

CoinPicks Market Direction

Research Package

Five pillars — four researched narratives and one pure-math read of the Bitcoin chart — scored on one standard, blended into one table, and distilled to one number. Everything in this folder is current as of **August 11, 2026** — a light daily touch off the Aug 10 committed set. **Today's score set has been auto-stamped under Alex's standing delegated daily authority — see the note below.**

✓ **Auto-stamped.** All four qualitative pillars held flat today — research found nothing that exceeds what the Aug 10 committed set already priced in. No pillar's P moved, no call band flipped, nothing rests on a single-source claim: exactly the routine, well-evidenced daily cycle Alex's 2026-08-06 delegated auto-stamp authority covers. See the Master Report's "My Decision" section for the full rationale.

THE FINAL NUMBER · AUGUST 11, 2026 (COMMITTED, LIGHT DAILY) · BTC \$64,355.00

+0.62

Mild Bull — the 1-month window stays outright Bear, same call band as Aug 10

Equal-weight mean of the five window signals below — every pillar counts 20% (scale -10 to +10; horizon-weighted variant +1.18). Positive because the far windows outweigh the near ones — **not a buy-today signal**. It is a "the storm is priced, the recovery isn't" number. Today's move is essentially nil — a hair of Bitcoin-TA mapping noise at the 3-month window — every qualitative pillar held flat again: CLARITY's Sept 15 cloture date is unchanged with the Senate in recess, Iran's Oman shipping-route deal remains unsigned (a Houthi strike on Saudi Aramco's Jazan refinery was found and logged but assessed continuation not escalation), Tokenization found no fresh dated catalyst, and Fed & Macro has no new release before Aug 12-13. The near-term picture is unchanged; the long-horizon structural case is unremoved.

THE FIVE WINDOWS UNDERNEATH IT

WINDOW	MASTER SIGNAL	CALL
1 month	-1.52	Bear — unchanged; all four qualitative pillars held flat today
3 months	-0.90	Mild Bear — the September FOMC still sits inside this window; today's move is negligible quant mapping noise
6 months	+0.29	Neutral — CLARITY/Tokenization structural strength vs. Iran's drag
1 year	+2.11	Bull — all five pillars still positive
3 years	+3.11	Strong Bull — law + adoption + cycle + valuation, unchanged

Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. The Mild Bull conclusion stays positive under every leave-one-out drop (+0.23 to +0.93); dropping CLARITY or Tokenization still rounds down to **Neutral** on a strict read, essentially unchanged from Aug 10's result. See the Master Report's Robustness section.

Reading order

Twenty minutes to the whole picture; each report stands alone and can be checked independently — every fact is dated with sources on its last page.

#	FILE	WHAT IT IS
1	CoinPicks_Master_Direction_Report.pdf	The summary. The final number, the five-window table, the full pillar matrix, where the lenses agree/fight, six weeks of dated triggers, sensitivity.
2	CoinPicks_Bitcoin_TA_Quant_Pillar_Report.pdf	The math pillar. 7 indicators on 16 years of data, halving-cycle analogs, power-law valuation — with charts. Fully reproducible from code.
3	reports/current/pdf/ — the four pillar PDFs	The story pillars. CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro. Each: thesis, dated facts, honest bear case, dated triggers, and the full score lineage (June committed → every draft through August 11 light daily).
4	reports/archive/ + prior-work/	Every earlier version, preserved untouched — the score history is fully auditable.
—	run.py · engine/blend.py · data/master_blend.json	The blend engine (runnable Python — reproduce any score set with <code>run.py blend --set NAME</code>), its output, and README.md for regeneration.

How the scoring works — one paragraph

Every pillar answers the same question on five windows (1 month / 3 months / 6 months / 1 year / 3 years): **P** = the odds (0–100) that this force is *good for crypto* by then, **Quality** = how trustworthy the evidence is (0–1), and **Impact** = how hard this force moves the whole market (0–10). These combine into a **Signal** = $((P - 50) \div 50) \times \text{Quality} \times \text{Impact}$ (Impact is a uniform 8 for every pillar), so a coin-flip view scores zero no matter how loud the headlines are, and weak evidence can't shout. **All five pillars are equal-weighted** — the master for each window is the simple mean of the five signals (20% each; add a pillar and it auto-rebalances to 1/N) — and the Final Number averages the five master windows.

