COINPICKS · RESEARCH & EDUCATION

Master Direction Report

Five Pillars, One Table, One Number — Updated & Re-verified October 15, 2026 — active score set `2026-10-15_draft` (LIGHT DAILY touch), **AUTO-STAMPED under Alex's delegated daily authority, October 15, 2026** — re-rates Fed & Macro down on a hot September CPI print and Iran War Risk down on 6mo/12mo on a worse-than-disclosed casualty finding, built on top of `2026-10-14_draft` (committed by Alex, October 14) · Prior committed baseline: 2026-09-26_draft3, COMMITTED BY ALEX, September 27, 2026

*The active score set is **2026-10-15_draft**, a **LIGHT DAILY touch** built on **2026-10-14_draft** (committed by Alex October 14). Two things moved this cycle. **Fed & Macro RE-RATED DOWN** on four windows, 33/26/36/44/58 → 31/23/34/43/58 (−2/−3/−2/−1/0): the September 2026 CPI print (BLS, primary, released Oct 14; corroborated via CNBC, Advisor Perspectives, Kiplinger, USInflationCalculator) beat consensus on both headline (+3.7% y/y) and core (+2.6% y/y), extending the Oct 8 Waller hawkish shift and lifting market-priced Oct 28/Dec 9 hike odds. **Iran War Risk RE-RATED DOWN** on 6mo/12mo, 1/1/13/32/66 → 1/1/12/31/66 (0/0/−1/−1/0): the Oct 11 Petro Dolphin drone attack off Sohar, Oman now carries a worse-than-disclosed casualty picture — 2 of 11 Indian crew MISSING, not merely injured, search-and-rescue ongoing, corroborated across 7+ outlets — plus a dated Seatrade tally confirming at least 18 Hormuz-theater attacks since Oct 1. No flip-line clause fired on either pillar. CLARITY Act and Tokenization both HELD FLAT. Research capability was not degraded this cycle; verification raised no unresolved inconsistency — **AUTO-STAMPED under the widened delegated daily authority: status committed, stamped_by "Alex (auto-stamped)."** The computed Bitcoin TA pillar moved on one of five windows (6mo P 62→61) as its cycle analog's median eased, with price pulling back to the Oct 14 close — moving THE FINAL NUMBER from −0.08 to −0.14 on the equal-weight variant (horizon-weighted +0.47→+0.43) — no call-band change at the master level.*

THE FINAL NUMBER · OCTOBER 15, 2026 (DAILY CHECK; FED & MACRO AND IRAN WAR RISK RE-RATED, SEE THOSE REPORTS) · EQUAL-WEIGHT MODEL · QUALITATIVE SET COMMITTED, AUTO-STAMPED

−0.14

Neutral overall — −0.14, down six hundredths from the October 14 daily-sync reading (−0.08), versus −0.08 on the Sept 26 committed baseline. The headline call band holds Neutral, and the horizon-weighted variant reads +0.43, still inside Neutral, down from +0.47 (Oct 14). Equal-weight mean of the five master window signals (scale −10 to +10). **Fed & Macro re-rated down on the hot September CPI print; Iran War Risk re-rated down on 6mo/12mo on a worse-than-disclosed casualty finding** this cycle; CLARITY Act and Tokenization both held flat. **NO call band flipped anywhere** this cycle, on any window or on either final-number variant. Bitcoin TA (computed) moved on one of five windows this cycle: P 55/56/61/68/69 (6-month P eased 62→61 as its cycle analog's median eased; 1mo/3mo/1yr/3yr all unchanged), BTC $81,590.01 (Oct 14, 2026 close, down 1.74% from Oct 13). **Two call bands flipped on the September 26 weekly and remain flipped:** 3 months went Mild Bear → Bear, 6 months went Neutral → Mild Bear. A final number this close to zero is not a prediction that nothing happens; it is five forces of real size pulling against each other, which is exactly what the leave-one-out range below is for — and that range still changes sign depending on which single pillar you drop.

COINPICKS MASTER BLEND · ALL FIVE PILLARS EQUAL-WEIGHTED · 20% EACH

Compiled September 26, 2026 (FULL WEEKLY refresh, **COMMITTED BY ALEX, September 27, 2026**); light daily touch October 14, 2026 (2026-10-14_draft, committed by Alex — Iran War Risk corrected and re-rated); light daily touch October 15, 2026 (2026-10-15_draft, status COMMITTED, AUTO-STAMPED — Fed & Macro and Iran War Risk re-rated) · BTC $81,590.01 (Oct 14, 2026 close; GitHub Actions data relay, read via run.py numbers; no local fetch needed — the sandbox network path blocks run.py quant's own fetch step, per the documented workaround) · Engine: engine/blend.py — run.py blend (equal-weight, active set 2026-10-15_draft, committed; prior committed set: 2026-10-14_draft; last TRUE weekly-committed set: 2026-09-26_draft3) · Not Financial Advice

The Master Table

MERGE NOTE — TWO independent full weekly refreshes ran for October 3, the same duplicate-cycle failure mode the runbook documents for Sept 26. *The cloud routine researches the day itself unless it can already see the day's commit on the shared repo; this run's commit was still local, so it researched independently and pushed first.* ***Origin's lineage is authoritative and untouched*** *— its set keeps the key `2026-10-03_draft` — so this package is `2026-10-03_draft2` and archives as `2026-10-03-2`.* ***The divergence needs Alex's decision:*** *the cloud's weekly moved ONLY Fed & Macro (to 30/27/35/43/58) and held the other three flat, while this package moves all four.* ***On Fed & Macro the two independent passes AGREE ON DIRECTION and differ on size*** *— the cloud took +3 on the 1-month window, this package +8 — which is genuine corroboration that the pillar should rise. On the other three pillars this package diverges alone, each cut resting on a dated primary fact. It is also the package with four independent adversarial-verification passes behind it, which withdrew three false claims from previously delivered reports.* ***UPDATE, October 10:*** *this divergence remains* ***UNRESOLVED*** *— Alex has not yet adjudicated between `2026-10-03_draft` and `2026-10-03_draft2`, and this cycle's own research builds forward on `2026-10-03_draft2` (the active_qual_set) without resolving it. The whole thesis in five rows, on the* ***October 10 FULL WEEKLY refresh*** *(2026-10-10_draft,* ***DRAFT — awaiting Alex's stamp****) vs. the October 3 weekly (2026-10-03_draft2, DRAFT, never stamped) and the Sept 26 committed baseline (2026-09-26_draft3, committed by Alex September 27, 2026). Signals on the −10 to +10 scale.* ***All four qualitative pillars moved again this cycle and they again very nearly cancelled:*** *CLARITY Act and Tokenization each re-rated UP modestly, Fed & Macro re-rated DOWN, and Iran War Risk HELD FLAT — leaving THE FINAL NUMBER within a hundredth or two of where it sat. That near-identity is a result, not a non-event, and is spelled out below.*

WINDOW	MASTER (EQUAL-WT)	OCT 14 (COMMITTED)	SEPT 26 (COMMITTED)	THE CALL
1 month	**−2.20**	**−2.14**	**−2.15**	**Bear** — down from −2.14 (Oct 14), band unchanged. CLARITY Act −5.44 (P still 10 at this window), Tokenization +1.15, and Iran −4.70 are all unchanged (Iran already at its floor at this window; its 6mo/12mo re-rate does not reach 1mo). **Fed & Macro moves to −2.58** (from −2.31) on the hot September CPI print; Bitcoin TA holds at +0.60.
3 months	**−1.82**	**−1.74**	**−1.63**	**Bear** — down from −1.74 (Oct 14). CLARITY −3.13, Tokenization +2.11 and Bitcoin TA +0.67 are unchanged; Iran holds at −5.10 (already at its floor). **Fed & Macro moves to −3.67** (from −3.26), the largest single-pillar move this cycle, since the Dec 9 FOMC sits inside this window.
6 months	**−0.63**	**−0.54**	**−0.59**	**Mild Bear** — down from −0.54 (Oct 14). CLARITY holds at −0.54; Tokenization holds at +2.72. **Fed & Macro moves to −2.05** (from −1.79) on the hot CPI print; **Iran War Risk moves to −4.26** (from −4.14) on the Petro Dolphin casualty finding; Bitcoin TA eases to +0.97 (from +1.06) as its cycle analog's median eased.
1 year	**+1.12**	**+1.16**	**+1.15**	**Mild Bull** — down slightly from +1.16 (Oct 14). CLARITY holds at +3.31; Tokenization and Bitcoin TA hold at +3.37 / +1.73. **Fed & Macro moves to −0.84** (from −0.72); **Iran War Risk moves to −1.98** (from −1.87).
3 years	**+2.84**	**+2.84**	**+2.82**	**Bull — unchanged**. Every pillar's 3-year P held exactly where it sat (CLARITY 92, Iran 66, Tokenization 86, Fed 58, Bitcoin TA P 69): nothing this cycle was sized onto this horizon, including the CPI print and the casualty finding, which touched only the near/medium windows. Every

				pillar remains positive here, and that unanimity at the long end against a Bear read at 1 month is the single most important shape in this table.

