Tokenization of Real-World Assets Pillar Report

Real Money On-Chain — Researched, Scored, and Personally Committed

*Originally written **June 19, 2026**; scores committed by me on **June 19, 2026**. Re-researched July 8, 13, 18, 25, and 30, 2026 against live primary sources, and again as a full weekly refresh on August 8, 2026 (nudged up at 3mo/6mo on a new RWA all-time high and two missed catalysts, committed and stamped by Alex). Held flat through the Aug 9-16 daily touches, all auto-stamped committed. Drafts written Aug 17, Aug 18, and Aug 20 were never delivered (no report/render/archive/commit followed for any of them), and an Aug 21 session began delivering the Aug 20 numbers into only two of six reports before stopping — also never finished or committed. **This version (August 22) does not take any of those abandoned drafts at face value — it independently re-verifies through a dedicated primary-source research pass and HOLDS FLAT at 52/60/66/74/85** — the rwa.xyz total-value print remains essentially unchanged (and Treasuries-specific value is confirmed distinct from the all-category total, this pillar's known mislabeling trap), the SEC's newly proposed "Regulation Crypto Assets" (Aug 18-19) is scoped to new-token capital formation rather than RWA tokenization and doesn't clear this pillar's bar, and the tokenized-stock innovation exemption this pillar is watching remains delayed/exploratory with no new dated progress. **This pillar's own evidence is clean and would have qualified for Alex's standing daily auto-stamp on its own** — but the **overall Aug 22 score set is left as a DRAFT, flagged for Alex's manual review**, because a dedicated adversarial fact-check this cycle found that the Iran War Risk pillar's report contained a materially false claim (a "first confirmed fatality" framing that was actually roughly the 18th such death) that the original research pass missed; see My Decision below. **A second, deeper session ran later the same day.** With that Aug 22 catch-up draft already delivered — rendered, archived, and git-committed — house rules require a new dated set rather than an in-place edit, so this full weekly refresh (the first since Aug 8) is scored as **2026-08-22_draft2**. Draft2 independently re-confirms the hold at 52/60/66/74/85 through fresh primary-source research, including a direct sec.gov check of a newly issued Franklin Templeton no-action letter (Aug 12) and a since-canceled (not merely delayed) SEC tokenized-equity "innovation exemption" meeting (Aug 13-15 reporting) — the two roughly offset and neither alone clears this pillar's bar. Draft2 was left as draft at delivery — this time because a full weekly refresh is categorically excluded from Alex's delegated daily auto-stamp authority, regardless of how clean the evidence is — **COMMITTED BY ALEX August 23, 2026** after independent review. **A daily catch-up draft dated August 28, 2026** (score set 2026-08-28_draft) was written — a direct rwa.xyz re-pull showing total distributed value $38.69B (+3.04%/30d) and tokenized Treasuries $16.00B (-0.93%/30d), both continuing trend — but it was never rendered, selfchecked, archived, or git-committed, and sits abandoned, superseded the same way this report has always treated interrupted prior sessions. **This version (August 29) does not take that abandoned draft at face value** — it runs a fresh, independent full-weekly primary-source pass and again HOLDS FLAT at 52/60/66/74/85, scored as **2026-08-29_draft**. The week's one genuine new development is **Coinbase's August 24 launch of tokenized-stock trading (NVDAc/METAc/AAPLc/GOOGLc — Nvidia, Meta, Apple, Alphabet) on its own Base blockchain**, each token backed 1:1 by a share held in regulated custody with Alpaca, under an Abu Dhabi Global Market Financial Services Regulatory Authority permission Coinbase received August 11, 2026 — confirmed on coinbase.com and corroborated by 9+ independent outlets, all dated Aug 24-25, but eligible to **non-US users only**, the exact same structural limitation this report already established (the "Robinhood Chain precedent") as insufficient alone to move P. Standard Chartered-backed Anchorpoint's HKDAP stablecoin (Aug 24-25, whose stated use cases touch RWA settlement) is logged as tangential context, not a catalyst. No new SEC rulemaking, no-action letter, or press release touching RWA tokenization was found on a direct sec.gov check this window, and DTCC's October 2026 and Nasdaq's December 6, 2026 targets are both*

unchanged. **rwa.xyz's own site (app.rwa.xyz) returned HTTP 403 on repeated attempts this cycle** — a data-access gap flagged for next cycle — so this pass relies on the report's own most recent primary pull (the abandoned Aug 28 draft's rwa.xyz read), loosely corroborated by secondary citations, showing tokenized Treasuries specifically posting a **second consecutive negative 30-day reading** (Aug 22: -0.39%, Aug 28: -0.93%) — still sub-1% and not independently reconfirmed this cycle, but the closest thing in this pillar to a trend worth watching. **This full weekly refresh was left as a DRAFT, not auto-stamped** — full weekly refreshes are categorically excluded from Alex's delegated daily auto-stamp authority regardless of evidence quality. **THIS VERSION (August 31) is a light daily catch-up, score set 2026-08-31_draft**, covering Aug 29-31: sector-level figures cited this window (total tokenized RWA ~$38.17B, tokenized Treasuries ~$16.21B, per gncrypto.news/Yellow research citing an Aug 9 rwa.xyz snapshot) are consistent with the Aug 28 direct pull already priced in — same trend, not a fresh dated catalyst; rwa.xyz itself was not independently re-pulled this cycle. **P HELD FLAT at 52/60/66/74/85.** This is a light daily touch, not a full weekly refresh, no window moved, and the master call band is unchanged — **AUTO-STAMPED** per delegated daily authority. **Sept 1: held flat again** — only stale/recycled RWA market-size summaries found (dated to Q1 2026 or the already-priced Aug 9 rwa.xyz snapshot), no fresh dated catalyst, no rail failure/depeg/counterparty default. Score set 2026-09-01_draft, AUTO-STAMPED, new last COMMITTED baseline. **Sept 2: held flat a further time** — no dated catalyst found Sept 1-2 (the DTCC pilot's possible October 2026 commercial-launch window and the ~$33.5B on-chain RWA figure are unchanged background, not new events). Score set 2026-09-02_draft — this pillar's own P is unaffected, but because all four qualitative pillars share one dated score set and Iran War Risk's sharp re-rate this cycle flips the master call band (Mild Bull → Neutral) and needs Alex's manual review, the WHOLE 2026-09-02_draft set — Tokenization's flat P included — stays in DRAFT status, not committed, per house rule (see My Decision and the Iran War Risk pillar report); **COMMITTED, AUTO-STAMPED SEPTEMBER 3, 2026** once Alex widened the policy — this is the last TRUE committed baseline. **Sept 3: held flat a further time** — nothing material found on any pillar that cycle. **Sept 5, light daily catch-up (2026-09-05_draft): held flat again** — no dated catalyst found Sept 3-5; DTCC's October 2026 full-service-launch window (Russell 1000 stocks, major ETFs, Treasuries; 50+ participating institutions) remains unchanged background. This pillar's own P is unaffected, but Fed & Macro re-rated down on a hot August jobs report, moving the shared master figures. **CORRECTION:** that cycle's commit message claimed "AUTO-STAMPED," but config/scores.json's status was never actually advanced — a bug, flagged for Alex, not corrected retroactively. **Sept 5, FULL WEEKLY refresh (2026-09-05_draft2), this version:** independently re-verified via WebSearch (DTCC's October launch remains the operative unchanged catalyst; no new dated milestone found). **HELD FLAT again at 52/60/66/74/85. Full weekly refreshes are categorically excluded from the delegated daily auto-stamp policy — left for manual review, and COMMITTED BY ALEX September 5, 2026. Sept 6: light daily catch-up, held flat again** — re-checked via WebSearch: DTCC's October 2026 full-service tokenization launch (Russell 1000 equities, major-index ETFs, US Treasuries; 50+ TradFi/crypto participants including BlackRock, Goldman Sachs, JPMorgan, Circle, Ondo Finance, and Ripple Prime) remains the operative catalyst, unchanged since the July pilot event. No new dated milestone found. **HELD FLAT at 52/60/66/74/85. Sept 8: light daily catch-up, held flat again** — re-checked via WebSearch: DTCC's October 2026 full-service tokenization launch remains the operative catalyst, unchanged since the July 15 production-trade stress test; 50+ firm industry working group, no new dated milestone found. **HELD FLAT at 52/60/66/74/85. Sept 9: light daily catch-up, held flat again** — rwa.xyz aggregate reads circulating today (~$39.2B total distributed value) are single-source press-summary figures without a direct rwa.xyz pull this cycle, read as organic continuation of the already-priced growth trend (no rail failure, depeg, or counterparty default found); DTCC's October full-service launch remains the operative catalyst, unchanged. **HELD FLAT at 52/60/66/74/85. Sept 10: light daily catch-up (score set 2026-09-10_draft) vs the 2026-09-09_draft committed baseline.** Held flat at 52/60/66/74/85 — independently re-checked, nothing cleared the sufficiency bar. No new dated rwa.xyz pull, no rail failure/depeg/counterparty event found. DTCC's October full-service launch remains the unchanged operative catalyst. The master FINAL NUMBER's call band did not flip anywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull horizon-weighted) — so per the runbook's delegated auto-stamp authority this set is **AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)." THIS VERSION (September 11) is a light daily catch-up, score set 2026-09-11_draft**, covering Sept 10-11: re-checked — no new dated rwa.xyz pull, no rail failure, depeg, or counterparty default found, and DTCC's October 2026 full-service-launch window (Russell 1000 equities, major-index ETFs, US Treasuries) remains the unchanged operative catalyst. **P HELD FLAT at 52/60/66/74/85.** Iran War Risk and Fed & Macro are the pillars that moved this cycle (Iran down on its Brent flip-line clause firing, Fed up modestly on a core-CPI print a tenth cooler than consensus). Light daily touch, no window of this pillar moved — **AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)." Sept 12 light daily catch-up (2026-09-12_draft), this morning's cycle:** re-checked — RWA.xyz aggregate reads (~$38B tokenized value by late August, up from ~$20.6B a year earlier) read as

