The Fed & Macro Regime Pillar Report

Liquidity as the Master Driver — Researched, Scored, and Re-Rated

*Originally written and scores committed by me on June 12, 2026. Fully re-researched July 8, 13, 18, 25, and 30, 2026, and again as a full weekly refresh on August 8, 2026 (re-rated up to a moderated 40/38/47/55/62 on the BLS July jobs report, committed and stamped by Alex). Re-rated up again August 13 to 43/41/48/56/62 on a cool CPI print and a weak claims print. **This version (August 14) is a light daily touch and HOLDS FLAT at 43/41/48/56/62** — the one PENDING trigger this pillar was carrying, the Fed H.4.1 release (week ended Aug 12), fired today: reserve balances fell \$49,290M w/w to \$2,944,059M against a \$56,626M TGA rebuild to \$963,950M — directionally the same reserve-drain/TGA-rebuild pattern already priced into this pillar's recent baselines, so it confirms rather than moves the score. No new jobless-claims print since the 209K figure already incorporated into the Aug 13 re-rate. **This version's scores have been auto-stamped** under Alex's standing delegated daily authority (in effect since 2026-08-06) — no pillar P moved anywhere in today's cycle; see My Decision below.*

COINPICKS PILLAR REPORT · WEIGHT: 25% OF MY THESIS

Written June 12, 2026 · Updated & Re-verified August 14, 2026 (light daily touch off the Aug 13 baseline — committed, auto-stamped) · Not Financial Advice

The Scores — Committed vs. Drafts

June column committed by me on June 12, 2026. Every draft since shown for full lineage. Aug 8 (re-rated up, moderated, full weekly refresh) committed and stamped by Alex. Aug 13 re-rated up on the CPI/claims data — committed, auto-stamped. Aug 14 is a light daily touch — held flat.

WINDOW	JUN	...	8/10	8/11	8/12	8/13	8/14	QUAL.	IMP.	SIGNAL	MY CALL
1 month	38	...	40	40	40	43	43	0.85	8	-0.95	Mild Bear — a cool CPI and a soft claims print both confirm the Sept dovish lean, but BofA's hawkish call caps the size of the move
3 months	40	...	38	38	38	41	41	0.85	8	-1.22	Mild Bear — Sept FOMC still in this window; two converging primary data points, one still-live hawkish dissent
6 months	46	...	47	47	47	48	48	0.80	8	-0.26	Mild Bear, close to Neutral
1 year	54	...	55	55	55	56	56	0.75	8	+0.72	Neutral/Mild Bull
3 years	61	...	62	62	62	62	62	0.65	8	+1.25	Mild Bull — structural accumulate

Committed P (Aug 14): 43 / 41 / 48 / 56 / 62 · **Weight:** 20% (equal) · **Impact:** 8 (uniform) · **Formula:** Signal = ((P - 50) ÷ 50) × Quality × Impact. Full lineage: June committed 38/40/46/54/61 (Jun 12) → ... (see prior versions of this report for the full Jul 8-Aug 7 path) → Aug 8 40/38/47/55/62 (up, moderated — committed and stamped by Alex) → Aug 9-12 40/38/47/55/62 (held flat — no new Fed/BLS release) → Aug 13 43/41/48/56/62 (up — July CPI and jobless claims both fired, confirming the Aug 8 dovish direction) → **Aug 14 43/41/48/56/62** (held flat — the PENDING H.4.1 release fired and confirmed, not moved, the score) — committed, auto-stamped.

THE THREE INPUTS, IN PLAIN ENGLISH

P — the odds the macro regime is *good for crypto* by then — not "the Fed cuts by then." Held flat this cycle at 43/41/48/56/62. The one trigger this pillar was carrying as PENDING since Aug 13 fired today: the Fed H.4.1 release (week ended Aug 12, federalreserve.gov primary, published 4:30pm ET Aug 13) shows reserve balances fell \$49,290M w/w to \$2,944,059M against a \$56,626M TGA rebuild to \$963,950M — directionally the same reserve-drain/TGA-rebuild pattern already priced into this pillar's recent baselines (e.g. the \$80,572M/\$73,405M and \$77,579M/\$81,153M prior-week pairs), so this confirms an already-adopted trend rather than firing a fresh trigger. No new jobless-claims print since the 209,000/week-ended-Aug-8 figure already incorporated into the Aug 13 re-rate (next claims release is Aug 20). Held flat pending genuinely new data.

