Tokenization of Real-World Assets Pillar Report

Real Money On-Chain — Researched, Scored, and Personally Committed

Originally written **June 19, 2026**; scores committed by me on **June 19, 2026**. Re-researched July 8, 13, 18, 25, and 30, 2026 against live primary sources; the Aug 5, 6, and 7 catch-ups were reviewed and stamped committed. **This version (August 8) is a FULL WEEKLY refresh, superseding today's earlier "held flat" light touch, and nudges UP at 3mo/6mo** — a direct [rwa.xyz](#) pull shows total RWA distributed value hit a new all-time high of \$38.24B, and two genuinely new institutional developments were confirmed that the "no new catalyst" daily touches missed: the Central Bank of Ireland cleared the first EU-regulator-approved public-chain tokenized fund (Aviva on the XRP Ledger, Jul 29), and Ripple converted its commercial relationship with Zilo/Licuido into equity stakes (Aug 3). **This version's scores have been reviewed and stamped committed by Alex** — this was a full weekly refresh (never auto-stamped per the runbook) and a different pillar (Fed & Macro) also moved enough this cycle that the whole set was held for manual review; see My Decision below.

COINPICKS PILLAR REPORT · WEIGHT: 30% OF MY THESIS

Written June 19, 2026 · Updated & Re-verified August 8, 2026 (FULL WEEKLY refresh, supersedes today's earlier light daily touch — committed, stamped by Alex) · Not Financial Advice

The Scores — Committed vs. Drafts

June P's committed by me June 19, 2026 (last committed Jun 12 cycle). Full lineage of every draft since shown below. Aug 7 (held flat) committed and stamped by Alex; Aug 8 was a FULL WEEKLY refresh — nudged up at 3mo/6mo after a direct rwa.xyz pull and two missed catalysts surfaced — reviewed and stamped committed by Alex.

WINDOW	JUN	...	8/2	8/3	8/4	8/5	8/6	8/7	8/8	QUAL.	IMP.	SIGNAL	MY CALL
1 month	53	...	50	50	50	50	52	52	52	0.90	8	+0.29	Mild Bull — held; no acute 30-day catalyst beyond the confirmed Aug 3 BlackRock launch
3 months	57	...	57	57	57	57	59	59	60	0.88	8	+1.41	Mild Bull — up on a new RWA ATH plus two missed catalysts
6 months	62	...	65	65	65	65	65	65	66	0.85	8	+2.18	Bull
1 year	72	...	74	74	74	74	74	74	74	0.78	8	+3.00	Strong Bull (right at the boundary)
3 years	85	...	85	85	85	85	85	85	85	0.70	8	+3.92	Strong Bull

Committed P (Aug 8, full weekly): 52 / 60 / 66 / 74 / 85 · **Weight:** 20% (equal) · **Impact:** 8 (uniform) · **Formula:** Signal = ((P – 50) ÷ 50) × Quality × Impact. **Full lineage:** June committed 53/57/62/72/85 (Jun 12) → ... (see prior versions of this report for the full Jul 8-Aug 6 path) → Aug 7 52/59/65/74/85 (held — no new catalyst found — committed and stamped by Alex) → **Aug 8 52/60/66/74/85** (up at 3mo/6mo — RWA all-time high, two missed catalysts confirmed) — committed and stamped by Alex.

THE THREE INPUTS, IN PLAIN ENGLISH

P — the odds this is *good for crypto* by then. This cycle's full-weekly re-verification found the "no new catalyst" daily-touch pattern was itself incomplete: a direct rwa.xyz pull (Aug 8, primary) shows **total RWA distributed value hit a new all-time high of \$38.24B**, up from \$34.67B roughly two and a half weeks earlier (+10%) — while tokenized Treasuries specifically grew modestly and in-trend, \$15.86B → \$16.21B (the recurring press mislabeling of that \$34.67B figure as "tokenized Treasuries," already flagged once before, is corrected again here). Two genuinely new, multi-sourced institutional developments were confirmed that the daily "no new catalyst" checks missed entirely: the **Central Bank of Ireland cleared Aviva Investors' tokenized fund on the XRP Ledger (Jul 29)** — the first EU-regulator approval of a public-blockchain fund structure — and **Ripple converted its commercial relationship into equity stakes in Zilo and Licuido (Aug 3)**, building regulated transfer-agency rails directly on top of the Aviva launch. BlackRock's confirmed Aug 3 BSTBL/BRsrv launch remains reflected, not double-counted. No new RWA-rail failure, depeg, or counterparty default was found in the window.