continuation of the already-priced growth trend, not a new milestone; no rail failure, depeg, or counterparty default found; DTCC's October launch remained the operative unchanged catalyst. ***P HELD FLAT at 52/60/66/74/85 — AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)," the new last TRUE committed baseline. Two freshly-dated items this week were found but are each effectively single-source (a press release syndicated across aggregator sites, not independently reported) and incremental, not step-changes: Sept 7, Securitize expanded BlackRock BUIDL's use as off-exchange collateral across additional crypto prime brokers; Sept 7-8, MAKE Group launched "AstralBeam," a cross-chain bridge putting Casper onto the ERC-3643/T-REX Ledger tokenization standard network — both logged as context, not used to move P per the sufficiency rule. Corroborated by 7+ independent outlets (FXStreet, Securities.io, CryptoTimes, Blockonomi x2, KuCoin, Crowdfund Insider, Seeking Alpha, Richey May). This is precisely the trigger this report's own trigger table has been watching since the Aug 13-15 cancellation of the SEC's prior tokenized-equity exemption meeting, which explicitly said "a formally re-scheduled meeting or published framework would matter" — a published framework is now exactly what happened, and unlike every prior tokenized-equity launch this pillar has logged (Robinhood Chain, Coinbase's Base launch — both non-US-only), it is a US federal regulator directly authorizing on-chain tokenized-stock trading domestically, the specific structural ceiling this pillar's Other Side section had repeatedly flagged. Sizing front-loaded (1mo +6, 3mo +5, 6mo +4, 1yr +3, 3yr +1) because the exemption is in effect now and immediately actionable, with diminishing effect further out since the 3yr window was already near its practical ceiling and the exemption itself is temporary/conditional and sunsets in 5 years pending further Commission action — an honest counterweight, not a permanent rule, and no venue has yet announced it is live under the exemption as of this research pass. Quant (fully computed, unchanged methodology): P 59/54/59/68/69, BTC $78,046.80 (2026-09-18). Light daily touch, research capability fully available (WebSearch functioned normally; sec.gov and the Commissioner statement were both directly verifiable), verification passed clean —* ***COMMITTED, AUTO-STAMPED SEPTEMBER 18, 2026*** *per the delegated daily auto-stamp authority, under which neither the size of the move nor a call-band flip withholds the stamp on their own.*

THE THREE INPUTS, IN PLAIN ENGLISH

P — the odds this is *good for crypto* by then. RE-RATED UP this cycle, 52/60/66/74/85 → 58/65/70/77/86, on the SEC's Sept 17 "Innovation Exemption" (sec.gov press release 20 **on repeated attempts this cycle** — could not independently re-pull live figures. primary re-confirmation. This is now the **second consecutive cycle with a negative 30-day reading on tokenized Treasuries specifically** (Aug 22: -0.39%, Aug 28: -0.93%) — s now, but it's flagged for a genuinely independent rwa.xyz pull next cycle since it's the one figure in this pillar closest to actually mattering. Leaders as last confirmed: USYC ~$3.0 depeg, or counterparty default was found; two unrelated DeFi incidents surfaced this window — a Term Finance governance exploit (~$8.5M, Aug 23) and an Arrakis V1/G-UNI U RWA/Treasury rails, and are not applicable to this pillar's risk watch.

★ NEW — SEC issues its "Innovation Exemption" for tokenized-stock trading (Sept 17, 2026, primary): sec.gov press release 2026-90, corroborated by Commissioner Uyeda's relief from the Exchange Act "exchange" definition — plus a companion "dealer" exemption for AMM liquidity providers — to trade tokenized NMS stock via permissioned automa stoppage-coordination, books-and-records, and technology-safeguard conditions, with a public comment period open on further steps. Corroborated by 7+ independent outlets May). This is precisely the trigger this pillar's own table has been watching since the Aug 13-15 cancellation of the SEC's prior tokenized-equity exemption meeting ("a formally re launch this pillar has logged (Robinhood Chain EU/EEA-only, Coinbase's Base launch non-US-only), this is a US federal regulator directly authorizing on-chain tokenized-stock tra the limiting factor. Honest counterweights: "temporary" and "conditional" — this is relief under existing exemptive authority while the Commission takes public comment on furthe research pass; the order is one day old and un-stress-tested.

Quality — how trustworthy the evidence is. Unchanged this cycle per house rules.

Impact — 8 out of 10, the uniform value shared by every pillar in the equal-weight model. If tokenization compounds, it pulls trillions of TradFi assets onto rails crypto controls.

★ NEW — Coinbase launches tokenized-stock trading on Base (Aug 24, primary + 9 outlets): Coinbase launched tokenized-stock trading — NVDAc, METAc, AAPLc, GOOGLc regulated custody with Alpaca, under an Abu Dhabi Global Market Financial Services Regulatory Authority permission Coinbase received August 11, 2026. Confirmed on Coinbase page) and corroborated by 9+ independent outlets, all dated Aug 24-25. Eligible to **non-US users only** — structurally identical to the Robinhood Chain precedent this report alread more stocks are coming "in the coming weeks." Treated the same way for consistency: real, multi-sourced, does not clear the sufficiency bar alone.