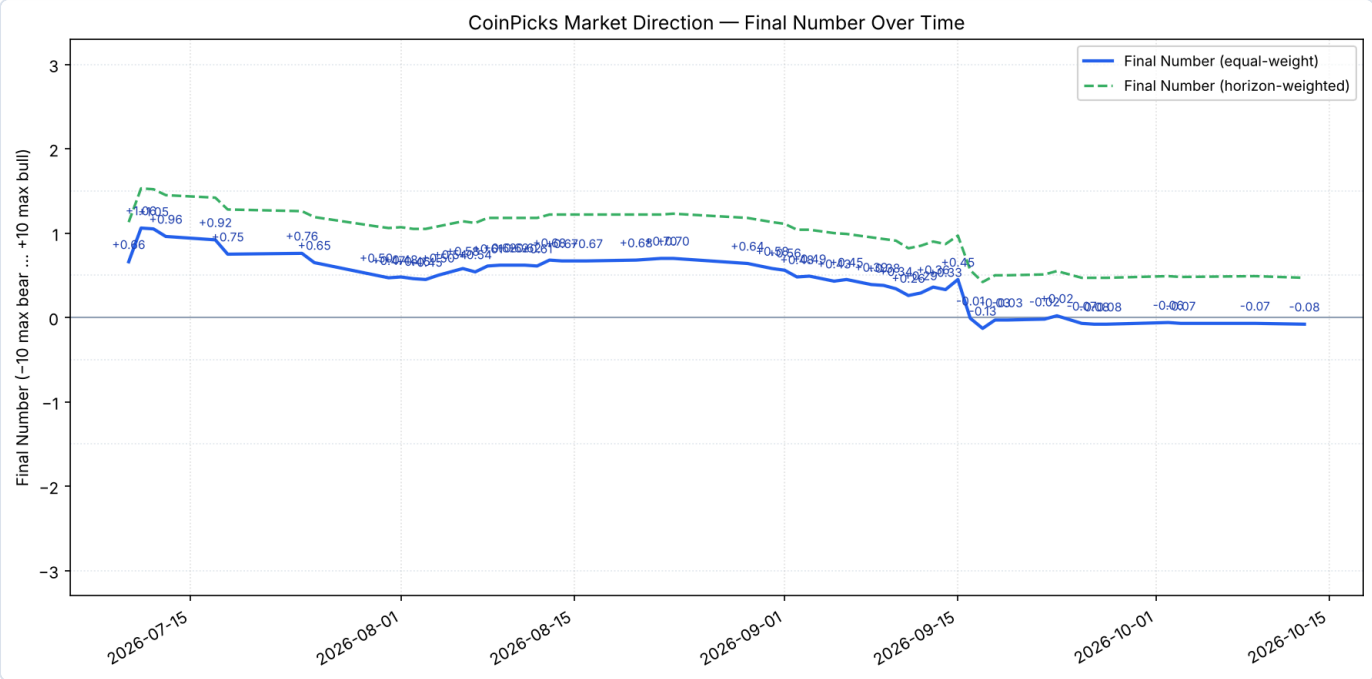

Formula: per pillar, Signal = ((P − 50) ÷ 50) × Quality × Impact, with Impact a uniform **8** for every pillar. **MASTER = the simple mean of all five pillar signals** — equal weight, 20% each (add a pillar and it auto-rebalances to 1/N). Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. Machine-verified two ways (hand recompute of every pillar signal and every master window, cross-checked against run.py blend's own output).

THE FINAL NUMBER — HOW IT'S BUILT, AND WHAT MOVED THIS CYCLE

−0.14 = the equal-weight mean of the five MASTER signals above ((−2.20 − 1.82 − 0.63 + 1.12 + 2.84) ÷ 5 = −0.14). Weighting the longer windows harder (10/15/20/30/25%) gives **+0.43**. Both readings are **Neutral**, and both are within a few hundredths of the October 14 daily-sync's −0.08 / +0.47 and the Sept 26 committed baseline's −0.08 / +0.47. **NO call band flipped anywhere** this cycle, on any window or on either final-number variant. **What moved this cycle (October 15, light daily touch): Fed & Macro RE-RATED DOWN** on four windows, 33/26/36/44/58 → 31/23/34/43/58 (−2/−3/−2/−1/0), on the September 2026 CPI print (BLS, primary, released Oct 14) beating consensus on both headline (+3.7% y/y) and core (+2.6% y/y), extending the Oct 8 Waller hawkish shift and lifting market-priced Oct 28/Dec 9 hike odds (Kalshi/Polymarket, labelled distinctly from institutional estimates) to roughly 34%/75–85%. **Iran War Risk RE-RATED DOWN** on 6mo/12mo, 1/1/13/32/66 → 1/1/12/31/66 (0/0/−1/−1/0): the Oct 11 Petro Dolphin drone attack off Sohar, Oman now carries a worse-than-disclosed casualty picture — 2 of 11 Indian crew MISSING, not merely injured, search-and-rescue ongoing, corroborated across 7+ outlets — plus a dated Seatrade tally confirming at least 18 Hormuz-theater attacks since Oct 1. No flip-line clause fired on either pillar. CLARITY Act and Tokenization both HELD FLAT. The computed Bitcoin TA pillar moved on one of five windows (6mo P 62→61) as its cycle analog's median eased, with price pulling back to the Oct 14 close. **Stamp decision: sourcing clears the sufficiency rule on both re-rated pillars, no flip-line clause fired, verification raised no unresolved inconsistency — AUTO-STAMPED under Alex's delegated daily authority: status committed, stamped_by "Alex (auto-stamped)." The honest reading of a near-zero number is not "calm"** — it is a Bear 1-month and a Bull 3-year held apart by five forces of real size, which is exactly what the leave-one-out range below exists to expose.

The Trend — Final Number, Cycle by Cycle

Every committed reading of THE FINAL NUMBER, in sequence — the record of how the call has actually moved, not just where it sits today. (Today's reading joins this history once archived.)

Generated by engine/history.py from every committed master_blend snapshot in reports/archive/. Rebuilt automatically on every run.py archive (or manually via run.py history).

The Full Pillar Matrix

*Every pillar's signal on every window — **October 15 LIGHT DAILY touch (2026-10-15_draft, COMMITTED, AUTO-STAMPED)**, built on the October 14 committed baseline. Each pillar report shows its own full score lineage.*

PILLAR (WEIGHT · IMPACT)	1 MO	3 MO	6 MO	1 YR	3 YR	STATUS
CLARITY Act (20% · 8)	−5.44	−3.13	−0.54	+3.31	+6.38	**HELD FLAT** at 10/27/46/73/92 — Senate remains in recess through Nov 9 (H.R. 2347, not H.R. 3633, queued as the first item back), so 1mo HOLDS at 10. The CFTC's Oct 5 ANPRM comment period re-confirmed still open; no new procedural step beyond what's already logged
Iran War Risk (20% · 8)	−4.70	−5.10	−4.26	−1.98	+1.41	**RE-RATED DOWN** on 6mo/12mo to 1/1/12/31/66. The Oct 11 drone attack on the product tanker Petro Dolphin off Sohar, Oman (already logged generically) now carries a worse-than-disclosed casualty picture — 2 of 11 Indian crew MISSING, not merely injured, search-and-rescue ongoing, corroborated across 7+ outlets. A dated Seatrade tally confirms at least 18 Hormuz-theater attacks since Oct 1. No flip-line clause fired. Research access remains degraded for the Brent spot series behind this pillar's oil flip-line
Tokenization RWA (20% · 8)	+1.15	+2.11	+2.72	+3.37	+4.03	**HELD FLAT** at 58/65/70/77/86 — OKXICE's Oct 4 SEC Issuer Notice re-confirmed still carries no launch date; DTCC's stated October launch target re-confirmed still unconfirmed. Nothing clears the sufficiency rule
Fed & Macro (20% · 8)	−2.58	−3.67	−2.05	−0.84	+0.83	**RE-RATED DOWN** on four windows to 31/23/34/43/58 — the September 2026 CPI print (BLS, primary, released Oct 14) beat consensus on both headline (+3.7% y/y vs 3.6%) and core (+2.6% y/y vs 2.5%), energy-driven, extending the Oct 8 Waller hawkish shift. Market-priced (Kalshi/Polymarket) Oct 28 hike odds rose to ~34% (from a pre-CPI ~17%); Dec 9 hike odds rose further to ~75–85%, capping the larger −3 at 3mo; 1mo takes only −2 (Oct 28 still a hold favorite). 36mo HOLDS
Bitcoin TA — quant (20% · 8)	+0.60	+0.67	+0.97	+1.73	+1.52	Computed, resynced October 15 (price pulled back to the Oct 14 close): P 55/56/61/68/69 (6mo fell 62→61 as its cycle analog's median eased; 1mo/3mo/1yr/3yr unchanged; no call-band boundary crossed), BTC $81,590.01 (Oct 14, 2026 close, down 1.74%; GitHub Actions data relay, read via run.py numbers)
MASTER — mean of the	−2.20	−1.82	−0.63	+1.12	+2.84	Equal weight, 20% each

five						

P lineage (June → Jul 8 → … → Sept 26 → Oct 14 → Oct 15) — CLARITY 55/60/65/85/92 → … → 15/28/45/72/92 (Sept 16–26, held flat) → 10/27/46/73/92 (Oct 10, re-rated up modestly on the CFTC's Oct 5 ANPRM) → **10/27/46/73/92** (Oct 15, held flat since, including today). Iran War Risk 50/55/62/75/85 → … → 1/2/15/34/66 (Sept 26) → 1/1/13/32/66 (Oct 14, corrected and re-rated down) → **1/1/12/31/66** (Oct 15, re-rated down on 6mo/12mo on the Petro Dolphin casualty finding; research access remains degraded for the Brent flip-line series). Tokenization 53/57/62/72/85 → … → 56/64/70/77/86 (Oct 3, cut on 1mo and 3mo) → 58/65/70/77/86 (Oct 10, re-rated up modestly on the OKXICE SEC filing) → **58/65/70/77/86** (Oct 15, held flat since). Fed & Macro 38/40/46/54/61 → … → 27/25/34/43/58 (Sept 26) → 33/26/36/44/58 (Oct 10/14, re-rated down on Governor Waller's Oct 8 hawkish speech, held flat through Oct 14) → **31/23/34/43/58** (Oct 15, re-rated down further on the hot September CPI print). Bitcoin TA is computed every run; the last several daily reads: 56/56/62/68/69 (Oct 10) → 56/59/62/68/69 (Oct 11) → 57/57/62/68/69 (Oct 12) → 56/57/62/68/69 (Oct 13) → 55/56/62/68/69 (Oct 14) → **55/56/61/68/69** (Oct 15, 6mo eased as its cycle analog's median softened and price pulled back). The abandoned 2026-09-24_draft is omitted from this lineage because it was never delivered; it remains in config/scores.json permanently. Each pillar report carries its own full, column-by-column lineage table.

