Bitcoin Technical Analysis
Quant Pillar Report

The Tape Itself — Measured, Scored, and Mapped to the Pillar Standard

Machine-computed from 16 years of daily price data through a 7-indicator scoring stack, halving-cycle analogs, and a power-law valuation model. Every number is reproducible from the scripts in the BTC-TA folder. ***These numbers are computed, not judged, so they carry no draft/committed status of their own — they enter the master blend directly. This cycle's active qualitative score set is 2026-10-29_draft, today's LIGHT DAILY touch, now COMMITTED (AUTO-STAMPED under Alex's delegated daily authority, stamped_by "Alex (auto-stamped)"), built on the 2026-10-24_draft FULL WEEKLY baseline. Today's research ran four independent WebSearch passes, one per pillar: CLARITY Act and Iran War Risk HELD FLAT again (a multi-sourced Oct 25 VP Vance letter to Iran is logged as a watch item, not scored); Fed & Macro HELD FLAT (the Oct 28 FOMC held rates 10-2, confirming rather than exceeding the already-priced consensus); Tokenization RE-RATED UP on 6mo/1yr only (70/77 → 71/78) on the OCC's Oct 21 final GENIUS Act stablecoin rule, the first of six agencies to finalize. See the pillar reports for the full research trail. This quant pillar's own output also moved on one window — the FINALIZED Oct 28 close printed $80,362.80 (GitHub Actions data relay), P 55/61/61/69/69 from 55/62/61/69/69 at yesterday's intraday read — and this pillar keeps resyncing unconditionally, unaffected by qualitative status, every cycle regardless.***

COINPICKS QUANT PILLAR REPORT · THE QUANTITATIVE SLEEVE OF MY THESIS

Data through October 28, 2026 close — BTC $80,362.80, finalized via GitHub Actions data relay · digest re-read & re-verified October 29, 2026 (qualitative set: 2026-10-29_draft, LIGHT DAILY touch, status COMMITTED — AUTO-STAMPED, stamped_by "Alex (auto-stamped)" — Tokenization re-rated up on 6mo/1yr on the OCC's final GENIUS Act rule; CLARITY Act, Iran War Risk and Fed & Macro held flat) · Not Financial Advice

The Scores — October 28 Model Output (Finalized)

Computed from daily data through October 28, 2026 (finalized close — GitHub Actions data relay; last qualitative touch: October 29, 2026, LIGHT DAILY touch — now status COMMITTED, AUTO-STAMPED; active set is 2026-10-29_draft). The weekly bar did NOT roll over this cycle (still the bar dated Nov 1, forming); monthly and quarterly did not roll over either. The finalized Oct 28 close printed BTC $80,362.80, down from yesterday's Oct 28 intraday read of $80,686.94 — −0.40%. ***This pillar's own Model P MOVED on one window*** *(P 55/61/61/69/69, from 55/62/61/69/69 yesterday) — Tokenization re-rated up on 6mo/1yr this cycle (see that pillar's report), so the final-number drift this cycle reflects both this pillar's own cycle-analog read and that re-rate. Historical note: the October 3 divergence between two independently-researched weekly drafts (`2026-10-03_draft` vs. `_draft2`), carried as an open item through several prior cycles, was effectively superseded when Alex committed the October 10 weekly's lineage forward on October 14 — it remains in config/scores.json permanently per house rules, but is no longer an active blocker.*

WINDOW	MODEL P	QUALITY	IMPACT	SIGNAL	CALL
1 month	**55**	0.75	8	**+0.60**	Mild Bull — unchanged; still 1-of-3 positive, median −1.5%; alignment-shift fragility, disclosed
3 months	**61**	0.70	8	**+1.23**	Mild Bull — MOVED (was 62); the 3mo analog ticked back on the finalized close, median +45.2% (still unanimous 3-of-3); alignment-shift fragility, disclosed
6 months	**61**	0.55	8	**+0.97**	Mild Bull — unchanged; still unanimous 3-of-3 positive, median +73.4%; alignment-shift fragility, disclosed
1 year	**69**	0.60	8	**+1.82**	Bull — unchanged; every prior cycle at this exact month was higher a year later (3-of-3), median +144.4%
3 years	**69**	0.50	8	**+1.52**	Bull — unchanged; value + cycle (36-month analog 3-of-3 positive, median +1084.9%)

Impact: 8 (the tape aggregates every driver, but adds no causal force of its own) · **Formula:** Signal = ((P − 50) ÷ 50) × Quality × Impact · **Honesty cap:** P = 50 + 25 × (window score ÷ 100) — pure TA never claims odds more than 25 points from a coin flip, because its measured out-of-sample edge is modest. Math machine-verified.

THE THREE INPUTS, IN PLAIN ENGLISH

P — the odds the tape is *good for Bitcoin* by then. Near-term as-is basis (weekly composite +39.4/100, Slight bullish, agreement 5-of-7, the bar dated Nov 1 now four days into forming); long-term still high (at this exact point in prior cycles, the next 12 months were positive 3-for-3, median +144.4%, and price sits ~44% below its power-law fair value).

Quality — how trustworthy the evidence is. Highest near-term (weekly bars of history feeding the indicator stack), lowest at 3 years (only 3 completed cycles to learn from, and this cycle is already breaking the old pattern).

Impact — 8 out of 10, now the uniform value shared by every pillar; the TA pillar carries an equal 20% weight in the master, same as each qualitative pillar. Price is the thing itself — but a mirror, not an engine.

The Claim

The thesis, and where the numbers differ from the mood

The crowd: today's light daily touch ran four independent WebSearch research passes, one per pillar, against primary sources. CLARITY Act and Iran War Risk HELD FLAT (Senate still in recess through ~Nov 6; no new confirmed Hormuz incident; a multi-sourced Oct 25 VP Vance letter proposing direct US-Iran talks is logged as a watch item, not scored — unaccepted by Iran, disputed by Trump himself — none of the four flip-line clauses fired). Fed & Macro HELD FLAT: the Oct 28 FOMC held rates at 3.75%-4.00%, voting 10-2 (Governors Cook and Hammack dissenting for a hike) — primary (federalreserve.gov), multiply corroborated — but this confirms, rather than exceeds, the hold consensus already priced into the baseline, so it is logged but does not move P. Tokenization RE-RATED UP on 6mo/1yr only (70/77 → 71/78): the OCC finalized its GENIUS Act stablecoin rule Oct 21 (primary OCC/Federal Register, corroborated by 8+ independent outlets) — the first of six federal agencies to finalize, front-running this pillar's own Jan 2027 resolution point. config/scores.json gained a new dated set this cycle (2026-10-29_draft, now active, AUTO-STAMPED under Alex's delegated daily authority — status committed, stamped_by "Alex (auto-stamped)"). The tape itself also moved this cycle, on the now-finalized close. (The finalized Oct 28 close printed $80,362.80, down 0.40% from yesterday's $80,686.94 intraday read and now +37.3% off the June 30 low; the tape doesn't know why price moved, only that it did.)

