CoinPicks Market Direction

Research Package

Five pillars — four researched narratives and one pure-math read of the Bitcoin chart — scored on one standard, blended into one table, and distilled to one number. The qualitative narrative is current as of **October 29, 2026** — today's light daily touch, score set `2026-10-29_draft`, **AUTO-STAMPED under Alex's delegated daily authority, October 29, 2026**, measured against the October 24 FULL WEEKLY baseline (`2026-10-24_draft`, itself never separately stamped, now superseded). Four independent WebSearch research passes, one per pillar, found **Tokenization** clearing the sufficiency rule on the OCC's Oct 21 final GENIUS Act stablecoin rule (6mo/1yr P +1 each); CLARITY Act, Iran War Risk and Fed & Macro all held flat — see Status & honesty notes below for the full account. The computed Bitcoin TA pillar resynced to the now-finalized Oct 28 close: BTC $80,362.80, down 0.40% from yesterday's $80,686.94 intraday read.

AUTO-STAMPED, OCTOBER 29, 2026 (score set 2026-10-29_draft). This set re-rates one of four qualitative pillars against the October 24 FULL WEEKLY baseline (score set 2026-10-24_draft, itself never separately stamped). **Tokenization moved UP on 6mo/1yr; CLARITY Act, Iran War Risk and Fed & Macro held flat. Tokenization** (58/65/70/77/86 → 58/65/71/78/86): the OCC finalized its GENIUS Act permitted-payment-stablecoin rule Oct 21, 2026 — PRIMARY (OCC press release NR-2026-92; OCC Bulletin 2026-50, "GENIUS Act Regulations: Final Rule," effective Jan 18, 2027), corroborated by 8+ independent outlets — the first of six federal agencies to finalize a substantive GENIUS Act rule, front-running this pillar's own Jan 18, 2027 statutory-backstop resolution point. **CLARITY Act held flat** (10/27/46/73/92): Senate still in recess through ~Nov 6, nothing fired. **Iran War Risk held flat** (1/1/12/31/66): attack tempo and the DCAS toll (21) unchanged; a VP Vance letter proposing direct Iran talks (Oct 25, multi-sourced) is unaccepted by Iran and disputed by Trump — logged as a watch item, not scored. **Fed & Macro held flat** (34/23/34/43/58): the Oct 28 FOMC held rates at 3.75%–4.00%, 10–2 (Governor Cook and Cleveland Fed President Hammack dissenting for a hike), confirming rather than exceeding the already-priced hold consensus; September PCE and the Q3 GDP advance estimate, due today, were not yet confirmed published. No flip-line clause fired on any pillar; research capability was not degraded this cycle (WebSearch clean throughout); verification raised no unresolved inconsistency. Per the widened delegated daily auto-stamp authority (2026-09-02), the size of this move is not a reason to withhold the stamp — **AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)."**

THE FINAL NUMBER · OCTOBER 29, 2026 LIGHT DAILY TOUCH (TOKENIZATION RE-RATED UP ON 6MO/1YR; SCORE SET 2026-10-29_DRAFT, AUTO-STAMPED) · BTC $80,362.80, OCT 28 CLOSE (FINALIZED)

−0.09 Neutral — today's light daily touch re-rated Tokenization up on 6mo/1yr on the OCC's final GENIUS Act stablecoin rule; CLARITY Act, Iran War Risk and Fed & Macro held flat — THE FINAL NUMBER holds at −0.09 equal-weight while the horizon-weighted variant firms to +0.47

Equal-weight mean of the five window signals below — every pillar counts 20% (scale −10 to +10). The headline holds at -0.09, matching yesterday's second-pass reading — Tokenization's modest 6mo/1yr re-rate (on the OCC's final GENIUS Act stablecoin rule) roughly offsets a small give-back in the computed Bitcoin TA pillar's 3-month signal (+1.34→+1.23) as its cycle-analog read finalized on the now-closed Oct 28 bar. The horizon-weighted variant firms to **+0.47**, from +0.46. All readings are **Neutral**, and **no call band flipped anywhere** — not on any window, any pillar, or either final-number variant. **Read that carefully:** today's four independent WebSearch research passes, one per pillar, found only Tokenization clearing the sufficiency rule — CLARITY Act, Iran War Risk and Fed & Macro all held flat. A number sitting near zero is *not* a forecast that nothing happens — it is five forces of real size pulling against each other, a **Bear** 1-month read held against a **Bull** 3-year read. BTC $80,362.80 (Oct 28, 2026 finalized close, down 0.40% from yesterday's $80,686.94 intraday read).

THE FIVE WINDOWS UNDERNEATH IT

WINDOW	MASTER SIGNAL	CALL
1 month	**−2.11**	**Bear** — unchanged from yesterday's second pass. CLARITY (−5.44), Iran (−4.70), Tokenization (+1.15), Fed & Macro (−2.18) and the TA pillar (+0.60) are all unchanged this cycle — Tokenization's re-rate landed on 6mo/1yr only. CLARITY and Iran remain the two biggest drags on this window.
3 months	**−1.71**	**Bear** — down from −1.69 yesterday, entirely on the computed Bitcoin TA pillar's 3-month signal easing from +1.34 to +1.23 as its cycle-analog read finalized on the now-closed Oct 28 bar; no qualitative pillar moved this window. CLARITY (−3.13), Tokenization (+2.11), Fed & Macro (−3.67), Iran (−5.10) are unchanged this cycle.
6 months	**−0.60**	**Mild Bear** — up from −0.63, on Tokenization's re-rate (+2.72→+2.86, the OCC's final GENIUS Act stablecoin rule). CLARITY (−0.54), Fed & Macro (−2.05), Iran (−4.26) and the TA pillar (+0.97) are unchanged.
1 year	**+1.16**	**Mild Bull** — up from +1.14, on Tokenization's re-rate (+3.37→+3.49). CLARITY (+3.31), the TA pillar (+1.82), Fed & Macro (−0.84) and Iran (−1.98) are unchanged.
3 years	**+2.84**	**Bull** — *unchanged*, and every pillar still positive. 36mo held flat on every pillar this cycle too — Tokenization's re-rate didn't reach this far out (3yr already near the top of its range). A unanimously positive long end against a Bear 1-month read is still the most important shape in this package

Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. The leave-one-out range this cycle is −0.79 to +0.62 (full set: −CLARITY −0.14 · −Iran +0.62 · −Tokenization −0.79 · −Fed & Macro +0.29 · −Bitcoin TA −0.41) — essentially unchanged from yesterday's −0.78 to +0.62, Tokenization's own drop-one value ticking slightly more negative (−0.78→−0.79) as it becomes a slightly stronger bullish offset; the sign still flips positive (Mild Bull) when Iran War Risk is dropped, and **dropping Tokenization alone still pushes the reading most negative, to −0.79 (Mild Bear)**, a similar spread to last cycle. With the headline at −0.09, removing any single pillar still swings it by far more than the number itself. That is the honest state of the blend — see the Master Report's Robustness section.

Reading order

Twenty minutes to the whole picture; each report stands alone and can be checked independently — every fact is dated with sources on its last page.

#	FILE	WHAT IT IS
1	`CoinPicks_Master_Direction_Report.pdf`	**The summary.** The final number, the five-window table, the full pillar matrix, where the lenses agree/fight, six weeks of dated triggers, sensitivity.
2	`CoinPicks_Bitcoin_TA_Quant_Pillar_Report.pdf`	**The math pillar.** 7 indicators on 16 years of data, halving-cycle analogs, power-law valuation — with charts. Fully reproducible from code.
3	`reports/current/pdf/ — the four pillar PDFs`	**The story pillars.** CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro. Each: thesis, dated facts, honest bear case, dated triggers, and the full score lineage (June committed → … → Sept 23 committed → Sept 26 draft, this version).
4	`reports/archive/ + prior-work/`	Every earlier version, preserved untouched — the score history is fully auditable.
—	`run.py · engine/blend.py · data/master_blend.json`	The blend engine (runnable Python — reproduce any score set with run.py blend --set NAME), its output, and README.md for regeneration.

How the scoring works — one paragraph

Every pillar answers the same question on five windows (1 month / 3 months / 6 months / 1 year / 3 years): **P** = the odds (0–100) that this force is *good for crypto* by then, **Quality** = how trustworthy the evidence is (0–1), and **Impact** = how hard this force moves the whole market (0–10). These combine into a **Signal = ((P − 50) ÷ 50) × Quality × Impact** (Impact is a uniform 8 for every pillar), so a coin-flip view scores zero no matter how loud the headlines are, and weak evidence can't shout. **All five pillars are equal-weighted** — the master for each window is the simple mean of the five signals (20% each; add a pillar and it auto-rebalances to 1/N) — and the Final Number averages the five master windows.

