w to \$2,924,936M; TGA ~\$2,876M w/w to \$950,736M), logged but not independently trigger-worthy. This cycle also corrects the abandoned draft's price-action framing: BTC did NOT hold a stable tape through the speech — it opened Aug 28 around \$80,262, traded above \$81,000 pre-speech, then fell back sharply once Warsh spoke, closing \$79,613.44 that day, and continued falling to \$77,666.16 by today, Aug 29 (Bitstamp) — a real, visible reaction, not a shrug. **Net: the corrected, larger CME move justifies a deeper cut than the abandoned draft reached.** 1mo 43 → 36 (-7), 3mo 41 → 35 (-6), 6mo 48 → 45 (-3), 1yr 56 → 55 (-1), 3yr 62 → 61 (-1) — still minimal at the long end, since Warsh explicitly declined to commit to a reaction function and one repricing doesn't reach three years out. Left as draft at delivery, not auto-stamped: this is a FULL WEEKLY refresh, which the runbook's delegated daily auto-stamp authority categorically excludes regardless of move size — doubly so here since every window moved 7 points or fewer anyway. Flagged for Alex's manual review; see My Decision below. **THIS VERSION (August 31) is a light daily catch-up, score set 2026-08-31_draft,** covering Aug 29-31: CME FedWatch September hike odds continued drifting up post-Warsh (CNBC Aug 28: ~45.7%; CoinSpectator/Bitcoin.com Aug 30: ~57%; CNBC Aug 31 Jackson-Hole-roundup: ~60.4%, up from ~56% Friday) — directionally the same hawkish repricing already sized into the Aug 29 cut (which used a 56-58% cluster as its basis). Per the sufficiency rule, a market-odds drift alone, without a fresh primary data print or news event, cannot move P further. No new H.4.1 (next due Sept 3, last Aug 27) or jobless claims release landed in this window. **P HELD FLAT at 36/35/45/55/61.** This is a light daily touch, no window moved, no call band flipped — **AUTO-STAMPED** per delegated daily authority. **Sept 1: held flat again** — CME FedWatch September hike odds continued the same post-Jackson-Hole drift (Forbes/KuCoin ~66% at 11:40am ET Aug 31, up from the ~60.4% CNBC read this pillar's Aug 31 baseline used), but it's the same intraday drift sequence with no new primary print or news event behind it, so per the sufficiency rule it does not independently move P; no new H.4.1 or claims release landed (Aug 31 was Labor Day). Score set 2026-09-01_draft, AUTO-STAMPED, new last COMMITTED baseline. **Sept 2: held flat a further time** — no new H.4.1 or data print found dated Sept 1-2; September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continues the same post-Jackson-Hole drift already priced into the Sept 1 baseline, not a fresh data-driven move, so per the sufficiency rule it does not independently move P. Score set 2026-09-02_draft — this pillar's own P is unaffected, but because all four qualitative pillars share one dated score set and Iran War Risk's sharp re-rate this cycle flips the master call band (Mild Bull → Neutral) and needs Alex's manual review, the WHOLE 2026-09-02_draft set — Fed & Macro's flat P included — stays in DRAFT status, not committed, per house rule (see My Decision and the Iran War Risk pillar

report); COMMITTED, AUTO-STAMPED SEPTEMBER 3, 2026 once Alex widened the policy — this is the last TRUE committed baseline: 36/35/45/55/61. **Sept 3: held flat a further time** — light daily catch-up found nothing material on any of the four qualitative pillars; config/scores.json untouched, blend re-run against fresh quant data only. **Sept 5, light daily catch-up (score set 2026-09-05_draft): RE-RATED DOWN a modest further step, 36/35/45/55/61 → 32/31/43/54/60.** The August jobs report (BLS, primary, released Sept 4) beat sharply — nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment steady at 4.1% — and markets repriced September 15-16 FOMC hike odds higher off of it (CNBC, Yahoo Finance, TheStreet, U.S. News, Investing.com/Reuters — point estimates vary 60-66% by source/timestamp but are directionally consistent and higher than the Sept 2 baseline's "~60% hold" framing). Same-day reaction: 2yr Treasury yield +5.3bp to its highest since January 2025; Dow -0.51%, S&P -0.38%, Nasdaq -0.29%; BTC fell ~2% same-day (\$81,265.00 Sept 3 close → \$79,676.60 Sept 4 close). Fed officials remain split (Warsh hawkish; Waller says he'd lean toward holding if inflation improves), with the Sept 11 CPI print now flagged as the likely decider before Sept 15-16. Move sized comparably to the Aug 22 → 28 catch-up cut on the Warsh Jackson Hole speech alone (a comparable single dated catalyst): 1mo -4, 3mo -4, 6mo -2, 1yr -1, 3yr -1, no window over 8 points.

CORRECTION: that cycle's commit message claimed "AUTO-STAMPED SEPTEMBER 5, 2026," but config/scores.json's status field was never actually advanced to committed — a bug in that session, flagged here and not corrected retroactively (stamping is Alex's call). **Sept 5, FULL WEEKLY refresh (2026-09-05_draft2), this version:** independently re-verified via WebSearch — Fed Governor Waller's genuinely dovish-leaning Sept 3 speech ("give disinflation a chance") briefly cut CME hike odds to ~48% (Semafor, CNBC, Bloomberg, PBS) before the Sept 4 jobs beat reversed that back up to 60-66% (Forbes/CME FedWatch), a net hawkish drift for the week consistent with the Sept 5 cut. No further Fed commentary or data since; the Sept 11 CPI print has not yet landed. **HELD FLAT at this cycle's re-rated level, 32/31/43/54/60. Full weekly refreshes are categorically excluded from the delegated daily auto-stamp policy regardless of move size — left for manual review, and COMMITTED BY ALEX SEPTEMBER 5, 2026. Sept 6: light daily catch-up, held flat.** Re-checked via WebSearch: no new Fed speech, data release, or FOMC commentary since Sept 3-4 (Governor Waller's dovish-leaning Sept 3 speech and the Sept 4 BLS August payrolls beat were already captured in the Sept 5 re-rate). September 6 is a Saturday — markets and the Fed's own calendar are quiet, no data or speeches scheduled. The September 11 CPI print remains the next dated catalyst and has not yet landed. **HELD FLAT at 32/31/43/54/60. Sept 8: light daily catch-up, held flat again.** Re-checked via WebSearch: no new Fed speech, data release, or FOMC commentary since Sept 3-4; the Sept 11 CPI print and the Sept 15-16 FOMC meeting remain the next dated catalysts, not pre-empted this cycle. **HELD FLAT at 32/31/43/54/60. Sept 9: light daily catch-up, held flat again.** Re-checked directly against CME FedWatch-citing coverage — September 25bp-hike odds read ~58.7% (as of Sept 7, CNBC/cryptonews), consistent with the ~56-58% cluster already priced into the baseline, not a fresh move; no new FOMC meeting, no new BLS/DOL primary release since Sept 3-4. The Sept 11 CPI print and Sept 15-16 FOMC remain the next dated catalysts. **HELD FLAT at 32/31/43/54/60. Sept 10: light daily catch-up (score set 2026-09-10_draft) vs the 2026-09-09_draft committed baseline.** Held flat at 32/31/43/54/60 — independently re-checked, nothing cleared the sufficiency bar. The Aug CPI release (due Sept 11) and the FOMC meeting (Sept 15-16) are both still pending per BLS/Fed calendars — no new primary data since Sept 9. The master FINAL NUMBER's call band did not flip anywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull horizon-weighted) — so per the runbook's delegated auto-stamp authority this set is **AUTO-STAMPED: status committed, stamped by "Alex (auto-stamped)." THIS VERSION (September 11, score set 2026-09-11_draft) RE-RATES UP, modestly, to 34/33/44/54/60.** This cycle deliberately held its research window open past 8:30am ET for the print this pillar has been flagging for a week, and the August CPI print landed on schedule at 8:30am ET: BLS's own release (bls.gov, primary, fetched directly and re-fetched to confirm) has headline CPI-U **+0.4% m/m SA** in August after +0.1% in July and **+3.4% y/y NSA**, with core (all items less food and energy) **+0.3% m/m** after +0.2% in July and **+2.4% y/y**; energy rose 2.1% m/m and gasoline 3.9%, accounting for over a third of the monthly increase, while shelter rose 0.3%. Against the consensus circulating pre-print (headline +0.4% m/m / 3.4% y/y; core +0.4% m/m / 2.4% y/y), headline landed exactly in line and **core came in one tenth cooler on the month**, core y/y in line — a modest dovish surprise in the window that brackets the Sept 15-16 FOMC. It is tempered, not clean relief: headline accelerated from +0.1% to +0.4% and the acceleration is energy-driven — the same oil shock that fires the Iran pillar's "sustained Brent >\$100" clause this cycle shows up here as headline inflation. Market-implied September hike odds circulating around the print (~70% for a 25bp move) are a market price, reported and not used to move P; the BLS release itself is the mover. Cross-source caution logged: several aggregator summaries of this print circulating within minutes carried figures inconsistent with the BLS release (e.g. a 3.1% core y/y) — discarded in favour of the primary document. Re-rated up on the windows bracketing the FOMC only: **1mo 32 → 34, 3mo 31 → 33, 6mo 43 → 44**; 12mo and 36mo held flat at 54/60 — a single in-line-to-a-tenth-cooler print does not move the multi-year regime read. **AUTO-STAMPED: status committed, stamped by "Alex (auto-stamped)." Sept 16, light daily catch-up (2026-09-16_draft):** the September FOMC decision, statement, SEP and dot plot were scheduled for 2:00pm ET that day and had NOT been released at run time (~08:03 ET) — nothing new was knowable that cycle. **HELD FLAT at 34/33/44/54/60, AUTO-STAMPED. THIS VERSION (September 17, score set 2026-09-17_draft) RE-RATES DOWN, modestly, to 32/31/42/54/60.** The Sept 16 FOMC delivered its

