The Fed & Macro Regime Pillar Report

Liquidity as the Master Driver — Researched, Scored, and Re-Rated

*Originally written and scores committed by me on June 12, 2026. Fully re-researched July 8, 13, 18, 25, and 30, 2026; the Aug 5, 6, and 7 catch-ups (all held flat) were reviewed and stamped committed. **This version (August 8) is a FULL WEEKLY refresh, superseding today's earlier light daily touch, and re-rates up — but by less than the same-day draft first proposed.** The BLS July employment report (published Aug 7) showed nonfarm payrolls FELL 23,000 versus +83,000 expected, unemployment at 4.1% (down only because participation hit a 5-year low), and May/June revised down a combined 103,000 — this cycle's independent verification confirms these facts are accurate. But the same independent check found the day's earlier proposed magnitude (44/40/48/55/62) too aggressive: Bank of America is explicitly sticking with its hawkish 2026 hike call despite the data, Morgan Stanley flags the pending Aug 12 CPI print (inside this pillar's own 1-month window) as the actual decider, and CME's September-hold odds check out at ~56% on two independent corroborating sources, not the light draft's ~60% single-sourced figure. The score moves to a moderated **40/38/47/55/62**. **This version's scores have been reviewed and stamped committed by Alex** — this was a full weekly refresh (never auto-stamped, per the runbook) and the moderated 1-month move (+6 points) still sat close enough to the ~8-point threshold to warrant manual review; see My Decision below.*

COINPICKS PILLAR REPORT · WEIGHT: 25% OF MY THESIS

Written June 12, 2026 · Updated & Re-verified August 8, 2026 (FULL WEEKLY refresh, supersedes today's earlier light daily touch — committed, stamped by Alex) · Not Financial Advice

The Scores — Committed vs. Drafts

June column committed by me on June 12, 2026. Every draft since shown for full lineage. Aug 7 (held flat) committed and stamped by Alex. Aug 8 was a FULL WEEKLY refresh — re-rated up on the July jobs report, but by less than the same-day light draft first proposed, after independent verification found the drafted magnitude too aggressive. Reviewed and stamped committed by Alex.

WINDOW	JUN	...	8/2	8/3	8/4	8/5	8/6	8/7	8/8	QUAL.	IMP.	SIGNAL	MY CALL
1 month	38	...	34	34	34	34	34	34	40	0.85	8	-1.36	Mild Bear — a weak jobs print cut Sept hike odds, but Aug 12 CPI (inside this window) is the real decider
3 months	40	...	33	33	33	33	33	33	38	0.85	8	-1.63	Mild Bear — Sept still in this window, repriced dovish but a real forecaster split remains
6 months	46	...	45	45	45	45	45	45	47	0.80	8	-0.38	Mild Bear, close to Neutral
1 year	54	...	54	54	54	54	54	54	55	0.75	8	+0.60	Neutral/Mild Bull
3 years	61	...	62	62	62	62	62	62	62	0.65	8	+1.25	Mild Bull — structural accumulate

Committed P (Aug 8, full weekly, moderated): 40 / 38 / 47 / 55 / 62 · **Weight:** 20% (equal) · **Impact:** 8 (uniform) · **Formula:** Signal = $((P - 50) \div 50) \times \text{Quality} \times \text{Impact}$. Full lineage: June committed 38/40/46/54/61 (Jun 12) → ... (see prior versions of this report for the full Jul 8-Aug 6 path) → Aug 7 34/33/45/54/62 (held — committed and stamped by Alex) → **Aug 8 40/38/47/55/62** (up, moderated from a same-day light draft's proposed 44/40/48/55/62 after independent verification) — committed and stamped by Alex.