The Story, Window by Window

What the blend is saying on October 15, 2026, a daily check (Fed & Macro and Iran War Risk re-rated; comparisons below give the October 14 daily-sync reading and the Sept 26 committed baseline, 2026-09-26_draft3)

- **1 month — Bear (−2.20, down from Oct 14's −2.14; from −2.15 on the Sept 26 baseline).** CLARITY holds at −5.44 (P still 10 at this window), Tokenization at +1.15, Iran at −4.70 (already at its floor), and the Bitcoin TA pillar at +0.60. **Fed & Macro moves to −2.58** (from −2.31) on the hot September CPI print — this window's entire move.
- **3 months — Bear (−1.82, down from Oct 14's −1.74; from −1.63 on the Sept 26 baseline).** CLARITY holds at −3.13, Tokenization at +2.11, Iran at −5.10 and the Bitcoin TA pillar at +0.67. **Fed & Macro moves to −3.67** (from −3.26), the largest single-pillar move this cycle, since the Dec 9 FOMC sits inside this window.
- **6 months — Mild Bear (−0.63, down from Oct 14's −0.54; from −0.59 on the Sept 26 baseline).** CLARITY holds at −0.54 and Tokenization at +2.72. **Fed & Macro moves to −2.05** (from −1.79) and **Iran moves to −4.26** (from −4.14) on the Petro Dolphin casualty finding; the Bitcoin TA pillar eases to +0.97 (from +1.06).
- **1 year — Mild Bull (+1.12, down slightly from Oct 14's +1.16; from +1.15 on the Sept 26 baseline).** CLARITY holds at +3.31, Tokenization at +3.37, and the Bitcoin TA pillar at +1.73. **Fed & Macro moves to −0.84** (from −0.72) and **Iran moves to −1.98** (from −1.87).
- **3 years — Bull (+2.84, unchanged from Oct 14 and the Sept 26 baseline).** Every pillar's 3-year P held exactly where it sat: CLARITY 92, Iran 66, Tokenization 86, Fed 58, and the computed Bitcoin TA pillar's P 69. A hot CPI print and a worse tanker-casualty finding are both near-term facts, and neither was sized onto this horizon. That the long end is unanimously positive while 1 month reads Bear is the most important shape in this report.

Where the Two Lenses Agree — and Where They Fight

The point of running qualitative and quantitative on the same standard

THE INDEPENDENT CONFIRMATION

Two of four qualitative pillars moved this cycle, both down, and the headline still only moved six hundredths: Fed & Macro re-rated DOWN on the hot September CPI print (BLS, primary) and Iran War Risk re-rated DOWN on 6mo/12mo on a worse-than-disclosed tanker-casualty finding (7+ independent outlets); CLARITY Act and Tokenization both HELD FLAT. **Both re-rated pillars moved on primary, multi-sourced evidence that clears the sufficiency rule cleanly** — the CPI print is BLS primary data corroborated by 4+ independent outlets, and the casualty finding is corroborated across 7+ independent outlets. No flip-line clause fired on either pillar. Research capability was not degraded this cycle (WebSearch reached BLS-sourced reporting and the casualty-finding outlets directly); verification raised no unresolved inconsistency.

THE REAL DISAGREEMENT

Near-term (3-month P, where the spread is most informative): Tokenization (P 65) remains the strongest near-term pillar, well ahead of the computed Bitcoin TA pillar (P 56) and CLARITY Act (P 27). Fed & Macro (P 23) is now the second-weakest near-term pillar after this cycle's hot-CPI cut. Iran War Risk (P 1) remains the weakest, pinned at its near-floor. The master resolves it honestly: Bear at 1 month and 3 months, because three of five pillars pull the same direction at once.

Long-term: the four story pillars average about +3.16 at 3 years (CLARITY +6.38, Tokenization +4.03, Iran +1.41, Fed +0.83) versus the Bitcoin-TA pillar's +1.44 — still roughly 2.2× higher. Remember why: the TA pillar is capped by construction (P never leaves 25–75) and its 3-year Quality is 0.50. Equal weight lets that gap show through honestly instead of burying it in a blend.

Trigger Watch — The Next Six Weeks, Re-Dated

A LIGHT DAILY touch ran October 15, researching all four qualitative pillars from primary sources. ***Fed & Macro re-rated DOWN on the hot September CPI print; Iran War Risk re-rated DOWN on 6mo/12mo on a worse-than-disclosed casualty finding; CLARITY Act and Tokenization HELD FLAT.*** *These are the forward triggers; each pillar report carries the full table.*

DATE / LEVEL	EVENT	RE-RATES
FIRED Oct 14, 8:30am ET — PRIMARY (bls.gov), corroborated via CNBC, Advisor Perspectives, Kiplinger, USInflationCalculator	**September 2026 CPI:** headline +3.7% y/y (vs 3.6% consensus, up from 3.4%), core +2.6% y/y (vs 2.5% consensus, up from 2.4%), +0.6% m/m headline matching estimates, energy/gasoline-driven. A hawkish beat on both legs, extending the Oct 8 Waller hawkish shift already priced in — and landing in a Fed that is hiking, not cutting (raised to 3.75-4.00% in September). MARKET PRICES (Kalshi/Polymarket, labelled distinctly): Oct 28 hike odds rose to ~34% (hold ~66%) from a pre-CPI ~17%; Dec 9 hike odds elevated further to ~75–85% (noisy, no single figure settled)	**Fed & Macro: RE-RATED DOWN to 31/23/34/43/58** (−2/−3/−2/−1/0). 3mo takes the largest cut since the Dec 9 meeting sits in that window at materially elevated odds; 1mo only −2 since Oct 28 is still a hold favorite even after roughly doubling
FIRED Oct 11, disclosed Oct 15 — corroborated across 7+ outlets (Maritime Executive, Gulf	The product tanker **Petro Dolphin**, drone-struck at Sohar Anchorage, Oman: of 11 Indian crew, 9 rescued and **2 MISSING**, search-and-rescue ongoing as of the most recent reporting. Separately the Marshall Islands-flagged MT	**Iran War Risk: RE-RATED DOWN on 6mo/12mo to 1/1/12/31/66.** Missing

News, Khaleej Times, The Week, Telangana Today, Kerala Kaumudi, LBC)	Valthera was hit the same day (fire, all 11 crew safe). Seatrade (Oct 13, dated) tallies at least 18 attacks on Hormuz-theater shipping since Oct 1, confirming continued, undiminished frequency	(not merely injured) crew with SAR still open is a worse signal than anything previously logged; no flip-line clause fires (no state border crossed, no US casualty)
FIRED Oct 8 — PRIMARY (federalreserve.gov), independently adversarially verified via five-plus outlets not used in the original research pass	**Fed Governor Christopher Waller's genuinely hawkish Istanbul Economic Forum speech:** further hikes are the likely next step if data cooperate; inflation has been above target ~5.5 years; the economy strengthened in H2 2026; he explicitly cited the Iran-conflict energy shock and AI-buildout demand as upside price pressures — a genuine hawkish SHIFT from his more dovish spring 2026 posture. He explicitly downplayed the weak September payrolls print, calling the labor market "solid and stable," and said hikes needn't be consecutive, leaving room for an October pause while flagging December as the next hike candidate. A sitting FOMC voter directly rebutting the dovish narrative behind the Oct 3 up-move clears the sufficiency rule on its own. Market pricing for the Oct 27–28 meeting barely moved (hold ~78–82% vs. ~77–81% a week earlier) — why 1mo takes only −2; December-meeting-implied hike odds drifted directionally higher per noisy, inconsistent market-price sources (not quoted to one precise figure), concentrated inside the 3mo window, why it takes −3. The 10-year yield was roughly flat (~5.23% Oct 8 vs. ~5.24% Oct 1) after an initial Waller-driven spike partly reversed on a Trump comment ruling out a pre-midterm Iran strike and a solid 30-year auction — supports only a small −1 6mo trim	**Fed & Macro: RE-RATED DOWN to 33/26/36/44/58** (−2/−3/−1/0/0), reversing about a quarter of the Oct 3 up-move. 12mo/36mo HOLD — one week of rhetoric and noisy market pricing is insufficient per the sufficiency rule to move those horizons
Oct 6, 2026 — on-record (Qatar's MOFA spokesperson) — and a RESEARCH-ACCESS FLAG for Alex	Qatar's MOFA spokesperson confirmed on-record that US-Iran message exchange continues via mediators; Iran's Interior Minister Momeni was in Doha Oct 6 on the long-running "Iranian pilots" dispute (Iran alleges Qatar detained 3 Iranian military personnel after a March crash in Qatari airspace; Qatar disputes "detained," says remains were recovered) — a technical delegation follow-up was agreed. Separately, the already-known Rubio-ordered-early-departure story (Oct 1) remains disputed by Iran's UN mission on the record. Attack FREQUENCY in the Strait of Hormuz ticked up (trade-press count: 9 UKMTO warnings in October through Oct 5) but severity/character is unchanged (zero deaths/injuries, no attribution claimed, UKMTO still does not identify projectile origin) — a continuation of an already-priced pattern, not a new escalation type. **FLAGGED FOR ALEX: this pillar's research access was materially degraded this cycle** — the sandbox's network proxy returned policy-level blocks, not flakiness, for fred.stlouisfed.org, eia.gov, centcom.mil and en.wikipedia.org, so the official Brent spot series behind this pillar's already-fired ">$100 sustained" flip-line could NOT be re-checked this week — re-check once access allows. **A CLAIM WITHDRAWN:** an initial research pass this cycle had claimed Momeni visited Islamabad specifically Oct 5 for a "joint de-escalation framework"; this conflates a REAL July	**Iran War Risk: HELD FLAT at 1/1/14/33/66.** Diplomatic continuity (mild positive) roughly offsets elevated-but-unchanged-character kinetic activity (mild negative); no flip-line clause fired either direction; all five windows held