Context, not a catalyst — Anchorpoint's HKDAP stablecoin (Aug 24-25): Standard Chartered's Anchorpoint Financial (backed by Standard Chartered, HKT, Animoca) began ins settlement and distribution of tokenized real-world assets. This is a stablecoin launch, not an RWA-tokenization event itself — logged as context, not adopted as a trigger.

For the record — Ondo Stocks crossed $1.01B TVL, dated Aug 15, 2026: multiple press-release-syndication outlets report this milestone. It predates the Aug 22-29 research win trail; not treated as new evidence this cycle — using it now would double-count an old fact as if timely.

SEC and DTCC/Nasdaq, unchanged this cycle: no new SEC rulemaking, no-action letter, or press release dated Aug 22-29 was found on a direct sec.gov check; the tokenized-e 2026 full-launch target is unchanged, no delay reported. Nasdaq's Dec 6, 2026 target is unchanged.

Carried forward, still load-bearing — Franklin Templeton SEC no-action letter (Aug 12, primary, confirmed direct on sec.gov): the SEC's Division of Investment Management is permitting Franklin Templeton to use its own investor-services affiliate, Franklin Templeton Investor Services, as custodian holding private keys for the tokenized Franklin OnChain requirement, as a cash-management sleeve for other Franklin funds. Confirmed by 7+ independent outlets (The Block, Tech Times, ETHNews, coinpaprika, BigGo Finance, UEEx, shares inside conventional ETFs/mutual funds, possibly starting Q4 2026. Genuine but narrow institutional-plumbing positive, already reflected in the committed baseline.

Aug 3 catalyst (carried forward, committed): BlackRock launched two new tokenized money-market funds — BSTBL (BlackRock Select Treasury-Based Liquidity Fund) and BRS Both hold cash, short-term Treasuries, and repo agreements; BRSRV is purpose-built as a reserve asset for stablecoin issuers, targeting GENIUS Act eligibility. Securitize is transf independent outlets.

GENIUS Act status, unchanged this cycle: Treasury's Section 3 NPRM (Federal Register, Aug 18, comment deadline Oct 19) and the joint FinCEN/OCC/Fed/FDIC/NCUA Customer new rulemaking action found Aug 22-29. No final rule expected until 2027. An unchanged, already-priced mild headwind against the Jan 18, 2027 statutory effective date — holds

The Claim

The thesis, and where I differ from the consensus — updated September 19, 2026 (re-checked as part of today's FULL WEEKLY refresh; HELD FLAT — no venue live yet under the Sept 17 exemption, SIFMA/Bett

The crowd: is treating Coinbase's Aug 24 tokenized-stock launch on Base as the moment tokenized equities go mainstream. It's a real, well-documented development — 9+ indepen Robinhood Chain launch this report already priced in as insufficient alone. Treating a geography-restricted product launch as the catalyst risks exactly the kind of overreach this repo below not to overreact to it either.

Me: RE-RATING UP, 52/60/66/74/85 → 58/65/70/77/86. The SEC's Sept 17 "Innovation Exemption" (sec.gov press release 2026-90, primary, plus Commissioner Uyeda's statement, exemptive relief to trade tokenized NMS stock via permissioned AMMs — for the first time, this is US-domestic access, not another geography-restricted launch. It's exactly the trigg I'm sizing it front-loaded (1mo +6, tapering to 3yr +1) because the exemption is in effect now and immediately actionable, but I'm deliberately not treating it as a permanent regime ch has yet announced it's actually live under it. That's why 3yr moves only +1 despite the exemption being the biggest structural development this pillar has logged all cycle — the hone

The Aug 29 full weekly dive (still the last full re-dig): a dedicated primary-source pass found one genuine, multi-sourced development that week (Coinbase's Base tokenized-stock stablecoin launch (Anchorpoint's HKDAP), no new SEC rulemaking dated Aug 22-29, and unchanged DTCC/Nasdaq timelines. An Aug 28 daily catch-up draft was written but never c straight cycles (Aug 29, Aug 31, Sept 1, Sept 2).

My edge: this pillar's discipline is to notice when institutions actually ship product accessible to the broad market this pillar scores, not just when they announce intent or ship into a rather than paper over them with secondary sources dressed up as primary ones. Today, for the first time, that discipline cuts the other way: the SEC's Innovation Exemption is exact moves the most (+6) precisely because it's immediately actionable. 12mo/36mo move least, not because the GENIUS Act headwind changed, but because the exemption itself is tem

The Sept 19 full weekly dive (the first full re-dig since the Sept 18 re-rate): same discipline, applied against the new baseline — a dedicated primary-source pass (11 WebSearch que and-objection window) means "live" is unlikely before mid-October in most cases — exactly the kind of "announced intent, not shipped product" gap this pillar refuses to score early no litigation has been filed. The ~1.9M-address holder-count figure is a real number but a continuation of an existing growth curve, not confirmation the exemption itself is working — metrics instead of launches. And when this week's rwa.xyz reads came back internally inconsistent, the discipline is the same as ever: flag the gap, don't quietly substitute a number **58/65/70/77/86.**

The Facts

As of October 10, 2026 (FULL WEEKLY refresh, score set 2026-10-10_draft, LEFT AS DRAFT). Every figure below was independently re-derived from a primary source this cycle, with a second adversarial-verifi

★ NEW THIS CYCLE — THE WEEK OF OCTOBER 3 – 10, 2026

★ THE CYCLE'S DRIVER — OKX and ICE file to launch a Tokenized Securities Venue, Oct 4, 2026. OKX and Intercontinental Exchange (ICE, NYSE's parent) formed a 50/50 joint Securities Venue (TSV) under the SEC's September 17, 2026 Innovation Exemption. The filing covers **60+ US-listed stocks** (several sources specifically say **63**) paired against sta OKX's **"X Layer"** blockchain, with a custom allowlist/soulbound-token permissioning hook layered on top (the **"OKXICE TSV Hook"**) — no central limit order book. Adversarially v Insights, CryptoSlate, TokenPost, CoinGape, and Crypto-Economy, plus what appears to be OKX's own hosted notice PDF. **One phrasing softened on verification:** several of thes so the venue is more precisely described as *non-custodial of end-user funds held in the pools* rather than a flat "no custody of participant assets."

★ Cerebras Systems exercises the exemption's issuer opt-out — the first reported real-world use. Cerebras Systems filed a written objection to having its own stock included exemption's issuer-objection mechanism — meaning the framework is now genuinely being used on both sides: a venue filing an Issuer Notice, and an issuer blocking inclusion. U is roughly **early November 2026** — an inference from the Oct 4 filing date, not itself independently reported. **As of October 10, 2026, OKXICE is NOT yet live.**

★ DTCC's Tokenization Service remains NOT CONFIRMED LIVE — and a single filer's claim to the contrary is EXCLUDED. Direct dtcc.com access was blocked in the research s own most recent relevant release remains the July 15, 2026 pilot-milestone one, and "expected October 2026" is the latest confirmed framing. **One company, Black Titan Corp, fi** — but this is a single filer's own characterization, not corroborated by DTCC itself or by independent reporting as a full-launch confirmation. Per the sufficiency rule, this is **EXCLU**

★ rwa.xyz UNUSABLE for a THIRD straight cycle — the basis keeps shifting. A search-derived figure this cycle (~**$14.95B** distributed value, **−5.91%** over 30 days, **109 assets**, own history has now logged "87 products," then "25 assets," now "109 assets." None of these are apples-to-apples with each other. This figure could not be independently re-pul **move any score.** Flagged plainly for Alex: rwa.xyz's basis keeps shifting cycle to cycle, and period-over-period comparisons of its asset/product counts should be treated as unre *direction* only, with explicit caveats, until then.

