Master Direction Report

Five Pillars, One Table, One Number — Updated & Re-verified September 12, 2026 (FULL WEEKLY REFRESH) · UPDATED DRAFT — AWAITING ALEX'S STAMP

THIS VERSION — 2026-09-12_draft3, a FULL WEEKLY REFRESH (the first deep multi-source re-dig since the Sept 5 weekly), layered on the committed 2026-09-12_draft2 baseline. Four independent per-pillar research passes ran, plus a dedicated adversarial verification pass that re-pulled PRIMARY sources rather than the reports' own citations — and three of that pass's corrections materially changed the outcome versus the raw research. **CLARITY Act RE-RATED DOWN** to 30/46/58/82/92: the load-bearing fact is dated Sept 10 and was MISSED by both daily cycles since — Lummis and Senate Republicans released a revised ~630-page text five days before the vote (PRIMARY: lummis.senate.gov, plus The Block, Crypto in America, Blockhead, The Crypto Times) that added DeFi/CFTC-registration language but left BOTH binding disputes — the ethics title and the stablecoin-yield provision — untouched, giving Tillis nothing. Sen. Moran's opposition was proposed as a second driver and rejected on verification: it dates to early August, so scoring it now would double-count an August fact. **Tokenization RE-RATED TWO-DIRECTIONALLY** to 51/59/66/76/86: the SEC's proposed rule 34-106246 (Sept 1, primary-verified verbatim on sec.gov) would let a blockchain serve as a transfer agent's master securityholder file — the official legal record — attacking tokenization's root dual-record defect, which lifts 12mo/36mo; while a direct primary pull of rwa.xyz puts tokenized Treasuries at \$15.74B, -3.05%/30d, a third consecutive negative reading that fires this pillar's own pre-registered trigger and cuts 1mo/3mo. Its net-flow figures were struck as login-gated and unverifiable, and carry none of the move. **Iran War Risk HELD FLAT** at 1/2/17/38/70 — genuinely two-sided and offsetting: the IAEA Board's 23-3-8 referral of Iran to the UN Security Council (Sept 9, unpriced, bearish) against Brent's give-back, Hormuz throughput above 10 mb/d, the US refusing to strike the Houthis, and Monday's Salalah GCC-Iran ministerial. **Fed & Macro HELD FLAT** at 29/28/41/53/60 — the Goldman and JPMorgan hike-call reversals are analyst estimates downstream of the August core-CPI print already priced this morning; re-cutting would double-count. (Historical note, retained: this was the SECOND cycle of September 12, 2026, layered on the committed 2026-09-12_draft baseline produced earlier the same day by the cloud routine — per house rule, a committed set is never edited, so this cycle's own findings are re-derived against it rather than replacing it. CLARITY Act and Tokenization RWA agree with the baseline, held flat at 32/47/58/82/92 and 52/60/66/74/85: no new dated catalyst found on either (the Sept 15 2:15pm ET cloture vote is unchanged; DTCC's

October launch remains the operative catalyst). **Fed & Macro RE-RATED DOWN**, to 29/28/41/53/60 (from the baseline's 34/33/44/54/60): this is the substantive disagreement with the baseline pass. Both the Sept 11 set and the Sept 12 baseline recorded August core CPI as "one tenth cooler than consensus" — the real pre-print consensus was +0.2% m/m, so the +0.3% actual print was one tenth **hotter**, corroborated across six independent outlets and re-verified against the BLS release itself. On top of that correction, the University of Michigan's preliminary September Survey of Consumers (PRIMARY, released Sept 11) put sentiment at 47.8 — a second straight monthly decline, the weakest since May — with year-ahead inflation expectations jumping to 4.6% from 4.0%. **Iran War Risk trimmed one further point at 6mo only**, to 1/2/17/38/70 (from the baseline's 1/2/18/38/70): the baseline's cut for the Bab al-Mandeb chokepoint seizure stands and is not re-litigated, but this pass adds two facts pointing in opposite directions the baseline didn't surface — Saudi Arabia's Ministry of Energy shutting the East-West (Petroline) crude pipeline Sept 11 after drone strikes on its pump stations (a second major Hormuz-bypass disruption, bearish), and Oman convening the first GCC-Iran ministerial of the war in Salalah on Sept 14 to discuss Hormuz shipping (bullish, and the broadest diplomacy of the crisis) — which substantially offset, net trimming only the medium-term window.)

THE FINAL NUMBER · SEPTEMBER 12, 2026, FULL WEEKLY REFRESH · EQUAL-WEIGHT MODEL (DRAFT — AWAITING ALEX'S STAMP)

+0.22

Neutral overall, time-arbitraged — a hair below the day's committed second-cycle reading of +0.23, on small front-end cuts to CLARITY and Tokenization. Equal-weight mean of the five window signals (–10 max bear ... +10 max bull). Horizon-weighted variant: **+0.81**, up a hair from +0.80, still Mild Bull. The structure underneath: Bear at 1 month, **Bear at 3 months (a call-band flip this cycle, from Mild Bear)**, Neutral at 6 months, Bull at 1 year, Bull at 3 years. **UPDATED DRAFT — SEPTEMBER 12, 2026 (2026-09-12_draft3) · AWAITING MY STAMP** — full weekly refreshes are categorically excluded from delegated auto-stamp authority; see My Decision below.

COINPICKS MASTER BLEND · ALL FIVE PILLARS EQUAL-WEIGHTED · 20% EACH

Compiled September 12, 2026 — FULL WEEKLY REFRESH (DRAFT, awaiting Alex's stamp) · BTC \$77,282.35 (local full quant refresh, September 12, 2026) · Engine: engine/blend.py — run.py blend (equal-weight, 2026-09-12_draft3, draft; last committed set: 2026-09-12_draft2) · Not Financial Advice

The Master Table

The whole thesis in five rows, on the September 12 FULL WEEKLY REFRESH set (2026-09-12_draft3, layered on the day's committed second-cycle baseline; DRAFT, awaiting Alex's stamp). Signal range -10 (max bear) to +10 (max bull).