The model: the weekly bar did NOT roll over this cycle — the bar dated Nov 1 is now four days into forming (Oct 26–29), reading +39.4 as-is (Slight bullish, agreement 5-of-7). Monthly and quarterly bars remain in the bars opened by the Oct 1 rollover, with no new rollover this cycle: October (monthly, as-is +13.1, Neutral, agreement 2-of-7) and Q4 (quarterly, as-is +34.7, Slight bullish, agreement 4-of-7) continue forming, while the completed September and Q3 bars hold at +15.7 and +31.1. Repair Signal #1 (a weekly close above the 200-week MA) stays confirmed, with price +19.1% above it ($67,477) and +6.1% above the 50-week MA ($75,776). Model P moved on one window versus yesterday's intraday read: 3-month P 62→61 (Signal +1.34→+1.23, still Mild Bull), as the finalized close ticked the 3-month cycle analog back slightly (median +45.2%, still unanimous 3-of-3) — the same disclosed n=3 alignment fragility, not a new finding. The other four windows hold exactly at P 55/61/69/69. Price is ~44% below fair value ($144,164), and the froth that precedes real crashes remains absent. No level flipped membership this cycle: $81,685 (2x touch) remains resistance, price pulling slightly further from it ($80,362.80, +1.6% below, up from +1.2% below); the next resistance up is $88,269 (+9.8%, 2x).

The edge: the model reads three separate clocks that don't take a position on the news cycle — tape (confirmed at the weekly level, price below $81,685 resistance), cycle clock (bottoming window: prior cycles bottomed at months 26–30; we're at month 30.29, past the average-bottom date), and valuation (~44% below the power-law fair line, with price sitting above the −1σ "cheap" band at $72,064). All three clocks point the same direction on the medium-to-long horizon — the near-term clock is the one doing the day-to-day flexing, exactly as its lower Quality input says it should.

The Facts — The Tape

*Computed from daily data through October 28, 2026 close (BTC $80,362.80, finalized via GitHub Actions data relay; down from $80,686.94, yesterday's Oct 28 intraday read). The weekly bar did NOT roll over this cycle (still the bar dated 2026-11-01, forming); monthly and quarterly did not roll over; scores use the current bar as-is. Quantified: on completed bars only, weekly is **+42.0** (bar dated 2026-10-25, closed), monthly **+15.7** (September's bar, dated 2026-09-30, closed) and quarterly **+31.1** (Q3's bar, dated 2026-09-30, closed) — monthly/quarterly unchanged since the Oct 1 rollover. Both readings are quoted deliberately — the as-is figure includes a bar that has not finished.*

- **Weekly composite +39.4/100 (Slight bullish), agreement 5-of-7 indicators** — the bar dated 2026-11-01 is now four days into forming (Oct 26–29), its as-is reading down slightly from +40.2 on yesterday's intraday read, still below the last completed bar dated 2026-10-25, which finished at +42.0. Price is above the 20-week ($73,101, +9.9%) and well above the **200-week average ($67,477, +19.1%)**; price sits above the 50-week ($75,776, +6.1%). RSI 54.9; MACD line 2,255 with histogram positive (+1,406) — momentum repair continuing; %B 0.70.

★ **Repair signal #1 (a weekly close above the 200-week MA) remains CONFIRMED.** Price ($80,362.80) sits +19.1% above the 200-week average ($67,477). The weekly bar dated 2026-10-25 closed with a completed-bar composite of **+42.0**; the bar now forming (dated 2026-11-01, four days of data) reads +39.4 as-is, down slightly from +40.2 on yesterday's intraday read.

- **Monthly bar remains in its October cycle (rolled over Oct 1) — September's completed bar holds at +15.7/100.** The forming bar (October, dated 2026-10-31) reads **+13.1/100 (Neutral), agreement 2-of-7** — below the 20-month average ($87,081, −7.7%), above the 50-month ($63,462, +26.6%); RSI 51.7; monthly MACD line 860 with histogram −2,613 — still negative; %B 0.40.
- **Quarterly bar remains in its Q4 cycle (rolled over Oct 1) — Q3's completed bar holds at +31.1/100.** The forming bar (Q4, dated 2026-12-31) reads **+34.7/100 (Slight bullish), agreement 4-of-7** — comfortably above the 20-quarter average ($60,108, +33.7%) and the 50-quarter ($30,431, +164.1%); RSI 57.4, MACD line 15,998 with histogram −594; %B 0.67.
- **Levels that matter — no classification flip this cycle:** $81,685 (2x touch) remains resistance, price pulling slightly further from it (+1.6%, up from +1.2%). Above it, the nearest further resistance is $88,269 (+9.8%, 2x), then $98,090 (+22.1%, 2x). Below current price, the next support is $74,434 (−7.4%, 1x), then $59,930 (−25.4%, 1x) and $57,735 (−28.2%, 1x). The falling weekly support trendline sits at $36,135; the falling resistance trendline sits at $74,373, below current price.

★ **June 30 remains the cycle low: $58,526 close** — the flush tagged the Fib golden pocket ($54,257–$57,802 = 61.8–65% retrace of the $15,479 → $126,272 run) and has since built a **+37.3% bounce to $80,362.80**. **$58,526 is still the line in the sand** — a decisive break back below it would undo this entire recovery leg.

Weekly tape, scored +39.4/100 as-is on the forming bar (Slight bullish, dated Nov 1, now four days of data, below +42.0 on the last completed bar dated Oct 25) with agreement 5 of 7 indicators: the weekly close above the 200-week MA remains confirmed, MACD histogram remains positive, price above the 50-week MA, and price sits 1.6% below $81,685, which remains resistance. Machine-annotated from the same data that feeds the scores.