	2026 Momeni-Islamabad visit with a REAL but separate October Pakistan/Qatar de-escalation proposal that did not involve Momeni in Islamabad in October — WITHDRAWN, does not appear elsewhere in this report	
FIRED Oct 5 — PRIMARY (CFTC Release No. 9307-26, RIN 3038-AF80), independently adversarially verified via law-firm client alerts (WilmerHale, Baker Botts, Lowenstein) and other outlets not used in the original research pass	The CFTC published an Advance Notice of Proposed Rulemaking — "Regulation Crypto Asset Transactions"/"Reg CTX" and "Regulation Crypto Asset Markets"/"Reg CAM," under CEA §2(c)(2)(D) — covering leveraged/margined retail crypto and creating a new "CAM" designated-contract-market sub-category, with a 60-day comment period. This is an advancement of the already-known CFTC prerule/OIRA status (RIN 3038-AF80), not a new abandonment of the legislative track. Issued the same day as CFTC Chairman Selig's related remarks at the Fordham Law Blockchain Regulatory Symposium — described here as issued the same day as, NOT announced at, those remarks (verification found that specific linkage thinly sourced). No Senate floor/committee/cloture action on H.R. 3633 was found or possible in the Oct 3–10 window: the Senate remains in recess through Nov 9, 2026, with H.R. 2347, not H.R. 3633, queued as the first item back. No named Democrat committed to yes; no Republican Nay (Collins/Hawley/Moran/Tillis) reversed. No shutdown; funding unchanged through Dec 11, 2026 (Public Law 119-103)	**CLARITY Act: RE-RATED UP modestly to 10/27/46/73/92** (0/+1/+2/+1/0). 1mo HOLDS at 10 — no legislative path exists in-window regardless of the regulatory-track advance
FIRED Oct 4 — PRIMARY (SEC Issuer Notice filing), independently adversarially verified nearly point-for-point via outlets not in the original research pass	OKX and Intercontinental Exchange (ICE, NYSE's parent) formed a 50/50 joint venture, "OKXICE," and filed an SEC Issuer Notice to operate a Tokenized Securities Venue under the Sept 17 Innovation Exemption, covering 60+ (several sources say 63) US-listed stocks paired against stablecoins via permissioned Uniswap v4 AMM pools on OKX's X Layer chain. Softened on verification: "non-custodial of end-user funds in the pools," not simply "no custody" — admin/pause keys are held by an OKX Technology affiliate. Cerebras Systems separately filed a written objection, the first real-world exercise of the exemption's issuer opt-out mechanism. Not yet live (earliest plausible ~early November under the 30-day issuer-notice mechanic). DTCC's Tokenization Service remains NOT confirmed live as of Oct 10 (dtcc.com still frames an "expected October" launch; no DTCC press release found Oct 3–10; a single company's SEC Form 6-K claiming it's "live since July" is excluded as single-source/uncorroborated). **rwa.xyz's tokenized-Treasuries read is UNUSABLE for a THIRD straight cycle** — a new search-derived figure surfaced yet another distinct scope basis (25 → 87 → 109 "assets/products" across three cycles this year) and is excluded from the rationale entirely; flagged for Alex that this aggregator's shifting methodology makes period-over-period comparisons unreliable. No new GENIUS Act rule finalized (Treasury's Section 3 NPRM comment period runs to Oct 19, not yet closed). No new rail failure/depeg/redemption run	**Tokenization: RE-RATED UP modestly to 58/65/70/77/86** (+2/+1/0/0/0)

FIRED Oct 2 — PRIMARY (bls.gov), and it undercuts the Fed's own stated rationale	**September jobs report: payrolls +29,000** against an ~84,000 consensus, **unemployment up to 4.2%** from 4.1%, average hourly earnings +0.1% m/m and +3.0% y/y, and **60,000 of downward revisions** — July flipped to −10,000. Governor Barr had said on Sept 29 that "risks to the labor market have receded"; three days later the data said otherwise. CME FedWatch October-hike odds fell to ~17–23% from ~36% a week earlier (*market prices, not a Fed estimate*). **The counterweight, and it matters:** initial claims were 197,000 — layoffs are NOT rising, so this is a hiring freeze, not a firing wave	**Fed & Macro: RE-RATED UP to 35/29/37/44/58** (+8 on 1mo). The Oct 27–28 meeting is now very likely a hold
FIRED Sept 30 — PRIMARY (bea.gov)	**August PCE undershot:** headline +0.3% m/m and **3.4% y/y** against a ~3.7% consensus; **core 3.0% y/y**. Real PCE +0.6%. Caveat stated rather than buried: the release embeds the annual update of the National Economic Accounts with revisions back to January 2021. **The same day, Q2 GDP was revised sharply UP to 2.2%** from 1.5% — growth accelerating, which is why the Fed re-rate is single-digit and stops at 12mo	Fed & Macro: the dovish leg of the move. 3mo takes only +4 — the Dec 8–9 FOMC is inside that window and still priced as a hike
FIRED Sept 30 — PRIMARY (senate.gov), and now ARITHMETIC rather than forecast	**The Senate's last votes of the session were Sept 30** (roll calls 253–256, every tally verified on senate.gov) and **none touched CLARITY**. It convened pro forma Oct 1 — "no business was conducted" — and now stands adjourned, but for pro forma sessions, **until Monday Nov 9 at 3:00 p.m.**, whose agenda is H.R. 2347, not H.R. 3633. The 1-month window closes around Nov 3, *before the Senate returns*	**CLARITY Act: RE-RATED DOWN to 10/26/44/72/92.** 1mo takes −5 because the residual odds of action inside it are not low but zero
FIRED Oct 3 — direct rwa.xyz pull, confirmed exact; and a NEGATIVE finding on the offsetting catalyst	**Tokenized US Treasuries fell again:** $14.94B → **$14.77B**, now −7.30% over 30 days on the same 25-asset basis. And **DTCC's October tokenization launch is confirmed NOT live** — dtcc.com's own page still says "expected October 2026 launch," its last service press release is July 15. **Verification SHRANK this call:** the "four consecutive negative readings" framing was retired once the aggregator's scope was found to have changed from 87 products to 25 assets. Offsetting positive, previously missed: **GENIUS is no longer zero-of-six** — Treasury's first binding interim final rule landed Sept 30 (91 FR 61688)	**Tokenization: CUT to 56/64/70/77/86** — 1mo and 3mo only; the 6mo cut was WITHDRAWN
FIRED Sept 28 — confirmed; and a FACT CORRECTION to a delivered report	**The indirect UNGA-sidelines track reached a stalemate** and Iran's delegation, including FM Araghchi, left New York that evening. Reported with its grade: that Rubio *ordered* them out rests on one anonymous Axios original syndicated to ~25 outlets, while Iran's UN mission denies expulsion *on the record and first-party* — so the expulsion is disputed, and only the stalemate moves P. **BRENT CORRECTED:** official EIA/FRED spot was **$120.92 (Sept 24) and $116.01 (Sept 25)**, not the $106.60/$104.37 this system printed — those were futures prints captioned as the spot series. Latest spot is $113.96 (Sept 29); the "sustained >$100" clause is fired by a wide margin. Four vessels were struck Sept 28–29 and more since, but by "unknown projectile" with no claim of responsibility — **attribution to Iran is NOT established** — and with zero casualties	**Iran War Risk: RE-RATED DOWN to 1/1/14/33/66** — −1 on 3mo/6mo/12mo. The "talks are still live" grounds for sitting above the floor weakened

FIRED Sept 26 — PRIMARY, the decision-maker on the record. This reversed the cycle's own earlier call	**Trump rejected Iran's seven-day plan himself**, to reporters outside the White House: "I reject their proposal"; "I've rejected their deal"; "that deal would not be acceptable" — adding that the US has "total control" of the strait and "we put up the greatest blockade ever in military history." Independently captured by CNN, Fox News Digital and Al Jazeera. **The WSJ's separate unnamed-source claims — bombing after the midterms, and having told mediators he will not lift the blockade — remain single-source and are NOT scored**	Iran War Risk: RE-RATED DOWN to 1/2/15/34/66, reversing the Sept 23 bump
FIRED Sept 25 — on-record, named principal, 3 independent originals, and now REFUSED	**FM Araghchi's seven-day plan**, conveyed via Qatar: ~4–5 days of US steps (lift the blockade, waive oil sanctions, release an estimated $12bn in frozen assets, ceasefire on all fronts), Strait reopens day six, nuclear talks day seven. "The choice now rests with the United States." AP, Reuters and Al Jazeera as independent originals. **Pezeshkian separately offered to readmit UN nuclear inspectors** (CBS excerpt released Sept 25)	The catalyst behind the Sept 23 bump — real, well-sourced, and rejected. The inspector offer is why 12mo takes only one point
FIRED Sept 26 — this pillar's OWN pre-committed trigger, fired DOWNWARD	**Tokenized US Treasuries contracted for a third consecutive reading:** $14.94B, −6.95% over 30 days (rwa.xyz direct pull) from $16.00B on Aug 28 — after −0.39% (Aug 22) and −0.93% (Aug 28), at ~7× the prior magnitude. The report had pre-committed that a third negative reading "would be a genuine trend worth re-rating on." Cause unknown and reported as a number, not a narrative; magnitude is single-aggregator	Tokenization: CUT one point on 1mo, to 57/65/70/77/86
FIRED Sept 23–25 — a bundle, mostly PRIMARY	**Fed & Macro:** Governor Barr's Sept 23 speech, verbatim from the Fed's own PDF — "in my base case, further policy adjustments are likely to be needed"; the S&P Global flash PMI (primary release) pairing the strongest growth since July 2021 with the fastest input-cost inflation since October 2022; UMich final September with long-run inflation expectations breaking a three-month plateau (3.3%→3.4%) and year-ahead 4.0%→4.6%; claims at 197K; and H.4.1 reserve balances −$83.6B w/w	Fed & Macro: RE-RATED DOWN to 27/25/34/43/58
Checked Sept 26, no scorable change — but four FACT CORRECTIONS	**CLARITY Act:** no new floor scheduling and no Democratic yes votes. Corrected against primary sources: the final text DOES require divest-or-blind-trust (the report had said the opposite); TILLIS, not Thune, entered the motion to reconsider; FOUR Republicans defected on Roll Call 234; and a Sept 17 seven-Democrat recommitment statement had been missed by three prior cycles	CLARITY Act: held flat at 15/28/45/72/92
RESOLVED Sept 30, 2026	**August PCE and the Q2 GDP third estimate (BEA) landed.** Core PCE 3.0% y/y (partly a telegraphed BEA methodology change, not clean disinflation); Q2 GDP revised sharply up to +2.2%. The two offset rather than confirm or reverse the Fed cut	Fed & Macro: held flat (Oct 1 daily touch); next watch is the Oct 27–28 FOMC