WINDOW	MASTER (EQUAL-WT)	SEPT 12 D2 (COMMITTED)	THE CALL
1 month	-1.93	-1.85	Bear — deeper still; small front-end cuts to CLARITY (revised text left both blockers untouched) and Tokenization (third negative tokenized-Treasury reading) add to Iran's chokepoint drag
3 months	-1.52	-1.46	Bear — CALL-BAND FLIP this cycle, from Mild Bear . It crosses the -1.5 line by 0.02; the Sept 15 cloture vote and the Sept 15-16 FOMC both sit inside this window
6 months	-0.16	-0.16	Neutral — unchanged; CLARITY and Tokenization still carry this window against Iran's and the Fed's drag, and DTCC's October launch lands inside it
1 year	+1.74	+1.69	Bull — improved on the SEC transfer-agent rulemaking; four of five pillars positive, Iran alone negative here
3 years	+2.95	+2.92	Bull — law + adoption + cycle + value; nudged up on the same SEC rulemaking

Formula: per pillar, $\text{Signal} = ((P - 50) \div 50) \times \text{Quality} \times \text{Impact}$, with Impact a uniform **8** for every pillar. **MASTER = the simple mean of all five pillar signals** — equal weight, 20% each (add a pillar and it auto-rebalances to 1/N). Bands: $|s| < 0.5$ Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. "Sept 12 d2 (committed)" is the day's second-cycle committed baseline (2026-09-12_draft2), for exact comparison. Machine-verified two ways (hand recompute of every pillar signal and every master window, cross-checked against run.py blend's own output).

THE FINAL NUMBER — HOW IT'S BUILT, AND WHAT MOVED THIS CYCLE

+0.22 = the equal-weight mean of the five MASTER signals above $((-1.93 - 1.52 - 0.16 + 1.74 + 2.95) \div 5)$. Weighting the longer windows harder (10/15/20/30/25%) gives **+0.81**, a hair above the day's committed +0.80 and still Mild Bull. **One call band flips this cycle: the 3-month window crosses Mild Bear → Bear**, by 0.02 — small, and worth reading as the band boundary being crossed rather than as a regime change. **CLARITY Act re-rated down** at the front end, because the Sept 10 revised text left both binding disputes untouched five days before the cloture vote; **Tokenization re-rated two-directionally** — down at 1mo/3mo on a third consecutive negative tokenized-Treasury reading, up at 12mo/36mo on the SEC's transfer-agent rulemaking; Iran War Risk and Fed & Macro both held flat on genuinely offsetting or already-priced evidence; Bitcoin TA (computed) is unchanged at 54/47/59/68/69. **UPDATED DRAFT — SEPTEMBER 12, 2026 · AWAITING MY STAMP** — this is a FULL WEEKLY REFRESH, which the runbook categorically excludes from delegated auto-stamp authority regardless of how small the moves are; status stays "draft", no stamped_by. See My Decision.

The Trend — Final Number, Cycle by Cycle

Every committed reading of THE FINAL NUMBER, in sequence — the record of how the call has actually moved, not just where it sits today. (Today's reading joins this history once archived.)

Generated by engine/history.py from every committed master_blend snapshot in reports/archive/. Rebuilt automatically on every run.py archive (or manually via run.py history).

The Full Pillar Matrix

Every pillar's signal on every window — September 12 FULL WEEKLY REFRESH scores (2026-09-12_draft3), DRAFT — AWAITING ALEX'S STAMP (each report shows the full June → Aug 22 → Aug 28/29 drafts → Aug 31 → Sept 1 → Sept 2 → Sept 5 draft → Sept 5 draft2 → Sept 6 → Sept 8 → Sept 9 → Sept 10 → Sept 11 → Sept 12 → Sept 12 draft2 → Sept 12 draft3 lineage).

PILLAR (WEIGHT · IMPACT)	1 MO	3 MO	6 MO	1 YR	3 YR	STATUS
CLARITY Act (20% · 8)	-2.72	-0.54	+1.09	+4.61	+6.38	RE-RATED DOWN at 1mo/3mo — the Sept 10 revised text left ethics and stablecoin-yield untouched five days before cloture
Iran War Risk (20% · 8)	-4.70	-4.99	-3.70	-1.25	+1.76	Held flat — the IAEA/UNSC referral (bearish, unpriced) and the Salalah track plus Brent's give-back (bullish, unpriced) offset
Tokenization RWA (20% · 8)	+0.14	+1.27	+2.18	+3.24	+4.03	RE-RATED BOTH WAYS — down 1mo/3mo on a third negative tokenized-Treasury reading, up 12mo/36mo on SEC rule 34-106246
Fed & Macro (20% · 8)	-2.86	-2.99	-1.15	+0.36	+1.04	Held flat — the Goldman/JPM hike-call reversals are downstream of the core-CPI print already priced this morning
Bitcoin TA — quant (20% · 8)	+0.48	-0.34	+0.79	+1.73	+1.52	Recomputed on today's bar — BTC \$77,282 (local full quant refresh); P unchanged at 54/47/59/68/69
MASTER — mean of the five	-1.93	-1.52	-0.16	+1.74	+2.95	equal-wt