The Facts — The Cycle Clock & The Value Floor

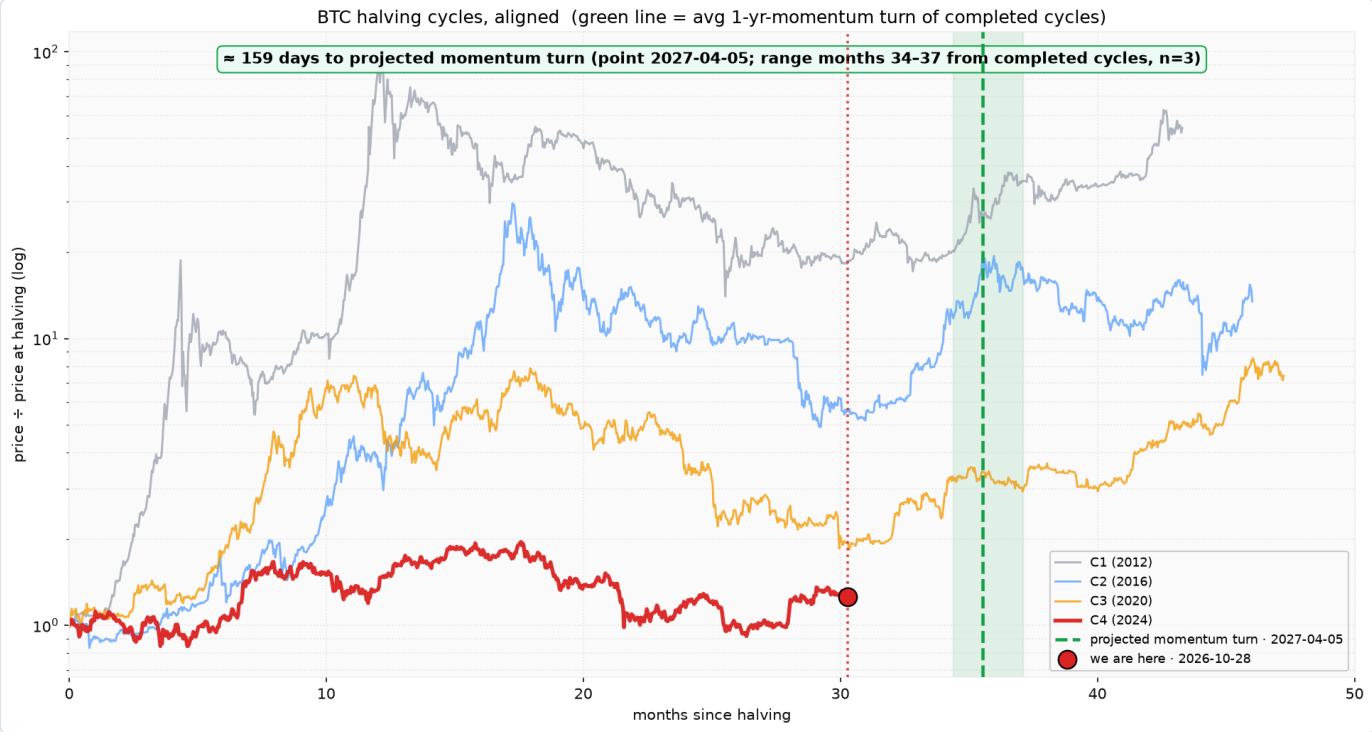

The two slower clocks. Same data, longer lenses.

- **The halving clock says "bottoming window."** The three completed cycles topped 12–18 months after their halving (avg 15.8) and bottomed at months 26–30 (avg 28.4). This cycle topped at month 18 (Oct 6, 2025 — $124,728) and printed its low-so-far at month 26 (June 30, $58,526, −53% from the top). **We are at month 30.29 — past the average-bottom date.**
- ★ **The cycle analogs are the spine of the long-window scores.** Standing at this exact cycle-month in C1/C2/C3: next 1 month positive **1-of-3** (median −1.5%, unchanged) · next 3 months positive **3-of-3** (median +45.2%, still unanimous, but the finalized close ticked P back to 61 from yesterday's 62) · next 6 months positive **3-of-3** (median +73.4%, unchanged) · next 12 months positive **3-of-3** (median +144.4%, unchanged) · next 36 months positive **3-of-3** (median +1084.9%, unchanged). *Fragility disclosure: the medians and agreement counts move as the underlying close is finalized a day later — the same disclosed n=3 alignment fragility this report has always carried. Treat the analog levels as soft, the direction as the signal. And know what the 36-month number is: from month ~30 that window reaches month ~66 — it contains the NEXT halving's rally.*
- **1-year momentum turned positive at months 34–37 in every completed cycle (avg 35.5)** → still projects to **~April 2027** for this cycle.
- **The power-law floor:** a log-log fit over the full price series puts fair value at **$144,164** — price is **−44%** versus fair. Fit-window honesty: starting the fit in 2011, 2012, 2013, or 2015 instead moves fair value

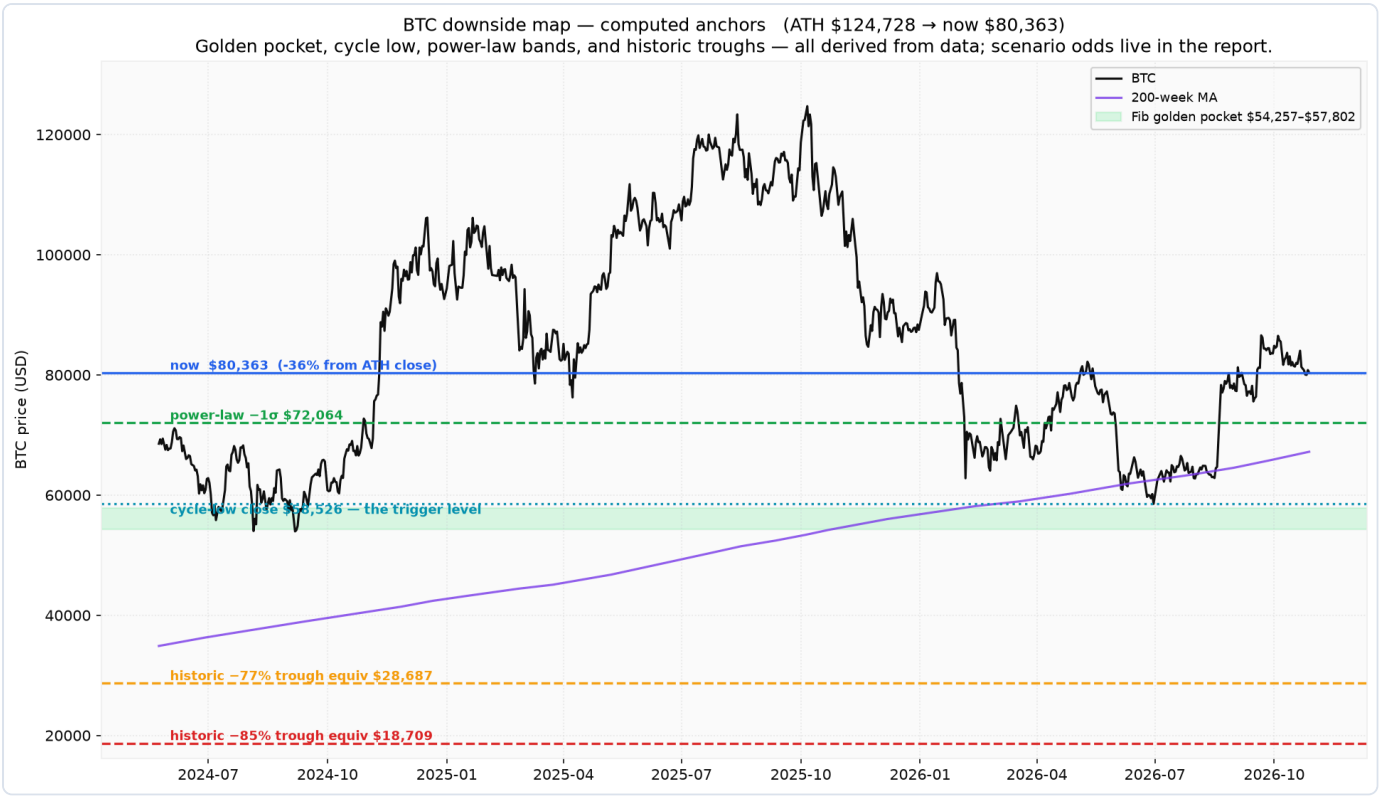

materially ($133,609 / $138,466 / $121,294 / $148,152) — the level is soft, but the **"well below fair" verdict holds across every window tested**. Price ($80,362.80) sits above the **−1σ band ($72,064)** — out of the "cheap" zone (the −2σ band sits at $36,023, far below). Every halving-era cycle trough was −77% to −85% from ATH ($18.7K–$28.7K equivalent today) — the pre-halving 2011 bear went ~−93% (~$8.7K equivalent), excluded from the range but in the data; this cycle's low-so-far was −53% from the ATH.