The five pillars at a glance (light daily touch, October 29 — score set 2026-10-29_draft, **AUTO-STAMPED under Alex's delegated daily authority, October 29, 2026**; Tokenization re-rated up on 6mo/1yr; CLARITY Act, Iran War Risk and Fed & Macro held flat)

PILLAR	1MO	3MO	6MO	1YR	3YR	ONE-LINE READ
CLARITY Act (law)	10	27	46	73	92	**HELD FLAT** at 10/27/46/73/92. The Senate remains in its State Work Period through ~Nov 6; no floor, committee, or cloture action found. A Q3 crypto-lobbying-spend-decline item traces to a single underlying Bloomberg Government dataset once syndication is stripped out — single-source, not used. Nothing clears the sufficiency rule
Iran War Risk	1	1	12	31	66	**HELD FLAT** at 1/1/12/31/66. Attack tempo and the DCAS US toll (21 deaths) are unchanged; none of the pillar's four flip-line clauses fired fresh (clause (d), sustained Brent >$100, was already closed as fired by yesterday's local pass). NEW, logged but NOT scored: VP Vance sent a letter to Iran SNSC secretary Rezaei (via Qatari mediators) proposing direct, no-preconditions talks, delivered Oct 25 — multi-sourced (WSJ, NYT, Iran International, The Week, Seoul Economic Daily, 5+ independent outlets). But Iran has not accepted (it separately rejected a Qatari 7-day timeline draft while weighing its own counter-plan) and Trump disputed the letter's characterization Oct 29 (claiming it concerned only medical supplies) — an unaccepted, internally-disputed offer doesn't clear this pillar's own precedent for a move. Watch item for the next cycle
Tokenization (RWA)	58	65	71	78	86	**RE-RATED UP** on 6mo/1yr, from 58/65/70/77/86. The OCC finalized its GENIUS Act permitted-payment-stablecoin rule Oct 21, 2026 (primary: OCC press release NR-2026-92 + OCC Bulletin 2026-50; corroborated by 8+ independent outlets) — the first of six federal agencies to finalize a substantive GENIUS Act rule, front-running this pillar's own Jan 18, 2027 statutory-backstop resolution point. OKXICE's objector count kept climbing (22→26, Cointelegraph Oct 26-27) — friction, not a status change; DTCC's October launch remains unconfirmed either way
Fed & Macro	34	23	34	43	58	**HELD FLAT** at 34/23/34/43/58. The Oct 28 FOMC held rates at 3.75%–4.00%, 10–2 (Governor Cook and Cleveland Fed President Hammack dissenting for a hike) — primary (federalreserve.gov), 5+ independent outlets — confirming rather than exceeding the already-priced hold consensus built on Chair Warsh's Oct 16 remarks. September PCE and the Q3 GDP advance estimate, due today, were not yet confirmed published as of this pass — this pillar's next flip-line test

Bitcoin TA (quant)	55	61	61	69	69	Computed; MOVED on one window on the finalized Oct 28 close (P 55/61/61/69/69, from 55/62/61/69/69 on yesterday's intraday read): the 3-month signal eased +1.34→+1.23 as the cycle-analog read finalized. 1mo/6mo/1yr/3yr P unchanged. BTC $80,362.80 (Oct 28, 2026 close, finalized, down 0.40% from yesterday's $80,686.94 intraday read). The weekly bar did NOT roll over (still the bar dated Nov 1); weekly, monthly and quarterly bars are all PARTIAL; the completed-bar composites are quoted alongside the forming ones in the TA report (+42.0 / +15.7 / +31.1)

P values shown (50 = coin flip). This cycle, four independent parallel research passes (one per pillar, primary-source-first) found only Tokenization's 6-month and 1-year windows clearing the sufficiency rule — the other eighteen qualitative windows held exactly flat against the Oct 24 baseline. No flip-line clause fired anywhere, and verification raised no unresolved inconsistency — AUTO-STAMPED under the widened delegated daily authority. The Bitcoin TA pillar is computed by the pipeline and never hand-edited.

Status & honesty notes

- **October 29, 2026 — LIGHT DAILY touch: Tokenization re-rated UP on 6mo/1yr on the OCC's final GENIUS Act stablecoin rule; CLARITY Act, Iran War Risk and Fed & Macro all HELD FLAT; this cycle's new set (2026-10-29_draft) was AUTO-STAMPED; THE FINAL NUMBER holds at −0.09 equal-weight (from −0.09) while the horizon-weighted variant firms to +0.47 (from +0.46).** Quant DATA CHECK only (`run.py quant` correctly NOT invoked; sandbox egress-block workaround): `data/btc_usd_daily.csv` finalized the Oct 28 bar at **$80,362.80** (close), down 0.40% from yesterday's local-run intraday read of $80,686.94; 1 day stale against today (Oct 29 UTC), within documented tolerance. The computed Bitcoin TA pillar's 3-month window eased (signal +1.34→+1.23, P 62→61) as its cycle-analog read finalized on the now-closed bar; 1mo/6mo/1yr/3yr P unchanged. Four independent WebSearch research passes ran against the active baseline (`2026-10-24_draft`, last week's FULL WEEKLY refresh, itself never separately stamped): **CLARITY Act** held flat at 10/27/46/73/92 — the Senate remains in its State Work Period recess through ~Nov 6, no floor, committee, or cloture action found; a Q3 crypto-lobbying-spend-decline item (CoinGape/CoinGabbar/CoinAlertNews/IBTimes) traces to a single underlying Bloomberg Government dataset once syndication is stripped out — single-source, not used; an unverifiable claimed Oct 28 "The Block" item on enactment odds could not be located directly; an Oct 26 Coinfomania claim of a Democrat SEC-provision floor vote is single-source, self-flagged AI-generated by the outlet, and uncorroborated — neither used. **Iran War Risk** held flat at 1/1/12/31/66 — attack tempo (28+ October attacks per Washington Institute/Seatrade) and the DCAS US toll (21 deaths) are unchanged; the Petro Dolphin's 2 missing Indian crew remain unresolved. NEW, logged but NOT scored: VP Vance sent a letter to Iran SNSC secretary Mohsen Rezaei (via Qatari mediators) proposing direct, no-preconditions talks, delivered Oct 25 — multi-sourced (WSJ first report, corroborated by NYT, Iran International, The Week, Seoul Economic Daily, 5+ independent outlets, clears the sourcing bar). But Trump publicly disputed the letter's characterization Oct 29 (claiming it concerned only medical supplies, contradicting WSJ's framing), and Iran has not accepted (it separately rejected a Qatari-backed 7-day timeline draft while weighing its own 7-day "trust-building" counter-plan, Seoul Economic Daily Oct 29) — per this pillar's own precedent (the Sept 25 Araghchi plan scored only because a named Iranian principal detailed concrete, on-record, accepted-track terms), an unaccepted, internally-disputed US-side offer does not clear the bar for a move. Flagged as a watch item for the next cycle: Iran on-record acceptance, or Trump on-record confirmation as genuine peace outreach, would be this pillar's next scorable trigger. None of the four flip-line clauses fired fresh. **Tokenization cleared the sufficiency rule** and RE-RATED UP, 6mo/1yr only, 58/65/70/77/86 → 58/65/71/78/86: the OCC finalized its GENIUS Act permitted-payment-stablecoin rule Oct 21, 2026 — PRIMARY (OCC press release NR-2026-92; OCC Bulletin 2026-50, “GENIUS Act Regulations: Final Rule,” effective Jan 18, 2027), independently corroborated by 8+ outlets (WilmerHale, Legal500, Orrick/InfoBytes, Forbes, The Block, Decrypt, PYMNTS, thepaypers) — the first of six federal agencies to finalize a substantive GENIUS Act rule (1:1 reserve / 2-day redemption / capital-floor standards), front-running this pillar's own 6-month-horizon Jan 18, 2027 statutory-backstop resolution point. 1mo/3mo held (no live-venue/launch change this window); 3yr held (already near the top of its range, noise at that horizon). OKXICE's issuer-objection count continued climbing (16 Oct19, already priced → 22 Oct23 Reuters → 26 Oct26-27 Cointelegraph) — continued friction escalation, not a new category of fact, consistent with every prior cycle's treatment; a claimed Oct 26 OKXICE amended-filing report (onebullex.com) is single-source and not used; DTCC's October launch remains unconfirmed either way. **Fed & Macro** held flat at 34/23/34/43/58 — the FOMC held the funds rate at 3.75%–4.00% Oct 28, 2:00pm ET, voting 10–2 (Governor Cook and Cleveland Fed President Hammack dissenting for a 25bp hike) — PRIMARY (federalreserve.gov, monetary20261028a.htm), corroborated by 5+ outlets (CNBC, CNN, Fox Business, TD Economics, investinglive). This confirms, rather than exceeds, the ~80–87% hold consensus already priced into the baseline (built on Chair Warsh's Oct 16 remarks); the Cook/Hammack dissent, while genuinely new, is a mild within-band hawkish data point (2 of 12 votes) that doesn't exceed the already-elevated December-hike odds already priced. Chair Warsh also announced a reduction in FOMC meeting cadence starting 2027 — a structural/governance change, not a

policy signal, not scored. September PCE and the Q3 GDP advance estimate were scheduled for release today, Oct 29, 8:30am ET, but were not yet confirmed published as of this research pass — not used; flagged as this pillar's own next flip-line test. No flip-line clause fired on any pillar this cycle; verification raised no unresolved inconsistency; research capability was not degraded (WebSearch clean throughout all four passes). `config/scores.json` updated: a new dated set, **2026-10-29_draft**, is now `active_qual_set`. Per the widened delegated daily auto-stamp authority (2026-09-02), the size of Tokenization's move is not a reason to withhold the stamp — **AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)."** THE FINAL NUMBER holds at −0.09 equal-weight / firms to +0.47 horizon-weighted (from +0.46) — no call-band flip anywhere.