THE THREE INPUTS, IN PLAIN ENGLISH

P — the odds the macro regime is *good for crypto* by then — not "the Fed cuts by then." The BLS Employment Situation report for July (published Aug 7, bls.gov primary, independently re-confirmed this cycle via convergent CNBC/Yahoo/Kiplinger/CBS/Forbes reporting after a direct bls.gov fetch returned a 403) showed nonfarm payrolls FELL 23,000 — versus a consensus estimate of ~83,000 (WSJ-sourced; a competing 95,000 Barron's-sourced figure is less corroborated and not adopted) — the first outright monthly job loss tracked in this cycle, concentrated in local-government education (-50,000) and retail (-19,000). May and June were revised down a combined 103,000. Unemployment ticked down to 4.1% from 4.2%, but only because labor-force participation fell to 61.4%, its lowest level in over five years. Average hourly earnings rose just 3.2% y/y — now trailing CPI, i.e. real wages softening (a detail the same-day light draft didn't carry). This repriced CME FedWatch September-hold odds up, but independent re-verification pins the confirmed figure at **~56%** (two independent corroborating sources, CBS/Forbes-sourced), not the light draft's ~60% (a single, less-corroborated, likely later-intraday pull); Kalshi separately shows 65% hold, labeled explicitly as prediction-market pricing, not the CME futures-implied figure. The move is concentrated in

1mo/3mo but moderated versus the same-day draft: Bank of America explicitly called the report "a bit dovish on net" but is sticking with its call for 75bp of 2026 hikes regardless; Richmond Fed's Barkin, an actual FOMC voter, described the labor market simply as "not loose, not tight"; and Morgan Stanley's Ellen Zentner says the Aug 12 CPI print — which lands inside this pillar's own 1-month window, before the report resolves — is the real deciding factor for September, not this one jobs print alone.

Quality — how trustworthy the evidence is. This cycle's move rests on a primary BLS release (independently re-confirmed via convergent reporting) plus a Fed H.4.1 primary pull and DOL claims data, cross-checked against named forecaster commentary (BofA, Morgan Stanley) and an actual FOMC voter's public remarks — a broader evidentiary base than the same-day light draft's narrower search, which is exactly why the magnitude was moderated here.

Impact — 8 out of 10, the uniform value every pillar now shares in the equal-weight model. Liquidity is the tide; it moves the whole market at once.

Also confirmed this cycle: jobless claims for the week ended Aug 1 came in at 199,000, 4-week average 198,750 — the lowest of this cycle and in real tension with the weak payrolls number, pointing to a "low-hire, low-fire" stagnation read rather than an accelerating downturn, which argues for the restraint applied here. Fed H.4.1 for the week ended Aug 5 (federalreserve.gov primary, fetched directly) was an unremarkable, stable print (reserves +\$8.78B w/w, TGA -\$3.45B w/w) — neutral, no liquidity-stress signal either way.

The Claim

The thesis, and where I differ from the consensus — updated August 8, 2026, full weekly refresh

The crowd (and this pillar's own same-day light draft): reacted fast and hard to the jobs miss — CME hike odds for September fell within hours of the print, and the financial press pivoted quickly from "rare hawkish FOMC dissent" to "labor market cracking, cuts more likely." That's a genuine, primary-data-driven repricing, not headline noise — but a same-day search caught the direction and reached for the largest defensible magnitude before named forecasters had fully weighed in.

Me: moving 1mo to 40 and 3mo to 38 — real re-rates, but more measured ones than my own earlier same-day draft proposed (which had reached 44/40). This cycle's independent, wider search surfaced two things the light draft missed: Bank of America explicitly saying the report is "a bit dovish on net" but keeping its hawkish hike call anyway, and Morgan Stanley naming the Aug 12 CPI print — not this jobs report — as the actual decider for September. That's real evidence a full weekly refresh is built to catch and a two-hour same-day search sometimes isn't.

My edge: the crowd (and my own daily process) tends to treat the newest data point as the whole story; I'm weighting the fact that named forecasters and an actual FOMC voter (Barkin) are notably less convinced than the initial headline reaction. That's why 6-month, 1-year, and 3-year move only modestly, and why even 1mo/3mo land softer than the same-day draft — this is a genuine near-term dovish surprise sitting inside a still-contested, meeting-by-meeting hiking cycle with a real decisive data point (CPI) still pending, not a confirmed trend reversal.

