Iran War Risk Pillar Report

Middle East Conflict Risk — Researched, Scored, and Personally Committed

AI-researched draft, truth-checked by a verification swarm against live primary sources. Final scores committed by me on June 19, 2026.

COINPICKS PILLAR REPORT · WEIGHT: 25% OF MY THESIS

Written June 19, 2026 · Last Checked June 19, 2026 · Not Financial Advice

My Committed Scores

Committed by me on June 19, 2026 — AI drafts shown for the record

WINDOW	MY P	AI DRAFT	QUALITY	IMPACT	SIGNAL	MY CALL
1 month	50	50	0.60	7	0.0	Neutral — no edge
3 months	55	55	0.65	7	+0.5	Mild Bull
6 months	62	62	0.70	7	+1.2	Bull
1 year	75	75	0.65	7	+2.3	Bull (dip-buy)
3 years	85	85	0.55	7	+2.7	Strong Bull

My Weight: 25% · **My Impact:** 7 (confirmed from subject selection) · **Formula:** Signal = ((P – 50) ÷ 50) × Quality × Impact. Positive = Bull · negative = Bear · zero = Neutral. Math verified.

THE THREE INPUTS, IN PLAIN ENGLISH

P — the odds this is *good for crypto* by then. Near-term a coin flip (a fragile ceasefire just wobbled and US–Iran talks broke off); long-term high (war shocks have historically faded and crypto recovered).

Quality — how trustworthy the evidence is. It *falls* with the horizon (0.70 → 0.55): the near-term reaction is well-documented, but the multi-year read leans on a thin sample. Every source is on the last page — click and judge for yourself.

Impact — 7 out of 10. A war shock hits crypto hard for days — but it's one input among many, and even a regime-change war in 2026 barely moved crypto on Iran-specific grounds.

The Claim

The thesis, and where I differ from the consensus

The crowd: a hot Middle East war is pure risk-off — "missiles fly, crypto dumps." With Iran's Supreme Leader killed and a ceasefire that keeps cracking, the loud story is "stay out until it's over."

Me: ~50% good-for-crypto near-term (real dip risk), rising to ~85% over three years — the dip has historically been a buy, not the start of a bear.

My edge: the crowd treats a war shock like a regime change *for crypto*. History says it's a multi-day flush that fades — and in 2026 crypto barely flinched on Iran itself (the current drop is macro, not missiles). Be scared for a week, constructive for a year.

The Facts

As of June 19, 2026 — hard numbers only, sources on the last page

- June 2025 "12-Day War":** Israel's Operation Rising Lion (June 13); US Operation Midnight Hammer struck Fordow / Natanz / Isfahan (June 21–22; 7 B-2s, 14 GBU-57 bunker-busters, Tomahawks); Iran hit Al Udeid, Qatar (June 23 — intercepted, no casualties); ceasefire June 24.
- Crypto in that war:** BTC slid from ~\$108k pre-war to a **~\$98,225 intraday low (June 22)**, then reclaimed **\$107k+ by June 25** — a fast V. Brent spiked from ~\$69 toward **~\$79**, then fell back to ~\$69 at the ceasefire.

- **2026 — a far larger war.** The US and Israel launched a regime-change campaign on **Feb 28, 2026**; Supreme Leader **Khamenei was killed** that day (confirmed by Iran's own government March 1). **~40 days** of fighting; ceasefire **April 8, 2026**.
- **Fragile since:** CENTCOM self-defense strikes **May 25** (IRGC boats in the Strait of Hormuz + a Bandar Abbas SAM site); a direct Israel–Iran missile exchange **June 7–8** (Iran hit Israel's Ramat David airbase; Israel struck central/western Iran).
- **Today (June 19):** Israel–Hezbollah agreed to renew their ceasefire (June 4 statement; IDF stays in southern Lebanon); **US–Iran nuclear talks in Switzerland were called off**. A June MoU opened a **60-day window** toward a final nuclear deal (reportedly sanctions relief + a ~\$300B reconstruction fund).
- **Crypto now:** BTC **~\$62.5k**, **~24%** below the ~\$82k mid-May peak (May 6) — the slide is **macro/Fed-driven**, **with Iran a secondary factor**. Brent calm ~\$80, no acute supply panic despite the escalation.