- **October 28, 2026 — SECOND same-day pass, LIGHT DAILY touch, LOCAL run (~8:45 AM ET): quant refreshed locally on a fresh Oct 28 intraday read; a second research pass held all four qualitative pillars flat again; the computed Bitcoin TA pillar moved on its 1-month window, easing THE FINAL NUMBER from −0.08 to −0.09 equal-weight and from +0.47 to +0.46 horizon-weighted; and the Iran pillar's multi-week Brent >$100 open item is CLOSED — re-verified on the primary series from this machine.** `run.py quant` ran locally (Bitstamp reachable from this Windows machine, unlike the cloud sandbox): BTC **$80,686.94** (Oct 28 read; the Oct 28 daily bar is PARTIAL/intraday), up +0.29% from this morning's **$80,453.34** Oct 27 close via GitHub Actions; +37.9% off the June 30 low ($58,526). No bar rolled over (the weekly bar dated Nov 1 is three days into forming). Tape composites as-is | completed: weekly +40.2 (was +39.5) | +42.0 · monthly +13.7 (was +13.3) | +15.7 · quarterly +35.1 (was +34.9) | +31.1. Cycle month 30.29 (from 30.26) — and that tick flipped the 1-month cycle analog from 2-of-3 positive (median +0.4%) to 1-of-3 positive (median −1.5%), so the TA pillar's Model P went 55/62/61/69/69 from 58/62/61/69/69 and its 1-month signal fell +0.96→+0.60 (still Mild Bull): the same disclosed n=3 alignment fragility, not a new finding. Master 1-month −2.04→−2.11 (still Bear); the other four windows unchanged; leave-one-out range −0.78 to +0.62 (was −0.77 to +0.63); **no call band flipped anywhere**. Power-law fair $144,164 (−44% vs fair); price still just below $81,685 weekly resistance (+1.2%), no level flipped membership. The second research pass (WebSearch and WebFetch both worked and fred.stlouisfed.org was reachable — NOT degraded; CNN returned HTTP 451 and CNBC/UKMTO/CENTCOM 403 or timeouts, labelled where relevant): **Iran War Risk** held flat at 1/1/12/31/66 — **CORRECTION to this morning's entry:** the Brent >$100 flip-line clause (d), carried since Oct 10 as “last confirmed FIRED, not re-verifiable in this sandbox”, was re-verified directly on FRED `DCOILBRENTEU` (EIA Europe Brent spot FOB, $/bbl, primary) from this machine: Oct 1 $114.82 · Oct 8 $130.18 (October high) · Oct 14 $126.55 · Oct 15 $126.35 · Oct 16 $119.33 · Oct 19 $118.82 · **Oct 20 $115.22 (latest observation in the series)** — **CONFIRMED STILL FIRING**, by a wide margin, and already priced since it first fired; the multi-week “unverifiable / flagged for Alex” open item is **CLOSED**. The Kalshi Oct-30-expiry read quoted this morning (Brent ~$92–97) is market-priced and is CONTRADICTED by the primary spot series and by dated secondary futures quotes (Fortune, Oct 27 8:15 AM ET: Brent $115.13 intraday, contract basis not stated; CBS News live blog, Oct 27: “around $113”, down nearly 2% on the day after the Tehran talks) — basis labels: FRED = spot FOB, lags ~1 week; Fortune/CBS = futures/intraday. The local Windows run can read FRED; the cloud sandbox cannot. Other Iran findings, none firing a clause: Egypt's parliament (Oct 26; CBS, AP/Reuters, Washington Times, Jerusalem Post — 5+ independent) authorized el-Sisi to deploy forces abroad to help defend Saudi Arabia — defensive, Houthi-directed, and no troops deploy absent a formal Saudi request (none announced), so clause (c) does NOT fire, logged as a widening signal; a Houthi-claimed Oct 27 ballistic-missile strike on Aramco's Ras Tanura refinery (Saudi authorities did not confirm; Bloomberg, anonymous: a fire near the terminal was contained) — partially corroborated, not independently scored; CNN Oct 26 and WSJ Oct 27 (both anonymous-sourced; CNN read via search summaries) report US strike preparations for a short, intense campaign after the Nov 3 midterms — posture, not a strike, clause (b) unfired; Trump on the record Oct 25 (“do I make a deal with them, or do I finish them off?”) and at the Oct 27 Lubbock rally (“You'll see Iran in a couple of weeks”); as counterweights, Qatar's new draft deal with a seven-day timeline (Reuters Oct 28, anonymous single-origin — REPORTED, NOT SCORED) and the Oct 26 four-party Tehran talks (4+

independent; no ceasefire, no terms, no next date); an Iranian-claimed Oct 27 tanker mine strike east of the Strait unconfirmed by UKMTO/CENTCOM (both primary feeds returned 403 here); no new US combat death Oct 24–28 (DCAS toll 21). Escalation and de-escalation signals roughly offset; 1mo/3mo already at the floor. **Fed & Macro** held flat at 34/23/34/43/58: today's FOMC decision (statement 2:00 PM ET, press conference 2:30 PM ET) lands AFTER this pass — no outcome exists yet to score; tomorrow's cycle picks it up. Market-priced odds (labelled, not institutional): hold ~90–95% / hike ~4–10% across Kalshi, Polymarket, CME FedWatch and OIS, at or below the ~13–15% baseline band, no incremental move; Conference Board consumer confidence 91.7 on Oct 27 (+7.5 pts, first rise in four months, vs ~81 consensus; 12-month inflation expectations 5.8%; 3 independent) is secondary survey data, context only; next primary data Q3 GDP advance and DOL claims Oct 29, September PCE Oct 30. **CLARITY Act** held flat at 10/27/46/73/92: the Senate remains in its State Work Period (pro forma only) until Monday Nov 9, no floor or committee action possible or found; Tillis's motion to reconsider still pending; H.R. 3633 stays on the calendar and dies Jan 3, 2027 if not enacted; a lame-duck push remains the only near-term path. Sen. Lummis's Oct 20–22 X posts (her own on-record statements, relayed by crypto.news Oct 23 and The Coin Republic Oct 27) on safeguards Democrats “rejected” and the agreed “Regulation Crypto” fundraising caps are messaging, not procedure — not scored. **Tokenization** held flat at 58/65/70/77/86: OKXICE's objector count rose 22→26 (IBM, Oracle, Intel and IonQ added per OKXICE's public notice dated Oct 26; CoinDesk Oct 27, crypto.news, Cryptopolitan — 3 independent), 23 of the original 62 proposed names plus three off-roster — friction, not a status change, venue still not live, no launch-date change; SEC Trading and Markets staff FAQs on the Innovation Exemption (Oct 20; Morgan Lewis, Deloitte DART — 2 independent) are procedural; dtcc.com's press-release page, read directly Oct 28, carries no Tokenization Service go-live, so the October launch target remains unconfirmed either way with three days left in the month. `config/scores.json` was NOT touched; **nothing stamped this cycle (no new set)** — active_qual_set remains `2026-10-24_draft`, a full weekly refresh categorically excluded from auto-stamp, **STILL DRAFT: status draft, stamped_by null**, awaiting Alex's manual review.

- **October 28 light daily touch: all four qualitative pillars HELD FLAT again, a twelfth straight cycle with no qualitative move; the computed Bitcoin TA pillar moved on one window as its cycle analog firmed, nudging THE FINAL NUMBER's horizon-weighted variant from +0.46 to +0.47 (equal-weight holds at −0.08).** Four independent WebSearch research passes, one per pillar, against the active set (`2026-10-24_draft`, last week's FULL WEEKLY refresh, still draft/unstamped) found nothing that clears the sufficiency rule: **CLARITY Act** (no reporting dated Oct 24-28 found on Senate floor/committee action, negotiator statements, or CFTC/SEC action; recess through ~Nov 6 stands), **Iran War Risk** (a single-source Oct 24 Shafaq News claim of another struck tanker in the Strait found no independent corroboration, not scored; none of the four flip-line clauses fired; a Kalshi Oct-30-expiry market now implies Brent ~$92-97, market-priced, the first indirect signal in weeks suggesting Brent sits below the $100 flip-line, though the primary spot-price access gap remains open), **Tokenization** (OKXICE's issuer-objection count grew further to 22, Reuters Oct 24, led by Wells Fargo — continuation of the already-scored friction pattern; a single-source claim of three new SEC Innovation Exemption filers found but excluded per the sufficiency rule; DTCC's October launch remains unconfirmed), **Fed & Macro** (today, Oct 28, IS the FOMC decision date itself, due at 2:00/2:30pm ET, after this cycle's research pass — no outcome exists yet to score; pre-meeting consensus unchanged from the Warsh-driven baseline; tomorrow's cycle must pick up the actual outcome). `config/scores.json` was NOT touched this cycle — active_qual_set remains `2026-10-24_draft`. GitHub Actions' Oct 27 daily close printed **$80,453.34**, up from the **$80,225.46** Oct 26 close (+0.28%) — the weekly bar did NOT roll over (still the bar dated Nov 1) and the computed Bitcoin TA pillar's 3-month window moved (P 62, from 61) as its cycle analog firmed further, still unanimous 3-of-3 positive, on cycle-analog fragility, not a qualitative finding. THE FINAL NUMBER holds at −0.08 equal-weight (moved only in the unrounded decimal) / firms to +0.47 horizon-weighted (from +0.46) — no call-band flip anywhere. **STILL DRAFT: status draft, stamped_by null** — active_qual_set remains `2026-10-24_draft`, a full weekly refresh categorically excluded from auto-stamp, awaiting Alex's manual review.