Quality — how trustworthy the evidence is. This cycle pulled rwa.xyz directly (primary) and cross-checked the Aviva/Ripple items against 5-6 independent outlets each plus a Ripple.com press release — a broader evidentiary sweep than the daily touches' narrower searches, which is exactly why it caught what they missed.

Impact — 8 out of 10, the uniform value shared by every pillar in the equal-weight model. If tokenization compounds, it pulls trillions of TradFi assets onto rails crypto controls.

Aug 3 catalyst (carried forward, committed): BlackRock launched two new tokenized money-market funds — BSTBL (BlackRock Select Treasury-Based Liquidity Fund) and BRSRV (BlackRock Daily Reinvestment Stablecoin Reserve Vehicle), following an SEC prospectus filing Aug 1. Both hold cash, short-term Treasuries, and repo agreements; BRSRV is purpose-built as a reserve asset for stablecoin issuers, targeting GENIUS Act eligibility. Securitize is transfer agent and tokenization provider for both, the same role it plays for BUIDL. Confirmed by 7+ independent outlets.

GENIUS Act status, re-confirmed this cycle: FDIC's BSA/AML compliance-framework comment period closed Aug 4; a joint five-agency customer-identification (CIP) comment period runs through Aug 21; no agency has published a final rule. An unchanged, already-priced mild headwind against the Jan 18, 2027 statutory effective date — holds 12mo/36mo flat.

The Claim

The thesis, and where I differ from the consensus — updated August 8, 2026, full weekly refresh

The crowd (and this pillar's own recent daily touches): concluded "no new catalyst" for several days running, with coverage staying fixed on CLARITY's cloture filing, the Iran-Oman deal claim, and the Fed's jobs shock — RWA-specific searches kept surfacing only generic market-size roundups.

Me: nudging 3mo/6mo up after a genuine full-week sweep found what the narrower daily searches missed — a new RWA all-time high and two real institutional developments (an EU regulatory first, a Ripple equity move) that never showed up in a same-day "no new catalyst" search. This is exactly the kind of thing a full weekly refresh exists to catch: not a dramatic single headline, but a week's worth of incremental, real progress that a narrow two-day search window can miss entirely.

My edge: this pillar's discipline is to notice when institutions actually ship product, not just when they announce intent — and this cycle, a wider search window caught two real ships that a narrower one didn't. 1mo holds because none of this week's developments are acute 30-day catalysts on their own; 12mo/36mo hold because the GENIUS Act rulemaking delay remains an unchanged, already-priced headwind roughly offsetting the adoption tailwinds at those horizons.

The Facts

As of August 8, 2026, FULL WEEKLY refresh — hard numbers with exact dates, sources on the last page. New/corrected facts appear first; the Aug 6-7/Jul 30 facts below are carried forward unchanged (still load-bearing).

- ★ ★ **NEW — total RWA distributed value hit a new all-time high of \$38.24B** (rwa.xyz direct pull, Aug 8), up from \$34.67B roughly two and a half weeks earlier — a genuine +10% move, not stagnation. Tokenized Treasuries specifically grew modestly and in-trend, \$15.86B → \$16.21B (87 products, 62,997 holders, 7d yield 3.29%).
- ★ ★ **CORRECTION, again — the \$34.67B figure was never "tokenized Treasuries."** KuCoin's "Tokenized Treasuries Dip to \$34.67 Billion" headline (~Jul 22) mislabels the total-RWA distributed-value figure as Treasuries-specific; this is the same conflation this report has now caught twice. Do not cite that figure as a Treasuries number anywhere in this system.
- ★ ★ **NEW — the Central Bank of Ireland cleared Aviva Investors' tokenized USD Liquidity Fund on the XRP Ledger (Jul 29),** the first time a major EU regulator has approved a public-blockchain tokenized fund structure (BNY Mellon custody, Komainu/Licuido on-chain layer) — confirmed by 6+ independent outlets, missed entirely by the daily "no new catalyst" checks.

- ★ ★ **NEW — Ripple took equity stakes in Zilo and Licuido (Aug 3)**, converting a commercial relationship into ownership and adding regulated transfer-agency, issuance, and collateral-mobility infrastructure directly to the XRPL stack that powered the Aviva launch (Ripple.com press release + 5 outlets).
- **rwa.xyz also separately reports a "Represented Asset Value" of \$373.55B** (down 1.70% over 30 days) — a different metric (off-chain assets referenced via tokenization infrastructure, not tokens actually distributed on-chain). Never quote this interchangeably with the \$38.24B distributed-value figure.
- **No new RWA-rail failure, depeg, or counterparty default found** in the Jul 30 - Aug 8 window.
- **BTC (pipeline reference) closed at \$65,006.64 on Aug 8** — essentially flat vs. Aug 7's close of \$65,000.00.