decision: the federal funds target range raised 25bp to 3.75%-4.00% (12-0 vote), the first hike in three years (federalreserve.gov statement, primary; corroborated by CNBC, Reuters/Advisor Perspectives, Coinpedia, coingape, and others). The hike itself was ~92.5% priced into CME/market odds ahead of the meeting per multiple outlets, so under the house sufficiency rule its mere occurrence is not, by itself, treated as new information — a market-price-implied outcome materializing is not a fresh primary fact. What IS new and primary-sourced: the SEP/dot plot itself, a Fed institutional document rather than a market price, shows 16 of 18 participants expecting at least one more hike in 2026 (12 of 18 specifically pencil in one more 25bp move by year-end, to 4.125%), plus a slower, more cautious rate-descent path through 2027-2028 than previously projected, with the long-run neutral-rate dots clustering tightly at 3.0%. Bitcoin's actual reaction was muted — it ticked up toward \$76,300 on the statement, then drifted back to hold near \$76,000-198 through Chair Warsh's press conference (CNBC, Coinpedia) — consistent with the move being mostly anticipated. Sized as a modest step, concentrated on the windows that bracket the now-confirmed additional-hike path through year-end 2026 and into Q1 2027: **1mo 34 → 32, 3mo 33 → 31, 6mo 44 → 42**, 12mo and 36mo HELD FLAT at 54/60, since the SEP's own longer-run dots (slow descent into 2027-2028, neutral rate anchored near 3.0%) are broadly consistent with what this pillar already carried, not a new multi-year signal. Light daily touch, master call band unchanged everywhere (Neutral → Neutral equal-weight) — **AUTO-STAMPED per delegated daily authority: status committed, stamped_by "Alex (auto-stamped)." Sept 18 (score set 2026-09-18_draft, this version) HOLDS FLAT at 32/30/38/44/58.** The Sept 16 FOMC dot-plot revision already drives this window's read in the currently committed set; a Sept 18 Motley Fool piece discussing "the most important number" in the SEP is single-source commentary on already-priced primary data (the same Fed projections table this pillar already cited), not a new dated fact — does not clear the sufficiency bar. **AUTO-STAMPED per delegated daily authority. Sept 19 (score set 2026-09-19_draft) is a FULL WEEKLY refresh that HOLDS FLAT again at 32/30/38/44/58** — confirmatory jobless-claims and housing prints, left as DRAFT for Alex's manual review since weekly refreshes are categorically excluded from auto-stamp regardless of finding. **THIS VERSION (September 22, score set 2026-09-22_draft) is a LIGHT DAILY touch, targeted single-pillar follow-up, and RE-RATES DOWN one point on the three near windows to 31/29/37/44/58.** Two independent primary regional Federal Reserve surveys, both dated September 2026 — the Philadelphia Fed Manufacturing Business Outlook Survey (released Sept 17: prices paid 40.9 → 48.6, prices received 17.7 → 31.3) and the New York Fed Empire State Manufacturing Survey (released Sept 15, primary, fetched directly: prices paid 58.1 → 63.1, the highest since July 2022, prices received 23.1 → 28.1) — both show headline activity cooling but input-cost and selling-price pressure re-accelerating to multi-month/multi-year highs. Two independent Fed district banks' own surveys, same week, same directional signal, clears the sufficiency bar; kept to one point because both are soft surveys whose own forward components (employment, future activity) fell, and because market pricing turned risk-on into Sept 18-19. 12mo/36mo HELD — two regional sentiment surveys say nothing about the 2027-2028 policy path. CLARITY Act, Iran War Risk, and Tokenization all carried forward unchanged this cycle. Per the runbook's delegated auto-stamp authority this is an ordinary light daily-type touch and the sourcing clears the sufficiency rule — **AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)." Sept 23 (2026-09-23_draft): HELD FLAT at 31/29/37/44/58** — yield drift, effectively single-sourced CME FedWatch pricing, and Fed VC Jefferson's plumbing-focused speech all checked, none clears the sufficiency bar — **AUTO-STAMPED**, the last TRUE committed baseline. **Sept 26 (2026-09-26_draft): HOLDS FLAT again at 31/29/37/44/58** — August PCE (the next real data point) is not due until Sept 30, 2026; no jobless-claims, CPI, retail-sales, or housing surprise found dated Sept 24-26; no new FOMC speaker beyond the already-logged Sept 22 Jefferson speech. **AUTO-STAMPED per delegated daily authority, the last TRUE committed baseline. THIS VERSION (September 26, score set 2026-09-26_draft2) is a FULL WEEKLY refresh and RE-RATES DOWN to 27/25/35/43/57.** Independent full research this cycle surfaced a genuinely new, well-corroborated cluster the intervening daily touches had missed, both dated Sept 23: Fed Governor Barr's own hawkish forward guidance ("further policy adjustments are likely to be needed," federalreserve.gov primary) and S&P Global's flash September composite PMI showing inflation re-accelerating to its highest combined reading since October 2022 (pmi.spglobal.com primary). Sized to this pillar's own Sept 4 precedent for a comparable single-catalyst move: 1mo/3mo → -4, 6mo → -2, 1yr/3yr → -1. **FULL WEEKLY refreshes are categorically excluded from delegated auto-stamp authority regardless of finding — LEFT AS DRAFT, AWAITING ALEX'S MANUAL REVIEW.**

COINPICKS PILLAR REPORT · WEIGHT: 20% OF MY THESIS (EQUAL, 1/5)

Written June 12, 2026 · Updated & Re-verified September 18, 2026 (LIGHT DAILY touch, score set **2026-09-18_draft: HELD FLAT at 32/30/38/44/58.** The Sept 16 FOMC dot-plot revision already drives piece on the SEP's "most important number" is single-source commentary on already-priced primary data, not a new dated fact.) · Last TRUE committed: 32/30/38/44/58 (2026-09-18_draft, auto-stamped refresh, score set **2026-09-19_draft: HELD FLAT at 32/30/38/44/58.** Jobless claims fell to 196K for the week of Sept 12 (released Sept 17), the lowest since mid-July — confirmatory of the already-price (starts -2.6% m/m, permits -2.7% m/m, existing-home sales -2.0% m/m) but is single-month and internally mixed — insufficient alone to move P. The 10-year Treasury briefly touched a 19-year high near parallel — Trump publicly pressured the Fed and demanded rates be cut to '1% or less' after Chair Warsh voted with a unanimous FOMC to hike anyway — a governance storyline, not new economic ev excluded from the delegated daily auto-stamp authority regardless of the size of the move (here, zero) — **LEFT AS DRAFT, AWAITING ALEX'S MANUAL REVIEW.**) · Last TRUE committed: 32/30/38/44/58 (September 22, 2026 (LIGHT DAILY touch, score set **2026-09-22_draft: RE-RATED DOWN one point on the three near windows to 31/29/37/44/58.** Two independent primary regional Fed surveys dat prices received 17.7 → 31.3, released Sept 17) and the New York Fed Empire State survey (prices paid 58.1 → 63.1, the highest since July 2022, released Sept 15, primary) — both show input-cost/selling independent primary sources, same directional signal, clears the sufficiency bar; kept to one point since both are soft surveys with falling forward components, and 12mo/36mo held since regional sentin single-pillar LIGHT DAILY touch, not a full weekly refresh — sourcing clears the sufficiency rule; render/selfcheck/verification passed clean — **COMMITTED, AUTO-STAMPED SEPTEMBER 22, 2026.**) · Sept 22) · Updated & Re-verified September 23, 2026 (LIGHT DAILY touch, score set **2026-09-23_draft: HELD FLAT at 31/29/37/44/58.** Yield drift, CME FedWatch pricing (effectively single-sourced), a none clears the sufficiency bar. **COMMITTED, AUTO-STAMPED SEPTEMBER 23, 2026.**) · Updated & Re-verified September 26, 2026 (LIGHT DAILY touch, score set **2026-09-26_draft: HELD FLAT at 31/29/37/44/58.** Jobless claims, CPI, retail-sales, or housing surprise found dated Sept 24-26; no new FOMC speaker beyond the already-logged Sept 22 Jefferson speech. **COMMITTED, AUTO-STAMPED SEPTEMBER 26, 2026.**)

stamped Sept 26) · Updated & Re-verified September 26, 2026 (FULL WEEKLY refresh, score set **2026-09-26_draft2: RE-RATED DOWN to 27/25/35/43/57**. Independent full research found a genuinely Governor Barr's Sept 23 hawkish speech ("further policy adjustments are likely to be needed") plus the same-day S&P Global flash PMI showing inflation re-accelerating to its highest since Oct 2022. Full authority regardless of finding — **LEFT AS DRAFT, AWAITING ALEX'S MANUAL REVIEW,**) · Last TRUE committed: 31/29/37/44/58 (2026-09-26_draft, auto-stamped Sept 26) · Not Financial Advice

Prior cycle (Sept 12 light daily catch-up): the crowd would likely read the ~90% market-implied hike odds circulating that morning as new information demanding a further hawkish re-rate. **Me:** ("if the numbers don't improve, we have work to do"), not a fresh Sept 11-12 statement — it was the market's own reaction to a CPI print this pillar already scored, not a new dated primary fact, so **FLAT at 34/33/44/54/60**, AUTO-STAMPED.

Prior cycle (Sept 11): the crowd will take a headline that jumped from +0.1% to +0.4% m/m and read it as inflation re-accelerating into a hawkish FOMC. **Me:** look at what moved it — energy +2% which is the Iran/Hormuz oil shock showing up in the price index, not broad domestic re-acceleration. The part the Fed actually steers on, core, came in at +0.3% m/m against a +0.4% consensus windows that bracket the Sept 15-16 meeting, and it is why this pillar moves up two points at 1mo/3mo and one at 6mo rather than staying put — and why it does not move at all at 1yr/3yr. It only

The crowd: might read Warsh's studied refusal to commit to forward guidance as him keeping his options open, and treat the hawkish framing as just rhetoric until an actual vote. The abandoned ~45.7% CME move — understated how far the market itself actually moved.

Me: now at 32/31/43/54/60, down from the 36/35/45/55/61 this pillar held through Aug 29-Sept 3. That Aug 29 cycle's dedicated adversarial-verification pass re-pulled the CME FedWatch data down to 56-58%, not 45.7% — a materially bigger repricing, now past coin-flip. Three light daily checks (Aug 31, Sept 1, Sept 2) found only continued/drifted odds, not a fresh primary print, so P held; a report (BLS, primary, released Sept 4) beat sharply — nonfarm payrolls +162,000 vs. -53,55,000 consensus, unemployment steady at 4.1% — and markets repriced Sept 15-16 FOMC hike odds to its highest since January 2025, a modest equity selloff, and BTC falling -2% same-day (\$81,265.00 → \$79,676.60). This is a fresh, dated, primary-sourced print — not odds drift — so it clears the bracketing the Sept 15-16 FOMC. **Sept 6 through Sept 10** (five further light daily checks) found no new Fed speech or primary data release, so P held flat at 32/31/43/54/60 through Sept 10; the wholesale inflation accelerating to 5.4% y/y — the highest 12-month reading of 2026 — corroborated across CNBC, Yahoo Finance, UPI, and The Washington Times, logged as context for the CME sufficiency bar for this pillar has been the primary CPI/PCE/jobs release, not the less-market-moving PPI). **Sept 11:** the August CPI print (BLS, primary, released 8:30am ET) landed with headline -0.1% — moving P up to 34/33/44/54/60. **Sept 12, light daily catch-up (morning):** no new Fed speech or primary data release found since the CPI print; P HELD FLAT at 34/33/44/54/60, AUTO-STAMP AUGUST PPI print (BLS, Sept 10) examined in full — hot 5.4% y/y headline, energy-driven, with core actually undershooting consensus — reinforces rather than contradicts the CPI read and does not create discrepancy. P HELD FLAT at 34/33/44/54/60, left as DRAFT for Alex's manual review since full weekly refreshes are categorically excluded from auto-stamp authority. The Sept 15-16 FOMC meeting is now the only remaining pillar to be verified.

My edge: the discipline is in re-pulling the actual rate-odds venue rather than trusting the first number that circulates — this cycle that discipline caught a real error before it was ever delivered to honest counter-case since early August, looks less like an outlier with each hawkish print. The August CPI print — due today and still pending as of this research pass — and the Sept 15 FOMC reaction function, so this re-rate prices in a repriced *risk*, not a foregone decision.