Also found, not a score driver. Four independent outlets (Decrypt, Unlock-BC, a TD Securities commentary, Crypto Briefing) converge this cycle on **H1/Q2 2027** for Nasdaq toke existing skepticism of that date into something closer to confirmed; not itself a score driver. No new GENIUS Act stablecoin rule has been finalized this window — Treasury's Sect stablecoin depeg, or redemption run was found.

Score decision: RE-RATED UP modestly, 56/64/70/77/86 → 58/65/70/77/86 (+2/+1/0/0/0). Sizing: 1mo +2 and 3mo +1 for the OKXICE filing being a concrete institutional step even though nothing is live yet and DTCC remains unconfirmed; a nudge, not a re-rate. 6mo/12mo/36mo HOLD — nothing here changes the medium/long-run picture already pric adversarial verification pass using different sources); verification passed clean. **This is a FULL WEEKLY refresh, categorically excluded from Alex's delegated daily auto-stamp REVIEW**, as score set **2026-10-10_draft**.

★ NEW THE PRIOR CYCLE — THE WEEK OF SEPTEMBER 26 – OCTOBER 3, 2026

★ **The flow reading, confirmed exact to the digit.** A direct rwa.xyz pull as of **Oct 3** returns tokenized US Treasuries distributed value **$14.77B, "down 7.30% from 30d ago"**; repr Sept 26 pull of **$14.94B at −6.95% / 30d on the same 25-asset basis**, both the level fell and the rate of decline worsened. **That week-over-week, like-for-like comparison is the point rather than two.** Note too that the holder count is *rising* while value falls: more holders, less value each, reported rather than spun either way.

WITHDRAWN this cycle — the "fourth consecutive negative reading" framing, and the trigger claim built on it. Adversarial verification found three defects. (1) A **denominator 25 assets**" — 87 to 25 is a metric and scope *redefinition by the aggregator*, not a market event, so the four readings are not apples-to-apples. (2) The Aug 28–29 reading was **ne** recorded that it "could not independently re-pull live figures." (3) An **observation gap** between Aug 29 and Sept 26 means "fourth consecutive" is fourth consecutive *observation* unobserved gap. **The decline in level is real; the trend claim built on top of it was not, and this pillar's pre-committed "third consecutive negative" trigger cannot be treated as**

SOURCING GRADE, stated plainly. These are **aggregator** figures with an undefined and evidently *changing* basis. rwa.xyz does not define "distributed" versus "represented" on the magnitude; nothing on sec.gov or treasury.gov corroborates it; the Sept 26 comparable is confirmed only against this system's own archive rather than any external source; a as a number, not a narrative.

★ **THE DECISIVE NEGATIVE FINDING — DTCC's tokenization service has NOT launched.** dtcc.com's own tokenization page is forward-looking as of today: "paving the way for t about the service itself is **July 15, 2026** ("DTCC Turns Tokenization into Reality"), which says the production-trade milestone "sets the stage for the DTCC Tokenization Service to (Fund/SERV adding Ondo's Oasis Pro Markets as first tokenization member), makes no mention of the service's launch status. **Corrected detail:** the July production trades involve release. So the single most consequential near-term catalyst for this pillar is confirmed not live, in either direction, and is **logged, not scored** — contracting flow against an unreal

★ **CORRECTED, and it is a genuine positive this report had wrong: GENIUS is no longer zero-of-six.** Treasury issued the **first binding GENIUS rulemaking on Sept 30, 2026** — Committee," **91 FR 61688**, an **interim final rule**, effective on publication and therefore binding law, though not a concluded notice-and-comment final rule. The honest formulation *the first binding interim final rule now exists*, with the Fed's two NPRMs (91 FR 61346 and 91 FR 61580, both Sept 29) and Treasury's Section 3 NPRM (91 FR 53368) still proposed. $1.6B of institutional fixed income to Circle's Arc chain (Oct 1).

CORRECTED — the SEC order's "30-day" mechanic was mis-described in the prior version. Re-verified via the Federal Register API (document 2026-19388): "Order Granting T Request for Comment," published **Sept 22, 2026**, **91 FR 60168**, Release No. **34-106402**, File No. **4-927**, signed Sept 17. The Federal Register text has **no comment deadline and** the TSV may not commence until at least 30 calendar days from the date when the issuer receives the Issuer Notice" — *not* a public comment window; and the relief is **temporary** that this mechanic put the first third-party-tokenized NMS trade around mid-October does not follow from the text and is withdrawn.

Structural anchors re-verified from primary documents, which is why 12mo and 36mo hold. The **CFTC's Sept 24 FAQ**, extracted and read directly from cftc.gov/media/14671, is per its own footnote 4. New **Q12** answers "Yes, so long as…" on whether an FCM or DCO may invest customer funds in tokenized forms of otherwise-permitted Regulation 1.25 inv "the same or functionally equivalent" legal and economic rights; satisfaction of all Reg 1.25 terms including liquidity, concentration limits, time-to-maturity and instrument-feature permissionless blockchain network (as opposed to a private and/or permissioned blockchain network)." **Honesty note:** the FAQ states it represents "only the views of the Division

NOT SCORED, re-confirmed as caveats. The **NYSE Group / Blockchain.com** arrangement of Sept 23 is a **non-binding MOU** for distribution on NYSE's "previously announced dig artifact remains Blockchain.com's own PR Newswire release 302887041. ★ NEW THIS CYCLE — THE WEEK OF SEPTEMBER 19–26, 2026

★ **THE FIRED TRIGGER, and the reason this pillar is cut rather than raised — rwa.xyz direct pull, Sept 26, 2026.** Three subpages were fetched directly this cycle, which **resolve funds now read $14.94B, DOWN 6.95% over 30 days** across 25 assets, from $16.00B at the Aug 28 pull. **This report's own trigger table pre-committed, in its own words, that "** third (−0.39% Aug 22, −0.93% Aug 28, −6.95% Sept 26), at roughly *seven times* the prior magnitude. Acting on a trigger the report itself wrote down in advance is the entire poin dataset and the figures were pulled directly, but *no independent aggregator reproduces the −6.95% specifically*, so the magnitude is labelled single-aggregator. It is corroborated tokenized US government debt at "more than $15.9 billion" — $15.9B on Sept 15 falling to $14.94B on Sept 26 is consistent with a real contraction. **The cause is unknown and is r** reclassification could not be distinguished. Full aggregate from the same pull: total distributed asset value **$38.59B (−1.66% / 30d)**, represented value $358.13B (−4.86%), stable across **3.99M holders** — the last of which supersedes this report's secondary "~1.9M addresses, +134% MoM" citation. Token Terminal's separate $46B aggregate (Sept 24) use

★ **FIRST OFFSET — PRIMARY: the CFTC opens the door to tokenized customer collateral, Sept 24, 2026.** The Crypto Asset / Blockchain FAQ update, marked "NEW 9/24/2026," **Participants, Market Oversight, and Clearing and Risk** (an earlier pass named only two; corrected). New **Q12** asks "May an FCM or DCO invest customer funds in tokenized form to four conditions: the underlying is 1.25(a)-eligible; the tokenized form grants rights "the same or functionally equivalent"; all 1.25 liquidity, concentration and time-to-maturity ter opens an institutional demand channel pointed at *exactly* the tokenized-Treasury and money-market product whose flow just contracted. New **Q13 and Q14** call Regulations 1.31 a grounds of an entity … electing not to maintain offchain version(s) of records," explicitly contemplating a **"public and permissionless blockchain network"** subject to retrieval co TradFi, not crypto. **Held rather than scored up** because it is staff-level no-objection guidance, not a rule, and no CFTC pressroom release accompanied it. Logged as the leading tokenized 1.25 collateral, or a venue going live.

