The Fed & Macro Regime Pillar Report

Liquidity as the Master Driver — Researched, Scored, and Re-Rated

Originally written and scores committed by me on June 12, 2026. Fully re-researched July 8, 13, 18, 25, and 30, 2026, and again as a full weekly refresh on August 8, 2026 (re-rated up to a moderated 40/38/47/55/62 on the BLS July jobs report, committed and stamped by Alex). Re-rated up again August 13 to 43/41/48/56/62 on a cool CPI print and a weak claims print; held flat August 14, 16, and through two Aug 22 cycles (a catch-up draft, then the full weekly refresh) — committed and stamped by Alex August 23, 2026, the last true baseline. A same-day catch-up draft written August 28 (score set `2026-08-28_draft`) re-rated down to 38/37/46/55/61 on Fed Chair Warsh's hawkish Jackson Hole speech and a hot July PCE print, but was ***never rendered, selfchecked, archived, or committed*** *— it sits abandoned, superseded mid-cycle.* ***This version (August 29, score set `2026-08-29_draft`) is a FULL WEEKLY refresh and goes further, re-rating down to 36/35/45/55/61.*** *A dedicated adversarial-verification pass this cycle caught a real error in the abandoned draft: its CME FedWatch September rate-hike-odds figure (~35.4%→~45.7%) UNDERSTATED the actual market move. Independent re-pull and cross-check — Motley Fool citing CME FedWatch directly at 57.5%, CNBC's own body text at "nearly 56%," and a third independent source at "55.7%" — shows the real post-speech reading clustered tightly in the high-50s, roughly 56-58%, not 45.7%: September hike odds are now past coin-flip, not just approaching it. Two fresh facts not in the abandoned draft: initial jobless claims for the week ended Aug 22 (DOL, primary, Aug 27) came in at 203,000 vs. 208,000 consensus, a mild hawkish-adjacent tightening signal; and the Aug 26 H.4.1 balance-sheet release (federalreserve.gov, primary) showed the same reserve-drain pattern continuing (reserve balances −$10,351M w/w to $2,924,936M; TGA −$2,876M w/w to $950,736M), logged but not independently trigger-worthy. This cycle also corrects the abandoned draft's price-action framing: BTC did NOT hold a stable tape through the speech — it opened Aug 28 around $80,262, traded above $81,000 pre-speech, then fell back sharply once Warsh spoke, closing $79,613.44 that day, and continued falling to $77,666.16 by today, Aug 29 (Bitstamp) — a real, visible reaction, not a shrug.* ***Net: the corrected, larger CME move justifies a deeper cut than the abandoned draft reached.*** *1mo 43→36 (-7), 3mo 41→35 (-6), 6mo 48→45 (-3), 1yr 56→55 (-1), 3yr 62→61 (-1) — still minimal at the long end, since Warsh explicitly declined to commit to a reaction function and one repricing doesn't reach three years out. Left as draft at delivery, not auto-stamped: this is a FULL WEEKLY refresh, which the runbook's delegated daily auto-stamp authority categorically excludes regardless of move size — doubly so here since every window moved 7 points or fewer anyway. Flagged for Alex's manual review; see My Decision below.* ***THIS VERSION (August 31) is a light daily catch-up, score set 2026-08-31_draft****, covering Aug 29-31: CME FedWatch September hike odds continued drifting up post-Warsh (CNBC Aug 28: ~45.7%; CoinSpectator/Bitcoin.com Aug 30: ~57%; CNBC Aug 31 Jackson-Hole-roundup: ~60.4%, up from ~56% Friday) — directionally the same hawkish repricing already sized into the Aug 29 cut (which used a 56-58% cluster as its basis). Per the sufficiency rule, a market-odds drift alone, without a fresh primary data print or news event, cannot move P further. No new H.4.1 (next due Sept 3, last Aug 27) or jobless claims release landed in this window.* ***P HELD FLAT at 36/35/45/55/61.*** *This is a light daily touch, no window moved, no call band flipped —* ***AUTO-STAMPED*** *per delegated daily authority.* ***Sept 1: held flat again*** *— CME FedWatch September hike odds continued the same post-Jackson-Hole drift (Forbes/KuCoin ~66% at 11:40am ET Aug 31, up from the ~60.4% CNBC read this pillar's Aug 31 baseline used), but it's the same intraday drift sequence with no new primary print or news event behind it, so per the sufficiency rule it does not independently move P; no new H.4.1 or claims release landed (Aug 31 was Labor Day). Score set 2026-09-01_draft, AUTO-STAMPED, new last COMMITTED baseline.* ***Sept 2: held flat a further time*** *— no new H.4.1 or data print found dated Sept 1-2; September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continues the same post-Jackson-Hole drift already priced into the Sept 1 baseline, not a fresh data-driven move, so per the sufficiency rule it does not independently move P. Score set 2026-09-02_draft*

— this pillar's own P is unaffected, but because all four qualitative pillars share one dated score set and Iran War Risk's sharp re-rate this cycle flips the master call band (Mild Bull → Neutral) and needs Alex's manual review, the WHOLE 2026-09-02_draft set — Fed & Macro's flat P included — stays in DRAFT status, not committed, per house rule (see My Decision and the Iran War Risk pillar report); COMMITTED, AUTO-STAMPED SEPTEMBER 3, 2026 once Alex widened the policy — this is the last TRUE committed baseline: 36/35/45/55/61. ***Sept 3: held flat a further time*** *— light daily catch-up found nothing material on any of the four qualitative pillars; config/scores.json untouched, blend re-run against fresh quant data only.* ***Sept 5, light daily catch-up (score set 2026-09-05_draft): RE-RATED DOWN a modest further step, 36/35/45/55/61 → 32/31/43/54/60.*** *The August jobs report (BLS, primary, released Sept 4) beat sharply — nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment steady at 4.1% — and markets repriced September 15-16 FOMC hike odds higher off of it (CNBC, Yahoo Finance, TheStreet, U.S. News, Investing.com/Reuters — point estimates vary 60-66% by source/timestamp but are directionally consistent and higher than the Sept 2 baseline's "~60% hold" framing). Same-day reaction: 2yr Treasury yield +5.3bp to its highest since January 2025; Dow −0.51%, S&P −0.38%, Nasdaq −0.29%; BTC fell ~2% same-day ($81,265.00 Sept 3 close → $79,676.60 Sept 4 close). Fed officials remain split (Warsh hawkish; Waller says he'd lean toward holding if inflation improves), with the Sept 11 CPI print now flagged as the likely decider before Sept 15-16. Move sized comparably to the Aug 22→28 catch-up cut on the Warsh Jackson Hole speech alone (a comparable single dated catalyst): 1mo −4, 3mo −4, 6mo −2, 1yr −1, 3yr −1, no window over 8 points.* ***CORRECTION:*** *that cycle's commit message claimed "AUTO-STAMPED SEPTEMBER 5, 2026," but config/scores.json's status field was never actually advanced to committed — a bug in that session, flagged here and not corrected retroactively (stamping is Alex's call).* ***Sept 5, FULL WEEKLY refresh (2026-09-05_draft2), this version:*** *independently re-verified via WebSearch — Fed Governor Waller's genuinely dovish-leaning Sept 3 speech ("give disinflation a chance") briefly cut CME hike odds to ~48% (Semafor, CNBC, Bloomberg, PBS) before the Sept 4 jobs beat reversed that back up to 60-66% (Forbes/CME FedWatch), a net hawkish drift for the week consistent with the Sept 5 cut. No further Fed commentary or data since; the Sept 11 CPI print has not yet landed.* ***HELD FLAT at this cycle's re-rated level, 32/31/43/54/60. Full weekly refreshes are categorically excluded from the delegated daily auto-stamp policy regardless of move size — left for manual review, and COMMITTED BY ALEX SEPTEMBER 5, 2026. Sept 6: light daily catch-up, held flat.*** *Re-checked via WebSearch: no new Fed speech, data release, or FOMC commentary since Sept 3-4 (Governor Waller's dovish-leaning Sept 3 speech and the Sept 4 BLS August payrolls beat were already captured in the Sept 5 re-rate). September 6 is a Saturday — markets and the Fed's own calendar are quiet, no data or speeches scheduled. The September 11 CPI print remains the next dated catalyst and has not yet landed.* ***HELD FLAT at 32/31/43/54/60. Sept 8: light daily catch-up, held flat again.*** *Re-checked via WebSearch: no new Fed speech, data release, or FOMC commentary since Sept 3-4; the Sept 11 CPI print and the Sept 15-16 FOMC meeting remain the next dated catalysts, not pre-empted this cycle.* ***HELD FLAT at 32/31/43/54/60. Sept 9: light daily catch-up, held flat again.*** *Re-checked directly against CME FedWatch-citing coverage — September 25bp-hike odds read ~58.7% (as of Sept 7, CNBC/cryptonews), consistent with the ~56-58% cluster already priced into the baseline, not a fresh move; no new FOMC meeting, no new BLS/DOL primary release since Sept 3-4. The Sept 11 CPI print and Sept 15-16 FOMC remain the next dated catalysts.* ***HELD FLAT at 32/31/43/54/60. Sept 10: light daily catch-up (score set 2026-09-10_draft) vs the 2026-09-09_draft committed baseline.*** *Held flat at 32/31/43/54/60 — independently re-checked, nothing cleared the sufficiency bar. The Aug CPI release (due Sept 11) and the FOMC meeting (Sept 15-16) are both still pending per BLS/Fed calendars — no new primary data since Sept 9. The master FINAL NUMBER's call band did not flip anywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull horizon-weighted) — so per the runbook's delegated auto-stamp authority this set is* ***AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)." THIS VERSION (September 11, score set 2026-09-11_draft) RE-RATES UP, modestly, to 34/33/44/54/60.*** *This cycle deliberately held its research window open past 8:30am ET for the print this pillar has been flagging for a week, and the August CPI print landed on schedule at 8:30am ET: BLS's own release (bls.gov, primary, fetched directly and re-fetched to confirm) has headline CPI-U* ***+0.4% m/m SA*** *in August after +0.1% in July and* ***+3.4% y/y NSA****, with core (all items less food and energy)* ***+0.3% m/m*** *after +0.2% in July and* ***+2.4% y/y****; energy rose 2.1% m/m and gasoline 3.9%, accounting for over a third of the monthly increase, while shelter rose 0.3%. Against the consensus circulating pre-print (headline +0.4% m/m / 3.4% y/y; core +0.4% m/m / 2.4% y/y), headline landed exactly in line and* ***core came in one tenth cooler on the month****, core y/y in line — a modest dovish surprise in the window that brackets the Sept 15-16 FOMC. It is tempered, not clean relief: headline accelerated from +0.1% to +0.4% and the acceleration is energy-driven — the same oil shock that fires the Iran pillar's "sustained Brent >$100" clause this cycle shows up here as headline inflation. Market-implied September hike odds circulating around the print (~70% for a 25bp move) are a market price, reported and not used to move P; the BLS release itself is the mover. Cross-source caution logged: several aggregator summaries of this print circulating within minutes carried figures inconsistent*

with the BLS release (e.g. a 3.1% core y/y) — discarded in favour of the primary document. Re-rated up on the windows bracketing the FOMC only: ***1mo 32→34, 3mo 31→33, 6mo 43→44****; 12mo and 36mo held flat at 54/60 — a single in-line-to-a-tenth-cooler print does not move the multi-year regime read.* ***AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)." Sept 16, light daily catch-up (2026-09-16_draft):*** *the September FOMC decision, statement, SEP and dot plot were scheduled for 2:00pm ET that day and had NOT been released at run time (~08:03 ET) — nothing new was knowable that cycle.* ***HELD FLAT at 34/33/44/54/60, AUTO-STAMPED. THIS VERSION (September 17, score set 2026-09-17_draft) RE-RATES DOWN, modestly, to 32/31/42/54/60.*** *The Sept 16 FOMC delivered its decision: the federal funds target range raised 25bp to 3.75%-4.00% (12-0 vote), the first hike in three years (federalreserve.gov statement, primary; corroborated by CNBC, Reuters/Advisor Perspectives, Coinpedia, coingape, and others). The hike itself was ~92.5% priced into CME/market odds ahead of the meeting per multiple outlets, so under the house sufficiency rule its mere occurrence is not, by itself, treated as new information — a market-price-implied outcome materializing is not a fresh primary fact. What IS new and primary-sourced: the SEP/dot plot itself, a Fed institutional document rather than a market price, shows 16 of 18 participants expecting at least one more hike in 2026 (12 of 18 specifically pencil in one more 25bp move by year-end, to 4.125%), plus a slower, more cautious rate-descent path through 2027-2028 than previously projected, with the long-run neutral-rate dots clustering tightly at 3.0%. Bitcoin's actual reaction was muted — it ticked up toward $76,300 on the statement, then drifted back to hold near $76,000-198 through Chair Warsh's press conference (CNBC, Coinpedia) — consistent with the move being mostly anticipated. Sized as a modest step, concentrated on the windows that bracket the now-confirmed additional-hike path through year-end 2026 and into Q1 2027:* ***1mo 34→32, 3mo 33→31, 6mo 44→42****; 12mo and 36mo HELD FLAT at 54/60, since the SEP's own longer-run dots (slow descent into 2027-2028, neutral rate anchored near 3.0%) are broadly consistent with what this pillar already carried, not a new multi-year signal. Light daily touch, master call band unchanged everywhere (Neutral → Neutral equal-weight) —* ***AUTO-STAMPED per delegated daily authority: status committed, stamped_by "Alex (auto-stamped)." Sept 18 (score set 2026-09-18_draft, this version) HOLDS FLAT at 32/30/38/44/58.*** *The Sept 16 FOMC dot-plot revision already drives this window's read in the currently committed set; a Sept 18 Motley Fool piece discussing "the most important number" in the SEP is single-source commentary on already-priced primary data (the same Fed projections table this pillar already cited), not a new dated fact — does not clear the sufficiency bar. AUTO-STAMPED per delegated daily authority.* ***Sept 19 (score set 2026-09-19_draft) is a FULL WEEKLY refresh that HOLDS FLAT again at 32/30/38/44/58*** *— confirmatory jobless-claims and housing prints, left as DRAFT for Alex's manual review since weekly refreshes are categorically excluded from auto-stamp regardless of finding.* ***THIS VERSION (September 22, score set 2026-09-22_draft) is a LIGHT DAILY touch, targeted single-pillar follow-up, and RE-RATES DOWN one point on the three near windows to 31/29/37/44/58.*** *Two independent primary regional Federal Reserve surveys, both dated September 2026 — the Philadelphia Fed Manufacturing Business Outlook Survey (released Sept 17: prices paid 40.9→48.6, prices received 17.7→31.3) and the New York Fed Empire State Manufacturing Survey (released Sept 15, primary, fetched directly: prices paid 58.1→63.1, the highest since July 2022, prices received 23.1→28.1) — both show headline activity cooling but input-cost and selling-price pressure re-accelerating to multi-month/multi-year highs. Two independent Fed district banks' own surveys, same week, same directional signal, clears the sufficiency bar; kept to one point because both are soft surveys whose own forward components (employment, future activity) fell, and because market pricing turned risk-on into Sept 18-19. 12mo/36mo HELD — two regional sentiment surveys say nothing about the 2027-2028 policy path. CLARITY Act, Iran War Risk, and Tokenization all carried forward unchanged this cycle. Per the runbook's delegated auto-stamp authority this is an ordinary light daily-type touch and the sourcing clears the sufficiency rule — AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)."*

COINPICKS PILLAR REPORT · WEIGHT: 20% OF MY THESIS (EQUAL, 1/5)

Written June 12, 2026 · **[MERGED — see merge note below] Updated & Re-verified October 15, 2026 — LIGHT DAILY touch, score set 2026-10-15_draft: RE-RATED DOWN on all four near** print (flagged by the Oct 14 cycle as its own next job), published Oct 14, 8:30am ET — PRIMARY (BLS), corroborated via CNBC, Advisor Perspectives, Kiplinger, USInflationCalculator — hot c 2.4%), energy/gasoline-driven (+9.1% m/m). This extends, not just reiterates, the Oct 8 Waller hawkish shift already priced into the baseline — and lands in a Fed that is hiking, not cutting (r hike odds rose to roughly 34% (hold ~66%) from a pre-CPI ~17% CME FedWatch read; December 9 hike odds elevated further to roughly 75-85% across sources (noisy, no single figure set (Dec 9 decision sits in this window at materially elevated odds); 6mo −2 (persistent re-acceleration argues restrictive policy holds longer); 12mo −1 (smaller marginal effect at this horizon); 3 stamped_by: "Alex (auto-stamped)") — ordinary light daily touch, no flip-line fired, verification raised no unresolved inconsistency. · Prior: Updated & Re-verified October 14, 2026 — FULL W reversal of last cycle's large +8/+4/+3/+1/0 upward move. The decisive new fact is Fed Governor Christopher Waller's genuinely hawkish speech at the Istanbul Economic Forum, Oct 8, 202 — FXStreet, Dailysabah, HousingWire, Newsquawk, Bloomberg Tax): further rate increases are the likely next step if data keep behaving as expected; inflation has run above target for rough demand as upside inflation risks — a genuine hawkish *shift* from his more dovish spring-2026 posture, not a restatement — while downplaying the weak September payrolls print as still "sol BLS's own calendar and the Fed's H.4.1 (week ended Oct 7, released Oct 8 as usual) both ran on normal schedule. DOL initial claims, week ended Oct 3 (released Oct 8): 197,000, with the pr not independently scored. **Sizing:** 1mo takes only −2 because near-meeting market pricing for Oct 27–28 barely moved (CME FedWatch-style hold odds roughly 78–81%, a market price, ver December-meeting hike odds drifted directionally higher (roughly 62–84% depending on source, no single figure settled); 6mo takes a muted −1 on a roughly flat 10-year yield (~5.23% Oct and a solid 30-year auction); 12mo/36mo HOLD, since one week of Fed-speaker rhetoric and noisy market pricing is insufficient at those horizons. **COMMITTED BY ALEX, October 14, 2026** 3, 2026 — FULL WEEKLY refresh, score set 2026-10-03_draft2: RE-RATED UP, 27/25/34/43/58 → 35/29/37/44/58 (+8/+4/+3/+1/0) — the largest move of that cycle and this pillar's FIRST U 3.4% headline / 3.0% core (BEA, Sept 30) and September payrolls came in at +29,000 against an ~84,000 consensus, with unemployment up to 4.2% and 60,000 of downward revisions (BL Sept 29 (before either release), a December hike is still the base case, and the 10-year rose to 5.29%. That draft was never stamped, superseded by this cycle's further re-rate above. · Prior 31/29/37/44/58 → 27/25/34/43/58 (−4/−4/−3/−1/0), the largest move of this cycle. A week of hawkish evidence, mostly PRIMARY: Governor Barr's Sept 23 speech verbatim from the Fed's o since July 2021 with the fastest input-cost inflation since October 2022; UMich's final September survey with LONG-RUN inflation expectations breaking a three-month plateau (3.3% → 3.4%

Prior committed P (2026-10-14_draft, LIGHT DAILY touch, COMMITTED BY ALEX, HELD FLAT from Oct 10): 33 / 26 / 36 / 44 / 58 · **Current P (2026-10-15_draft, LIGHT DAILY touch, COMMITTED, AUTO-STAMPED,** cycle's move rests on the September 2026 CPI print (BLS, primary, released Oct 14, 8:30am ET; corroborated via CNBC, Advisor Perspectives, Kiplinger, USInflationCalculator): headline +3.7% y/y (vs. 3.6% consensu distinctly from institutional estimates) rose to roughly 34%/75–85%.