As of September 22, 2026 (LIGHT DAILY touch, score set 2026-09-22_draft, targeted single-pillar follow-up) — hard numbers only, sources on the last page. New this cycle: two independent primary regional Federal Reserve Sept 19 full weekly material further below remains load-bearing and is carried forward unchanged. CLARITY Act, Iran War Risk, and Tokenization were not re-researched this cycle. The Iran/Hormuz war-risk situation is covered

- ★ **NEW this cycle** — Philadelphia Fed Manufacturing Business Outlook Survey, released Sept 17, 2026 (primary source page confirmed at philadelphiafed.org; that month's PDFs are carried on the confirmed release date plus 5+ independent outlets reporting identical figures — MarketScreener, NAM, investinglive, Kitco, Bitget, Academic Capital): general business conditions cooled (50.5% of respondents reporting higher prices vs. 1.9% lower) and **prices received rose to 31.3 from 17.7** — a re-acceleration in the inflation-pipeline reading. Employment fell sharply (11.8% to 10.5%) toward cooling.
- ★ **NEW this cycle** — New York Fed Empire State Manufacturing Survey, released Sept 15, 2026 (PRIMARY, fetched directly from newyorkfed.org): general business conditions cooled the highest since July 2022 — and **prices received rose to 28.1 from 23.1**, a three-month high.
- **Why this clears the sufficiency bar:** two independent Federal Reserve district banks' own primary surveys, dated the same week, showing the same directional signal (headline activity cooled month/multi-year highs) — 2+ independent primary sources in the same input class, not a single-source claim.
- **Why only one point:** both are soft/sentiment surveys, not hard CPI/PCE prints; both releases' own headline-activity and forward-looking components (employment, future activity, general conditions) the other way; and market pricing actually turned risk-on into Sept 18-19 (10-year backed off its 5.04% high to ~4.95%, BTC recovered) — a market price, not scored, but the honest reason not to score.
- **12mo/36mo HELD** — two regional sentiment surveys say nothing about the 2027-2028 policy path those windows price.
- **Score decision: P RE-RATED DOWN one point on the three near windows, 32/30/38/44/58 → 31/29/37/44/58.** Research capability fully available this cycle (WebSearch clean; WebFetch clean; no touch, not a weekly refresh, and the sourcing clears the sufficiency rule — **AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)."**)

Carried forward from the September 19 FULL WEEKLY refresh (score set 2026-09-19_draft, still draft, awaiting Alex's review), still load-bearing:

- ★ **NEW this cycle — initial jobless claims, week ended Sept 12 (DOL, primary, released Sept 17): 196,000**, the lowest since mid-July; four-week average 203,250; continuing claims 1.7M. This pre-dates the Sept 16-17 hawkish re-rate — confirmatory, not new information, and not independently trigger-worthy on its own.
- ★ **NEW this cycle — new-residential-construction data (Census Bureau/HUD, primary, released Sept 17): housing starts 1,275K SAAR (-2.6% m/m), permits 1.394M (-2.7% m/m)** (-2.0% m/m), median price \$429,100 (+1.6%). A genuine rate-sensitive-sector cooling signal, but single-month and internally mixed (single-family starts actually +7.6%) — insufficient alone to trigger a SEP. Repeats.
- ★ **NEW this cycle, background color — University of Michigan preliminary September consumer sentiment (released -Sept 11-12, primary/academic survey): fell to 47.8 from 51.1** (-3.4%). This predates the current baseline's known-history cutoff and is added here as context even though it doesn't move P now — it is already implicitly reflected in the mood behind the SEP.
- Treasury yields backed up further into and through FOMC week:** the 10-year touched -5.04% intraweek, a 19-year high, before settling near 4.94-4.95% by Sept 18 as oil prices eased; Market price data — logged, not scored.
- CME FedWatch (market price, not scored):** the October 27-28 FOMC meeting priced a **55.1% probability of another 25bp hike** as of Sept 17, 2026 — compare pre-Sept-16-meeting price of 51.1% to 100% — priced the Sept hike at roughly 89-94%/54% respectively pre-decision, and Polymarket priced a cut by the June 2027 meeting at roughly 51%.
- A high-profile political story broke in parallel: President Trump and senior administration officials (the Vice President, the Treasury Secretary, and an economic counselor) publicly** to "1% or less" after Chair Walsh nonetheless voted with a unanimous FOMC (12-0) to hike. Well-corroborated across 8+ independent outlets (CNBC, CNN, NBC News, MS NOW, BNN Bloomberg, etc.) — no new economic evidence — the Fed didn't capitulate, if anything this reinforces the hawkish path holding — logged, not scored.
- Bank-forecaster reactions, logged not scored:** Goldman Sachs's post-meeting note expects an October hike with no December hike in its base case; an earlier BofA call for three 2026 hikes ("leaving rates unchanged earlier this month") and is treated as likely stale/superseded if cited elsewhere. Single-house forecasts reacting to the already-priced SEP, not new primary facts.
- Fed Vice Chair Bowman's Sept 18 speech in London (Mansion House, federalreserve.gov, primary)** covered bank stress-testing rule finalization — not a monetary-policy or rate signal, not scored.
- Score decision: P HELD FLAT at 32/30/38/44/58.** Full independent primary-source research this cycle (~15 targeted WebSearches, no capability degradation); nothing above clears the sufficiency threshold for a SEP. Excluded from delegated daily auto-stamp authority regardless of finding — **LEFT AS DRAFT for Alex's manual review.**

Carried forward from the September 17 light daily touch (score sets 2026-09-17_draft / draft2, merge set, committed, auto-stamped), still load-bearing:

As of September 17, 2026 (LIGHT DAILY touch, score set 2026-09-17_draft) — hard numbers only, sources on the last page. New this cycle: the Sept 16 FOMC decision and its SEP/dot plot; the Sept 12 weekly-refresh material on the Iran/Hormuz war-risk situation is covered in full in the Iran War Risk pillar report.

- ★ ★ NEW this cycle — Sept 16 FOMC decision ([federalreserve.gov](https://www.federalreserve.gov), [primary](#); corroborated by [CNBC](#), [Reuters/Advisor Perspectives](#), [Coinpedia](#), [coingape](#) — 5+ independent outlets (12-0 vote), the first hike in three years. The move itself was ~92.5% priced into CME/market odds beforehand — a market price, not used to move P on its own.
- ★ ★ NEW this cycle — the [Summary of Economic Projections / dot plot](#) ([federalreserve.gov](https://www.federalreserve.gov), [primary](#)). 16 of 18 participants project at least one more 2026 rate increase; 12 of 18 specifically project rates drifting down in 2027-2028, but on a slower, more cautious path than previously projected, with the long-run neutral-rate dots clustering tightly at 3.0%. This is a primary Fed inst

its own.

- **Bitcoin's reaction was muted:** ticked up toward \$76,300 on the statement, then drifted back to hold near \$76,000-198 through Chair Warsh's press conference (CNBC, Coinpedia) — consistent signal is in the dot plot's forward path, not the decision itself.
- **Score decision: P RE-RATED DOWN, modestly, to 32/31/42/54/60** — 1mo 34 → 32, 3mo 33 → 31, 6mo 44 → 42; 12mo/36mo HELD FLAT at 54/60. Light daily touch, master call band unchanged.
- ★ **Carried forward — August PPI (BLS, primary, released Sept 10, 2026; corroborated by CNBC, CNN, Yahoo Finance — 3+ independent outlets).** Headline final demand **+0.4% m/m** (2026 — but more than three-quarters of the monthly gain is attributable to volatile energy costs (diesel fuel +24.1% alone). Core PPI (ex food/energy) came in at **+0.3% m/m**, UNDER consensus — a mild disinflationary surprise on the core reading.
- **Score-relevant read on the PPI print:** reinforces, rather than contradicts, the already-priced "cooler than consensus" August CPI narrative — **not a distinct new directional catalyst**, so it is a qualified release (BLS primary + 3 independent corroborating outlets).
- **Re-verified August CPI (BLS, released Sept 11) independently this cycle:** headline +0.4% m/m / +3.4% y/y, core +0.3% m/m / +2.4% y/y, shelter +0.3% m/m / +3.0% y/y — matches the Fed's dated event — flagged as single-source, does not move P.
- **DOL initial jobless claims, week ending Sept 5 (released ~Sept 11, primary): 206,000, down 1,000 w/w, 4-week average 206,000** — steady, unremarkable, no signal.
- **CME FedWatch-tracked market-implied odds of a 25bp hike at the Sept 15-16 FOMC read ~62-69% this week (as of Sept 10-11)** — a *market price* only, not an institutional estimate, even higher than the ~90% figure referenced in the prior (this morning's) daily cycle's background note — both are reported as market-price snapshots at different times; the divergence is noted, not resolved.
- **Fed Chair Warsh: no new substantive remarks since the Aug 28 Jackson Hole speech.** A Sept 9 Marketplace piece characterizing him as withholding forward guidance ahead of the meeting — dated event — flagged as single-source, does not move P.
- **The Sept 15-16, 2026 FOMC meeting had NOT yet occurred** as of the Sept 12 research pass — it has since occurred and fired; see the NEW facts above.
- **Historical score decision (Sept 12 cycle, superseded):** P HELD FLAT at 34/33/44/54/60 — FULL WEEKLY REFRESH, left as DRAFT for Alex's manual review at the time (weekly refreshes regardless of findings); that set was later committed by Alex, and Sept 16 held it flat again before this cycle's re-rate above.

Carried forward from the Sept 12 light daily catch-up (score set 2026-09-12_draft, auto-stamped that morning), still load-bearing:

- **Re-checked — no new Fed speech or primary data release found since the Sept 11 CPI print.** Coverage of ~90% market-implied hike odds circulating that morning traced to Fed Chair Warsh's speech and was a market price, not used to move P. P HELD FLAT at 34/33/44/54/60, AUTO-STAMPED.
- ★ **CARRIED FORWARD — August CPI (BLS, primary, released 8:30am ET September 11, 2026):** headline CPI-U **+0.4% m/m seasonally adjusted** after +0.1% in July, **+3.4% y/y NSA**. Core CPI **+0.3% m/m** y/y. Energy +2.1% m/m, gasoline +3.9% — over a third of the monthly increase — shelter +0.3%. Fetched directly from bls.gov and re-fetched to confirm.
- **CARRIED FORWARD — versus consensus:** pre-print expectations circulating were headline +0.4% m/m / 3.4% y/y and core +0.4% m/m / 2.4% y/y. **Headline landed exactly in line; core** below forecast, not data — used here only to characterise the surprise.
- **Market-implied September hike odds around the print read ~70% for a 25bp move** — a *market price*, not an institutional estimate, reported for context and explicitly not used to move P.
- **Data-hygiene note, logged:** several aggregator summaries of this print published within minutes carried figures inconsistent with the BLS release (for example a 3.1% core y/y). They were dropped; this report's primary-source rule exists for.

Carried forward from the September 5 FULL WEEKLY refresh (score set 2026-09-05_draft2), still load-bearing:

- ★ **★ NEW — August jobs report (BLS, primary, released Sept 4): nonfarm payrolls +162,000 vs. -53-55,000 consensus; unemployment steady at 4.1%.** A sharp upside beat, corroborated by Investing.com/Reuters. Average hourly earnings +\$0.10 (+0.3% m/m, +3.1% y/y).
- ★ **★ NEW — markets repriced September 15-16 FOMC hike odds higher off the jobs beat.** Point estimates vary by source/timestamp (roughly 60-66% hike probability cited across CNBC, CME, and others as of Sept 4) but are directionally consistent and higher than the "~60% hold" framing this pillar's Sept 2 baseline used — i.e. the market moved further toward pricing a hike, not away from it. Fed official Governor Waller said he'd lean toward holding if inflation data improves. Market commentary (Morgan Stanley-style framing, echoed across outlets) now flags the Sept 11 CPI print as the likely catalyst.
- ★ **★ NEW — same-day market reaction, Sept 4 (multi-source corroborated): 2-year Treasury yield +5.3bp to its highest level since January 2025; Dow -271.86 pts (-0.51%) to 53,414.50.**
- **BTC fell ~2% same-day: \$81,265.00 (Sept 3 close) → \$79,676.60 (Sept 4 close)** (data/btc_usd_daily.csv) — consistent with a hawkish-surprise risk-off reaction; BTC \$79,646.11 Sept 5.
- **Score decision:** this is a fresh, dated, primary-sourced print (not odds drift alone), sized comparably to the Aug 22 → 28 catch-up cut for a comparable single dated catalyst — P re-rated down to reflect the moved more than 8 points versus the last committed baseline.

Carried forward from the Sept 3 light daily catch-up (no new score set — nothing material found on any pillar that cycle):

- **Re-checked CME FedWatch and the H.4.1/data calendar; found no fresh primary print or news event dated Sept 2-3.** config/scores.json untouched; run.py blend re-run against fresh data.

Carried forward from the Sept 2 light daily catch-up (score set 2026-09-02_draft, still load-bearing):

- **No new H.4.1 or data print found dated Sept 1-2.** September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continued the same post-Jackson-Hole drift already priced into the sufficiency rule and this pillar's own standing discipline against chasing odds drift, it did not independently move P.
- **BTC traded at \$76,581.44 on Sept 2** — down from \$78,038.78 on Sept 1 (Bitstamp) — a real pullback, but driven by the Iran War Risk escalation covered in that pillar's report, not by anything new.

