

CoinPicks Market Direction

Research Package

Five pillars — four researched narratives and one pure-math read of the Bitcoin chart — scored on one standard, blended into one table, and distilled to one number. Everything in this folder is current as of **August 14, 2026** — a light daily touch off the Aug 13 committed set; all four qualitative pillars held flat. **Today's score set has been auto-stamped under Alex's standing delegated daily authority — see the note below.**

✓ **Auto-stamped.** All four qualitative pillars held flat; Fed & Macro's own named PENDING trigger (the Aug 13 H.4.1 release) fired today and confirmed rather than moved the score. No pillar's P moved at all, nothing rests on a single-source claim: exactly the routine, well-evidenced daily cycle Alex's 2026-08-06 delegated auto-stamp authority covers. See the Master Report's "My Decision" section for the full rationale.

THE FINAL NUMBER · AUGUST 14, 2026 (COMMITTED) · BTC \$62,802.46

+0.67 Mild Bull — same call band as Aug 13; today's move is quant mapping noise, not a research-driven change

Equal-weight mean of the five window signals below — every pillar counts 20% (scale -10 to +10; horizon-weighted variant +1.22). Positive because the far windows outweigh the near ones — **not a buy-today signal**. It is a "the storm is priced, the recovery isn't" number. All four qualitative pillars held flat today: CLARITY's Sept 15 cloture date is unchanged, the Hormuz deal remains unsigned on the same dispute, Tokenization's rwa.xyz read was reconfirmed with no new catalyst, and Fed & Macro's own PENDING H.4.1 trigger fired and confirmed the existing reading rather than moving it. Bitcoin TA's quant pillar ticked down slightly at 1 month on pure mapping noise (BTC -1.5% today).

THE FIVE WINDOWS UNDERNEATH IT

WINDOW	MASTER SIGNAL	CALL
1 month	-1.39	Mild Bear — unchanged call band; quant mapping noise only
3 months	-0.82	Mild Bear — the September FOMC still sits inside this window; unchanged
6 months	+0.31	Neutral — CLARITY/Tokenization structural strength vs. Iran's drag
1 year	+2.14	Bull — all five pillars still positive
3 years	+3.12	Strong Bull — law + adoption + cycle + valuation, essentially unchanged

Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. The Mild Bull conclusion stays positive under every leave-one-out drop (+0.30 to +1.00); dropping CLARITY or Tokenization still rounds down to **Neutral**, unchanged from Aug 13. See the Master Report's Robustness section.

Reading order

Twenty minutes to the whole picture; each report stands alone and can be checked independently — every fact is dated with sources on its last page.

#	FILE	WHAT IT IS
1	CoinPicks_Master_Direction_Report.pdf	The summary. The final number, the five-window table, the full pillar matrix, where the lenses agree/fight, six weeks of dated triggers, sensitivity.
2	CoinPicks_Bitcoin_TA_Quant_Pillar_Report.pdf	The math pillar. 7 indicators on 16 years of data, halving-cycle analogs, power-law valuation — with charts. Fully reproducible from code.
3	reports/current/pdf/ — the four pillar PDFs	The story pillars. CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro. Each: thesis, dated facts, honest bear case, dated triggers, and the full score lineage (June committed → every draft through August 14).
4	reports/archive/ + prior-work/	Every earlier version, preserved untouched — the score history is fully auditable.
—	run.py · engine/blend.py · data/master_blend.json	The blend engine (runnable Python — reproduce any score set with <code>run.py blend --set NAME</code>), its output, and README.md for regeneration.

How the scoring works — one paragraph

Every pillar answers the same question on five windows (1 month / 3 months / 6 months / 1 year / 3 years): **P** = the odds (0–100) that this force is *good for crypto* by then, **Quality** = how trustworthy the evidence is (0–1), and **Impact** = how hard this force moves the whole market (0–10). These combine into a **Signal** = $((P - 50) \div 50) \times \text{Quality} \times \text{Impact}$ (Impact is a uniform 8 for every pillar), so a coin-flip view scores zero no matter how loud the headlines are, and weak evidence can't shout. **All five pillars are equal-weighted** — the master for each window is the simple mean of the five signals (20% each; add a pillar and it auto-rebalances to 1/N) — and the Final Number averages the five master windows.