- **No froth in the system:** the altcoin-froth index reads z = −0.87 — the opposite of the euphoric signature that preceded prior deep crashes. Validated on 16 years of data: high-froth days led to −39% average 12-month drawdowns vs −23% for low-froth days (gap significant, 95% CI excludes zero). *Data lags ~6 weeks (through May 23, unchanged) — used as a tilt, not a score input.*

★ **What we rejected:** a 5-feature logistic crash model was tested leave-one-cycle-out and **failed** (AUC 0.44 vs 0.58 for froth alone; 0.70 = useful). It is not in this report's numbers. The scores rest only on what survived out-of-sample testing.

All four halving cycles aligned (log scale, price ÷ price-at-halving). Triangles mark where 1-year momentum turned positive in each prior cycle — months 34–37, projecting to ~April 2027 for this one. The red dot is today: month 30.29, past the historical bottoming window.

The downside map, updated after the June 30 flush: the projected $54K–$61K bottom zone was hit ($58,526 close / $57,735 intraday, inside the golden pocket's doorstep) and bounced. Odds re-weighted accordingly: ~40% the low is in, ~35% one more flush to $54–58K, ~17% deeper bear, ~8% tail.

The Prize

Illustrative only — not price targets, not advice

From $80,362.80: the 20-week average ($73,101) is well behind us — price sits **+9.9%** above it; the 50-week average ($75,776) is further behind, price sitting **+6.1%** above it. A retest of the $124,728 ATH is **+55.2%**; the power-law fair line is **+79.4%**. The median 12-month analog from this cycle-month is **+144.4%**; the median 36-month analog is +1084.9% — **discount that one hard**, it leans on regimes (2017 mania, post-COVID ZIRP) that don't repeat on demand.

The Prize doesn't feed the math — it tells you what the lean is worth acting on. Here it says: the tape moved on one of its five windows this cycle (3-month P 62→61 — a cycle-analog fragility effect on the finalized close, not a trend change) while the other four held. The qualitative side did move, on one pillar: Tokenization re-rated up on 6mo/1yr on the OCC's final GENIUS Act stablecoin rule (see that pillar's own report); CLARITY Act, Iran War Risk and Fed & Macro all held flat. The tape's own three clocks (tape, cycle, valuation) kept pointing the same medium-to-long direction regardless — price now sits 1.6% below the $81,685 level, which stays resistance. The 1-year read holds at Bull (P 69, unchanged) and the 3-year read holds at Bull (P 69, unchanged).

The Other Side

The strongest honest case the model is wrong

- **n = 3.** Every long-window claim rests on three completed cycles. Three coin flips landing heads is not a law of nature.

- **This cycle already broke the pattern.** A −53% drawdown at month 26 vs −77/−85% in prior cycles could mean dampened cycles (bullish read) — or it could mean *the bottom isn't in*: a historic-depth trough from this ATH is $18.7K–$28.7K, far below every level in this report.
- **The ETF era changed the machine.** Prior cycles had no spot-ETF flow channel, no CME basis trade at this scale, no corporate treasuries. Analogs may simply not transfer.
- **The power law is a curve fit, not a promise.** R^2 0.96 in-sample says nothing about a structural break — a fit like this "said cheap" through most of 2022's decline too. It bounds scenarios; it doesn't time anything.
- **The tape's edge is small by construction.** The honesty cap exists because measured predictive validity is modest (froth AUC 0.58). If you removed the cap, this report would be louder — and less true.

The Triggers

Price and dated events — some prove the read right, some prove it wrong

WHEN / LEVEL	EVENT	MEANS
$58,526	Daily close below the June 30 low	Flush scenario live — golden pocket $54.3–57.8K is the target; re-rate 1/3-month down
~$67,477	Weekly close above the 200-week MA	**CONFIRMED** — price sits +19.1% above this level; the weekly bar dated Nov 1 is now four days into forming, its as-is composite reading +39.4, down slightly from yesterday's intraday read of +40.2, still below the last completed bar dated Oct 25 at +42.0
~$75,776	Weekly close above the 50-week MA	**CONFIRMED** — price sits +6.1% above it, trend repair intact
~Aug 31, 2026	Historical average-bottom month (28.4) has now passed (we're at month 30.29)	Price sits well off the June 30 low (+37.3%); a higher low + improving monthly momentum after this date = basing confirmed — September's completed monthly bar (+15.7) is a further such sign
Jan–Jul 2027	Projected 1-yr momentum turn window (point: ~Apr 2027)	Arriving without new lows = cycle thesis on track; re-rate 1-year up
$50,000	Weekly close below	−60% from ATH; the dampened-cycle story is failing — see the flip line

The flip line: a decisive weekly close below **$50,000** breaks the base case and the golden pocket both — treat the dampened-cycle thesis as broken and put the historic trough zone ($18.7K–$28.7K) back on the table. Above it, a bearish quarter is the plan, not a surprise.

My Decision

COMPUTED OUTPUT — OCTOBER 29, 2026 · NO STAMP REQUIRED FOR THE QUANT PILLAR (it is never hand-edited) · THE QUALITATIVE SET IT BLENDS WITH, 2026-10-29_draft, IS A LIGHT DAILY TOUCH, NOW COMMITTED (AUTO-STAMPED, STAMPED_BY "ALEX (AUTO-STAMPED)") — TOKENIZATION RE-RATED UP ON 6MO/1YR ON THE OCC'S FINAL GENIUS ACT RULE; CLARITY ACT, IRAN WAR RISK AND FED & MACRO HELD FLAT (see Scores section); THE FINALIZED OCT 28 CLOSE (GITHUB ACTIONS DATA RELAY) PRINTED $80,362.80, DOWN FROM YESTERDAY'S $80,686.94 INTRADAY READ — MODEL P MOVED ON ONE WINDOW (55/61/61/69/69); THE FINAL NUMBER MOVED ON BOTH THE QUANT AND QUALITATIVE SIDES (SEE WHAT CHANGED)