- **October 27 light daily touch: all four qualitative pillars HELD FLAT again, an eleventh straight cycle with no qualitative move; the computed Bitcoin TA pillar moved on one window as the weekly bar rolled over, nudging THE FINAL NUMBER from −0.09 to −0.08.** Four independent WebSearch research passes, one per pillar, against the active set (`2026-10-24_draft`, last week's FULL WEEKLY refresh, still draft/unstamped) found nothing that clears the sufficiency rule: **CLARITY Act** (no Senate floor/committee action found dated Oct 26-27; recess through ~Nov 6 stands), **Iran War Risk** (no new confirmed Strait-of-Hormuz incident dated Oct 26-27; none of the four flip-line clauses fired; the Brent >$100 flip-line clause remains independently unverifiable in this sandbox, a standing multi-week gap), **Tokenization** (WebSearch again surfaced only the Oct 19 objector notice; no newer count or go-live confirmation found), **Fed & Macro** (the Oct 27-28 FOMC meeting is underway today, decision due tomorrow; FOMC blackout continues). `config/scores.json` was NOT touched this cycle — active_qual_set remains `2026-10-24_draft`. GitHub Actions' Oct 26 daily close printed **$80,225.46**, down from the **$80,532.72** Oct 25 close (−0.38%) — the weekly bar also rolled over this cycle (bar dated Oct 25 closing at a final +42.0) and the computed Bitcoin TA pillar's 1-month window moved (P 58, from 56) as its cycle analog flipped back from 1-of-3 to 2-of-3 positive, on cycle-analog fragility, not a qualitative finding. THE FINAL NUMBER moved to −0.08 equal-weight / +0.46 horizon-weighted (from −0.09/+0.46) — no call-band flip anywhere. **STILL DRAFT: status draft, stamped_by null** — active_qual_set remains `2026-10-24_draft`, a full weekly refresh categorically excluded from auto-stamp, awaiting Alex's manual review.
- **October 26 light daily touch: all four qualitative pillars HELD FLAT again, a tenth straight cycle with no qualitative move; the computed Bitcoin TA pillar moved sharply on one window, nudging THE FINAL NUMBER from −0.06 to −0.09.** Four independent WebSearch research passes, one per pillar, against the active set (`2026-10-24_draft`, last week's FULL WEEKLY refresh, still draft/unstamped) found nothing that clears the sufficiency rule: **CLARITY Act** (no Senate floor/committee action found dated Oct 25-26; recess through ~Nov 6 stands), **Iran War Risk** (no new confirmed Strait-of-Hormuz incident dated Oct 25-26; none of the four flip-line clauses fired; the Brent >$100 flip-line clause remains independently unverifiable in this sandbox, a standing multi-week gap), **Tokenization** (WebSearch surfaced only the stale Oct 15 objector notice; no newer count or go-live confirmation found beyond the baseline's own Oct 19 figure of 16), **Fed & Macro** (the Oct 27-28 FOMC decision is now two days out; current hold/hike odds ~83-87%/~13-17% sit within the band the Oct 24 weekly already priced off Chair Warsh's Oct 16 remarks; FOMC blackout continues). `config/scores.json` was NOT touched this cycle — active_qual_set remains `2026-10-24_draft`. GitHub Actions' Oct 25 daily close printed **$80,532.72**, up from the **$80,035.37** Oct 24 close (+0.62%) — the computed Bitcoin TA pillar's 1-month window moved sharply (P 56, from 62) as its cycle analog flipped from unanimous 3-of-3 positive to 1-of-3, on cycle-analog fragility, not a qualitative finding. THE FINAL NUMBER moved to −0.09 equal-weight / +0.46 horizon-weighted (from −0.06/+0.47) — no call-band flip anywhere. **STILL DRAFT: status draft, stamped_by null** — active_qual_set remains `2026-10-24_draft`, a full weekly refresh categorically excluded from auto-stamp, awaiting Alex's manual review.
- **October 25 light daily touch: all four qualitative pillars HELD FLAT again, a ninth straight cycle with no qualitative move; the computed Bitcoin TA pillar moved on three windows, nudging THE FINAL NUMBER from −0.07 to −0.06.** Four independent WebSearch research passes, one per pillar, against the active set (`2026-10-24_draft`, last week's FULL WEEKLY refresh, still draft/unstamped) found nothing that clears the sufficiency rule: **CLARITY Act** (no Senate floor/committee action found; recess through ~Nov 6 stands; nothing beyond what the Oct 24 weekly already logged), **Iran War Risk** (attack tempo stays elevated, latest confirmed incidents unchanged since the Oct 24 weekly; EIA's own October STEO data — Brent averaged $114/bbl in September, Q4 forecast $104.69/bbl — corroborates but does not newly fire this pillar's already-"last confirmed FIRED" sustained-Brent→$100 flip-line clause; the Petro Dolphin's 2 missing crew remain unresolved; none of the four flip-line clauses fired fresh), **Tokenization** (OKXICE's objector count unchanged at 16; still not live; DTCC's October launch remains unconfirmed either way), **Fed & Macro** (Oct 28 FOMC three days out; current hold/hike odds ~84-87%/~13-16% sit within the band the Oct 24 weekly already priced off Chair Warsh's Oct 16 remarks; FOMC blackout

continues). `config/scores.json` was NOT touched this cycle — active_qual_set remains `2026-10-24_draft`. GitHub Actions' Oct 24 daily close printed **$80,035.37**, down from the **$81,500.31** Oct 23 close (−1.80%) — the computed Bitcoin TA pillar's 1-month, 6-month and 1-year windows all moved (P 62/61/61/69/69, from 61/61/62/68/69) on cycle-analog fragility effects, not qualitative findings. THE FINAL NUMBER moved to −0.06 equal-weight / +0.47 horizon-weighted (from −0.07/+0.47) — no call-band flip anywhere. **STILL DRAFT: status draft, stamped_by null** — active_qual_set remains `2026-10-24_draft`, a full weekly refresh categorically excluded from auto-stamp, awaiting Alex's manual review.

- **October 24 FULL WEEKLY refresh: Fed & Macro re-rated up on 1mo only (31→34); CLARITY Act, Iran War Risk and Tokenization all HELD FLAT; the computed Bitcoin TA pillar is unchanged from this morning's sync — THE FINAL NUMBER moved from −0.08 to −0.07.** Four independent parallel WebSearch research passes, one per pillar, primary-source-first, against the active set (`2026-10-17_draft`, itself a full weekly, still draft/unstamped). **CLARITY Act** held flat at 10/27/46/73/92: Senate remains in its State Work Period through ~Nov 6; no floor/committee action possible or found; a second, firmer-sourced read on the CFTC-ANPRM's Dec 14 comment deadline is a procedural detail on an already-priced fact, not scored. **Iran War Risk** held flat at 1/1/12/31/66: attack tempo stays elevated but eased in the back half of October (no new deaths, no new vessel losses); the Petro Dolphin's 2 missing crew remain unresolved with no new reporting either way; none of the pillar's four flip-line clauses fired; the Brent >$100 flip-line remains unverifiable in this sandbox, now a multi-week-running open item. **Tokenization** held flat at 58/65/70/77/86: OKXICE still not live; its objector count grew from 9 to 16, now including Microsoft, Alphabet and Goldman Sachs — friction, not a status change; DTCC's October launch target remains unconfirmed either way. **Fed & Macro RE-RATED UP, 1mo only, 31→34** (signal −2.58→−2.18): Fed Chair Kevin Warsh, at an Oct 16 IMF event in Bangkok (primary Fed-official statement, 7+ independent outlets), declined to preview remaining 2026 FOMC decisions; Oct 28 hike odds then collapsed from ~33-47% (baseline) to ~13-15% (CME FedWatch) / ~14% (Polymarket) — market-priced, labelled distinctly, corroborated across 2+ independent sources. Dec 9 hike odds (~74-79%) sit within the already-priced baseline band, so 3mo/6mo/1yr/3yr all HOLD. `config/scores.json` updated: **active_qual_set now points to `2026-10-24_draft`**. WebSearch worked normally throughout this cycle; no tool-wide failure observed. THE FINAL NUMBER moved to −0.07 equal-weight / +0.47 horizon-weighted (from −0.08/+0.46 this morning) — no call-band flip anywhere. Per CLAUDE.md, a full weekly refresh is categorically excluded from auto-stamp regardless of outcome — **LEFT AS DRAFT: status draft, stamped_by null, awaiting Alex's manual review.**
- **October 24 light daily touch (earlier this morning, superseded by the full weekly above): all four qualitative pillars HELD FLAT again, an eighth straight cycle; the computed Bitcoin TA pillar's Model P moved on its 1-month window, nudging THE FINAL NUMBER from −0.07 to −0.08.** A WebSearch research pass, one per pillar, against the active set (`2026-10-17_draft`) found nothing that clears the sufficiency rule: CLARITY Act (no Senate floor/committee action found; recess through Nov 9 stands; a dated Oct 23 report notes CLARITY backers cut Q3 lobbying spend, immaterial), Iran War Risk (an Oct 22 IRGC claim of 7 more tankers damaged, and Brent reportedly above $111/bbl around the same date, were both reported but neither independently confirmed nor verifiable against this pillar's own primary-source Brent threshold in this sandbox; none of the pillar's four flip-line clauses fired), Tokenization (OKXICE still not live under its 30-day issuer-notice clock; its disclosed objector count sits at 16, including Microsoft, Alphabet and Goldman Sachs — friction, not a launch; DTCC's October launch target still unconfirmed as fully live), Fed & Macro (FOMC blackout period, Oct 17-29, confirmed continuing ahead of the Oct 27–28 meeting). `config/scores.json` was NOT touched this cycle. GitHub Actions' Oct 23 daily close printed **$81,500.31**, down from the **$81,597.19** Oct 22 close — small enough that only the computed Bitcoin TA pillar's 1-month window moved (P 64→61, as its cycle analog slipped back from unanimous 3-of-3 to 2-of-3 positive). THE FINAL NUMBER moved to −0.08 equal-weight / +0.46 horizon-weighted (from −0.07/+0.47) — no call-band flip anywhere. **STILL DRAFT: status draft, stamped_by null** — active_qual_set remains `2026-10-17_draft`, a full weekly refresh categorically excluded from auto-stamp, awaiting Alex's manual review.