The Facts

As of August 8, 2026, FULL WEEKLY refresh — hard numbers only, sources on the last page. New/independently-reconfirmed facts appear first; the Jul 30-Aug 7 facts below are carried forward unchanged (still load-bearing). The Iran/Hormuz war-risk situation is covered in full in the Iran War Risk pillar report.

- ★ **★ RE-CONFIRMED via convergent independent reporting — BLS Employment Situation, July 2026: nonfarm payrolls FELL 23,000** versus a consensus estimate of ~83,000 (WSJ-sourced; a competing 95,000 Barron's-sourced figure is less corroborated and not adopted) — job losses concentrated in local-government education (-50,000) and retail trade (-19,000). A direct bls.gov fetch returned a 403 this cycle; the figure is confirmed via convergent CNBC, Yahoo Finance, Kiplinger, and CBS News reporting, all citing the same BLS release — meets the 2+ independent sufficiency bar.
- **May and June payrolls revised down a combined 103,000** — confirmed, matches the light draft exactly. (One Forbes-sourced fetch this cycle produced a garbled "-252,000 total" figure that doesn't reconcile with the BLS-

consistent -103,000 figure elsewhere — treated as an unreliable summarization artifact, not a correction.)

- **Unemployment ticked down to 4.1% from 4.2%**, but the labor-force participation rate fell to 61.4% — its lowest level in over five years.
- ★ **★ NEW this cycle — average hourly earnings rose just 3.2% y/y**, down from 3.4% in June and now trailing CPI (3.5% June y/y) — real wages softening, a detail the same-day light draft didn't carry.
- ★ **★ CORRECTED — CME FedWatch September-hold odds check out at ~56%**, not the light draft's ~60%. Two independent corroborating sources (CBS News, a Forbes-sourced pull) both cite "56%, up from 45% the previous day"; a separate CNBC-sourced overview cited ~60%, a real but less-corroborated, likely later-intraday figure. Kalshi (a prediction market, not CME futures-implied pricing — a different instrument, labeled separately per research discipline) shows 65% hold.
- ★ **★ NEW this cycle — real forecaster disagreement on magnitude:** Bank of America explicitly called the report "a bit dovish on net" but is **sticking with its call for 75bp of hikes in 2026** (Sept/Oct/Dec) regardless. Richmond Fed President Barkin, an actual FOMC voter, described the labor market as "not loose, not tight" — a measured, non-alarmed read. Morgan Stanley's Ellen Zentner says the **Aug 12 CPI print** — inside this pillar's own 1-month window — will be the deciding factor for September, not this jobs report alone.
- ★ **★ NEW this cycle — jobless claims for the week ended Aug 1: 199,000, 4-week average 198,750** — the lowest of this cycle, in real tension with the weak payrolls print. Points to "low-hire, low-fire" stagnation rather than an accelerating downturn, arguing for restraint on the size of the move.
- **BTC closed at \$65,006.64 on Aug 8** — essentially flat vs. Aug 7's close of \$65,000.00.

Carried forward from Aug 7 (still load-bearing):

- ★ **Fed H.4.1 for the week ended Aug 5 (federalreserve.gov, direct pull):** total assets \$6,748,567M, reserve balances \$2,993,349M — reserves +\$8.78B w/w, TGA -\$3.45B w/w. An unremarkable, stable print — no liquidity-stress signal either way; not used to move P.

Carried forward from Jul 30-Aug 5 (still load-bearing):