Carried forward from Aug 6-7 (still load-bearing):

- **GENIUS Act rulemaking status:** FDIC's BSA/AML comment period closed Aug 4; a joint five-agency CIP comment period runs through Aug 21; no agency has published a final rule. Realistic final-rule timing has slipped toward late 2026/early 2027 against a fixed Jan 18, 2027 statutory effective date — an already-priced, mild headwind.

Carried forward from Aug 6 (still load-bearing):

- ★ **BlackRock launched two tokenized money-market funds on Aug 3, 2026.** BSTBL and BRSRV, following an SEC prospectus filing Aug 1, via Securitize (same transfer agent as BUIDL), targeting GENIUS Act stablecoin-reserve eligibility. Confirmed by CoinDesk, KuCoin, PYMNTS, Cointribune, BitcoinWorld, Solana Compass, and CoinPaprika (7 independent outlets).

Carried forward from the July 30 full refresh (still load-bearing):

- ★ ★ **CORRECTION — the "\$34.67B tokenized Treasuries pulling back" headline circulating this week (and cited in the Jul 29/30 daily touches) is a metric mislabel, again.** That figure is the total cross-category RWA "Distributed Value" (all asset classes), not tokenized Treasuries specifically — the same conflation an earlier full refresh already corrected once. Multiple outlets (including one whose own body text contradicts its headline, admitting "tokenized U.S. treasuries lead at \$15.86 billion") ran versions of this mislabeled headline. A direct rwa.xyz pull (Jul 30) shows tokenized Treasuries at **\$16.18B**, essentially flat versus \$16.20B a week ago — not declining.
- ★ **NEW, direct pull — BlackRock's BUIDL continues recovering, not declining.** BUIDL sits at **\$2.64B** (Jul 30), up from \$2.52B (Jul 22 wobble low) and \$2.61B (Jul 25) — a steady +4.8% recovery, the opposite of the "down 12.22% w/w" framing the daily touches carried forward from a stale Jul 22 snapshot.
- ★ **NEW, confirmed 4+ outlets — Robinhood Chain's on-chain RWA activity jumped roughly 5x to ~\$70M (Jul 25).** Tokenized-stock trading grew in size, with tokenized SpaceX overtaking tokenized GameStop as the chain's largest RWA holding (CoinDesk, CryptoTimes, Cryptopolitan, Incrypted, Crowdfund Insider). TVL roughly tripled to ~\$312M, though stablecoins/memecoins still dominate overall activity. Separately, a Jul 29 report cites \$885.5M in Robinhood Chain's *cumulative transfer volume* — a flow metric, not a balance figure; not conflated with the RWA-value numbers above.
- ★ **NEW — Securitize Capital (BlackRock BUIDL's transfer-agent/tokenization partner) registered with the SEC as an investment adviser (Jul 27)**, and Citi initiated a Buy rating on Securitize's stock (SECZ), calling it "critical infrastructure" for RWA tokenization (Jul 27, sell-side sentiment).
- **All-RWA totals, direct pull (Jul 30): Distributed Value ~\$36.93B** (+0.3% over 5 days), **Represented Value ~\$370.55B** (−2.6% over 5 days, single-pull, unconfirmed trend), **stablecoin total ~\$296.86B** (−0.4%). USDT \$188.95B, USDC \$72.14B.
- **GENIUS Act: no new final rules in this window.** FDIC's BSA/sanctions comment window remains open (closes Aug 4); the joint CIP comment window remains open (closes Aug 21). No agency completed rulemaking Jul 25-30.
- **DTCC's tokenization pilot continues as planned** — Russell 1000 stocks/ETFs/Treasuries, 50+ firms including BofA, Citi, Morgan Stanley, Robinhood, Circle, Ondo, Anchorage; October 2026 full-launch target unchanged, no new catalyst this window.
- **Risk check: clean window, no new incidents.** No RWA-protocol hack, tokenized-treasury depeg, or counterparty failure found Jul 25-30 (the Jul 15 Ostium oracle exploit, ~\$18-24M, remains outside this window and was already

logged last cycle). USYC's Binance/BNB-Chain concentration remains an unresolved fragility point, not re-verified this cycle.