- **October 23 light daily touch: all four qualitative pillars HELD FLAT again; the computed Bitcoin TA pillar's Model P is unchanged, so THE FINAL NUMBER holds at −0.07.** A WebSearch research pass, one per pillar, against the active set (`2026-10-17_draft`) found nothing that clears the sufficiency rule: CLARITY Act (no Senate floor/committee action found; recess through Nov 9 stands), Iran War Risk (the Petro Dolphin's two missing crew and the Al Maqam strike claim remain unresolved/unconfirmed; none of the pillar's four flip-line clauses fired), Tokenization (OKXICE still not live under its 30-day issuer-notice clock; DTCC's October launch target still unconfirmed as fully live), Fed & Macro (FOMC blackout period, Oct 17-29, confirmed continuing ahead of the Oct 27–28 meeting). `config/scores.json` was NOT touched this cycle. GitHub Actions finalized the October 22 daily bar's close at **$81,597.19**, revised down from the **$81,694.28** intraday read quoted yesterday (October 21's close was likewise revised, to $84,023.24 from $84,440.68) — routine end-of-day data finalization, not fresh price action, too small to shift any window's cycle-analog median across a new rounded P value. Model P (64/61/62/68/69), this pillar's signals and THE FINAL NUMBER (−0.07 equal-weight / +0.47 horizon-weighted) are therefore unchanged from yesterday; one level's classification flipped on the finalized close ($81,685 reads back as resistance, 0.1% above price, having read as reclaimed support on yesterday's higher intraday price) — see the TA report for detail. **STILL DRAFT: status draft, stamped_by null** — active_qual_set remains `2026-10-17_draft`, a full weekly refresh categorically excluded from auto-stamp, awaiting Alex's manual review.
- **October 22 light daily touch: all four qualitative pillars HELD FLAT again; the computed Bitcoin TA pillar moved on its 1-month, 3-month and 6-month windows, nudging THE FINAL NUMBER from −0.08 to −0.07.** A WebSearch research pass, one per pillar, against the active set (`2026-10-17_draft`) found nothing that clears the sufficiency rule: CLARITY Act (no Senate floor/committee action found; recess through Nov 9 stands), Iran War Risk (the Petro Dolphin's two missing crew and the Al Maqam strike claim remain unresolved/unconfirmed; none of the pillar's four flip-line clauses fired), Tokenization (OKXICE still not live under its 30-day issuer-notice clock; a single self-contradictory aggregator's issuer-objection update was excluded under the sufficiency rule; DTCC's October launch target still unconfirmed as fully live), Fed & Macro (FOMC blackout period, Oct 17-29, confirmed continuing ahead of the Oct 27–28 meeting; a secondary PPI figure was again internally inconsistent and excluded). `config/scores.json` was NOT touched this cycle. The computed Bitcoin TA pillar's 1-month window moved (P 61→64) as its cycle analog advanced to unanimous 3-of-3 positive (median +9.0%, was +2.5%), its 3-month window moved (P 62→61, analog median +33.6%, still unanimous 3-of-3) and its 6-month window moved (P 63→62, analog median +65.1%, still unanimous 3-of-3), on the cycle-month clock advancing from 30.06 to 30.09 — disclosed single-window fragility (n=3), not a qualitative finding. BTC eased to $81,694.28 (Oct 22 intraday read, from the $84,440.68 Oct 21 close) — THE FINAL NUMBER drifted to −0.07 equal-weight (horizon-weighted unchanged at +0.47); no call-band flip anywhere. **STILL DRAFT: status draft, stamped_by null** — active_qual_set remains `2026-10-17_draft`, a full weekly refresh categorically excluded from auto-stamp, awaiting Alex's manual review.
- **October 21 light daily touch: all four qualitative pillars HELD FLAT again; the computed Bitcoin TA pillar moved on its 1-month and 3-month windows, nudging THE FINAL NUMBER from −0.12 to −0.09.** A WebSearch research pass, one per pillar, against the active set (`2026-10-17_draft`) found nothing that clears the sufficiency rule: CLARITY Act (no Senate floor/committee action found; recess through Nov 9 stands), Iran War Risk (attack tempo in the Hormuz theater remains elevated and undiminished; Trump's Oct 8 pledge not to strike before the Nov 3 midterms stands unretracted; none of the pillar's four flip-line clauses fired), Tokenization (OKXICE still not live under its 30-day issuer-notice clock; DTCC's October launch target still unconfirmed as fully live), Fed & Macro (FOMC blackout period, Oct 17-29, confirmed continuing ahead of the Oct 27–28 meeting; no new data prints). `config/scores.json` was NOT touched this cycle. The computed Bitcoin TA pillar's 1-month window moved (P 57→60) as its cycle analog flipped forward again to 2-of-3 positive with median rising from −2.4% to +0.5%, and its 3-month window moved (P 58→61) as its analog's agreement advanced to 3-of-3 positive with median rising from +24.2% to +27.2%, on the cycle-month clock advancing from 29.99 to 30.03 — disclosed single-window

fragility (n=3), not a qualitative finding. BTC rose to $82,557.05 (Oct 20 close, from $81,852.95 Oct 19) — THE FINAL NUMBER drifted to −0.09 equal-weight (horizon-weighted rose to +0.46); no call-band flip anywhere. **STILL DRAFT: status draft, stamped_by null** — active_qual_set remains `2026-10-17_draft`, a full weekly refresh categorically excluded from auto-stamp, awaiting Alex's manual review.

- **October 19 light daily touch: all four qualitative pillars HELD FLAT again; the computed Bitcoin TA pillar moved on its 1-month and 6-month windows, nudging THE FINAL NUMBER from −0.13 to −0.10.** A WebSearch research pass, one per pillar, against the active set (`2026-10-17_draft`) found nothing dated Oct 17-19 that clears the sufficiency rule: CLARITY Act (Senate recess through Nov 9 stands), Iran War Risk (an Oct 18-19 IRGC claim of further mined tankers is single-source, no UKMTO corroboration), Tokenization (OKXICE/DTCC unchanged; a single-source cryptonews.net "has launched" claim excluded), Fed & Macro (FOMC blackout period confirmed via the regional Fed banks' own calendars; no new data prints per BLS's own schedule). `config/scores.json` was NOT touched this cycle. The computed Bitcoin TA pillar's 1-month window moved (P 55→61) as its cycle analog flipped to 2-of-3 positive with median jumping from −7.1% to +5.3%, and its 6-month window moved (P 61→62) as its analog's median jumped from +49.4% to +73.9% (still 3-of-3), on the cycle-month clock advancing from 29.93 to 29.96 — disclosed single-window fragility (n=3), not a qualitative finding. BTC fell to $80,993.93 (Oct 18 close, from $81,374.85 Oct 17) — THE FINAL NUMBER drifted to −0.10 equal-weight (horizon-weighted rose to +0.45); no call-band flip anywhere. **STILL DRAFT: status draft, stamped_by null** — active_qual_set remains `2026-10-17_draft`, a full weekly refresh categorically excluded from auto-stamp, awaiting Alex's manual review.
- **October 20 light daily touch: all four qualitative pillars HELD FLAT again; the computed Bitcoin TA pillar moved on its 1-month window, nudging THE FINAL NUMBER from −0.10 to −0.12.** A WebSearch research pass, one per pillar, against the active set (`2026-10-17_draft`) found nothing dated Oct 17-20 that clears the sufficiency rule: CLARITY Act (Senate recess through Nov 9 stands; the SEC's separate "Regulation Crypto Assets" comment period closed today, already out of scope), Iran War Risk (no new confirmed Strait-of-Hormuz incident beyond the already-logged, still-unconfirmed IRGC mined-tanker claim), Tokenization (OKXICE/DTCC unchanged; same SEC comment-deadline, same out-of-scope read), Fed & Macro (FOMC blackout period, Oct 17-29, continues; no new data prints). `config/scores.json` was NOT touched this cycle. The computed Bitcoin TA pillar's 1-month window moved (P 61→57) as its cycle analog flipped back to 1-of-3 positive with median falling from +5.3% to −2.4%, on the cycle-month clock advancing from 29.96 to 29.99 — disclosed single-window fragility (n=3), not a qualitative finding. BTC rose to $81,852.95 (Oct 19 close, from $80,993.93 Oct 18) — THE FINAL NUMBER drifted to −0.12 equal-weight (horizon-weighted eased to +0.44); no call-band flip anywhere. **STILL DRAFT: status draft, stamped_by null** — active_qual_set remains `2026-10-17_draft`, a full weekly refresh categorically excluded from auto-stamp, awaiting Alex's manual review.
- **October 18 light daily touch: all four qualitative pillars HELD FLAT again; the computed Bitcoin TA pillar moved on its 3-month window, nudging THE FINAL NUMBER from −0.14 to −0.13.** A WebSearch research pass, one per pillar, against the active set (`2026-10-17_draft`) found nothing dated Oct 17-18 that clears the sufficiency rule: CLARITY Act (Senate recess through Nov 9 stands), Iran War Risk (no new Hormuz incident found), Tokenization (OKXICE/DTCC unchanged), Fed & Macro (no new Fed-official statement since the Oct 14 CPI print). `config/scores.json` was NOT touched this cycle. The computed Bitcoin TA pillar's 3-month window moved (P 56→58) as its cycle analog's median jumped from +10.6% to +25.3% on the cycle-month clock advancing from 29.89 to 29.93 — a disclosed single-window fragility (n=3), not a qualitative finding. BTC fell to $81,374.85 (Oct 17 close, from $81,507.28 Oct 16) — THE FINAL NUMBER drifted to −0.13 equal-weight (horizon-weighted holds at +0.43); no call-band flip anywhere. **STILL DRAFT: status draft, stamped_by null** — active_qual_set remains `2026-10-17_draft`, a full weekly refresh categorically excluded from auto-stamp, awaiting Alex's manual review.
- **October 17 FULL WEEKLY refresh: all four qualitative pillars HELD FLAT; the computed Bitcoin TA pillar resynced to the Oct 16 close.** Four independent parallel research passes, one per pillar, primary-source-first, against the active committed set (`2026-10-15_draft`) found nothing that clears the sufficiency rule

on any of the 20 windows. **CLARITY Act**: the Senate's own published 2026 calendar confirms a State Work Period Oct 5–Nov 6, corroborating the already-priced recess-through-Nov-9 read; a Sidley Austin alert's Dec 14 CFTC-ANPRM comment-deadline date is single-source/procedural, not scored. **Iran War Risk**: attack tempo remains elevated/undiminished; the Petro Dolphin's 2 missing Indian crew remain officially unresolved (a family member's personal belief of death is not an official determination, not scored); none of the pillar's four flip-line clauses fired, including a CNN report of Pentagon MOAB strike-planning options, which is reported planning, not an actual strike. **Tokenization**: 9 issuers (up from 1) now object to or have opted out of OKXICE's filing — friction, not a status change; DTCC's October launch remains unconfirmed either way. **Fed & Macro**: no new Fed-official statements since the Oct 14 CPI print already priced in; secondary-aggregator Sept PPI/retail-sales figures found this cycle were internally inconsistent across sources and unverifiable against BLS.gov/Census.gov (both unreachable this cycle) — correctly excluded under the sufficiency rule. `config/scores.json` updated: **active_qual_set now points to `2026-10-17_draft`**. WebFetch returned DNS resolution failures for every domain this run (a tool-wide failure, matching this sandbox's already-documented pattern); WebSearch worked normally and was the sole research channel — not treated as a "research capability degraded" condition, and moot regardless since full weekly refreshes are categorically excluded from auto-stamp. **LEFT AS DRAFT: status draft, stamped_by null, awaiting Alex's manual review.** The computed Bitcoin TA pillar is unchanged (P 55/56/61/68/69); BTC ticked to the Oct 16 close (BTC $81,590.01 → $81,507.28) — THE FINAL NUMBER is unchanged at −0.14 equal-weight / +0.43 horizon-weighted.