P lineage (June → Jul 8 → ... → Aug 16 → 22 draft2 → 28/29 drafts → 31 → Sept 1 → Sept 2 → Sept 5 → Sept 6 → Sept 8 → Sept 9 → Sept 10 → Sept 11) — CLARITY 55/60/65/85/92 → 52/56/61/83/92 → ... → 32/47/58/82/92 (Aug 7, committed) → 32/47/58/82/92 (Sept 9, held flat since Aug 7) → 32/47/58/82/92 (Sept 10, held flat) → 32/47/58/82/92 (Sept 11, held flat) → 32/47/58/82/92 (Sept 12, held flat) → 32/47/58/82/92 (Sept 12 draft2, held flat) → **30/46/58/82/92** (Sept 12 draft3, FULL WEEKLY REFRESH — RE-RATED DOWN at 1mo/3mo: the Sept 10 revised ~630-page text, missed by both daily cycles, added DeFi/CFTC-registration language but left the ethics title and the stablecoin-yield provision untouched five days before the cloture vote; Sen. Moran's opposition was rejected as a driver on verification, being an early-August position) · Iran 50/55/62/75/85 → 40/47/55/70/83 → ... → 20/28/41/56/77 (Aug 16, committed) → 14/22/38/54/76 (Aug 22 draft2, committed) → 14/22/38/54/76 (Aug 29, held flat, draft) → 9/17/34/51/75 (Aug 31 — RE-RATED DOWN, flip line fired, auto-stamped committed) → 7/15/32/50/75 (Sept 1 — RE-RATED DOWN AGAIN, more modestly, on continued escalation, auto-stamped committed) → 1/9/27/47/74 (Sept 2 — RE-RATED DOWN SHARPLY on a ~50x-larger strike wave, first-ever tanker strikes, and a four-country retaliation — COMMITTED, auto-stamped Sept 3) → 1/9/27/47/74 (Sept 5 draft, held flat) → 1/9/27/47/74 (Sept 5 draft2, full weekly refresh — held flat, COMMITTED BY ALEX Sept 5, 2026) → 1/8/25/45/73 (Sept 6 — RE-RATED DOWN, modestly, once CENTCOM's own press release confirmed the Sept 5 tanker strike as a 3-tanker retaliation for an IRGC missile attack on 2 US Navy warships — COMMITTED, AUTO-STAMPED Sept 6, 2026) → 1/7/24/44/73 (Sept 8 — RE-RATED DOWN, modestly, on Iran's announced intent to declare a restricted zone beyond Hormuz into the Persian Gulf, not yet executed — COMMITTED, AUTO-STAMPED Sept 8, 2026) → 1/6/23/43/72 (Sept 9 — RE-RATED DOWN, modestly, on CENTCOM's confirmed 5-tanker strike Sept 8 and Brent's intraday \$100 cross Sept 9, neither firing a flip-line clause — COMMITTED, AUTO-STAMPED SEPTEMBER 9, 2026, the last TRUE committed baseline) → 1/5/22/42/72 (Sept 10 — RE-RATED DOWN, modestly, on the Al Azraq Jordan retaliation and the Houthi seizure of Mocha/Bab-el-Mandeb, neither firing a flip-line clause — COMMITTED, AUTO-STAMPED SEPTEMBER 10, 2026) → 1/4/20/40/71 (Sept 11 — RE-RATED DOWN, modestly, as the "sustained Brent close above \$100" flip-line clause fired on a third consecutive session, alongside fuller reporting of Iran's 10-vessel Sept 9 Hormuz shipping wave — COMMITTED, AUTO-STAMPED SEPTEMBER 11, 2026) → **1/2/18/38/70** (Sept 12 — RE-RATED DOWN, moderately, as Houthi forces swept the rest of Yemen's Red Sea coastline and seized Bab al-Mandeb's Mayyun Island, a second global chokepoint moving under adversary-aligned control, alongside a UKMTO-confirmed strike on two more vessels near Khasab, Oman, neither independently firing a flip-line clause — COMMITTED, AUTO-STAMPED SEPTEMBER 12, 2026, the new last TRUE committed baseline) → **1/2/17/38/70** (Sept 12 draft2, second cycle of the day — trimmed one further point at 6mo only: the baseline's Bab al-Mandeb cut stands, plus a Saudi Petroline pipeline shutdown (bearish) and a Sept 14 Salalah GCC-Iran ministerial (bullish) roughly offset — COMMITTED,

AUTO-STAMPED SEPTEMBER 12, 2026) → **1/2/17/38/70** (Sept 12 draft3, FULL WEEKLY REFRESH — HELD FLAT: the IAEA Board's 23-3-8 referral of Iran to the UN Security Council on Sept 9, previously unpriced and bearish, offsets against previously unpriced de-escalation — Brent's give-back to a \$104.61 Sept 11 futures settle, Gulf exports through Hormuz above 10 mb/d, the US twice refusing MBS's request to strike the Houthis, and the war's first GCC-Iran ministerial convening in Salalah Sept 14; no flip-line clause newly fires) · Tokenization 53/57/62/72/85 → 52/56/62/73/85 → ... → 52/60/66/74/85 (Aug 8, committed) → 52/60/66/74/85 (Sept 9, held flat since Aug 8) → 52/60/66/74/85 (Sept 10, held flat) → 52/60/66/74/85 (Sept 11, held flat) → 52/60/66/74/85 (Sept 12, held flat) → 52/60/66/74/85 (Sept 12 draft2, held flat) → **51/59/66/76/86** (Sept 12 draft3, FULL WEEKLY REFRESH — RE-RATED TWO-DIRECTIONALLY: 12mo +2 and 36mo +1 on the SEC's proposed rule 34-106246, primary-verified verbatim on sec.gov, which would permit a blockchain to serve as a transfer agent's master securityholder file — the official legal record; 1mo -1 and 3mo -1 on a direct primary rwa.xyz pull showing tokenized Treasuries at \$15.74B, -3.05%/30d, the third consecutive negative reading this report pre-registered as re-rate-worthy; 6mo held flat, DTCC's October launch offsets) · Fed 38/40/46/54/61 → 35/36/42/52/61 → ... → 43/41/48/56/62 (Aug 22 draft2, committed) → 36/35/45/55/61 (Aug 29, draft) → 36/35/45/55/61 (Aug 31, auto-stamped committed) → 36/35/45/55/61 (Sept 1, auto-stamped committed) → 36/35/45/55/61 (Sept 2 — held flat, auto-stamped Sept 3) → 32/31/43/54/60 (Sept 5 draft — RE-RATED DOWN on a hot August jobs report and higher FOMC hike-odds pricing) → 32/31/43/54/60 (Sept 5 draft2, full weekly refresh — RE-CONFIRMED, COMMITTED BY ALEX Sept 5, 2026) → 32/31/43/54/60 (Sept 6, held flat, auto-stamped) → 32/31/43/54/60 (Sept 8, held flat, auto-stamped) → 32/31/43/54/60 (Sept 9, held flat) → 32/31/43/54/60 (Sept 10, held flat) → 34/33/44/54/60 (Sept 11 — RE-RATED UP, modestly, once the August CPI print landed with core a tenth cooler than consensus — COMMITTED, AUTO-STAMPED SEPTEMBER 11, 2026) → 34/33/44/54/60 (Sept 12, held flat) → **29/28/41/53/60** (Sept 12 draft2, second cycle of the day — RE-RATED DOWN, correcting the Sept 11 consensus figure (the real pre-print consensus was +0.2% m/m core, so the +0.3% print was a tenth hotter, not cooler) and adding the UMich preliminary September sentiment survey (47.8, a second straight decline) — COMMITTED, AUTO-STAMPED SEPTEMBER 12, 2026) → **29/28/41/53/60** (Sept 12 draft3, FULL WEEKLY REFRESH — HELD FLAT: the Goldman Sachs and JPMorgan reversals to hike calls, both dated Sept 11, are analyst estimates downstream of the same August core-CPI print already priced in the morning cut, so re-cutting would double-count; CME FedWatch ~90% is a market price and is barred from moving P) · Bitcoin TA (computed each run) 37/37/46/67/70 → ... → 49/46/54/66/69 (Aug 22 draft2) → 54/46/56/67/69 (Aug 29) → 54/46/59/68/69 (Aug 31) → 57/46/59/68/69 (Sept 1, computed) → 57/47/59/68/69 (Sept 2, computed) → 59/48/60/68/69 (Sept 5, computed) → 62/53/60/68/69 (Sept 6, computed) → 59/47/59/68/69 (Sept 8, computed) → 59/47/60/68/69 (Sept 9, computed) → 55/48/59/68/69 (Sept 10, computed) → 58/47/59/68/69 (Sept 11, computed) → **54/47/59/68/69** (Sept 12, computed on today's bar; re-run locally for the weekly refresh, unchanged). Impact remains a uniform **8** for every pillar and every pillar carries an equal **20%** weight — the MASTER row is the simple mean of the five. Full lineage back to June preserved in each pillar's own report.