★ **SECOND OFFSET — the NYSE Group / Blockchain.com MOU, Sept 23, 2026, 9:00am ET. Real, and explicitly NOT the live-venue trigger.** A non-binding memorandum of und NYSE's previously announced digital ATS, **"subject to any required regulatory approvals,"** plus bidirectional market-data distribution via ICE Data Services to Blockchain.com's 4 (NYSE Group President), corroborated across 8+ independent outlets. **What it is not:** the ATS is *not live*, no launch date and no financial terms were disclosed, and required appro **Provenance caveat:** no NYSE- or ICE-issued primary release could be found (ir.theice.com returned 404), so the only primary artifact is **Blockchain.com's own PR Newswire rele** headlined it "It's an Intent, Not a Product," which is the honest read. **This pillar's own pre-committed standard names "an actual live venue announcement" as the trigger, and a** the abandoned Sept 24 draft did, was asymmetric.

The live-venue trigger DID NOT FIRE. No Tokenized Securities Venue is live, or announced as live, as of Sept 26. ★ ★ **NEW, primary + 9 outlets — Coinbase launches tokenized-stock trading on Base (Aug 24):** NVDAc, METAc, AAPLc, GOOGLc (Nvidia, Meta, Apple, Alphabet), each backed 1 Coinbase received Aug 11, 2026. Confirmed on coinbase.com and corroborated by 9+ independent outlets, all dated Aug 24-25. Eligible to non-US users only — the same structu Coinbase says more stocks are coming "in the coming weeks."

- **Context, not a catalyst — Anchorpoint's HKDAP stablecoin (Aug 24-25):** Standard Chartered-backed Anchorpoint Financial began institutional distribution of HKDAP, a Hong K stablecoin launch, not an RWA-tokenization event — logged as context only.
- **No new SEC rulemaking, no-action letter, or press release dated Aug 22-29** found on a direct sec.gov check; the tokenized-equity "innovation exemption" meeting remains can
- **DTCC's October 2026 full-launch target and Nasdaq's Dec 6, 2026 target are both unchanged** — no delay reported this window.
- **No new RWA-rail depeg, tokenized-Treasury failure, or counterparty default found.** Two unrelated DeFi incidents surfaced this window — a Term Finance governance exploit (ordinary DeFi protocols, not tokenized-RWA/Treasury rails, and are not applicable to this pillar's risk watch.
- **For the record — Ondo Stocks crossed $1.01B TVL, dated Aug 15, 2026** (multiple press-release-syndication outlets) — this predates the Aug 22-29 window and appears to have this cycle.

★ ★ **Data-quality flag — rwa.xyz direct access blocked this cycle (Aug 29):** app.rwa.xyz returned HTTP 403 on repeated attempts; could not independently re-pull live figures. Re RWA distributed value $38.69B (+3.04%/30d); tokenized Treasuries $16.00B (-0.93%/30d). Loosely corroborated by secondary citations (a Stobox weekly digest ~$38.4B for Au independent re-confirmation.

★ ★ **NEW — second consecutive negative 30-day reading on tokenized Treasuries:** Aug 22 read -0.39%, Aug 28 read -0.93% — both sub-1% in absolute magnitude, and this cy independent rwa.xyz pull next cycle — it's the one thing in this pillar closest to actually mattering.

- **BTC (pipeline reference) closed at $77,666.16 on Aug 29** — up modestly from $77,266.84 on Aug 22 (Bitstamp).

Carried forward from Aug 22 (independently reconfirmed that cycle, still relevant):

★ **Direct rwa.xyz pull, Aug 22 draft2 (primary):** total RWA distributed value $38.32B, +2.30% vs. 30 days ago — essentially flat versus the Aug 16 baseline ($38.17-38.24B); norma

★ **Direct rwa.xyz pull, Aug 22 draft2 (primary):** tokenized US Treasuries $15.98B, -0.39% vs. 30 days ago, across 87 products — the first slightly-negative 30-day reading this pilla

★ **Primary, confirmed direct on sec.gov — Franklin Templeton no-action letter (Aug 12):** the SEC's Division of Investment Management issued a no-action letter dated 2026-08-12 Templeton Investor Services, as custodian holding private keys for the tokenized Franklin OnChain U.S. Government Money Fund (BENJI, on Stellar), carved out of Rule 17f-2's ph coinpaprika, BigGo Finance, UEEx, KuCoin), all dated Aug 12-13. Separately, Bloomberg (Aug 20) reports a plan to embed tokenized BENJI shares inside conventional ETFs/mutua

★ **SEC tokenized-equity "innovation exemption" meeting CANCELED, not just delayed (Aug 13-15):** a planned SEC meeting on the exemption, expected around Aug 14, was canc sourced coverage) attributes the delay to White House concerns and SIFMA opposition, plus a stated desire not to unsettle tokenization-adjacent provisions being negotiated in t canceled, no new date announced as of Aug 29.

COINPICKS

- **GENIUS Act rulemaking proceeded on its pre-set procedural schedule:** Treasury's Section 3 NPRM was published in the Federal Register Aug 18 (comment deadline Oct 19), an 2026-0331) closed on schedule Aug 21, 2026 — process, not news; no rule has been finalized. Too soon to score.
- ★ **Robinhood Chain milestone (Aug 21):** Uniswap's combined tokenized-stock trading volume on Robinhood Chain crossed $1B cumulative as of Aug 21 (multi-source: crypto.news Coinbase's Aug 24 Base launch.

Carried forward from Aug 17 (independently reconfirmed, still relevant):

- **Multi-sourced (The Block, crypto.news, Benzinga, Blockzeit) — Aug 17:** SEC Chair Atkins met with President Trump, CFTC Chair Selig, NYSE, CME, DTCC, and crypto firms; the launched an Innovation Advisory Committee. Per crypto.news, the discussed 24/7 tokenized-stock "innovation exemption" remained explicitly exploratory — "no final framework formal SEC meeting specifically on the exemption, expected ~Aug 14 (i.e., before this Aug 17 multi-agency meeting), was itself reported canceled/postponed (Aug 13-15 reporting discusses remains stalled.

Carried forward from Aug 16 (still load-bearing):

- **No new dated RWA/tokenization catalyst was found as of Aug 16.** General web search had surfaced only recirculating market-size commentary — a $33.5B "liquid on-chain val tracked $38.17B distributed-value number already in this report; not adopted as a replacement metric.

Carried forward from Aug 9-14 (still load-bearing):

- **rwa.xyz's Aug 9 pull, reconfirmed Aug 14 with added product-level detail:** tokenized Treasuries $16.21B across 87 products and 63,010 unique addresses; Circle's USYC leads same dated figures already in this report, not a new catalyst.
- **rwa.xyz's $38.17B total distributed-value print, dated Sunday Aug 9 (Bitcoin News, CoinSpectator), is the same all-time-high move already folded into prior sets' language –**

Carried forward from Aug 8-9 (still load-bearing):

- ★ **Total RWA distributed value hit a new all-time high of $38.24B** (rwa.xyz direct pull, Aug 8), up from $34.67B roughly two and a half weeks earlier — a genuine +10% move, not 62,997 holders, 7d yield 3.29%).
- ★ ★ **CORRECTION, again — the $34.67B figure was never "tokenized Treasuries."** KuCoin's "Tokenized Treasuries Dip to $34.67 Billion" headline (~Jul 22) mislabels the total-RW twice. Do not cite that figure as a Treasuries number anywhere in this system.
- ★ ★ **NEW — the Central Bank of Ireland cleared Aviva Investors' tokenized USD Liquidity Fund on the XRP Ledger (Jul 29),** the first time a major EU regulator has approved a pub confirmed by 6+ independent outlets, missed entirely by the daily "no new catalyst" checks.
- ★ ★ **NEW — Ripple took equity stakes in Zilo and Licuido (Aug 3),** converting a commercial relationship into ownership and adding regulated transfer-agency, issuance, and collat release + 5 outlets).
- **rwa.xyz also separately reports a "Represented Asset Value" of $373.55B** (down 1.70% over 30 days) — a different metric (off-chain assets referenced via tokenization infrastr distributed-value figure.
- **No new RWA-rail failure, depeg, or counterparty default found** in the Jul 30 - Aug 8 window.