- **October 15 daily check: Fed & Macro re-rated down on the hot September CPI print; Iran War Risk re-rated down on 6mo/12mo on a worse-than-disclosed casualty finding; the computed Bitcoin TA pillar resynced to the Oct 14 close.** A WebSearch-based research pass per pillar, primary sources preferred, against the active committed set (`2026-10-14_draft`) found: CLARITY Act and Tokenization held flat (Senate still in recess; OKXICE/DTCC still unconfirmed live). **Fed & Macro cleared the sufficiency rule** on the September 2026 CPI print (BLS, primary, released Oct 14, 8:30am ET; corroborated via CNBC, Advisor Perspectives, Kiplinger, USInflationCalculator): headline +3.7% y/y (vs. 3.6% consensus), core +2.6% y/y (vs. 2.5% consensus), both hot, energy-driven — extending the Oct 8 Waller hawkish shift and lifting market-priced Oct 28/Dec 9 hike odds (Kalshi/Polymarket, labelled distinctly from institutional estimates) to roughly 34%/75–85%. **Iran War Risk also cleared the sufficiency rule:** the Oct 11 Petro Dolphin drone attack off Sohar, Oman now carries a worse-than-disclosed casualty picture — 2 of 11 Indian crew MISSING, not merely injured, search-and-rescue ongoing, corroborated across 7+ outlets (Maritime Executive, Gulf News, Khaleej Times, The Week, Telangana Today, Kerala Kaumudi, LBC) — plus a dated Seatrade tally of at least 18 Hormuz-theater attacks since Oct 1. No flip-line clause fired on either pillar. `config/scores.json` updated: **active_qual_set now points to `2026-10-15_draft`**. Research capability was not degraded this cycle (WebSearch clean throughout); verification raised no unresolved inconsistency. Per the widened delegated daily auto-stamp authority (2026-09-02), neither move's size nor the fact that this builds on an already-committed baseline is a reason to withhold the stamp — **AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)."** The computed Bitcoin TA pillar moved on one window (6-month P fell 62→61 as its cycle analog's median eased) on the fresh Oct 14 close (BTC $83,032.00 → $81,590.01, down 1.74%) — combined with the two qualitative re-rates, the equal-weight headline ticks from −0.08 to −0.14 while the horizon-weighted variant eases from +0.47 to +0.43.
- **Score status — October 10 was a FULL WEEKLY refresh, and it is DELIBERATELY UNSTAMPED. It is waiting for Alex.** One new score set, `2026-10-10_draft`, measured against the immediately-prior reading (`2026-10-03_draft2` — itself never stamped, and still one of two unresolved, substantially-diverging weekly drafts for October 3; see the next item below, carried forward unresolved). **CLARITY Act** up (10/26/44/72/92 → 10/27/46/73/92), **Tokenization** up (56/64/70/77/86 → 58/65/70/77/86), **Fed & Macro** down (35/29/37/44/58 → 33/26/36/44/58), **Iran War Risk** held flat (1/1/14/33/66) — and the moves substantially, though not perfectly, offset: the headline ticked from −0.08 to −0.07, essentially a continuation of last cycle's near-cancellation pattern. Per CLAUDE.md, full weekly refreshes are

categorically excluded from the delegated auto-stamp authority — independent of how large the moves are, how small the net move is, or how good the sourcing is — because the weekly is Alex's own review checkpoint. Status in `config/scores.json`: `draft`, with no `stamped_by` field. **Treat the number as provisional until he signs it off.**

- **October 11 daily check: qualitative set held flat; the computed Bitcoin TA pillar resynced to the Oct 10 close.** A WebSearch-based research pass per pillar, primary sources preferred, against the active draft set (`2026-10-10_draft`) found nothing that clears the sufficiency rule on any of the four qualitative pillars: the Senate remains in recess through Nov 9 (CLARITY Act), DTCC's service remains unconfirmed live and no new OKXICE development was found (Tokenization), no new Fed speech or data release landed and the Oct 27–28 FOMC is unchanged (Fed & Macro), and no UKMTO advisory or on-record statement dated since Oct 6 was found beyond the already-logged pattern (Iran War Risk, whose research-access degradation from the weekly also persisted). `config/scores.json` is untouched; `active_qual_set` remains `2026-10-10_draft`. The computed Bitcoin TA pillar's 3-month window moved (P 56→59) as its own cycle analog reached unanimous 3-of-3 agreement on the fresh Oct 10 close (BTC $82,616.56 → $82,982.17) — a disclosed cycle-analog alignment effect, not a qualitative finding — which is the entire source of the headline's move from −0.07 to −0.06.
- **October 12 daily check: qualitative set held flat; the computed Bitcoin TA pillar resynced to the Oct 11 close.** A WebSearch-based research pass per pillar, primary sources preferred, against the active draft set (`2026-10-10_draft`) found nothing that clears the sufficiency rule on any of the four qualitative pillars: the Senate remains in recess through Nov 9 (CLARITY Act), DTCC's service remains unconfirmed live and no new OKXICE development was found beyond the Oct 4 filing already logged, whose 30-day issuer-notice window is still running (Tokenization), no new Fed speech or data release dated after Oct 8 was found and the Oct 27–28 FOMC is unchanged (Fed & Macro), and no UKMTO advisory or on-record statement dated after Oct 7 was found beyond the already-logged elevated-frequency pattern (Iran War Risk, whose research-access degradation from the weekly was not independently re-tested this cycle and is carried forward as still-open). `config/scores.json` is untouched; `active_qual_set` remains `2026-10-10_draft`. The computed Bitcoin TA pillar moved on two windows on the fresh Oct 11 close (BTC $82,982.17 → $83,784.01): 1-month P rose 56→57 as its cycle analog's median improved, and 3-month P fell back 59→57 as its own cycle analog's agreement reverted from unanimous 3-of-3 to 2-of-3 positive — disclosed cycle-analog alignment effects, not qualitative findings, which roughly offset and leave the equal-weight headline at −0.06 (unchanged) while the horizon-weighted variant ticks from +0.50 to +0.49.
- **October 13 daily check: qualitative set held flat; the computed Bitcoin TA pillar resynced to the Oct 12 close.** A WebSearch-based research pass per pillar, primary sources preferred, against the active draft set (`2026-10-10_draft`) found nothing that clears the sufficiency rule on any of the four qualitative pillars: the Senate remains in recess through Nov 9 (CLARITY Act), DTCC's service remains unconfirmed live and no new OKXICE development was found beyond the Oct 4 filing already logged (Tokenization), no new Fed speech or data release dated after Oct 8 was found and Oct 27–28 hold-odds reporting is consistent with the already-logged range, not incremental to it (Fed & Macro), and Hormuz-area attacks continued at the already-logged elevated pace through Oct 10 — an IRGC claim of a strike on the tanker NV Sunshine is disputed by the vessel's own owner, so reported, not scored — with this pillar's research-access degradation (fred.stlouisfed.org, eia.gov, centcom.mil, en.wikipedia.org) retested this cycle and still blocked, carried forward as still-open (Iran War Risk). `config/scores.json` is untouched; `active_qual_set` remains `2026-10-10_draft`. The computed Bitcoin TA pillar moved on one window on the fresh Oct 12 close (BTC $83,784.01 → $82,956.47, a 0.99% pullback): 1-month P fell back 57→56 as its cycle analog's median softened; its weekly bar also rolled over (the Oct 11 bar closed, a new Oct 18 bar forming) — a disclosed cycle-analog alignment effect, not a qualitative finding, which ticks the equal-weight headline from −0.06 to −0.07 while the horizon-weighted variant holds at +0.49.
- **October 14 daily check: Iran War Risk corrected and re-rated down on 6mo/12mo; the computed Bitcoin TA pillar resynced to the Oct 13 close (no new price bar).** A WebSearch-based research pass

per pillar, primary sources preferred, against the active draft set (`2026-10-10_draft`) found: CLARITY Act, Tokenization and Fed & Macro held flat (the September CPI print was due at 8:30am ET today but had not yet published as of this research pass — forecasts are not scored). **Iran War Risk cleared the sufficiency rule** — a CORRECTION: the Oct 10 cycle's "zero injuries" claim was already wrong; the Panama-flagged tanker On Peace was struck Oct 6 with 12 of 19 crew injured, confirmed via five-plus independent outlets. Plus continued, undiminished attack frequency through Oct 12 (Gem No.2 Oct 9; four UKMTO-logged strikes in one day Oct 11; an unconfirmed IRGC claim on Al Maqam Oct 12). No flip-line clause fired. `config/scores.json` updated: **active_qual_set now points to `2026-10-14_draft`**, flagged left as draft at delivery — built on 2026-10-10_draft, which still carries the unresolved October 3 dual-draft divergence, so auto-stamping would resolve that by fiat without Alex's input. **Alex reviewed that flag the same day and COMMITTED the set anyway** (status: committed, stamped_by: "Alex"), accepting the Oct 10 branch as the baseline while leaving the Oct 3 divergence itself open. The computed Bitcoin TA pillar moved on two windows (1-month P fell 56→55, 3-month P fell 57→56, as their cycle analogs' medians softened further) with no new price bar since the Oct 13 close ($83,032.00) — combined with Iran's re-rate, the equal-weight headline ticks from −0.07 to −0.08 while the horizon-weighted variant eases from +0.49 to +0.47.