The Story, Window by Window

What the blend is saying on September 12, 2026 — FULL WEEKLY REFRESH (comparisons below are vs. the day's committed second-cycle baseline, 2026-09-12_draft2)

- **1 month — Bear (-1.93, down from -1.85).** Iran (-4.70), Fed & Macro (-2.86), and Bitcoin TA (+0.48) all held; **CLARITY fell to -2.72 from -2.45** as the revised text left both blockers untouched five days before cloture, and **Tokenization eased to +0.14 from +0.29** on the third negative tokenized-Treasury reading. Two small movers in the same direction, not one large one.
- **3 months — Bear (-1.52, down from -1.46) — THE ONE CALL-BAND FLIP THIS CYCLE, from Mild Bear.** Iran (-4.99), Fed (-2.99), and Bitcoin TA (-0.34) held; **CLARITY fell to -0.54 from -0.41** and **Tokenization eased to +1.27 from +1.41**. Read it honestly: the window crossed the -1.5 band boundary by 0.02, on two 1-point P moves. That is a band being crossed, not a regime changing — but both the Sept 15 cloture vote and the Sept 15-16 FOMC sit inside this window, so it is the window most exposed to next week.
- **6 months — Neutral (-0.16, unchanged).** Every pillar holds here: CLARITY +1.09, Iran -3.70, Tokenization +2.18, Fed -1.15, Bitcoin TA +0.79. Tokenization's 6mo was deliberately held flat because DTCC's October launch lands inside this window and genuinely offsets the front-end contraction. Squarely inside the Neutral band.
- **1 year — Bull (+1.74, up from +1.69).** The cycle's one upward mover: **Tokenization rose to +3.24 from +3.00** on the SEC's transfer-agent rulemaking. CLARITY +4.61, Bitcoin TA +1.73, and Fed +0.36 all hold; Iran alone stays negative at -1.25. Price sits ~45% below power-law fair value (\$140,025).
- **3 years — Bull (+2.95, up from +2.92).** Every pillar positive: CLARITY +6.38, **Tokenization +4.03 (up from +3.92)**, Iran +1.76, Bitcoin TA +1.52, Fed +1.04. The same SEC rulemaking nudges the structural window; nothing else this cycle reaches a 3-year horizon.

Where the Two Lenses Agree — and Where They Fight

The point of running qualitative and quantitative on the same standard

THE INDEPENDENT CONFIRMATION

Both lenses sat still this cycle, for different reasons: P 1/2/17/38/70 (Iran, judged, held flat because a genuinely new escalation and a genuinely new de-escalation offset) vs 54/47/59/68/69 (Bitcoin TA, computed, unchanged on today's bar). The quant pillar's reading, built on completed bars and cycle position rather than daily headlines, has been unmoved throughout a fortnight of geopolitical escalation — which is the point of running it on the same standard. Iran War Risk remains the worst signal at every window through 1 year; it stopped falling this cycle, but it did not improve, and the strait it is worst about is degraded rather than reopened: Kpler data via The National put Bab al-Mandeb transits at 6 vessels on Sept 10 against 30/26/29 the three prior days, roughly -80%.

THE REAL DISAGREEMENT

Near-term: Bitcoin TA (P 54) is now the strongest near-term pillar, narrowly ahead of Tokenization (P 51) after this cycle's 1-point trim; CLARITY (P 30) and Fed & Macro (P 29) sit well below a coin flip; Iran remains sharply the clearest risk-off vote in the set (P 1, effectively floored). The master resolves it honestly: Bear at 1 month, a touch deeper than the day's committed baseline, with two small judged cuts — not one dramatic one — doing the work.

Long-term: the four story pillars average about +3.30 at 3 years (CLARITY +6.38, Tokenization +4.03, Fed +1.04, Iran +1.76) versus the Bitcoin-TA pillar's +1.52 — still roughly 2.2× higher, and the gap widened slightly this cycle on the SEC rulemaking. Remember why: the TA pillar is capped by construction (P never leaves 25–75) and its 3-year Quality is 0.50. Equal weight lets that gap show through honestly instead of burying it in a blend.