WATCH — Sept 28 – Oct 2, 2026	**The last Senate in-session week before a five-week recess** (senate.gov's own 2026 schedule lists "Oct 05 – Nov 06 State Work Period"). No CLARITY re-vote is scheduled; Tillis's motion to reconsider preserves the option but sets no date	CLARITY Act: the only realistic pre-recess window
WATCH — whether the mediated track survives the rejection	Reuters (Sept 25–26, unnamed US official) has the US in "positive, constructive discussions with Iran through mediators"; Rubio said Sept 26 it "would be incorrect to describe recent talks as a major breakthrough"; Iran is formally still awaiting a response. **Trump has rejected this proposal but not dealmaking** — he said "I like making a deal too" and still frames a deal as post-midterm	Iran War Risk: the next concrete signal either way. A named US official reviving or formally burying the track is what would move this pillar next
Oct 27–28, 2026	Next scheduled FOMC meeting. CME FedWatch priced an October hike at ~53% Sept 23, 77.5% Sept 24 and ~70–76% Sept 25 (market prices, not scored); traders price roughly four more hikes by June 2027, which retires this report's earlier "cut by June 2027" row	Fed & Macro: confirmation or reversal of this cycle's cut
~mid-October 2026 at the earliest	First possible live Tokenized Securities Venue under the SEC's temporary conditional exemption (91 FR 60168, published Sept 22). The NYSE Group / Blockchain.com MOU of Sept 23 is real but NON-BINDING, the ATS is not live, and no launch date was disclosed — explicitly not the live-venue trigger	Tokenization: the next genuine upside confirmation
Power-law fair value $141,272	BTC $84,015.60 sits ~41% below fair value	1yr/3yr windows: the structural bull case's core, and a reminder that the fit swings with its start year (2011–2015 fits span roughly $119k–$146k) — quote it as a range, not a target

The master flip line — two of four Iran clauses remain live, and one has gone dormant: a confirmed new US combat death, a resumption of direct US strikes on Iran proper, independent confirmation the conflict has widened to a further new state, or a sustained Brent close above $100. **The Brent clause fired Sept 10–11 and, as of its last verified reading, still held — by a wider margin than this report had once stated.** CORRECTED Oct 3: on the official EIA/FRED Europe Brent Spot FOB series the closes were **$120.92 (Sept 24)**, **$116.01 (Sept 25)**, $119.97 (Sept 28) and **$113.96 (Sept 29, the last published reading)** — roughly 14% above the $100 threshold. The $106.60/$104.37 figures previously printed were ICE front-month FUTURES prints captioned as the spot series. **UPDATE Oct 10 — UNVERIFIED THIS CYCLE, not re-confirmed:** this week's research access to fred.stlouisfed.org and eia.gov was blocked by a policy-level sandbox network restriction, not ordinary flakiness, so the clause's live status could not be re-checked. It is carried here as **last confirmed fired on the Sept 29 reading above, unverified this cycle** — not claimed as still-fired with fresh confidence, and not claimed to have lapsed either. Re-check once access allows; flagged for Alex. **The strikes clause, which fired Aug 30, is now DORMANT though not un-fired:** no announced US strike on Iranian territory since Sept 1, roughly 3.5 weeks — a negative that rests on ISW's Sept 24 update and the absence of wire reporting, because centcom.mil returned 403, so it is labelled wire-derived rather than primary-verified. **The combat-death clause did NOT fire:** the Pentagon's DCAS total holds at 19 (11 hostile, 8 non-hostile); the 19th, Capt. Bianca C. Wilkerson, posthumously promoted to major, died Sept 18 of a cause DCAS lists as undetermined and which officials describe as a medical incident — explicitly non-hostile. The Sept 23 Hormuz vessel strike caused two casualties, but these were merchant crew, not US service members. **Widening did not fire:** the two Houthi salvos at Saudi Arabia (Sept 24 and overnight Sept 25–26) struck a state already in theatre and were intercepted. **The Iran upside flip line is NOT**

met, and is now further away than at any point this week: it requires a signed, US-accepted deal holding a clean week. **The US has now explicitly refused** — Trump rejected the plan on the record Sept 26 — and the Sept 23 vessel strike breaks any clean-week clause independently. **On CLARITY, the flip line fired on the downside Sept 16** and the lame duck is now the only 2026 path; a renewed cloture vote that actually passes would be the equivalent upside flip. **On Fed & Macro, the flip line has now FULLY resolved, and it resolved DOVISH enough to reverse part of the cut** — August PCE landed Sept 30 at 3.4% headline / 3.0% core, both under consensus, and the September jobs report landed Oct 2 at +29,000 with unemployment up to 4.2% and 60,000 of downward revisions, undercutting both legs of the hawkish case (Barr's own "risks to the labor market have receded"). The BEA methodology caveat stands and Q2 GDP was revised sharply UP to 2.2%, which is why this is an eight-point partial reversal at 1mo rather than a full one, and why 36mo did not move at all. **On Tokenization, the flip line is unchanged from Sept 18** — a live US venue trading under the exemption would be the upside confirmation; the exemption drifting unused toward its five-year sunset, or a rescission during the comment period, would be the downside flip. The TA flip line (weekly close under $50,000) is unchanged and far from current price.

Robustness — Does Any One Pillar Drive the Call?

Equal weight is now the fixed model — there is no qual/quant mix knob to tune. The test that matters instead: drop any single pillar and see whether the conclusion holds.

— drop CLARITY Act	**−0.20**	Neutral
— drop Iran War Risk	**+0.56**	Mild Bull · yes
— drop Tokenization RWA	**−0.84**	Mild Bear · yes
— drop Fed & Macro	**+0.24**	Neutral
— drop Bitcoin TA	**−0.45**	Neutral
all five in (headline)	**−0.14**	**Neutral**

Leave-one-out final (drop any one pillar): −0.84 to +0.56 — SIGN STILL FLIPS (fragile), a similar spread to the October 14 daily-sync's −0.78 to +0.61 and the Sept 26 committed baseline's −0.76 to +0.59. Drop CLARITY −0.20 · drop Iran +0.56 · drop Tokenization −0.84 · drop Fed +0.24 · drop Bitcoin TA −0.45 (data through the Oct 14 close — BTC $81,590.01; this cycle's shift is primarily the Fed & Macro and Iran War Risk re-rates). Read this before you read the headline: with the final number at −0.14, removing any single pillar swings it by *far* more than the number itself, and the sign is not robust. That is the honest state of the blend, not a footnote to it — and it is the reason a cycle in which two pillars moved and the headline barely did not is still worth reading in full.

My Decision

AUTO-STAMPED — OCTOBER 15, 2026 (2026-10-15_draft) · LIGHT DAILY TOUCH, FED & MACRO AND IRAN WAR RISK RE-RATED DOWN · NO CALL BAND FLIPPED · BUILDS ON THE OCTOBER 14 COMMITTED BASELINE

MASTER: −2.20 / −1.82 / −0.63 / +1.12 / +2.84 · THE FINAL NUMBER: -0.14 equal-weight (Neutral) / +0.43 horizon-weighted (Neutral) · Leave-one-out range: −0.84 to +0.56 (sign still flips) · Score set 2026-10-15_draft, AUTO-STAMPED under Alex's delegated daily authority, October 15, 2026 (builds on 2026-10-14_draft, committed by Alex) · Immediately-prior reading: 2026-10-14_draft (COMMITTED), which read −0.08 / +0.47 · Last committed set before that: 2026-09-26_draft3, which read −0.08 / +0.47 · NO call band flipped on any master window or on either final-number variant · BTC $81,590.01 (Oct 14, 2026 close, read via run.py numbers; GitHub Actions data relay, down 1.74% from Oct 13) · The October 15 daily check re-researched all four qualitative pillars against primary sources: Fed & Macro cleared the sufficiency rule on the hot September CPI print and re-rated down on four windows; Iran War Risk cleared the sufficiency rule on a worse-than-disclosed casualty finding and re-rated down on 6mo/12mo; CLARITY Act and Tokenization held flat; config/scores.json was updated and auto-stamped

Why Fed & Macro moved down, again, on a hot CPI print. The September 2026 CPI print (BLS, primary, released Oct 14, 8:30am ET; corroborated via CNBC, Advisor Perspectives, Kiplinger, USInflationCalculator) beat consensus on both headline (+3.7% y/y vs. 3.6%) and core (+2.6% y/y vs. 2.5%), energy/gasoline-driven (+9.1% m/m). This extends — not merely reiterates — the Oct 8 Waller hawkish shift already priced into the baseline, and it lands in a Fed that is hiking, not cutting (raised to 3.75-4.00% in September). Market-priced (Kalshi/Polymarket, labelled distinctly from institutional estimates) Oct 28 hike odds rose to roughly 34% (hold ~66%) from a pre-CPI ~17%; December 9 hike odds rose further to roughly 75–85% across sources (noisy, no single figure settled). 1mo takes only −2 since Oct 28 is still a hold favorite even after roughly doubling; 3mo takes the largest cut, −3, since the Dec 9 meeting sits inside that window at materially elevated odds; 6mo takes −2 since the core beat specifically argues for persistent re-acceleration rather than a one-print spike; 12mo takes only −1, a smaller marginal effect at that horizon; 36mo holds, since one print does not reach the 2029 liquidity regime.