Computed P: 55 / 61 / 61 / 69 / 69 · Quality: 0.75 / 0.70 / 0.55 / 0.60 / 0.50 · Impact: 8 (uniform) · This pillar's signals: 1mo +0.60 · 3mo +1.23 · 6mo +0.97 · 1yr +1.82 · 3yr +1.52 · Model P MOVED on one window (3mo 62→61) · Master (equal-weight), this cycle's blend: 1mo −2.11 · 3mo −1.71 · 6mo −0.60 · 1yr +1.16 · 3yr +2.84 · THE FINAL NUMBER (this blend): −0.09 equal-weight (Neutral) / +0.47 horizon-weighted (Neutral), moved from −0.09/+0.46 at yesterday's intraday read, on this pillar's own cycle-analog drift plus the Tokenization re-rate — no call-band flip anywhere · Leave-one-out: −0.14 / +0.62 / −0.79 / +0.29 / −0.41 (drop CLARITY / Iran / Tokenization / Fed / TA), range −0.79 to +0.62 (sign still flips) · BTC $80,362.80 (finalized Oct 28 close, via run.py numbers)

This is the quantitative sleeve of the thesis — the same five windows, same formula, same table as every qualitative pillar, but computed instead of judged. The weekly bar did NOT roll over this cycle — it remains the bar dated Nov 1, now four days into forming, reading +39.4 as-is (5-of-7), down slightly from yesterday's intraday read of +40.2, still below the last completed bar dated Oct 25 at +42.0; monthly and quarterly bars remain in the bars opened by the Oct 1 rollover, with no new rollover this cycle — the completed September and Q3 bars hold at +15.7 and +31.1. Model P moved on one window: the 3-month window eased to P 61 (Mild Bull, was 62), as the finalized close ticked the 3-month cycle analog back slightly (median +45.2%, still unanimous 3-of-3) — disclosed n=3 fragility, not a trend change. The 1-month (P 55, Mild Bull), 6-month (P 61, Mild Bull), 1-year (P 69, Bull) and 3-year (P 69, Bull) windows held exactly. The near-term read sits at 1mo (55, Mild Bull), 3mo (61, Mild Bull) and 6mo (61, Mild Bull) — the direction, not the level, is the signal.

These numbers enter the master blend exactly as computed — this pillar has no override/re-stamp step of its own. Unlike the four qualitative pillars, this pillar carries no draft/committed status of its own: this cycle's active qualitative score set is 2026-10-29_draft, today's LIGHT DAILY touch, now COMMITTED (AUTO-STAMPED under Alex's delegated daily authority). Today's research ran four independent WebSearch passes, one per pillar, and found CLARITY Act and Iran War Risk HELD FLAT (a multi-sourced Vance-letter item logged as a watch item, not scored), Fed & Macro HELD FLAT (the Oct 28 FOMC hold confirms, not exceeds, the already-priced consensus), and Tokenization RE-RATED UP on 6mo/1yr (the OCC's Oct 21 final GENIUS Act rule). config/scores.json gained a new dated set, 2026-10-29_draft, now active and auto-stamped. This pillar's own computed output is unaffected by qualitative status and enters the master blend the same way it does every cycle; this cycle it moved on its own cycle-analog read, reflecting the finalized Oct 28 close ($80,362.80).

What Changed Since Last Check

LIGHT DAILY touch, October 29, 2026 (previous: the October 28 local second-pass and cloud passes before it; Tokenization re-rated this cycle — active_qual_set is now 2026-10-29_draft, status COMMITTED, AUTO-STAMPED).

★ **October 29, 2026 — LIGHT DAILY touch:** data/btc_usd_daily.csv's last bar is now the FINALIZED October 28 close, **$80,362.80** (GitHub Actions data relay), down 0.40% from yesterday's Oct 28 intraday read of $80,686.94 and +37.3% off the June 30 low. The weekly bar did NOT roll over (still the bar dated Nov 1, now four days into forming, Oct 26–29), reading +39.4 as-is (Slight bullish, 5-of-7); monthly +13.1 as-is (Neutral, 2-of-7); quarterly +34.7 as-is (Slight bullish, 4-of-7); completed bars unchanged at +42.0 / +15.7 / +31.1. **Model P moved on one window: 3mo 62 → 61** (Signal +1.34 → +1.23, still Mild Bull) as the finalized close ticked the 3-month cycle analog back slightly (median +45.2%, still unanimous 3-of-3) — the disclosed n=3 alignment fragility, not a new finding; 1mo/6mo/1yr/3yr held at P 55/61/69/69. Power-law fair value $144,164 (unchanged; −1σ $72,064, −2σ $36,023); no level flipped membership ($81,685 still resistance, +1.6% above price, from +1.2%). Master 1mo −2.11 (unchanged, still Bear); 3mo −1.71 (from −1.69, still Bear); 6mo −0.60 (from −0.63, Mild Bear); 1yr +1.16 (from +1.14, Mild Bull); 3yr +2.84 (unchanged, Bull); **THE FINAL NUMBER moved to −0.09 equal-weight / +0.47 horizon-weighted** (from −0.09/+0.46 yesterday) — no call-band flip anywhere; leave-one-out −0.14 / +0.62 / −0.79 / +0.29 / −0.41, range −0.79 to +0.62 (sign still flips). Four independent WebSearch research passes, one per pillar, found: CLARITY Act and Iran War Risk **HELD FLAT** (a multi-sourced Oct 25 VP Vance letter to Iran proposing direct talks is logged in that pillar's report as a watch item, not scored — unaccepted by Iran, disputed by Trump himself). Fed & Macro **HELD FLAT**: the Oct 28 FOMC held rates 10-2 (Cook and Hammack dissenting for a hike) — primary federalreserve.gov, multiply corroborated — but this confirms, rather than exceeds, the consensus already priced in the baseline, so it is logged but not scored. Tokenization **RE-RATED UP on 6mo/1yr only (70/77 → 71/78)**: the OCC finalized its GENIUS Act stablecoin rule Oct 21 (primary OCC/Federal Register, corroborated by 8+ independent outlets) — the first of six agencies to finalize, front-running this pillar's own Jan 2027 resolution point. **config/scores.json gained a new dated set this cycle** (**2026-10-29_draft**, now active, **AUTO-STAMPED** per Alex's delegated daily authority — status committed, stamped_by "Alex (auto-stamped)"). Master, 00_START_HERE and the three other qualitative pillar reports' quoted-number lines were resynced in the same pass.

