

CoinPicks Market Direction

Research Package

Five pillars — four researched narratives and one pure-math read of the Bitcoin chart — scored on one standard, blended into one table, and distilled to one number. Everything in this folder is current as of **September 12, 2026, second cycle of the day** (2026-09-12_draft2, layered on the day's earlier committed baseline). **This cycle's score set is COMMITTED — AUTO-STAMPED SEPTEMBER 12, 2026 — see the note below.**

COMMITTED — AUTO-STAMPED SEPTEMBER 12, 2026 (second cycle of the day, score set 2026-09-12_draft2). Two independent research passes ran today — the cloud routine, which produced the committed 2026-09-12_draft baseline this morning, and a local pass whose own competing draft was abandoned once the collision was discovered on push; this set re-derives the local pass's findings against the committed baseline rather than replacing it. CLARITY Act and Tokenization RWA agree with the baseline, held flat — nothing found cleared the sufficiency bar on either. **Fed & Macro RE-RATED DOWN** (34/33/44/54/60 → 29/28/41/53/60): the Sept 11 core-CPI consensus figure was wrong (real consensus +0.2% m/m, so the +0.3% print was a tenth hotter, not cooler — six independent outlets, re-verified against bls.gov), and the University of Michigan's preliminary September sentiment survey (released Sept 11) fell to 47.8 with year-ahead inflation expectations jumping to 4.6% from 4.0%. **Iran War Risk trimmed one further point at 6mo only** (1/2/18/38/70 → 1/2/17/38/70): the baseline's Bab al-Mandeb cut stands, but a Saudi Petroline pipeline shutdown (bearish) and a newly scheduled Sept 14 Salalah GCC-Iran ministerial (bullish) roughly offset. THE FINAL NUMBER is +0.23, versus +0.31 at this morning's first-cycle baseline and +0.36 at the last stamped set (Sept 11).

THE FINAL NUMBER · SEPTEMBER 12, 2026, SECOND CYCLE (COMMITTED — AUTO-STAMPED) · BTC \$77,313.24 ON SEPT 12

+0.23 Neutral — down from this morning's first-cycle +0.31 on the Fed correction, no call-band flip versus the last stamped set (Sept 11's +0.36)

Equal-weight mean of the five window signals below — every pillar counts 20% (scale -10 to +10; horizon-weighted variant +0.80, down from this morning's +0.86, still Mild Bull). CLARITY and Tokenization held flat, agreeing with the baseline; Fed & Macro re-rated down on a corrected CPI consensus and a fresh UMich sentiment print; Iran War Risk trimmed one further point at 6mo; Bitcoin TA (computed) is unchanged from the baseline's read — BTC \$77,313.24 on Sept 12 (local full quant refresh).

THE FIVE WINDOWS UNDERNEATH IT

WINDOW	MASTER SIGNAL	CALL
1 month	-1.85	Bear — deeper still; the Fed correction adds to Iran's chokepoint drag and Bitcoin TA's front-end easing
3 months	-1.46	Mild Bear — the Fed cut pulls down further; the September FOMC still sits inside this window
6 months	-0.16	Neutral — CLARITY/Tokenization structural strength against Fed's and Iran's deepening drag; well inside the Neutral band
1 year	+1.69	Bull — four of five pillars positive; Iran alone negative here
3 years	+2.92	Bull — law + adoption + cycle + valuation, unchanged this cycle

Bands: $|s| < 0.5$ Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. The leave-one-out range this cycle is -0.15 to $+1.02$ — the sign still flips negative when CLARITY or Tokenization are dropped individually, the same fragile-reading pattern as Sept 11; **dropping Iran alone moves the reading to $+1.02$, Mild Bull**, and dropping Fed & Macro alone also crosses into Mild Bull ($+0.57$). See the Master Report's Robustness section.

Reading order

Twenty minutes to the whole picture; each report stands alone and can be checked independently — every fact is dated with sources on its last page.

#	FILE	WHAT IT IS
1	CoinPicks_Master_Direction_Report.pdf	The summary. The final number, the five-window table, the full pillar matrix, where the lenses agree/fight, six weeks of dated triggers, sensitivity.
2	CoinPicks_Bitcoin_TA_Quant_Pillar_Report.pdf	The math pillar. 7 indicators on 16 years of data, halving-cycle analogs, power-law valuation — with charts. Fully reproducible from code.
3	reports/current/pdf/ — the four pillar PDFs	The story pillars. CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro. Each: thesis, dated facts, honest bear case, dated triggers, and the full score lineage (June committed → Aug 22 committed → Aug 28/29 drafts → Aug 31 committed → Sept 1 committed → Sept 2 committed → Sept 5 committed → Sept 6 committed → Sept 8 committed → Sept 9 committed → Sept 10 committed → Sept 11 committed → Sept 12 committed, auto-stamped, this light daily catch-up cycle).
4	reports/archive/ + prior-work/	Every earlier version, preserved untouched — the score history is fully auditable.
—	run.py · engine/blend.py · data/master_blend.json	The blend engine (runnable Python — reproduce any score set with <code>run.py blend --set NAME</code>), its output, and README.md for regeneration.

