Bitcoin Technical Analysis
Quant Pillar Report

The Tape Itself — Measured, Scored, and Mapped to the Pillar Standard

Machine-computed from 16 years of daily price data through a 7-indicator scoring stack, halving-cycle analogs, and a power-law valuation model. Every number is reproducible from the scripts in the BTC-TA folder. ***These numbers are computed, not judged, so they carry no draft/committed status of their own — they enter the master blend directly. This cycle (Nov 14, cloud routine), the qualitative set it blends with is unchanged at 2026-11-13_draft (COMMITTED, auto-stamped November 13, 2026) — a quant-only resync day; checks on all four qualitative pillars found nothing clearing the sufficiency rule. This quant pillar's own output resynced to BTC $68,833.17 (data relay, Nov 13 FINALIZED close, down from the Nov 13 intraday read of $69,208.90 quoted yesterday; Nov 12 close was $71,374.07, so −3.56% on the day). Model P eased one further point on the 1-month window (50→49); 3mo/6mo/1yr/3yr held at 54/58/70/70, and this pillar keeps resyncing unconditionally, every cycle regardless. Research access was NOT degraded — see What Changed.***

COINPICKS QUANT PILLAR REPORT · THE QUANTITATIVE SLEEVE OF MY THESIS

Data through November 13, 2026 — FINALIZED CLOSE, BTC $68,833.17 (data relay; Nov 12 close $71,374.07) · digest re-read & re-verified November 14, 2026, FULL WEEKLY refresh (qualitative set now 2026-11-14_draft, DRAFT, awaiting Alex's stamp — Iran War Risk re-rated down on 6mo; CLARITY Act, Tokenization, Fed & Macro held) · Not Financial Advice

The Scores — November 13 Model Output (Finalized Close)

Computed from daily data through the November 13, 2026 FINALIZED close (data relay; re-read and re-verified November 14, 2026). Last qualitative touch: November 13, 2026 — active set 2026-11-13_draft (COMMITTED, auto-stamped November 13, 2026), unchanged this cycle. No bar rolled over since yesterday (weekly dated 2026-11-15, now five days of data, the fifth partial; monthly 2026-11-30, quarterly 2026-12-31). BTC $68,833.17, −3.56% from the Nov 12 close ($71,374.07; intraday low $67,500). ***This pillar's own Model P eased a further point on the 1-month window*** *(1-month 50→49, Signal +0.00→−0.12) as the forming weekly bar fell to −19.6 as-is; the 3-month (54, +0.45), 6-month (58, +0.70), 1-year (70, +1.92) and 3-year (70, +1.60) windows held. Historical note: the October 3 divergence between two independently-researched weekly drafts (`2026-10-03_draft` vs. `_draft2`) was superseded when Alex committed the October 10 weekly's lineage forward on October 14 — it remains in config/scores.json permanently per house rules, but is no longer an active blocker.*

WINDOW	MODEL P	QUALITY	IMPACT	SIGNAL	CALL
1 month	**49**	0.75	8	**−0.12**	Neutral — eased a touch below a coin flip (P 50→49); forming weekly bar fell further (as-is −19.6, from −18.1); cycle analog 2-of-3 positive, median +6.8%
3 months	**54**	0.70	8	**+0.45**	Neutral — unchanged (P 54); monthly as-is −9.0 (from −8.1); still 2-of-3 positive, median +32.1%
6 months	**58**	0.55	8	**+0.70**	Mild Bull — unchanged (P 58); still unanimous 3-of-3 positive, median +84.3%; alignment-shift fragility, disclosed
1 year	**70**	0.60	8	**+1.92**	Bull — unchanged; every prior cycle at this exact month was higher a year later (3-of-3), median +160.2% (n=3 alignment shift, level soft)
3 years	**70**	0.50	8	**+1.60**	Bull — unchanged; value + cycle (36-month analog 3-of-3 positive, median +1,018.5%)

Impact: 8 (the tape aggregates every driver, but adds no causal force of its own) · **Formula:** Signal = ((P − 50) ÷ 50) × Quality × Impact · **Honesty cap:** P = 50 + 25 × (window score ÷ 100) — pure TA never claims odds more than 25 points from a coin flip, because its measured out-of-sample edge is modest. Math machine-verified.

THE THREE INPUTS, IN PLAIN ENGLISH

P — the odds the tape is *good for Bitcoin* by then. Near-term as-is basis (weekly composite −18.1/100, Neutral, agreement 4-of-7, on the forming bar dated Nov 15, five days of data; the completed bar dated Nov 8 finished at +12.3); long-term still high (at this exact point in prior cycles, the next 12 months were positive 3-for-3, median +160.2%, and price sits ~52% below its power-law fair value).

Quality — how trustworthy the evidence is. Highest near-term (weekly bars of history feeding the indicator stack), lowest at 3 years (only 3 completed cycles to learn from, and this cycle is already breaking the old pattern).

Impact — 8 out of 10, now the uniform value shared by every pillar; the TA pillar carries an equal 20% weight in the master, same as each qualitative pillar. Price is the thing itself — but a mirror, not an engine.

The Claim

The thesis, and where the numbers differ from the mood

The crowd: this is the cloud routine, Nov 14, on a fresh git clone. Preflight (Step 0) found no same-day duplicate “daily”/“weekly” commit on origin/master — proceeded normally. Quant data check: data/btc_usd_daily.csv's last bar is the FINALIZED November 13 close, $68,833.17 (GitHub Actions data relay), about one day old at run time — within the documented freshness window, so **no run.py quant refresh was run or needed** (the sandbox's network egress proxy blocks Bitstamp directly). Research ran primary-source-first (WebSearch) against the committed 2026-11-13_draft baseline on all four qualitative pillars and **found nothing clearing the sufficiency rule**: **CLARITY Act HELD** at 10/25/43/70/91 (no Senate floor/committee/cloture action or new text found since the Nov 9 return from recess). **Iran War Risk HELD** at 2/2/10/29/65 (continued Hormuz-area tanker and strike reporting this week is noisy and mutually conflicting across outlets/dates, much of it IRGC/state-media-sourced single-source claims; nothing clears sufficiency beyond what is already priced in the Nov 13 set). **Tokenization RWA HELD** at 59/66/71/78/86 (OKXICE's Tokenized Securities Venue has a confirmed Nov 23 launch date but is still not live; DTCC and the OCC's GENIUS Act rule were already captured in prior cycles). **Fed & Macro HELD** at 30/19/33/43/58 (October retail sales is not due until Nov 17; no new qualifying Fed-official remarks found beyond Nov 10–13). **Research access was NOT degraded** — WebSearch returned usable results on all four pillars; WebFetch to arbitrary domains (e.g. FRED) hit the documented sandbox egress block, worked around via WebSearch. config/scores.json was NOT touched this cycle. The tape itself resynced to BTC $68,833.17 (Nov 13 finalized close, down from the $69,208.90 intraday figure quoted yesterday; low $67,500), −3.56% from the Nov 12 close of $71,374.07, and +17.6% off the June 30 low — the tape doesn’t know why price moved, only that it did.