Why Iran War Risk moved down, on a worse-than-disclosed casualty finding. The Oct 11 drone attack on the product tanker Petro Dolphin off Sohar, Oman (already logged generically as part of a "four strikes" count) now carries a worse-than-disclosed casualty picture: 2 of 11 Indian crew are MISSING, not merely injured, with search-and-rescue still open as of the most recent reporting. Independently corroborated across 7+ outlets (Maritime Executive, Gulf News, Khaleej Times, The Week, Telangana Today, Kerala Kaumudi, LBC). Separately, the Marshall Islands-flagged MT Valthera was hit the same day (fire, all 11 crew safe — not an escalation). A dated Seatrade tally (Oct 13) confirms at least 18 attacks on Hormuz-theater shipping since Oct 1, confirming continued, undiminished attack frequency. No flip-line clause fires — no new state widened to, no confirmed US casualty, no resumption of direct US strikes. 1mo/3mo remain at the effective floor; 6mo/12mo take the small further nudge, since missing (not merely injured) crew with SAR still open is a worse signal than anything previously logged; 36mo holds as noise.

Why CLARITY Act and Tokenization held flat. On CLARITY: the Senate remains in recess through Nov 9; the CFTC's Oct 5 ANPRM comment period re-confirmed still open, nothing new found. On Tokenization: OKXICE's Oct 4 Issuer Notice re-confirmed still carries no launch date; DTCC's stated October launch target re-confirmed still unconfirmed. Nothing on either pillar clears the sufficiency rule this cycle.

Stamp decision: AUTO-STAMPED. This is an ordinary light daily touch, not a full weekly refresh. Both re-rated pillars' sourcing clears the sufficiency rule on primary, multi-sourced evidence; no flip-line clause fired

on either; verification raised no unresolved inconsistency; research capability was not degraded this cycle. Per the widened delegated daily auto-stamp authority (2026-09-02), neither the size of these moves nor the fact that this cycle builds on an already-committed baseline is a reason to withhold the stamp. Status: `committed`, `stamped_by: "Alex (auto-stamped)"`.

Why Fed & Macro moved down (Oct 14 cycle, carried forward for context). Governor Christopher Waller's Oct 8 speech at the Istanbul Economic Forum (primary, federalreserve.gov, independently adversarially verified via five-plus outlets not in the original research pass) was a genuine hawkish shift from his more dovish spring 2026 posture: further hikes are the likely next step if data cooperate; inflation has been above target roughly 5.5 years; the economy strengthened in H2 2026; he explicitly cited the Iran-conflict energy shock and AI-buildout demand as upside price pressures; he explicitly downplayed the weak September payrolls print as “solid and stable”; and he flagged December, not October, as the next hike candidate while leaving room for an October pause. A sitting FOMC voter directly rebutting the dovish narrative behind the Oct 3 up-move clears the sufficiency rule on its own, which is why this is sized rather than logged-not-scored. It is sized small, though: market pricing for the Oct 27–28 meeting barely moved (hold ~78–82% vs. ~77–81% the week before), capping 1mo at −2, and the 10-year yield round-tripped most of an initial Waller-driven spike after a Trump comment ruling out a pre-midterm Iran strike and a solid 30-year auction, capping 6mo at −1. December-odds drift, read from noisy and inconsistent market-price sources rather than one precise figure, is concentrated inside the 3mo window, which is why that window takes the larger −3. DOL initial jobless claims (Oct 8, week ended Oct 3) of 197,000, with the prior week revised up 197K→199K, read as continued labor resilience and were not independently scored.

Why CLARITY Act and Tokenization each moved up, modestly. On CLARITY: no Senate floor/committee/cloture action on H.R. 3633 was possible in the Oct 3–10 window regardless (the Senate is in recess through Nov 9, with H.R. 2347, not H.R. 3633, queued as the first item back), so 1mo holds at its floor of 10 even as the pillar re-rates up elsewhere. The driver is the CFTC's Oct 5 Advance Notice of Proposed Rulemaking (Release No. 9307-26, RIN 3038-AF80, “Reg CTX”/“Reg CAM,” 60-day comment period) — independently adversarially verified via law-firm client alerts (WilmerHale, Baker Botts, Lowenstein) and other outlets not used in the original pass — an advancement of the already-known CFTC prerule track, not a new abandonment of the legislative one. On Tokenization: OKX and Intercontinental Exchange formed “OKXICE,” a 50/50 joint venture, and filed an SEC Issuer Notice Oct 4 to run a Tokenized Securities Venue for 60+ US-listed stocks against stablecoins via permissioned Uniswap v4 AMM pools on OKX's X Layer chain — independently adversarially verified nearly point-for-point, with one phrasing softened to “non-custodial of end-user funds in the pools” rather than simply “no custody,” since an OKX Technology affiliate holds admin/pause keys. Cerebras Systems filed a written objection, the first real-world exercise of the exemption's issuer opt-out mechanism. Neither development is yet a live venue.

Why Iran War Risk held flat, and a research-access flag for Alex. Diplomatically, Qatar's MOFA spokesperson confirmed on-record Oct 6 that the US-Iran mediated channel continues, and a technical-delegation follow-up on the long-running pilots dispute was agreed — a mild positive. Kinetically, Hormuz warning frequency ticked up (9 UKMTO warnings in October through Oct 5) while severity and character stayed unchanged (zero deaths or injuries, no attribution claimed) — a continuation of an already-priced pattern, not a new escalation type, and a mild negative. The two roughly offset and no flip-line clause fired. **Flagged plainly: this pillar's research capability was materially degraded this cycle** — the sandbox's network proxy returned policy-level blocks, not ordinary flakiness, for fred.stlouisfed.org, eia.gov, centcom.mil and en.wikipedia.org, so the official Brent spot series behind this pillar's already-fired oil flip-line could not be re-verified this week (see Trigger Watch's flip-line note). This is named as a degraded-access cycle rather than dressed up as confident continuity.

What was deliberately NOT scored this cycle, in either direction. On Tokenization: the OKXICE filing's “no custody” framing was softened to “non-custodial of end-user funds in the pools” on verification and is used only in that corrected form; rwa.xyz's tokenized-Treasuries read is excluded entirely this cycle, unusable for a third straight reading on yet another shifting scope basis (25 → 87 → 109 “assets/products”), flagged for Alex that the aggregator's methodology makes period-over-period comparisons unreliable; a single company's SEC Form 6-K claiming DTCC's service is “live since July” is excluded as single-source/uncorroborated. On Iran: an initial research pass's claim that Momeni visited Islamabad specifically Oct 5 for a “joint de-escalation framework” is WITHDRAWN — adversarial verification found it conflates a real July 2026 Momeni-Islamabad visit with a separate, real October Pakistan/Qatar de-escalation proposal that did not involve Momeni in Islamabad in October; it does not appear elsewhere in this report and did not affect

the Iran recommendation, which was already hold-flat. On Fed: December-implied hike odds are described directionally, not quoted to one precise figure, because the market-price sources this cycle were noisy and inconsistent.

Stamp decision: LEFT AS DRAFT. The governing reason is categorical: this is a **full weekly refresh**, which CLAUDE.md's delegated auto-stamp authority excludes independent of move size, call-band flips or evidence quality, because the weekly is Alex's own periodic review checkpoint. That exclusion applies here regardless of the fact that no call band flipped and the moves were modest in either direction. Status: `draft`, `stamped_by: null`.

For Alex, before stamping. (a) The standing October 3 dual-draft divergence is still unresolved. `2026-10-03_draft` and `2026-10-03_draft2` remain two independently-researched, substantially-diverging weekly drafts for the same week, both still in draft (see the Master Table's MERGE NOTE); this cycle's research builds forward on draft2, the active_qual_set, without adjudicating that divergence — it is not resolved by this cycle and is still yours to decide. **(b) Iran War Risk's research access was degraded this cycle.** A policy-level network block, not flakiness, prevented re-verifying the official Brent spot series behind this pillar's already-fired oil flip-line; worth a manual re-check once access allows, rather than taking this cycle's "held flat" read as a confident all-clear on that clause. **(c) The Fed reversal rests on one speech against barely-moved market pricing.** Waller's Oct 8 remarks are a real, primary, verified hawkish shift from a sitting FOMC voter, which is why it clears the sufficiency rule — but the Oct 27–28 meeting's priced hold odds (~78–82%) moved only a few points, which is exactly why the re-rate is sized at −2/−3/−1/0/0 rather than larger; worth your own read on whether that sizing is right. **(d) rwa.xyz is unusable for a third straight cycle.** Its shifting scope basis (25 → 87 → 109 "assets/products") makes it unfit for period-over-period comparison; Tokenization's score this cycle rests entirely on the OKXICE filing, not on this aggregator, which is now excluded from the pillar's rationale outright rather than merely caveated.

