

CoinPicks Market Direction

Research Package

Five pillars — four researched narratives and one pure-math read of the Bitcoin chart — scored on one standard, blended into one table, and distilled to one number. Everything in this folder is current as of **September 13, 2026** — a light daily touch against yesterday afternoon's full weekly refresh (2026-09-12_draft2, which itself remains a draft awaiting Alex's review). **This cycle's score set (2026-09-13_draft) is COMMITTED — AUTO-STAMPED under the runbook's delegated daily authority.**

COMMITTED — AUTO-STAMPED (light daily touch, score set 2026-09-13_draft). CLARITY Act, Tokenization RWA, and Fed & Macro were re-checked and held flat — nothing found cleared the sufficiency bar. **Iran War Risk RE-RATED UP, modestly** (1/1/17/37/70 → 3/3/19/39/70) — **the first upward move on this pillar since August 6.** Iran's foreign ministry announced Friday Sept 11 that the foreign ministers of Iran, the six GCC states and Iraq will convene in Salalah, Oman on Monday Sept 14 to discuss Strait of Hormuz navigation, safe commercial shipping routes and mine clearance — the first such gathering since the war began in February (Iranian MFA statement, primary, plus 6+ independent outlets). It is sized small on purpose: Bahrain will not attend, an Iranian official says no deal is expected, the agenda concerns managing a strait Iran still controls, and the fighting did not pause (a fatal vessel attack near Qeshm Island and a Houthi projectile on Jazan, both Sept 13). THE FINAL NUMBER is +0.36, up from yesterday's +0.29 — no call-band flip. **One correction was applied this cycle:** the Fed & Macro report carried a stale line claiming the Sept 11 set re-rated *down* to 29/28/41/54/60; the committed set is 34/33/44/54/60 (re-rated *up* on the August CPI print). Prose corrected; no score, blend, or archive was affected.

THE FINAL NUMBER · SEPTEMBER 13, 2026 (COMMITTED — AUTO-STAMPED, LIGHT DAILY TOUCH) · BTC \$76,745.60 ON SEPT 13

+0.36 Neutral — up from yesterday's +0.29, no call-band flip

Equal-weight mean of the five window signals below — every pillar counts 20% (scale -10 to +10; horizon-weighted variant +0.90, versus yesterday's +0.85, still Mild Bull). CLARITY, Tokenization, and Fed & Macro held flat; Iran War Risk re-rated up, modestly, on the announced Sept 14 Iran-GCC Hormuz ministerial in Oman; Bitcoin TA (computed) firmed on today's bar to P 60/48/59/68/69 as the 1-month cycle analog turned 3-of-3 positive, even though BTC eased to \$76,745.60.

THE FIVE WINDOWS UNDERNEATH IT

WINDOW	MASTER SIGNAL	CALL
1 month	-1.53	Bear — still the worst window, but the least-bad in a week: Iran off its floor and Bitcoin TA firmer
3 months	-1.28	Mild Bear — a touch shallower on Iran's re-rate up; the Sept 15-16 FOMC and the Sept 15 CLARITY cloture vote both sit inside this window, undecided
6 months	-0.04	Neutral — CLARITY/Tokenization structural strength against Iran's drag; a hair below zero, well inside the Neutral band
1 year	+1.73	Bull — four of five pillars positive; Iran alone negative here
3 years	+2.92	Bull — law + adoption + cycle + valuation, barely moved

Bands: $|s| < 0.5$ Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. The leave-one-out range this cycle is -0.09 to $+1.06$ — the sign still flips negative when CLARITY or Tokenization are dropped individually; **dropping Iran alone moves the reading to +1.06, Mild Bull**, and dropping Fed & Macro alone also crosses into Mild Bull ($+0.64$). See the Master Report's Robustness section.

Reading order

Twenty minutes to the whole picture; each report stands alone and can be checked independently — every fact is dated with sources on its last page.

#	FILE	WHAT IT IS
1	CoinPicks_Master_Direction_Report.pdf	The summary. The final number, the five-window table, the full pillar matrix, where the lenses agree/fight, six weeks of dated triggers, sensitivity.
2	CoinPicks_Bitcoin_TA_Quant_Pillar_Report.pdf	The math pillar. 7 indicators on 16 years of data, halving-cycle analogs, power-law valuation — with charts. Fully reproducible from code.
3	reports/current/pdf/ — the four pillar PDFs	The story pillars. CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro. Each: thesis, dated facts, honest bear case, dated triggers, and the full score lineage (June committed → Aug 22 committed → Aug 28/29 drafts → Aug 31 committed → Sept 1 committed → Sept 2 committed → Sept 5 committed → Sept 6 committed → Sept 8 committed → Sept 9 committed → Sept 10 committed → Sept 11 committed → Sept 12 committed, auto-stamped, light daily → Sept 12 draft2, this full weekly refresh, draft, awaiting Alex's review).
4	reports/archive/ + prior-work/	Every earlier version, preserved untouched — the score history is fully auditable.
—	run.py · engine/blend.py · data/master_blend.json	The blend engine (runnable Python — reproduce any score set with <code>run.py blend --set NAME</code>), its output, and README.md for regeneration.

How the scoring works — one paragraph

Every pillar answers the same question on five windows (1 month / 3 months / 6 months / 1 year / 3 years): **P** = the odds (0–100) that this force is *good for crypto* by then, **Quality** = how trustworthy the evidence is (0–1), and **Impact** = how hard this force moves the whole market (0–10). These combine into a **Signal = ((P – 50) ÷ 50) × Quality × Impact** (Impact is a uniform 8 for every pillar), so a coin-flip view scores zero no matter how loud the headlines are, and weak evidence can't shout. **All five pillars are equal-weighted** — the master for each window is the simple mean of the five signals (20% each; add a pillar and it auto-rebalances to 1/N) — and the Final Number averages the five master windows.