The model: no bar rolled over — weekly still dated 2026-11-15 (now five days of data, the fifth partial), monthly 2026-11-30, quarterly 2026-12-31. The weekly bar’s completed composite is **+12.3** (the bar dated Nov 8); the forming bar reads **−19.6** as-is (Neutral, agreement 4-of-7, from −18.1), and the weekly MACD histogram stays negative (−166). The monthly as-is composite eased to **−9.0** (Neutral, agreement 3-of-7, from −8.1), with October’s completed bar at +7.8. Q4 (quarterly) eased to +21.5 as-is (Slight bullish, 1-of-7, from +21.9), with Q3’s completed bar at +31.1. Repair Signal #1 (a weekly close above the 200-week MA) stays confirmed on the completed bar — but price now sits only +1.2% above the 200-week MA ($67,994), well below the 50-week ($75,061, −8.3%) and the 20-week ($74,038, −7.0%). Model P eased a further point on the 1-month window: P 50→49 (Signal +0.00→−0.12, Neutral), 2-of-3 positive, median +6.8%; the 3-month (P 54, Signal +0.45), 6-month (P 58, Signal +0.70), 1-year (P 70, Signal +1.92) and 3-year (P 70, Signal +1.60) windows held exactly. Price is ~53% below fair value ($145,521), and the froth that precedes real crashes remains absent. No horizontal level flipped membership: **$74,434 (1x) remains resistance, now +8.1% above price**; $81,685 (2x) remains resistance, +18.7% above price. Price remains below the falling resistance trendline ($72,816).

The edge: the model reads three separate clocks that don’t take a position on the news cycle — tape (weakening: price below $74,434 and $81,685 resistance and below the 20/50-week MAs, holding just above the 200-week), cycle clock (bottoming window: prior cycles bottomed at months 26–30; we’re at month 30.81, past the average-bottom date), and valuation (~53% below the power-law fair line, with price now further BELOW the −1σ “cheap” band at $72,751 — still inside the cheap zone). The two slow clocks point the same direction on the medium-to-long horizon — the near-term clock is the one doing the day-to-day flexing, exactly as its lower Quality input says it should.

The Facts — The Tape

*Computed from daily data through the November 13, 2026 FINALIZED close (BTC $68,833.17; −3.56% from the Nov 12 close of $71,374.07). No bar rolled over (weekly dated 2026-11-15, monthly 2026-11-30, quarterly 2026-12-31); scores use the current bar as-is. Quantified: on completed bars only, weekly is **+12.3** (bar dated 2026-11-08), monthly **+7.8** (October’s bar, dated 2026-10-31) and quarterly **+31.1** (Q3’s bar, dated 2026-09-30). Both readings are quoted deliberately — the as-is figure includes a bar that has not finished; the weekly bar has five days of data, the fifth partial.*

- **Weekly composite −19.6/100 (Neutral), agreement 4-of-7 indicators** — the forming bar (dated 2026-11-15, five days of data) eased further from −18.1 as price dropped further: price is below the 20-week ($74,038, −7.0%) and the 50-week ($75,061, −8.3%), and only just above the **200-week average ($67,994, +1.2%)**. RSI 41.6; MACD line 770 with histogram still NEGATIVE (−166, from −142); %B 0.34. The completed bar dated 2026-11-08 (Nov 2–8) finished at **+12.3**, closing at $74,742.52 with RSI 47.9, MACD line 1,622 / histogram +646 and %B 0.53.

★ **Repair signal #1 (a weekly close above the 200-week MA) remains CONFIRMED on the last completed bar — but it is now under test.** The completed bar dated 2026-11-08 closed at $74,742.52, about +10.3% above its 200-week average and −1.0% below its 50-week, with a completed-bar composite of **+12.3**. Price now ($68,833.17, Nov 13 finalized close; intraday low $67,500, below the line) sits only +1.2% above the current 200-week average ($67,994); the forming bar dated 2026-11-15 reads −19.6 as-is. A Sunday Nov 15 weekly close below ~$68,000 would un-confirm it.

- **Monthly bar did not roll over — October's bar stays completed at +7.8/100.** The forming bar (November, dated 2026-11-30) eased to **−9.0/100 (Neutral), agreement 3-of-7** — below the 20-month average ($86,249, −20.2%), above the 50-month ($64,392, +6.9%); RSI 46.3; the monthly MACD line stays below zero (−140, from −110) with histogram −2,853; %B 0.25.

- **Quarterly bar remains in its Q4 cycle — Q3's completed bar holds at +31.1/100.** The forming bar (Q4, dated 2026-12-31) eased to **+21.5/100 (Slight bullish), agreement 1-of-7** — comfortably above the 20-quarter average ($59,531, +15.6%) and the 50-quarter ($30,201, +127.9%); RSI 53.7, MACD line 15,079 with histogram −1,330; %B 0.58.

- **Levels that matter — no horizontal-level classification flip this cycle:** $74,434 (1x) remains resistance, now +8.1% above price. Above it, $81,685 (2x touch) remains resistance, +18.7% above price, then $88,269 (+28.2%, 2x). Below current price, the next support is $59,930 (−12.9%, 1x), then $57,735 (−16.1%, 1x). The falling weekly support trendline sits at $34,237; the falling resistance trendline sits at $72,816 — price remains below it.

★ **June 30 remains the cycle low: $58,526 close** — the flush tagged the Fib golden pocket ($54,257–$57,802 = 61.8–65% retrace of the $15,479 → $126,272 run) and has since built a **+17.6% bounce to $68,833.17** (Nov 13 finalized close), down from +18.3% on yesterday's intraday read. **$58,526 is still the line in the sand** — a decisive break back below it would undo this entire recovery leg.

Weekly tape, scored −19.6/100 as-is on the forming bar (Neutral, dated Nov 15, five days of data; the completed bar dated Nov 8 finished at +12.3) with agreement 4 of 7 indicators: the weekly close above the 200-week MA remains confirmed on the completed bar but price is now only +1.2% above it, the MACD histogram stays negative, price sits below both the 20- and 50-week MAs, and $74,434 remains resistance, +8.1% above price. Machine-annotated from the same data that feeds the scores.