The five pillars at a glance (August 11 committed P's — light daily touch off the Aug 10 committed baseline)

PILLAR	1MO	3MO	6MO	1YR	3YR	ONE-LINE READ
CLARITY Act (law)	32	47	58	82	92	Held flat: Senate remains in August recess; the Sept 15 2:15pm ET cloture vote is unchanged; no new floor-schedule or ethics-text development found
Iran War Risk	20	28	41	56	77	Held flat: a Houthi drone strike on Saudi Aramco's Jazan refinery (Aug 9) was found and logged, but assessed continuation not escalation; the Hormuz deal remains unsigned
Tokenization (RWA)	52	60	66	74	85	Held flat: no new dated catalyst found beyond generic 2026 market-sizing coverage
Fed & Macro	40	38	47	55	62	Held flat: no new Fed H.4.1 or BLS release since Aug 8; next H.4.1 and jobless claims due Aug 13, July CPI due Aug 12
Bitcoin TA (quant)	40	36	45	68	70	Quant pillar refreshed on today's price (BTC \$64,355.00, –1.1% vs. Aug 10; weekly tape –23.2 slight bearish, monthly –38.4 slight bearish, quarterly +10.1 neutral; cycle month 27.7)

P values shown (50 = coin flip). Fed & Macro (judged) sits only marginally ahead of Bitcoin TA (computed) at 1mo/3mo — unchanged from Aug 10, since all four qualitative pillars held flat today.

Status & honesty notes

- **Score status:** August 11 scores are a light daily touch that, after Step 6 verification passed clean, was **auto-stamped** under Alex's standing delegated daily authority (in effect since 2026-08-06): no pillar's P moved, no call band flipped, and nothing rests on a single-source claim — exactly the routine, well-evidenced cycle that authority covers. Every report prints the full lineage (June committed → every draft through August 11, now committed). Nothing hides its history.
- **Verification:** facts researched with primary/wire-source discipline, independently fact-checked, and the whole package forensically audited; score math recomputed independently; price data cross-checked across two exchanges; models that failed out-of-sample testing were excluded and say so. This cycle's checks: reconfirmed the Senate remains in August recess and the CLARITY Sept 15 2:15pm ET cloture date is unchanged across 5 outlets; found and assessed a Houthi drone strike on Saudi Aramco's Jazan refinery (Aug 9, six independent outlets) as continuation not escalation; confirmed no fresh dated RWA/tokenization catalyst beyond generic market-sizing coverage; confirmed no new Fed H.4.1 or BLS release has posted since Aug 8.
- **Known limits, in print inside the reports:** cycle-analog claims rest on 3 completed cycles; the TA pillar caps its own conviction at $P = 50 \pm 25$; single-source items are labeled in-line; current chart bars are partial and the completed-bar numbers are printed; the Robustness section shows dropping CLARITY or Tokenization still lands right at the Neutral/Mild-Bull boundary, a thin margin unchanged from Aug 10.
- **The near-term calendar is the test:** July CPI, Aug 12, and the next Fed H.4.1/jobless-claims prints, Aug 13 (the real Fed deciders inside this month's window) · the first CLARITY cloture vote, now precisely dated 2:15pm ET Sept 15 · an actual signed, operating Hormuz agreement the US accepts (route map alone isn't it — fees/compensation/sovereignty and continued attacks are the real test) · next FOMC (with SEP/dot plot), week of Sept 15 · GENIUS Act 18-month backstop effective Jan 18, 2027. Each pillar's trigger table says in advance what each outcome does to the scores.

This is research and education, not financial advice. The scores are probabilistic opinions with dated evidence — built to be argued with. If you check one thing manually, check the trigger tables: they are the falsifiable part.