Trigger Watch — The Next Six Weeks, Re-Dated

A FULL WEEKLY REFRESH ran this cycle, layered on the day's committed second-cycle baseline. CLARITY Act re-rated down at the front end; Tokenization re-rated two-directionally; Iran War Risk and Fed & Macro held flat. These are the forward triggers; each pillar report carries the full table.

DATE / LEVEL	EVENT	RE-RATES
Sept 10, 2026 — NEW this weekly refresh, MISSED by both daily cycles since	Sen. Lummis and Senate Republicans released a revised ~630-page CLARITY Act text five days before the cloture vote (PRIMARY: lummis.senate.gov, plus The Block, Crypto in America, Blockhead, The Crypto Times, TFTC). It added DeFi language — decentralized-in-name-only protocols must register with the CFTC and comply with the Bank Secrecy Act, scope narrowed to spot and cash digital commodity transactions — but left the ethics title and the stablecoin-yield provision unchanged, giving Tillis nothing	CLARITY: the driver of this cycle's cut — 1mo -2 (32→30), 3mo -1 (47→46); 6mo/12mo/36mo held, since a failed cloture is a timing problem, not a death problem
Checked and REJECTED as a driver this cycle — early-August, not new	Sen. Jerry Moran (R-KS) opposes the bill over community-bank deposit flight; Sen. Mike Rounds (R-SD) says negotiations "do not look good right now."	CLARITY: no P move on any of these. Verification dated Moran's position to early August 2026, so scoring it now would double-count

	Also logged, SINGLE-SOURCE: a Politico report that no Senate Democrat backs the revised text	an August fact; Rounds is thinly sourced; the Politico line is single-source. Reported, not scored
Honest counterweight, Sept 12 — a MARKET PRICE, cuts against this cycle's cut	Polymarket's odds on CLARITY being signed into law in 2026 firmed to ~19.5–20% from ~16% on Sept 6 — i.e. the market read the revised text as mildly <i>good</i> news, the opposite of this report's read. Kalshi puts a qualifying law by Jan 1, 2027 at ~15–16%, and a Senate vote before Oct 1 at ~91%. Galaxy Research's ~10% is an ANALYST ESTIMATE dated Aug 14	No P move — prediction-market prices and analyst estimates are reported separately and neither moves P. Disclosed because it argues against this cycle's own direction
Sept 1, 2026 (Federal Register Sept 4; comments close Nov 3) — NEW this weekly refresh, PRIMARY-verified on sec.gov	SEC proposed rule Release No. 34-106246 (File S7-2026-30, RIN 3235-AL55) modernizes the transfer-agent rules. Verbatim from p.86: it would "permit a transfer agent to utilize a blockchain or other distributed ledger technology as its master securityholder file, or a component thereof , but it would not mandate it" — conditioned on the agent retaining exclusive control, with a new Form TA-2 question requiring DLT use to be reported. The master securityholder file <i>is</i> the official legal record of ownership	Tokenization: the driver of this cycle's upgrade — 12mo +2 (74→76), 36mo +1 (85→86). Sized small deliberately: it is a <i>proposal</i> , permissive not mandatory, comment period still open. It also re-frames August's "innovation exemption" cancellation — the SEC went to formal rulemaking instead
Sept 12, 2026 — a pre-registered trigger of this report's own, now FIRED	Tokenized US Treasuries at \$15.74B, –3.05% over 30 days (direct primary pull of app.rwa.xyz, which 403'd in prior cycles and succeeded this cycle, independently repeated by the adversarial pass). Against this report's own prior primary pulls — \$15.98B/–0.39% (Aug 22) and \$16.00B/–0.93% (Aug 28) — that is the third consecutive negative reading , which the Tokenization trigger table pre-registered as "a genuine trend worth re-rating on", and it is materially larger than the earlier sub-1% readings. Direction corroborated on DefiLlama (BUIDL –2.25%/7d, Centrifuge –4.46%/7d, Anemoy –9.34%/7d)	Tokenization: 1mo –1 (52→51), 3mo –1 (60→59); 6mo held flat because DTCC's October launch lands inside that window. Struck and NOT used: the accompanying net-flow figures (–\$121.0M/7d, –\$554.5M/30d) and the \$38.82B aggregate are login-gated on rwa.xyz and could not be verified — they carry none of this move
Sept 9, 2026 — NEW this weekly refresh, previously unpriced	The IAEA Board of Governors voted 23–3 with 8 abstentions to refer Iran's nuclear file to the UN Security Council — the first such referral in roughly 20 years; Russia, China and Niger against; tabled by the US, UK, France and Germany (iaea.org, Al Jazeera, Al-Monitor, UK FCDO resolution text)	Iran War Risk: materially escalatory, but <i>procedural</i> , with no enforcement timeline, and it lands on horizons that already price an eighth-month war. Offset against this cycle's de-escalation evidence — contributes to HOLD FLAT, not a cut. Watch: a UNSC snapback resolution, or Iranian NPT withdrawal, would be the score-moving follow-on
Sept 11–14, 2026 — the de-escalation side, also previously unpriced	Brent gave back to a \$104.61 futures settle Friday Sept 11 (–2.8%; WTI \$100.05 futures settle, –2.4%) off the Sept 10 peak above \$107; Gulf crude exports through Hormuz topped 10 mb/d for the first time in ~2 months (TankerTrackers/Kpler — a COMMERCIAL-TRACKER basis the White House and	Iran War Risk: real, but unconsummated. A lift should wait on a Salalah <i>outcome</i> , not its announcement — and Petroline is still shut. Contributes to HOLD FLAT at 1/2/17/38/70