The Facts — The Cycle Clock & The Value Floor

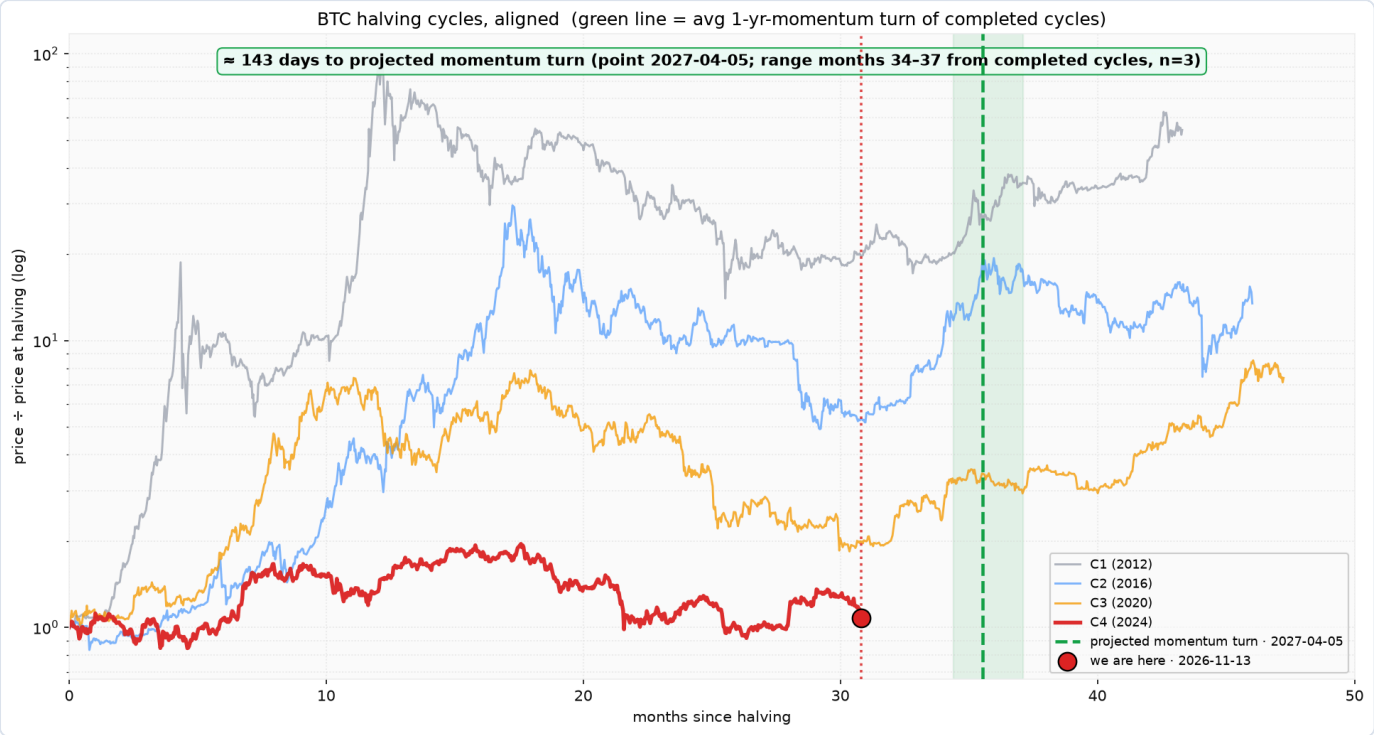

The two slower clocks. Same data, longer lenses.

- **The halving clock says "bottoming window."** The three completed cycles topped 12–18 months after their halving (avg 15.8) and bottomed at months 26–30 (avg 28.4). This cycle topped at month 18 (Oct 6, 2025 — $124,728) and printed its low-so-far at month 26 (June 30, $58,526, −53% from the top). **We are at month 30.81 — past the average-bottom date.**
- ★ **The cycle analogs are the spine of the long-window scores.** Standing at this exact cycle-month in C1/C2/C3 (cycle-month 30.81, from 30.78): next 1 month positive **2-of-3** (median +6.8%) · next 3 months positive **2-of-3** (median +32.1%) · next 6 months positive **3-of-3** (median +84.3%) · next 12 months positive **3-of-3** (median +160.2%) · next 36 months positive **3-of-3** (median +1,018.5%). *Fragility disclosure: the medians and agreement counts move as the cycle-month clock advances and as the underlying price moves — the 12-month median swung +176.4% → +146.7% → +160.2% over the last two cycles on alignment shift alone, the same disclosed n=3 fragility this report has always carried. Treat the analog levels as soft, the direction as the signal. And know what the 36-month number is: from month ~30 that window reaches month ~66 — it contains the NEXT halving's rally.*
- **1-year momentum turned positive at months 34–37 in every completed cycle (avg 35.5)** → still projects to **~April 2027** for this cycle.
- **The power-law floor:** a log-log fit over the full price series puts fair value at **$145,521** — price is **−53%** versus fair. Fit-window honesty: starting the fit in 2011, 2012, 2013, or 2015 instead moves fair value