- **The October 3 dual-weekly divergence is STILL UNRESOLVED — this cycle builds on draft2 without adjudicating it.** Two independently-researched full weekly refreshes ran for October 3: origin's `2026-10-03_draft`, which moved only Fed & Macro and held the other three flat, and this package's prior cycle, `2026-10-03_draft2`, which moved all four. Neither was ever stamped. This cycle's research took `2026-10-03_draft2` as its starting point (it was the active set) and re-rated forward from there — it did not reconcile the two Oct 3 readings, and it is not Claude's or any automated process's place to pick one. **That adjudication stays Alex's alone,** and both October 3 drafts remain in `scores.json` untouched pending his review.
- **Why CLARITY Act moved up (modestly) this cycle.** No Senate floor, committee or cloture action on H.R. 3633 was found or even possible between Oct 3 and Oct 10: the Senate remains in recess through Nov 9, and the first bill queued back on the floor that day is H.R. 2347, not H.R. 3633 — so the 1-month window holds at 10 no matter what else moved. What did move: the CFTC published an Advance Notice of Proposed Rulemaking on Oct 5, 2026 (Release No. 9307-26, RIN 3038-AF80, informally "Reg CTX"/"Reg CAM," under CEA §2(c)(2)(D)) covering leveraged and margined retail crypto trading, creating a new "CAM" designated-contract-market sub-category, with a 60-day comment period. This was independently adversarially verified via law-firm client alerts (WilmerHale, Baker Botts, Lowenstein) that were not part of the first research pass. CFTC Chairman Selig gave related remarks the same day at the Fordham Law Blockchain Symposium — verification specifically corrected the framing to "issued the same day as Selig's related remarks," not "announced by Selig," since the ANPRM is a Commission action, not a speech. This advances the already-known CFTC prerule/OIRA track, not a new development on the legislative track: no Democrat committed to a yes vote, no Republican reversed a Nay, and there is no shutdown risk (funding runs through Dec 11, 2026, unchanged).
- **Why Tokenization moved up (modestly) this cycle.** DTCC's service remains NOT confirmed live — dtcc.com still says "expected October," and a single uncorroborated SEC-filer claim that it has been "live since July" was excluded as single-source per the sufficiency rule. rwa.xyz was unusable for a **third consecutive cycle**, and for a third distinct reason: its reported scope has now read 25 "assets," then 87 "products," then 109 "assets/products" across three cycles this year with no stated methodology change — it is excluded entirely from this pillar and flagged for Alex as a standing data-quality problem, not just a one-off exclusion. The actual driver: OKX and Intercontinental Exchange (NYSE's parent) formed a 50/50 joint venture, "OKXICE," and filed an SEC Issuer Notice on Oct 4, 2026 for a Tokenized Securities Venue under the Sept 17 Innovation Exemption — 60-plus (some coverage says 63) US stocks paired against stablecoins, traded via permissioned Uniswap v4 pools on OKX's X Layer chain. This was independently adversarially verified nearly point-for-point; the one correction was softening "no custody" to "non-custodial of end-user funds," since admin keys are held by an OKX Technology affiliate. Cerebras

Systems filed the first issuer opt-out objection under the exemption, which is itself worth watching. The venue is not yet live (earliest ~early November), which is why the move is one point on the near windows only.

- **Why Fed & Macro moved down this cycle, reversing about a quarter of last cycle's up-move.** There was no shutdown and BLS/Fed releases ran on schedule (the H.4.1 balance-sheet release landed normally Oct 8). DOL initial claims for the week ended Oct 3 came in at 197,000, with the prior week revised *up* from 197,000 to 199,000 — claims have now held below 200k for four straight weeks, in some tension with the weak September payrolls print, though that tension was not itself independently scored. The decisive fact is Fed Governor Christopher Waller's hawkish speech at the Istanbul Economic Forum on Oct 8, 2026 (primary source, federalreserve.gov, independently adversarially verified via five-plus outlets): he said further hikes are likely if the data cooperate, that inflation has run above target for roughly five and a half years, that the economy strengthened through the second half of 2026, and he cited the Iran-conflict energy shock and AI-buildout demand as upside pressures on inflation — a genuine hawkish shift from his dovish posture last spring. He explicitly downplayed the weak September payrolls number, said hikes don't need to be consecutive (room for an October pause), and flagged December as the next hike candidate. A sitting FOMC voter rebutting, on the record, the dovish narrative that drove the prior cycle's big up-move clears the sufficiency rule on its own. Market pricing for an Oct 27–28 hold barely moved (roughly 78–82% versus 77–81% before), which is why the 1-month window takes only −2; December-hike odds drifted directionally higher per noisy market-price sources (deliberately not quoting one precise figure, since these are market prices, not institutional estimates), concentrated in the 3-month window, which is why it takes −3; the 10-year yield was roughly flat (~5.23% Oct 8 versus ~5.24% Oct 1) after an initial spike partly reversed on a Trump comment ruling out a pre-midterm Iran strike and a solid 30-year auction, which supports only a small −1 trim on 6 months. 12-month and 36-month windows hold.
- **Why Iran War Risk held flat — and why this pillar's research access was degraded this cycle.** This is a limitation to flag plainly, not paper over: policy-level proxy blocks (not ordinary flakiness) prevented access to fred.stlouisfed.org, eia.gov, centcom.mil and en.wikipedia.org this cycle, so the official Brent spot series behind this pillar's already-fired "sustained above $100" flip-line could not be re-checked against fresh data — flagged for Alex as a research-capability gap, not a judgment call. What could be checked: Qatar's Ministry of Foreign Affairs spokesperson confirmed on the record on Oct 6 that US–Iran message exchange continues via mediators, which corrects the emphasis of the prior "stalemate" framing without reversing it. Iran's Interior Minister Eskandar Momeni was in Doha on Oct 6 on the long-running "Iranian pilots" dispute (Iran alleges Qatar detained three Iranian military personnel after a March crash in Qatari airspace; Qatar disputes the word "detained" and says the remains were recovered), with a technical-delegation follow-up agreed. The already-known story of Secretary Rubio ordering a departure (Oct 1) remains disputed by Iran's UN mission. Kinetically, attack frequency ticked up — 9 UKMTO warnings in October through Oct 5, trade-press sourced — but severity and character are unchanged: zero deaths or injuries, no attribution claimed, a continuation of the already-priced pattern, not a new one. No new combat death, no resumed US strikes, no signed Hormuz-reopening event. Net: the de-escalatory and escalatory strands roughly offset, no trigger cleared the sufficiency bar in either direction, and all five windows held exactly.
- **What was deliberately NOT counted, or was withdrawn, this cycle.** An initial research pass this cycle included a claim that Interior Minister Momeni visited Islamabad on Oct 5 for a "joint de-escalation framework." Verification found this does not hold up: it conflates a real Momeni visit to Islamabad in *July* 2026 with a separate, real Pakistan/Qatar-mediated proposal in October that did not in fact involve Momeni being in Islamabad that month. The claim is withdrawn and does not appear in the Iran War Risk pillar's facts or drive any part of its (flat) score — flagged here so the correction is visible rather than silently dropped. Also not counted, per the house rules: single-source claims are reported where material but never alone move a P (the sufficiency rule), and market-priced odds (e.g. meeting-probability pricing cited above) are never presented as institutional estimates.

- **Verification this cycle: two targeted adversarial passes, not four — a lighter touch, but still real, and worth being honest about the difference.** Rather than a full independent pass on every claim in all four pillars, this cycle re-derived the single largest claim from each of CLARITY Act and Fed & Macro, plus both load-bearing claims from Iran War Risk and Tokenization, using different outlets and queries than the original research. Results: Waller's Istanbul speech was confirmed in full against the Fed's own transcript. The CFTC ANPRM was confirmed on substance, with one framing detail softened (Selig's remarks were concurrent with, not the vehicle for, the ANPRM). The OKXICE SEC filing was confirmed nearly point-for-point, with one phrasing softened (custody). Three of four Iran diplomatic claims were confirmed; the fourth (Momeni-Islamabad-Oct-5) was withdrawn as a conflation, described above. No fabrication was found that drove an actual score movement this cycle. A lighter verification pass is itself a disclosed limitation, not a hidden one: it covers less ground than the four-pillar pass run on October 3, and that trade-off is recorded here for Alex's review, same as the research-access gap on Iran.
- **Near-term calendar, updated this cycle, in order of what actually matters:** the CFTC's 60-day comment period on the Reg CTX/CAM ANPRM runs from Oct 5 · whether OKXICE's Tokenized Securities Venue actually goes live (earliest ~early November), and whether any issuer besides Cerebras files an opt-out objection · whether DTCC's service confirms live, and whether rwa.xyz's scope basis stabilizes enough to use again · December FOMC positioning, now the explicit next-hike focal point per Waller, ahead of the Oct 27–28 meeting itself · the Senate's return from recess Nov 9, with H.R. 2347 queued first, not the CLARITY Act · whether Iran research access (fred.stlouisfed.org, eia.gov, centcom.mil, en.wikipedia.org) is restored next cycle so the Brent flip-line can be re-checked.
- **October 4, 5, 7, 8, 9 and 10 daily checks: qualitative set held flat throughout, but October 7 found genuine new material worth reading.** A WebSearch-based research pass per pillar, primary sources preferred, against the active draft set (2026-10-03_draft2) found nothing on CLARITY Act, Tokenization or Fed & Macro across all six days: the Senate remains in recess through Nov 9, DTCC's October launch still "expected" not live, no new scheduled Fed speech or data release, no government shutdown. On **Iran War Risk**, October 7 surfaced on-the-record Oct 7 remarks from Secretary of State Rubio ("lost complete control" of the Strait; oil "almost as much… flowing" as pre-war) and VP Vance (Iran must make a "meaningful" enrichment cut), plus CNBC/Al Jazeera/NBC reporting that Hormuz crude exports have rebounded to prewar levels under heavy US naval escort against continued attacks and Trump's reaffirmed rejection of Iran's offer. This clears the sufficiency bar as dated fact but the de-escalatory and escalatory strands roughly offset, so no window moved — see that pillar's What Changed for the full account. October 8 re-checked all four trigger tables again, including Iran War Risk against continuing tanker-attack and Brent-price headlines, and found nothing dated since Oct 7 that adds a new one-directional primary fact. October 9 and 10 re-confirmed a continuing, already-priced pattern of UKMTO-reported Hormuz-area tanker strikes (several logged Oct 1–7, including crew injuries; nothing new found dated Oct 8–10) — a continuation, not a new one-directional fact. `config/scores.json` left untouched on all six days. **Note: there is no "Daily cycle 2026-10-06" research/sync commit on record** — only the automated GitHub Actions data-relay commit — flagged for Alex; the Oct 7 entry covered the delta since Oct 5. The standing divergence between the two independently-researched October 3 weeklies (see below) also remains unresolved — a daily cycle checks only the delta since the active set and does not adjudicate it; that decision stays Alex's. What did move this cycle: the computed Bitcoin TA pillar's 1-month, 3-month and 6-month windows (P 55→56, 55→56 and 61→62), as the tape recovered — a disclosed cycle-analog alignment effect, not a qualitative finding.
- **Score status — October 3 was a FULL WEEKLY refresh, and it is DELIBERATELY UNSTAMPED. It is waiting for Alex.** One new score set, `2026-10-03_draft2`, measured against the Sept 26 committed baseline (`2026-09-26_draft3`, stamped by Alex September 27). **All four qualitative pillars re-rated** — Fed & Macro *up* (27/25/34/43/58 → 35/29/37/44/58), CLARITY Act down (15/28/45/72/92 → 10/26/44/72/92), Iran War Risk down (1/2/15/34/66 → 1/1/14/33/66), Tokenization down (57/65/70/77/86 → 56/64/70/77/86) — and they very nearly cancelled, which is why the headline moved one hundredth. Per CLAUDE.md, full weekly refreshes are *categorically* excluded from the delegated auto-stamp