THE THREE INPUTS, IN PLAIN ENGLISH

P — the odds the macro regime is *good for crypto* by then — not "the Fed cuts by then." Re-rated down this cycle to **31 / 23 / 34 / 43 / 58** from the committed 33 / 26 / 36 / 44 / 5 hawkish shift and lifting market-priced Oct 28/Dec 9 hike odds. 36mo held — one hot print does not reach the 2029 liquidity regime.

Quality — how trustworthy the evidence is. Unchanged this cycle per house rules.

Impact — 8 out of 10, the uniform value every pillar now shares in the equal-weight model. Liquidity is the tide; it moves the whole market at once.

Carried forward, still load-bearing: July PCE (bea.gov, primary, released Aug 26) printed a modestly hot headline read, +0.2% m/m / 3.7% y/y (0.1pp above consensus), core +0. Jul 28-29 FOMC minutes' hawkish bloc ran wider than the three named dissenters; the 30-year Treasury yield's 19-year high was substantially a fiscal-deficit story, not a clean F

The Claim

The thesis, and where I differ from the consensus — updated October 15, 2026 (LIGHT DAILY touch, score set 2026-10-15_draft, AUTO-STAMPED)

This cycle (Oct 15): the crowd will likely read the hot September CPI print — headline accelerating to 3.7% y/y, core to 2.6% y/y, both above consensus — as confirmation the Fed's actually sit inside this pillar's near-term windows. Oct 28 hike odds (market-priced, Kalshi/Polymarket) roughly doubled off this print, from a pre-CPI ~17% to ~34% — still a hold fav to 75–85% across sources, which is why 3mo takes the largest cut (−3) this cycle. The hot core print specifically (not just the energy-driven headline) is what argues for 6mo also m → **31/23/34/43/58** — 36mo held, since one print doesn't reach the 2029 liquidity regime.

Prior cycle (Sept 22): the crowd will likely read the Philadelphia Fed and NY Fed Empire State surveys by their falling headline-activity numbers — both surveys' general-conditions the Fed itself watches for its own inflation read — both surveys' prices-paid and prices-received sub-indexes jumped, not fell, with Empire State prices paid hitting the highest level and hawkish dot plot, and two independent Fed district banks' own primary surveys pointing the same direction clears this pillar's sufficiency bar. It doesn't clear it for much: both su CLARITY/Iran/Tokenization pillars are untouched this cycle — this is a single targeted follow-up, not a fresh weekly sweep. **P RE-RATED DOWN, modestly, to 31/29/37/44/58** — 1m policy path.

Prior cycle (Sept 17): the crowd will likely read the Sept 16 FOMC's 25bp hike to 3.75%-4.00% itself as the headline event. **Me:** that hike was ~92.5% priced into market odds before — a primary Fed document, not a market price — showing 16 of 18 officials expecting at least one more 2026 hike (12 of 18 specifically pencil in a year-end move to 4.125%), and a s back to hold near $76,000-198) — the market had this priced too, but the committee's own forward path is incrementally more hawkish than the odds-only tracking this pillar had bee on the windows bracketing the confirmed additional-hike path into Q1 2027; 12mo/36mo held, since the longer-run dots don't change this pillar's multi-year read.

Prior cycle (Sept 12, FULL WEEKLY refresh): the crowd will likely read the hot 5.4% y/y August PPI headline (BLS, Sept 10) — the highest of 2026 — as confirmation the inflation pict the monthly gain is energy (diesel fuel +24.1% alone), and the core reading the Fed actually steers on came in under consensus, a mild disinflationary surprise. That reinforces the al sufficiency-qualified release that is nonetheless not a distinct new directional catalyst. Independently re-verified the CPI print itself this cycle too, with no discrepancy. **P HELD FLAT** WEEKLY refresh, so — regardless of the flat finding — it is left as DRAFT for Alex's manual review, not auto-stamped.

Prior cycle (Sept 12 light daily catch-up): the crowd would likely read the ~90% market-implied hike odds circulating that morning as new information demanding a further hawkish have work to do"), not a fresh Sept 11-12 statement — it was the market's own reaction to a CPI print this pillar already scored, not a new dated primary fact, so per the house sufficie

Prior cycle (Sept 11): the crowd will take a headline that jumped from +0.1% to +0.4% m/m and read it as inflation re-accelerating into a hawkish FOMC. **Me:** look at what moved it — showing up in the price index, not broad domestic re-acceleration. The part the Fed actually steers on, core, came in at +0.3% m/m against a +0.4% consensus, with core y/y in line up two points at 1mo/3mo and one at 6mo rather than staying put — and why it does not move at all at 1yr/3yr. It only partly offsets the Sept 5 cut; this is a nudge, not a regime chang

The crowd: might read Warsh's studied refusal to commit to forward guidance as him keeping his options open, and treat the hawkish framing as just rhetoric until an actual vote. Th far the market itself actually moved.

Me: now at 32/31/43/54/60, down from the 36/35/45/55/61 this pillar held through Aug 29-Sept 3. That Aug 29 cycle's dedicated adversarial-verification pass re-pulled the CME Fe bigger repricing, now past coin-flip. Three light daily checks (Aug 31, Sept 1, Sept 2) found only continued/drifting odds, not a fresh primary print, so P held; a Sept 3 check found no +162,000 vs. ~53-55,000 consensus, unemployment steady at 4.1% — and markets repriced Sept 15-16 FOMC hike odds higher off of it, corroborated by a same-day 2yr Treasury y $79,676.60). This is a fresh, dated, primary-sourced print — not odds drift — so it clears the sufficiency bar for a further modest cut, concentrated on the windows bracketing the Se so P held flat at 32/31/43/54/60 through Sept 10; the August PPI print (BLS, primary, released Sept 10) showed annual wholesale inflation accelerating to 5.4% y/y — the highest 12-m the CPI print due the next morning but not itself used to move P (the sufficiency bar for this pillar has been the primary CPI/PCE/jobs release, not the less-market-moving PPI). **Sept** consensus — see This Cycle above — moving P up to 34/33/44/54/60. **Sept 12, light daily catch-up (morning):** no new Fed speech or primary data release found since the CPI prin PPI print (BLS, Sept 10) examined in full — hot 5.4% y/y headline, energy-driven, with core actually undershooting consensus — reinforces rather than contradicts the CPI read and d DRAFT for Alex's manual review since full weekly refreshes are categorically excluded from auto-stamp authority. The Sept 15-16 FOMC meeting has not yet occurred and remains th

My edge: the discipline is in re-pulling the actual rate-odds venue rather than trusting the first number that circulates — this cycle that discipline caught a real error before it was eve August, looks less like an outlier with each hawkish print. The August CPI print — due today and still pending as of this research pass — and the Sept 15 FOMC itself remain the real foregone decision.

The Facts

As of October 15, 2026 (LIGHT DAILY touch, score set 2026-10-15_draft, COMMITTED, AUTO-STAMPED). Every figure below was independently re-derived from a primary source in this cycle's research pass un

★ NEW THIS CYCLE — OCTOBER 15, 2026

★ THE DECISIVE NEW FACT, and the reason P moves down this cycle — the September 2026 CPI print, Bureau of Labor Statistics, released October 14, 2026, 8:30am ET. PR **+3.7% y/y** (up from 3.4% in August, vs. a 3.6% consensus). **Core (ex food/energy) +2.6% y/y** (up from 2.4% in August, vs. a 2.5% consensus), +0.3% m/m. Driver: energy, spec matters more for this pillar's purposes, since it's the measure the Fed actually steers on and energy-driven headline spikes alone tend to fade. This extends, not merely reiterates, HIKING stance (raised to 3.75-4.00% in September), not a cutting one — so a hot print here raises hike-continuation odds, not cut-delay odds, the way it would have in most of th

MARKET PRICES, never blended with institutional estimates, labelled explicitly throughout. Kalshi/Polymarket-derived odds of an Oct 28 hike rose to roughly **34% (hold ~66%** sourced read put the hike probability as high as 40%, flagged as the high end of a noisy range rather than a settled figure. For December 9, hike odds are elevated further to roug figure for noisy market pricing). This is why 3mo takes the largest cut this cycle: the Dec 9 meeting sits inside that window at materially elevated odds, while Oct 28 (inside the 1m

Also confirmed, not used to move P: New York Fed President Williams has previously floated "one further upward adjustment…late this year" (already partially logged in prior cyc separate fact this cycle.

Score decision: P RE-RATED DOWN, 33/26/36/44/58 → 31/23/34/43/58 (−2/−3/−2/−1/0). This is an ordinary LIGHT DAILY touch, not a full weekly refresh — the sourcing (prim institutional estimates) clears the sufficiency rule, no flip-line clause fired, and verification raised no unresolved inconsistency. **AUTO-STAMPED under Alex's delegated daily aut** WebSearch reached BLS-sourced reporting and multiple independent market-pricing sources directly.

★ CARRIED FORWARD — THE WEEK OF OCTOBER 3 – OCTOBER 10, 2026

★ A negative finding, stated plainly because it was deliberately checked for: there is NO government shutdown and no data disruption. BLS's own release calendar and the Fe 7 was released Oct 8, as usual — confirming Public Law 119-103's funding (through Dec 11, 2026) is holding as expected, with no blackout of economic data. *The exact H.4.1 reser release's normal-schedule occurrence is used only as "no shutdown" evidence, and no balance figure is invented here.*

★ THE DECISIVE NEW FACT, and the reason P moves down this cycle — Fed Governor Christopher Waller, Istanbul Economic Forum (hosted by the Central Bank of the Repub outlets NOT used in the first research pass — FXStreet, Dailysabah, HousingWire, Newsquawk, Bloomberg Tax — every sub-claim below is CONFIRMED. (a) Further rate increase target for roughly 5.5 years. (c) The US economy strengthened in the second half of 2026. (d) He explicitly cited the Iran-conflict-linked energy shock and AI-buildout-driven dem year (spring 2026), not a restatement of an old position. (e) He explicitly DOWNPLAYED the weak September nonfarm-payrolls print (+29,000 vs. ~84,000 consensus), describing consecutive FOMC meetings, leaving room for a pause at the upcoming Oct 27–28 meeting, while flagging December (the Dec 8–9 meeting) as the next hike candidate. **A sitting rule on its own** — it does not need a second corroborating primary source because it IS itself primary and multiply corroborated on content.

★ PRIMARY — DOL initial jobless claims, week ended Oct 3, 2026, released Oct 8, 2026 (corroborated by multiple independent outlets via a Reuters-sourced wire): **197,000**, wi below 200,000 for four straight weeks. This is in some tension with the weak +29,000 September payrolls print that drove the prior cycle's big dovish move — read here as a cont move any P — it is context, not a driver.

MARKET PRICES, never blended with institutional estimates, labelled explicitly throughout. CME FedWatch-style pricing for the Oct 27–28 meeting barely moved despite Walle is only −2; the market mostly isn't buying a near-term hike shift yet. For the Dec 8–9 meeting, sources on hike-implied odds are noisy and not internally consistent across feeds (r higher since the prior cycle's reported "mid-60s to mid-70s%" read — consistent with Waller's push. No single precise December-odds number is quoted as settled; it is describe concentrated at the meeting that sits inside the 3-month window, is why 3mo takes the larger cut (−3) versus 1mo's −2.

The 10-year Treasury yield was roughly FLAT this week — approximately **5.23% on Oct 8** versus approximately 5.24% on Oct 1 (the prior cycle's reading) — after an initial Walle midterms, and (ii) a solid 30-year Treasury bond auction. This supports only a small (−1) 6mo trim, since no new quarterly GDP/PCE data landed this week and the long end didn't sufficiency rule, insufficient to move these longer horizons; no primary data release at that range occurred.

Explicitly EXCLUDED this cycle — verification found these too weak/unreliable to use. A single wire report's claim that Goldman Sachs might shift to forecasting two more hikes only as a flagged, unused aside. The 2-year Treasury yield's move this week is reported in CONFLICTING directions by two low-quality aggregators and could not be resolved (FF figure for the week ended Oct 7 could not be extracted from available sources, as noted above.

Score decision: P RE-RATED DOWN, 35/29/37/44/58 → 33/26/36/44/58 (−2/−3/−1/0/0), a partial reversal of the prior cycle's large +8/+4/+3/+1/0 upward move. This is a FULL stability, or sourcing quality — **LEFT AS DRAFT for Alex's manual review.** Research capability was NOT degraded this cycle: federalreserve.gov, dol.gov, and five-plus independe

★ CARRIED FORWARD — THE WEEK OF SEPTEMBER 26 – OCTOBER 3, 2026

★ PRIMARY — August PCE undershot, BEA, released Sept 30, 2026. Every element re-confirmed exact against bea.gov: headline PCE price index **+0.3% m/m and 3.4% y/y**; c headline and core came in *under* consensus — the headline survey figure was about 3.7%. **Caveat stated rather than buried:** this release embeds the *annual update of the Natio* Consensus figures are survey expectations, not institutional estimates; BEA publishes none.

★ PRIMARY — the September jobs report, BLS, released Oct 2, 2026 at 8:30 a.m. ET, and it contradicts the Fed's own stated rationale. Nonfarm payrolls **+29,000** against an ~ UNRATE); average hourly earnings +5 cents / **+0.1% m/m to $37.81** and **+3.0% y/y**; participation 61.8%. Prior months revised down by a combined **60,000** — July flipped from + **earlier Governor Barr had said "risks to the labor market have receded."** This is the single most important new fact on this page.

★ PRIMARY — Vice Chair Philip N. Jefferson, "The U.S. Economy and Monetary Policy," Darden School of Business, University of Virginia, Oct 1, 2026. Quote re-verified verb *take more time."* He added that "any future adjustments in policy should be determined by carefully examining trends in the data, the evolving outlook, and the balance of risks." A the Board's own calendar puts it Oct 1, and Sept 30 was a Wednesday; the same article attributes a Richmond Fed rural-America panel to Boston's Collins when the Board calenda

★ THE HAWKISH COUNTERWEIGHTS, which are why this move is single-digit and stops at 12 months. (a) Governor Michael S. Barr, "Economic Conditions and Monetary Pol *adjustments are likely to be needed to ensure inflation comes down to target in a timely fashion."* and *"Risks to achieving our inflation target have increased, while risks to the lab to both components of our dual mandate."* and *"Earlier this month, the FOMC unanimously agreed to raise short-term policy interest rates to support achieving our dual mandate sentences while presenting them as verbatim: the full endings are restored above.* **Critically, Barr spoke on Sept 29 — before both the Sept 30 PCE and the Oct 2 jobs report —** decided to raise the target range for the federal funds rate by 1/4 percentage point to 3-3/4 to 4 percent," on a 12–0 vote, effective Sept 17, 2026. Remaining 2026 meetings: **Oct 2** (+0.7pp), real GDI +2.6% (+0.4pp), the GDP/GDI average +2.4% (+0.6pp). Growth is accelerating, not cracking. **(c) Initial claims, week ended Sept 26** (PRIMARY, DOL, released O 200,000, −2,500 (prior average revised 202,250 → 202,500). **(d) The long end went the wrong way:** FRED DGS10 5.17% (Sept 25) → 5.24% → 5.26% → **5.29% (Sept 30)** → 5.24 Oct 2" traces to a third-party CFD feed and is not quoted. Meanwhile DGS2 *fell*: 4.81% (Sept 25) → 4.92% (Sept 28) → 4.89% (Sept 29) → 4.88% (Sept 30) → **4.78% (Oct 1)**. **A fa** which is exactly the de-anchoring this pillar tracks.