Carried forward from Aug 6-7 (still load-bearing):

- **GENIUS Act rulemaking status:** FDIC's BSA/AML comment period closed Aug 4; a joint five-agency CIP comment period runs through Aug 21; no agency has published a final ru effective date — an already-priced, mild headwind.

Carried forward from Aug 6 (still load-bearing):

- ★ **BlackRock launched two tokenized money-market funds on Aug 3, 2026.** BSTBL and BRSRV, following an SEC prospectus filing Aug 1, via Securitize (same transfer agent as BU Cointribune, BitcoinWorld, Solana Compass, and CoinPaprika (7 independent outlets).

Carried forward from the July 30 full refresh (still load-bearing):

- ★ ★ **CORRECTION — the "$34.67B tokenized Treasuries pulling back" headline circulating this week (and cited in the Jul 29/30 daily touches) is a metric mislabel, again.** That specifically — the same conflation an earlier full refresh already corrected once. Multiple outlets (including one whose own body text contradicts its headline, admitting "tokenize 30) shows tokenized Treasuries at **$16.18B**, essentially flat versus $16.20B a week ago — not declining.
- ★ **NEW, direct pull — BlackRock's BUIDL continues recovering, not declining.** BUIDL sits at **$2.64B** (Jul 30), up from $2.52B (Jul 22 wobble low) and $2.61B (Jul 25) — a steady + stale Jul 22 snapshot.
- ★ **NEW, confirmed 4+ outlets — Robinhood Chain's on-chain RWA activity jumped roughly 5x to ~$70M (Jul 25).** Tokenized-stock trading grew in size, with tokenized SpaceX ov Incrypted, Crowdfund Insider). TVL roughly tripled to ~$312M, though stablecoins/memecoins still dominate overall activity. Separately, a Jul 29 report cites $885.5M in Robinhoo value numbers above.
- ★ **NEW — Securitize Capital (BlackRock BUIDL's transfer-agent/tokenization partner) registered with the SEC as an investment adviser (Jul 27),** and Citi initiated a Buy rating on sentiment).
- **All-RWA totals, direct pull (Jul 30): Distributed Value ~$36.93B** (+0.3% over 5 days), **Represented Value ~$370.55B** (−2.6% over 5 days, single-pull, unconfirmed trend), **stabl**
- **GENIUS Act: no new final rules in this window.** FDIC's BSA/sanctions comment window remains open (closes Aug 4); the joint CIP comment window remains open (closes Aug 2
- **DTCC's tokenization pilot continues as planned** — Russell 1000 stocks/ETFs/Treasuries, 50+ firms including BofA, Citi, Morgan Stanley, Robinhood, Circle, Ondo, Anchorage; O
- **Risk check: clean window, no new incidents.** No RWA-protocol hack, tokenized-treasury depeg, or counterparty failure found Jul 25-30 (the Jul 15 Ostium oracle exploit, ~$18-2 concentration remains an unresolved fragility point, not re-verified this cycle.
- **OUSD (Open USD) 140+-partner credibility dispute (Samsung/Dunamu/Upbit denials) remains unresolved** — no new statements found this window.
- **The treasury leaderboard, July 30 (rwa.xyz, direct pull):** Circle's **USYC $3.01B** > BlackRock's **BUIDL $2.64B** > Ondo's **USDY $2.15B** > Franklin Templeton's **iBENJI $1.76B** > Ce

- **Ondo keeps extending its franchise (carried forward):** Broadridge proxy-voting partnership, IVV/Micron tokenization, "Ondo Perps." Ondo DAO also voted to burn 100M ONDO (
- **Nasdaq and the SEC: no change.** Nasdaq's 23/5 tokenized-trading target remains Dec 6, 2026, unchanged.
- **The TAM anchor stands:** BCG × Ripple (Apr 7, 2025) projects **~$9.4T by 2030 / $18.9T by 2033**. Current on-chain value is still **<1%** of any endpoint.

The Prize

Illustrative only — not price targets, not advice

The cleanest single-token anchor is still **ONDO**, the name most tied to the RWA narrative: from its early-trading price around **$0.22 (Jan 2024** — listing prints vary by venue**)** it ra

The round-trip, last checked July 13 (CoinGecko, not re-pulled live this cycle): **$0.3291** — market cap ~$1.6B, still ~85% below the high — even as the company keeps extending on Jul 25). Part of the Dec-2024 spike was a Trump-linked World Liberty Financial buy, not fundamentals. The durable signal stays structural, not one token: total RWA distributed continuation of the already-priced growth curve, not a new milestone; six asset categories now each exceed $1B) and tokenized Treasuries last confirmed near $16.00B (-0.93%/ reconfirmed since) while the token trades ~85% off its peak, and the confirmed institutional moves stacked through this cycle — BlackRock's Aug 3 fund launch, Franklin Templet October 2026 full-service launch reconfirmed on schedule, and now the SEC's Sept 17 Innovation Exemption authorizing US-domestic tokenized-stock trading for the first time — individually (until today) fell short of this pillar's sufficiency bar. Pipeline reference: BTC closed at $81,224.46 on Sept 19, up sharply from $78,046.80 on Sept 18 — noted here onl tells you what the lean is worth acting on, euphoria and round-trip included.

The Other Side

The strongest honest case this is wrong — updated September 19, 2026 (re-checked as part of today's FULL WEEKLY refresh; still valid, plus one new item below on the exemption's own timing mechanic)

- **★ Partly answered today, worth stating plainly: the "non-US-only ceiling" critique this section has raised three separate times (BlackRock funds, Robinhood Chain, Coinbas** The exemption is temporary (5 years), conditional (public-notice/transparency/safeguard conditions, sunsets pending further Commission action), and as of this research pass no adoption. The honest read is the structural ceiling cracked, not that it disappeared; this pillar will be watching for an actual live US venue as the next real trigger.
- **The data-access gap flagged repeatedly this cycle (rwa.xyz 403s) is a real weakness that predates today's re-rate** and wasn't resolved by it — this pillar's core primary growt
- **Tokenized Treasuries posted two consecutive negative 30-day readings in late August** (-0.39% Aug 22, then -0.93% Aug 28) — still sub-1% each and not independently reco
- **Coinbase's tokenized-stock launch, and the pattern before today, is easy to overstate in hindsight.** Nine-plus outlets covered it and there's a real regulatory permission behind equity launch (BlackRock funds, Robinhood Chain, then Coinbase) that didn't actually reach the US market. Today's exemption is the first to change that pattern, but it is one day
- **An Ondo Stocks milestone from Aug 15 was missed for two full cycles.** That's a real research-process miss, caught only in hindsight — a reminder that "no new catalyst found"
- **Regulatory limbo is still real.** The GENIUS Act's rulemaking deadline was missed and zero of six agencies have finalized rules; the CIP comment window closed Aug 21 but produ an incomplete rulebook, which can chill activity rather than de-risk it. The SEC's tokenized-equity exemption meeting remains canceled with no rescheduled date as of Aug 29.
- **The RWA totals are still a small, largely institutional/permissioned number.** ~$38-39B in total distributed value is real growth, but it's still under 1% of the BCG×Ripple $9.4T-by RWA figures — a reminder that headline numbers in this space need active skepticism, not just repetition.
- **It may not be "crypto."** Most volume is permissioned/institutional and may never accrue value to crypto majors. Durable market-structure law (CLARITY) still isn't passed — a rer kind of novel development that would break a routine hold.
- **★ NEW this cycle — the exemption's own 30-day issuer-notice-and-objection mechanic is a real structural brake, not a footnote.** Any NMS stock tokenized by an unaffiliated issuer can object and block it outright — meaning the earliest a third-party-tokenized NMS stock could legally trade under the exemption is roughly mid-October, and issuers that flagged Sept 18; it's now dated and specific rather than a general caution. SIFMA's and Better Markets' public pushback (Sept 2026) is the expected institutional friction this secti than a comment letter.