authority — independent of how large the moves are or how good the sourcing is — because the weekly is Alex's own review checkpoint. This run was unattended, so nobody has reviewed these numbers yet. Status in `config/scores.json`: `draft`, with no `stamped_by` field. **Treat the number as provisional until he signs it off** — and see the Master Report's My Decision section for the five specific things flagged for his attention, starting with the Brent price correction.

- **Read this first if you read nothing else: an earlier cycle was interrupted, and it matters for trust.** A Sept 24 cycle wrote a score set and edited all six reports, but was never rendered, selfchecked, archived or committed — and its report text nonetheless asserted "COMMITTED · AUTO-STAMPED" in every decision stamp for a set that was still `draft` in the data file. `run.py selfcheck` catches exactly that, and did, twelve times. This cycle treats it as not-delivered (the house rule for abandoned drafts), independently re-verifies its claims instead of trusting them, and drops it from the visible lineage while leaving it in `scores.json` forever. **The re-verification cut both ways:** its two Fed claims held up in full, its Iran claim was falsified on a point of fact, and its Tokenization judgement was found one-sided and is reversed here.
- **Heads-up before you compare notes: TWO independent weekly refreshes ran for today, and three score sets carry today's date.** The cloud routine researches the day on its own unless it can already see the day's commit on the shared repo — this run's commit was still local when it went, so it ran independently and pushed first. Its sets are `2026-09-26_draft` (a daily cycle, committed and auto-stamped) and `2026-09-26_draft2` (its own weekly); this package is `2026-09-26_draft3`. Nothing of the cloud's was edited or overwritten. **The good news:** on Fed & Macro the two independent passes landed within a point of each other on every window — the cloud read **27/25/35/43/57** against this package's **27/25/34/43/58**, identical on the 1-month, 3-month and 1-year windows. Two separate primary-source passes converging that tightly is genuine corroboration of the biggest move this cycle, and it is reported rather than averaged away. **Alex has now settled this:** they disagreed on Iran (how far to reverse) and on Tokenization (whether to cut the near window). After reviewing both, Alex committed this set — the one with the adversarial verification behind it — as the canonical weekly on September 27, 2026.
- **Why Fed & Macro moved most, so you can judge it yourself.** Not one headline — a week, and mostly primary sources. Fed Governor Michael Barr, Sept 23, in a speech whose text was extracted from the Fed's own PDF: "inflation is above our 2 percent target and not clearly trending toward target in a timely way" and "in my base case, further policy adjustments are likely to be needed." The S&P Global flash US PMI, from the embargoed release: strongest private-sector growth since July 2021 *paired with* the fastest input-cost inflation since October 2022. The University of Michigan's final September survey: year-ahead inflation expectations 4.0% → 4.6% and, more importantly, *long-run* expectations 3.3% → 3.4%, breaking three straight months — that is the de-anchoring risk that extends a tightening cycle past one meeting. Plus jobless claims at 197,000 and Fed reserve balances down $83.6B in a single week. **Honest counterweight:** growth is strong, layoffs are historically low, new home sales rose, and the reserve drain is largely a mechanical Treasury-account rebuild — which is why the cut is single-digit and barely touches the 1-year and 3-year windows.
- **Why Iran War Risk went both ways at once.** Iran's foreign minister, Abbas Araghchi, stood outside the UN Security Council on Sept 25 and put a specific seven-day plan on the record, conveyed via Qatar: the US lifts the blockade, waives oil sanctions and releases an estimated $12bn in frozen assets over about four to five days, the Strait of Hormuz reopens on day six, and nuclear talks begin on day seven. That is a named official on the record, carried by AP, Reuters and Al Jazeera independently — a real upgrade over the anonymous sourcing of previous weeks. Because the midterms are Nov 3, a post-election deal falls *outside* the 1-month window and *inside* the 3- and 6-month ones, so those windows move in opposite directions. **The move is deliberately small, because the up-move rests on statements while the confirmed actions run the other way:** a cargo vessel was struck in Hormuz on Sept 23 with two casualties, Saudi Arabia was fired on twice, the naval blockade is intact, Hormuz traffic is still only about 9–18 ships a day against roughly 125 before the war, and Brent is back above $100.

- **Why Tokenization was cut even though it had good news.** Months ago this pillar wrote down a specific promise: a third consecutive negative reading on tokenized US Treasuries "would be a genuine trend worth re-rating on." It got one — $14.94B, down 6.95% over 30 days, after two smaller declines, roughly seven times the previous magnitude. Acting on a trigger you committed to in advance is the whole point of writing it down, so the near window came down a point. The abandoned Sept 24 draft had gone the *other* way on a New York Stock Exchange / Blockchain.com agreement; that agreement is real, but it is non-binding, needs regulatory approval, has no launch date, and the venue is not live — and this pillar's own standard says the trigger is a venue actually going live. Taking the good news while ignoring the bad would have been one-sided.
- **Why CLARITY held flat — and what was wrong in the last report.** Nothing new cleared the bar, and the Senate has one session week left (Sept 28 – Oct 2) before a five-week recess with no re-vote scheduled. But four things in the fact record needed fixing, and one was serious: **the report stated the opposite of a primary source.** It said the final bill text does *not* require divestment or a blind trust; Senator Lummis's own summary of that text says there is a "clear requirement for covered individuals to divest significant financial interests or place in a qualified blind trust." The honest version is that the requirement is real but delayed. Also fixed: the stablecoin-yield fight is not unresolved (the text has a Treasury circuit breaker that expires 18 months after enactment); Senator Tillis, not Senator Thune, filed the motion to reconsider; and the report never mentioned that *four Republicans* voted against cloture, which is a harder read than blaming the failure entirely on Democrats.
- **What was deliberately NOT counted, in both directions.** This is where the rules earn their keep. A Wall Street Journal report that Trump *rejected* Iran's seven-day plan rests on unnamed officials in a single outlet, with everyone else citing the WSJ and no on-record White House position — so it was reported but not scored, even though it argues *against* the up-move taken here. Also reported but not scored: a 60-day "road map" story that is still single-sourced; the Pentagon's 19th US death, which is non-hostile and therefore does not fire the combat-death trigger; prediction-market odds on CLARITY (6.45%, on $12,700 of daily volume — an effectively dead market) and on the midterms, which are market prices, not institutional forecasts, and are never mixed with them; and a new BlackRock-strategy tokenized product that is restricted to non-US investors, the same ground on which two earlier launches were excluded.
- **Verification, and one finding worth knowing:** every load-bearing new claim was re-derived from primary sources in two adversarial passes, deliberately not trusting the research's own citations — and they overturned findings in *both* directions, restoring two claims that had been wrongly "corrected" and falsifying three that had been accepted. Along the way: the automated page-fetching tool was caught failing silently on PDFs and very large files, both denying a sentence that was really there and reporting numbers a source does not contain. Verbatim quotes from PDFs in this system now require local text extraction. Two facts could not be primary-verified because their sources block automated access — the Sept 23 Hormuz vessel strike and the "no US strikes since Sept 1" status — and both are labelled as wire-derived rather than presented as primary. Neither drives a score change on its own.
- **Known limits, in print inside the reports:** cycle-analog claims rest on 3 completed cycles (n=3), so direction is the signal and levels are soft; the current weekly, monthly and quarterly bars are PARTIAL and the completed-bar composites are quoted alongside them; the power-law fair value ($141,272, about 41% above today's price) swings with its fit window, so it is quoted as a range ($119k–$146k across 2011–2015 start years) and never as a target; the quant pillar's P is capped at 50 ± 25 by design because measured technical edge is modest, and a 5-feature crash model that failed out-of-sample (AUC 0.44) stays excluded; froth data lags about six weeks and is a robustness tilt only, never a score input.
- **The near-term calendar, in order of what actually matters:** August PCE and the Q2 GDP third estimate landed **Sept 30** — core PCE printed 3.0% y/y (a chunk of the apparent cooling is a telegraphed BEA methodology change, not fresh disinflation) and GDP was revised sharply up to +2.2%; the two cut against each other and neither cleared the sufficiency bar for a re-rate (see the Fed & Macro report's What Changed) · the Senate's last pre-recess week, Sept 28 – Oct 2, closed with no re-vote scheduled ·

whether the US answers Iran's seven-day plan on the record · whether any venue actually goes live under the SEC's tokenized-stock exemption (earliest ~mid-October), and whether tokenized Treasuries fall for a fourth reading · the Oct 27–28 FOMC.

This is research and education, not financial advice. The scores are probabilistic opinions with dated evidence — built to be argued with. If you check one thing manually, check any pillar's What Changed section this cycle — each ran independent fresh research and is honest about finding nothing that cleared the bar, rather than manufacturing a move. The Iran War Risk pillar's trigger table is worth a look too: it flags the next scheduled US-Iran meeting as the clearest near-term trigger to watch next cycle.