CORRECTED this cycle, and it kills a claim this system has been repeating: jobless claims are NOT at or near a 57-year low. The "near 57-year lows" / "lowest since 1969" fram strings "lowest" and "1969" do not appear in it — and **FRED ICSA refutes it outright**: 197,000 is not even 2026's lowest print, with **189,000** (week of Jul 18) and **190,000** (Apr 25) 1968). **The level still does the analytical work without the superlative:** claims near 197–200k mean layoffs are not rising, so +29,000 payrolls is a *hiring freeze*, not a firing wave

MARKET PRICES, never blended with the SEP. CME FedWatch October-hike odds collapsed to roughly **17–23%** (hold ~77–81%) as of Oct 2, from about 36% a week earlier. For D **corrected down from a first-pass "above 75%," which verification found unsupported**; CME's own page and the CNBC article both returned HTTP 403, so this rests on conflict

H.4.1, week ended Sept 30 (PRIMARY, released Oct 1, re-confirmed exact): reserve balances **$2,948,090M** from $2,930,193M, **+$17,897M w/w** — last cycle's record −$83,601M what the Sept 26 cycle logged — a clean cross-check.

★ NEW THIS CYCLE — THE WEEK OF SEPTEMBER 19–26, 2026

★ PRIMARY — Fed Governor Michael S. Barr, "A Long-Term View on the Costs of Shelter," Sept 23, 2026, 10:05 a.m. EDT, at the Chicago Fed's Housing Affordability 2026 sum *federalreserve.gov/newsevents/speech/files/barr20260923a.pdf*, in one continuous paragraph on p.2: "Economic growth is strong and the labor market is solid, but inflation is ab target have increased, while risks to the labor market have receded. We needed to recalibrate monetary policy to reflect the balance of risks to our mandate goals. … **In my base c** He also confirmed he supported the Sept 16 hike. *Verification note, stated because it cuts against an earlier draft of this very cycle:* a first research pass reported the middle sent present, and the Board's own September calendar lists Barr at 10:05 a.m. — 10:20 a.m. that day was Vice Chair Jefferson at the NY Fed.

★ PRIMARY — S&P Global flash US PMI, Sept 23, 2026. The embargoed release ("Embargoed until 0945 EDT … 23 September 2026") was retrieved directly. Composite output **5** expected); services **58.7**. Critically for this pillar, the release places **input-cost inflation at its fastest since OCTOBER 2022**, attributing it to higher fuel and transport costs — and prices index 66.4 from 59.9" reading circulated in secondary coverage does NOT appear anywhere in the release and is vendor/subscriber data, so it is excluded; the October-20

★ PRIMARY — University of Michigan Surveys of Consumers, FINAL September, released Sept 25, 2026. Sentiment **48.1**, down 7.0% month-on-month from 51.7; current condi jumped from 4.0% last month to 4.6% this month" and "**Long-run inflation expectations ticked up to 3.4%, ending three consecutive months at 3.3%.**" The long-run break is th tightening cycle beyond one meeting — and it is the specific reason the 6-month window took −3 rather than −1.

★ PRIMARY — DOL initial jobless claims, week ended Sept 19, 2026: advance figure **197,000** (the "near 57-year lows" characterisation carried here was later found FALSE and i average is **202,250**. Both revisions correct figures this report had been carrying. A near-record-low layoff rate removes the last dovish counterweight to a further hike — and is, h

★ **PRIMARY — Federal Reserve H.4.1, week ended Sept 23, 2026.** Reserve balances **$2,930,193M against $3,013,794M** the prior week — a fall of exactly **$83,601M in one wee** assets roughly flat at $6,747,704M. This is by far the largest one-week reserve drain this report has logged (prior logged weeks: −$10.4B, −$49.3B) and is a direct liquidity negati is why it supports the move without driving it.

Two Fed voices, both DOWNGRADED on sourcing after verification — used as corroboration only, neither able to move P alone. *Boston Fed President Susan Collins, Sept 22:* t notably above 2%" — but it was a LinkedIn post that is unfetchable, bostonfed.org does not carry it, and every corroborating outlet traces to the same Reuters story, so it is **effect** closed. *NY Fed President John Williams, Sept 24, at NIESR's London Macro Policy Forum:* **materially recharacterised, because an earlier pass misattributed it.** Williams was des the end of the year," and then adding "That seems to me a reasonable way of thinking about it. **But we have to see. We're going to collect the data.**" Presenting that as his own fl transcript exists (it was an unscripted fireside chat; newyorkfed.org 404s), and genuinely independent reporting is TWO outlets (Reuters and CNBC) — the other eight carry the id

Also logged this cycle, not scoreable. The Fed's own *Senior Credit Officer Opinion Survey* (Sept 24, primary) reports dealer pricing and non-pricing terms "remained basically un rate-path signal. Census *New Residential Sales* for August (Sept 24) came in at **684,000 SAAR, an increase**, attributed to price reductions — which **contradicts this report's earl** the Census PDF would not parse). Census advance durable goods for August (Sept 25) were virtually unchanged at $338.6B. No Fed speeches were delivered Sept 24, 25 or 26;

MARKET PRICES — reported, and never blended with the SEP's institutional estimates. The 10-year Treasury yield rose **4.96% (Sept 22) → 5.11% (Sept 23) → 5.18% (Sept 24)**, daily yield-curve series agree exactly on both values. That *resolves* the honest caveat carried in the abandoned Sept 24 draft (FRED had not yet published Sept 23 at its research quoted at 4.947%, the highest since May 2024 (secondary). CME FedWatch odds of an Oct 27–28 hike moved ~53% (Sept 23) → **77.5% (Sept 24)** → ~70–76% (Sept 25), source this report's earlier "Polymarket ~51% odds of a cut by June 2027" line. *A claimed data-integrity finding was RETRACTED rather than printed:* an initial pass reported that FRED's truncates long before 2026, so the readings were almost certainly fabricated by a summarizing layer reading a truncated file, not served by FRED. It is logged as an unresolved ga

RE-CONFIRMED FROM PRIMARY — the Sept 16 FOMC and its dot plot. The statement reads "The Committee decided to raise the target range for the federal funds rate by 1/4 pe submitted projections, splitting for 2026 year-end **2 at 3.875%, 12 at 4.125%, 4 at 4.375%**; medians 4.1% (2026), 4.1% (2027), 3.9% (2028), 3.2% longer-run. So this report's star and survives re-verification.

THE TEST HAS LANDED, AND IT CAME BACK TWO-SIDED. August PCE and the Q2 GDP third estimate released **Sept 30** (BEA, primary). Core PCE printed 3.0% y/y, but roughly Q2 GDP was revised sharply up to +2.2%, a genuine growth beat. The two roughly offset, so this pillar's own flip line resolves without confirming or reversing the Sept 23-26 cut

★ ★ **NEW this cycle — Philadelphia Fed Manufacturing Business Outlook Survey, released Sept 17, 2026 (primary source page confirmed at philadelphiafed.org; that month's independent outlets reporting identical figures — MarketScreener, NAM, investinglive, Kitco, Bitget, Academic Capital):** general activity fell to 37.8 from 47.4, but **prices paid from 17.7** — a re-acceleration in the inflation-pipeline reading. Employment fell sharply (11.8 from 27.9) and future activity fell (52.9 from 73.6), a real counterweight toward coolin

★ ★ **NEW this cycle — New York Fed Empire State Manufacturing Survey, released Sept 15, 2026 (PRIMARY, fetched directly from newyorkfed.org):** general business condition **received rose to 28.1 from 23.1**, a three-month high.

- **Why this clears the sufficiency bar:** two independent Federal Reserve district banks' own primary surveys, dated the same week, showing the same directional signal (headline independent primary sources in the same input class, not a single-source claim.
- **Why only one point:** both are soft/sentiment surveys, not hard CPI/PCE prints; both releases' own headline-activity and forward-looking components (employment, future activity turned risk-on into Sept 18-19 (10-year backed off its 5.04% high to ~4.95%, BTC recovered) — a market price, not scored, but the honest reason not to take this further.
- **12mo/36mo HELD** — two regional sentiment surveys say nothing about the 2027-2028 policy path those windows price.
- **Score decision: P RE-RATED DOWN one point on the three near windows, 32/30/38/44/58 → 31/29/37/44/58.** Research capability fully available this cycle (WebSearch clean; clears the sufficiency rule — **AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)."**

Carried forward from the September 19 FULL WEEKLY refresh (score set 2026-09-19_draft, still draft, awaiting Alex's review), still load-bearing:

★ ★ **NEW this cycle — initial jobless claims, week ended Sept 12 (DOL, primary, released Sept 17): 196,000**, the lowest since mid-July; four-week average 203,250; continuing cl confirmatory, not new information, and not independently trigger-worthy on its own.

★ ★ **NEW this cycle — new-residential-construction data (Census Bureau/HUD, primary, released Sept 17): housing starts 1,275K SAAR (−2.6% m/m), permits 1.394M (−2.7%** genuine rate-sensitive-sector cooling signal, but single-month and internally mixed (single-family starts actually +7.6%) — insufficient alone to move P per the sufficiency rule; fla

- ★ **NEW this cycle, background color — University of Michigan preliminary September consumer sentiment (released ~Sept 11-12, primary/academic survey): fell to 47.8 fro** known-history cutoff and is added here as context even though it doesn't move P now — it is already implicitly reflected in the mood behind the Sept 16-17 hawkish re-rate.
- **Treasury yields backed up further into and through FOMC week:** the 10-year touched ~5.04% intraweek, a 19-year high, before settling near 4.94-4.95% by Sept 18 as oil price
- **CME FedWatch (market price, not scored):** the October 27-28 FOMC meeting priced a **55.1% probability of another 25bp hike** as of Sept 17, 2026 — compare pre-Sept-16-mee respectively pre-decision, and Polymarket priced a cut by the June 2027 meeting at roughly 51%.
- **A high-profile political story broke in parallel: President Trump and senior administration officials (the Vice President, the Treasury Secretary, and an economic counselor) p** voted with a unanimous FOMC (12-0) to hike. Well-corroborated across 8+ independent outlets (CNBC, CNN, NBC News, MS NOW, BNN Bloomberg, Fortune, The Hill, Bloomberg reinforces the hawkish path holding — logged, not scored.
- **Bank-forecaster reactions, logged not scored:** Goldman Sachs's post-meeting note expects an October hike with no December hike in its base case; an earlier BofA call for thre and is treated as likely stale/superseded if cited elsewhere. Single-house forecasts reacting to the already-priced SEP, not new primary facts.
- **Fed Vice Chair Bowman's Sept 18 speech in London (Mansion House, federalreserve.gov, primary)** covered bank stress-testing rule finalization — not a monetary-policy or rat
- **Score decision: P HELD FLAT at 32/30/38/44/58.** Full independent primary-source research this cycle (~15 targeted WebSearches, no capability degradation); nothing above cl stamp authority regardless of finding — **LEFT AS DRAFT for Alex's manual review.**

Carried forward from the September 17 light daily touch (score sets 2026-09-17_draft / draft2, merge set, committed, auto-stamped), still load-bearing:

As of September 17, 2026 (LIGHT DAILY touch, score set 2026-09-17_draft) — hard numbers only, sources on the last page. New this cycle: the Sept 16 FOMC decision and its SEP/dot plot; the Sept 12 weekly-re Iran War Risk pillar report.

★ ★ **NEW this cycle — Sept 16 FOMC decision (federalreserve.gov, primary; corroborated by CNBC, Reuters/Advisor Perspectives, Coinpedia, coingape — 5+ independent ou** move itself was ~92.5% priced into CME/market odds beforehand — a market price, not used to move P on its own.

★ ★ **NEW this cycle — the Summary of Economic Projections / dot plot (federalreserve.gov, primary).** 16 of 18 participants project at least one more 2026 rate increase; 12 of 18 but on a slower, more cautious path than previously projected, with the long-run neutral-rate dots clustering tightly at 3.0%. This is a primary Fed institutional document, not a ma

- **Bitcoin's reaction was muted:** ticked up toward $76,300 on the statement, then drifted back to hold near $76,000-198 through Chair Warsh's press conference (CNBC, Coinpedi the decision itself.
- **Score decision: P RE-RATED DOWN, modestly, to 32/31/42/54/60** — 1mo 34→32, 3mo 33→31, 6mo 44→42; 12mo/36mo HELD FLAT at 54/60. Light daily touch, master call bar

★ **Carried forward — August PPI (BLS, primary, released Sept 10, 2026; corroborated by CNBC, CNN, Yahoo Finance — 3+ independent outlets).** Headline final demand **+0.4%** monthly gain is attributable to volatile energy costs (diesel fuel +24.1% alone). Core PPI (ex food/energy) came in at **+0.3% m/m**, UNDER consensus on one reading (+0.2% m/m

- **Score-relevant read on the PPI print:** reinforces, rather than contradicts, the already-priced "cooler than consensus" August CPI narrative — **not a distinct new directional catal** independent corroborating outlets).
- **Re-verified August CPI (BLS, released Sept 11) independently this cycle:** headline +0.4% m/m / +3.4% y/y, core +0.3% m/m / +2.4% y/y, shelter +0.3% m/m / +3.0% y/y — mat
- **DOL initial jobless claims, week ending Sept 5 (released ~Sept 11, primary): 206,000, down 1,000 w/w, 4-week average 206,000** — steady, unremarkable, no signal.
- **CME FedWatch-tracked market-implied odds of a 25bp hike at the Sept 15-16 FOMC read ~62-69% this week (as of Sept 10-11)** — a *market price* only, not an institutional esti (this morning's) daily cycle's background note — both are reported as market-price snapshots at different times; the divergence is noted, not resolved or editorialized on.

- **Fed Chair Warsh: no new substantive remarks since the Aug 28 Jackson Hole speech.** A Sept 9 Marketplace piece characterizing him as withholding forward guidance ahead does not move P.
- **The Sept 15-16, 2026 FOMC meeting had NOT yet occurred** as of the Sept 12 research pass — it has since occurred and fired; see the NEW facts above.
- **Historical score decision (Sept 12 cycle, superseded):** P HELD FLAT at 34/33/44/54/60 — FULL WEEKLY REFRESH, left as DRAFT for Alex's manual review at the time (weekly committed by Alex, and Sept 16 held it flat again before this cycle's re-rate above.

Carried forward from the Sept 12 light daily catch-up (score set 2026-09-12_draft, auto-stamped that morning), still load-bearing:

- **Re-checked — no new Fed speech or primary data release found since the Sept 11 CPI print.** Coverage of ~90% market-implied hike odds circulating that morning traced to Fe P. P HELD FLAT at 34/33/44/54/60, AUTO-STAMPED.
- ★ **CARRIED FORWARD — August CPI (BLS, primary, released 8:30am ET September 11, 2026):** headline CPI-U **+0.4% m/m seasonally adjusted** after +0.1% in July, **+3.4% y/y N** over a third of the monthly increase — shelter +0.3%. Fetched directly from bls.gov and re-fetched to confirm.
- **CARRIED FORWARD — versus consensus:** pre-print expectations circulating were headline +0.4% m/m / 3.4% y/y and core +0.4% m/m / 2.4% y/y. **Headline landed exactly in** characterise the surprise.
- **Market-implied September hike odds around the print read ~70% for a 25bp move** — a *market price*, not an institutional estimate, reported for context and explicitly not used to
- **Data-hygiene note, logged:** several aggregator summaries of this print published within minutes carried figures inconsistent with the BLS release (for example a 3.1% core y/y). for.

Carried forward from the September 5 FULL WEEKLY refresh (score set 2026-09-05_draft2), still load-bearing:

- ★ **★ NEW — August jobs report (BLS, primary, released Sept 4): nonfarm payrolls +162,000 vs. ~53-55,000 consensus; unemployment steady at 4.1%.** A sharp upside beat, c (+0.3% m/m, +3.1% y/y).
- ★ **★ NEW — markets repriced September 15-16 FOMC hike odds higher off the jobs beat.** Point estimates vary by source/timestamp (roughly 60-66% hike probability cited acros higher than the "~60% hold" framing this pillar's Sept 2 baseline used — i.e. the market moved further toward pricing a hike, not away from it. Fed officials remain split: Chair Wa Market commentary (Morgan Stanley-style framing, echoed across outlets) now flags the Sept 11 CPI print as the likely deciding data point before Sept 15-16.
- ★ **★ NEW — same-day market reaction, Sept 4 (multi-source corroborated): 2-year Treasury yield +5.3bp to its highest level since January 2025;** Dow −271.86 pts (−0.51%) to
- **BTC fell ~2% same-day: $81,265.00 (Sept 3 close) → $79,676.60 (Sept 4 close)** (data/btc_usd_daily.csv) — consistent with a hawkish-surprise risk-off reaction; BTC $79,646.1
- **Score decision:** this is a fresh, dated, primary-sourced print (not odds drift alone), sized comparably to the Aug 22→28 catch-up cut for a comparable single dated catalyst — P last committed baseline.

Carried forward from the Sept 3 light daily catch-up (no new score set — nothing material found on any pillar that cycle):

- **Re-checked CME FedWatch and the H.4.1/data calendar; found no fresh primary print or news event dated Sept 2-3.** config/scores.json untouched; run.py blend re-run agains

Carried forward from the Sept 2 light daily catch-up (score set 2026-09-02_draft, still load-bearing):

- **No new H.4.1 or data print found dated Sept 1-2.** September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continued the same post-Jackson-Hole drift already discipline against chasing odds drift, it did not independently move P.
- **BTC traded at $76,581.44 on Sept 2** — down from $78,038.78 on Sept 1 (Bitstamp) — a real pullback, but driven by the Iran War Risk escalation covered in that pillar's report, not

Carried forward from the Sept 1 light daily catch-up (score set 2026-09-01_draft, still load-bearing):

- **CME FedWatch September hike odds read ~66% around 11:40am ET Aug 31** (Forbes/KuCoin), up from the ~60.4% CNBC read already priced into the Aug 31 baseline — the sa
- **No new H.4.1 or jobless claims release Aug 31-Sept 1** — Aug 31 was Labor Day, a US federal holiday; next H.4.1 is due Sept 3.
- **BTC traded at $78,038.78 on Sept 1** — down from $78,447.16 on Aug 31 (Bitstamp).