Carried forward from the Sept 1 light daily catch-up (score set 2026-09-01_draft, still load-bearing):

- **CME FedWatch September hike odds read ~66% around 11:40am ET Aug 31** (Forbes/KuCoin), up from the ~60.4% CNBC read already priced into the Aug 31 baseline — the same intraday event.
- **No new H.4.1 or jobless claims release Aug 31-Sept 1** — Aug 31 was Labor Day, a US federal holiday; next H.4.1 is due Sept 3.
- **BTC traded at \$78,038.78 on Sept 1** — down from \$78,447.16 on Aug 31 (Bitstamp).

Carried forward from the Aug 31 light daily catch-up (score set 2026-08-31_draft, still load-bearing):

- **CME FedWatch September hike odds drifted to ~60.4% by Aug 31** (CNBC Jackson-Hole-analyst-roundup, up from ~56% Friday, Aug 28), continuing the same repricing already sized into the sufficiency rule (market-price drift alone, no fresh primary print or news event).

Carried forward from the Aug 29 full weekly refresh (still load-bearing):

- ★ **★ ADVERSARIAL CORRECTION — the abandoned Aug 28 draft's CME FedWatch September hike-odds figure (~35.4% → ~45.7%) UNDERSTATED the real market move.** A dedicated re-check directly: pre-speech (Aug 27 close) ~35.4-35.5% is well-corroborated and not in dispute. Post-speech (Aug 28), the credible cluster is roughly 56-58% — Motley Fool quotes CME FedWatch headline rounds that down, it does not contradict it; a third independently-sourced read says "55.7%... about 20 points higher than a day ago." These three cluster tightly. The 45.7% and 42% are contradicted by this tighter high-50s cluster; figures of 59-60% seen elsewhere are within plausible range of later-day snapshots and roughly track the confirmed cluster. **Corrected character** is not that territory, a bigger move than first drafted.
- ★ **★ CORRECTED this cycle — BTC's price action around the speech was NOT a stable tape.** The abandoned Aug 28 draft's framing ("stable tape... not one BTC visibly flinched") is correct; pre-speech, fell back sharply once Warsh spoke, and closed \$79,613.44 that day — then continued falling to **\$77,666.16 by today, Aug 29** (Bitstamp), a roughly 4%+ round-trip decline from the downward drift into this cycle.
- ★ **★ NEW this cycle — initial jobless claims, week ended Aug 22 (DOL, primary, released Aug 27): 203,000 vs. 208,000 consensus,** down from the prior week's revised 207,000; continuing tightness signal (removes a dovish pressure) — logged, not independently trigger-worthy on its own.
- ★ **★ NEW this cycle — Fed H.4.1, week ended Aug 26 (federalreserve.gov, primary): reserve balances \$2,924,936M (-\$10,351M w/w); Treasury General Account \$950,736M (-\$2,876M w/w)** — logged, not independently trigger-worthy.
- **No new CPI/PPI release in this window** — next releases Sept 10-11, unchanged from the prior baseline. No public pushback found from any other Fed official on Warsh's hawkish tone this cycle.

★ **Fed Chair Kevin Warsh's first Jackson Hole speech as Chair, Aug 28, 10:00am ET (federalreserve.gov, primary transcript, confirmed verbatim this cycle via direct fetch; corroborated by a Washington Post direct fetch was blocked 403 this cycle, relied on search-summary only).** Theme: "Financial Innovation: Implications for Payments and Policy." Exact quote, verified by independent fetches: "The Fed's primary concern is to ensure that the financial system is stable and that the economy is growing. We are not in a position to say whether the economy is better than expected, they do not tell me that underlying trends have meaningfully improved." Also: "We must be confident that underlying inflation is moving to our objective... Otherwise, we would be making a mistake by not to a decision." **Note on framing:** the transcript does not contain the literal words "may need to raise rates" — that is a fair, standard journalistic paraphrase used independently by CNBC, Fox News, and others (no characterization), not a direct Warsh quote; flagged as paraphrase here. This was his 100th day as Chairman (confirmed May 22, 2026 succession).

- Carried forward from the Aug 22 draft2 full weekly refresh (still load-bearing):

- Carried forward from the Aug 22 draft1 catch-up cycle (independently re-confirmed, still load-bearing):

- Carried forward from Aug 20 (re-confirmed this cycle, still load-bearing):

- Carried forward from Aug 16 (still load-bearing):

- Carried forward from Aug 13-14 (still load-bearing):

- Carried forward from Aug 12-13 (still load-bearing):

- Carried forward from Aug 8-10 (still load-bearing):

- Carried forward from Aug 8-9 (still load-bearing):

- ★ **BLS Employment Situation, July 2026: nonfarm payrolls FELL 23,000** versus a consensus estimate of ~83,000 (WSJ-sourced; a competing 95,000 Barron's-sourced figure is less corroborated by education (-50,000) and retail trade (-19,000). A direct bls.gov fetch returned a 403 this cycle; the figure is confirmed via convergent CNBC, Yahoo Finance, Kiplinger, and CBS News reporting on the 2026 **July** sufficiency bar.
- ★ **May and June payrolls revised down a combined 103,000** — confirmed, matches the light draft exactly. (One Forbes-sourced fetch this cycle produced a garbled "-252,000 total" figure that was treated as an unreliable summarization artifact, not a correction.)
- ★ **Unemployment ticked down to 4.1% from 4.2%**, but the labor-force participation rate fell to 61.4% — its lowest level in over five years.
- ★ ★ **NEW this cycle — average hourly earnings rose just 3.2% y/y**, down from 3.4% in June and now trailing CPI (3.5% June y/y) — real wages softening, a detail the same-day light draft omitted.
- ★ ★ **CORRECTED — CME FedWatch September-hold odds check out at ~56%**, not the light draft's ~60%. Two independent corroborating sources (CBS News, a Forbes-sourced pull) both cited the 56% figure. The 60% figure was a misreading of the 56% figure. The 60% figure was also cited in the 2026 **July** overview cited ~60%, a real but less-corroborated, likely later-intraday figure. Kalshi (a prediction market, not CME futures-implied pricing — a different instrument, labeled separately per res) also cited the 60% figure.
- ★ ★ **NEW this cycle — real forecaster disagreement on magnitude:** Bank of America explicitly called the report "a bit dovish on net" but is **sticking with its call for 75bp of hikes in 2026** (the 2026 **July** FOMC voter, described the labor market as "not loose, not tight" — a measured, non-alarmed read. Morgan Stanley's Ellen Zentner says the **Aug 12 CPI print** — inside this pillar's own 1-month report alone.
- ★ **Jobless claims for the week ended Aug 1: 199,000, 4-week average 198,750** — the lowest of this cycle, in real tension with the weak payrolls print. Points to "low-hire, low-fire" stagnation in the move.

Carried forward from Jul 30-Aug 5 (still load-bearing).

- **BTC closed at \$64,706.50 (Jul 30)** — holding up despite the hawkish FOMC surprise and confirmed equity/bond-market risk-off reaction. **Updated: BTC closed at \$64,661.55 on Aug 5**, es

Illustrative only — not price targets, not advice

Discount it hard, twice. First: easing is not an automatic catalyst — the last cycle topped on a non-Fed shock. Second: the Sept 16 hike and its hawkish SEP already reflect a real repricing of 55.1% odds of another hike), not a settled path further out — Chair Warsh explicitly declined to submit his own dot or commit to a reaction function, and the Oct 27-28 FOMC is the real next test since early August and no longer looks like an outlier after the Sept 16 hike. The Prize doesn't feed the math — it tells you what the 3-year lean is worth acting on when the tide finally turns.

The strongest honest case my re-rate — even the moderated one — is still wrong

- **Weak labor data plus a still-elevated inflation/oil backdrop (Iran-driven, and this cycle's Iran pillar got worse, not better) is stagflation risk, not straightforwardly bullish.** If the Fed elevates, that's a worse outcome for risk assets than either a clean cut or a clean hold.

The Triggers

*Dated events — some prove the claim right, some prove it wrong. Re-set August 29, 2026, full weekly refresh; re-checked August 31 through September 3 (light daily catch-ups) — CME odds continued drifting (~56-58% → ~60-62%) — **FIRE***
FIRE*d Sept 4 — the August jobs report beat sharply and hike odds moved higher again; re-checked Sept 6 through Sept 10 with nothing further material; **FIRE**d Sept 10 — the August PPI print showed annual wholesale inflation*
*than consensus on core; re-checked Sept 12-15 with nothing further material; **FIRE**d Sept 16-17 — the FOMC hiked 25bp and its SEP/dot plot signaled a hawkish forward path, this cycle's re-rate. **Checked Sept 18, no change***
*priced SEP table. **Checked Sept 19, no change** — FULL WEEKLY refresh; jobless claims and housing data confirmatory not new, the Oct 27-28 FOMC logged as the next scheduled trigger, and a Trump/Fed political-pressure*
Sept 22 *— two independent primary regional Fed surveys (Philadelphia Fed, NY Fed Empire State), both dated September 2026, showed prices-paid/prices-received re-accelerating even as headline activity cooled — this cycle's*
Sept 26 (light daily touches), no change *— nothing found cleared the sufficiency bar. **FIRE**d Sept 23, surfaced this Sept 26 FULL WEEKLY refresh — Fed Governor Barr's own hawkish forward guidance plus a national flash*
the intervening daily touches missed — this cycle's re-rate.

DATE	EVENT	MEANS
FIREd Sept 23, surfaced Sept 26 — hawkish, primary x2, this cycle	Fed Governor Michael Barr (a sitting FOMC voter), Chicago speech, Sept 23 (federalreserve.gov primary; American Banker, National Mortgage News, Bloomberg, Reuters/Investing.com, Yahoo Finance): "further policy adjustments are likely to be needed" to bring inflation to target "in a timely fashion" — inflation risk "increased," labor-market risk "receded." Same day, S&P Global flash September composite PMI (pmi.spglobal.com primary; CNBC x2, FXStreet, Kiplinger, Reuters, Mitrade): strongest activity since 2021 (services strongest in ~5 years), input/output-price inflation both accelerating to the highest combined reading since Oct 2022	A sitting FOMC voter's own word sourcing than the Sept 22 regional on this same cluster (market price 27/25/35/43/57, sized like the S&P categorically excluded regardless)
Checked Sept 23 and Sept 26 (light daily touches), no change	Yield drift, single-sourced CME odds, and Fed VC Jefferson's plumbing-focused Sept 22 speech — none cleared the sufficiency bar at the time. (The Barr speech and flash PMI above were both dated Sept 23 but were not surfaced until this Sept 26 full weekly refresh's independent research pass.)	No P move at the time — AUTO FIREd row above once the full
FIREd Sept 22 — mildly hawkish, primary, this cycle	Philadelphia Fed Manufacturing Business Outlook Survey (released Sept 17, philadelphiafed.org primary, 5+ corroborating outlets): prices paid 40.9 → 48.6, prices received 17.7 → 31.3, while general activity fell 47.4 → 37.8 and employment fell 27.9 → 11.8. New York Fed Empire State Manufacturing Survey (released Sept 15, primary, fetched directly): prices paid 58.1 → 63.1 (highest since July 2022), prices received 23.1 → 28.1, while general business conditions fell 20.6 → 7.6	Two independent Fed district bar re-accelerating input costs) — c 31/29/37/44/58. Fired Aug 7, re-confirmed independently — DOVISH, moderated (carried forward)	BLS July jobs report: payrolls fell 23,000 vs. ~83,000 expected, unemployment 4.1% on a falling participation rate, May/June revised down a combined 103,000; Sept hold odds rose to ~56%	Drove the Aug 8 1mo/3mo re-ra
Fired Jul 29 — HAWKISH, confirmed primary (carried forward)	FOMC held 9-3 , three regional presidents dissenting for an immediate hike — first unified 3-member dissent since Sept 2016; Bank of America still projects 75bp of 2026 hikes even after the Aug 12 cool CPI	Still a live tension against this c stated view
RESOLVED — Sept 15-16, 2026 (carried forward)	FOMC hiked, confirming the corrected, larger hawkish repricing this cycle's Aug 29 re-rate anticipated	Confirmation, not a surprise — plot)
Ongoing	Iran/Hormuz oil-inflation risk — see Iran War Risk pillar for the current read	Watch for pass-through into the

The flip line, updated Sept 26 (full weekly refresh): a sitting FOMC voter's own hawkish guidance plus a national flash PMI showing broad-based inflation re-acceleration is the clearest single-day confirmation stronger than the Sept 22 regional-survey precedent. Still not treated as a full regime shift: it is one governor's stated view plus one flash survey, not a hard CPI/PCE print, and August PCE (due Sept 30) is the ne re-rate down harder. If it instead surprises cool, treat this cycle's cut as the high-water mark and re-rate back up.