Quality — how trustworthy the evidence is. Unchanged this cycle per house rules.

Impact — 8 out of 10, the uniform value every pillar now shares in the equal-weight model. Liquidity is the tide; it moves the whole market at once.

Carried forward from Aug 8: jobless claims for the week ended Aug 1 came in at 199,000, 4-week average 198,750. Fed H.4.1 for the week ended Aug 5 (federalreserve.gov primary) was an unremarkable, stable print (reserves +\$8.78B w/w, TGA -\$3.45B w/w) — neutral, no liquidity-stress signal either way.

The Claim

The thesis, and where I differ from the consensus — updated August 14, 2026, light daily touch

The crowd: may read today's H.4.1 print as a fresh liquidity signal — but the reserve-drain/TGA-rebuild pattern it shows is directionally the same one this pillar has already been pricing for weeks, not new information.

Me: holding at 43/41/48/56/62 — the one PENDING trigger (H.4.1) fired and confirmed rather than moved the score. This is exactly the discipline this pillar's own history argues for: a real primary release that doesn't exceed what's already priced in gets logged, not re-rated.

My edge: the discipline is in the size of the move, not just the direction. Bank of America's own read of the same data set (still 75bp of hikes) remains the honest counter-case this report keeps printing rather than burying.

The Facts

As of August 14, 2026, light daily touch — hard numbers only, sources on the last page. The one PENDING trigger fired today and confirmed rather than moved the score. The Aug 8-13 facts below are carried forward unchanged (still load-bearing). The Iran/Hormuz war-risk situation is covered in full in the Iran War Risk pillar report.

- ★ ★ **NEW — Fed H.4.1, week ended Aug 12 (federalreserve.gov, published 4:30pm ET Aug 13, primary release read directly): reserve balances \$2,944,059M, down \$49,290M w/w; Treasury General Account \$963,950M, up \$56,626M w/w.** Directionally the same reserve-drain/TGA-rebuild pattern already priced into this pillar's recent baselines — confirms an already-adopted trend, doesn't fire a fresh trigger.
- **No new jobless-claims print since the 209,000/week-ended-Aug-8 figure** already incorporated into the Aug 13 re-rate — next claims release is Aug 20 (week ending Aug 15).
- **BTC closed at \$62,802.46 on Aug 14** — -1.5% vs. Aug 13's close of \$63,786.51.

Carried forward from Aug 12-13 (still load-bearing):

- **July CPI (BLS, published Aug 12): headline +0.1% m/m / +3.4% y/y; core +0.2% m/m / +2.5% y/y** — landed cool, exactly in line with consensus, drove the Aug 13 re-rate up.
- **Initial jobless claims, week ended Aug 8 (DOL/ETA, published Aug 13): 209,000 actual vs. 202,000 expected** — a genuine weak-side miss, 8-week high, the second trigger behind the Aug 13 re-rate.

Carried forward from Aug 8-10 (still load-bearing):

- **Initial jobless claims for the week ended Aug 6 (published Aug 8): 262,000 actual vs. 263,000 expected** — essentially in line with consensus, noise rather than a surprise.

Carried forward from Aug 8-9 (still load-bearing):

- ★ **BLS Employment Situation, July 2026: nonfarm payrolls FELL 23,000** versus a consensus estimate of ~83,000 (WSJ-sourced; a competing 95,000 Barron's-sourced figure is less corroborated and not adopted) — job losses concentrated in local-government education (-50,000) and retail trade (-19,000). A direct bls.gov fetch returned a 403 this cycle; the figure is confirmed via convergent CNBC, Yahoo Finance, Kiplinger, and CBS News reporting, all citing the same BLS release — meets the 2+ independent sufficiency bar.

