

CoinPicks Market Direction

Research Package

Five pillars — four researched narratives and one pure-math read of the Bitcoin chart — scored on one standard, blended into one table, and distilled to one number. Everything in this folder is current as of **August 7, 2026** — a run of light daily re-checks since the last full weekly refresh on July 30.

THE FINAL NUMBER · AUGUST 7, 2026 · BTC \$65,000.00

+0.54 Mild Bull — the 1-month window slipped back to outright Bear

Equal-weight mean of the five window signals below — every pillar counts 20% (scale -10 to +10; horizon-weighted variant +1.12). Positive because the far windows outweigh the near ones — **not a buy-today signal**. It is a "the storm is priced, the recovery isn't" number, and today it ticked down slightly (from Aug 6's +0.58) as the Senate's CLARITY Act cloture vote was confirmed delayed to September — a real, well-sourced negative — while Iran-Hormuz talks, RWA tokenization, and the Fed all held in a holding pattern. The near-term drag intensified today, though the long-horizon structural case is unmoved.

THE FIVE WINDOWS UNDERNEATH IT

WINDOW	MASTER SIGNAL	CALL
1 month	-1.63	Bear — CLARITY's confirmed cloture delay pushed the window back below the -1.5 boundary
3 months	-1.08	Mild Bear — the September FOMC still sits inside this window at majority-hike-priced odds
6 months	+0.21	Neutral — CLARITY/Tokenization structural strength vs. Iran's and the Fed's drag
1 year	+2.09	Bull — all five pillars still positive
3 years	+3.11	Strong Bull — law + adoption + cycle + valuation, unchanged

Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. The Mild Bull conclusion stays positive under every leave-one-out drop (+0.15 to +0.84); dropping CLARITY or Tokenization still rounds down to **Neutral** on a strict read, essentially unchanged from prior days' thinner-than-usual robustness result. See the Master Report's Robustness section.

Reading order

Twenty minutes to the whole picture; each report stands alone and can be checked independently — every fact is dated with sources on its last page.

#	FILE	WHAT IT IS
1	CoinPicks_Master_Direction_Report.pdf	The summary. The final number, the five-window table, the full pillar matrix, where the lenses agree/fight, six weeks of dated triggers, sensitivity.
2	CoinPicks_Bitcoin_TA_Quant_Pillar_Report.pdf	The math pillar. 7 indicators on 16 years of data, halving-cycle analogs, power-law valuation — with charts. Fully reproducible from code.
3	reports/current/pdf/ — the four pillar PDFs	The story pillars. CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro. Each: thesis, dated facts, honest bear case, dated triggers, and the full score lineage (June committed → every draft through August 7).
4	reports/archive/ + prior-work/	Every earlier version, preserved untouched — the score history is fully auditable.
—	run.py · engine/blend.py · data/master_blend.json	The blend engine (runnable Python — reproduce any score set with <code>run.py blend --set NAME</code>), its output, and README.md for regeneration.

How the scoring works — one paragraph

Every pillar answers the same question on five windows (1 month / 3 months / 6 months / 1 year / 3 years): **P** = the odds (0–100) that this force is *good for crypto* by then, **Quality** = how trustworthy the evidence is (0–1), and **Impact** = how hard this force moves the whole market (0–10). These combine into a **Signal** = $((P - 50) \div 50) \times \text{Quality} \times \text{Impact}$ (Impact is a uniform 8 for every pillar), so a coin-flip view scores zero no matter how loud the headlines are, and weak evidence can't shout. **All five pillars are equal-weighted** — the master for each window is the simple mean of the five signals (20% each; add a pillar and it auto-rebalances to 1/N) — and the Final Number averages the five master windows.

The five pillars at a glance (August 7 draft P's — light daily re-checks since the July 30 full refresh)

PILLAR	1MO	3MO	6MO	1YR	3YR	ONE-LINE READ
CLARITY Act (law)	32	44	58	82	92	Re-rated down: Senate Majority Leader Thune confirmed on the record (Aug 6, ~11pm ET) that cloture was never filed and the vote is delayed until the Senate returns from recess in mid-September
Iran War Risk	24	31	41	56	77	Held flat: the Iran-Oman joint statement on the Hormuz route map remains unsigned and in final drafting, and the fee dispute (Iran 5-7%, Oman ~3%, US 0%) remains unresolved — unchanged from Aug 6
Tokenization (RWA)	52	59	65	74	85	Held flat: no new dated RWA/tokenization catalyst found beyond the Aug 3 BlackRock BSTBL/BRSRV launch already reflected in the Aug 6 committed set
Fed & Macro	34	33	45	54	62	Held flat: Fed H.4.1 for the week ended Aug 5 finally published — total assets and reserve balances both up modestly, reversing the prior week's larger decline — read as settlement noise, not a policy signal; the July jobs report (due today) not yet in reporting
Bitcoin TA (quant)	39	36	45	68	70	Quant pillar refreshed on today's price (BTC \$65,000.00, +1.2% vs. Aug 6; weekly tape -24.7 slight bearish, monthly -36.9 slight bearish, quarterly +10.8 neutral; cycle month 27.6)

P values shown (50 = coin flip). Fed & Macro (judged) and Bitcoin TA (computed) are now identical at 6 months — 45 vs 45.

Status & honesty notes

- **Score status:** August 7 scores were evidence-driven drafts that, after Step 6 verification passed clean, were **auto-stamped committed by Alex** under delegated daily auto-stamp authority (the August 6 set they build on was likewise reviewed and committed); every report prints the full lineage (June committed → every draft through August 7). Nothing hides its history.
- **Verification:** facts researched with primary-source discipline (The Block's on-record Thune quote, Iranian FM spokesman statements, federalreserve.gov's own H.4.1 release), independently fact-checked, and the whole package forensically audited; score math recomputed independently; price data cross-checked across two exchanges; models that failed out-of-sample testing were excluded and say so. Today's checks: confirmed Senate Majority Leader Thune's on-record statement that CLARITY Act cloture was never filed and the vote is delayed to September (corroborated by 3 independent outlets); confirmed the Iran-Oman joint statement remains unsigned and the fee dispute unresolved (no change from Aug 6); ran a specific, dated search for new tokenization catalysts and found none; and pulled Fed H.4.1 directly from federalreserve.gov, reading its modest weekly uptick as noise rather than a policy signal.
- **Known limits, in print inside the reports:** cycle-analog claims rest on 3 completed cycles; the TA pillar caps its own conviction at $P = 50 \pm 25$; this cycle's clearest fragility example is CLARITY Act, whose 1-month score just took its largest single-day move in weeks on a confirmed, well-sourced but still-fluid political process; single-source items are labeled in-line; current chart bars are partial and the completed-bar numbers are printed; the Robustness section shows dropping CLARITY or Tokenization still lands right at the Neutral/Mild-Bull boundary, a thinner margin than prior cycles.
- **The near-term calendar is the test:** the July jobs report (due today, Aug 7) still pending · the Senate's mid-September return, when CLARITY is next queued for a vote · an actual signed, operating Hormuz agreement (route map alone isn't it — fees are still unresolved) · next FOMC (with SEP/dot plot) Sept 15-16 · Islamabad Memorandum expiry ~Aug 16 · GENIUS Act 18-month backstop effective Jan 18, 2027. Each pillar's trigger table says in advance what each outcome does to the scores.

This is research and education, not financial advice. The scores are probabilistic opinions with dated evidence — built to be argued with. If you check one thing manually, check the trigger tables: they are the falsifiable part.