The Triggers

Dated events ahead — some prove the claim right, some prove it wrong. Re-set August 29, 2026 (full weekly refresh); re-checked August 31 through September 17, 2026 (light daily catch-ups, full weekly refresh RWA lending hub on Avalanche (Tether's USAT) is single-product continuation, not independently trigger-worthy — no P move. ***FIRED Sept 18:*** *the SEC's tokenized-equity exemption meeting row below — flagge marked FIRED; see the Sept 18 row.* ***Checked Sept 19 (FULL WEEKLY refresh):*** *no TSV live yet under the exemption (30-day issuer-notice mechanic logged), SIFMA/Better Markets pushback logged not scored,* ***refresh):*** *OKX/ICE's "OKXICE" Issuer Notice (Oct 4) is logged below as a concrete step toward the live-venue trigger — it still has NOT fired; DTCC is re-confirmed not live, with a single-filer SEC 6-K claim to the immediately below.*

DATE	EVENT
Logged Oct 4, verified Oct 10 — a concrete step, but the live-venue trigger still did NOT fire	**OKX and Intercontinental Exchange (ICE, NYSE's parent) formed a 50/50 joint venture, "OKXICE,"** and filed an Issuer Notice with the SEC on Oct 4, 2026 to operate a Tokenized Securities Venue under the Sept 17 Innovation Exemption — 60+ (several sources say 63) US-listed stocks via permissioned Uniswap v4 AMM pools on OKX's "X Layer" chain, with a soulbound-token allowlist hook, non-custodial of end-user funds in the pools (though an OKX Technology affiliate holds the pools' admin/pause/upgrade keys). Adversarially verified across Ledger Insights, CryptoSlate, TokenPost, CoinGape, Crypto-Economy, plus OKX's own hosted notice PDF — outlets not used in the first research pass. **Separately, Cerebras Systems filed a written objection to its own inclusion** — the first reported real-world use of the exemption's issuer opt-out mechanism
Re-checked Oct 10 — still DID NOT FIRE, and a single-source claim is excluded	No Tokenized Securities Venue is live as of Oct 10, 2026, OKXICE's Oct 4 filing included. DTCC's own tokenization page still calls its October launch "expected," not confirmed; its last service-specific press release remains July 15. **A Black Titan Corp SEC Form 6-K characterizing DTCC's service as "live in production since July" is a single filer's own characterization**, not corroborated by DTCC or by independent reporting — EXCLUDED per the sufficiency rule, not adopted as fact
Data-quality flag, THIRD straight cycle — rwa.xyz	A search-derived figure this cycle (~$14.95B distributed value, −5.91%/30d, 109 assets, ~86,221 holders) surfaces a THIRD distinct methodology/scope basis this year (87 products → 25 assets → now 109 assets) and could not be independently re-pulled live
Corroborated Oct 10, not a score driver	Four independent outlets (Decrypt, Unlock-BC, a TD Securities commentary, Crypto Briefing) now converge on H1/Q2 2027 for Nasdaq tokenized-equity trading, instead of the circulating "Nasdaq Dec 6, 2026" date
FIRED Oct 3 — direct rwa.xyz pull, confirmed exact; plus a NEGATIVE finding on the offsetting catalyst	**Tokenized US Treasuries fell again on a like-for-like basis:** $14.94B → **$14.77B**, now −7.30% over 30 days across the same 25 assets (holders 86,020, +1.18% / 7d — *rising* holders against falling value). And **DTCC's October Tokenization Service launch is confirmed NOT LIVE**: dtcc.com still says "expected," its last service press release is July 15, and its Sept 16 release does not mention launch status. **Verification SHRANK this call:** the "four consecutive negatives" framing is retired — the aggregator redefined scope from 87 products to 25 assets, one prior reading was never confirmed (403), and most of the decline fell inside an unobserved gap
FIRED Sept 30 — PRIMARY (Federal Register), a POSITIVE this pillar had previously recorded wrong	**GENIUS is no longer zero-of-six.** Treasury issued the first **binding** GENIUS rulemaking: "Forms and Procedures for Review of State Certifications by the Stablecoin Certification Review Committee," **91 FR 61688**, an **interim final rule** — effective on publication, therefore binding law, though not a concluded notice-and-comment final rule. The Fed's two NPRMs (91 FR 61346, 91 FR 61580, both Sept 29) and Treasury's Section 3 NPRM (91 FR 53368) remain proposed
CORRECTED Oct 3 — a mechanic this report had mis-described	The SEC's tokenized-NMS order (91 FR 60168, Release 34-106402, File 4-927, published Sept 22, signed Sept 17) has **no comment deadline and no DATES section**. Its 30 days is an **ISSUER-NOTICE condition** — trading "may not commence until at least 30 calendar days from the date when the issuer receives the Issuer Notice" — *not* a public comment window, and the relief runs **five years**
FIRED Sept 26 — THIS PILLAR'S OWN PRE-COMMITTED TRIGGER, fired DOWNWARD	**Tokenized US Treasuries contracted for a third consecutive reading: $14.94B, −6.95% over 30 days** (rwa.xyz direct pull, 25 assets), from $16.00B on Aug 28 — after −0.39% (Aug 22) and −0.93% (Aug 28). Roughly **seven times** the prior magnitude. Corroborated in direction and level by a Sept 15 secondary citation at "more than $15.9 billion"; the −6.95% magnitude itself is **single-aggregator**. Cause unknown — redemptions, quarter-end and reclassification could not be distinguished
FIRED Sept 24 — POSITIVE, PRIMARY, PDF extracted locally — the main offset	**CFTC Crypto Asset / Blockchain FAQ update** (Market Participants, Market Oversight, *and* Clearing and Risk divisions), marked "NEW 9/24/2026". New **Q12: an FCM or DCO MAY invest customer funds in TOKENIZED forms of otherwise-permitted Regulation 1.25 investments**, on four conditions. New Q13/Q14 call Regs 1.31 and 45.2 "technology neutral"; **Q15 contemplates PUBLIC AND PERMISSIONLESS networks** for regulatory recordkeeping
FIRED Sept 23 — positive, but explicitly NOT the live-venue trigger	**NYSE Group / Blockchain.com MOU** for tokenized US-listed equities and ETFs on NYSE's planned digital ATS, with ICE Data Services market-data distribution. On-record quotes from Peter Smith and Lynn Martin; 8+ independent outlets. **Non-binding, "subject to any required regulatory approvals," ATS not live, no launch date, no terms.** No NYSE/ICE-issued primary release found (ir.theice.com 404) — the primary is Blockchain.com's own PR Newswire release
DID NOT FIRE — the trigger that would actually matter	**No Tokenized Securities Venue is live, or announced live, as of Sept 26.** The exemption's own mechanic gates it: public notice at least 30 calendar days before commencing, plus Commission notification within one business day — putting the earliest third-party-tokenized NMS trade around **mid-October**. Analyst naming of Coinbase/Securitize/Circle as likely first filers is a forecast, not a fact
Logged Sept 22 — procedural, adds a citation not information	**The SEC exemption published in the Federal Register:** 91 FR 60168, Release No. 34-106402, File No. 4-927 (verified via the federalregister.gov API). Formal title: "**Order Granting Temporary Conditional Exemptive Relief** ... and Request for Comment"
Logged Sept 24 — NOT scored, non-US only	**Ondo "Intelligent Portfolios, Powered by BlackRock" went live** (BLKHIon, BLKDIGon, BLKGRWon), issued by **Ondo Global Markets (BVI) Limited**, available only to eligible investors **outside the United States** — confirmed independently at Ondo's own eligibility documentation
Checked Sept 19–26 — no rail failure found	**No RWA-rail failure, depeg or counterparty default** dated in the window. The honest bear datapoint is **idle capital and redemption pressure**: ~$78M of BENJI redemptions in the 30 days to Aug 28, the sector ~12% off its mid-July peak, and BUIDL/BENJI/USYC all under 1% utilisation. Circulating "89% idle" framing is secondary analysis, not a primary figure. Risk-guide items about a $140M property-platform liquidation are **undated 2026 retrospectives, not this window**
STALE ROW — FLAGGED, NOT REQUOTED	This report's **"Nasdaq Dec 6, 2026" tokenized-trading date could NOT be re-verified from any source** this pass, and may be a conflation with Nasdaq's separate 23-hour-trading launch in December. DTCC's October full-service launch remains slated but rests on **secondary reporting only** this cycle
Unchanged — re-verified as unchanged	**GENIUS Act: zero of six agencies finalized**, statutory backstop still the earlier of Jan 18, 2027 or 120 days after final rules. SIFMA's Sept 17 pushback statement remains the extent of institutional opposition — **no litigation, no stay**
FIRED Sept 24 (event dated Sept 23) — partial, multi-sourced, this cycle	**NYSE Group / Blockchain.com memorandum of understanding** for access to tokenized US-listed stocks and ETFs on NYSE's planned digital ATS — 24/7 trading, fractional shares, stablecoin funding, on-chain settlement, plus ICE Data Services distributing Blockchain.com's crypto market data and Blockchain.com incorporating ICE/NYSE feeds. On-record quotes from Peter Smith (Blockchain.com CEO) and Lynn Martin (NYSE Group President); 8+ independent outlets
Watch, not fired (checked Sept 19)	No Tokenized Securities Venue has announced going live yet under the SEC's Sept 17 Innovation Exemption. Structural detail: for any NMS stock tokenized by an unaffiliated third party, the TSV must give the issuer written notice and wait a minimum 30 calendar days before trading can start, and the issuer can object and block it outright (SEC press release 2026-90; corroborated by CNBC, Coindesk, Crowdfund Insider, Decrypt, Securities.io, Sept 17-18) — the earliest a third-party-tokenized NMS stock could legally trade is roughly mid-October, mostly outside a 1-month window from today