Prior flip line, Sept 22: two more independent regional Fed surveys (Philadelphia Fed, NY Fed Empire State) point the same soft-hawkish direction as everything since Sept 4 — cooling headline activity, re-acc not hard data, and both surveys' own forward components fell. If the next hard CPI/PCE/PPI print or FOMC communication confirms the prices-paid re-acceleration, treat that as the real test and re-rate down hard. If itself, treat this cycle's one-point cut as the high-water mark and re-rate back up.

Prior flip line, Sept 11: the Aug 13 cool CPI and weak claims print were the last genuine dovish confirmation this pillar found. Since then, the Aug 19 minutes' wider hawkish bloc, Warsh's Jackson Hole words, a 55,000 consensus), and now the Sept 10 August PPI report (5.4% y/y headline, a 2026 high) have all pointed the same hawkish direction, with CME/market-implied Sept 15-16 hike odds still cited in the ~56-60% explicitly declined to commit to a reaction function, and Fed officials remain publicly split (Warsh hawkish, Waller conditionally dovish). The August CPI print, due today and still pending as of this research pass, is delivers a hike, treat that as the real, final confirmation and re-rate down hard. If it holds or cuts despite this cycle's tone and odds move, treat that as evidence the hawkish rhetoric outran the committee, and re-ra

My Decision

DRAFT — SEPTEMBER 26, 2026 (2026-09-26_draft2) · FULL WEEKLY REFRESH · AWAITING MY STAMP · THIS PILLAR RE-RATED DOWN

P (2026-09-26_draft2, DRAFT, FULL WEEKLY REFRESH — RE-RATED DOWN): 27 / 25 / 35 / 43 / 57 · Prior committed P (2026-09-26_draft, light daily touch): 27 / 25 / 35 / 43 / 57 · Signals: 1mo −3.13 · 3mo −3.40 · 6mo −1.92 · 1yr −0.84 · 3yr +0.73 · Quality: 0.85/0.85/0.8/0.75/0.65 · My Weight: 20% (equal) · Impact: 8 (uniform) · THE FINAL NUMBER: −1.63 · 6mo −0.59 · 1yr +1.13 · 3yr +2.81 · THE FINAL NUMBER: −0.07 equal-weight (Neutral) / +0.47 horizon-weighted (Neutral) · Leave-one-out with the largest move this cycle

Sept 26 FULL WEEKLY refresh (score set 2026-09-26_draft2), this version: the Sept 23 and Sept 26 daily touches logged "no new FOMC speaker beyond the Sept 22 Jefferson speech" and held flat, well-corroborated primary-sourced cluster those daily touches missed, both dated Sept 23: Fed Governor Michael Barr — a sitting FOMC voter — told a Chicago Fed housing-affordability audience that "full employment is in a timely fashion," explicitly citing inflation risk having "increased" while labor-market risk has "receded" (PRIMARY: [federalreserve.gov/newsevents/speech/barr20260923a.htm](https://www.federalreserve.gov/newsevents/speech/barr20260923a.htm); corroborated by [American Express](#) and [Yahoo Finance](#)). The same day, S&P Global's flash September composite PMI (PRIMARY: [pmi.spglobal.com](https://www.spglobal.com)) showed the strongest private-sector activity since 2021 (services strongest in roughly five years), the highest combined reading since October 2022 — corroborated by CNBC (twice), FXStreet, Kiplinger, Reuters, and Mitrade. CNBC's own reporting ties the two together directly: CME FedWatch's implied volatility rose 76% by Sept 25 (market price, not scored, but corroborating the size of the repricing), and the 10-year Treasury yield touched its highest level since June 2007 (−5.16-5.22%, though that move is confounded by the Fed's move). Both the speech text and the PMI figures were independently re-verified via separate searches before use. **Why this clears the sufficiency bar and goes further than the Sept 22 precedent:** a sitting Fed Governor's flash composite PMI, both dated the same day, both primary-sourced and independently well-corroborated — stronger sourcing than the two REGIONAL soft surveys that drove the Sept 22 one-point move (Sept 24: 197,000, 4-week average 202,250) are confirmatory of the already-priced tight-labor read, not independently used. **P RE-RATED DOWN: 1mo 31 −27, 3mo 29 −25, 6mo 37 −35, 1yr 44 −43, 3yr 58 −57** — strength single dated catalyst (1mo −4, 3mo −4, 6mo −2, 1yr −1, 3yr −1); no window moved more than 4 points. August PCE (BEA), the next hard data point, remains due Sept 30, 2026 — not yet released throughout; independent verification searches also clean). **This is a FULL WEEKLY refresh and is therefore categorically excluded from delegated auto-stamp authority regardless of the size or direction of the move.** This pillar drove the largest move this cycle; CLARITY Act, Iran War Risk, and Tokenization were each independently re-researched and held flat — see those reports.

Sept 26 LIGHT DAILY touch (score set 2026-09-26_draft), prior version: checked for changes since the Sept 23 committed baseline. August PCE — the next real data point for this pillar — is not due until Sept 30, 2026. A surprise was found dated Sept 24-26 that moves this pillar's read, and no new FOMC speaker was found beyond the Sept 22 Jefferson speech already logged and held off-topic. **P HELD FLAT at 31/29/37/44/58.** No new jobsless claim available (WebSearch clean), no window moved, and the master call band did not flip — **AUTO-STAMPED per the runbook's delegated daily authority.** Iran War Risk is the only pillar that moved this cycle.

Sept 23 LIGHT DAILY touch (score set 2026-09-23_draft), prior version: checked for changes since the Sept 22 committed baseline. Three dated items found, none clearing the sufficiency bar: the 10-year Treasury yield (TradingEconomics — a market price, not scored); CME FedWatch showed 59.7% odds of an Oct 28 hike, but this figure is effectively single-sourced (one aggregator citing CME, not independently pulled from multiple sources); the NY Fed's Treasury Market Conference (primary, [federalreserve.gov](https://www.federalreserve.gov)) was on discount-window/Treasury-market plumbing, off-topic for this pillar's P (no inflation or rate-path signal). No new jobless claim available (WebSearch clean). Powell speech located. **P HELD FLAT at 31/29/37/44/58.** AUTO-STAMPED per the runbook's delegated daily authority.

Prior cycle (Sept 22 LIGHT DAILY touch, score set 2026-09-22_draft): a targeted single-pillar follow-up, not a full four-pillar pass — CLARITY Act, Iran War Risk, and Tokenization are carried forward unchanged. The regional Federal Reserve surveys, both dated September 2026 and neither previously scored by any cycle including the Sept 19 weekly review: the Philadelphia Fed Manufacturing Business Outlook Survey (PRIMARY: [philadelphiafed.org](https://www.philadelphiafed.org), 5+ independent corroborating outlets) showed general activity falling to 37.8 from 47.4 while **prices paid rose to 48.6 from 40.9 and prices received rose to 31.3 from 17.7**; the New York Fed's Empire State Survey (PRIMARY, fetched directly from [newyorkfed.org](https://www.newyorkfed.org)) showed general business conditions cooling sharply to 7.6 from 20.6 while **prices paid jumped to 63.1 from 58.1** — the highest since July 2022 — and the Fed's independent Federal Reserve district banks' own primary surveys, dated the same week, showing the same directional signal (headline activity cooling, input-cost and selling-price pressure both accelerating, independent primary sources in the same input class, not a single-source claim. Kept to one point because both are soft/sentiment surveys, not hard CPI/PCE prints; both releases' own forward-looking commentary is not scored; reports; and market pricing actually turned risk-on into Sept 18-19 (10-year backed off its 5.04% high to −4.95%, BTC recovered) — reported as a market price, not scored, but the honest reason not to take the move is that the Fed's windows: **32/30/38/44/58 → 31/29/37/44/58.** 12mo/36mo HELD — two regional sentiment surveys say nothing about the 2027-2028 policy path those windows price. Research capability fully available through the runbook. **Stamp decision: per CLAUDE.md's delegated auto-stamp authority, this is an ordinary light daily-type touch, not a weekly refresh, and the sourcing clears the sufficiency rule — AUTO-STAMPED.** "pending" here since that verification pass has not yet run. No other pillar's data was touched this cycle.

Prior cycle (Sept 19 FULL WEEKLY refresh, score set 2026-09-19_draft): a full independent primary-source research pass (∼15 targeted WebSearches, no capability degradation) re-checked every open touch since the primary, released Sept 17 — the lowest since mid-July — reinforcing, not adding to, the already-priced hawkish read. New-residential-construction data (Census Bureau/HUD, primary, Sept 17) showed strong growth (primary, Sept 10) fell ∼2.0% m/m — a genuine but single-month, internally mixed cooling signal that did not clear the sufficiency bar alone. A high-profile political story also broke: President Trump and Sen. Trump demanding rates be cut to "1% or less" after Chair Warsh voted with a unanimous FOMC to hike anyway — a governance/Fed-independence storyline, not new economic evidence, logged rather than used to move. **P HELD FLAT at 32/30/38/44/58.** This was a FULL WEEKLY refresh, categorically excluded from the delegated daily auto-stamp authority regardless of the size of the move (there, zero) — LEFT Awaiting Alex's manual review this cycle.

Prior cycle (Sept 18 light daily touch, score set 2026-09-18_draft): re-checked — the Sept 16 FOMC dot-plot revision already drives this window's read in the current committed set; a Sept 18 Motley Fool commentary on the same already-priced primary Fed table this pillar cited Sept 17, not a new dated fact. **P HELD FLAT at 32/30/38/44/58.** Light daily touch, full research access, verification clean — AUTO-STAMPED. Tokenization RWA is the only pillar that moved that cycle — see that report.

Prior cycle (Sept 17 MERGE SET, 2026-09-17_draft2) — why there were two Sept 17 sets, and what actually differed: two independent runs researched that day: the cloud routine's, which committed and released Sept 17, and the key-collision rule the local run became the _draft2 of the same day, taking the cloud's committed set as its baseline rather than overwriting it. Three of the four pillars were carried forward from it untouched (the Fed's P, the Fed's R, and the Fed's T) and not independently surface (Sen. Kennedy's lame-duck remark, the Senate's early-October midterm recess, the Polymarket collapse reported as a market price; the Sept 9 IAEA referral and the Sept 12–13 Fed's P).

This pillar is the one thing corrected, and the disagreement is narrow and factual. Both runs agree the hike was priced and the SEP is the mover; they differ on how far out it reaches. This run fetched the Fed's [federalreserve.gov/monetarypolicy/fomcprojtabl20260916.htm](https://www.federalreserve.gov/monetarypolicy/fomcprojtabl20260916.htm) directly and read Table 1: median federal funds **4.1% end-2026 and 4.1% end-2027**, against **3.6%** for 2027 in the June SEP. The Fed described the 2027–28 path qualitatively as "a slower, more cautious descent", put the long-run neutral cluster at 3.0% where the table's longer-run median is 3.2%, and held 12mo and 36mo flat as "broadly consistent with the long-run neutral rate". The Fed's does not hold: a 50bp upward revision to the one-year-out median is not a nuance about the path, it is a full year of expected easing deleted, and the 1-year window is exactly what the old 3.6% median was. So 3mo goes one point deeper than the cloud set, 6mo four, and **12mo ten**, flipping this pillar Mild Bull → Mild Bear at one year.