- **May and June payrolls revised down a combined 103,000** — confirmed, matches the light draft exactly. (One Forbes-sourced fetch this cycle produced a garbled "-252,000 total" figure that doesn't reconcile with the BLS-consistent -103,000 figure elsewhere — treated as an unreliable summarization artifact, not a correction.)
- **Unemployment ticked down to 4.1% from 4.2%**, but the labor-force participation rate fell to 61.4% — its lowest level in over five years.
- ★ **★ NEW this cycle — average hourly earnings rose just 3.2% y/y**, down from 3.4% in June and now trailing CPI (3.5% June y/y) — real wages softening, a detail the same-day light draft didn't carry.
- ★ **★ CORRECTED — CME FedWatch September-hold odds check out at ~56%**, not the light draft's ~60%. Two independent corroborating sources (CBS News, a Forbes-sourced pull) both cite "56%, up from 45% the previous day"; a separate CNBC-sourced overview cited ~60%, a real but less-corroborated, likely later-intraday figure. Kalshi (a prediction market, not CME futures-implied pricing — a different instrument, labeled separately per research discipline) shows 65% hold.
- ★ **★ NEW this cycle — real forecaster disagreement on magnitude**: Bank of America explicitly called the report "a bit dovish on net" but is **sticking with its call for 75bp of hikes in 2026** (Sept/Oct/Dec) regardless. Richmond Fed President Barkin, an actual FOMC voter, described the labor market as "not loose, not tight" — a measured, non-alarmed read. Morgan Stanley's Ellen Zentner says the **Aug 12 CPI print** — inside this pillar's own 1-month window — will be the deciding factor for September, not this jobs report alone.
- ★ **Jobless claims for the week ended Aug 1: 199,000, 4-week average 198,750** — the lowest of this cycle, in real tension with the weak payrolls print. Points to "low-hire, low-fire" stagnation rather than an accelerating downturn, arguing for restraint on the size of the move.

Carried forward from Aug 7 (still load-bearing):

- ★ **Fed H.4.1 for the week ended Aug 5 (federalreserve.gov, direct pull)**: total assets \$6,748,567M, reserve balances \$2,993,349M — reserves +\$8.78B w/w, TGA -\$3.45B w/w. An unremarkable, stable print — no liquidity-stress signal either way; not used to move P.

Carried forward from Jul 30-Aug 5 (still load-bearing):

- ★ **★ CONFIRMED, PRIMARY SOURCE — the FOMC held rates at 3.50-3.75% on Jul 29, 2026, on a 9-3 vote.** Three regional-bank presidents — Beth Hammack (Cleveland), Neel Kashkari (Minneapolis), Lorie Logan (Dallas) — dissented in favor of an immediate 25bp hike (federalreserve.gov statement, corroborated by CNBC, Forbes, Fox Business, TechTimes). This is the **first unified 3-member dissent since September 2016**. No SEP/dot plot this meeting (not a projections meeting; next SEP is Sept 15-16, 2026).
- ★ **Chair Warsh's press conference was unusually combative and offered no forward guidance**: "there is no soft inflation target... not on this committee's watch"; "the five-plus years of inflation above target cannot be cured in nine weeks." A confirmed (single-sourced) risk-off market reaction followed: S&P 500 fell 1.85% in the final 65 minutes of trading (full day: S&P -1.52%, Dow -2.19%, Nasdaq -1.74%); the 30-year Treasury yield rose to 5.21%, its highest since July 2007 — a "bear steepener" consistent with rising inflation-credibility concern.
- ★ **★ CONFIRMED, PRIMARY SOURCE — jobless claims for the week ended Jul 25 came in at 197,000** (DOL/ETA release, fetched and read directly), a genuine +9,000 increase; the prior week (ended Jul 18) was revised *up* to **188,000** from the originally-reported 187,000. The primary release itself confirms the seasonal-adjustment distortion flagged last cycle: actual non-seasonally-adjusted claims fell only 9.2% w/w versus the 13.3% seasonal factors expected — meaning the "lowest since 1969" framing was real but mechanically set to partially reverse, exactly as it did.
- ★ **The September hike-odds figure could not be reconciled to a single number this cycle, despite four direct attempts.** Live pulls produced 55.8% (Fox Business, Jul 28), 62.4% (Investing.com Fed Rate Monitor, timestamped Jul 30), 70.2% (KuCoin, pre-meeting), and 81% (Southeast AgNet, Jul 30) — no two agree. The qualitative direction — "still elevated, majority-hike-priced" — is the only defensible takeaway; no re-rate rests on a specific point figure.