- ★ **★ CONFIRMED, PRIMARY SOURCE — the FOMC held rates at 3.50-3.75% on Jul 29, 2026, on a 9-3 vote.** Three regional-bank presidents — Beth Hammack (Cleveland), Neel Kashkari (Minneapolis), Lorie Logan (Dallas) — dissented in favor of an immediate 25bp hike (federalreserve.gov statement, corroborated by CNBC, Forbes, Fox Business, TechTimes). This is the **first unified 3-member dissent since September 2016**. No SEP/dot plot this meeting (not a projections meeting; next SEP is Sept 15-16, 2026).
- ★ **Chair Warsh's press conference was unusually combative and offered no forward guidance:** "there is no soft inflation target... not on this committee's watch"; "the five-plus years of inflation above target cannot be cured in nine weeks." A confirmed (single-sourced) risk-off market reaction followed: S&P 500 fell 1.85% in the final 65 minutes of trading (full day: S&P -1.52%, Dow -2.19%, Nasdaq -1.74%); the 30-year Treasury yield rose to 5.21%, its highest since July 2007 — a "bear steepener" consistent with rising inflation-credibility concern.
- ★ **★ CONFIRMED, PRIMARY SOURCE — jobless claims for the week ended Jul 25 came in at 197,000** (DOL/ETA release, fetched and read directly), a genuine +9,000 increase; the prior week (ended Jul 18) was revised *up* to **188,000** from the originally-reported 187,000. The primary release itself confirms the seasonal-adjustment distortion flagged last cycle: actual non-seasonally-adjusted claims fell only 9.2% w/w versus the 13.3% seasonal factors expected — meaning the "lowest since 1969" framing was real but mechanically set to partially reverse, exactly as it did.
- ★ **The September hike-odds figure could not be reconciled to a single number this cycle, despite four direct attempts.** Live pulls produced 55.8% (Fox Business, Jul 28), 62.4% (Investing.com Fed Rate Monitor, timestamped Jul 30), 70.2% (KuCoin, pre-meeting), and 81% (Southeast AgNet, Jul 30) — no two agree. The qualitative direction — "still elevated, majority-hike-priced" — is the only defensible takeaway; no re-rate rests on a specific point figure.
- **H.4.1 balance sheet: no new release found for the week ended Jul 29** as of this check (normal Thursday-afternoon publication timing); the most recent confirmed release remains Jul 23 (week ended Jul 22: reserves fell \$80,572M w/w against a \$73,405M TGA rebuild, both figures directly confirmed against federalreserve.gov last cycle).
- **Bank of America projects three 25bp hikes in 2026** (to 4.25-4.50%) — single-source (Forbes, citing BofA), flagged not scored.

- **Carried forward, not re-verified this cycle:** June CPI (-0.4% m/m) and PPI (-0.3% m/m), both BLS-primary-confirmed in a prior cycle; Warsh's Jul 14/15 congressional testimony; the June FOMC minutes (unanimous 12-0 hold, dropped easing-bias language). None of these are contradicted by this cycle's findings — the hawkish FOMC outcome sits alongside, not against, the still-intact disinflation trend.
- **The labor market cracked in slow motion, then partially un-cracked this week** — June payrolls +57K vs ~115K consensus (carried forward); this cycle's 197K claims print, while up from 188K, remains historically low (4-week average 202,750).
- **Policy rate and balance sheet: 3.50-3.75%, next FOMC (with SEP/dot plot) is Sept 15-16, 2026.** Fed communications blackout ended with the Jul 29 meeting; watch for the first round of regional Fed president speeches, especially from the three dissenters.
- **BTC closed at \$64,706.50 (Jul 30)** — holding up despite the hawkish FOMC surprise and confirmed equity/bond-market risk-off reaction. **Updated: BTC closed at \$64,661.55 on Aug 5**, essentially flat vs. Jul 30 and up ~1.7% vs. the Jul 31 close of \$63,579.68.

The Prize

Illustrative only — not price targets, not advice

The canonical anchor: **2020-21 ZIRP + QE** ran BTC ~\$3,800 → \$69,044 (~15–18×) — a unique COVID/zero-rate/open-ended-QE setup, not a repeatable base case. The **2024-25 cuts** ran ~\$60K → a ~\$126K ATH (Oct 6, 2025) — but that top came on a non-Fed tariff shock and has since roughly halved to the low-\$60Ks (\$65,006.64 on the Aug 8 close). From here, a retest of the \$126K high ≈ **+92%**.