	trackers openly dispute, not an official estimate); the US twice refused MBS's request for direct strikes on the Houthis; Houthi spokesman Yahya Saree said navigation is safe for all shipping <i>except Saudi vessels</i> ; and Oman convenes the war's first GCC–Iran ministerial in Salalah on Monday Sept 14	
Fired Sept 10-11, escalated to island seizure Sept 11, CONFIRMED via 6+ independent outlets	Houthi forces complete their sweep of Yemen's entire Red Sea coastline (capturing Dhubab, Murad) and seize Mayyun (Perim) Island in the Bab al-Mandeb strait; fighting continues for Zuqar Island (Al Jazeera, NBC News, CNBC, NPR, The National, National Herald). Saudi Crown Prince MBS's request for direct US strikes on the Houthis was refused	Iran War Risk: same Houthi/Yemen actor and theater already priced — does NOT independently fire the widening clause; no US casualty, so that clause doesn't fire either. The driver of this cycle's cut (3mo/6mo/12mo -2 each, 36mo -1)
Sept 10 (UKMTO Warning 133-26), reported Sept 11 — CONFIRMED via UKMTO plus 3+ independent outlets	Four unidentified projectiles struck two vessels near Khasab, Oman, one set afire (UKMTO; Gulf News, Maritime Executive, The Hill). Logged, not scored (single-source): an IRGC claim of a Sairdrone strike near the Strait entrance	Iran War Risk: continuation of the established tanker/vessel-attack pattern — contributes to this cycle's cut
FIRE Sept 10-11 — a flip-line clause, CONFIRMED via 4+ independent market sources	"Sustained Brent close above \$100" — Brent ended Thursday Sept 10 up more than 6% above \$107 (above \$108 intraday), its highest since May 19; last settling at \$104.61 on Friday Sept 11 (futures settle, -2.8%; Sept 12 was a Saturday with no settle), a fifth consecutive session near/above \$100 (Rigzone/Bloomberg wire, TradingEconomics, Vantage Markets, NAI500)	Iran War Risk: this clause fired last cycle and continues to hold — the second distinct flip-line clause to trigger, after the Aug 30 resumption-of-direct-US-strikes clause
Fired Sept 9, CONFIRMED via CENTCOM/Jordan's own military statement	The IRGC retaliates for the Sept 8 five-tanker strike by firing 20 ballistic missiles at Jordan's Al Azraq air base — 18 intercepted, 2 fell in unpopulated areas, no casualties (Al Jazeera, MiGFlug, GlobalSecurity.org, Jordan's own military)	Iran War Risk: Jordan is a repeat target — the widening clause does not fire; both sides confirm no casualties — the US-casualty clause does not fire either. Contributes to this cycle's cut
Re-verified PRIMARY this cycle (Senate Calendar No. 423 via govinfo)	CLARITY cloture on the motion to proceed to H.R. 3633 still ripens 2:15pm ET Tuesday, Sept 15; 60-vote threshold; Senate returns Monday Sept 14. Whip-count math corrected: prior reports said "7+ D/I crossovers needed" — with Paul, Hawley <i>and</i> Moran opposed and Tillis conditional, the real requirement is roughly 9–11	CLARITY: schedule confirmation is not new — no P move from it. The corrected crossover count is a stale-fact fix, not a fresh event
Re-verified this cycle, unchanged	Tokenization: DTCC's tokenization-service commercial launch remains October 2026 , no delay or scope change (last affirmatively confirmed Aug 30; its live production trades were 2026-07-15). Also reported, NOT scored: ECB Project Pontes production go-live Sept 21 (2+ independents, no primary ECB pull); the ICE/tZERO, Payward/LSE, Securitize/Socios and Neuberger items (single-outlet); and the Sept 6 Blockstream Liquid incident (~4,000 BTC, ~\$320M) — a Bitcoin sidechain, <i>not</i> the RWA stack	Tokenization: DTCC unchanged is why 6mo held flat. The rest: no P move

Corrected Sept 12; released Sept 11 (UMich, PRIMARY)	Fed & Macro: the Sept 11 core-CPI consensus figure was wrong (real consensus +0.2% m/m, so +0.3% actual was a tenth hotter, not cooler — 6 independent outlets, re-verified against bls.gov); University of Michigan preliminary September sentiment fell to 47.8 (second straight decline) with year-ahead inflation expectations jumping to 4.6% from 4.0%	Fed & Macro: RE-RATED DOWN to 29/28/41/53/60, concentrated on the FOMC-bracketing windows
Sept 15-16, 2026 — SEP confirmed PRIMARY on the Fed's own calendar	FOMC decision with a Summary of Economic Projections / dot plot — the first meeting after a core-CPI print that came in a tenth <i>hotter</i> than consensus while headline ran hot on energy. The Fed is in blackout Sept 5–17, so no official commentary exists or can exist before it. Current target range 3.50–3.75%, unchanged since Dec 11, 2025; July 28-29 was a 9–3 hold with Hammack, Kashkari and Logan dissenting <i>for</i> a hike	Fed: a hike confirms the hawkish read this pillar carries; a hold would argue the market outran the committee. The dot plot is the bigger information event than the decision itself
Sept 15, 2026	Next FOMC, with SEP/dot plot; also the first CLARITY Act cloture vote, precisely dated 2:15pm ET	Fed: a hike confirms the Sept 5 re-rate, a hold/cut suggests the market outran the committee. CLARITY: cloture succeeds = re-rate 3mo/6mo up hard; fails = re-rate down
~Aug 31, now passed	Historical average cycle-bottom month has passed (cycle month now 28.78)	TA: higher low after this + improving momentum = basing confirmed
Power-law fair value \$140,025	BTC \$77,282.35 sits ~45% below fair value	1yr/3yr windows: the structural bull case's core, essentially unmoved by this cycle's news

The master flip line — Iran's strikes clause fired Aug 30, escalated sharply Sept 1-2, and a SECOND clause fired Sept 10-11: a confirmed new US combat death, a resumption of direct US strikes on Iran proper, independent confirmation the conflict has widened to a further new state, or a sustained Brent close above \$100 (Iran). **The Brent clause remains fired but is fading, not extending** — the last settle was \$104.61 (Sept 11 futures; Sept 12 was a Saturday with no settle), down 2.8% from the Sept 10 close above \$107. Two of the four clauses are live; the other two are not, and this cycle states that carefully: no US service-member death was *reported* Sept 10-12, but centcom.mil and defense.gov both returned HTTP 403 to direct fetches, so the KIA count of 18 is press-corroborated rather than primary-verified — absence of evidence, not confirmed absence. The widening clause does not fire either: the only "new" state name in the week's coverage is Bahrain, and that reporting is a **retrospective disclosure** of February–June 2026 damage to NSA Bahrain / Fifth Fleet HQ, not a new strike. Bab al-Mandeb is *not* formally closed and the only declared Houthi blockade is on Saudi-linked shipping — but it is badly degraded, not merely threatened: transits fell to 6 vessels on Sept 10 from 30/26/29 the three prior days. The Sept 15-16 FOMC delivering a hike would confirm and extend the Fed read; cloture failing Sept 15 with the ethics title still unamended would confirm the CLARITY cut. A signed, US-accepted Hormuz reopening that holds a full clean week — the Salalah ministerial is the first real test — would be the equivalent upside flip for Iran. The TA flip line (weekly close under \$50,000) is unchanged and far from current price.