Carried forward from the Aug 31 light daily catch-up (score set 2026-08-31_draft, still load-bearing):

- **CME FedWatch September hike odds drifted to ~60.4% by Aug 31** (CNBC Jackson-Hole-analyst-roundup, up from ~56% Friday, Aug 28), continuing the same repricing already alone, no fresh primary print or news event).

Carried forward from the Aug 29 full weekly refresh (still load-bearing):

- ★ **★ ADVERSARIAL CORRECTION — the abandoned Aug 28 draft's CME FedWatch September hike-odds figure (~35.4%→~45.7%) UNDERSTATED the real market move.** A de 35.5% is well-corroborated and not in dispute. Post-speech (Aug 28), the credible cluster is roughly 56-58% — Motley Fool quotes CME FedWatch directly at 57.5%; CNBC's ow sourced read says "55.7%... about 20 points higher than a day ago." These three cluster tightly. The 45.7% and 42% figures that circulated appear to be a stale or mismatched s day snapshots and roughly track the confirmed cluster. **Corrected characterization: ~35% to roughly 56-58%** — past coin-flip, into hike-more-likely-than-not territory, a bigger
- ★ **★ CORRECTED this cycle — BTC's price action around the speech was NOT a stable tape.** The abandoned Aug 28 draft's framing ("stable tape... not one BTC visibly flinched") spoke, and closed $79,613.44 that day — then continued falling to **$77,666.16 by today, Aug 29** (Bitstamp), a roughly 4%+ round-trip decline from the day's high through today.
- ★ **★ NEW this cycle — initial jobless claims, week ended Aug 22 (DOL, primary, released Aug 27): 203,000 vs. 208,000 consensus,** down from the prior week's revised 207,00 pressure) — logged, not independently trigger-worthy on its own.
- ★ **★ NEW this cycle — Fed H.4.1, week ended Aug 26 (federalreserve.gov, primary): reserve balances $2,924,936M (−$10,351M w/w); Treasury General Account $950,736M**
- **No new CPI/PPI release in this window** — next releases Sept 10-11, unchanged from the prior baseline. No public pushback found from any other Fed official on Warsh's hawkish
- **Score decision:** the corrected, larger CME move justifies a deeper cut than the abandoned Aug 28 draft's 38/37/46/55/61 — P re-rated down to 36/35/45/55/61, concentrated o baseline.

Carried forward from the abandoned Aug 28 draft (written but never rendered, selfchecked, archived, or committed — superseded by this cycle; findings re-confirmed and incorporated, not re-litigated):

- ★ **Fed Chair Kevin Warsh's first Jackson Hole speech as Chair, Aug 28, 10:00am ET (federalreserve.gov, primary transcript, confirmed verbatim this cycle via direct fetch; cor 403 this cycle, relied on search-summary only).** Theme: "Financial Innovation: Implications for Payments and Policy." Exact quote, verified against the transcript: "And while this improved." Also: "We must be confident that underlying inflation is moving to our objective... Otherwise, we have work to do," and "I stand here today committed to a discipline, n standard journalistic paraphrase used independently by CNBC, Yahoo Finance, Forbes, and Spectrum News (well-corroborated as a characterization), not a direct Warsh quote; f
- ★ **July PCE (bea.gov, primary, released Aug 26): headline +0.2% m/m, 3.7% y/y (0.1pp hot vs. consensus); core +0.2% m/m, 3.3% y/y (in line).** Consumer spending +0.2% m/m week, didn't by itself change his read on underlying trends.
- **2-year Treasury yield rose to a roughly one-month high: confirmed +6.6bp to 4.29% intraday-close** (one source cites a peak of +9bp to 4.32%); the 30-year yield eased abou
- **BTC closed at $79,613.44 on Aug 28 (Bitstamp)** — this price point is now superseded by today's $77,666.16 close (Aug 29); see the corrected price-action fact above.

Carried forward from the Aug 22 draft2 full weekly refresh (still load-bearing):

- ★ **The Jul 28-29 FOMC minutes' hawkish bloc runs wider than previously known (federalreserve.gov, primary, published Aug 19; corroborated by CNBC, Quartz, Newsquawk,** "several participants" also favored a hike at the meeting, and "many participants assessed that policy tightening would likely be necessary if inflation did not decline." Inflation cit cited: unemployment steady at 4.2% (June), wage growth 3.5% y/y (moderating).

COINPICKS

★ ★ **NEW this cycle — the 30-year Treasury yield hit 5.31-5.33%, a ~19-year high (highest since 2007), around Aug 17-18** (Bloomberg, CNBC, Axios). Driven substantially by fis heavy long-bond supply, not purely a Fed-hike repricing story, though it compounds optically with the hawkish minutes.

★ ★ **NEW this cycle — equities sold off Aug 20:** S&P 500 −0.87% to 7,641.16; Dow −703.84 pts (−1.32%) to 52,759.21 (partly a ~9% Walmart-earnings-driven drop, not purely Fed- 21 saw a partial recovery.

★ ★ **NEW this cycle — CME FedWatch (September meeting) independently re-verified directly, cross-venue:** ~68-70% hold probability across multiple contemporaneous reads defirate.com blended 68.3% hold/30.6% hike — essentially UNCHANGED before and after the Aug 19 minutes landed, meaning the market already had the hawkish content price

★ ★ **DISCARDED — a separately-circulating claim of "93.6% September hike probability" was traced this cycle to a garbled data conflation.** It appears to be Kalshi's JULY mee explicitly discarded, not used in this pillar's scoring.

- **Jobless claims week ended Aug 15 (DOL, primary, released Aug 20): 206K, down 6K, vs. 210K consensus; 4-week average 204K.** Confirms the low-layoff, tight-labor trend al
- **Aug 22 score decision (superseded by this cycle):** the hawkish minutes detail and the noisy weak retail-sales print largely offset an already-priced rate-odds market — netted to
- **BTC closed at $77,266.84 on Aug 22 (Bitstamp)** — vs. $79,613.44 on Aug 28 and $77,666.16 on Aug 29 (see this cycle's facts above).

Carried forward from the Aug 22 draft1 catch-up cycle (independently re-confirmed, still load-bearing):

- **No new Fed H.4.1 release since the week ended Aug 19 (federalreserve.gov, primary, published Aug 20):** that remains the current release; the next H.4.1 is due Aug 27. No new 13) was already known and priced before the Aug 16 baseline.
- **No new public remarks from Chair Warsh between the Jul 29 FOMC press conference and the Aug 28 Jackson Hole speech (see this cycle's facts above).**

Carried forward from Aug 20 (re-confirmed this cycle, still load-bearing):

- **FOMC minutes from the Jul 28-29 meeting confirm the known 9-3 hold vote and the Hammack/Kashkari/Logan dissent for an immediate 25bp hike.** Inflation risks characteriz forward guidance from Chair Warsh. A balance-sheet task-force report will inform future deliberations, but no near-term QT-pace signal was given.
- **Offsetting signal, re-confirmed and expanded this cycle: CME FedWatch showed the odds of a September 16 hold rising to ~65% post-minutes, up from a pre-minutes ~50/5** across five independent sources, Aug 17-22) confirms no further material move off that level, i.e. the market stayed priced for a hold through the minutes' release.

Carried forward from Aug 16 (still load-bearing):

- **July retail sales (Census Bureau, published Aug 14, primary release): headline −0.6% m/m vs. +0.1% expected, core (ex-auto) −0.2% m/m, still +5.0% y/y.** The first monthly with some calendar-effect noise (Amazon Prime Day pulled into June). A genuine but noisy dovish-leaning counter-signal — per this pillar's own house discipline against chasing
- **Recalled for continuity, not re-scored:** the Aug 17 Empire State Manufacturing Survey surged to 20.6 vs. 11.0 consensus, the highest since 2022 — a hot beat cutting against the chasing single prints in either direction, this was not sized into a move.

Carried forward from Aug 13-14 (still load-bearing):

- **Fed H.4.1, week ended Aug 12 (federalreserve.gov, published 4:30pm ET Aug 13): reserve balances $2,944,059M, down $49,290M w/w; Treasury General Account $963,95** baselines — confirmed an already-adopted trend, didn't fire a fresh trigger.

Carried forward from Aug 12-13 (still load-bearing):

- **July CPI (BLS, published Aug 12): headline +0.1% m/m / +3.4% y/y; core +0.2% m/m / +2.5% y/y** — landed cool, exactly in line with consensus, drove the Aug 13 re-rate up.
- **Initial jobless claims, week ended Aug 8 (DOL/ETA, published Aug 13): 209,000 actual vs. 202,000 expected** — a genuine weak-side miss, 8-week high, the second trigger be

Carried forward from Aug 8-10 (still load-bearing):

- **Initial jobless claims for the week ended Aug 6 (published Aug 8): 262,000 actual vs. 263,000 expected** — essentially in line with consensus, noise rather than a surprise.

Carried forward from Aug 8-9 (still load-bearing):

★ **BLS Employment Situation, July 2026: nonfarm payrolls FELL 23,000** versus a consensus estimate of ~83,000 (WSJ-sourced; a competing 95,000 Barron's-sourced figure is l (-19,000). A direct bls.gov fetch returned a 403 this cycle; the figure is confirmed via convergent CNBC, Yahoo Finance, Kiplinger, and CBS News reporting, all citing the same BL

- **May and June payrolls revised down a combined 103,000** — confirmed, matches the light draft exactly. (One Forbes-sourced fetch this cycle produced a garbled "-252,000 tot summarization artifact, not a correction.)
- **Unemployment ticked down to 4.1% from 4.2%,** but the labor-force participation rate fell to 61.4% — its lowest level in over five years.

★ ★ **NEW this cycle — average hourly earnings rose just 3.2% y/y,** down from 3.4% in June and now trailing CPI (3.5% June y/y) — real wages softening, a detail the same-day li

★ ★ **CORRECTED — CME FedWatch September-hold odds check out at ~56%,** not the light draft's ~60%. Two independent corroborating sources (CBS News, a Forbes-sourced corroborated, likely later-intraday figure. Kalshi (a prediction market, not CME futures-implied pricing — a different instrument, labeled separately per research discipline) shows

★ ★ **NEW this cycle — real forecaster disagreement on magnitude:** Bank of America explicitly called the report "a bit dovish on net" but is **sticking with its call for 75bp of hikes i** "not loose, not tight" — a measured, non-alarmed read. Morgan Stanley's Ellen Zentner says the **Aug 12 CPI print** — inside this pillar's own 1-month window — will be the decidin

★ **Jobless claims for the week ended Aug 1: 199,000, 4-week average 198,750** — the lowest of this cycle, in real tension with the weak payrolls print. Points to "low-hire, low-fire"

Carried forward from Aug 7 (still load-bearing):

★ **Fed H.4.1 for the week ended Aug 5 (federalreserve.gov, direct pull):** total assets $6,748,567M, reserve balances $2,993,349M — reserves +$8.78B w/w, TGA -$3.45B w/w. An

Carried forward from Jul 30-Aug 5 (still load-bearing):

★ ★ **CONFIRMED, PRIMARY SOURCE — the FOMC held rates at 3.50-3.75% on Jul 29, 2026, on a 9-3 vote.** Three regional-bank presidents — Beth Hammack (Cleveland), Neel K corroborated by CNBC, Forbes, Fox Business, TechTimes). This is the **first unified 3-member dissent since September 2016**. No SEP/dot plot this meeting (not a projections me

★ **Chair Warsh's press conference was unusually combative and offered no forward guidance:** "there is no soft inflation target... not on this committee's watch"; "the five-plus ye followed: S&P 500 fell 1.85% in the final 65 minutes of trading (full day: S&P −1.52%, Dow −2.19%, Nasdaq −1.74%); the 30-year Treasury yield rose to 5.21%, its highest since Ju

★ ★ **CONFIRMED, PRIMARY SOURCE — jobless claims for the week ended Jul 25 came in at 197,000** (DOL/ETA release, fetched and read directly), a genuine +9,000 increase; th confirms the seasonal-adjustment distortion flagged last cycle: actual non-seasonally-adjusted claims fell only 9.2% w/w versus the 13.3% seasonal factors expected — meaning

★ **The September hike-odds figure could not be reconciled to a single number this cycle, despite four direct attempts.** Live pulls produced 55.8% (Fox Business, Jul 28), 62.4% no two agree. The qualitative direction — "still elevated, majority-hike-priced" — is the only defensible takeaway; no re-rate rests on a specific point figure.

- **H.4.1 balance sheet: no new release found for the week ended Jul 29** as of this check (normal Thursday-afternoon publication timing); the most recent confirmed release remai against federalreserve.gov last cycle).
- **Bank of America projects three 25bp hikes in 2026** (to 4.25-4.50%) — single-source (Forbes, citing BofA), flagged not scored.
- **Carried forward, not re-verified this cycle:** June CPI (-0.4% m/m) and PPI (-0.3% m/m), both BLS-primary-confirmed in a prior cycle; Warsh's Jul 14/15 congressional testimony cycle's findings — the hawkish FOMC outcome sits alongside, not against, the still-intact disinflation trend.
- **The labor market cracked in slow motion, then partially un-cracked this week** — June payrolls +57K vs ~115K consensus (carried forward); this cycle's 197K claims print, while
- **Policy rate and balance sheet: 3.50-3.75%, next FOMC (with SEP/dot plot) is Sept 15-16, 2026.** Fed communications blackout ended with the Jul 29 meeting; watch for the first
- **BTC closed at $64,706.50 (Jul 30)** — holding up despite the hawkish FOMC surprise and confirmed equity/bond-market risk-off reaction. **Updated: BTC closed at $64,661.55 o**

The Prize

Illustrative only — not price targets, not advice

The canonical anchor: **2020-21 ZIRP + QE** ran BTC ~$3,800 → $69,044 (~15–18×) — a unique COVID/zero-rate/open-ended-QE setup, not a repeatable base case. The **2024-25** $81,224.46 today, Sept 19 — up sharply from $78,046.80 on Sept 18, a real gain that arrived without any Fed-specific catalyst this week (the Sept 16 FOMC hike and hawkish SEP retest of the $126K high ≈ **+53.6%**.

Discount it hard, twice. First: easing is not an automatic catalyst — the last cycle topped on a non-Fed shock. Second: the Sept 16 hike and its hawkish SEP already reflect a real r path further out — Chair Warsh explicitly declined to submit his own dot or commit to a reaction function, and the Oct 27-28 FOMC is the real next test. A major forecaster (BofA) Prize doesn't feed the math — it tells you what the 3-year lean is worth acting on when the tide finally turns.

The Other Side

The strongest honest case my re-rate — even the moderated one — is still wrong

- **This re-rate might not be conservative enough a read on BofA's stance.** Bank of America has been calling for 75bp of 2026 hikes since early August, straight through the cool C mixed data picture, even 36/35 could prove too generous.
- **Warsh explicitly avoided committing to a reaction function — this report may be over-reading a rhetorical signal into a real repricing.** The CME odds move is real, quantified, a threshold; if Warsh was simply managing expectations rather than pre-committing to a September hike, this cycle's move could unwind as fast as it appeared.
- **The adversarial-verification pass caught one error in the abandoned draft's CME figure — it may not have caught all of them.** This cycle corrected 45.7% to the high-50s clus authoritative CME FedWatch screenshot pulled directly by this report; a subsequent, cleaner pull could still move the number again.
- **I may still be over-reacting to one speech and one data print.** This pillar has already seen a claims number ("lowest since 1969") partially reverse the following week on a season speech, even a well-corroborated one, could be a similar move that partially unwinds once the actual September data (another CPI, another jobs report) lands.
- **The FOMC's own hawkish dissent hasn't gone away and now looks more, not less, mainstream.** Three regional presidents voted for an immediate hike on Jul 29, and Warsh's A tension, not resolved by this cycle's move either.
- **Downward revisions can themselves get revised.** The BLS's own benchmark process regularly adjusts prior months; May-June's combined 103,000 downward payroll revision i
- **Weak labor data plus a still-elevated inflation/oil backdrop (Iran-driven, and this cycle's Iran pillar got worse, not better) is stagflation risk, not straightforwardly bullish.** If th than either a clean cut or a clean hold.