The Prize

Illustrative only — not price targets, not advice

The upside is the **"buy-the-invasion" rebound**. Anchor: Russia's invasion of Ukraine (Feb 24, 2022) — BTC fell ~8% to a **~\$34,300 intraday low**, bounced toward ~\$40k the same day, posted a **+14.5% up-day on Feb 28**, and ended **~+25–29% above the low within a week** (~+38% by late March). The June 2025 Iran war rhymed: a dip to ~\$98k, fully recovered within a week.

The Prize = catching the V-reclaim — but note it took *weeks* in 2022, not a day, and it's a thin two-event sample. The Prize doesn't feed the math; it tells you what the lean is worth acting on.

The Other Side

The strongest honest case this is wrong

- **BTC is a risk asset here, not a safe haven.** In a real Strait-of-Hormuz oil shock → inflation path, crypto falls *with* equities — the opposite of the implied "digital-gold dip-buy."
- **It already broke once.** The 2026 war re-ignited four months after its ceasefire (June 7–8 exchange; talks called off today). "Time heals" is directly contradicted by repeated re-escalation.
- **Thin sample.** The bullish long-term read rests on ~2 dip-and-recover events, both in a bull regime — geopolitical shocks don't always V-recover.

The Triggers

Dated events — some prove the claim right, some prove it wrong

DATE	EVENT	MEANS
By Aug 2026	60-day MoU window yields a signed nuclear deal	De-escalation confirmed — re-rate up
Any time	Strait of Hormuz closure / oil shock	Risk-off → re-rate near-term down
Any time	Renewed direct Israel–Iran or US strikes	Fresh dip — buy-the-dip test
2026	MoU window collapses, ceasefire breaks	Diplomacy fails — re-rate 3/6-month down

The flip line: a wider, sustained regional war (not a contained flare-up) *plus* a Hormuz oil shock = treat the dip-buy thesis as broken. A contained, fading conflict keeps the long-term Bull.

My Decision

✓ COMMITTED BY ME ON JUNE 19, 2026

My P: 50 / 55 / 62 / 75 / 85 · My Weight: 25% · My Impact: 7

Kept the AI draft scores as my own. A **dip-watching pillar, not a panic-selling one** — even a regime-change war in 2026 didn't crater crypto on Iran-specific grounds. The long-window optimism leans on a thin two-event sample, so I sized it modestly.

My numbers ARE my call. The trade plan comes when all my pillars combine in the master spreadsheet.

What Changed Since Last Check

Re-verified June 19, 2026 (first committed report in this format)

- **The 2026 war is confirmed and far larger than 2025** — a regime-change campaign (Feb 28 → Apr 8); **Khamenei was killed** (confirmed by Iran's government March 1). The ceasefire is fragile: June 7–8 missile exchange; US–Iran talks called off June 19.
- **Correction:** the 12-Day-War BTC bottom was **~\$98,225 (June 22, 2025)**, reclaiming ~\$107k by June 25 — pre-strike was the low-\$100ks, not ~\$105.7k.
- **Correction:** the 2022 "Prize" rebound took **weeks** (~+25–29% above the low within a week), not "+15% in 24 hours."
- **BTC ~\$62.5k, ~24% below the May peak** — macro/Fed-driven, Iran secondary.

Sources

Retrieved & graded June 19, 2026 — click and judge the quality yourself. Official records first, then reporting, then prices, then betting markets (sentiment only).

- **Official records:** Pentagon briefing — Operation Midnight Hammer (B-2s, GBU-57s, Tomahawks) · CENTCOM — Al Udeid defended, no casualties · CENTCOM self-defense strikes, May 25 2026 (quoted).
- **The 2026 war:** Assassination of Ali Khamenei (confirmed by Iran, Mar 1 2026) · NPR — Khamenei killed (Feb 28 2026) · Al Jazeera — June 7 Iran–Israel missile exchange · Al Jazeera — Israel–Lebanon ceasefire renewal (June 4) · Irish Times —

Switzerland talks called off (June 19).

- **The prices:** Coinbase API — BTC June 2025 (\$98,225 low; \$107.4k recovery) · Yahoo Finance — BTC ~\$62.5k, June 19 2026 (Fed-driven) · EIA — Brent daily (June 2025 spike to ~\$79) · StatMuse — BTC Feb 2022 daily closes · Bitcoin Magazine — 2022 Ukraine BTC reaction.
- **The odds (sentiment only, not fact):** Polymarket — US–Iran nuclear-deal / peace markets (directional: a near-term framework deal priced as likely, "permanent peace" priced lower and falling; live percentages not cited).