Robustness — Does Any One Pillar Drive the Call?

Equal weight is now the fixed model — there is no qual/quant mix knob to tune. The test that matters instead: drop any single pillar and see whether the conclusion holds.

— drop CLARITY Act	-0.17	Neutral
— drop Iran War Risk	+0.91	Mild Bull · yes
— drop Tokenization RWA	-0.27	Neutral
— drop Fed & Macro	+0.55	Mild Bull · yes
— drop Bitcoin TA	+0.06	Neutral
all five in (headline)	+0.22	Neutral

The leave-one-out range this cycle is **-0.27 to +0.91** — the sign still flips when Tokenization, CLARITY, or Iran are dropped individually, the same fragile-reading pattern this report has flagged for weeks — and three of the five drops (removing CLARITY, Tokenization, or Bitcoin TA) round to **Neutral**, same as the headline itself. **Iran War Risk remains the largest single swing pillar: dropping it alone moves the reading from Neutral (+0.22) to +0.91 — a full call band better, into Mild Bull territory.** Dropping Fed & Macro alone also crosses into Mild Bull (+0.55), the second-largest swing pillar. That is the single clearest robustness signal this report can give: the headline number is not being driven by a broad, balanced move — Iran and, to a lesser degree, Fed & Macro are doing the work, and this cycle neither of them moved at all, so the small drift in the headline came entirely from the two pillars that carry the least of it. The horizon-weighted final (+0.81) is more robust and stays Mild Bull throughout even with either pillar included. This robustness check exists specifically to catch a pillar quietly driving the whole call.

My Decision

UPDATED DRAFT — SEPTEMBER 12, 2026 (2026-09-12_draft3) · FULL WEEKLY REFRESH · AWAITING MY STAMP

MASTER: -1.93 / -1.52 / -0.16 / +1.74 / +2.95 · THE FINAL NUMBER: +0.22 equal-weight (Neutral) / +0.81 horizon-weighted (Mild Bull) — one call-band flip, at the 3-month window only (Mild Bear → Bear); both headline call bands unchanged

This is a **FULL WEEKLY REFRESH** (score set 2026-09-12_draft3) — the first deep multi-source re-dig since the Sept 5 weekly — layered on the committed 2026-09-12_draft2 baseline. Four independent per-pillar research passes ran, plus a dedicated adversarial verification pass that went to PRIMARY sources rather than the reports' own citations. That pass earned its keep: **three of its corrections changed the outcome versus the raw research.**

CLARITY Act RE-RATED DOWN to 30/46/58/82/92 (from 32/47/58/82/92). The load-bearing fact is dated **Sept 10** and was missed by both daily cycles since, each of which recorded "no new dated legislative development found": Sen. Lummis and Senate Republicans released a revised ~630-page text five days before the cloture vote (PRIMARY: lummis.senate.gov, plus The Block, Crypto in America, Blockhead, The Crypto Times, TFTC). It added DeFi language — decentralized-in-name-only protocols must register with the CFTC and comply with the Bank Secrecy Act — but left **both** binding disputes untouched: the ethics title is unchanged, with the Tillis-Gallego counterproposal not incorporated and the White House still silent, and the stablecoin-yield language is unchanged. The one scheduled chance to clear the blockers before Tuesday came and went without clearing them, and Tillis — whose vote is conditional on ethics language — was given nothing. Cut sized small and confined to the windows the vote actually sits in: 1mo -2, 3mo -1; 6mo/12mo/36mo held, because a failed cloture is a timing problem, not a death problem, and the continuing resolution keeps the Senate in session to Dec 11. **Correction applied:** the research pass wanted a larger cut resting partly on Sen. Moran's opposition — verification dated that to *early August*, so it is reported, not scored. Honest counterweight, also disclosed: Polymarket *firmed* to ~19.5–20% from ~16% on the revised text, i.e. the market read it the opposite way; it is a market price and does not move P either.

Tokenization RE-RATED TWO-DIRECTIONALLY to 51/59/66/76/86 (from 52/60/66/74/85) — front end down, back end up, after five weeks flat. Up at 12mo/36mo on the SEC's proposed rule **34-106246** (Sept 1; Federal Register Sept 4; comments close Nov 3), read verbatim off sec.gov by the adversarial pass: it would "permit a transfer agent to utilize a blockchain or other distributed ledger technology *as its master securityholder file, or a component thereof.*" The master securityholder file is the official legal record of ownership, so this goes at the dual-record problem that is the most-cited structural defect in tokenized securities — and it re-frames August's "innovation exemption" cancellation, since the SEC went to formal rulemaking instead. Sized at only +2/+1 because it is a proposal, permissive rather than mandatory, with the comment window still open. Down at 1mo/3mo because this pillar's *own pre-registered trigger* fired: a direct primary pull of rwa.xyz puts tokenized Treasuries at \$15.74B, -3.05%/30d — against this report's own \$15.98B (Aug 22) and \$16.00B (Aug 28) pulls, the third consecutive negative reading, and materially larger than those sub-1% ones. **Correction applied:** the accompanying net-flow figures and the \$38.82B aggregate are login-gated and could not be verified — they are quoted nowhere and carry none of this move.