The Triggers

Dated events — some prove the claim right, some prove it wrong. ***Re-set September 26, 2026 (FULL WEEKLY refresh).*** *The flip line below is now HALF-MET: three Fed communications (Barr primary-verified, W* ***the Q2 GDP third estimate on Sept 30 are the test****, four days out. Historical re-set notes follow: originally re-set August 29, 2026, full weekly refresh.*

DATE	EVENT
FIRED Oct 14, 8:30am ET — HAWKISH, PRIMARY — this cycle's decisive fact, extending the Oct 8 row below	**September 2026 CPI (BLS):** headline +3.7% y/y (vs. 3.6% consensus, up from 3.4%), core +2.6% y/y (vs. 2.5% consensus, up from 2.4%), +0.6% m/m hea matching estimates. Driver: energy/gasoline +9.1% m/m. Corroborated via CNBC, Advisor Perspectives, Kiplinger, USInflationCalculator. MARKET PRICES (Kalshi/Polymarket, labelled distinctly): Oct 28 hike odds rose to ~34% (hold ~66%) from a pre-CPI ~17%; Dec 9 hike odds elevated further to ~75–85% (nc single figure settled)
FIRED Oct 8 — HAWKISH, PRIMARY, adversarially verified — the decisive fact this print extends	**Fed Governor Christopher Waller, Istanbul Economic Forum:** further rate increases are the likely next step if data keep behaving as expected; inflation has target for roughly 5.5 years; the economy strengthened in H2 2026; explicitly cited Iran-linked energy costs and AI-buildout demand as upside inflation risks genuine hawkish *shift* from his dovish spring-2026 posture. He explicitly DOWNPLAYED the weak September payrolls print (+29,000) as still "solid and stab said hikes needn't come at consecutive meetings, flagging **December (Dec 8–9), not Oct 27–28,** as the next hike candidate. Verified across 5+ independent (FXStreet, Dailysabah, HousingWire, Newsquawk, Bloomberg Tax)
Checked Oct 8 — PRIMARY, DOL, partially offsetting context, not independently scored	**Initial jobless claims, week ended Oct 3 (released Oct 8): 197,000**, with the prior week (ended Sept 26) revised UP 197,000→199,000. Claims have held bel 200,000 for four straight weeks — corroborated via a Reuters-sourced wire across multiple independent outlets
Checked Oct 8 — MARKET PRICES, not institutional estimates, labelled distinctly	CME FedWatch-style odds for Oct 27–28 barely moved post-Waller (~78–82% hold vs. the prior cycle's reported 77–81%); December (Dec 8–9) hike-implied noisy and inconsistent across feeds (roughly 62–84% depending on source) but directionally higher than the prior cycle's "mid-60s to mid-70s%" read. The yield was roughly flat (~5.23% Oct 8 vs. ~5.24% Oct 1) after an initial Waller-driven spike partly reversed on a Trump Iran-strike comment and a solid 30-ye
FIRED Oct 2 — PRIMARY (bls.gov), and it undercuts this pillar's own hawkish rationale	**September payrolls +29,000** against an ~84,000 consensus; **unemployment up to 4.2%**; average hourly earnings +0.1% m/m and +3.0% y/y; participation and **60,000 of downward revisions**, with July flipping to −10,000. **Governor Barr had said on Sept 29 that "risks to the labor market have receded"** — thre later the data said otherwise. CME FedWatch October-hike odds fell to ~17–23% from ~36% a week earlier (*market prices*). **The counterweight, and it matt** claims were 197,000, so layoffs are NOT rising — this is a hiring freeze, not a firing wave
FIRED Sept 30 — PRIMARY (bea.gov), two releases pulling opposite ways	**August PCE undershot:** headline +0.3% m/m and **3.4% y/y** against a ~3.7% consensus; **core 3.0% y/y**; real PCE +0.6%. Caveat stated: the release embed annual update of the National Economic Accounts, revisions back to January 2021. **The same day, Q2 GDP was revised sharply UP to 2.2%** from 1.5% (+0. real GDI +2.6%
Checked Oct 1–3 — PRIMARY, and two-sided	**Vice Chair Jefferson, Oct 1:** "My colleagues and I will need to come to our own judgment, **which may take more time**" — a sitting Vice Chair slowing the pa **Against it, the long end:** FRED DGS10 reached **5.29% on Sept 30** while DGS2 fell to 4.78% by Oct 1 — a steepening that prices less near-term tightening an long-run inflation risk. **H.4.1:** reserve balances +$17,897M w/w to $2,948,090M, reversing last cycle's record drain
CORRECTED Oct 3 — a claim this pillar had been repeating is FALSE and is withdrawn	**Jobless claims are NOT at or near a 57-year low.** The DOL release contains no "lowest since" language — the strings "lowest" and "1969" do not appear in FRED ICSA refutes it: 197,000 is not even 2026's lowest, with 189,000 (Jul 18) and 190,000 (Apr 25) both lower. The series minimum is 162,000, Nov 1968
FIRED Sept 25 — HAWKISH, PRIMARY, this cycle — the most consequential single figure	**University of Michigan final September survey:** year-ahead inflation expectations jumped 4.0% → 4.6%, and **LONG-RUN expectations ticked 3.3% → 3.4 three consecutive months at 3.3%.** Sentiment fell to 48.1 (−7.0% m/m)
FIRED Sept 24 — HAWKISH, PRIMARY, arithmetic checked	**Fed H.4.1, week ended Sept 23:** reserve balances $2,930,193M from $3,013,794M — **−$83,601M in one week**, the largest drain this report has logged — w +$100,056M
FIRED Sept 24 — HAWKISH-ADJACENT, PRIMARY series	**DOL initial jobless claims, week ended Sept 19: 197,000**; prior week revised UP to 198,000; 4-week average 202,250
FIRED Sept 23 — HAWKISH, PRIMARY release retrieved	**S&P Global flash US PMI:** composite 58.4 (strongest since July 2021), manufacturing 57.0, services 58.7 — paired with **the fastest input-cost inflation sinc OCTOBER 2022**, attributed to fuel and transport costs. The "66.4 input-prices index" figure in secondary coverage is NOT in the release and is excluded
FIRED Sept 23 — HAWKISH, PRIMARY, verbatim from the Fed's own PDF	**Governor Michael S. Barr, "A Long-Term View on the Costs of Shelter," 10:05 a.m. EDT:** "inflation is above our 2 percent target and not clearly trending tow in a timely way … risks to achieving our inflation target have increased, while risks to the labor market have receded … **In my base case, further policy adju are likely to be needed.**" All three sentences confirmed by local text extraction; two earlier "corrections" to this item were themselves wrong and are withdr
FIRED Sept 22 — hawkish, but DOWNGRADED on sourcing this cycle	**Boston Fed President Susan Collins:** "I now see an increased likelihood of future scenarios in which inflation remains notably above 2%." Quote verbatim-c but it was a LinkedIn post, bostonfed.org does not carry it, and all corroboration traces to one Reuters story — **effectively single-agency**
FIRED Sept 24 — hawkish, but MATERIALLY RECHARACTERISED	**NY Fed President John Williams** at NIESR London was *describing investors' forecasts* — market pricing made another year-end hike "likely" — then added seems to me a reasonable way of thinking about it. **But we have to see.**" No primary transcript exists; genuinely independent reporting is TWO outlets, the r one Reuters wire
RESOLVED Sept 30, 2026 — HARD DATA LANDED, read as two-sided	**August PCE (core 3.0% y/y, but ~0.15-0.2pt of the apparent cooling is a telegraphed BEA methodology change, not fresh disinflation) and the Q2 GDP th estimate (revised sharply up to +2.2% annualized)** — the two offset rather than confirm or reverse the Sept 23-26 hawkish bundle
Watch — October 27–28, 2026 FOMC	**MARKET PRICES, not institutional estimates:** CME FedWatch odds of another 25bp hike moved ~53% (Sept 23) → **77.5% (Sept 24)** → ~70–76% (Sept 25). price roughly **four more hikes by June 2027**, which retires this report's earlier "~51% odds of a cut by June 2027" line
Checked Sept 24–26 — NEUTRAL / counter-signal, logged	The Fed's own **SCOOS** (Sept 24, primary) shows dealer terms "basically unchanged, on net, across all counterparty types." Census **new home sales rose to SAAR** in August, and durable goods were virtually unchanged. **No Fed speeches Sept 24, 25 or 26**
FIRED Sept 22 — mildly hawkish, primary, this cycle	**Philadelphia Fed Manufacturing Business Outlook Survey (released Sept 17, philadelphiafed.org primary, 5+ corroborating outlets): prices paid 40.9→4 prices received 17.7→31.3, while general activity fell 47.4→37.8 and employment fell 27.9→11.8.** New York Fed Empire State Manufacturing Survey (releas 15, primary, fetched directly): prices paid 58.1→63.1 (highest since July 2022), prices received 23.1→28.1, while general business conditions fell 20.6→7.6
Checked Sept 19, no change — confirmatory, FULL WEEKLY refresh	**Jobless claims (DOL, primary, released Sept 17): 196,000 for the week ended Sept 12, lowest since mid-July; four-week average 203,250.** Housing start m/m, permits −2.7% m/m (Census Bureau/HUD, Sept 17, primary); existing-home sales −2.0% m/m (NAR, Sept 10, primary) — single-month, internally mixed family starts +7.6%)

Watch — October 27-28, 2026 FOMC (next scheduled meeting)	**CME FedWatch prices a 55.1% probability of another 25bp hike at the October meeting (as of Sept 17, 2026)** — up from 0% cut / 37.6% hold / 62.4% hike ahead of the Sept 16 meeting. Polymarket/Kalshi priced the Sept hike at roughly 89-94%/54% pre-decision; Polymarket prices a cut by the June 2027 meet roughly 51%
Logged Sept 16-19 — governance context, not scored	**President Trump and senior administration officials (the Vice President, the Treasury Secretary, an economic counselor) publicly pressured the Fed aga hiking; Trump demanded rates be cut to "1% or less" after Chair Warsh voted with a unanimous FOMC (12-0) to hike anyway.** Well-corroborated across 8 independent outlets (CNBC, CNN, NBC News, MS NOW, BNN Bloomberg, Fortune, The Hill, Bloomberg)
Checked Sept 18, no change	**A Sept 18 Motley Fool piece discusses "the most important number" in the Fed's Summary of Economic Projections** — commentary on the same federalreserve.gov SEP table already cited in the Sept 17 re-rate, single-source, not a new dated fact
FIRED Sept 16, 2:00pm ET / confirmed Sept 17 — HAWKISH, primary, this cycle	**Sept 16 FOMC: 25bp hike to 3.75%-4.00% (12-0), first hike in 3 years — largely priced (~92.5% CME odds pre-meeting), not scored alone.** The SEP/dot (federalreserve.gov, primary) shows 16 of 18 officials expecting another 2026 hike, 12 of 18 pencilling in one more 25bp move by year-end to 4.125%; slowe 2028 descent projected, neutral rate anchored near 3.0%. Corroborated by CNBC, Reuters/Advisor Perspectives, Coinpedia, coingape. BTC reaction muted → drifted back near $76,000-198).
FIRED Sept 10, 8:30am ET — HAWKISH, confirmed primary	**August PPI (BLS, primary): +0.4% m/m (in line), but +5.4% y/y — the highest 12-month reading of 2026, up from 4.8% in July; core PPI +4.6% y/y (from** Corroborated by CNBC, Yahoo Finance, UPI, and The Washington Times. Final-demand energy +4.2% m/m, diesel fuel +24.1% — plausible early pass-throu Iran-war oil shock (Brent $106-108/bbl, highest since May 19)
FIRED Sept 11, 8:30am ET — resolved (carried forward)	**August CPI (BLS, primary):** headline +0.4% m/m/3.4% y/y, core +0.3% m/m/2.4% y/y — a tenth cooler than consensus on core
FIRED Sept 4, 8:30am ET — HAWKISH, confirmed primary, this cycle	**August jobs report (BLS, primary): nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment steady 4.1%.** Corroborated by CNBC, Yahoo F TheStreet, U.S. News, Investing.com/Reuters
Checked Sept 3, no change	**Re-checked CME FedWatch and the H.4.1/data calendar; nothing material found dated Sept 2-3**
Checked Sept 2, no change	**No new H.4.1 or data print found dated Sept 1-2;** September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continues the same post-Jacks drift already priced into the Sept 1 baseline
Logged Aug 31, 11:40am ET — drift, not independently trigger-worthy	**CME FedWatch September hike odds continued drifting to ~66%** (Forbes/KuCoin), up from the ~60.4% CNBC read the Aug 31 baseline used
RESOLVED — Sept 15-16, 2026 (carried forward, see the FIRED row at top)	FOMC hiked 25bp as the corrected CME FedWatch read anticipated, with a hawkish SEP/dot plot on top
FIRED Aug 28, 10:00am ET — HAWKISH, confirmed primary; CORRECTED this cycle	**Fed Chair Warsh's first Jackson Hole speech as Chair** (federalreserve.gov primary, verbatim-confirmed; CNBC, PBS, Reuters/investing.com, CNN, Yahoo F cooler summer PCE/CPI prints "do not tell me that underlying trends have meaningfully improved"; media paraphrase (not a direct quote) that the Fed may r raise rates; avoided forward guidance/reaction-function otherwise
Fired Aug 27 — mildly hawkish-adjacent, primary, this cycle	**Initial jobless claims, week ended Aug 22 (DOL primary): 203,000 vs. 208,000 consensus,** down from the prior week's revised 207,000; continuing claim vs. 1.79M forecast
Fired Aug 26 — routine, primary, this cycle	**Fed H.4.1, week ended Aug 26 (federalreserve.gov primary): reserve balances −$10,351M w/w to $2,924,936M; TGA −$2,876M w/w to $950,736M**
FIRED Aug 26 — modestly hawkish, primary (carried forward from the abandoned Aug 28 draft)	**July PCE (bea.gov primary):** headline +0.2% m/m/3.7% y/y (0.1pp hot), core +0.2% m/m/3.3% y/y (in line)
Fired Aug 19, 2:00pm ET — confirmed hawkish-but-already-priced (carried forward)	**FOMC minutes (Jul 28-29 meeting), federalreserve.gov primary:** hawkish bloc wider than the three named dissenters ("several participants" beyond them hike, "many participants" saw tightening as possibly necessary)
Logged Aug 17-18 (carried forward)	**30-year Treasury yield hit 5.31-5.33%, a ~19-year high** — driven substantially by fiscal/deficit concerns, not purely Fed repricing
Fired Aug 20 (carried forward)	**Equity selloff, partial Aug 21 recovery** — attributed to the hawkish minutes and rising long yields
Fired Aug 20, confirmed Aug 22 (carried forward)	**Initial jobless claims, week ended Aug 15: 206K vs. 210K consensus** (modest hawkish beat, 4-week average 204K); prior week (Aug 8) revised up to 212K 209K
Fired Aug 14, logged Aug 16 (carried forward)	**July retail sales:** headline −0.6% m/m vs. +0.1% expected, core −0.2%, still +5.0% y/y — first decline in nine months, steepest since May 2025, broad-base some Prime-Day calendar noise
Fired Aug 13, 4:30pm ET (carried forward)	**Fed H.4.1, week ended Aug 12:** reserve balances −$49,290M w/w to $2,944,059M, TGA +$56,626M w/w to $963,950M
Fired Aug 12-13 (carried forward)	**July CPI landed cool/in-line; jobless claims (week ended Aug 8) missed weak at 209K vs. 202K expected**
Fired Aug 7, re-confirmed independently — DOVISH, moderated (carried forward)	**BLS July jobs report:** payrolls fell 23,000 vs. ~83,000 expected, unemployment 4.1% on a falling participation rate, May/June revised down a combined 103 hold odds rose to ~56%
Fired Jul 29 — HAWKISH, confirmed primary (carried forward)	**FOMC held 9-3**, three regional presidents dissenting for an immediate hike — first unified 3-member dissent since Sept 2016; Bank of America still projects 2026 hikes even after the Aug 12 cool CPI
RESOLVED — Sept 15-16, 2026 (carried forward)	FOMC hiked, confirming the corrected, larger hawkish repricing this cycle's Aug 29 re-rate anticipated
Ongoing	Iran/Hormuz oil-inflation risk — see Iran War Risk pillar for the current read

The flip line, updated Oct 1 — RESOLVED, and it came back two-sided, not a confirmation. The test this pillar set for itself was whether "the next hard CPI/PCE/PPI print or FOMC communication co verified and unambiguous, Williams and Collins corroborating). **The hard-data half landed Sept 30: August PCE and the Q2 GDP third estimate.** Core PCE printed 3.0% y/y — but a telegraphed BEA not read as a clean confirmation of disinflation. Q2 GDP was revised sharply up to +2.2% (from 1.5%), a genuine growth beat that argues the opposite direction. **Neither print, nor the two together, c** read, held flat on the Oct 1 daily touch. A government shutdown was separately averted through Dec 11, removing a near-term data-disruption risk. The genuinely two-sided facts to keep in view eith drain is mostly mechanical. Next watch: the Oct 27–28 FOMC.

Prior flip line, Sept 11: the Aug 13 cool CPI and weak claims print were the last genuine dovish confirmation this pillar found. Since then, the Aug 19 minutes' wider hawkish bloc, Warsh's Jackson Ho August PPI report (5.4% y/y headline, a 2026 high) have all pointed the same hawkish direction, with CME/market-implied Sept 15-16 hike odds still cited in the ~56-60% range across sources — pa (Warsh hawkish, Waller conditionally dovish). The August CPI print, due today and still pending as of this research pass, is now the next real test before Sept 15-16. If the Sept 15 FOMC actually deliv treat that as evidence the hawkish rhetoric outran the committee, and re-rate back up.