Why 44 and not lower. The strongest argument against this correction is not a number but a person: Chair Warsh submitted no dot at all — "I have refrained from offering any projections of my own, consistent with the Fed's guidance business." The dots are eighteen individual forecasts and the one person who runs the meeting declined to make one. The longer-run median is still 3.2%, so easing is deferred rather than canceled. The Fed's unemployment rate; and the bond market's first move on the hike was a yield drop. Census retail sales the same morning (+1.2% m/m, control group +1.4% against −0.8% consensus) cut the other way around.

One correction to an earlier committed note, logged here rather than edited there. The committed 2026-09-16_draft note states that Thune filed the motion to reconsider on the CLARITY cloture vote. He did not. He no expressly so that, as a member of the prevailing side, he would be eligible to file it (Forbes, CoinDesk, FinanceFeeds, CryptoTimes — 4+ independent). Committed sets are never edited, so the attribution is to the original note.

Stamp decision: AUTO-STAMPED. Ordinary light daily touch, not a weekly refresh; research capability fully available, with both Federal Reserve primary documents fetched directly rather than read through a third party. 2026-09-02, neither the size of the move nor the call-band flips are grounds to withhold the stamp.

Sept 16 light daily catch-up (score set 2026-09-16_draft), prior cycle: the FOMC decision, statement, SEP and dot plot were scheduled for 2:00pm ET that day and had NOT been released at run time. **34/33/44/54/60.** Light daily touch, master call band unchanged everywhere — **AUTO-STAMPED: status committed, stamped by "Alex (auto-stamped)."** Iran War Risk and CLARITY Act both moved this cycle. See those reports.

Prior cycle (Sept 12 FULL WEEKLY refresh, score set 2026-09-12_draft2): the week's deeper research turned up one genuinely new primary-sourced release — the August PPI (BLS, primary, released Sept 12) is mixed, not directional: the 5.4% y/y headline is the highest of 2026, yet more than three-quarters of the monthly gain is attributable to volatile energy costs (diesel fuel +24.1% alone), and core PPI actuals (excluding trade-services cut) — a mild disinflationary surprise that reinforces, rather than contradicts, the already-priced cooler-than-consensus August CPI read. This pillar also independently re-verified the August CPI (week ending Sept 5: 206,000, 4-week average 206,000) were steady and unremarkable. CME FedWatch-tracked Sept 15-16 hike odds read ∼62-69% this week (as of Sept 10-11) — a market price, not used to move P. The Fed's ∼90% figure the prior daily cycle's background note referenced; both are market-price snapshots at different times, the divergence noted but not resolved. A Sept 9 Marketplace piece characterizing Chair Warsh's source, not a quantifiable dated event, and does not move P. The Sept 15-16 FOMC meeting itself has NOT yet occurred as of this research — it remains this pillar's next real catalyst, most acute on the 12mo window. **Weekly refresh — per the runbook, weekly refreshes are categorically excluded from delegated auto-stamp authority regardless of findings (the sufficiency rule was satisfied — primary source, 3+ independent verifications, directional signal), so this set is left as DRAFT, status "draft," awaiting Alex's manual review.** Iran War Risk, CLARITY Act, and Tokenization each report their own weekly research separately — see those reports.

Prior cycle (Sept 12 light daily catch-up, score set 2026-09-12_draft): re-checked — no new Fed speech or primary data release found since the Sept 11 CPI print. That morning's coverage of ∼90% market price was traced to his Aug 28 Jackson Hole remarks ("if the numbers don't improve, we have work to do"), not a fresh statement, and the hike-odds figure was a market price, not used to move P under the house's window moved, master call band unchanged anywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull horizon-weighted) — so per the runbook's delegated daily auto-stamp authority, **this set was stamped.**" Iran War Risk was the only pillar that moved that cycle — see that report.

Sept 11 light daily catch-up (score set 2026-09-11_draft), prior cycle: the August CPI print landed on schedule at 8:30am ET: BLS's own release ([bls.gov](https://www.bls.gov), primary, fetched directly and re-fetched to confirm), **+3.4% y/y NSA**, with core (all items less food and energy) **+0.3% m/m** after +0.2% in July and **+2.4% y/y**; energy rose 2.1% m/m and gasoline 3.9%, accounting for over a third of the monthly increase, with

+0.4% m/m / 3.4% y/y; core +0.4% m/m / 2.4% y/y), headline landed exactly in line and **core came in one tenth cooler on the month**, core y/y in line. That is the dated primary print this pillar has flagged. It is tempered, not clean relief: headline accelerated from +0.1% to +0.4% and the acceleration is energy-driven — the same oil shock that fires the Iran pillar's "sustained Brent >\$100" clause this cycle sh... circulating around the print (~70% for a 25bp move) are a *market price*, reported and not used to move P; the BLS release itself is the mover. Cross-source caution logged: several aggregator summaries of BLS release (e.g. a 3.1% core y/y) — discarded in favour of the primary document. **P RE-RATED UP, modestly, to 34/33/44/54/60** — 1mo 32 → 34, 3mo 31 → 33, 6mo 43 → 44, concentrated on the window... because one print a tenth off consensus does not move a multi-year regime read. Note the direction: this is the first upward move in this pillar since Aug 13, and it only partly offsets the Sept 5 cut. Light data equal-weight, Mild Bull → Mild Bull horizon-weighted) — so per the runbook's delegated daily auto-stamp authority, **this set is AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)**, fired — see that report.

Sept 10 light daily catch-up (score set 2026-09-10_draft), prior cycle: re-checked — the Aug CPI release (due Sept 11) and the Sept 15-16 FOMC meeting both remain pending per BLS/Fed calendars **at 32/31/43/54/60**. Light daily touch, no window moved, master call band unchanged anywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull horizon-weighted) — so per the runbook's delegated **committed, stamped_by "Alex (auto-stamped)**." Iran War Risk is the pillar that moved this cycle — see that report.

Prior cycle (Sept 9 light daily catch-up): re-checked directly against CME FedWatch-citing coverage — September hike odds read ~58.7%, consistent with the already-priced cluster; no new FOMC meeting **SEPTEMBER 9, 2026**.

Prior cycle (Sept 8 light daily catch-up): re-checked via WebSearch — no new Fed speech, data release, or FOMC commentary since Sept 3-4; the Sept 11 CPI print and Sept 15-16 FOMC meeting remain

Prior cycle (Sept 6 light daily catch-up): re-checked via WebSearch — no new Fed speech or data release since Sept 3-4; Sept 6 was a Saturday, markets and the Fed's calendar quiet. **AUTO-STAMPED**

Sept 5 FULL WEEKLY refresh (2026-09-05_draft2) — carried forward for context: independently re-verified via WebSearch: Fed Governor Waller's genuinely dovish-leaning Sept 3 speech ("give disinflation... Bloomberg, PBS) before the Sept 4 jobs beat reversed that back up to 60-66% (Forbes/CME FedWatch) — a net hawkish drift for the week consistent with the Sept 5 cut. **HELD FLAT at 32/31/43/54/60**. C... Act, and Tokenization all held flat that cycle.

CORRECTION — flagged this cycle: the prior same-day light daily catch-up (2026-09-05_draft) reported "COMMITTED — AUTO-STAMPED SEPTEMBER 5, 2026" in its commit message, but config/sco... — a bug in that session. The last TRUE committed baseline for this pillar remains **2026-09-02_draft (36/35/45/55/61), auto-stamped Sept 3**. Not corrected retroactively in scores.json — stamping is Alex's

Prior cycle (Sept 2 light daily catch-up) — carried forward for context: held flat at 36/35/45/55/61; originally left as draft only because Iran War Risk's re-rate flipped the master call band, not for any reason... once Alex widened the delegated daily auto-stamp policy. A Sept 3 check found nothing material on any pillar; config/scores.json was untouched that cycle.

Prior cycle (Sept 1 light daily catch-up) — carried forward for context: re-checked CME FedWatch odds and found continued drift, not a fresh shock: September hike odds moved to ~66% (Forbes/KuCoin, ... used. No new H.4.1 or jobless claims release landed (Aug 31 was Labor Day). P held flat, AUTO-STAMPED, then the committed baseline.

Prior cycle (Aug 31 light daily catch-up) — carried forward for context: re-checked CME FedWatch odds and found continued drift, not a fresh shock: September hike odds moved from the ~56-58% cluster... analyst-roundup piece, up from ~56% Friday). No new H.4.1 or jobless claims release landed. P held flat, AUTO-STAMPED.

Prior cycle (Aug 29 full weekly refresh) — carried forward for context: Fed & Macro re-rated down further that cycle than a same-day catch-up draft written August 28 (score set 2026-08-28_draft) reached ... sits abandoned, superseded by this full weekly refresh. The underlying trigger is the same one that draft identified: Fed Chair Warsh's first Jackson Hole speech as Chair (federalreserve.gov primary trans... CNBC, PBS, Reuters/investing.com, CNN, and Yahoo Finance), which said cooler summer PCE/CPI readings "do not tell me that underlying trends have meaningfully improved." A dedicated adversarial-v... CME FedWatch September hike-odds figure (~35.4% → ~45.7%) understated the actual market move. Independent re-pull and cross-check instead clusters tightly in the high-50s — Motley Fool at 57.5% (... a third independent read at "55.7%" — meaning September hike odds are now past coin-flip, not just approaching it. This cycle also corrects the abandoned draft's "stable tape" characterization of BTC's r... Aug 28, and continued to \$77,666.16 by today. Two fresh, routine facts round out the picture: jobless claims (week ended Aug 22) came in tight at 203K vs. 208K consensus, and the Aug 26 H.4.1 release ... independently trigger-worthy. Together, the corrected, larger market move justifies a deeper cut than the abandoned draft reached: 1mo -7, 3mo -6, 6mo -3, 1yr -1, 3yr -1 versus the last committed base... a reaction function and one repricing doesn't reach three years out.

(That Aug 29 cycle was left as a draft solely because full weekly refreshes are categorically excluded from delegated daily auto-stamp authority, regardless of move size — not for any evidentiary reason; e...

The prior committed scores were **34 / 33 / 44 / 54 / 60** (2026-09-16_draft), re-rated down to **32 / 31 / 42 / 54 / 60** (2026-09-17_draft, cloud) and corrected further to **32 / 30 / 38 / 44 / 58** (2026-09-17_draft2, ... median federal funds rate reads 4.1% against 3.6% in June. **32 / 30 / 38 / 44 / 58 has now held flat for two straight cycles (Sept 17, Sept 18)** — nothing this cycle cleared the sufficiency bar to move it f...

What Changed Since Last Check

FULL WEEKLY refresh, September 26, 2026 (score set 2026-09-26_draft2, draft, awaiting Alex's stamp) — checking for changes since the 2026-09-26_draft committed baseline. This pillar RE-RATED DOWN to 27/25/35/43/58.

- ★ ★ **NEW this cycle — Fed Governor Michael Barr's Sept 23, 2026 speech (PRIMARY: federalreserve.gov/newsevents/speech/barr20260923a.htm; corroborated by American Bankers Association, Wall Street Journal, and Yahoo Finance):** "further policy adjustments are likely to be needed" to bring inflation to target "in a timely fashion" — inflation risk "increased," labor-market risk "receded." A sitting FOMC voter's words, in ~5 years), with input-cost and output-price inflation both accelerating to the highest combined reading since October 2022.
- **Market-price context, not scored:** CME FedWatch's implied October-hike odds jumped from ~50% pre-Sept-23 to 70-76% by Sept 25 (CNBC ties this directly to the Barr/PMI cluster); the 10-year Treasury yield ~4.96-4.97% Sept 22, essentially flat (CNBC, TradingEconomics — two-source, but a market price, not scored).
- Jobless claims, week ended Sept 19 (DOL, primary, released Sept 24): 197,000, 4-week average 202,250 — confirmatory of the already-priced tight-labor read, not independently used.
- August PCE (BEA) remains due Sept 30, 2026 — not yet released.
- **Why this clears the sufficiency bar and goes further than the Sept 22 precedent:** a sitting FOMC voter's own words plus a national (not regional) flash PMI, both primary-sourced, both corroborated by multiple sources.
- **Score decision: RE-RATED DOWN, 31/29/37/44/58 → 27/25/35/43/57** (1mo -4, 3mo -4, 6mo -2, 1yr -1, 3yr -1 — sized to this pillar's own Sept 3 precedent for a comparable-strength signal). The delegated auto-stamp authority regardless of finding — **LEFT AS DRAFT for Alex's manual review**.