- **OUSD (Open USD) 140+-partner credibility dispute (Samsung/Dunamu/Upbit denials) remains unresolved** — no new statements found this window.
- **The treasury leaderboard, July 30 (rwa.xyz, direct pull):** Circle's **USYC \$3.01B** > BlackRock's **BUIDL \$2.64B** > Ondo's **USDY \$2.15B** > Franklin Templeton's **iBENJI \$1.76B** > Centrifuge's **JTRSY \$881M**.
- **Circle won final OCC approval for a national trust bank (Jul 10, carried forward).** "Circle National Trust" puts Circle under direct federal (OCC) oversight for fiduciary digital-asset custody. CRCL closed ~\$66.79 (Jul 20).
- **Swift's blockchain ledger (17 banks, 6 continents, carried forward)** continues running 24/7 cross-border tokenized-deposit payments over Chainlink CCIP — framed as banks' competitive response to stablecoins.
- **Ondo keeps extending its franchise (carried forward):** Broadridge proxy-voting partnership, IVV/Micron tokenization, "Ondo Perps." Ondo DAO also voted to burn 100M ONDO (1% of supply, Jul 25) — tokenomics, not core-RWA news.
- **Nasdaq and the SEC: no change.** Nasdaq's 23/5 tokenized-trading target remains Dec 6, 2026, unchanged.
- **The TAM anchor stands:** BCG × Ripple (Apr 7, 2025) projects **~\$9.4T by 2030 / \$18.9T by 2033**. Current on-chain value is still <1% of any endpoint.

The Prize

Illustrative only — not price targets, not advice

The cleanest single-token anchor is still **ONDO**, the name most tied to the RWA narrative: from its early-trading price around **\$0.22 (Jan 2024)** — listing prints vary by venue) it ran to a **\$2.14 all-time high (Dec 16, 2024)** — roughly **~10× in 11 months**.

The round-trip, last checked July 13 (CoinGecko, not re-pulled live this cycle): **\$0.3291** — market cap ~\$1.6B, still ~85% below the high — even as the company keeps extending its franchise (Broadridge proxy-voting integration, IVV/Micron tokenization, DAO-voted 100M-token burn on Jul 25). Part of the Dec-2024 spike was a Trump-linked World Liberty Financial buy, not fundamentals. The durable signal stays structural, not one token: total RWA distributed value just hit a fresh all-time high (\$38.24B) and tokenized Treasuries hold near \$16.2B on a flat-to-positive trend while the token trades ~85% off its peak, and this cycle's confirmed institutional moves — BlackRock's Aug 3 fund launch, the first EU regulator clearing a public-chain fund, Ripple converting a partnership into equity — are exactly the kind of adoption proof points that outlast any single token's price. The Prize doesn't feed the math — it tells you what the lean is worth acting on, euphoria and round-trip included.

The Other Side

The strongest honest case this is wrong — updated August 8, 2026, full weekly refresh

- **Two data points isn't a trend, and both are one-degree removed from crypto-native.** A Central Bank of Ireland approval and a Ripple equity stake in two UK fintechs are real, but they're incremental institutional-infrastructure moves, not evidence of accelerating adoption — the +1/+1 nudge reflects that, but even a small move risks reading too much into routine business development.
- **The RWA all-time high is still a small, largely institutional/permissioned number.** \$38.24B in total distributed value is real growth, but it's still under 1% of the BCG×Ripple \$9.4T-by-2030 TAM anchor, and this pillar has twice now had to correct press coverage that inflated or mislabeled RWA figures — a reminder that headline numbers in this space need active skepticism, not just repetition.
- **Regulatory limbo is still real.** The GENIUS Act's rulemaking deadline was missed and zero of six agencies have finalized rules, with comment windows only now closing (FDIC Aug 4, CIP Aug 21) — nearly seven months of mid-

market issuers operating under an incomplete rulebook, which can chill activity rather than de-risk it.

- **The Represented-vs-Distributed value gap is still doing heavy lifting for the bull case.** The much larger ~\$373.55B "Represented Value" figure is mostly locked or permissioned tokenization, not liquid or retail-accessible — a distinct metric this report is careful not to conflate with the \$38.24B distributed-value ATH.
- **It may not be "crypto."** Most volume is permissioned/institutional and may never accrue value to crypto majors. Durable market-structure law (CLARITY) still isn't passed, and its own prediction-market odds hit a fresh record low this week.

The Triggers

Dated events ahead — some prove the claim right, some prove it wrong. Re-set August 8, 2026, full weekly refresh.