My Decision

P (2026-10-15_draft, AUTO-STAMPED under Alex's delegated daily authority, October 15, 2026; RE-RATED DOWN on the September CPI prin 2026, itself held flat from the October 10 weekly): 33 / 26 / 36 / 44 / 58 · Change: −2 / −3 / −2 / −1 / 0 · Last prior TRUE committed P (2026-09-2 (equal) · Impact: 8 (uniform) · This pillar's signals: 1mo −2.58 (Bear) · 3mo −3.67 (Strong Bear) · 6mo −2.05 (Bear) · 1yr −0.84 (Mild Bear) · 3yr · 6mo −0.63 (Mild Bear) · 1yr +1.12 (Mild Bull) · 3yr +2.84 (Bull) · THE FINAL NUMBER (this blend): -0.14 equal-weight (Neutral) / +0.43 horizon cycle is primarily this pillar's own re-rate plus Iran War Risk's (see that pillar's report), not the computed TA pillar — no call band flipped anyw −Tokenization −0.84 · −Fed & Macro +0.24 · −Bitcoin TA −0.45) · BTC $81,590.01 (GitHub Actions data relay, October 14, 2026 close). The Sep 8:30am ET — PRIMARY (BLS): headline +3.7% y/y (vs. 3.6% consensus), core +2.6% y/y (vs. 2.5% consensus) — hot on both legs, driving thi

October 15, 2026, LIGHT DAILY touch (score set 2026-10-15_draft), this version — RE-RATED DOWN, 33/26/36/44/58 → 31/23/34/43/58 (−2/−3/−2/−1/0). THE DECISIVE NEW FACT: the USInflationCalculator) — headline +3.7% y/y (vs. 3.6% consensus, up from 3.4% in August), core +2.6% y/y (vs. 2.5% consensus, up from 2.4%), +0.6% m/m headline matching estimates, d the Oct 8 Waller hawkish shift already priced into the baseline, and it lands in a Fed that is hiking, not cutting (raised to 3.75-4.00% in September). **Sizing:** 1mo takes only −2, since market-pric favored. 3mo takes the largest cut, −3, since the Dec 9 meeting sits inside that window and market-priced December hike odds are already elevated to roughly 75–85% across sources (noisy, persistent re-acceleration rather than a one-print spike. 12mo takes only −1, a smaller marginal effect at that horizon. 36mo HOLDS at 58: one print, however primary-sourced, does not reach BLS data plus 4+ independent outlets; market-price hike odds explicitly labelled and kept distinct from institutional estimates), no flip-line clause fired, and verification raised no unresolved in **stamped)."**

October 10, 2026 FULL WEEKLY refresh (score set 2026-10-10_draft), prior version — RE-RATED DOWN, 35/29/37/44/58 → 33/26/36/44/58 (−2/−3/−1/0/0), a partial reversal of the Oct Istanbul Economic Forum (hosted by the Central Bank of the Republic of Türkiye), Oct 8, 2026 — PRIMARY (federalreserve.gov), adversarially verified across five-plus independent outlets not He said further rate increases are the likely next step if incoming data keep behaving as expected; that inflation has run above the Fed's 2% target for roughly 5.5 years; that the US economy demand as upside inflationary pressures — a genuine hawkish *shift* from his more dovish, wait-and-see spring-2026 posture, not a restatement. He explicitly downplayed the weak Septembe jobs number, and said rate hikes don't need to come at consecutive FOMC meetings — leaving room for a pause at the Oct 27–28 meeting while flagging December (the Dec 8–9 meeting) as clears the sufficiency rule on its own; it does not need a second corroborating primary source because it IS itself primary and multiply corroborated on content. **Also confirmed, not used to m** Oct 7, released Oct 8 as usual) both ran on normal schedule, confirming Public Law 119-103's funding through Dec 11, 2026 holds. DOL initial jobless claims, week ended Oct 3 (released Oct 8 Sept 26) revised UP from 197,000 to 199,000 — claims have now held below 200,000 for four straight weeks, read as continued labor-market resilience in tension with, not confirmation of, the FedWatch-style pricing for Oct 27–28 barely moved despite Waller's remarks (roughly 78–82% hold odds, a market price, versus the prior cycle's reported 77–81% hold) — the market mostly i the hawkish signal concentrates: sources on December hike-implied odds are noisy and not internally consistent (ranging roughly 62–84% depending on source) but agree directionally that in settled. 6mo takes a muted −1: the 10-year Treasury yield was roughly flat this week (~5.23% Oct 8 vs. ~5.24% Oct 1) after an initial Waller-driven spike partially reversed following a Trump co quarterly GDP/PCE data landed and the long end didn't move much. 12mo and 36mo HOLD FLAT: one week of Fed-speaker rhetoric and noisy market pricing is, per the sufficiency rule, insuff **weak/unreliable to use:** a single wire report's claim that Goldman Sachs might shift to forecasting two more hikes is internally inconsistent (the same article states Goldman's base case remai low-quality aggregators and could not be resolved (FRED access was blocked this cycle) — no figure quoted; the exact H.4.1 reserve-balances dollar figure for the week ended Oct 7 could no evidence — no balance figure invented. **Stamp decision: this is a FULL WEEKLY refresh, categorically excluded from delegated auto-stamp authority regardless of move size, call-band st**

October 3, 2026 FULL WEEKLY refresh (score set 2026-10-03_draft2), prior version — RE-RATED UP, 27/25/34/43/58 → 35/29/37/44/58 (+8/+4/+3/+1/0), the largest move of that cycle PCE undershot at 3.4% headline / 3.0% core (BEA, Sept 30) and September payrolls came in at +29,000 against an ~84,000 consensus, with unemployment up to 4.2% and 60,000 of downw The Oct 27–28 FOMC, sitting inside the 1mo window, re-priced from hike-likely to a hold (~17–23% hike odds, CME FedWatch, a market price). 3mo took only +4 because the Dec 8–9 FOMC s core PCE at 3.0% and softer wage growth; 12mo +1 only, since the 10-year rose to 5.29% even as the 2-year fell to 4.78%, a steepening that caps the longer-horizon read; 36mo held, nothing of move size — **LEFT AS DRAFT, never stamped, superseded by this cycle's further re-rate above.**

Sept 26 FULL WEEKLY refresh (score set 2026-09-26_draft3), this version — RE-RATED DOWN, 31/29/37/44/58 → 27/25/34/43/58 (−4/−4/−3/−1/0), the largest move of this cycle. This Barr's Sept 23 Chicago Fed speech, all three load-bearing sentences confirmed verbatim by local text extraction of the Fed's own PDF — "inflation is above our 2 percent target and not clearl have receded," and "in my base case, further policy adjustments are likely to be needed." **PRIMARY:** the S&P Global flash US PMI, retrieved from the embargoed release, pairing the strongest September survey, year-ahead inflation expectations 4.0% → 4.6% and *long-run* 3.3% → 3.4%, breaking three straight months. **PRIMARY:** DOL claims at 197,000, with the prior week revised **were downgraded on sourcing rather than leaned on:** Williams was characterising *investors'* forecasts and hedged with "but we have to see," and Collins's warning traces entirely to one Reu expectations, labour and liquidity moves an October hike from coin-flip to base case. Sized against precedent — Sept 4 (August jobs) took −4/−4/−2/−1/−1 and Aug 28–29 (Warsh) took −7/−6 Sept 24 draft's −1 *specifically* because that draft had no expectations data. 12mo takes only −1, since one survey month and a few speeches say little about H2-2027, and 36mo holds at 58 be growth *beat*, not a recession signal; layoffs are not rising (claims 197,000); August new home sales *rose* to 684K SAAR, which contradicts this report's earlier cooling-housing read and is corre mechanical TGA rebuild. **Stamp decision: COMMITTED BY ALEX, September 27, 2026, after his own manual review** — full weekly refreshes are categorically excluded from delegated auto-s **next test is four days out:** August PCE on Sept 30 is the first hard print since any of this, and if it comes in soft this is the first move to revisit.

Sept 24 draft (score set 2026-09-24_draft) — WRITTEN BUT NEVER DELIVERED; SUPERSEDED by the Sept 26 weekly above. It proposed 31/29/37/44/58 → 29/27/36/44/58 and its report `config/scores.json` was never advanced past `draft`. It is retained here for the audit trail only. **On re-verification its evidence HELD UP in full** — both claims below are confirmed, and two not because it was mistaken. Its original text follows. Two independent, same-day hawkish developments dated Sept 23, 2026, neither previously scored. **(1) PRIMARY:** Fed Governor Michael parsed directly from `federalreserve.gov` (`barr20260923a.pdf`), not read through an outlet's summary. Verbatim: "Economic growth is strong and the labor market is solid, but inflation is a have increased, while risks to the labor market have receded." And: "In my base case, further policy adjustments are likely to be needed to ensure inflation comes down to target in a timely fa **released Sept 23**: composite output **58.4** (from 56.0), the strongest private-sector expansion since July 2021; manufacturing **57.0** (from 53.9, vs 53.6 expected), strongest since May 2022; s **rose too** — reversing August, when selling-price inflation had slowed to a nine-month low. S&P Global's own release page returned HTTP 403 to automated fetch, so those figures are carried Alpha); one aggregator rendered manufacturing as 56.7, which cross-checking resolves — 56.7 is the separate manufacturing *output* index, 57.0 is the headline PMI quoted here. **Why two poi** SEP already had 16 of 18 officials seeing at least one more 25bp hike this year — and the PMI's strength is genuinely two-sided for crypto, since strong growth and a solid labor market are risk PMI and one Governor's base case say little about the 2027-2028 path those windows price. **Market prices, reported and explicitly not scored:** the 10-year Treasury yield rose more than 13b cited (CNBC, CNN, Yahoo Finance, Investing.com). **Stated honestly:** the primary source for that yield (FRED `DGS10`, Board of Governors) was fetched directly and its latest published observat confirmed, and is not used to justify any part of this move. CME FedWatch odds of an Oct 28 hike rising to 66.4% from 55% are likewise a market price, never blended with the institutional SE clears the sufficiency rule, verification clean.

Sept 23 LIGHT DAILY touch (score set 2026-09-23_draft), prior version: checked for changes since the Sept 22 committed baseline. Three dated items found, none clearing the sufficiency scored); CME FedWatch showed 59.7% odds of an Oct 28 hike, but this figure is effectively single-sourced (one aggregator citing CME, not independently pulled from CME's own site); and Fe discount-window/Treasury-market plumbing, off-topic for this pillar's P (no inflation or rate-path signal). No new jobless claims, PCE, CPI, retail sales, or housing data found dated in this wind available (WebSearch clean), no window moved, and the master call band did not flip — **AUTO-STAMPED per the runbook's delegated daily authority.** Iran War Risk is the only pillar that mov

Sept 22 LIGHT DAILY touch (score set 2026-09-22_draft), prior version: a targeted single-pillar follow-up, not a full four-pillar pass — CLARITY Act, Iran War Risk, and Tokenization are carri dated September 2026 and neither previously scored by any cycle including the Sept 19 weekly review: the Philadelphia Fed Manufacturing Business Outlook Survey (released Sept 17, primar from 47.4 while **prices paid rose to 48.6 from 40.9** and **prices received rose to 31.3 from 17.7**; the New York Fed Empire State Manufacturing Survey (released Sept 15, PRIMARY, fetched dire **from 58.1** — the highest since July 2022 — and **prices received rose to 28.1 from 23.1**, a three-month high. Two independent Federal Reserve district banks' own primary surveys, dated the s to multi-month/multi-year highs) clears the sufficiency bar — 2+ independent primary sources in the same input class, not a single-source claim. Kept to one point because both are soft/senti conditions) fell in the same reports; and market pricing actually turned risk-on into Sept 18-19 (10-year backed off its 5.04% high to ~4.95%, BTC recovered) — reported as a market price, not **32/30/38/44/58 → 31/29/37/44/58.** 12mo/36mo HELD — two regional sentiment surveys say nothing about the 2027-2028 policy path those windows price. Research capability fully availab **auto-stamp authority, this is an ordinary light daily-type touch, not a weekly refresh, and the sourcing clears the sufficiency rule — AUTO-STAMPED: status committed, stamped_by "Ale** cycle.

Prior cycle (Sept 19 FULL WEEKLY refresh, score set 2026-09-19_draft): a full independent primary-source research pass (~15 targeted WebSearches, no capability degradation) re-checked mid-July — reinforcing, not adding to, the already-priced hawkish read. New-residential-construction data (Census Bureau/HUD, primary, Sept 17) showed starts −2.6% m/m and permits −2.7 signal that did not clear the sufficiency bar alone. A high-profile political story also broke: President Trump and senior administration officials publicly pressured the Fed against hiking, with Tr governance/Fed-independence storyline, not new economic evidence, logged rather than scored. Nothing that cycle cleared the sufficiency bar for a further move. **P HELD FLAT at 32/30/38/** size of the move (there, zero) — LEFT AS DRAFT, flagged for Alex's manual review; still awaiting that review as of this cycle.

Prior cycle (Sept 18 light daily touch, score set 2026-09-18_draft): re-checked — the Sept 16 FOMC dot-plot revision already drives this window's read in the current committed set; a Sept 18 primary Fed table this pillar cited Sept 17, not a new dated fact. **P HELD FLAT at 32/30/38/44/58.** Light daily touch, full research access, verification clean — **AUTO-STAMPED SEPTEMBER 18**

Prior cycle (Sept 17 MERGE SET, 2026-09-17_draft2) — why there were two Sept 17 sets, and what actually differed: two independent runs researched that day: the cloud routine's, which com `_draft2` of the same day, taking the cloud's committed set as its baseline rather than overwriting it. Three of the four pillars were carried forward from it untouched. Its CLARITY and Iran read October midterm recess, the Polymarket collapse reported as a market price; the Sept 9 IAEA referral and the Sept 12–13 NPT-withdrawal statement on the Iran side).

This pillar is the one thing corrected, and the disagreement is narrow and factual. Both runs agree the hike was priced and the SEP is the mover; they differ on how far out it reaches. This ru funds **4.1% end-2026 and 4.1% end-2027**, against **3.6%** for 2027 in the June SEP, with 2028 at 3.9%, 2029 at 3.6% and longer run 3.2%. The cloud set described the 2027–28 path qualitativ and held 12mo and 36mo flat as "broadly consistent with what the pillar already carried". Against the table that does not hold: a 50bp upward revision to the one-year-out median is not a nuan underwriting. Five-plus independent outlets lead on that same revision. So 3mo goes one point deeper than the cloud set, 6mo four, and **12mo ten**, flipping this pillar Mild Bull → Mild Bear at o

Why 44 and not lower. The strongest argument against this correction is not a number but a person: Chair Warsh submitted no dot at all — "I have refrained from offering any projections of m eighteen individual forecasts and the one person who runs the meeting declined to make one. The longer-run median is still 3.2%, so easing is deferred rather than cancelled; the SEP pairs th yield drop. Census retail sales the same morning (+1.2% m/m, control group +1.4% against ~0.8% consensus) cut the other way and are why the correction was made at all.

One correction to an earlier committed note, logged here rather than edited there. The committed `2026-09-16_draft` note states that Thune filed the motion to reconsider on the CLARITY prevailing side, he would be eligible to file it (Forbes, CoinDesk, FinanceFeeds, CryptoTimes — 4+ independent). Committed sets are never edited, so the attribution is corrected for the record

Stamp decision: AUTO-STAMPED. Ordinary light daily touch, not a weekly refresh; research capability fully available, with both Federal Reserve primary documents fetched directly rather tha nor the call-band flips are grounds to withhold the stamp.

Sept 16 light daily catch-up (score set 2026-09-16_draft), prior cycle: the FOMC decision, statement, SEP and dot plot were scheduled for 2:00pm ET that day and had NOT been released a band unchanged everywhere — **AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)."** Iran War Risk and CLARITY Act both moved that cycle on the Senate cloture failure

Prior cycle (Sept 12 FULL WEEKLY refresh, score set 2026-09-12_draft2): the week's deeper research turned up one genuinely new primary-sourced release — the August PPI (BLS, primary, headline is the highest of 2026, yet more than three-quarters of the monthly gain is attributable to volatile energy costs (diesel fuel +24.1% alone), and core PPI actually undershot consensus contradicts, the already-priced cooler-than-consensus August CPI read. This pillar also independently re-verified the August CPI print itself (BLS, Sept 11) with no discrepancy found. Jobless 15-16 hike odds read ~62-69% this week (as of Sept 10-11) — a market price, not used to move P, and flagged for the record as meaningfully lower than the ~90% figure the prior daily cycle's 9 Marketplace piece characterizing Chair Warsh as withholding forward guidance ahead of the meeting is single-source, not a quantifiable dated event, and does not move P. The Sept 15-16 1mo/3mo windows. **P HELD FLAT at 34/33/44/54/60.** This is a FULL WEEKLY refresh — per the runbook, weekly refreshes are categorically excluded from delegated auto-stamp authority re inconclusive/reinforcing, not a fresh directional catalyst), so **this set is left as DRAFT, status "draft," awaiting Alex's manual review.** Iran War Risk, CLARITY Act, and Tokenization each repor

Prior cycle (Sept 12 light daily catch-up, score set 2026-09-12_draft): re-checked — no new Fed speech or primary data release found since the Sept 11 CPI print. That morning's coverage of ("if the numbers don't improve, we have work to do"), not a fresh statement, and the hike-odds figure was a market price, not used to move P under the house sufficiency rule. **P HELD FLAT a** Mild Bull → Mild Bull horizon-weighted) — so per the runbook's delegated daily auto-stamp authority, **this set was AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)."**

Sept 11 light daily catch-up (score set 2026-09-11_draft), prior cycle: the August CPI print landed on schedule at 8:30am ET: BLS's own release (bls.gov, primary, fetched directly and re-fetc food and energy) **+0.3% m/m** after +0.2% in July and **+2.4% y/y**; energy rose 2.1% m/m and gasoline 3.9%, accounting for over a third of the monthly increase, while shelter rose 0.3%. Agai line and **core came in one tenth cooler on the month**, core y/y in line. That is the dated primary print this pillar has flagged as its next catalyst for a week, and it clears the sufficiency bar on it same oil shock that fires the Iran pillar's "sustained Brent >$100" clause this cycle shows up here as headline inflation. Market-implied September hike odds circulating around the print (~70% logged: several aggregator summaries of this print circulating within minutes carried figures inconsistent with the BLS release (e.g. a 3.1% core y/y) — discarded in favour of the primary docu bracketing the Sept 15-16 FOMC; 12mo and 36mo held flat at 54/60, because one print a tenth off consensus does not move a multi-year regime read. Note the direction: this is the first upwar everywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull horizon-weighted) — so per the runbook's delegated daily auto-stamp authority, **this set is AUTO-STAMPED: status comm** report.

Sept 10 light daily catch-up (score set 2026-09-10_draft), prior cycle: re-checked — the Aug CPI release (due Sept 11) and the Sept 15-16 FOMC meeting both remain pending per BLS/Fed c window moved, master call band unchanged anywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull horizon-weighted) — so per the runbook's delegated daily auto-stamp authority, cycle — see that report.