This is a **FULL WEEKLY refresh** (**2026-10-03_draft2**) against the Sept 26 committed baseline (2026-09-26_draft3): four independent primary-source research passes, one per pillar, then **four independent adversarial-verification passes — one per pillar — that re-derived every load-bearing claim from primary sources rather than from the research's own citations, and overturned findings in both directions**. **All four qualitative pillars moved this cycle, and they very nearly cancelled. Fed & Macro re-rated UP** for the first time in weeks, +8/+4/+3/+1/0 (27/25/34/43/58 → 35/29/37/44/58), on August PCE undershooting at 3.4% headline / 3.0% core and September payrolls at +29,000 with unemployment up to 4.2% — the October hike is now priced out. Against it, three cuts: **CLARITY Act** −5/−2/−1/0/0 (15/28/45/72/92 → 10/26/44/72/92) as the Senate's last pre-recess votes passed on Sept 30 with no CLARITY action and the chamber adjourned to Nov 9; **Iran War Risk** 0/−1/−1/−1/0 (1/2/15/34/66 → 1/1/14/33/66) as the UNGA-sidelines track stalled; and **Tokenization** −1/−1/0/0/0 (57/65/70/77/86 → 56/64/70/77/86), a cut deliberately reduced from a larger first pass after verification undercut its own trend claim. **Three claims carried in previously delivered reports are withdrawn as false this cycle** — Brent's Sept 24–25 levels (futures prints captioned as the official EIA spot series, understating oil by $12–14), jobless claims being "near 57-year lows" (197,000 is not even 2026's lowest), and the SEC tokenized-NMS order's "30-day public comment" mechanic (it is an issuer-notice period). The computed Bitcoin TA read ticked with BTC's pullback ($85,488.24 → $84,015.60 → $83,789.11 → $82,912.83). Two call bands flipped — 3 months Mild Bear → Bear and 6 months Neutral → Mild Bear — both on moves of 0.09 and 0.05 across band boundaries, which is named here rather than dressed up as a change of view.

Housekeeping that matters for trust: this cycle supersedes an interrupted Sept 24 cycle. A 2026-09-24_draft score set and a full set of report edits were written but *never delivered* — no render, no selfcheck, no archive, no commit. Worse, those edits asserted "COMMITTED — SEPTEMBER 24, 2026 · AUTO-STAMPED" in all six decision stamps while `config/scores.json` was never advanced past `draft`; `run.py selfcheck` flagged exactly that, twelve times. Per this system's standing convention for abandoned drafts, it is treated as not-delivered: its claims were independently re-verified rather than trusted, it is dropped from the visible lineage columns, and it stays in `scores.json` permanently for lineage. **The verdict on it is mixed, and worth stating:** its two Fed claims were *vindicated in full*, its Iran claim was *falsified* on a point of fact (it reported no tanker incidents on Sept 23–24; a vessel was struck Sept 23), and its Tokenization judgement was found *asymmetric* and is reversed.

Second housekeeping item, and this is the decision Alex made: TWO independent full weekly refreshes ran for today, and there are now THREE score sets dated 2026-09-26. The cloud routine skips its own

research only when it can already see the day's commit on `origin`. This cycle's commit was still local when the cloud ran, so the cloud researched the day independently and pushed first. Origin therefore already holds `2026-09-26_draft` (its daily cycle, **committed and auto-stamped**, Iran reverted to 1/1/14/33/66) and `2026-09-26_draft2` (its own weekly, Fed at 27/25/35/43/57). Origin's lineage is authoritative and has been left **byte-for-byte untouched** — committed stays committed, and its keys are not reused — so this set takes the next free key, `2026-09-26_draft3`. **Where the two weeklies agree, strikingly:** on Fed & Macro, researched entirely independently, the cloud landed on 27/25/35/43/57 against this set's 27/25/34/43/58 — identical on 1mo, 3mo and 12mo, and within a single point on the other two. That is the strongest independent cross-check this system has produced, and it is reported rather than averaged away. **Where they diverged, and what Alex adjudicated:** on *Iran*, the cloud fully reverted to the old 1/1/14/33/66 floor while this set stops at 1/2/15/34/66 — the entire gap was whether Pezeshkian's inspector offer and Trump's own post-election framing justify sitting one point above that floor on 3mo, 6mo and 12mo. On *Tokenization*, the cloud held at 58 while this set cuts 1mo to 57 on the pillar's own pre-committed tokenized-Treasury trigger. **One further correction worth stating plainly:** the cloud reached the right *direction* on Iran, but its stated grounds do not survive checking — its claim that senior White House officials confirmed on record they have "no intention of dismantling" the blockade could not be found anywhere, and that phrasing traces to an April 2026 newsletter posing it as a hypothesis. The correct basis is Trump's own on-record rejection on Sept 26, which is what this set uses. Alex reviewed this reasoning and COMMITTED this set (2026-09-26_draft3) as canonical on September 27, 2026.

Why Fed & Macro moved most. Not one headline but a week, and the hard data does the work. PRIMARY: Governor Barr's Sept 23 Chicago Fed speech, all three load-bearing sentences confirmed verbatim by local extraction of the Fed's own PDF — "inflation is above our 2 percent target and not clearly trending toward target in a timely way," "risks to achieving our inflation target have increased, while risks to the labor market have receded," and "in my base case, further policy adjustments are likely to be needed." PRIMARY: the S&P Global flash US PMI, retrieved from the embargoed release — composite 58.4, the strongest private-sector growth since July 2021, paired with the fastest input-cost inflation since October 2022. PRIMARY: UMich's final September survey, with year-ahead inflation expectations jumping 4.0% → 4.6% and *long-run* expectations ticking 3.3% → 3.4%, breaking three straight months — de-anchoring is what extends a tightening cycle past one meeting, and it is why 6mo took −3 rather than the abandoned draft's −1. PRIMARY: DOL claims at 197,000, removing the last dovish counterweight; and H.4.1 reserve balances down $83,601M in a single week, the largest drain this report has logged. **Two sourcing honesty notes:** NY Fed President Williams was *characterising investors' forecasts* when he called another year-end hike likely, and hedged it with "but we have to see" — presenting that as his own flat assertion would be exactly the market-expectation-versus-official-estimate conflation this system forbids; and Boston Fed President Collins's inflation-risk warning, though quoted correctly, traces entirely to one Reuters story, so it is effectively single-agency. Both are used as corroboration only. **The honest other side:** growth is strong, layoffs are not rising (claims 197,000), August new home sales *rose*, the Fed's own SCOOS shows credit terms basically unchanged, and the big reserve drain is largely a mechanical TGA rebuild — which is why the move is single-digit and stops at 12mo.

Why Iran War Risk came DOWN, after this cycle first had it going up. On Sept 25 Iran's foreign minister Araghchi put a concrete seven-day plan on the record outside the UN Security Council — US steps over ~4–5 days (lift the blockade, waive oil sanctions, release an estimated $12bn in frozen assets, ceasefire on all fronts), the Strait reopening on day six, nuclear talks on day seven — carried by AP, Reuters and Al Jazeera as independent originals. That was a real upgrade over the anonymous sourcing this pillar had been refusing to score, and this cycle initially read it as a de-escalation catalyst and scored Iran *up* as a window split. **Then the principal rejected it on the record.** On Sept 26 Trump told reporters outside the White House: "I reject their proposal"; "I've rejected their deal"; "that deal would not be acceptable" — while boasting of "total control" of the strait and "the greatest blockade ever in military history." Captured independently by CNN, Fox News Digital and Al Jazeera. A primary source from the only person who could have accepted the plan outranks the inference drawn from the plan's existence, so the up-move was withdrawn and the Sept 23 bump comes off. **It is not a full reversal to the old floor**, because two on-record facts are new since that floor: Trump paired the rejection with "I like making a deal too" and has not withdrawn his own prediction of a deal right after the Nov 3 midterms (which sit inside the 3mo and 6mo windows), and Pezeshkian offered to readmit UN nuclear inspectors. **The most bearish material was still excluded:** the WSJ's unnamed-source claims that Trump privately expects bombing to resume after the midterms and has told mediators he will not lift the blockade remain single-original-source and unconfirmed, and are not scored. Live contrary evidence

is also on the record: Reuters has the US in "positive, constructive" mediated talks, and Rubio declined to call them a breakthrough — which presumes they exist.

Why Tokenization was cut, against the grain of its own good news. This pillar's trigger table had pre-committed, in its own words, that "a third consecutive negative reading would be a genuine trend worth re-rating on." It got one: tokenized US Treasuries read $14.94B, down 6.95% over 30 days from $16.00B, after −0.39% and −0.93% — roughly seven times the prior magnitude. Acting on a trigger the report itself wrote down is the whole point of writing it down, so 1mo takes −1. The abandoned Sept 24 draft took *+1* here on the NYSE Group / Blockchain.com MOU while not accounting for the contraction, which is asymmetric: the MOU is real and independently verified, but it is non-binding, "subject to any required regulatory approvals," the ATS is not live, no launch date was disclosed, and this pillar's own standard names "an actual live venue announcement" as the trigger. The other four windows hold because two genuine positives offset the contraction — chiefly the CFTC's Sept 24 FAQ update (primary, PDF extracted locally), whose new Q12 lets an FCM or DCO hold *tokenized* Regulation 1.25 collateral, opening an institutional demand channel aimed squarely at the product whose flow just fell, and whose Q15 contemplates *public and permissionless* chains for regulatory recordkeeping. Both are staff no-objection guidance rather than rules, so they are logged, not scored.