How the scoring works — one paragraph

Every pillar answers the same question on five windows (1 month / 3 months / 6 months / 1 year / 3 years): **P** = the odds (0–100) that this force is *good for crypto* by then, **Quality** = how trustworthy the evidence is (0–1), and **Impact** = how hard this force moves the whole market (0–10). These combine into a **Signal** = $((P - 50) \div 50) \times \text{Quality} \times \text{Impact}$ (Impact is a uniform 8 for every pillar), so a coin-flip view scores zero no matter how loud the headlines are, and weak evidence can't shout. **All five pillars are equal-weighted** — the master for each window is the simple mean of the five signals (20% each; add a pillar and it auto-rebalances to 1/N) — and the Final Number averages the five master windows.

The five pillars at a glance (September 12 P's, second cycle — Fed & Macro re-rated down, Iran trimmed at 6mo, COMMITTED — AUTO-STAMPED)

PILLAR	1MO	3MO	6MO	1YR	3YR	ONE-LINE READ
CLARITY Act (law)	32	47	58	82	92	Held flat: Sept 15 2:15pm ET cloture vote unchanged; whip-count math unchanged
Iran War Risk	1	2	17	38	70	Trimmed 1pt at 6mo: the baseline's Bab al-Mandeb cut stands; a Saudi Petroline pipeline shutdown and a Sept 14 Salalah GCC-Iran ministerial roughly offset
Tokenization (RWA)	52	60	66	74	85	Held flat, agreeing with the baseline: RWA.xyz's ~\$38B read is a continuation of the already-priced growth trend, no fresh dated catalyst
Fed & Macro	29	28	41	53	60	RE-RATED DOWN: the Sept 11 core-CPI consensus was wrong (real consensus +0.2% m/m, so +0.3% actual was a tenth hotter, not cooler); UMich preliminary September sentiment fell to 47.8
Bitcoin TA (quant)	54	47	59	68	69	Unchanged from this morning's baseline read — BTC \$77,313.24 (local full quant refresh)

P values shown (50 = coin flip). CLARITY, Tokenization, and Fed & Macro held flat this cycle; Iran War Risk re-rated down moderately, and this set (light daily catch-up, 2026-09-12_draft) is COMMITTED — AUTO-STAMPED SEPTEMBER 12, 2026.

Status & honesty notes

- **Score status:** September 12 score set (2026-09-12_draft) — a **light daily catch-up** against the Sept 11 committed baseline (2026-09-11_draft, auto-stamped) — is **COMMITTED — AUTO-STAMPED SEPTEMBER 12, 2026**. CLARITY Act, Tokenization RWA, and Fed & Macro were independently re-checked and held flat. **Iran War Risk re-rated down, moderately**, as Houthi forces swept the rest of Yemen's Red Sea coastline and seized Bab al-Mandeb's Mayyun Island. The master call band held Neutral → Neutral everywhere, sourcing clears the primary-source-plus-multi-outlet bar, and under the runbook's widened delegated authority the size of a move is not itself a reason to withhold — so this set is AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)." Every report prints the full lineage (June committed → Aug 22 committed → Aug 28/29 drafts → Aug 31 committed → Sept 1 committed → Sept 2 committed → Sept 5 draft → Sept 5 draft2 committed → Sept 6 committed → Sept 8 committed → Sept 9 committed → Sept 10 committed → Sept 11 committed → Sept 12 committed, auto-stamped).
- **Verification:** facts researched with primary-source discipline corroborated by multiple independent outlets per claim. Results: the Houthi seizure of Yemen's Red Sea coastline and Mayyun Island is corroborated across 6+ independent outlets (Al Jazeera, NBC News, CNBC, NPR, The National, National Herald); the Khasab vessel strikes are confirmed via UKMTO's own official warning plus Gulf News, Maritime Executive, and The Hill; a single-source IRGC claim of a Saildrone strike was reported but explicitly not used to move a score; no new dated catalyst was found for CLARITY Act, Tokenization RWA, or Fed & Macro.
- **Known limits, in print inside the reports:** cycle-analog claims rest on 3 completed cycles, a disclosed fragility this report has repeatedly flagged (this cycle's own 1-month analog fell from 2-of-3 to 1-of-3 positive on a single day's price move); the TA pillar caps its own conviction at $P = 50 \pm 25$; single-source items are labeled in-line; current chart bars are partial and the completed-bar numbers are printed; the Robustness section shows dropping Iran alone still flips the headline to Mild Bull, and dropping Fed & Macro alone does too — two pillars this report flags as doing most of the work on the headline number, and the leave-one-out range this cycle (-0.15 to $+1.02$) genuinely crosses zero.
- **The near-term calendar is the test:** the next FOMC (with SEP/dot plot), Sept 15-16, 2026 · the first CLARITY cloture vote, precisely dated 2:15pm ET Sept 15 · whether Brent's sustained-above-\$100 run continues, whether the Houthis actually close or interdict shipping through Bab al-Mandeb (vs. merely holding its shores/islands), and whether Zuqar Island's contested status resolves — the real tests for Iran War Risk next cycle · GENIUS Act 18-month backstop effective Jan 18, 2027. Each pillar's trigger table says in advance what each outcome does to the scores.

This is research and education, not financial advice. The scores are probabilistic opinions with dated evidence — built to be argued with. If you check one thing manually, check the Iran War Risk pillar's My Decision section and trigger table — this is the cycle where a second global oil chokepoint moved from a threatened approach to actual adversary-aligned control. That is the falsifiable part.