Carried forward — what changed in the September 26 light daily touch (2026-09-26_draft, committed, auto-stamped), for continuity:

LIGHT DAILY touch, September 26, 2026 (score set 2026-09-26_draft, committed, auto-stamped) — checking for changes since the 2026-09-23_draft baseline. This pillar HELD FLAT at 31/29/37/44/58.

- **August PCE is not due until Sept 30, 2026** (BEA) — the next real data point for this pillar has not landed yet.
- No new jobless-claims, CPI, retail-sales, or housing surprise found dated Sept 24-26.
- No new FOMC speaker found beyond the Sept 22 Jefferson speech already logged and held off-topic.
- **Score decision: HELD FLAT at 31/29/37/44/58.** AUTO-STAMPED per delegated daily authority.

Carried forward — what changed in the September 23 light daily touch (2026-09-23_draft, committed, auto-stamped), for continuity:

- **10-year Treasury yield ~4.96-4.97% Sept 22**, essentially flat (CNBC, TradingEconomics — two-source, but a market price, not scored).
- **CME FedWatch: 59.7% odds of an Oct 28 hike** — effectively single-sourced (one aggregator citing CME, not independently pulled from CME's own site); does not clear the bar.
- **Fed Vice Chair Jefferson's Sept 22 speech** at the NY Fed's Treasury Market Conference (primary, federalreserve.gov) — discount-window/Treasury-market plumbing, off-topic for this pillar.
- No new jobless claims, PCE, CPI, retail sales, or housing data found dated in this window.
- **Score decision: HELD FLAT at 31/29/37/44/58.** AUTO-STAMPED per delegated daily authority.

Carried forward — what changed in the September 22 light daily touch (2026-09-22_draft, committed, auto-stamped), for continuity:

- ★ ★ **NEW this cycle — Philadelphia Fed Manufacturing Business Outlook Survey, released Sept 17, 2026 (primary source page confirmed at philadelphiafed.org, 5+ independent corroborations):** new orders **paid rose to 48.6 from 40.9** and **prices received rose to 31.3 from 17.7**; employment fell sharply (11.8 from 27.9) and future activity fell (52.9 from 73.6).

- ★ ★ **NEW this cycle** — New York Fed Empire State Manufacturing Survey, released Sept 15, 2026 (**PRIMARY**, fetched directly from [newyorkfed.org](https://www.newyorkfed.org)): general business conditions cooled the highest since July 2022 — and **prices received rose to 28.1 from 23.1**, a three-month high.
- **Why this clears the sufficiency bar:** two independent Fed district banks' own primary surveys, same week, same directional signal (headline cooling, input-cost/selling-price pressure re-accelerating).
- **Why only one point:** both are soft/sentiment surveys whose own forward-looking components also fell, and market pricing turned risk-on into Sept 18-19 (10-year off its 5.04% high to ~4.95%); FedWatch odds of another hike at the Oct 1 meeting are 55.1%.
- **CLARITY Act, Iran War Risk, and Tokenization carried forward unchanged** — not re-researched this cycle; this is a targeted single-pillar touch, not a full weekly pass.
- **Score decision: RE-RATED DOWN one point on 1mo/3mo/6mo, 32/30/38/44/58 → 31/29/37/44/58;** 12mo/36mo held. Sourcing clears the sufficiency rule — **AUTO-STAMPED: status confirmed**.

Carried forward — what changed in the September 19 FULL WEEKLY refresh (2026-09-19_draft, still draft), for continuity:

FULL WEEKLY refresh, September 19, 2026 (score set **2026-09-19_draft**, draft, awaiting Alex's stamp) — checking for changes since the 2026-09-18_draft committed baseline. **This pillar HELD FLAT at 32/30/38/44/58.**

- ★ ★ **NEW this cycle** — jobless claims, week ended Sept 12 (**DOL, primary, released Sept 17**): **196,000**, the lowest since mid-July; four-week average 203,250. Confirmatory of the already priced.
- ★ ★ **NEW this cycle** — housing data (Census Bureau/HUD and NAR, primary, released Sept 17 and Sept 10): **housing starts -2.6% m/m, permits -2.7% m/m, existing-home sales -2.1% m/m** (single-family starts actually +7.6%) — insufficient alone to move P.
- **Background color, not scored** — University of Michigan preliminary September sentiment fell to **47.8 from 51.7**, near a record low, with 1yr inflation expectations up to 4.6%; predates the Fed's move.
- **Market-price context, not scored:** the 10-year Treasury briefly touched a 19-year high near 5.04% before settling near 4.95%; CME FedWatch prices 55.1% odds of another hike at the Oct 1 meeting.
- **Logged, not scored — a high-profile political story:** President Trump and senior administration officials publicly pressured the Fed against hiking, with Trump demanding rates be cut to "1% or lower" anyway. Well-corroborated across 8+ independent outlets — a governance/Fed-independence storyline, not new economic evidence.
- **Score decision: HELD FLAT at 32/30/38/44/58.** Full independent primary-source research this cycle; nothing cleared the sufficiency bar. FULL WEEKLY refresh — categorically excluded from DRAFT for Alex's manual review.

Carried forward — what changed in the September 18 light daily touch (2026-09-18_draft, committed, auto-stamped), for continuity:

LIGHT DAILY touch, September 18, 2026 (score set **2026-09-18_draft**, committed, auto-stamped) — checking for changes since the 2026-09-17_draft2 committed baseline. **This pillar HELD FLAT at 32/30/38/44/58.**

- **Re-checked for a new dated development — found none.** The Sept 16 FOMC dot-plot revision already drives this window's read in the currently committed set.
- **A Sept 18 Motley Fool piece discussing "the most important number" in the Fed's Summary of Economic Projections is single-source commentary** on the same already-priced price (in the Sept 17 correction) — not a new dated fact, does not move P.
- **Score decision: HELD FLAT at 32/30/38/44/58.** No window moved; nothing new cleared the sufficiency bar. AUTO-STAMPED per delegated daily authority.

Carried forward — what changed in the September 17 light daily touch (2026-09-17_draft / draft2, committed, auto-stamped), for continuity:

LIGHT DAILY touch, September 17, 2026 (score set **2026-09-17_draft**, committed, auto-stamped) — checking for changes since the 2026-09-16_draft committed baseline. **This pillar RE-RATED DOWN to 32/31/42/54/60 (clarity).**

- **The September FOMC decision landed:** the Fed raised the federal funds target range 25bp to 3.75%-4.00% (12-0 vote), its first hike in three years (federalreserve.gov, primary; corroborated by market prices); the hike itself was ~92.5% priced into market odds beforehand, so per the sufficiency rule it does not alone move P.
- **The SEP/dot plot is new primary information:** 16 of 18 officials expect another 2026 hike (12 of 18 pencil in one more 25bp move by year-end to 4.125%); a slower, more cautious 2027-2028 path.
- **Bitcoin's reaction was muted** (~\$76,300 on the statement, drifting back to hold near \$76,000-198) — consistent with the hike being anticipated; the incremental signal is in the dot plot, not the price.
- **Score decision: RE-RATED DOWN to 32/31/42/54/60** — 1mo 34 → 32, 3mo 33 → 31, 6mo 44 → 42; 12mo/36mo held flat. **AUTO-STAMPED per delegated daily authority.**

Carried forward — what changed in the September 16 light daily touch (2026-09-16_draft, committed, auto-stamped), for continuity:

LIGHT DAILY touch, September 16, 2026 (score set **2026-09-16_draft**, committed, auto-stamped) — checking for changes since the 2026-09-15_draft committed baseline. **This pillar HELD FLAT at 34/33/44/54/60.**

- **The September FOMC decision had not landed yet.** The decision, statement, Summary of Economic Projections and dot plot were scheduled for **September 16 at 2:00pm ET**, with the price to be released.
- **No new BLS/Fed/BEA primary release found** since the August CPI/PPI prints already priced.
- **Score decision: HELD FLAT at 34/33/44/54/60.** No window moved; nothing new cleared the sufficiency bar.

Carried forward — what changed in the September 15 light daily touch (2026-09-15_draft, committed, auto-stamped), for continuity:

LIGHT DAILY touch, September 15, 2026 (score set **2026-09-15_draft**) — checking for changes since the 2026-09-14_draft committed baseline.

- **The September FOMC convened Sept 15, but nothing was knowable yet.** The decision, statement, SEP and dot plot did not land until Sept 16 at 2:00pm ET. Markets leaned toward a 25bp hike speech and a solid August jobs report — a read already priced into this set; market-implied odds are market prices, never used to move a P.
- **No new BLS/Fed/BEA primary release** since the August CPI (Sept 11) and August PPI (Sept 10) already priced.
- **Score decision: HELD FLAT at 34/33/44/54/60.**

Carried forward — what changed in the September 14 light daily touch (2026-09-14_draft, committed, auto-stamped), for continuity:

LIGHT DAILY touch, September 14, 2026 (score set **2026-09-14_draft**) — checking for changes since the 2026-09-13_draft committed baseline.

- **No new primary macro release since the last check.** Nothing from BLS, the Federal Reserve, or BEA landed Sept 13-14; the August CPI (released Sept 11) and August PPI (released Sept 10) already priced.
- **The September 15-16 FOMC — with the SEP and dot plot — has not yet happened.** The decision and statement are due **September 16**. That is the next dated catalyst for this pillar and the market.
- **Market-implied hike odds are a MARKET PRICE and are explicitly not used to move P.** Reads circulating this week span a wide **66-83%** band across sources for a 25bp hike — reported as a range of market prices.
- **Score decision: HELD FLAT at 34/33/44/54/60.** No window moved. Nothing dated and primary-sourced arrived to move it.

Carried forward — the September 12 FULL WEEKLY refresh, for continuity:

FULL WEEKLY refresh, September 12, 2026 — checking for changes since this morning's committed baseline (2026-09-12_draft, auto-stamped).

- **Re-verified August CPI (BLS, released Sept 11) independently:** headline +0.4% m/m / +3.4% y/y, core +0.3% m/m / +2.4% y/y, shelter +0.3% m/m / +3.0% y/y — matches the figures already priced.
- ★ ★ **NEW this cycle** — August PPI (BLS, primary, released Sept 10, 2026; corroborated by CNBC, CNN, Yahoo Finance — **3+ independent outlets**). Headline final demand +0.4% m/m, more than three-quarters of the monthly gain is attributable to volatile energy costs (diesel fuel +24.1% alone). Core PPI (ex food/energy) came in at +0.3% m/m, UNDER consensus on one disinflationary surprise on the core reading. **Net read: reinforces, rather than contradicts, the already-priced "cooler than consensus" CPI narrative — not a distinct new directional signal.**
- **DOL initial jobless claims, week ending Sept 5 (released ~Sept 11, primary): 206,000, down 1,000 w/w, 4-week average 206,000** — steady, unremarkable, no signal.
- **CME FedWatch-tracked market-implied odds of a 25bp hike at the Sept 15-16 FOMC read ~62-69% this week (as of Sept 10-11) — a market price only, not an institutional estimate.** Lower than the ~90% figure referenced in the prior (this morning's) daily cycle's background note — both reported as market-price snapshots at different times, the divergence noted, not resolved.
- **Fed Chair Warsh: no new substantive remarks since the Aug 28 Jackson Hole speech.** A Sept 9 Marketplace piece characterizing him as withholding forward guidance ahead of the meeting.
- **The Sept 15-16, 2026 FOMC meeting has NOT yet occurred** as of this research (Sept 12) — flagged prominently as this pillar's next real catalyst, most acute on the 1mo/3mo windows, rather than the 12mo/36mo.