The five pillars at a glance (August 14 committed P's — all four qualitative pillars held flat)

PILLAR	1MO	3MO	6MO	1YR	3YR	ONE-LINE READ
CLARITY Act (law)	32	47	58	82	92	Held flat: Senate remains in August recess; the Sept 15 2:15pm ET cloture vote is unchanged; conflicting cached Polymarket reads (13-21%) not adopted
Iran War Risk	20	28	41	56	77	Held flat: Hormuz deal remains unsigned, stuck on the same compensation/blockade/sanctions dispute; Brent eased to ~\$87-90 as traffic stays low
Tokenization (RWA)	52	60	66	74	85	Held flat: rwa.xyz's Aug 9 pull (\$38.17B TVL, \$16.21B tokenized Treasuries) reconfirmed with added product-level detail, no new catalyst
Fed & Macro	43	41	48	56	62	Held flat: the PENDING H.4.1 release (week ended Aug 12) fired today — reserve drain/TGA rebuild directionally the same as already priced in, confirms not moves
Bitcoin TA (quant)	42	36	45	68	71	Quant pillar refreshed on today's price (BTC \$62,802.46, -1.5% vs. Aug 13; weekly -29.4 slight bearish, monthly -44.9 slight bearish, quarterly +8.0 neutral; cycle month 27.8) — 1mo P ticked down on mapping noise

P values shown (50 = coin flip). All four qualitative pillars held flat today; only Bitcoin TA's computed 1-month reading moved, on pure mapping noise from today's BTC close.

Status & honesty notes

- **Score status:** August 14 scores — all four qualitative pillars held flat — after Step 6 verification passed clean, were **auto-stamped** under Alex's standing delegated daily authority (in effect since 2026-08-06): no pillar's P moved at all, no FINAL NUMBER call-band flip, and nothing rests on a single-source claim — exactly the routine, well-evidenced cycle that authority covers. Every report prints the full lineage (June committed → every draft through August 14, now committed). Nothing hides its history.
- **Verification:** facts researched with primary/wire-source discipline, independently fact-checked, and the whole package forensically audited; score math recomputed independently; price data cross-checked across two exchanges; models that failed out-of-sample testing were excluded and say so. This cycle's checks: read the Fed H.4.1 release directly for the week ended Aug 12 (reserve balances –\$49,290M w/w to \$2,944,059M, TGA +\$56,626M w/w to \$963,950M) and confirmed it's directionally consistent with the reserve-drain/TGA-rebuild pattern already priced in; reconfirmed the Senate remains in August recess and the CLARITY Sept 15 cloture date is unchanged; re-checked the Hormuz deal status (still unsigned, same compensation dispute) across 6 outlets; reconfirmed rwa.xyz's Aug 9 tokenization figures with added product-level detail.
- **Known limits, in print inside the reports:** cycle-analog claims rest on 3 completed cycles, a disclosed fragility this report has repeatedly flagged; the TA pillar caps its own conviction at $P = 50 \pm 25$; single-source items are labeled in-line; current chart bars are partial and the completed-bar numbers are printed; the Robustness section shows dropping CLARITY or Tokenization still lands at the Neutral/Mild-Bull boundary, unchanged from Aug 13 once the house $|s| < 0.5$ band is applied correctly (the Aug 13 report's prose miscounted this — corrected here).
- **The near-term calendar is the test:** the next Fed H.4.1 balance-sheet release and jobless-claims print, due Aug 20 · the first CLARITY cloture vote, precisely dated 2:15pm ET Sept 15 · an actual signed, operating Hormuz agreement the US accepts (route map alone isn't it — the compensation/blockade/sanctions disputes and continued attacks are the real test) · next FOMC (with SEP/dot plot), week of Sept 15 — the real test of whether the Aug 13 dovish confirmation survives to an actual vote · GENIUS Act 18-month backstop effective Jan 18, 2027. Each pillar's trigger table says in advance what each outcome does to the scores.

This is research and education, not financial advice. The scores are probabilistic opinions with dated evidence — built to be argued with. If you check one thing manually, check the trigger tables: they are the falsifiable part.