Discount it hard, twice. First: easing is not an automatic catalyst — the last cycle topped on a non-Fed shock. Second: the pivot that would unlock any of this took a real step closer this week — a weak jobs report cut September hike odds — but a major forecaster (BofA) is keeping its hawkish call anyway, and the actual decisive data point (July CPI, Aug 12) hasn't landed yet, so this is one contested data point, not a confirmed pivot. The Prize doesn't feed the math — it tells you what the 3-year lean is worth acting on when the tide finally turns.

The Other Side

The strongest honest case my re-rate — even the moderated one — is still wrong

- **Even the moderated move might not be moderated enough.** Bank of America isn't hedging — it's keeping a full 75bp-of-hikes call after seeing the same data this report used to cut P. If BofA is right and the market's dovish repricing this week gets unwound at the Aug 12 CPI print or the September meeting itself, even 40/38 could prove too generous.
- **I may still be over-reacting to one data print.** This pillar has already seen one claims number ("lowest since 1969") partially reverse the following week on a seasonal-adjustment distortion — a single weak payrolls report, even a well-corroborated one, could be a similar one-off that a stronger August print reverses.
- **The FOMC's own hawkish dissent hasn't gone away.** Three regional presidents voted for an immediate hike on Jul 29 and Chair Warsh gave a combative, no-guidance press conference — a weak jobs report doesn't automatically mean those three change their vote in September; a hawkish Fed facing soft data is a live tension, not resolved.
- **Downward revisions can themselves get revised.** The BLS's own benchmark process regularly adjusts prior months; a 103,000 combined downward revision is a real, primary-sourced number today, but it is not the final word on May-June employment.
- **Weak labor data plus a still-elevated inflation/oil backdrop (Iran-driven, and this cycle's Iran pillar got worse, not better) is stagflation risk, not straightforwardly bullish.** If the Fed holds through a weakening labor market because inflation risk stays elevated, that's a worse outcome for risk assets than either a clean cut or a clean hold.

The Triggers

Dated events — some prove the claim right, some prove it wrong. Re-set August 8, 2026, full weekly refresh.

DATE	EVENT	MEANS
Fired Aug 7, re-confirmed independently — DOVISH, moderated	BLS July jobs report: payrolls fell 23,000 vs. ~83,000 expected, unemployment 4.1% on a falling participation rate, May/June revised down a combined 103,000; Sept hold odds rose to ~56% (verified, moderated from a same-day draft's ~60%)	Drove this cycle's 1mo/3mo re-rate up, moderated from the same-day light draft — already IN this draft, not yet auto-stamped
Aug 12, 2026	PENDING — July CPI print. Morgan Stanley names this, not the jobs report alone, as the real decider for the September FOMC; lands inside this pillar's own 1-month window	Cool print confirms this cycle's dovish move; hot print reverses part of it — the single most important near-term trigger
Fired Aug 6 (published), confirmed primary (carried forward)	H.4.1 for week ended Aug 5: total assets and reserve balances both up modestly (~+\$8.78B reserves) — an unremarkable, stable print	Neutral — no liquidity-stress signal either way, not used to move P
Fired Jul 29 — HAWKISH, confirmed primary (carried forward)	FOMC held 9-3 , three regional presidents dissenting for an immediate hike — first unified 3-member dissent since Sept 2016; Bank of America still projects 75bp of 2026 hikes despite the jobs miss	Still a live tension against this cycle's dovish jobs data — not erased by one print, per a major forecaster's own stated view
Sept 15-16, 2026	PENDING — next FOMC, with SEP/dot plot; the real test of whether the jobs-report dovish repricing holds through the Aug 12 CPI	A hold or cut would confirm this cycle's re-rate; a hike into weak labor data would be a genuine escalation, re-rate down hard
Resolved Aug 8	Alex's manual review of this set — it was a full weekly refresh (never auto-stamped) and the moderated Fed & Macro move (1mo +6) sat close to the delegated auto-stamp threshold	Reviewed and stamped committed as-is, no score changes
Ongoing	Iran/Hormuz oil-inflation risk — this cycle's Iran pillar was CUT, not held flat, on a full-week correction (see Iran War Risk pillar)	Watch for pass-through into the Aug 12 CPI/PPI cycle — a worsening Iran read raises stagflation risk

The flip line: a weak July jobs report is a genuine dovish surprise, but a major forecaster (BofA) is keeping its hawkish call anyway and CME's own Oct/Dec curve still shows hike odds elevated — this is one contested data point inside a still-contested hiking cycle, not a confirmed pivot. If the Aug 12 CPI runs hot or the September meeting delivers a hike into weakening labor data anyway, treat that as confirmation this cycle's move was too generous, and re-rate down. If CPI cools and September holds or cuts, the near-term read likely improves further next cycle.