- **H.4.1 balance sheet: no new release found for the week ended Jul 29** as of this check (normal Thursday-afternoon publication timing); the most recent confirmed release remains Jul 23 (week ended Jul 22: reserves fell \$80,572M w/w against a \$73,405M TGA rebuild, both figures directly confirmed against federalreserve.gov last cycle).
- **Bank of America projects three 25bp hikes in 2026** (to 4.25-4.50%) — single-source (Forbes, citing BofA), flagged not scored.
- **Carried forward, not re-verified this cycle:** June CPI (-0.4% m/m) and PPI (-0.3% m/m), both BLS-primary-confirmed in a prior cycle; Warsh's Jul 14/15 congressional testimony; the June FOMC minutes (unanimous 12-0 hold, dropped easing-bias language). None of these are contradicted by this cycle's findings — the hawkish FOMC outcome sits alongside, not against, the still-intact disinflation trend.
- **The labor market cracked in slow motion, then partially un-cracked this week** — June payrolls +57K vs ~115K consensus (carried forward); this cycle's 197K claims print, while up from 188K, remains historically low (4-week average 202,750).
- **Policy rate and balance sheet: 3.50-3.75%, next FOMC (with SEP/dot plot) is Sept 15-16, 2026.** Fed communications blackout ended with the Jul 29 meeting; watch for the first round of regional Fed president speeches, especially from the three dissenters.
- **BTC closed at \$64,706.50 (Jul 30)** — holding up despite the hawkish FOMC surprise and confirmed equity/bond-market risk-off reaction. **Updated: BTC closed at \$64,661.55 on Aug 5**, essentially flat vs. Jul 30 and up ~1.7% vs. the Jul 31 close of \$63,579.68.

The Prize

Illustrative only — not price targets, not advice

The canonical anchor: **2020-21 ZIRP + QE** ran BTC ~\$3,800 → \$69,044 (~15–18×) — a unique COVID/zero-rate/open-ended-QE setup, not a repeatable base case. The **2024-25 cuts** ran ~\$60K → a ~\$126K ATH (Oct 6, 2025) — but that top came on a non-Fed tariff shock and has since roughly halved to the low-\$60Ks (\$62,802.46 on the Aug 14 close). From here, a retest of the \$126K high ≈ **+99%**.

Discount it hard, twice. First: easing is not an automatic catalyst — the last cycle topped on a non-Fed shock. Second: today's H.4.1 print confirmed, but didn't advance, the dovish direction the Aug 13 CPI/claims data established — a major forecaster (BofA) is keeping its hawkish call anyway, and the FOMC's own 9-3 dissent hasn't been overridden by any actual vote. Confirmation of a direction is not the same as the Fed itself moving. The Prize doesn't feed the math — it tells you what the 3-year lean is worth acting on when the tide finally turns.

The Other Side

The strongest honest case my re-rate — even the moderated one — is still wrong

- **Even today's up-move might not be conservative enough of a read on BofA's stance.** Bank of America isn't hedging — it's keeping a full 75bp-of-hikes call even after seeing the same cool CPI print this report used to raise P. If BofA is right and the September meeting itself delivers a hike into softening data, even 43/41 could prove too generous.
- **I may still be over-reacting to one data print.** This pillar has already seen one claims number ("lowest since 1969") partially reverse the following week on a seasonal-adjustment distortion — a single weak payrolls report, even a well-corroborated one, could be a similar one-off that a stronger August print reverses.
- **The FOMC's own hawkish dissent hasn't gone away.** Three regional presidents voted for an immediate hike on Jul 29 and Chair Warsh gave a combative, no-guidance press conference — a weak jobs report doesn't

automatically mean those three change their vote in September; a hawkish Fed facing soft data is a live tension, not resolved.

- **Downward revisions can themselves get revised.** The BLS's own benchmark process regularly adjusts prior months; a 103,000 combined downward revision is a real, primary-sourced number today, but it is not the final word on May-June employment.
- **Weak labor data plus a still-elevated inflation/oil backdrop (Iran-driven, and this cycle's Iran pillar got worse, not better) is stagflation risk, not straightforwardly bullish.** If the Fed holds through a weakening labor market because inflation risk stays elevated, that's a worse outcome for risk assets than either a clean cut or a clean hold.