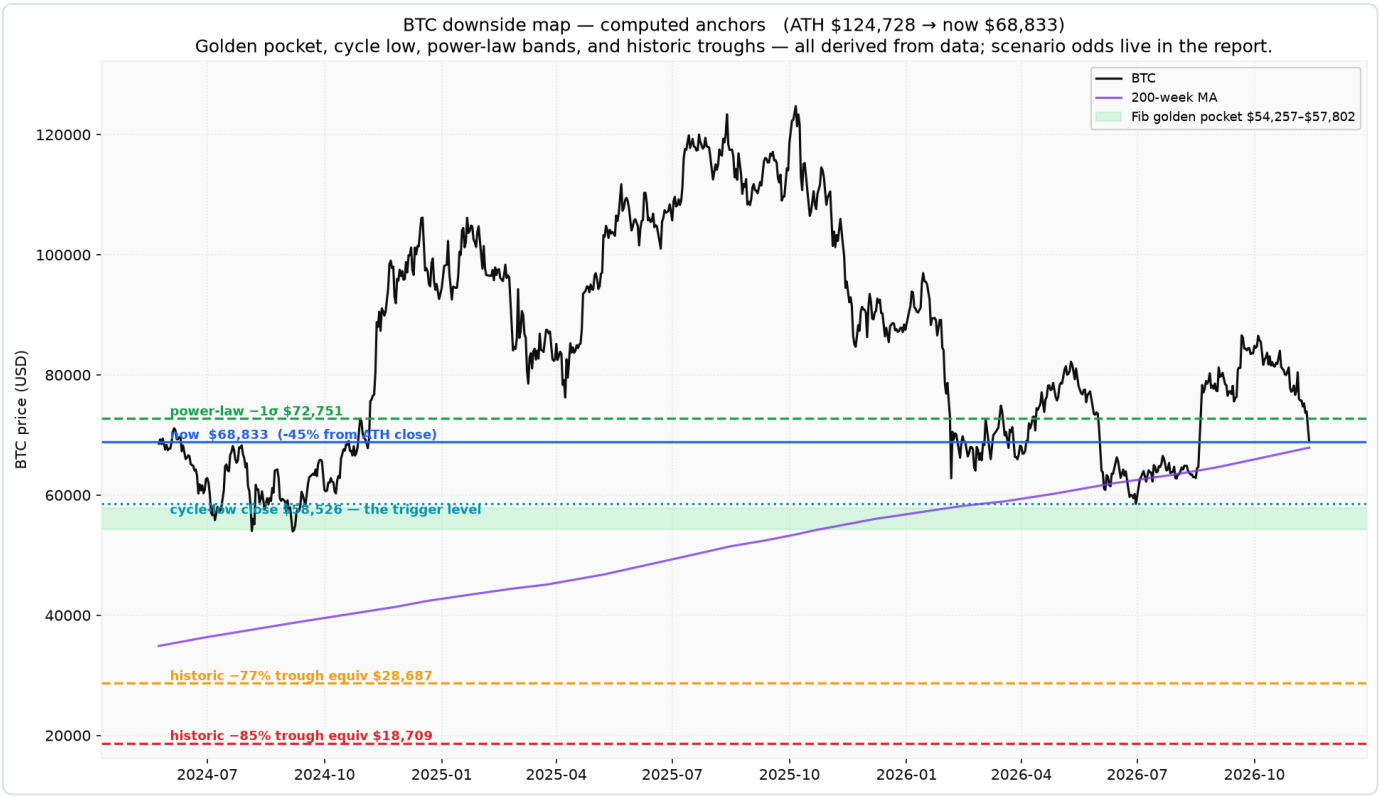

materially ($134,855 / $139,667 / $122,323 / $149,118) — the level is soft, but the **"well below fair" verdict holds across every window tested**. Price ($68,833.17, Nov 13 finalized close) sits **below the −1σ band ($72,751), by 5.4%** — inside the "cheap" zone (it sat 4.9% below the band on yesterday's intraday read; the −2σ band sits at $36,370, far below). Every halving-era cycle trough was −77% to −85% from ATH ($18.7K–$28.7K equivalent today) — the pre-halving 2011 bear went ~−93% (~$8.7K equivalent), excluded from the range but in the data; this cycle's low-so-far was −53% from the ATH.

- **No froth in the system:** the altcoin-froth index reads z = −0.87 — the opposite of the euphoric signature that preceded prior deep crashes. Validated on 16 years of data: high-froth days led to −39% average 12-month drawdowns vs −23% for low-froth days (gap significant, 95% CI excludes zero). *Data lags ~6 weeks (through May 23, unchanged) — used as a tilt, not a score input.*

★ **What we rejected:** a 5-feature logistic crash model was tested leave-one-cycle-out and **failed** (AUC 0.44 vs 0.58 for froth alone; 0.70 = useful). It is not in this report's numbers. The scores rest only on what survived out-of-sample testing.

All four halving cycles aligned (log scale, price ÷ price-at-halving). Triangles mark where 1-year momentum turned positive in each prior cycle — months 34–37, projecting to ~April 2027 for this one. The red dot is today: month 30.81, past the historical bottoming window.

The downside map, updated after the June 30 flush: the projected $54K–$61K bottom zone was hit ($58,526 close / $57,735 intraday, inside the golden pocket's doorstep) and bounced. Odds re-weighted accordingly: ~40% the low is in, ~35% one more flush to $54–58K, ~17% deeper bear, ~8% tail.

The Prize

Illustrative only — not price targets, not advice

From $68,833.17 (Nov 13 finalized close): the 20-week average ($74,038) is **+7.6%** above price; the 50-week average ($75,061) is **+9.1%** away. A retest of the $124,728 ATH is **+81.2%**; the power-law fair line ($145,521) is **+111.4%**. The median 12-month analog from this cycle-month is **+160.2%**; the median 36-month analog is +1,018.5% — **discount that one hard**, it leans on regimes (2017 mania, post-COVID ZIRP) that don't repeat on demand.

The Prize doesn't feed the math — it tells you what the lean is worth acting on. Here it says: the tape eased a touch further on its 1-month window as BTC's finalized close fell to $68,833.17 (Model P 49/54/58/70/70, from 50/54/58/70/70). On the qualitative side: nothing changed this cycle — the active set stays 2026-11-13_draft (CLARITY Act, Iran War Risk, Tokenization and Fed & Macro all held; see What Changed). The tape's two slow clocks (cycle, valuation) kept pointing the same medium-to-long direction regardless — $74,434 remains resistance at +8.1%, with $81,685 behind it at +18.7%, and price sits further inside the power-law −1σ "cheap" band. The 1-year and 3-year reads hold at Bull (P 70 each).

The Other Side

The strongest honest case the model is wrong

- **n = 3.** Every long-window claim rests on three completed cycles. Three coin flips landing heads is not a law of nature.

- **This cycle already broke the pattern.** A −53% drawdown at month 26 vs −77/−85% in prior cycles could mean dampened cycles (bullish read) — or it could mean *the bottom isn't in*: a historic-depth trough from this ATH is $18.7K–$28.7K, far below every level in this report.
- **The ETF era changed the machine.** Prior cycles had no spot-ETF flow channel, no CME basis trade at this scale, no corporate treasuries. Analogs may simply not transfer.
- **The power law is a curve fit, not a promise.** R^2 0.96 in-sample says nothing about a structural break — a fit like this "said cheap" through most of 2022's decline too. It bounds scenarios; it doesn't time anything.
- **The tape's edge is small by construction.** The honesty cap exists because measured predictive validity is modest (froth AUC 0.58). If you removed the cap, this report would be louder — and less true.

The Triggers

Price and dated events — some prove the read right, some prove it wrong

WHEN / LEVEL	EVENT	MEANS
$58,526	Daily close below the June 30 low	Flush scenario live — golden pocket $54.3–57.8K is the target; re-rate 1/3-month down
~$67,994	Weekly close above the 200-week MA	**CONFIRMED on the last completed bar, now UNDER TEST** — the completed bar dated Nov 8 closed at $74,742.52, about +10.3% above its 200-week MA (completed-bar composite +12.3); price now sits only +1.2% above this level after a $67,500 intraday low; the forming bar dated Nov 15 reads −19.6 as-is — a Nov 15 weekly close below it un-confirms the repair
~$75,061	Weekly close above the 50-week MA	**NOT CONFIRMED on the forming bar** — the completed Nov 8 bar closed −1.0% below its 50-week MA; price sits −8.3% below it now (from −7.8% yesterday) — repair on the Nov 15 close now looks out of reach
~Aug 31, 2026	Historical average-bottom month (28.4) has now passed (we're at month 30.81)	Price sits off the June 30 low (+17.6% on the Nov 13 finalized close, from +18.3% yesterday's intraday read); a higher low + improving monthly momentum after this date = basing confirmed — September's completed monthly bar (+15.7) was such a sign, but October's completed bar softened to +7.8 and the forming November bar's MACD line stays below zero, so the monthly confirmation is deteriorating, not improving
Jan–Jul 2027	Projected 1-yr momentum turn window (point: ~Apr 2027)	Arriving without new lows = cycle thesis on track; re-rate 1-year up
$50,000	Weekly close below	−60% from ATH; the dampened-cycle story is failing — see the flip line

The flip line: a decisive weekly close below **$50,000** breaks the base case and the golden pocket both — treat the dampened-cycle thesis as broken and put the historic trough zone ($18.7K–$28.7K) back on the table. Above it, a bearish quarter is the plan, not a surprise.