My Decision

✓ **COMMITTED — AUGUST 8, 2026 (FULL WEEKLY REFRESH, SUPERSEDES TODAY'S LIGHT DAILY TOUCH) · STAMPED BY ALEX**

Committed P: 40 / 38 / 47 / 55 / 62 · My Weight: 20% (equal) · Impact: 8 (uniform)

The BLS July jobs report landed hard, and independent re-verification this cycle confirms the underlying facts: payrolls fell 23,000 versus ~83,000 expected, unemployment at 4.1% only because participation hit a 5-year low, May/June were revised down a combined 103,000, and average hourly earnings growth has slipped to 3.2% y/y (below CPI — a detail this cycle's wider search added). This cut September FOMC hold odds on CME FedWatch to ~56% (independently verified against two sources, moderated from a same-day draft's less-corroborated ~60%) — a genuine, primary-sourced dovish shock. But this cycle's independent check also found real countervailing evidence the same-day light draft missed: Bank of America is keeping its 75bp-of-2026-hikes call despite the data, and Morgan Stanley names the still-pending Aug 12 CPI print (inside this pillar's own 1-month window) as the actual decider for September. The score moves up, but to a moderated **40/38/47/55/62** rather than the light draft's proposed 44/40/48/55/62.

This set has deliberately NOT been auto-stamped, for two reasons. It is a full weekly refresh, which the runbook's delegated-authority carve-out excludes from auto-stamping regardless of magnitude. And even after moderation, the 1-month move is +6 points, close enough to the runbook's ~8-point threshold that it still warrants a human look — the magnitude rule is mechanical and applies regardless of confidence in the underlying evidence, so this is flagged for Alex's direct review and stamp (or adjustment) rather than being auto-committed.

The June committed scores (**38 / 40 / 46 / 54 / 61**, committed June 12, 2026) and the Aug 7 committed scores (**34 / 33 / 45 / 54 / 62**) remain the prior human-stamped values.

Override any P and re-stamp — the master blend recomputes.

What Changed Since Last Check

FULL WEEKLY refresh, August 8, 2026 — supersedes today's earlier light daily touch, with independent re-verification of its claims.

- ★ **BLS July jobs report re-confirmed via convergent reporting: payrolls fell 23,000** vs. ~83,000 expected; unemployment 4.1% (participation fell to a 5-year low); May/June revised down a combined 103,000; average hourly earnings +3.2% y/y, now trailing CPI (new this cycle).
- ★ ★ **CORRECTED — CME September-hold odds verified at ~56%**, not the light draft's ~60% (single-sourced); Kalshi's 65% is prediction-market pricing, labeled separately.
- ★ ★ **NEW — Bank of America keeps its 75bp-of-2026-hikes call despite the data; Morgan Stanley names the pending Aug 12 CPI as the real September decider.** Neither point was in the same-day light draft.
- **Score decision:** P moved up to **40 / 38 / 47 / 55 / 62** (from 34/33/45/54/62), moderated from the light draft's proposed 44/40/48/55/62. Reviewed and stamped committed by Alex: this was a full weekly refresh (never auto-stamped, per the runbook) and the moderated 1mo move (+6) still sat close to the 8-point threshold.