Prior cycle (Sept 9 light daily catch-up): re-checked directly against CME FedWatch-citing coverage — September hike odds read ~58.7%, consistent with the already-priced cluster; no new

Prior cycle (Sept 8 light daily catch-up): re-checked via WebSearch — no new Fed speech, data release, or FOMC commentary since Sept 3-4; the Sept 11 CPI print and Sept 15-16 FOMC mee

Prior cycle (Sept 6 light daily catch-up): re-checked via WebSearch — no new Fed speech or data release since Sept 3-4; Sept 6 was a Saturday, markets and the Fed's calendar quiet. **AUTO**

Sept 5 FULL WEEKLY refresh (2026-09-05_draft2) — carried forward for context: independently re-verified via WebSearch: Fed Governor Waller's genuinely dovish-leaning Sept 3 speech (" reversed that back up to 60-66% (Forbes/CME FedWatch) — a net hawkish drift for the week consistent with the Sept 5 cut. **HELD FLAT at 32/31/43/54/60. COMMITTED BY ALEX SEPTEMB**

CORRECTION — flagged this cycle: the prior same-day light daily catch-up (2026-09-05_draft) reported "COMMITTED — AUTO-STAMPED SEPTEMBER 5, 2026" in its commit message, but committed baseline for this pillar remains **2026-09-02_draft (36/35/45/55/61), auto-stamped Sept 3**. Not corrected retroactively in scores.json — stamping is Alex's call.

Prior cycle (Sept 2 light daily catch-up) — carried forward for context: held flat at 36/35/45/55/61; originally left as draft only because Iran War Risk's re-rate flipped the master call band, not stamp policy. A Sept 3 check found nothing material on any pillar; config/scores.json was untouched that cycle.

Prior cycle (Sept 1 light daily catch-up) — carried forward for context: re-checked CME FedWatch odds and found continued drift, not a fresh shock: September hike odds moved to ~66% (Fo release landed (Aug 31 was Labor Day). P held flat, AUTO-STAMPED, then the committed baseline.

Prior cycle (Aug 31 light daily catch-up) — carried forward for context: re-checked CME FedWatch odds and found continued drift, not a fresh shock: September hike odds moved from the ~5 Friday). No new H.4.1 or jobless claims release landed. P held flat, AUTO-STAMPED.

Prior cycle (Aug 29 full weekly refresh) — carried forward for context: Fed & Macro re-rated down further that cycle than a same-day catch-up draft written August 28 (score set 2026-08-28_ full weekly refresh. The underlying trigger is the same one that draft identified: Fed Chair Warsh's first Jackson Hole speech as Chair (federalreserve.gov primary transcript, Aug 28, confirme cooler summer PCE/CPI readings "do not tell me that underlying trends have meaningfully improved." A dedicated adversarial-verification pass this cycle caught a real error in the abandoned pull and cross-check instead clusters tightly in the high-50s — Motley Fool at 57.5% (citing CME FedWatch directly), CNBC's own body text at "nearly 56%," and a third independent read at " draft's "stable tape" characterization of BTC's reaction: BTC fell from above $81,000 pre-speech to a $79,613.44 close Aug 28, and continued to $77,666.16 by today. Two fresh, routine facts release showed the known reserve-drain pattern continuing — neither independently trigger-worthy. Together, the corrected, larger market move justifies a deeper cut than the abandoned dra explicitly declined to commit to a reaction function and one repricing doesn't reach three years out.

(That Aug 29 cycle was left as a draft solely because full weekly refreshes are categorically excluded from delegated daily auto-stamp authority, regardless of move size — not for any evide

The prior committed scores were **34 / 33 / 44 / 54 / 60** (2026-09-16_draft), re-rated down to **32 / 31 / 42 / 54 / 60** (2026-09-17_draft, cloud) and corrected further to **32 / 30 / 38 / 44 / 58** (20 against 3.6% in June. **32 / 30 / 38 / 44 / 58 has now held flat for two straight cycles (Sept 17, Sept 18)** — nothing this cycle cleared the sufficiency bar to move it further — **AUTO-STAMPED**

Override any P and re-stamp — the master blend recomputes.

What Changed Since Last Check

*LIGHT DAILY touch, October 15, 2026 (score set **2026-10-15_draft**, **AUTO-STAMPED**) — checked against the last committed baseline, 2026-10-14_draft (33/26/36/44/58).*

October 15, 2026 — LIGHT DAILY touch (this pillar RE-RATED DOWN; Iran War Risk also re-rated, see that report): re-checked this pillar's trigger table against primary sources via PRIMARY (BLS), corroborated via CNBC, Advisor Perspectives, Kiplinger, USInflationCalculator: headline +3.7% y/y (vs. 3.6% consensus, up from 3.4%), core +2.6% y/y (vs. 2.5% c shift, landing in a Fed that is hiking, not cutting. Market-priced (Kalshi/Polymarket, labelled distinctly from institutional estimates) Oct 28 hike odds rose to ~34% (hold ~66%) from a **33/26/36/44/58 → 31/23/34/43/58 (−2/−3/−2/−1/0)** — 1mo only −2 (Oct 28 still a hold favorite even after roughly doubling); 3mo the largest cut, −3 (Dec 9 sits in-window at mater updated: active_qual_set now points to **2026-10-15_draft**. Sourcing clears the sufficiency rule, no flip-line fired, verification raised no unresolved inconsistency — **AUTO-STAMPED** this cycle: −0.08→−0.14 equal-weight (Neutral→Neutral), +0.47→+0.43 horizon-weighted (Neutral→Neutral) — no call-band flip anywhere. BTC $81,590.01 (Oct 14 close, GitHub Act

October 14, 2026 — LIGHT DAILY touch (this pillar held flat; Iran War Risk re-rated, see that report): re-checked this pillar's trigger table against primary sources via WebSearch. T consensus forecasts (Dow Jones survey: +0.6% m/m, +3.6% y/y headline; core +0.2% m/m, +2.5% y/y) are logged here but explicitly NOT scored, per the sufficiency rule. No other its normal release calendar today is itself confirmation the Dec 11 continuing resolution (Public Law 119-103) still holds. **HOLD FLAT — nothing cleared the sufficiency rule; today's C** correction and re-rate on the Iran War Risk pillar only — this pillar's own P carries forward unchanged. The computed Bitcoin TA pillar did not move either (no new price bar since the — no action on this pillar's own score. **Later the same day: Alex reviewed this set and COMMITTED it** — status in config/scores.json advanced to `committed`, `stamped_by: "Alex` time since Sept 26.

October 13, 2026 — LIGHT DAILY touch (quant-only; qualitative set unchanged): re-checked this pillar's trigger table against primary sources via WebSearch. No new scheduled F consistent with, not incremental to, the already-logged ~78–82% hold range. Confirmed no government shutdown — the Dec 11 continuing resolution holds. **HOLD FLAT — nothing c** awaiting Alex's adjudication of the standing October 3 divergence (see My Decision). The computed Bitcoin TA pillar resynced to the Oct 12 close this cycle (1mo P 57→56 as BTC pu equal-weight reading from −0.06 to −0.07 while its horizon-weighted variant held at +0.49 — no action on this pillar's own score.

October 12, 2026 — LIGHT DAILY touch (quant-only; qualitative set unchanged): re-checked this pillar's trigger table against primary sources via WebSearch. No new scheduled F the Dec 11 continuing resolution holds. **HOLD FLAT — nothing cleared the sufficiency rule.** config/scores.json untouched; active set remains **2026-10-10_draft**, still status DRAFT ar resynced to the Oct 11 close this cycle (1mo P 56→57, 3mo P 59→57 as its cycle analog's agreement reverted to 2-of-3), leaving THE FINAL NUMBER's equal-weight reading unchan

October 11, 2026 — LIGHT DAILY touch (quant-only; qualitative set unchanged): re-checked this pillar's trigger table against primary sources via WebSearch. No new scheduled F the Dec 11 continuing resolution holds. **HOLD FLAT — nothing cleared the sufficiency rule.** config/scores.json untouched; active set remains **2026-10-10_draft**, still status DRAFT ar resynced to the Oct 10 close this cycle, moving THE FINAL NUMBER from −0.07 to −0.06 — no action on this pillar's own score.

October 10, 2026 — FULL WEEKLY refresh (score set 2026-10-10_draft), this version — RE-RATED DOWN, 35/29/37/44/58 → 33/26/36/44/58 (−2/−3/−1/0/0), a partial reversal which ran earlier the same day before this fuller weekly research pass. **Decisive new fact:** Fed Governor Christopher Waller's genuinely hawkish speech at the Istanbul Economic Fo FXStreet, Dailysabah, HousingWire, Newsquawk, Bloomberg Tax): further hikes are the likely next step if data keep behaving as expected; inflation has run above target ~5.5 years; t inflation risks — a genuine hawkish shift from his dovish spring-2026 posture; explicit downplaying of the weak September payrolls print (+29,000) as still "solid and stable"; hikes n FOMC voter rebutting the prior cycle's dovish narrative clears the sufficiency rule on its own. **Confirmed, not a mover:** no government shutdown (BLS and the Fed's H.4.1, week ende UP 197,000→199,000, four straight weeks below 200,000 — labor resilience in tension with, not confirming, the weak payrolls print, logged as context only. **Sizing:** 1mo −2 only, sinc largest cut, since the Dec 8–9 meeting sits in that window and December-dated odds drifted directionally higher (noisy, roughly 62–84% across sources, no figure settled); 6mo −1, s Trump Iran-strike comment and a solid 30-year auction, with no new quarterly data; 12mo/36mo HELD FLAT, since one week of Fed-speaker rhetoric and noisy market pricing is insu "two more hikes" claim (the same article keeps Goldman's base case at one December hike); a 2-year Treasury yield figure, reported in conflicting directions by two low-quality aggr its normal-schedule occurrence is used, as "no shutdown" evidence). **Stamp decision: this is a FULL WEEKLY refresh, categorically excluded from delegated auto-stamp authorit** Master FINAL NUMBER this blend: −0.07 equal-weight (Neutral) / +0.49 horizon-weighted (Neutral), versus −0.08 / +0.48 on the October 10 daily-sync reading — no call band flippe

October 10, 2026 — LIGHT DAILY touch (quant-only; qualitative set unchanged), earlier same-day check, superseded by the FULL WEEKLY refresh above: re-checked this pillar' early October; next FOMC remains Oct 27–28. Confirmed no government shutdown — the Dec 11 continuing resolution (signed Sept 2) holds, so no data-release disruption. **HOLD FL 03_draft2**, still status DRAFT and still awaiting Alex's adjudication of the divergence against the independently-researched second October 3 weekly, which on this pillar agreed on d researched in full.

October 9, 2026 — LIGHT DAILY touch (quant-only; qualitative set unchanged): re-checked this pillar's trigger table against primary sources via WebSearch. No new scheduled Fe government shutdown — the Dec 11 continuing resolution (signed Sept 2) holds, so no data-release disruption. **HOLD FLAT — nothing cleared the sufficiency rule.** config/scores.jso divergence against the independently-researched second October 3 weekly, which on this pillar agreed on direction but disagreed on size (see My Decision).

October 8, 2026 — LIGHT DAILY touch (quant-only; qualitative set unchanged): re-checked this pillar's trigger table against primary sources via WebSearch. No new scheduled Fe — the Dec 11 continuing resolution (signed Sept 2) holds, so no data-release disruption. **HOLD FLAT — nothing cleared the sufficiency rule.** config/scores.json untouched; active se independently-researched second October 3 weekly, which on this pillar agreed on direction but disagreed on size (see My Decision).

October 7, 2026 — LIGHT DAILY touch (quant-only; qualitative set unchanged; note: no Oct 6 touch landed, gap flagged for Alex, this entry covers the delta since Oct 5): re-che dated since October 5; next FOMC remains Oct 27–28. Confirmed no government shutdown — the Dec 11 continuing resolution (signed Sept 2) holds, so no data-release disruption. still status DRAFT and still awaiting Alex's adjudication of the divergence against the independently-researched second October 3 weekly, which on this pillar agreed on direction but

October 5, 2026 — LIGHT DAILY touch (quant-only; qualitative set unchanged): re-checked this pillar's trigger table against primary sources via WebSearch. No new scheduled Fe FOMC communication found dated since October 4; next FOMC remains Oct 27–28. **HOLD FLAT — nothing cleared the sufficiency rule.** config/scores.json untouched; active set re independently-researched second October 3 weekly, which on this pillar agreed on direction but disagreed on size (see My Decision).

October 4, 2026 — LIGHT DAILY touch (quant-only; qualitative set unchanged): re-checked this pillar's trigger table against primary sources via WebSearch. No new scheduled Fe FOMC communication found dated since October 3. **HOLD FLAT — nothing cleared the sufficiency rule.** config/scores.json untouched; active set remains **2026-10-03_draft2**, still s 3 weekly, which on this pillar agreed on direction but disagreed on size (see My Decision).

October 3, 2026 — FULL WEEKLY refresh (2026-10-03_draft2), LEFT AS DRAFT: RE-RATED UP, 27/25/34/43/58 → 35/29/37/44/58 (+8/+4/+3/+1/0) — the largest move of this 1mo 27 → 35: August PCE undershot (3.4% headline / 3.0% core, BEA Sept 30) and September payrolls came in at +29,000 against ~84,000 expected with unemployment up to 4.2 market have receded." The Oct 27–28 FOMC sits inside this window and now prices as a hold (~17–23% hike odds, CME FedWatch, a market price). **3mo 25 → 29, only four points:** percent), so the cycle is *deferred by about six weeks, not ended*. **6mo 34 → 37:** core PCE at 3.0% and wage growth down to +3.0% y/y shorten the plausible path. **12mo 43 → 44, or** structural drag no single month of cooler data fixes. **36mo held at 58:** nothing structural changed. **Why not more:** Barr re-stated the full hawkish case on Sept 29 — before either rel softening is a hiring freeze rather than a firing wave. **Corrections this cycle:** the "claims near 57-year lows" claim is false and is withdrawn (197,000 is not even 2026's lowest); two B corrected down from "above 75%"; and DGS2 for Sept 29 is 4.89%, not 4.88%.

- **Oct 2 light daily touch (quant-only; qualitative set unchanged):** re-checked this pillar via WebSearch for any new scheduled Fed speech or data release. None found for Oct 1-2 **FLAT — nothing cleared the sufficiency rule.** config/scores.json untouched; active set remains 2026-09-26_draft3.
- **Oct 1 light daily touch (quant-only; qualitative set unchanged) — August PCE and the Q2 GDP third estimate, the test this report flagged as outstanding, both landed Sept 30** meaningful share of that apparent cooling is mechanical: BEA implemented a methodology overhaul to the PCE price index on this same release (telegraphed since June 2026, in fresh disinflation evidence. Separately, Q2 GDP (third estimate) was revised sharply **up** to **+2.2%** annualized (from 1.5%), with GDI +2.6% — a genuine, well-corroborated upside reversing this cycle's hawkish cut. A government shutdown was separately averted (H.R. 6500, funding through Dec 11, 2026 at FY2026 levels) — stabilizing, not a P-mover. No c **PCE/GDP data landed but nets out two-sided, clearing no sufficiency bar either way.** config/scores.json untouched; active set remains 2026-09-26_draft3.

★ ★ **SUPERSESSION NOTICE, stated first because it affects how you should read everything else.** A `2026-09-24_draft` cycle proposed 29/27/36/44/58 on this pillar and edited "COMMITTED · AUTO-STAMPED" for a set still marked `draft` in `config/scores.json`. Per house convention it is treated as not-delivered, drops out of the visible lineage colum claims held up, and the two "corrections" a first-pass research effort made to them were themselves wrong and are withdrawn (see the next two items). Its score is superseded r

★ ★ **NEW — Fed Governor Michael S. Barr, Sept 23 (PRIMARY, verbatim, local text extraction).** All three load-bearing sentences confirmed on p.2 of *barr20260923a.pdf*, includin **timely fashion.**" *Two withdrawn corrections:* a first pass reported the "risks … have receded" sentence as ABSENT and moved the start time to 10:20 a.m.; the sentence **is prese** rather than silently fixed, because the abandoned draft had them right.

★ ★ **NEW — S&P Global flash US PMI, Sept 23, now PRIMARY.** The embargoed release was retrieved directly, upgrading this from secondary: composite 58.4, manufacturing 57.0, from 59.9" reading circulating in secondary coverage does not appear in the release — it is vendor data and is not quoted.

★ ★ **NEW — UMich final September, Sept 25 (PRIMARY).** Year-ahead inflation expectations 4.0% → 4.6%; **long-run 3.3% → 3.4%, ending three consecutive months at 3.3%**; se

★ ★ **NEW — DOL claims, Sept 24 (PRIMARY): 197,000** for the week ended Sept 19; prior week **revised up to 198,000** and the 4-week average now **202,250** — both correcting sta

★ ★ **NEW — H.4.1, Sept 24 (PRIMARY, arithmetic checked): reserve balances −$83,601M week-over-week** to $2,930,193M, with TGA +$100,056M. The largest one-week drain l

- **Two Fed voices, DOWNGRADED on sourcing after verification.** Collins (Sept 22) is quoted correctly but traces entirely to one Reuters story — **effectively single-agency**, and ne hedged with "but we have to see"; no primary transcript exists and genuinely independent reporting is two outlets. Both corroborate; neither could move P alone.
- **Why this clears the sufficiency bar:** one primary Federal Reserve source, verbatim from the Fed's own server and extracted locally rather than summarised, plus four further pri
- **MARKET PRICES, reported and never mixed with the SEP:** the 10-year yield 4.96% → 5.11% → 5.18% (Sept 22–24), highest since 2007 — now **double-primary-confirmed** by the caveat and supersedes its press-sourced 5.104%. CME FedWatch October-hike odds ~53% → 77.5% → ~70–76%; traders now price ~four more hikes by June 2027, retiring this could not reproduce it and traced it to a summarizer reading a truncated file.
- **Score decision: RE-RATED DOWN to 27/25/34/43/58** (−4/−4/−3/−1/0). **LEFT AS DRAFT, NOT AUTO-STAMPED** — a full weekly refresh is categorically excluded from delegated federalreserve.gov, dol.gov, treasury.gov, the UMich survey and the S&P Global release were all reached directly.
- **What would change my mind, in order:** August PCE and Q2 GDP landed **Sept 30** and came back two-sided (see What Changed) — not itself a trigger; next is whether the Oct 27

Carried forward — what changed in the September 23 light daily touch (2026-09-23_draft, committed, auto-stamped), for continuity:

- **10-year Treasury yield ~4.96-4.97% Sept 22**, essentially flat (CNBC, TradingEconomics — two-source, but a market price, not scored).
- **CME FedWatch: 59.7% odds of an Oct 28 hike** — effectively single-sourced (one aggregator citing CME, not independently pulled from CME's own site); does not clear the bar.
- **Fed Vice Chair Jefferson's Sept 22 speech** at the NY Fed's Treasury Market Conference (primary, federalreserve.gov) — discount-window/Treasury-market plumbing, off-topic
- No new jobless claims, PCE, CPI, retail sales, or housing data found dated in this window.
- **Score decision: HELD FLAT at 31/29/37/44/58.** AUTO-STAMPED per delegated daily authority.