My Decision

QUALITATIVE SET NOW 2026-11-14_draft (DRAFT, AWAITING ALEX'S STAMP, FULL WEEKLY refresh built on the committed 2026-11-13_draft) · RE-VERIFIED NOVEMBER 14, 2026 · COMPUTED OUTPUT — NO STAMP OF ITS OWN FOR THE QUANT PILLAR (it is never hand-edited) · THIS PILLAR UNCHANGED THIS CYCLE AT THE NOV 13 FINALIZED CLOSE (DATA RELAY) — $68,833.17, MODEL P 49/54/58/70/70

Computed P: 49 / 54 / 58 / 70 / 70 · Quality: 0.75 / 0.70 / 0.55 / 0.60 / 0.50 · Impact: 8 (uniform) · This pillar's signals: 1mo −0.12 · 3mo +0.45 · 6mo +0.70 · 1yr +1.92 · 3yr +1.60 · Model P eased one further point on the 1-month window (1mo 50→49; 3mo/6mo/1yr/3yr held) · Master (equal-weight), this cycle's blend: 1mo −2.32 · 3mo −1.98 · 6mo −0.83 · 1yr +1.05 · 3yr +2.80 · THE FINAL NUMBER (this blend): -0.25 equal-weight (Neutral) / +0.32 horizon-weighted (Neutral), from −0.25 / +0.33 yesterday — essentially unchanged, the small drift is Iran War Risk's 6mo cut (this pillar's own 1-month easing was too small on its own to move the final number); no master call band flipped · Leave-one-out: −0.28 / +0.43 / −1.02 / +0.14 / −0.55 (drop CLARITY / Iran / Tokenization / Fed / TA), range −1.02 to +0.43 (sign still flips — fragile) · BTC $68,833.17 (Nov 13 finalized close, data relay, via run.py numbers; Nov 12 close $71,374.07)

This is the quantitative sleeve of the thesis — the same five windows, same formula, same table as every qualitative pillar, but computed instead of judged. No bar rolled over: the forming weekly bar (dated Nov 15, five days of data) eased to −19.6 as-is (4-of-7) and the completed Nov 8 bar stands at +12.3; the forming November monthly bar eased to −9.0 as-is (3-of-7; October completed at +7.8); Q4's quarterly bar eased to +21.5 as-is, with Q3's completed bar at +31.1. Model P eased one further point as the Nov 13 bar finalized below yesterday's intraday read: the 1-month window to P 49 (Neutral, −0.12; 2-of-3 positive, median +6.8%) — n=3, so a few days of alignment shift can flip one cycle's sign; read the direction, not the level. The 3-month (P 54, Neutral, +0.45), 6-month (P 58, Mild Bull, +0.70), 1-year (P 70, Bull) and 3-year (P 70, Bull) windows held exactly. With the weekly bar mid-cycle, quote the completed-bar figures (+12.3 / +7.8 / +31.1) alongside.

These numbers enter the master blend exactly as computed — this pillar has no override/re-stamp step of its own. Unlike the four qualitative pillars, this pillar carries no draft/committed status of its own: the qualitative set it blends with is now **2026-11-14_draft** (DRAFT, awaiting Alex's stamp), the FULL WEEKLY refresh built on the committed 2026-11-13_draft — Iran War Risk re-rated down −1 on 6mo (CENTCOM-confirmed Nov 13 Bahrain drone attack); CLARITY Act and Fed & Macro held flat; Tokenization's research resurfaced DTCC/Morgan Stanley facts already priced in from Nov 2–4 and correctly stayed held flat rather than double-counting them. This pillar's own computed output is unaffected by qualitative status and enters the master blend the same way it does every cycle; this cycle it eased a further point on its 1-month window on the Nov 13 finalized close ($68,833.17, −3.56% from the Nov 12 close of $71,374.07).

What Changed Since Last Check

FULL WEEKLY refresh, November 14, 2026 — cloud routine, run after this same day's earlier light daily touch (which left the qualitative set unchanged at 2026-11-13_draft). This pillar's own output is unchanged from that daily touch (BTC $68,833.17, Nov 13 finalized close, Model P 49/54/58/70/70). Four independent, deeper WebSearch research passes: CLARITY Act and Fed & Macro HELD FLAT; Iran War Risk RE-RATED DOWN −1 on 6mo (CENTCOM-confirmed Nov 13 Bahrain drone attack, widening the theater, partly offsetting the Nov 13 Brent-driven lift); Tokenization's research resurfaced DTCC/Morgan Stanley facts already priced in from Nov 2–4 and correctly stayed HELD FLAT rather than double-counting them. config/scores.json

*gained a new dated set, **2026-11-14_draft**, now active_qual_set — LEFT AS DRAFT, a full weekly refresh being categorically excluded from auto-stamp. THE FINAL NUMBER holds at −0.25 equal-weight / +0.32 horizon-weighted, essentially unchanged from yesterday's −0.25 / +0.33.*

LIGHT DAILY touch, November 14, 2026 — cloud routine (fresh git clone), quant-only resync; qualitative set unchanged at 2026-11-13_draft (COMMITTED, auto-stamped November 13, 2026) — CLARITY Act, Iran War Risk, Tokenization RWA and Fed & Macro all checked and held.