The Triggers

Dated events — some prove the claim right, some prove it wrong. Re-set August 14, 2026, light daily touch — the one named trigger fired and confirmed.

DATE	EVENT	MEANS
FIRE Aug 13, 4:30pm ET	Fed H.4.1, week ended Aug 12: reserve balances – \$49,290M w/w to \$2,944,059M, TGA +\$56,626M w/w to \$963,950M	Directionally the same reserve-drain/TGA-rebuild pattern already priced in — confirms, doesn't move, held flat
Fired Aug 12-13 (carried forward)	July CPI landed cool/in-line; jobless claims (week ended Aug 8) missed weak at 209K vs. 202K expected	Drove the Aug 13 re-rate up — already IN the committed baseline
Fired Aug 7, re-confirmed independently — DOVISH, moderated (carried forward)	BLS July jobs report: payrolls fell 23,000 vs. ~83,000 expected, unemployment 4.1% on a falling participation rate, May/June revised down a combined 103,000; Sept hold odds rose to ~56%	Drove the Aug 8 1mo/3mo re-rate up — already IN the committed baseline
Fired Jul 29 — HAWKISH, confirmed primary (carried forward)	FOMC held 9-3 , three regional presidents dissenting for an immediate hike — first unified 3-member dissent since Sept 2016; Bank of America still projects 75bp of 2026 hikes even after the Aug 12 cool CPI	Still a live tension against this cycle's dovish data — not erased by two prints, per a major forecaster's own stated view
Aug 20	Next Fed H.4.1 balance-sheet release and next weekly jobless-claims print (week ending Aug 15)	The next actual trigger for this pillar
Sept 15, 2026	PENDING — next FOMC, with SEP/dot plot; the real test of whether the Aug 13 dovish confirmation survives to an actual vote	A hold or cut would confirm this cycle's re-rate further; a hike into cooling data would be a genuine escalation, re-rate down hard
Ongoing	Iran/Hormuz oil-inflation risk — unresolved, see Iran War Risk pillar	Watch for pass-through into the next CPI/PPI cycle — a worsening Iran read raises stagflation risk

The flip line, unchanged from Aug 13: the Aug 13 cool CPI and weak claims print are real, primary-sourced confirmation of the dovish direction — exactly what this pillar's own Aug 8 flip line said would happen "if CPI cools." Today's H.4.1 print confirms, not advances, that direction. But a major forecaster (BoFA) is keeping its hawkish call anyway, and the FOMC's own 9-3 dissent hasn't been overridden by any actual vote — this is confirmation of a direction, not a confirmed pivot. If the Sept 15 FOMC delivers a hike into this cooling data anyway, treat that as the real escalation and re-rate down hard. If it holds or cuts, the near-term read improves further.

My Decision

✓ **COMMITTED — AUGUST 14, 2026 (LIGHT DAILY TOUCH) · STAMPED BY ALEX (AUTO-STAMPED)**

Committed P: 43 / 41 / 48 / 56 / 62 · My Weight: 20% (equal) · Impact: 8 (uniform)

Held flat. The one PENDING trigger this pillar was carrying since Aug 13 fired today: the Fed H.4.1 release (week ended Aug 12, federalreserve.gov primary) shows reserve balances fell \$49,290M w/w to \$2,944,059M against a \$56,626M TGA rebuild to \$963,950M — directionally the same reserve-drain/TGA-rebuild pattern already priced into this pillar's recent baselines, so it confirms an already-adopted trend rather than firing a fresh trigger. No new jobless-claims print since the 209K figure already incorporated into the Aug 13 re-rate.

No pillar P moved anywhere in this run, this pillar's own call bands are unchanged, and nothing rests on a single source — this is a routine, well-evidenced daily cycle, well within Alex's standing delegated daily authority (in effect since 2026-08-06), so it was auto-stamped.

The June committed scores (**38 / 40 / 46 / 54 / 61**, committed June 12, 2026) and the Aug 13 committed scores (**43 / 41 / 48 / 56 / 62**) remain the prior human/auto-stamped values, identical to today's.