★ **October 28, 2026 — LIGHT DAILY touch, SECOND same-day pass (LOCAL run, Windows Task Scheduler, ~8:45 AM ET):** run.py quant ran locally (Bitstamp reachable), delivering an Oct 28 intraday read of **$80,686.94** (the Oct 28 daily bar is partial), up 0.29% from the $80,453.34 Oct 27 close via GitHub Actions (this morning's cloud reading) and +37.9% off the June 30 low. The weekly bar did NOT roll over (still the bar dated Nov 1, now three days into forming, Oct 26–28), reading +40.2 as-is (Slight bullish, 5-of-7, from +39.5); monthly +13.7 as-is (Neutral, 2-of-7, from +13.3); quarterly +35.1 as-is (Slight bullish, 4-of-7, from +34.9); completed bars unchanged at +42.0 / +15.7 / +31.1. **Model P moved on one window: 1mo 58 → 55** (Signal +0.96 → +0.60, still Mild Bull) as the 1-month cycle analog flipped from 2-of-3 positive (median +0.4%) to 1-of-3 positive (median −1.5%) with the cycle-month clock advancing 30.26 → 30.29 — the disclosed n=3 alignment fragility, not a new finding; 3mo/6mo/1yr/3yr held at P 62/61/69/69 (medians +45.2% / +73.4% / +144.4% / +1084.9%, all still 3-of-3). Power-law fair value $144,164 (from $144,075; −1σ $72,064, −2σ $36,023); no level flipped membership ($81,685 still resistance, +1.2% above price, from +1.5%). Master 1mo −2.04 → −2.11 (still Bear), the other four master windows unchanged (−1.69 / −0.63 / +1.14 / +2.84); **THE FINAL NUMBER moved to −0.09 equal-weight / +0.46 horizon-weighted** (from −0.08/+0.47 this morning) — no call-band flip anywhere; leave-one-out −0.14 / +0.62 / −0.78 / +0.28 / −0.43, range −0.78 to +0.62 (sign still flips). A second research pass re-checked all four qualitative pillars (WebSearch and WebFetch both working from this machine, access NOT degraded): all four **HELD FLAT**, **config/scores.json again NOT touched** — active_qual_set remains **2026-10-24_draft**, still status DRAFT, awaiting Alex's manual review. One standing fact corrected: the Brent >$100 flip-line clause behind Iran War Risk, carried as “unverifiable in this sandbox” since Oct 10, was re-verified directly on FRED DCOILBRENTEU (primary, EIA Europe Brent spot FOB) from this machine — Oct 20 $115.22, the latest observation (Oct 8 high $130.18) — so it is CONFIRMED still firing (already priced since it first fired) and the multi-week open item is closed; the Kalshi-implied ~$92–97 read cited

this morning is contradicted by the primary spot series. Master, 00_START_HERE and the four qualitative pillar reports' quoted-number lines were resynced in the same pass.

★ **October 28, 2026 — LIGHT DAILY touch (cloud routine, earlier this morning, on the Oct 27 close — its figures superseded by the local pass above):** four independent WebSearch research passes, one per pillar, primary-source-first, against the active 2026-10-24_draft baseline. All four pillars **HELD FLAT**, a twelfth straight cycle with no qualitative move: CLARITY Act (no reporting dated Oct 24-28 found on Senate floor/committee action, negotiator statements, or CFTC/SEC action; recess through ~Nov 6 stands); Iran War Risk (a single-source Oct 24 Shafaq News claim of another struck tanker in the Strait found no independent corroboration and no casualties reported, not scored; none of the four flip-line clauses fired; a Kalshi Oct-30-expiry market now implies Brent ~$92-97, market-priced, the first indirect signal in weeks suggesting Brent sits below the $100 flip-line, though the primary spot-price access gap remains open); Tokenization RWA (OKXICE's issuer-objection count grew further to 22, Reuters Oct 24, 16 Nasdaq + 6 NYSE-listed issuers led by Wells Fargo — continuation of the already-scored friction pattern, not a status change; a single-source, internally-inconsistent claim of 25 objectors excluded as unreliable; a single-source claim of three new SEC Innovation Exemption filers found but uncorroborated against SEC.gov, excluded per the sufficiency rule; DTCC's October launch remains unconfirmed); Fed & Macro (today, Oct 28, IS the FOMC decision date itself, due at 2:00/2:30pm ET, after this cycle's research pass — no outcome exists yet to score; pre-meeting consensus ~80-87% hold/~13-20% hike unchanged from the Warsh-driven baseline; tomorrow's cycle must pick up the actual outcome once public). **config/scores.json was NOT touched** — active_qual_set remains **2026-10-24_draft**, still status DRAFT, awaiting Alex's manual review. This quant pillar's own output MOVED this cycle (GitHub Actions' Oct 27 daily bar, $80,453.34, up from $80,225.46; the weekly bar did NOT roll over, still the bar dated Nov 1, now reading +39.5 as-is, up from +38.7; Model P moved on one window, 58/62/61/69/69 from 58/61/61/69/69, as the 3-month cycle analog firmed further, still unanimous 3-of-3 positive). THE FINAL NUMBER moved to −0.08 equal-weight / +0.47 horizon-weighted (from −0.08/+0.46) — no call-band flip, entirely on the quant side.

★ **October 27, 2026 — LIGHT DAILY touch:** four independent WebSearch research passes, one per pillar, primary-source-first, against the active 2026-10-24_draft baseline. All four pillars **HELD FLAT**, an eleventh straight cycle with no qualitative move: CLARITY Act (Senate still in recess through ~Nov 6, no floor/committee action found dated Oct 26-27); Iran War Risk (no new confirmed Strait-of-Hormuz incident dated Oct 26-27; none of the four flip-line clauses fired; the Brent >$100 flip-line clause remains independently unverifiable in this sandbox, a standing multi-week gap); Tokenization RWA (WebSearch again surfaced only the Oct 19 objector notice, 16 objectors; no newer count or go-live confirmation found; DTCC's October launch target remains unconfirmed either way); Fed & Macro (the Oct 27-28 FOMC meeting is underway today, decision due tomorrow; FOMC blackout continues, no new primary data print or Fed-speaker remark found). **config/scores.json was NOT touched** — active_qual_set remains **2026-10-24_draft**, still status DRAFT, awaiting Alex's manual review. This quant pillar's own output MOVED this cycle (GitHub Actions' Oct 26 daily bar, $80,225.46, down from $80,532.72; the weekly bar also ROLLED OVER this cycle, the bar dated Oct 25 closing at a final +42.0; Model P moved on one window, 58/61/61/69/69 from 56/61/61/69/69, as the 1-month cycle analog flipped back from 1-of-3 to 2-of-3 positive). Also corrected a stale pair of weekly trendline figures quoted in prose ($37,084/$75,151) that had drifted out of sync with data/trendlines.csv; now reads $36,135/$74,373, matching the data exactly. THE FINAL NUMBER moved to −0.08 equal-weight / +0.46 horizon-weighted (from −0.09/+0.46) — no call-band flip, entirely on the quant side.