- **November 14, 2026 (cloud routine) — LIGHT DAILY touch (fresh git clone), quant-only resync:** Preflight (Step 0) found no same-day duplicate "daily"/"weekly" commit on origin/master — proceeded normally. data/btc_usd_daily.csv's last bar is now the FINALIZED November 13 close, **$68,833.17** (GitHub Actions data relay), down from the $69,208.90 Nov 13 INTRADAY read quoted in yesterday's local-pass report (−3.56% from the Nov 12 close of $71,374.07); +17.6% off the June 30 low (from +18.3% on yesterday's intraday read). This sandbox's network egress proxy blocks Bitstamp directly, so **no run.py quant refresh was run** — the data relay's finalized close is the quant input. The weekly bar did NOT roll over (still dated Nov 15, five days of data); as-is composites eased further: weekly −18.1 → **−19.6** (4/7), monthly −8.1 → **−9.0** (3/7), quarterly +21.9 → **+21.5** (1/7); completed bars unchanged at +12.3 / +7.8 / +31.1. **Model P moved on one window: 1-month 50 → 49** (Signal +0.00 → −0.12); 3mo/6mo/1yr/3yr held at 54/58/70/70. Cycle-month unchanged at 30.81; analog medians and agreement counts unchanged. Power-law fair $145,521 (essentially flat); price −52% → **−53%** vs fair; price sits further below the −1σ band ($72,751), now by 5.4% (from 4.9% yesterday); −2σ $36,370. No horizontal level flipped membership. Four independent WebSearch research passes, one per pillar, primary-source-first, ran against the active 2026-11-13_draft baseline (COMMITTED) and found **nothing clearing the sufficiency rule on any pillar**: **CLARITY Act** HELD at 10/25/43/70/91 (no Senate floor/committee/cloture action or new text found since the Nov 9 return from recess); **Iran War Risk** HELD at 2/2/10/29/65 (this week's Hormuz-area tanker/strike reporting is noisy, dated inconsistently across outlets, and largely IRGC/state-media single-source; nothing independently corroborated and dated clears the sufficiency rule beyond what the Nov 13 set already prices in); **Tokenization RWA** HELD at 59/66/71/78/86 (OKXICE's Tokenized Securities Venue has a confirmed November 23 launch date per OKX's own site, but is still not live; DTCC's October launch and the OCC's October GENIUS Act rule remain the only fired triggers, both already captured); **Fed & Macro** HELD at 30/19/33/43/58 (October retail sales is due Nov 17, not yet out; no new qualifying Fed-official remarks found beyond the Nov 10–13 window already logged). **Research access was NOT degraded this cycle** — WebSearch returned usable results on all four pillars; WebFetch to FRED (fred.stlouisfed.org) hit the documented sandbox egress block (DNS resolution failure), worked around via WebSearch. **config/scores.json was NOT touched this cycle** — active_qual_set remains **2026-11-13_draft**, still status COMMITTED. Master (equal-weight) moved on the 1-month window only: 1mo −2.29 → **−2.32**; 3mo/6mo/1yr/3yr unchanged at −1.98/−0.81/+1.05/+2.80. **THE FINAL NUMBER rounds to the same −0.25 equal-weight (Neutral) / +0.33 horizon-weighted (Neutral) as yesterday** — a quant-only drift, no call-band flip anywhere. Leave-one-out −0.28/+0.43/−1.01/+0.14/−0.54 (drop CLARITY/Iran/Tokenization/Fed/TA). Did NOT run run.py archive this cycle — archiving is tied to a score-set change, not a quant-only resync. Master and 00_START_HERE quoted-number lines resynced in the same pass.
- **November 13, 2026 (local Windows pass, ~7:45am ET) — LIGHT DAILY touch:** fast-forwarded to origin/master (only the GitHub Actions data-relay commit there; no Nov 13 daily-cycle commit yet), then ran run.py quant against Bitstamp directly. BTC **$69,208.90** is a Nov 13 INTRADAY read (today's bar partial; intraday low $67,500); Bitstamp's own Nov 12 close is **$71,374.07** (yesterday's report quoted a $72,801.82 intraday read). −3.03% from the Nov 12 close; +18.3% off the June 30 low (from +24.4%). No bar rolled over (weekly dated Nov 15, five days of data); as-is composites fell: weekly −3.2 → **−18.1** (4/7; MACD histogram turned negative, −142), monthly −0.9 → **−8.1** (3/7; monthly MACD line crossed below zero, −110), quarterly +25.7 → **+21.9** (1/7); completed bars unchanged at +12.3 / +7.8 / +31.1. **Model P moved on three windows: 1-month 53 → 50** (Signal +0.36 → +0.00), **3-month 56 → 54** (+0.67 → +0.45, Mild Bull → Neutral), **6-month 59 → 58** (+0.79 → +0.70); 1yr/3yr held at 70/70. Cycle-month 30.78 →

30.81; analog medians 1mo +6.8%, 3mo +32.1%, 6mo +84.3%, 1yr +160.2%, 3yr +1,018.5%; agreement counts unchanged. Power-law fair $145,522; price −52% vs fair; price fell **below the −1σ band ($72,751), by 4.9%**; −2σ $36,370. No horizontal level flipped membership; price broke down through the falling resistance trendline ($72,816) and sits only +1.8% above the 200-week MA ($67,996). Research ran primary-source-first against the committed 2026-11-10_draft baseline. **Iran War Risk RE-RATED UP** 1/1/9/29/65 → **2/2/10/29/65**: FRED DCOILBRENTEU (EIA Europe Brent spot FOB, PRIMARY, read locally Nov 13) now runs through Nov 11 and shows six consecutive sub-$100 closes — Nov 4 $91.84, Nov 5 $97.96, Nov 6 $97.83, Nov 9 $91.03, Nov 10 $90.16, Nov 11 $92.14 (last print above $100: Nov 3, $107.03) — so flip-line clause (d), "sustained Brent above $100," has UN-FIRED; independently corroborated by Reuters (via NST, Nov 10: Brent futures settled $92.57 on Nov 9, "lowest since late August" — MARKET PRICE, futures basis). **CLARITY Act** HELD at 10/25/43/70/91; **Tokenization RWA** HELD at 59/66/71/78/86; **Fed & Macro** HELD at 30/19/33/43/58 (October PPI (bls.gov, PRIMARY, released Nov 13, 8:30am ET): final demand +0.3% m/m and +6.5% y/y unadjusted; less foods, energy and trade services +0.5% m/m (+4.9% y/y); goods +0.5% (foods +1.3%, energy −0.1%), services +0.2%. Against a Dow Jones consensus of +0.4% m/m / +6.6% y/y (Nov 11 preview, SINGLE-SOURCE) the headline is a tenth soft while the ex-food/energy/trade core is firm — mixed, with a single-source consensus, so it does not move P; a December hike is already priced). **Research access was NOT degraded this cycle** — WebSearch and WebFetch (FRED, bls.gov, federalreserve.gov, fdic.gov, Al Jazeera) worked from the local machine. New set **2026-11-13_draft**, COMMITTED, auto-stamped November 13, 2026. Master (equal-weight): 1mo −2.24 → **−2.29**; 3mo −1.96 → **−1.98**; 6mo −0.81 unchanged (the Iran lift offset the TA easing); 1yr +1.05 and 3yr +2.80 unchanged. **THE FINAL NUMBER −0.23 → -0.25 equal-weight (Neutral) / +0.34 → +0.33 horizon-weighted (Neutral)** — no master call-band flip. Leave-one-out −0.27 / +0.44 / −1.00 / +0.15 / −0.54 (drop CLARITY / Iran / Tokenization / Fed / TA), range −1.00 to +0.44 (sign still flips — fragile). Archived. Master and 00_START_HERE quoted-number lines resynced in the same pass.