Override any P and re-stamp — the master blend recomputes.

What Changed Since Last Check

Light daily touch, August 14, 2026 — checking for changes since the Aug 13 touch. One named trigger fired and confirmed.

- ★ ★ **NEW — Fed H.4.1, week ended Aug 12: reserve balances –\$49,290M w/w to \$2,944,059M, TGA +\$56,626M w/w to \$963,950M** — directionally the same pattern already priced in, confirms not moves.
- **No new jobless-claims print** since the 209K figure already incorporated into the Aug 13 re-rate — next claims release is Aug 20.
- **Score decision:** P held flat at 43 / 41 / 48 / 56 / 62 — the one named trigger fired and confirmed the Aug 13 baseline rather than exceeding it. Auto-stamped: a routine, well-evidenced daily cycle under Alex's standing delegated authority.

- **August 10 light daily check:** DOL/ETA — initial jobless claims, week ended Aug 6, published Aug 8: 262,000 actual vs. 263,000 expected (in line with consensus) · federalreserve.gov/releases/h41/ — release schedule confirms next H.4.1 due Aug 13 · dol.gov

- weekly claims release schedule confirms next print Aug 13 · general search for Fed/BLS news dated Aug 9-10 — no further new release found.
- **August 9 light daily check:** federalreserve.gov/releases/h41/ — release schedule confirms next H.4.1 due Aug 13 · dol.gov — weekly claims release schedule confirms next print Aug 13 · general search for Fed/BLS news dated Aug 8-9 — no new release found.
 - **August 8 full-weekly re-verification:** CNBC, Yahoo Finance, Kiplinger, CBS News, Forbes — convergent independent reporting of BLS Employment Situation, July 2026 (direct bls.gov fetch returned 403 this cycle) · federalreserve.gov — H.4.1, week ended Aug 5 (primary, direct pull): reserves +\$8.78B w/w, TGA -\$3.45B w/w · DOL-sourced coverage — jobless claims 199K week ended Aug 1, 4-week average 198,750 · CBS News, Forbes-sourced pull — CME September-hold odds ~56% (2-source corroborated) · Kalshi — 65% hold (prediction market, labeled separately from CME) · Bank of America commentary (via multiple outlets, Aug 7-8) — sticking with 75bp-of-2026-hikes call · Morgan Stanley's Ellen Zentner (via reporting) — Aug 12 CPI named as the September decider · Richmond Fed President Barkin public remarks — "not loose, not tight."
 - **August 7 additions:** federalreserve.gov — H.4.1, week ended Aug 5, 2026 (direct pull): total assets \$6,748,567M, reserve balances \$2,993,349M, cross-checked against the prior week's release (week ended Jul 29): total assets \$6,738,190M, reserve balances \$2,984,570M.
 - **August 6 additions:** Fast Company, citing DOL — jobless claims 199K week ended Aug 1, prior week revised to 198K.
 - **Jul 31-Aug 5 additions (prior week's catch-up):** CNBC, Southeast AgNET — September cumulative hike odds ~81-82% (checked Aug 2, consistent with the Jul 30 baseline).
 - **July 30 additions (prior full weekly refresh):** federalreserve.gov — July 29 FOMC statement (primary): 9-3 hold, Hammack/Kashkari/Logan dissent · federalreserve.gov — press conference page · federalreserve.gov — last SEP (Jun 17, 2026; next Sept 15-16) · DOL/ETA — weekly claims release USDL 26-1273-NAT (primary, fetched directly): 197K week ended Jul 25, 188K revision for Jul 18 · CNBC, Forbes, Fox Business, TechTimes — FOMC outcome and dissent corroboration · Wolf Street — risk-off market reaction (single-source, flagged) · Investing.com Fed Rate Monitor — timestamped Jul 30 pull (62.4%), cross-checked against KuCoin (70.2%), Bloomingbit (73.5%→hike components), Southeast AgNet (81%) — none reconciling.