Why CLARITY held flat, and what got corrected anyway. No development cleared the sufficiency bar: no floor scheduling, no Democratic yes votes, and senate.gov's own schedule confirms one session week (Sept 28 – Oct 2) before a five-week recess, with no re-vote set. But the fact record needed four fixes, and one was serious: **the report stated the opposite of a primary source**, claiming the final text "does not require divestment or blind-trust placement." Senator Lummis's own summary of the final text says verbatim there is a "clear requirement for covered individuals to divest significant financial interests or place in a qualified blind trust." The honest framing is *real but delayed* — effective 360 days after enactment or 60 days after the section 10102 final rule, whichever is sooner. Also corrected: the stablecoin-yield fight is *not* unresolved (the text carries a Treasury circuit breaker whose authority expires 18 months after enactment); **Tillis**, not Thune, entered the motion to reconsider; and the report never mentioned that **four Republicans defected** on Roll Call 234 (Collins, Hawley, Moran, Tillis), which is a harder read than framing the failure as purely Democratic. A Sept 17 joint statement by seven Democratic negotiators recommitting to the bill had also been missed by three consecutive prior cycles, including a full weekly. The score still holds because the two items that clear the bar cut in opposite directions and both are embedded in the 49–50 failure already priced here.

What was deliberately NOT scored, in either direction. The sufficiency rule did real work this cycle. Against the Iran up-move: a WSJ report that Trump *rejected* the seven-day plan and expects to resume bombing after the midterms — unnamed officials, one outlet, every other outlet citing WSJ, no on-record White House position. Also not scored: The National's 60-day "road map" (still single-original-source, and a different frame from Araghchi's seven-day plan — the two are not merged); the Pentagon's 19th US death (non-hostile, DCAS cause undetermined, so the combat-death flip line does not fire); a White House adviser's remark that the lame duck "is not a significant focus" (effectively single-source, and bearish); prediction-market odds on CLARITY (6.45% on Polymarket, on $12.7k of daily volume — an illiquid, effectively dead market) and on the midterms, which are market prices in a single outlet and barred on both counts; and Ondo's BlackRock-strategy portfolios, live Sept 24 but restricted to non-US investors, the same ground on which Robinhood Chain and Coinbase's Base launch were both previously excluded. **A methodology finding worth carrying forward:** on PDFs and very large text files, the automated fetch layer fails silently in *both* directions — it reported a real Barr sentence as absent, and separately reported 10-year-yield figures that the source does not contain. Verbatim PDF quotes in this system now require local text extraction; that alone justifies keeping the adversarial pass in every weekly refresh.

Stamp decision: LEFT AS DRAFT — NOT auto-stamped — awaiting Alex's review. The governing reason is categorical: this is a **full weekly refresh**, which CLAUDE.md's delegated auto-stamp authority excludes independent of move size, call-band flips or evidence quality, because the weekly is Alex's own periodic review checkpoint. Two further facts reinforce that outcome rather than substituting for it: this cycle corrected four factual errors in a delivered report, and it cleaned up an interrupted cycle whose reports claimed a stamp that was never written. Research capability was *not* degraded — primary fetches succeeded across federalreserve.gov, dol.gov, treasury.gov, the UMich survey, the S&P Global release, senate.gov, lummis.senate.gov, cftc.gov, the Federal Register API and rwa.xyz. Status: `draft`, `stamped_by: null`.

For Alex, before stamping — the five things I would want a second opinion on: (1) Which of three Sept 26 score sets is canonical. A cloud run pushed `2026-09-26_draft` (committed, auto-stamped) and `2026-09-26_draft2` (its own weekly) before this one could land; this is `_draft3`, and it is the set with the adversarial verification behind it. Nothing upstream was edited. **(2) The Iran gap.** The cloud fully reverted to 1/1/14/33/66; this set stops at 1/2/15/34/66. The whole disagreement is whether Pezeshkian's conditional inspector offer and Trump's own post-election framing justify sitting one point above the old floor on 3mo, 6mo and 12mo. I think they do; it is a judgement call, not a sourcing dispute. **(3) Tokenization.** The cloud held at 58; this set cuts 1mo to 57 on the pillar's own pre-committed third-consecutive-negative trigger. The −6.95% magnitude is single-aggregator and its cause is genuinely unknown. **(4) Two facts could not be primary-verified** because their sources block automated access — the Sept 23 Hormuz vessel strike (ukmto.org 403, so wire-derived) and the "no US strike since Sept 1" negative (centcom.mil 403, so ISW/wire-derived). Neither drives a move by itself. **(5) August PCE lands Sept 30**, four days out, and is the first hard test of the Fed cut — which is the one move here that two independent research passes agreed on almost exactly.

What to watch next, in order (updated Oct 2 — item 1 has now resolved): (1) *Resolved Sept 30:* August PCE and the Q2 GDP third estimate landed and read two-sided (core PCE partly a methodology artifact, GDP revised sharply up) — neither confirms nor reverses the Fed re-rate; (2) whether the US responds on the record to Iran's seven-day plan, and whether the WSJ's anonymous rejection account is ever confirmed or denied by a named official — nothing new found as of Oct 1-2; (3) whether any Tokenized Securities Venue actually goes live under the SEC exemption (earliest ~Oct 17), and whether the tokenized-Treasury contraction continues into a fourth reading — no fresh rwa.xyz pull obtained this cycle; (4) whether the Fed delivers the further hike its own SEP median projects at the Oct 27–28 FOMC; (5) whether anything moves on CLARITY before the Oct 5 recess begins — nothing had as of Oct 1-2.

Read as an investment posture: the near windows are Bear, the one-year window is still Mild Bull, and the headline sits at −0.05 — essentially flat, having crossed zero without changing call band. This is not a month to chase. Read the robustness table before the headline: dropping Tokenization alone puts the reading at −0.71 (Mild Bear) while dropping Iran puts it at +0.65 (Mild Bull), so the leave-one-out range still straddles zero and the sign is not robust. That fragility is the honest state of the blend, and it is the reason this number is published with its workings rather than on its own.

Sources

Each pillar report carries its full, freshly-checked source list. The master adds the engine and headline references for this September 23 LIGHT DAILY touch.

- **October 10 full weekly refresh — the load-bearing facts checked this cycle:** federalreserve.gov (primary, Governor Waller's Oct 8 Istanbul Economic Forum speech) plus five-plus independent outlets · CFTC.gov Release No. 9307-26 / RIN 3038-AF80 (primary, Oct 5 ANPRM) plus WilmerHale, Baker Botts and Lowenstein client alerts and other outlets · SEC Issuer Notice filing (primary, Oct 4, OKX/ICE "OKXICE") plus outlets not in the original research pass · Qatar MOFA on-record statement (Oct 6) on the US-Iran mediated channel; UKMTO warning-count trade-press tally (Hormuz, October through Oct 5) — note fred.stlouisfed.org, eia.gov, centcom.mil and en.wikipedia.org returned policy-level sandbox network blocks this cycle and could not be used to re-verify the Iran pillar's Brent flip-line.
- **The pillars:** the sibling reports in this folder — CoinPicks_CLARITY_Act / Iran_War / Tokenization_RWA / Fed_Macro Pillar Reports (all re-researched this cycle, see each report's own What Changed and Sources) and the computed Bitcoin TA Quant Pillar Report (unchanged this cycle).
- **The engine:** engine/blend.py → data/master_blend.json (score set 2026-09-23_draft in config/scores.json, status: committed, active_qual_set; prior committed set 2026-09-22_draft; full lineage back to 2026-06-19_committed; final-number window weights in config/settings.json "final_weights") · engine/mapping.py → data/pillar_scores.json (data through Sept 23, 2026).
- **September 23 light daily touch — the load-bearing facts checked this cycle:** Reuters (primary wire, Sept 22, Iranian official's Hormuz-reopening offer) plus Washington Times, Yahoo, US News, The Star, Israel Hayom, KFGO, BOE Report, AOL (8+ corroborating outlets) · Al Jazeera, Axios, The Hill, Times of Israel, New Arab, Al Arabiya (6+ independent outlets on the Sept 22 UNGA-sidelines US-Iran meeting) plus Iranian state media confirmation.
- **September 22 light daily touch — the load-bearing facts checked that cycle:** philadelphiafed.org (primary, Philadelphia Fed Manufacturing Business Outlook Survey released Sept 17) plus MarketScreener, NAM, investinglive, Kitco, Bitget,

Academic Capital (5+ corroborating outlets) · newyorkfed.org (primary, fetched directly, New York Fed Empire State Manufacturing Survey released Sept 15).

- **Carried forward from the September 19 full weekly refresh, not re-checked this cycle:** Roll Call, BGov, The Well News, Troutman Financial Services (Senate 2026 calendar) · The Block, Yahoo Finance/247WallSt, CryptoTimes, Gokhshtein (Sept 18, CFTC's Sept 17 OIRA filing, RIN 3038-AF80) · Axios, Jerusalem Post, Politico/Political Wire, Israel National News, Breitbart (Sept 17, Trump's Iran remark) · UN press releases (press.un.org), Euronews, Security Council Report (Sept 17, UNSC veto) · IRNA/GlobalSecurity.org, The Hill, Bernama, IranWire (Sept 17-18, "Trend" tanker corroboration) · SEC.gov press release 2026-90 and Commissioner Uyeda statement (primary, Sept 17), CNBC, Coindesk, Crowdfund Insider, Decrypt, Securities.io (exemption mechanics) · SIFMA.org (primary, pushback statement) · U.S. Dept of Labor, Census Bureau/HUD, NAR, University of Michigan Surveys of Consumers (primary, labor/housing/sentiment data) · CNBC, CNN, NBC News, Bloomberg, The Hill (Trump-vs-Fed political-pressure story).
- **Price:** BTC/USD $84,015.60 (Sept 24, 2026, data/btc_usd_daily.csv via a local run.py quant refresh) — down from $85,488.24 (Sept 23); cycle low $58,526 (2026-06-30), cycle top $124,728 (2025-10-06).