- **November 12, 2026 (local Windows pass, ~7:45am ET) — LIGHT DAILY touch:** fast-forwarded to origin/master (no Nov 12 commit there yet), then ran run.py quant against Bitstamp directly. BTC **$72,801.82** is a Nov 12 INTRADAY read (today's bar partial); Bitstamp's own daily closes are Nov 10 **$73,697.92** and Nov 11 **$73,915.03** — the relay's "finalized" Nov 10 figure of $73,413.16 quoted yesterday differed from Bitstamp's own close (correction logged, as on Nov 10). −1.51% from the Nov 11 close; +24.4% off the June 30 low (from +25.4%). No bar rolled over (weekly dated Nov 15, four days of data); as-is composites eased: weekly −0.6 → **−3.2** (2/7), monthly +0.3 → **−0.9** (3/7, from 2/7), quarterly +26.5 → **+25.7** (2/7); completed bars unchanged at +12.3 / +7.8 / +31.1. **Model P moved on one window: 6-month P 60 → 59** (Signal +0.88 → +0.79, still Mild Bull); 1mo/3mo/1yr/3yr held at 53/56/70/70. Cycle-month 30.72 → 30.78; analog medians 1mo +10.3%, 3mo +31.1%, 6mo +78.7%, 1yr +146.7% (from +176.4% — n=3 alignment shift), 3yr +1,020.6%; agreement counts unchanged. Power-law fair $145,444; price −50% vs fair; −1σ $72,713 (price 0.1% above it, in from 1.1%), −2σ $36,352. No level flipped membership; price is now right on the falling resistance trendline ($72,816). Research ran primary-source-first against the active 2026-11-10_draft baseline (COMMITTED) and found nothing clearing the sufficiency rule on any pillar: **CLARITY Act** HELD at 10/25/43/70/91 (no Senate floor/committee/cloture action or new text found for the lame duck); **Iran War Risk** HELD at 1/1/9/29/65 — Trump's Nov 9–10 "positive momentum" remarks after meeting Qatar's PM and Rubio's Nov 10 "no need for major combat operations" (Al Jazeera; CBC) cut one way, while Iran's security chief Rezaei on Nov 11 called continuing-talks claims a "pure lie" and said Hormuz stays shut until Tehran's seven conditions are met (Al Jazeera Nov 11; Araghchi: reopening "within two days" if demands are met); IRGC claims of tankers hitting mines Nov 11 are unverified by any maritime authority (SINGLE-SOURCE, reported, not used; UKMTO separately reported two tanker incidents per Al Jazeera); no deal, no ceasefire, blockade unchanged — neither flip line fires, so the two sides net to hold. FRED DCOILBRENTEU (fetched locally) runs only through Nov 3 ($107.03), still above the $100 line; the ~$91 Nov 10 Brent settle (CNBC) is a MARKET PRICE, not used. **Tokenization RWA** HELD at 59/66/71/78/86 (no new GENIUS Act agency finalization or SEC tokenization release found); **Fed & Macro** HELD at 30/19/33/43/58 — federalreserve.gov lists no speeches after Nov

10 (Bowman, Waller); the Nov 10–11 coverage (Bowman "the latest data suggest that these pressures may be broadening"; Logan backing two more quarter-point hikes; Paulson favoring gradual increases; CME FedWatch ~90% December hike and January-hike odds ~21% → 64% — MARKET PRICES, per NWA Democrat-Gazette/AP Nov 12) is the same CPI-day reaction already priced in the Nov 10 re-rate, and re-rating again would double-count it; October PPI (~Nov 13) not yet out. **Research access was NOT degraded this cycle** — WebSearch and WebFetch (federalreserve.gov, FRED, Al Jazeera) worked from the local machine. **config/scores.json was NOT touched this cycle**. Master (equal-weight) moved on one window: 6mo −0.80 → **−0.81**; 1mo/3mo/1yr/3yr unchanged at −2.24/−1.96/+1.05/+2.80. **THE FINAL NUMBER unchanged at −0.23 equal-weight (Neutral) / +0.34 horizon-weighted (Neutral)** — no call-band flip anywhere. Leave-one-out −0.26/+0.47/−0.99/+0.17/−0.56. Did NOT run run.py archive — quant-only resync. Master and 00_START_HERE quoted-number lines resynced in the same pass.

- **November 11, 2026 (cloud routine) — LIGHT DAILY touch (fresh git clone):** Preflight (Step 0) found no same-day duplicate "daily"/"weekly" commit on origin/master — proceeded normally. data/btc_usd_daily.csv's last bar is now the FINALIZED November 10 close, **$73,413.16** (GitHub Actions data relay), down 2.46% from the Nov 9 finalized close of $75,266.85, and +25.4% off the June 30 low (from +25.9%). The weekly bar did NOT roll over (still dated Nov 15, now two days of data); as-is composites eased: weekly +0.5 → **−0.6** (2/7, from 3/7), monthly +0.8 → **+0.3** (2/7), quarterly +26.8 → **+26.5** (2/7); completed bars unchanged at +12.3 / +7.8 / +31.1. **Model P moved on one window: 1-month P 54 → 53** (Signal +0.48 → +0.36); 3mo/6mo/1yr/3yr held at 56/60/70/70. Cycle-month unchanged at 30.72; analog medians unchanged (1mo +10.8%, 3mo +30.8%, 6mo +81.6%, 1yr +176.4%, 3yr +1,011.1%). Power-law fair $145,278; price −50% vs fair; −1σ $72,629 (price 1.1% above it, in from 1.4%), −2σ $36,310. No level flipped membership. Four independent WebSearch research passes, one per pillar, primary-source-first, ran against the active 2026-11-10_draft baseline (COMMITTED) and found nothing clearing the sufficiency rule on any pillar: **CLARITY Act** HELD at 10/25/43/70/91 (the bill is widely reported dead in its current form after the Nov 3 midterm result — PYMNTS Nov 9, Giancarlo interview Nov 10 — but no new Senate floor/committee/cloture or SEC/CFTC action found dated Nov 11; a House Democratic market-structure proposal reported by Decrypt is House-side and single-source, fails sufficiency); **Iran War Risk** HELD at 1/1/9/29/65 (no new confirmed US strike or ceasefire breakthrough found beyond the already-priced Nov 7 Qeshm Island strike); **Tokenization RWA** HELD at 59/66/71/78/86 (OKXICE's Oct 4 SEC-exemption filing still not live; no new GENIUS Act agency finalization or DTCC update found); **Fed & Macro** HELD at 30/19/33/43/58 (next dated catalysts — October PPI ~Nov 13, retail sales ~Nov 17 — have not posted; no new qualifying Fed-official remarks found). **Research access was NOT degraded this cycle** — WebSearch returned usable results on all four pillars. **config/scores.json was NOT touched this cycle** — active_qual_set remains **2026-11-10_draft**, still status COMMITTED. Master (equal-weight) moved on one window: 1mo −2.22 → **−2.24**; 3mo/6mo/1yr/3yr unchanged at −1.96/−0.80/+1.05/+2.80. **THE FINAL NUMBER −0.22 → −0.23 equal-weight (Neutral) / +0.34 horizon-weighted (unchanged, Neutral)** — a quant-only drift, no call-band flip anywhere. Leave-one-out −0.25/+0.48/−0.98/+0.17/−0.56. Did NOT run run.py archive this cycle — archiving is tied to a score-set change, not a quant-only resync. Master, 00_START_HERE and this report's own quoted-number lines were resynced in the same pass.
- **November 10, 2026 (local second pass, ~9:25am ET) — LIGHT DAILY touch:** fast-forwarded to the cloud's 8am commit, then ran run.py quant locally against Bitstamp directly. BTC **$73,675.88** is a Nov 10 INTRADAY read (today's bar partial); Bitstamp's own Nov 9 daily close is **$75,266.85** — the cloud's $74,869.58 relay figure, labelled "finalized," was a same-day intraday snapshot (correction logged). +25.9% off the June 30 low. No bar rolled over; as-is composites eased: weekly +5.7 → **+0.5** (3/7), monthly +2.9 → **+0.8** (2/7), quarterly +28.0 → **+26.8** (3/7); completed bars unchanged at +12.3 / +7.8 / +31.1. **Model P 1-month 55 → 54** (Signal +0.60 → +0.48); 3mo/6mo/1yr/3yr held at 56/60/70/70. Analog medians (cycle-month 30.68 → 30.72): 1mo +10.8%, 3mo +30.8%, 6mo +81.6%, 1yr +176.4%, 3yr +1,011.1%. Power-law fair $145,278; price −49% vs fair; −1σ $72,630 (price 1.4% above it), −2σ $36,310. **$74,434 flipped from support to resistance** (+1.0% above price); price now below the 20-week