The five pillars at a glance (September 13 P's — light daily touch, Iran War Risk re-rated UP; COMMITTED — AUTO-STAMPED)

PILLAR	1MO	3MO	6MO	1YR	3YR	ONE-LINE READ
CLARITY Act (law)	32	47	58	82	92	Held flat: a fourth named Democratic blocking issue (vertical-integration conflict rules) surfaced, reinforcing rather than changing the already-priced whip math. Sept 15 2:15pm ET cloture vote unchanged
Iran War Risk	3	3	19	39	70	RE-RATED UP , modestly — first upward move since Aug 6: Iran and the six GCC states plus Iraq convene at foreign-minister level in Salalah, Oman on Sept 14 on Hormuz navigation, safe shipping routes and mine clearance (Iranian MFA statement, primary, plus 6+ independent outlets). Sized small — Bahrain is out, no deal is expected, and the fighting continued Sept 13
Tokenization (RWA)	52	60	66	74	85	Held flat: no dated catalyst Sept 12-13, no rail failure or depeg; rwa.xyz's \$39.2B Sept 8 read and DTCC's October launch both already priced
Fed & Macro	34	33	44	54	60	Held flat: no new BLS/Fed primary release since the Aug CPI (Sept 11) and PPI (Sept 10) prints; the Sept 15-16 FOMC has not occurred
Bitcoin TA (quant)	60	48	59	68	69	Recomputed on a local quant refresh (BTC \$76,745.60) — 1mo up as the cycle analog turned 3-of-3 positive; that is the same n=3 fragility this report keeps flagging, now pointing the other way

P values shown (50 = coin flip). CLARITY, Tokenization, and Fed & Macro held flat this cycle; Iran War Risk re-rated up, modestly, and this set (light daily touch, 2026-09-13_draft) is COMMITTED — AUTO-STAMPED. The prior set (2026-09-12_draft2, full weekly refresh) remains a draft awaiting Alex's manual review.

Status & honesty notes

- **Score status:** the September 13 light daily score set (2026-09-13_draft) builds on yesterday afternoon's full weekly refresh (2026-09-12_draft2, still draft). CLARITY Act, Tokenization RWA, and Fed & Macro were re-checked and held flat. **Iran War Risk re-rated UP, modestly** (1/1/17/37/70 → 3/3/19/39/70), on Iran's foreign ministry announcing the first Iran-GCC ministerial meeting since the war began — sourced to the Iranian MFA's own statement plus 6+ independent outlets; no flip-line clause fired in either direction. The master call band held Neutral → Neutral (equal-weight +0.29 → +0.36; horizon-weighted +0.85 → +0.90, still Mild Bull). **Per the runbook's delegated daily auto-stamp authority — under which move size, call-band movement, and how dramatic the news feels are explicitly not grounds to withhold — this set is AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)".** Every report prints the full lineage (June committed → ... → Sept 11 committed → Sept 12 committed, light daily → Sept 12 draft2, full weekly refresh, still draft → Sept 13 committed, auto-stamped, this set).
- **Verification:** facts researched with primary-source discipline, corroborated by multiple independent outlets per claim. This cycle's load-bearing new fact — the Sept 14 Iran-GCC Hormuz ministerial in Salalah — rests on the Iranian foreign ministry's own announcement plus 6+ independent outlets. Four counterweights are printed alongside it rather than buried: Bahrain's non-attendance, an Iranian official's statement that no deal is expected, the fact that the agenda concerns managing a strait Iran still controls, and the Sept 13 fighting. Brent's 4.24% Friday give-back is labelled a market price and was not used to move P; Iran's attribution of the Qeshm Island attack to the US is labelled as Iran's own claim. A stale figure in the Fed & Macro report (a Sept 11 line reading 29/28/41/54/60, carried over from an abandoned draft) was caught and corrected to the committed 34/33/44/54/60.
- **Known limits, in print inside the reports:** cycle-analog claims rest on 3 completed cycles, a disclosed fragility this report has repeatedly flagged — and this cycle it cut *in favour* of the number, which is worth naming; the TA pillar caps its own conviction at $P = 50 \pm 25$; single-source items are labeled in-line; current chart bars are partial and the completed-bar numbers are printed; the Robustness section shows dropping Iran alone still flips the headline to Mild Bull (+1.06), and dropping Fed & Macro alone does too (+0.64) — two pillars this report flags as doing most of the work on the headline number, and the leave-one-out range this cycle (−0.09 to +1.06) genuinely crosses zero.
- **The near-term calendar is the test, and it is unusually dense:** the Iran-GCC Hormuz ministerial in Salalah, Oman, Monday Sept 14 — whether it produces a concrete safe-corridor or mine-clearance agreement, or collapses · the first CLARITY cloture vote, precisely dated 2:15pm ET Sept 15 · the FOMC decision with SEP/dot plot, Sept 15-16 · whether Brent's sustained-above-\$100 run continues or breaks · whether the Houthis actually close or interdict shipping through Bab al-Mandeb, versus merely holding its shores and islands · GENIUS Act 18-month backstop effective Jan 18, 2027. Each pillar's trigger table says in advance what each outcome does to the scores.

This is research and education, not financial advice. The scores are probabilistic opinions with dated evidence — built to be argued with. If you check one thing manually, check the Iran War Risk pillar's My Decision section and trigger table — this is the cycle where a drone strike hit Saudi Arabia's cross-country oil pipeline (Petroline), sponsorship still undetermined. That is the falsifiable part.