★ **October 26, 2026 — LIGHT DAILY touch:** four independent WebSearch research passes, one per pillar, primary-source-first, against the active 2026-10-24_draft baseline. All four pillars **HELD FLAT**, a tenth straight cycle with no qualitative move: CLARITY Act (Senate still in recess through ~Nov 6, no floor/committee action found dated Oct 25-26); Iran War Risk (no new confirmed Strait-of-Hormuz incident dated Oct 25-26; none of the four flip-line clauses fired; the Brent >$100 flip-line clause remains independently unverifiable in this sandbox, a standing multi-week gap); Tokenization RWA (WebSearch

surfaced only the stale Oct 15 objector notice, no newer count or go-live confirmation found beyond the baseline's own Oct 19 figure of 16); Fed & Macro (the Oct 27-28 FOMC decision is now two days out, current hold/hike odds ~83-87%/~13-17% sit within the band the Oct 24 weekly already priced off Chair Warsh's Oct 16 remarks; FOMC blackout continues). **config/scores.json was NOT touched** — active_qual_set remains **2026-10-24_draft**, still status DRAFT, awaiting Alex's manual review. This quant pillar's own output MOVED sharply this cycle (GitHub Actions' Oct 25 daily bar, $80,532.72, up from $80,035.37; Model P moved on one window, 56/61/61/69/69 from 62/61/61/69/69, as the 1-month cycle analog flipped from unanimous 3-of-3 positive to 1-of-3). THE FINAL NUMBER moved to −0.09 equal-weight / +0.46 horizon-weighted (from −0.06/+0.47) — no call-band flip, entirely on the quant side.

★ **October 25, 2026 — LIGHT DAILY touch:** four independent WebSearch research passes, one per pillar, primary-source-first, against the active 2026-10-24_draft baseline. All four pillars **HELD FLAT**, a ninth straight cycle with no qualitative move: CLARITY Act (Senate still in recess through ~Nov 6, nothing beyond the Oct 24 weekly's own findings); Iran War Risk (attack tempo stays elevated, latest confirmed incidents unchanged since the Oct 24 weekly; EIA's own October STEO data — Brent averaged $114/bbl in September, Q4 forecast $104.69/bbl — corroborates but does not newly fire this pillar's already-"last confirmed FIRED" sustained→$100 flip-line clause; Petro Dolphin's 2 missing crew remain unresolved; none of the four flip-line clauses fired fresh); Tokenization RWA (OKXICE's objector count unchanged at 16; still not live; DTCC's October launch remains unconfirmed); Fed & Macro (Oct 28 FOMC three days out, current hold/hike odds ~84-87%/~13-16% sit within the band the Oct 24 weekly already priced off Chair Warsh's Oct 16 remarks; FOMC blackout continues). **config/scores.json was NOT touched** — active_qual_set remains **2026-10-24_draft**, still status DRAFT, awaiting Alex's manual review. This quant pillar's own output MOVED this cycle (GitHub Actions' Oct 24 daily bar, $80,035.37, down from $81,500.31; Model P moved on three windows, 62/61/61/69/69 from 61/61/62/68/69). THE FINAL NUMBER moved to −0.06 equal-weight / +0.47 horizon-weighted (from −0.07/+0.47) — no call-band flip, entirely on the quant side.

- **October 24, 2026 — FULL WEEKLY refresh:** four independent parallel WebSearch research passes, one per pillar, primary-source-first. CLARITY Act, Iran War Risk and Tokenization all **HELD FLAT**: CLARITY Act (Senate still in its State Work Period through ~Nov 6, no floor/committee action found; a second, firmer-sourced read on the CFTC-ANPRM's Dec 14 comment deadline is procedural, not scored); Iran War Risk (attack tempo stays elevated but eased in the back half of October, no new deaths; Petro Dolphin's 2 missing crew remain unresolved with no new reporting either way; none of the four flip-line clauses fired); Tokenization RWA (OKXICE still not live under its 30-day issuer-notice clock; its disclosed objector count grew from 9 to 16, including Microsoft, Alphabet and Goldman Sachs — friction, not a launch; DTCC's launch remains unconfirmed). **Fed & Macro RE-RATED UP, 1mo only, 31→34:** Fed Chair Kevin Warsh's Oct 16 remarks at an IMF event in Bangkok (primary, 7+ independent outlets) declined to preview remaining 2026 FOMC decisions; Oct 28 hike odds then collapsed from ~33-47% to ~13-15%/~14% (market-priced). This quant pillar's own output is unchanged this cycle (GitHub Actions' Oct 23 daily bar, $81,500.31, same as this morning's sync; Model P 61/61/62/68/69 unchanged). **config/scores.json updated** — active_qual_set now points to **2026-10-24_draft**, still status DRAFT, awaiting Alex's manual review (a full weekly refresh, categorically never auto-stamped). THE FINAL NUMBER moved to −0.07 equal-weight / +0.47 horizon-weighted (from −0.08/+0.46 this morning) — no call-band flip, entirely on the qualitative side.
- **October 24, 2026 — LIGHT DAILY touch (earlier this morning, superseded by the full weekly above):** GitHub Actions' price-data relay delivered the October 23, 2026 daily bar, closing at **$81,500.31**, down 0.12% from the $81,597.19 Oct 22 close. This nudges the three tape composites and the weekly/monthly/quarterly SMA/RSI/MACD readings slightly (see below) and moves Model P on the 1-month window only (64→61), nudging THE FINAL NUMBER. All four qualitative pillars were independently re-checked via WebSearch this cycle and again **HELD FLAT**, an eighth straight cycle with no qualitative move — nothing cleared the sufficiency rule: CLARITY Act (Senate still in recess through Nov 9, no floor/committee action found; a dated Oct 23 report notes CLARITY backers cut Q3 lobbying spend,

immaterial); Iran War Risk (an Oct 22 IRGC claim of 7 more tankers damaged, and Brent reportedly above $111/bbl around the same date, were both reported but neither independently confirmed nor verifiable against this pillar's own primary-source Brent threshold in this sandbox; none of the four flip-line clauses fired; the Petro Dolphin crew and Al Maqam claim remain unresolved/unconfirmed); Tokenization RWA (OKXICE still not live under its 30-day issuer-notice clock; its disclosed objector count grew to 16, including Microsoft, Alphabet and Goldman Sachs, more friction but no change to not-live status; DTCC's launch remains unconfirmed); Fed & Macro (FOMC blackout period, Oct 17-29, continues ahead of the Oct 27–28 meeting; no verifiable new data prints; no shutdown/funding status change). **config/scores.json was NOT touched** — active_qual_set remains **2026-10-17_draft**, still status DRAFT, awaiting Alex's manual review. THE FINAL NUMBER moved to −0.08 equal-weight / +0.46 horizon-weighted (from −0.07/+0.47) — no call-band flip.