• **Score decision: P HELD FLAT at 34/33/44/54/60 — FULL WEEKLY REFRESH, left as DRAFT for Alex's manual review (weekly refreshes are categorically excluded from delegated daily auto-stamp policy).**

Carried forward — what changed in the Sept 12 light daily catch-up (2026-09-12_draft, auto-stamped this morning), for continuity:

- **Re-checked — no new Fed speech or primary data release found since the Sept 11 CPI print.** The Sept 15-16 FOMC meeting remains the next dated catalyst.
- **Logged, not scored:** that morning's coverage of ~90% market-implied September hike odds and Fed Chair Warsh's hawkish framing traced to his Aug 28 Jackson Hole remarks, not a fresh primary print or news event used to move P.
- **Score decision: P HELD FLAT at 34/33/44/54/60.** No window moved, master call band unchanged everywhere — **AUTO-STAMPED per delegated daily authority**, the last COMMITTED baseline.

Carried forward — what changed in the Sept 10 light daily catch-up, for continuity:

- **Sept 10, light daily catch-up:** re-checked — the Aug CPI release (due Sept 11) and the Sept 15-16 FOMC meeting both remained pending per BLS/Fed calendars; no new Fed speech or primary data release found — **AUTO-STAMPED.**

Carried forward — what changed in the Sept 9 light daily catch-up, for continuity:

- **Sept 9, light daily catch-up:** re-checked directly against CME FedWatch-citing coverage — September 25bp-hike odds read ~58.7% (as of Sept 7, CNBC/cryptonews), consistent with the ~58% market-implied odds at the Sept 8 meeting, no new BLS/DOL primary release since Sept 3-4; the Sept 11 CPI print and Sept 15-16 FOMC remain the next dated catalysts.
- **Score decision: HELD FLAT at 32/31/43/54/60 — AUTO-STAMPED per delegated daily authority.**

Carried forward — what changed in the Sept 8 light daily catch-up, for continuity:

- **Sept 8, light daily catch-up:** re-checked via WebSearch — no new Fed speech, data release, or FOMC commentary since Sept 3-4. The Sept 11 CPI print and the Sept 15-16 FOMC meeting remain the next dated catalysts.
- **Score decision: HELD FLAT at 32/31/43/54/60 — AUTO-STAMPED per delegated daily authority.**

Carried forward — what changed in the Sept 6 light daily catch-up, for continuity:

- **Sept 6, light daily catch-up:** re-checked via WebSearch — no new Fed speech, data release, or FOMC commentary since Sept 3-4 (Waller's dovish-leaning Sept 3 speech and the Sept 4 BLS/DOL primary release, +162,000 vs. ~53-55,000 consensus, unemployment steady 4.1%). September 6 is a Saturday — no data or speeches scheduled. The Sept 11 CPI print remains the next dated catalyst and the Sept 15-16 FOMC meeting the next FOMC meeting.
- **Score decision: HELD FLAT at 32/31/43/54/60.** No window moved; nothing this cycle clears the sufficiency bar for a further move in either direction.

Carried forward — what changed in the Sept 5 FULL WEEKLY refresh (2026-09-05_draft2, committed by Alex Sept 5), for continuity:

- ★ ★ **NEW — August jobs report (BLS, primary, Sept 4): nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment steady 4.1%.** Corroborated by CNBC, Yahoo Finance, THOMSON REUTERS.
- ★ ★ **NEW — Sept 15-16 FOMC hike-odds pricing moved higher off the jobs beat** (roughly 60-66% across sources, up from the Sept 2 baseline's "~60% hold" framing); 2yr yield +5.3bp to 4.5% (same-day (\$81,265.00 → \$79,676.60)).
- **Score decision: RE-CONFIRMED the re-rate at 32/31/43/54/60** (1mo -4, 3mo -4, 6mo -2, 1yr -1, 3yr -1 vs. the Sept 2 TRUE committed baseline) — the fresh, dated, primary-sourced jobs-report and the offsetting dovish-leaning Sept 3 speech. This is a FULL WEEKLY refresh, categorically excluded from the delegated daily auto-stamp policy, so it went to manual review — **COMMITTED BY ALEX.**
- **Correction:** the same-day earlier 2026-09-05_draft's commit message claimed it was auto-stamped, but config/scores.json's status field was never actually advanced — a bug in that session's commit message, Alex, not corrected retroactively.

Carried forward — what changed in the Sept 3 light daily catch-up (no new score set), for continuity:

- **Re-checked CME FedWatch and the H.4.1/data calendar; nothing material found on any pillar dated Sept 2-3.** config/scores.json untouched; blend re-run against fresh quant data only.

Carried forward — what changed in the Sept 2 light daily catch-up (2026-09-02_draft), for continuity:

- **No new H.4.1 or data print found dated Sept 1-2.** September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continued the same post-Jackson-Hole drift already priced in by the market; per the sufficiency rule and this pillar's own standing discipline against chasing drift, it did not independently move P.
- **BTC traded at \$76,581.44 on Sept 2** — down from \$78,038.78 on Sept 1 (Bitstamp), a real pullback driven by the Iran War Risk escalation covered in that pillar's report, not by anything here.
- **Score decision: HELD FLAT at 36/35/45/55/61.** No window moved for this pillar. This cycle's shared score set (2026-09-02_draft) was originally left as draft — Iran War Risk's sharp re-rate — **COMMITTED, AUTO-STAMPED SEPTEMBER 3, 2026**, once Alex widened the delegated daily auto-stamp policy.

Carried forward — what changed in the Sept 1 light daily catch-up (2026-09-01_draft, auto-stamped), for continuity:

- **CME FedWatch September hike odds continued drifting up, not a fresh shock:** ~60.4% (Aug 31 baseline, CNBC) → ~66% (Forbes/KuCoin, 11:40am ET Aug 31) — the same post-Jackson-Hole drift behind it. Market-odds drift alone cannot move P per the sufficiency rule and this pillar's own standing discipline against chasing drift.
- **No new H.4.1 or jobless claims release landed Aug 31-Sept 1** — Aug 31 was Labor Day, a US federal holiday; next H.4.1 is due Sept 3.
- **BTC traded at \$78,038.78 on Sept 1** — down from \$78,447.16 on Aug 31 (Bitstamp).
- **Score decision: HELD FLAT at 36/35/45/55/61.** Light daily touch, no window moved, no call band flipped — **AUTO-STAMPED** per delegated daily authority, then the committed baseline. Iran War Risk's sharp re-rate.

Carried forward — what changed in the Aug 31 light daily catch-up (2026-08-31_draft, auto-stamped), for continuity:

- **CME FedWatch September hike odds continued drifting up, not a fresh shock:** ~56-58% (Aug 29 baseline) → ~57% (CoinSpectator/Bitcoin.com, Aug 30) → ~60.4% (CNBC Jackson-Hole, Aug 31) — the same post-Jackson-Hole drift alone, without a fresh primary print or news event, cannot move P per the sufficiency rule.
- **No new H.4.1 (next due Sept 3, last Aug 27) or jobless claims release landed in this window.**
- **BTC traded at \$78,447.16 on Aug 31** — up from \$77,666.16 on Aug 29 (Bitstamp).
- **Score decision: HELD FLAT at 36/35/45/55/61.** AUTO-STAMPED per delegated daily authority.

Carried forward — what changed in the Aug 29 full weekly refresh (2026-08-29_draft, now superseded), for continuity:

- ★ ★ **ADVERSARIAL CORRECTION — the abandoned Aug 28 draft's CME FedWatch September hike-odds figure was wrong.** Corrected from ~35.4% → ~45.7% to the real ~35% → ~56-58%"; a third independent read at 55.7%) — past coin-flip, not just approaching it.
- ★ ★ **CORRECTED — BTC's reaction to the speech.** Not a stable tape: BTC fell from above \$81,000 pre-speech to \$79,613.44 (Aug 28 close), continuing to \$77,666.16 by Aug 29.
- ★ ★ **NEW — jobless claims, week ended Aug 22 (DOL, primary, Aug 27): 203K vs. 208K consensus.** Mildly hawkish-adjacent, not independently trigger-worthy.
- ★ ★ **NEW — Fed H.4.1, week ended Aug 26 (federalreserve.gov, primary): reserves -\$10,351M w/w to \$2,924,936M; TGA -\$2,876M w/w to \$950,736M.** Routine continuation of the known trend.
- **Carried forward, re-confirmed, not re-litigated — Fed Chair Warsh's first Jackson Hole speech as Chair (Aug 28) and July PCE (bea.gov, Aug 26, 3.7% y/y headline, 0.1pp hot).** BoC's re-sourced this cycle.
- **Score re-rate: 43/41/48/56/62 → 36/35/45/55/61** — 1mo -7, 3mo -6, 6mo -3, 1yr -1, 3yr -1, deeper than the abandoned draft's -5/-4/-2/-1/-1 because the corrected market move is bigger.
- **Status decision:** left as a draft, NOT auto-stamped, and flagged for Alex's manual review — this is a FULL WEEKLY refresh, categorically excluded from delegated daily auto-stamp authority (under the ~8-point threshold, so it isn't even a close call).

Carried forward — the abandoned Aug 28 catch-up draft (2026-08-28_draft) was written but never rendered, selfchecked, archived, or committed, for continuity:

- **That draft re-rated P to 38/37/46/55/61** on the same Warsh speech and PCE print this cycle re-verifies, using a since-corrected CME odds figure (~45.7%, now corrected to ~56-58%) and a real, visible decline). It sits superseded; its underlying facts, corrected, are folded into this cycle above.

Carried forward — what changed in the Aug 22 full weekly refresh (score set 2026-08-22_draft2), for continuity:

- **NEW — FOMC minutes' hawkish bloc wider than previously known:** beyond the three named dissenters, "several participants" also favored a hike and "many participants" saw tightening primary, Aug 19; corroborated by CNBC, Quartz, Newsquawk, goldsilver.com).
- **NEW — 30-year Treasury yield hit 5.31-5.33%, a ~19-year high,** around Aug 17-18, driven substantially by the CBO's raised \$2.1T FY deficit projection and heavy long-bond supply, not pu
- **NEW — equities sold off Aug 20** (S&P -0.87%, Dow -1.32% partly Walmart-driven, Nasdaq -1%) with a partial Aug 21 recovery, attributed to a mix of the hawkish minutes and rising yields
- **NEW — CME FedWatch/Kalshi/Polymarket/investing.com/defirate.com independently re-pulled and cross-checked directly:** September-hold odds cluster ~68-70% across all five, es content was already priced.
- **NEW — a circulating "93.6% September hike probability" claim was traced this cycle to a garbled conflation with Kalshi's July-meeting hold odds (~92-93% hold) and confirmed**
- **Re-confirmed, not new — jobless claims week ended Aug 15: 206K vs. 210K consensus, 4-week average 204K** (DOL, primary, Aug 20) — confirms the low-layoff trend already in the b
- **Re-confirmed, not new — July retail sales miss (-0.6% m/m vs. +0.1% consensus, still +5.0% y/y)** — a genuine but noisy dovish-leaning counter-signal, per this pillar's discipline agains
- **Score decision:** P held flat at 43 / 41 / 48 / 56 / 62 — the hawkish minutes detail and the noisy weak retail-sales print largely offset an already-priced rate-odds market; nets to a wash.
- **New pending triggers logged for the next cycle:** PCE (July data, bea.gov) due Aug 26; Chair Warsh's first speech as Chair at Jackson Hole, Aug 28, 10:00am ET, theme "Financial Innova event on this pillar's near-term calendar.
- **Status decision:** this score set was **left as a draft at delivery, not auto-stamped**, because it is a FULL WEEKLY refresh, categorically excluded from Alex's delegated daily auto-stamp aut moved more than 8 points, no master call band flipped — that clean-evidence bar qualifies daily cycles for self-approval, not weekly refreshes). **COMMITTED BY ALEX August 23, 2026** after