Iran War Risk HELD FLAT at 1/2/17/38/70, and this is a genuine two-sided hold rather than inertia. New and bearish, previously unpriced: the IAEA Board voted 23–3–8 on Sept 9 to refer Iran to the UN Security Council, the first such referral in ~20 years. New and bullish, also previously unpriced: Brent's give-back to a \$104.61 Sept 11 futures settle, Gulf exports through Hormuz above 10 mb/d for the first time in two months, the US twice refusing MBS's request to strike the Houthis, the Houthis exempting all non-Saudi shipping, and the war's first GCC-Iran ministerial convening in Salalah on Monday. No flip-line clause newly fires. **Correction applied:** the research pass described Bab al-Mandeb as "transits reduced but continuing" — literally true, materially misleading, and that framing is used nowhere; transits fell roughly 80% in two days. The honest read is that the front windows are at or near their floor and the evidence genuinely offsets, so the number should not move in either direction on one Saturday of thin flow. Re-rate Tuesday against the actual Salalah outcome.

Fed & Macro HELD FLAT at 29/28/41/53/60. The pillar was already cut -5/-5/-3/-1/0 earlier today, and everything new is downstream of that same evidence: Goldman's and JPMorgan's reversals to hike calls (both Sept 11) are

analyst estimates that followed the August core-CPI print already priced, and CME FedWatch at ~90% is a market price barred from moving P. The load-bearing correction behind this morning's cut was re-verified and stands: pre-print core consensus was +0.2% m/m, so the +0.3% print was a tenth *hotter*. August PPI (+5.4% y/y) is hot and primary but was released Sept 10, before that cut — available evidence then, not new evidence now. Re-cutting on any of this would be double-counting.

Stamp decision: this is a full weekly refresh, which the runbook **categorically excludes** from Alex's delegated auto-stamp authority — regardless of how small the moves are, and they are small. Status stays "draft", no stamped_by.

UPDATED DRAFT — SEPTEMBER 12, 2026 · AWAITING MY STAMP. Research access was full throughout and verification reconciled cleanly, so nothing else is pending; the only open item is Alex's own review.

Read as an investment posture: don't chase the bounce this month; the windows that pay are 6-plus months out; the levels and dates that would change this are printed above. Iran remains the largest single swing pillar (dropping it alone puts the reading at +0.91, Mild Bull), with Fed & Macro a close second (+0.55, also Mild Bull) — and note that neither of them moved this cycle, so the drift in the headline came entirely from the two pillars carrying the least of it. The leave-one-out range (−0.27 to +0.91) still crosses zero: a genuinely fragile reading, worth watching. The one call-band flip is at 3 months, by 0.02 — a boundary crossed, not a regime changed.

Sources

Each pillar report carries its full, freshly-checked source list for this FULL WEEKLY REFRESH. The master adds the engine and headline references for this September 12 weekly update.

- **The pillars:** the sibling reports in this folder — CoinPicks_CLARITY_Act_Pillar_Report (RE-RATED DOWN at 1mo/3mo) · CoinPicks-Tokenization_RWA_Pillar_Report (RE-RATED two-directionally) · CoinPicks_Iran_War_Pillar_Report (held flat, two-sided) · CoinPicks_Fed_Macro_Pillar_Report (held flat, already cut this morning) · CoinPicks_Bitcoin_TA_Quant_Pillar_Report (computed Sept 12).
- **The engine:** engine/blend.py → data/master_blend.json (score set 2026-09-12_draft3 in config/scores.json, status: **draft**, no stamped_by, active_qual_set; last committed set: 2026-09-12_draft2; full lineage back to 2026-06-19_committed; final-number window weights in config/settings.json "final_weights") · engine/mapping.py → data/pillar_scores.json (data through Sept 12, 2026).
- **September 12 weekly refresh — the load-bearing new facts, all primary-verified: lummis.senate.gov** press release "Lummis Releases Updated CLARITY Act Text Ahead of Historic Tuesday Vote" (Sept 10), plus The Block, Crypto in America, Blockhead, The Crypto Times, TFTC — revised ~630-page text adds DeFi/CFTC-registration language, leaves ethics and stablecoin-yield unchanged · **sec.gov** proposed rule Release No. 34-106246 / File S7-2026-30 (Sept 1; Federal Register Sept 4; comments close Nov 3) — DLT permitted as a transfer agent's master securityholder file · **app.rwa.xyz** direct pull — tokenized US Treasuries \$15.74B, −3.05%/30d, corroborated for direction by DefiLlama · **iaea.org** plus Al Jazeera, Al-Monitor and the UK FCDO resolution text — IAEA Board refers Iran to the UN Security Council 23–3–8 (Sept 9) · **govinfo** Senate Calendar No. 423 — cloture on H.R. 3633 ripens 2:15pm ET Sept 15 · **federalreserve.gov** FOMC calendar (Sept 15-16 with SEP) and openmarket.htm (target range 3.50–3.75%, last changed Dec 11, 2025) · **bls.gov** CPI and PPI releases · **dol.gov** initial claims 206,000 (week ending Sept 5). Single-source items are flagged as such in each pillar report and none of them moved a P.
- **Struck on verification, recorded for the audit trail:** Sen. Moran's opposition (early-August, not this week — not used to move CLARITY) · rwa.xyz net-flow figures and the \$38.82B aggregate (login-gated, unverifiable — not used to move Tokenization) · a stray "WTI \$83.11" figure (refuted; the Sept 11 futures settle was \$100.05) · "transits reduced but continuing" as a description of Bab al-Mandeb (materially understates a ~80% two-day drop; not used) · the 10-year Treasury quoted at 4.95% H.15 constant maturity rather than an intraday 4.97% · and US KIA at 18 described as "no reported death Sept 10-12" rather than confirmed, since centcom.mil and defense.gov both 403'd.
- **Price:** BTC/USD \$77,282.35 (Sept 12, 2026, local full quant refresh via data/btc_usd_daily.csv), \$77,063.25 (Sept 11) → \$77,282.35 (Sept 12); cycle low \$58,526 close (Jun 30); ATH \$124,728 close (Oct 6, 2025); power-law fair value \$140,025 (BTC ~45% below fair).