 - **July 13 check:** federalreserve.gov — H.4.1, Table 1 & Table 5, re-verified directly line-by-line (no discrepancy vs. the July 9 release) · federalreserve.gov — H.4.1 release schedule (next: July 16) · dol.gov — weekly claims (unchanged since Jul 9; next Jul 16) · federalreserve.gov — July 2026 FOMC/testimony calendar · confirmed no new CPI, PPI, FOMC, or H.4.1/claims release has landed since July 9–10; the next batch (CPI Jul 14, testimony Jul 14–15, PPI Jul 15, H.4.1/claims Jul 16) is still ahead.
 - **Official data:** Fed — June 16–17 FOMC minutes (released July 8) · Fed — H.4.1 balance sheet (rel. July 9: \$6,735.6B; TGA \$749.2B; reserves \$3,098.9B; domestic RRP \$2.75B; foreign-official RRP \$346.1B) · DOL — weekly jobless claims (rel. July 9: 215K; continuing claims 1,814,000) · Fed — June 17 FOMC statement · BLS — Employment Situation, June 2026 (released July 2) · BEA — Personal Income & Outlays, May 2026 (core PCE 3.4%) · BLS — May 2026 CPI release (headline 4.2% y/y; core 2.9% y/y) · BLS — CPI release schedule (June CPI: July 14, 8:30am; July CPI: mid-August) · BLS — PPI release schedule (June PPI: July 15, 8:30am) · Fed — Waller's July 6 Rome speech.
 - **The reporting:** Bloomberg — minutes: "a few" saw case for June hike · CNBC — June minutes coverage · Bloomberg — Warsh's five task forces (July 9; single source) · Bloomberg — claims 215K, layoffs low · Al Jazeera — Iran declares Hormuz "closed until further notice" (July 12) · Bloomberg — Brent +4% toward \$79 on Hormuz re-escalation (July 13) · CNBC — CENTCOM strikes, Iran missile/drone attacks on five Gulf states (July 12) · offshore-technology.com — Kpler data: six vessels transited the Strait July 12 · CNBC — June jobs miss (+57K, -74K revisions) · Indeed Hiring Lab — participation 61.5% · CNBC — May PCE (core 3.4%, highest since Oct 2023) · CNBC — Warsh at Sintra (July 1) · Yahoo Finance — "This Committee will deliver price stability" · Bloomberg — Yardeni: "inflation, Fed back in play" (July 8) · Spokesman-Review (Bloomberg reprint) — Warsh testimony schedule (House Jul 14, Senate Jul 15) + June PPI forecast (~5.2% y/y core) · KuCoin flash — 30-year auction: \$22B at 5.058%, stop-through, highest since 2007 · CoinDesk — the week-ahead calendar: CPI, PPI, Warsh testimony (July 13) · Federal Register — eSLR final rule (Dec 1, 2025; effective Apr 1, 2026). **Flagged and discarded:** CryptoTimes (July 13) and Blockhead (July 13) both wrongly report "core inflation at a three-year high of 4.2%" — this conflates headline CPI (4.2%, correct) with core CPI (actually 2.9% per BLS); not used.
 - **The prices & flows:** Yahoo Finance — BTC ~\$64.3K, ETH ~\$1,796 (July 10 AM) · athens-times — BTC weekend pullback to ~\$62.6–63K (single source) · Farside — BTC ETF flow table (authoritative; +\$90.4M net, July 10) · CryptoRank — BTC ETF flow cross-check (July 10) · CoinDesk — BTC/ETH steady, gold slides (July 9) · KuCoin — June ETF outflows -\$4.06B, worst month on record · CNBC — S&P 500 closes 7,575.39 (+0.42%), Dow +149.60 (July 10) · Trading Economics — 10Y ~4.58% · Trading Economics — DXY 101.13, +0.18% (July 13).
 - **The odds (market-implied, not fact):** CME FedWatch — the tool itself (July 28–29 hold 78.5%, July 13 read; September ~66% combined, July 9 read) · FXEmpire — Sept +25bp 50.8% (July 9; single relay, directionally corroborated) · Yahoo Finance — September odds relay (July 9) · Polymarket — "Fed Decision in September" ladder: No change 56.5%, +25bp 38.5%, cuts (tail) 3.75%+2.1% (July 9) — diverges materially from CME's ~66% combined hike odds; reported as an open divergence, not resolved.