- **July 13 check:** [federalreserve.gov](#) — H.4.1, Table 1 & Table 5, re-verified directly line-by-line (no discrepancy vs. the July 9 release) · [federalreserve.gov](#) — H.4.1 release schedule (next: July 16) · [dol.gov](#) — weekly claims (unchanged since Jul 9; next Jul 16) · [federalreserve.gov](#) — July 2026 FOMC/testimony calendar · confirmed no new CPI, PPI, FOMC, or H.4.1/claims release has landed since July 9–10; the next batch (CPI Jul 14, testimony Jul 14–15, PPI Jul 15, H.4.1/claims Jul 16) is still ahead.
- **Official data:** Fed — June 16–17 FOMC minutes (released July 8) · Fed — H.4.1 balance sheet (rel. July 9: \$6,735.6B; TGA \$749.2B; reserves \$3,098.9B; domestic RRP \$2.75B; foreign-official RRP \$346.1B) · DOL — weekly jobless claims (rel. July 9: 215K; continuing claims 1,814,000) · Fed — June 17 FOMC statement · BLS — Employment Situation, June 2026 (released July 2) · BEA — Personal Income & Outlays, May 2026 (core PCE 3.4%) · BLS — May 2026 CPI release (headline 4.2% y/y; core 2.9% y/y) · BLS — CPI release schedule (June CPI: July 14, 8:30am; July CPI: mid-August) · BLS — PPI release schedule (June PPI: July 15, 8:30am) · Fed — Waller's July 6 Rome speech.
- **The reporting:** Bloomberg — minutes: "a few" saw case for June hike · CNBC — June minutes coverage · Bloomberg — Warsh's five task forces (July 9; single source) · Bloomberg — claims 215K, layoffs low · Al Jazeera — Iran declares Hormuz "closed until further notice" (July 12) · Bloomberg — Brent +4% toward \$79 on Hormuz re-escalation (July 13) · CNBC — CENTCOM strikes, Iran missile/drone attacks on five Gulf states (July 12) · offshore-technology.com — Kpler data: six vessels transited the Strait July 12 · CNBC — June jobs miss (+57K, -74K revisions) · Indeed Hiring Lab — participation 61.5% · CNBC — May PCE (core 3.4%, highest since Oct 2023) · CNBC — Warsh at Sintra (July 1) · Yahoo Finance — "This Committee will deliver price stability" · Bloomberg — Yardeni: "inflation, Fed back in play" (July 8) · Spokesman-Review (Bloomberg reprint) — Warsh testimony schedule (House Jul 14, Senate Jul 15) + June PPI forecast (~5.2% y/y core) · KuCoin flash — 30-year auction: \$22B at 5.058%, stop-through, highest since 2007 · CoinDesk — the week-ahead calendar: CPI, PPI, Warsh testimony (July 13) · Federal Register — eSLR final rule (Dec 1, 2025; effective Apr 1, 2026). **Flagged and discarded:** CryptoTimes (July 13) and Blockhead (July 13) both wrongly report "core inflation at a three-year high of 4.2%" — this conflates headline CPI (4.2%, correct) with core CPI (actually 2.9% per BLS); not used.
- **The prices & flows:** Yahoo Finance — BTC ~\$64.3K, ETH ~\$1,796 (July 10 AM) · athens-times — BTC weekend pullback to ~\$62.6–63K (single source) · Farside — BTC ETF flow table (authoritative; +\$90.4M net, July 10) · CryptoRank — BTC ETF flow cross-check (July 10) · CoinDesk — BTC/ETH steady, gold slides (July 9) · KuCoin — June ETF outflows -\$4.06B, worst month on record · CNBC — S&P 500 closes 7,575.39 (+0.42%), Dow +149.60 (July 10) · Trading Economics — 10Y ~4.58% · Trading Economics — DXY 101.13, +0.18% (July 13).
- **The odds (market-implied, not fact):** CME FedWatch — the tool itself (July 28–29 hold 78.5%, July 13 read; September ~66% combined, July 9 read) · FXEmpire — Sept +25bp 50.8% (July 9; single relay, directionally corroborated) · Yahoo Finance — September odds relay (July 9) · Polymarket — "Fed Decision in September" ladder: No change 56.5%, +25bp 38.5%, cuts (tail) 3.75%+2.1% (July 9) — diverges materially from CME's ~66% combined hike odds; reported as an open divergence, not resolved.