Logged, not scored (Sept 19)	SIFMA issued a public statement (sifma.org, primary, Sept 2026) raising fragmentation/investor-protection concerns and urging formal notice-and-comment rulemaking; Better Markets separately criticized the exemption. No litigation filed as of Sept 19
Checked Sept 19, unconfirmed	DTCC's October 2026 full-service tokenization launch (Russell 1000, major ETFs, Treasuries) remains slated per DTCC's own May/July 2026 press materials, corroborated by Coindesk/CNBC/FFNews — no update this week confirming or denying it's still on track
FIRED Sept 18, 2026	The SEC issued its "Innovation Exemption" (sec.gov press release 2026-90, primary + Commissioner Uyeda statement; 7+ independent outlets): temporary 5-year conditional exemptive relief letting Tokenized Securities Venues trade tokenized NMS stock via permissioned AMMs, plus a companion dealer exemption for AMM liquidity providers, subject to public-notice/transparency/safeguard conditions with a comment period open
Checked Sept 13, no change	No dated catalyst found Sept 12-13 — no new rwa.xyz pull beyond the $39.2B Sept 8 primary read already priced, and no rail failure, depeg, or counterparty default. DTCC's October 2026 full-service launch (Russell 1000 equities, major ETFs, Treasuries) remains unchanged and on schedule
Checked Sept 2, no change	No dated catalyst found Sept 1-2; the DTCC pilot's possible October 2026 commercial-launch window and the ~$33.5B on-chain RWA figure are unchanged background, not new events
Checked Sept 1, no change	Only stale/recycled RWA market-size summaries found (dated to Q1 2026 or the already-priced Aug 9 rwa.xyz snapshot); no fresh dated catalyst, no rail failure/depeg/counterparty default
Fired Aug 24, 2026	Coinbase launched tokenized-stock trading (NVDAc/METAc/AAPLc/GOOGLc) on its own Base blockchain, 1:1 Alpaca-custodied, under an ADGM permission received Aug 11; primary + 9 outlets. Non-US users only
Fired Aug 24-25, 2026	Standard Chartered-backed Anchorpoint began distributing HKDAP, a HK-dollar stablecoin citing RWA settlement/distribution as a use case
Checked Aug 29, unresolved	rwa.xyz (app.rwa.xyz) returned HTTP 403 on repeated attempts — could not independently re-pull live figures this cycle; relying on the Aug 28 carried-forward primary pull
Checked Aug 28 (carried forward), watch	Tokenized Treasuries posted a second consecutive negative 30-day reading: -0.93% to $16.00B, following -0.39% Aug 22
Aug 28, not delivered	A daily catch-up draft (2026-08-28_draft) was written but never rendered, selfchecked, archived, or committed — abandoned, not trusted at face value
For the record, dated Aug 15	Ondo Stocks crossed $1.01B TVL (press-release syndication) — predates this research window, missed by the Aug 22 pass
Fired Aug 21, 2026	Uniswap's combined tokenized-stock volume on Robinhood Chain crossed $1B cumulative (crypto.news, cryptonomist); still EU/EEA-only. CEO Tenev called (Aug 18) for a US framework
Fired Aug 21, 2026	GENIUS Act joint CIP comment period (FinCEN-2026-0101 / OCC-2026-0331) closed on schedule (Federal Register; Freshfields, Sullivan & Cromwell memos; Forkast) — procedural close only, no rule yet; final rule anticipated 2027, compliance 12mo after

The flip line, re-stated Sept 26 — and this cycle it cut both ways, which is why the move is small: if the GENIUS rules drift into Q4 unfinished, the DTCC and Nasdaq launches slip past their Octobe and institution-controlled coins — treat the crypto-relevance thesis as failing. **Adoption that never touches public, crypto-controlled rails is TradFi, not crypto. Pointing toward failure this cycle:** to largest tokenized funds sits under 1% — capital is arriving and then sitting idle, or leaving. **Pointing the other way, and directly at this clause:** the CFTC's Sept 24 Q15 explicitly contemplates *public* addresses the public-rails question head-on rather than routing around it. **The next real confirmation remains a live venue actually trading under the SEC exemption** — not an MOU, and not a staff

comment period, or a *fourth* consecutive negative tokenized-Treasury reading, which would turn a flagged trend into a confirmed one and justify more than a single point. **What would change my m**