- **October 23, 2026 refresh (prior cycle) in one line:** a routine daily tape sync on GitHub Actions' finalized Oct 22 close ($81,597.19, revised down from the $81,694.28 intraday read); Model P, this pillar's signals and THE FINAL NUMBER were unchanged by that revision, though the $81,685 level read back as resistance. Qualitative research again found nothing material on any of the four pillars.
- **Qualitative research today — a light daily touch, WebSearch against all four pillars, nothing material:** CLARITY Act: searched for Senate floor/committee action — found none; recess through Nov 9 stands. Iran War Risk: searched for new Strait-of-Hormuz developments — an Oct 22 IRGC claim of 7 tankers damaged is Iran's own unconfirmed claim; Brent reportedly above $111/bbl around the same date could not be independently verified against a primary series in this sandbox; the Petro Dolphin crew's status and the Al Maqam claim remain unresolved/unconfirmed; none of the four flip-line clauses fired. Tokenization RWA: OKXICE's objector count grew to 16 (from 9) per an Oct 19 update, including Microsoft, Alphabet and Goldman Sachs — friction, not a launch; DTCC's October target remains unconfirmed. Fed & Macro: confirmed the FOMC blackout period (Oct 17-29) continues; no Fed speakers, no verifiable new data prints. Nothing cleared the sufficiency rule on any pillar, so all four HELD FLAT and **config/scores.json was NOT touched** — active_qual_set remains **2026-10-17_draft**, still status DRAFT, awaiting Alex's manual review of the Oct 17 full weekly checkpoint.
- **Price: $81,500.31 close (Oct 23), down 0.12% from the $81,597.19 Oct 22 close.** This pillar scores the tape, not the day's qualitative news.
- ★ **Repair signal #1 remains CONFIRMED:** price sits +21.3% above the 200-week average ($67,166).
- **The weekly bar (dated Oct 25) continues forming this cycle — no rollover.** Its as-is composite eased to **+46.3** (agreement 6/7), essentially flat vs. yesterday's +46.7 and below the just-closed bar dated Oct 18 at +49.9.
- **Monthly and quarterly bars remain in the bars opened by the Oct 1 rollover** — no new rollover this cycle. October (monthly) reads **+15.5** as-is (agreement 2/7, Neutral); Q4 (quarterly) reads **+36.3** as-is (agreement 4/7, down from 5/7, Slight bullish); the completed September and Q3 bars hold at **+15.7** and **+31.1**.
- ★ **Model P moved on one window: 1mo 64 → 61** (Signal +1.68 → +1.32); 3mo 61, 6mo 62, 1yr 68, 3yr 69 all held (Signals +1.23 / +1.06 / +1.73 / +1.52). The cycle-month clock advanced to **30.12**; the 1-month cycle-analog median eased from +9.0% (unanimous 3-of-3) to +7.3% (back to 2-of-3) — the driver of the P move; the other analogs ticked too (3mo +33.6%→+31.4%; 6mo +65.1%→+63.8%; 1yr +123.7%→+126.2%; 3yr +1052.1%→+1081.5%) without crossing a new rounded P value. Honesty note: analogs rest on **n=3 completed cycles** and single windows flip when alignment shifts by days — the direction is the signal, the levels are soft.
- **Power-law fair value: $143,721** (up from $143,632; price now −43% vs. fair). Fit-window sensitivity spans $120,950 (2013 start) to $147,815 (2015 start): quote it as a range, never a target.
- **Froth unchanged at z = −0.87**, still dated 2026-05-23 — Coin Metrics community data lags ~6 weeks, so this stays a robustness tilt, never a score input.

- **Levels note: no classification flip this cycle** — $81,685 (2x touch) remains resistance, price pulling further below it (+0.2%, up from +0.1%). The next resistance up is $88,269 (+8.3%, 2x). The falling trendlines are unchanged (support $37,084, resistance $75,151).
- **Data refreshed:** daily price data through the October 23, 2026 close via the GitHub Actions data relay; indicators/levels/scores/cycle/mapping read via `run.py numbers` (run.py quant itself is not run in this sandbox — its fetch step hits bitstamp.net, which this environment's egress proxy blocks).
- **Context:** this cycle's active qualitative score set is **2026-10-17_draft**, a FULL WEEKLY refresh built on the Oct 15 committed baseline (2026-10-15_draft, which re-rated Fed & Macro and Iran War Risk; CLARITY Act and Tokenization RWA held flat). All four qualitative pillars confirmed held flat again this cycle; status remains DRAFT, awaiting Alex's manual review. This quant pillar is computed fresh every run regardless of qualitative status.
- ★ **Master blend MOVED this cycle, on the quant side only:** THE FINAL NUMBER moved from −0.07 to −0.08 equal-weight (still Neutral); horizon-weighted moved from +0.47 to +0.46 (still Neutral). Only the 1-month master window moved (−1.98→−2.05, still Bear), tracking this pillar's own signal move — no qualitative pillar re-rated, no call-band flip anywhere. **Because THE FINAL NUMBER itself moved (even though config/scores.json did not), the Master report, 00_START_HERE and the four qualitative pillar reports' own quoted-number lines were updated this cycle too** — to keep run.py selfcheck's prose-consistency guard passing — while their qualitative research content stays untouched; this TA report resyncs fully every cycle per the standing rule.

Method & Sources

Everything is reproducible — the scripts and data live in the BTC-TA folder. Run order below.

- **Price data:** Bitstamp OHLC API (daily, 2011–2026, no key) via fetch_btc_history.py · Coin Metrics community reference price (2010–2011 close-only) via build_master_history.py — 5,838 days total, each row tagged by source.
- **Indicator stack:** indicators.py — SMA 20/50/200, EMA 12/26, RSI-14 (Wilder), MACD 12/26/9, Bollinger 20/2, OBV — on weekly (W-SUN), monthly, quarterly bars. levels.py — swing-cluster S/R + least-squares trendlines.
- **Scoring:** score.py — each indicator → conviction in [−100, +100] (bounded inputs mapped linearly, unbounded squashed with tanh); composite = fixed weights (MA .20, RSI .15, MACD .15, BB .15, S/R .15, OBV .10, TL .10); agreement = indicators sharing the composite's sign.
- **Cycle & value:** cycle_analysis.py — halving-aligned tops/bottoms/momentum turns, projections from C1–C3 · downside.py / downside_map.py — power-law bands (R^2 0.96) + historical troughs + 6-method bottom-zone synthesis · test_altcoin_froth.py — froth quartiles vs forward drawdowns, block-bootstrap CI.
- **The mapping (new):** pillar_mapping.py — window scores from tape composites + cycle analogs + power-law value; P = 50 + 25×(S/100); Quality rubric per window; writes data/pillar_scores.json for the master blend.
- **Run order:** fetch_btc_history → build_master_history → fetch_altcoin_data → indicators → levels → score → charts → cycle_analysis → downside → downside_map → pillar_mapping.
- **Honesty notes:** the weekly bar did NOT roll over this cycle — the bar dated Oct 25 closed at +42.0 and the bar dated Nov 1, now four days into forming (Oct 26–29), reads +39.4 as-is; monthly and quarterly bars rolled over Oct 1, closing out September and Q3/Jul-Sep (completed-bar composites: monthly +15.7 / quarterly +31.1), with October and Q4 the bars currently forming (no new rollover this cycle) · the multi-signal crash model failed out-of-sample (AUC 0.44) and is excluded · the AUC figures are the pipeline's own attestation · froth data lags ~6 weeks · n=3 on all cycle claims, and analog windows can cross into the next cycle · the 2024 halving is dated Apr 19 (US ET; block 840,000 hit Apr 20 00:09 UTC — 0.03 cycle-month effect) · S/R levels are algorithmic swing-clusters with 1–2 touches each and can change membership day to day (as $81,685 has over recent cycles, resistance ↔ support) · the bottom-odds split (40/35/17/8) is a judgment synthesis, not a model output.