Carried forward — what changed in the September 22 light daily touch (2026-09-22_draft, committed, auto-stamped), for continuity:

- ★ **★ NEW this cycle — Philadelphia Fed Manufacturing Business Outlook Survey, released Sept 17, 2026 (primary source page confirmed at philadelphiafed.org, 5+ independe rose to 31.3 from 17.7**; employment fell sharply (11.8 from 27.9) and future activity fell (52.9 from 73.6).
- ★ **★ NEW this cycle — New York Fed Empire State Manufacturing Survey, released Sept 15, 2026 (PRIMARY, fetched directly from newyorkfed.org):** general business condition received rose to 28.1 from 23.1, a three-month high.
- **Why this clears the sufficiency bar:** two independent Fed district banks' own primary surveys, same week, same directional signal (headline cooling, input-cost/selling-price pre
- **Why only one point:** both are soft/sentiment surveys whose own forward-looking components also fell, and market pricing turned risk-on into Sept 18-19 (10-year off its 5.04% h
- **CLARITY Act, Iran War Risk, and Tokenization carried forward unchanged** — not re-researched this cycle; this is a targeted single-pillar touch, not a full weekly pass.
- **Score decision: RE-RATED DOWN one point on 1mo/3mo/6mo, 32/30/38/44/58 → 31/29/37/44/58;** 12mo/36mo held. Sourcing clears the sufficiency rule — **AUTO-STAMPED:**

Carried forward — what changed in the September 19 FULL WEEKLY refresh (2026-09-19_draft, still draft), for continuity:

*FULL WEEKLY refresh, September 19, 2026 (score set **2026-09-19_draft**, draft, awaiting Alex's stamp) — checking for changes since the 2026-09-18_draft committed baseline. **This pillar HELD FLAT at 32/30/***

- ★ **★ NEW this cycle — jobless claims, week ended Sept 12 (DOL, primary, released Sept 17): 196,000**, the lowest since mid-July; four-week average 203,250. Confirmatory of the
- ★ **★ NEW this cycle — housing data (Census Bureau/HUD and NAR, primary, released Sept 17 and Sept 10): housing starts −2.6% m/m, permits −2.7% m/m, existing-home sal** insufficient alone to move P.
- **Background color, not scored — University of Michigan preliminary September sentiment fell to 47.8 from 51.7,** near a record low, with 1yr inflation expectations up to 4.6%; pr
- **Market-price context, not scored:** the 10-year Treasury briefly touched a 19-year high near 5.04% before settling near 4.95%; CME FedWatch prices 55.1% odds of another hike
- **Logged, not scored — a high-profile political story:** President Trump and senior administration officials publicly pressured the Fed against hiking, with Trump demanding rates b independent outlets — a governance/Fed-independence storyline, not new economic evidence.
- **Score decision: HELD FLAT at 32/30/38/44/58.** Full independent primary-source research this cycle; nothing cleared the sufficiency bar. FULL WEEKLY refresh — categorically

Carried forward — what changed in the September 18 light daily touch (2026-09-18_draft, committed, auto-stamped), for continuity:

*LIGHT DAILY touch, September 18, 2026 (score set **2026-09-18_draft**, committed, auto-stamped) — checking for changes since the 2026-09-17_draft2 committed baseline. **This pillar HELD FLAT at 32/30/38/4***

- **Re-checked for a new dated development — found none.** The Sept 16 FOMC dot-plot revision already drives this window's read in the currently committed set.
- **A Sept 18 Motley Fool piece discussing "the most important number" in the Fed's Summary of Economic Projections is single-source commentary** on the same already-price fact, does not move P.
- **Score decision: HELD FLAT at 32/30/38/44/58.** No window moved; nothing new cleared the sufficiency bar. AUTO-STAMPED per delegated daily authority.

- **The September 15-16 FOMC — with the SEP and dot plot — has not yet happened.** The decision and statement are due **September 16**. That is the next dated catalyst for this pil
- **Market-implied hike odds are a MARKET PRICE and are explicitly not used to move P.** Reads circulating this week span a wide **66-83%** band across sources for a 25bp hike —
- **Score decision: HELD FLAT at 34/33/44/54/60.** No window moved. Nothing dated and primary-sourced arrived to move it.

Carried forward — the September 12 FULL WEEKLY refresh, for continuity:

FULL WEEKLY refresh, September 12, 2026 — checking for changes since this morning's committed baseline (2026-09-12_draft, auto-stamped).

- **Re-verified August CPI (BLS, released Sept 11) independently:** headline +0.4% m/m / +3.4% y/y, core +0.3% m/m / +2.4% y/y, shelter +0.3% m/m / +3.0% y/y — matches the f
- ★ **★ NEW this cycle — August PPI (BLS, primary, released Sept 10, 2026; corroborated by CNBC, CNN, Yahoo Finance — 3+ independent outlets).** Headline final demand +0.4% attributable to volatile energy costs (diesel fuel +24.1% alone). Core PPI (ex food/energy) came in at +0.3% m/m, UNDER consensus on one reading (+0.2% m/m on a further cor **contradicts, the already-priced "cooler than consensus" CPI narrative — not a distinct new directional catalyst, so it does not move P despite being a fresh, primary-source**
- **DOL initial jobless claims, week ending Sept 5 (released ~Sept 11, primary): 206,000, down 1,000 w/w, 4-week average 206,000** — steady, unremarkable, no signal.
- **CME FedWatch-tracked market-implied odds of a 25bp hike at the Sept 15-16 FOMC read ~62-69% this week (as of Sept 10-11) — a market price only, not an institutional est** prior (this morning's) daily cycle's background note — both reported as market-price snapshots at different times, the divergence noted, not resolved or editorialized on.
- **Fed Chair Warsh: no new substantive remarks since the Aug 28 Jackson Hole speech.** A Sept 9 Marketplace piece characterizing him as withholding forward guidance ahead does not move P.
- **The Sept 15-16, 2026 FOMC meeting has NOT yet occurred** as of this research (Sept 12) — flagged prominently as this pillar's next real catalyst, most acute on the 1mo/3mo wi
- **Score decision: P HELD FLAT at 34/33/44/54/60 — FULL WEEKLY REFRESH, left as DRAFT for Alex's manual review (weekly refreshes are categorically excluded from deleg**

Carried forward — what changed in the Sept 12 light daily catch-up (2026-09-12_draft, auto-stamped this morning), for continuity:

- **Re-checked — no new Fed speech or primary data release found since the Sept 11 CPI print.** The Sept 15-16 FOMC meeting remains the next dated catalyst.
- **Logged, not scored:** that morning's coverage of ~90% market-implied September hike odds and Fed Chair Warsh's hawkish framing traced to his Aug 28 Jackson Hole remarks,
- **Score decision: P HELD FLAT at 34/33/44/54/60.** No window moved, master call band unchanged everywhere — **AUTO-STAMPED per delegated daily authority**, the last COM

Carried forward — what changed in the Sept 10 light daily catch-up, for continuity:

- **Sept 10, light daily catch-up:** re-checked — the Aug CPI release (due Sept 11) and the Sept 15-16 FOMC meeting both remained pending per BLS/Fed calendars; no new Fed spe

Carried forward — what changed in the Sept 9 light daily catch-up, for continuity:

- **Sept 9, light daily catch-up:** re-checked directly against CME FedWatch-citing coverage — September 25bp-hike odds read ~58.7% (as of Sept 7, CNBC/cryptonews), consisten since Sept 3-4; the Sept 11 CPI print and Sept 15-16 FOMC remain the next dated catalysts.
- **Score decision: HELD FLAT at 32/31/43/54/60 — AUTO-STAMPED per delegated daily authority.**

Carried forward — what changed in the Sept 8 light daily catch-up, for continuity:

- **Sept 8, light daily catch-up:** re-checked via WebSearch — no new Fed speech, data release, or FOMC commentary since Sept 3-4. The Sept 11 CPI print and the Sept 15-16 FOM
- **Score decision: HELD FLAT at 32/31/43/54/60 — AUTO-STAMPED per delegated daily authority.**

Carried forward — what changed in the Sept 6 light daily catch-up, for continuity:

- **Sept 6, light daily catch-up:** re-checked via WebSearch — no new Fed speech, data release, or FOMC commentary since Sept 3-4 (Waller's dovish-leaning Sept 3 speech and t unemployment steady 4.1%). September 6 is a Saturday — no data or speeches scheduled. The Sept 11 CPI print remains the next dated catalyst and has not yet landed.
- **Score decision: HELD FLAT at 32/31/43/54/60.** No window moved; nothing this cycle clears the sufficiency bar for a further move in either direction.

Carried forward — what changed in the Sept 5 FULL WEEKLY refresh (2026-09-05_draft2, committed by Alex Sept 5), for continuity:

- ★ **★ NEW — August jobs report (BLS, primary, Sept 4): nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment steady 4.1%.** Corroborated by CNBC, Yahoo Fina
- ★ **★ NEW — Sept 15-16 FOMC hike-odds pricing moved higher off the jobs beat** (roughly 60-66% across sources, up from the Sept 2 baseline's "~60% hold" framing); 2yr yield
- **Score decision: RE-CONFIRMED the re-rate at 32/31/43/54/60** (1mo -4, 3mo -4, 6mo -2, 1yr -1, 3yr -1 vs. the Sept 2 TRUE committed baseline) — the fresh, dated, primary-sou is a FULL WEEKLY refresh, categorically excluded from the delegated daily auto-stamp policy, so it went to manual review — **COMMITTED BY ALEX SEPTEMBER 5, 2026**.
- **Correction:** the same-day earlier 2026-09-05_draft's commit message claimed it was auto-stamped, but config/scores.json's status field was never actually advanced — a bug i

Carried forward — what changed in the Sept 3 light daily catch-up (no new score set), for continuity:

- **Re-checked CME FedWatch and the H.4.1/data calendar; nothing material found on any pillar dated Sept 2-3.** config/scores.json untouched; blend re-run against fresh quant

Carried forward — what changed in the Sept 2 light daily catch-up (2026-09-02_draft), for continuity:

- **No new H.4.1 or data print found dated Sept 1-2.** September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continued the same post-Jackson-Hole drift already discipline against chasing drift, it did not independently move P.
- **BTC traded at $76,581.44 on Sept 2** — down from $78,038.78 on Sept 1 (Bitstamp), a real pullback driven by the Iran War Risk escalation covered in that pillar's report, not by an
- **Score decision: HELD FLAT at 36/35/45/55/61.** No window moved for this pillar. This cycle's shared score set (2026-09-02_draft) was originally left as draft — Iran War Risk's s **SEPTEMBER 3, 2026**, once Alex widened the delegated daily auto-stamp policy.

Carried forward — what changed in the Sept 1 light daily catch-up (2026-09-01_draft, auto-stamped), for continuity:

- **CME FedWatch September hike odds continued drifting up, not a fresh shock:** ~60.4% (Aug 31 baseline, CNBC) → ~66% (Forbes/KuCoin, 11:40am ET Aug 31) — the same post P per the sufficiency rule and this pillar's own standing discipline against chasing drift.
- **No new H.4.1 or jobless claims release landed Aug 31-Sept 1** — Aug 31 was Labor Day, a US federal holiday; next H.4.1 is due Sept 3.
- **BTC traded at $78,038.78 on Sept 1** — down from $78,447.16 on Aug 31 (Bitstamp).
- **Score decision: HELD FLAT at 36/35/45/55/61.** Light daily touch, no window moved, no call band flipped — **AUTO-STAMPED** per delegated daily authority, then the committed

Carried forward — what changed in the Aug 31 light daily catch-up (2026-08-31_draft, auto-stamped), for continuity:

- **CME FedWatch September hike odds continued drifting up, not a fresh shock:** ~56-58% (Aug 29 baseline) → ~57% (CoinSpectator/Bitcoin.com, Aug 30) → ~60.4% (CNBC Ja event, cannot move P per the sufficiency rule.
- **No new H.4.1 (next due Sept 3, last Aug 27) or jobless claims release landed in this window.**
- **BTC traded at $78,447.16 on Aug 31** — up from $77,666.16 on Aug 29 (Bitstamp).
- **Score decision: HELD FLAT at 36/35/45/55/61.** AUTO-STAMPED per delegated daily authority.

Carried forward — what changed in the Aug 29 full weekly refresh (2026-08-29_draft, now superseded), for continuity:

- ★ **★ ADVERSARIAL CORRECTION — the abandoned Aug 28 draft's CME FedWatch September hike-odds figure was wrong.** Corrected from ~35.4%→~45.7% to the real ~35%–
past coin-flip, not just approaching it.
- ★ **★ CORRECTED — BTC's reaction to the speech.** Not a stable tape: BTC fell from above $81,000 pre-speech to $79,613.44 (Aug 28 close), continuing to $77,666.16 by Aug 29.
- ★ **★ NEW — jobless claims, week ended Aug 22 (DOL, primary, Aug 27): 203K vs. 208K consensus.** Mildly hawkish-adjacent, not independently trigger-worthy.
- ★ **★ NEW — Fed H.4.1, week ended Aug 26 (federalreserve.gov, primary): reserves −$10,351M w/w to $2,924,936M; TGA −$2,876M w/w to $950,736M.** Routine continuation
- **Carried forward, re-confirmed, not re-litigated — Fed Chair Warsh's first Jackson Hole speech as Chair (Aug 28) and July PCE (bea.gov, Aug 26, 3.7% y/y headline, 0.1pp ho**
- **Score re-rate: 43/41/48/56/62 → 36/35/45/55/61** — 1mo -7, 3mo -6, 6mo -3, 1yr -1, 3yr -1, deeper than the abandoned draft's -5/-4/-2/-1/-1 because the corrected market move
- **Status decision:** left as a draft, NOT auto-stamped, and flagged for Alex's manual review — this is a FULL WEEKLY refresh, categorically excluded from delegated daily auto-star
even a close call).

Carried forward — the abandoned Aug 28 catch-up draft (2026-08-28_draft) was written but never rendered, selfchecked, archived, or committed, for continuity:

- **That draft re-rated P to 38/37/46/55/61** on the same Warsh speech and PCE print this cycle re-verifies, using a since-corrected CME odds figure (~45.7%, now corrected to ~5
superseded; its underlying facts, corrected, are folded into this cycle above.

Carried forward — what changed in the Aug 22 full weekly refresh (score set 2026-08-22_draft2), for continuity:

- **NEW — FOMC minutes' hawkish bloc wider than previously known:** beyond the three named dissenters, "several participants" also favored a hike and "many participants" saw
Quartz, Newsquawk, goldsilver.com).
- **NEW — 30-year Treasury yield hit 5.31-5.33%, a ~19-year high,** around Aug 17-18, driven substantially by the CBO's raised $2.1T FY deficit projection and heavy long-bond sup
- **NEW — equities sold off Aug 20** (S&P −0.87%, Dow −1.32% partly Walmart-driven, Nasdaq −1%) with a partial Aug 21 recovery, attributed to a mix of the hawkish minutes and ri
- **NEW — CME FedWatch/Kalshi/Polymarket/investing.com/defirate.com independently re-pulled and cross-checked directly:** September-hold odds cluster ~68-70% across a
- **NEW — a circulating "93.6% September hike probability" claim was traced this cycle to a garbled conflation with Kalshi's July-meeting hold odds (~92-93% hold) and confi**
- **Re-confirmed, not new — jobless claims week ended Aug 15: 206K vs. 210K consensus, 4-week average 204K** (DOL, primary, Aug 20) — confirms the low-layoff trend alread
- **Re-confirmed, not new — July retail sales miss (-0.6% m/m vs. +0.1% consensus, still +5.0% y/y)** — a genuine but noisy dovish-leaning counter-signal, per this pillar's discipli
- **Score decision:** P held flat at 43 / 41 / 48 / 56 / 62 — the hawkish minutes detail and the noisy weak retail-sales print largely offset an already-priced rate-odds market; nets to a
- **New pending triggers logged for the next cycle:** PCE (July data, bea.gov) due Aug 26; Chair Warsh's first speech as Chair at Jackson Hole, Aug 28, 10:00am ET, theme "Financi
- **Status decision:** this score set was **left as a draft at delivery, not auto-stamped**, because it is a FULL WEEKLY refresh, categorically excluded from Alex's delegated daily auto-s
band flipped — that clean-evidence bar qualifies daily cycles for self-approval, not weekly refreshes). **COMMITTED BY ALEX August 23, 2026** after independent review.