DATE	EVENT	MEANS
Jul 29 - Aug 8, missed by daily checks	Total RWA distributed value hit a new all-time high (\$38.24B) ; Central Bank of Ireland cleared Aviva's XRPL fund; Ripple took equity in Zilo/Licuido	Drove this cycle's 3mo/6mo nudge up — already IN this committed set
Fired Aug 3	BlackRock launched BSTBL and BRSRV , two tokenized money-market funds targeting GENIUS Act stablecoin-reserve eligibility, via Securitize	Confirmed, reflected in prior baselines — not double-counted this cycle
Watch	Whether BRSRV actually gets adopted by a major stablecoin issuer as reserve backing, or stays unused	Adoption = re-rate up further; no uptake after a quarter = the launch was noise, not signal
Watch	Whether the Aviva/Ripple XRPL institutional build-out attracts further EU-regulated fund launches, or stays a one-off	Follow-on launches = re-rate up further (broadening adoption); no follow-through = incremental only
Ongoing	GENIUS Act: zero of six agencies have finalized rules; FDIC comment window closed Aug 4, FinCEN CIP closes Aug 21	Fast finalization after close = the miss was survivable; drift with no progress = deeper limbo (3-mo)
Oct 2026	DTCC tokenization full launch — target unchanged	On time = the biggest institutional-rails catalyst of the year lands before Nasdaq; a slip = drift confirmed (3–6 mo)
Dec 6, 2026	Nasdaq 23/5 tokenized trading — SEC-approved target launch (unchanged)	A live launch = landmark public-market proof; another slip toward H1 2027 = drift confirmed (6-mo)
Jan 18, 2027	GENIUS Act 18-month statutory backstop effective date	The actual regulatory-clarity resolution point lands almost exactly at the 6-month mark (6-mo)
H1 2027	Nasdaq equity-token services "operational" · bank Tokenized Deposit Network go-live · DTCC-Stellar public-chain deployment target	Which rails win — public chains or bank ledgers — starts getting decided here (1-yr)
Any time	Tokenized-treasury depeg / counterparty failure (USYC's Binance/BNB-Chain concentration, not re-verified this cycle)	Plumbing fragility realized — re-rate down immediately

The flip line: if the GENIUS rules drift into Q4 unfinished, the DTCC and Nasdaq launches slip past their October and December windows, and the growth that remains keeps rotating to permissioned rails, bank deposit networks, and institution-controlled coins — treat the crypto-relevance thesis as failing. Adoption that never touches public, crypto-controlled rails is TradFi, not crypto.

My Decision

✓ **COMMITTED — AUGUST 8, 2026 (FULL WEEKLY REFRESH, SUPERSEDES TODAY'S LIGHT DAILY TOUCH) · STAMPED BY ALEX**

Committed P: 52 / 60 / 66 / 74 / 85 · My Weight: 20% (equal) · Impact: 8 (uniform)

A full-week re-verification, rather than a same-day search, found what the "no new catalyst" daily touches missed: a direct rwa.xyz pull shows total RWA distributed value hit a new all-time high (\$38.24B), and two genuine institutional developments were confirmed — the Central Bank of Ireland clearing the first EU-regulator-approved public-chain tokenized fund, and Ripple converting a commercial relationship into equity stakes. 3mo moves up to 60 (was 59), 6mo to 66 (was 65); 1mo/12mo/36mo hold.

This pillar's own move is small and routine (1-2 points, well under the 8-point threshold), but the day's overall score set was held as a draft for two reasons: it was a full weekly refresh (never auto-stamped, per the runbook) and Fed & Macro moved enough elsewhere to also require Alex's manual review — see the Master Report's My Decision section. Alex has since reviewed both points and stamped the set committed, with no score changes. The June committed scores (**53 / 57 / 62 / 72 / 85**, committed June 19, 2026) and the Aug 7 committed scores (**52 / 59 / 65 / 74 / 85**) remain the prior human-stamped values.

Override any P and re-stamp — the master blend recomputes.

What Changed Since Last Check

FULL WEEKLY refresh, August 8, 2026 — supersedes today's earlier "held flat" light touch, with a genuine full-week sweep rather than a same-day search.

- ★ ★ **Total RWA distributed value hit a new all-time high, \$38.24B** (rwa.xyz direct pull) — corrects the daily touches' "no new catalyst" conclusion.
- ★ ★ **Central Bank of Ireland cleared Aviva's tokenized fund on the XRP Ledger (Jul 29)** — first EU-regulator approval of a public-chain fund structure, missed by daily checks.
- ★ ★ **Ripple took equity stakes in Zilo and Licuido (Aug 3)** — building regulated transfer-agency rails, missed by daily checks.
- **GENIUS Act, DTCC, Nasdaq timelines: no change** — no new final rules, no launch-date movement.
- **No new RWA-rail failure, depeg, or counterparty default found.**
- **Score decision:** 3mo 59 → **60** · 6mo 65 → **66** · 1mo/12mo/36mo held at 52/74/85. Reviewed and stamped committed by Alex: this was a full weekly refresh (never auto-stamped, per the runbook) and a different pillar's move also triggered manual review.