($74,280) and 50-week ($75,158) MAs. Qualitative: **Fed & Macro re-rated down** 32/21/34/43/58 → 30/19/33/43/58 on the October CPI (bls.gov, PRIMARY: headline +0.4% m/m, core +0.3% m/m vs. +0.3%/+0.2% consensus per LSEG via Fox Business and FXStreet) and Governor Waller's London speech the same morning (federalreserve.gov, PRIMARY: 50bp in December "should be considered" if core is around 0.3%); CLARITY Act, Iran War Risk and Tokenization held (no new Nov 10 items beyond the cloud's 8am sweep). Research access NOT degraded. New set **2026-11-10_draft**, COMMITTED (auto-stamped). Master 1mo −2.14 → **−2.22**; 3mo −1.90 → **−1.96**; 6mo −0.77 → **−0.80**; 1yr +1.05 and 3yr +2.80 unchanged. **THE FINAL NUMBER −0.19 → −0.22 equal-weight (Neutral) / +0.36 → +0.34 horizon-weighted (Neutral)**; no call-band flip. Leave-one-out −0.24/+0.48/−0.98/+0.18/−0.56. Archived.

- **November 10, 2026 (cloud routine) — LIGHT DAILY touch (fresh git clone):** Preflight (Step 0) found no same-day duplicate "daily"/"weekly" commit on origin/master — proceeded normally. data/btc_usd_daily.csv's last bar is the FINALIZED November 9 close, **$74,869.58** (GitHub Actions relay), down 1.07% on the day; +27.9% off the June 30 low (from +29.3%). **The weekly bar ROLLED OVER** — the bar dated 2026-11-08 (Nov 2–8) is now completed at **+12.3** (down from +31.3 for the bar dated Nov 1), closing at $74,742.52 with RSI 47.9, MACD line 1,622/histogram +646, %B 0.53; a new bar dated 2026-11-15 began forming, reading +5.7 as-is (agreement 3/7) on its first day. Monthly and quarterly bars did NOT roll over (still dated 2026-11-30 / 2026-12-31); their as-is composites eased: monthly +2.9 (agreement 2/7, from +4.4), quarterly +28.0 (agreement 3/7, from +29.0); completed bars unchanged at +7.8 / +31.1. **Model P moved on three windows: 1-month P 56 → 55** (Signal +0.72 → +0.60) as the weekly tape reset on its rollover, even as the 1-month cycle analog firmed to 2-of-3 positive, median +10.8% → +11.8%; **3-month P 57 → 56** (Signal +0.78 → +0.67) on the same tape softening, still 2-of-3 positive, median +37.6% → +38.2%; **1-year P 69 → 70** (Signal +1.82 → +1.92), median +174.1% → +174.0% (essentially flat, still 3-of-3) as price settled further below the power-law fair line. The 6-month window held at P 60 (median +89.8% → +88.7%, still 3-of-3) and the 3-year window held at P 70 (median +984.9% → +1,013.4%, still 3-of-3) — cycle-month 30.65 → 30.68. No call-band boundary crossed on this pillar's own windows. Power-law fair $145,194 (from $145,111); price −48% vs fair (unchanged); −1σ $72,588, −2σ $36,289. No level flipped membership ($81,685 still resistance, +9.1% above price, from +7.9%, as price eased further below it); the weekly close slipped back below the 50-week MA ($75,182, −0.4%), reversing from +0.2% above yesterday — watch for repair on the next close. Four independent WebSearch research passes, one per pillar, primary-source-first, ran against the active 2026-11-07_draft2 baseline (DRAFT, full weekly refresh, still awaiting Alex's stamp) and found **nothing clearing the sufficiency rule on any pillar**: **CLARITY Act** HELD at 10/25/43/70/91 (Senate returned Nov 9 for a ~5-week lame-duck session, permitting reform reported as the likely first floor item; no CLARITY-specific floor/committee/cloture or SEC/CFTC action found dated Nov 8–10; AK and MS Senate races still uncalled); **Iran War Risk** HELD at 1/1/9/29/65 (no new confirmed US strike beyond the already-priced Nov 7 Qeshm Island strike; ceasefire talks remain stalled but ongoing, no breakthrough, unchanged from Nov 6 reporting); **Tokenization RWA** HELD at 59/66/71/78/86 (no new GENIUS Act agency finalization; OKXICE objector-count reporting remains unreliable/mutually-conflicting across sources, variously reported 50–67 depending on aggregator, fails sufficiency; no fresher rwa.xyz snapshot); **Fed & Macro** HELD at 32/21/34/43/58 (October CPI, due today 8:30am ET, had NOT posted as of this research pass, ~8:03am ET — not used; BLS separately announced Nov 9 that this report will omit year-over-year headline/core readings because of the 2025 shutdown's data gap, logged but not scored; no new qualifying Fed-official statement found). **Research access was NOT degraded this cycle** — WebSearch returned usable results on all four pillars. **config/scores.json was NOT touched this cycle** — active_qual_set remains **2026-11-07_draft2**, still status DRAFT (full weekly refresh, categorically excluded from auto-stamp, unrelated to today's light-touch finding). Master (equal-weight) moved on four windows: 1mo −2.12 → **−2.14**; 3mo −1.88 → **−1.90**; 6mo unchanged at −0.77; 1yr +1.03 → **+1.05**; 3yr unchanged at +2.80. **THE FINAL NUMBER rounds to the same −0.19 equal-weight (Neutral) / +0.36 horizon-weighted (Neutral) as yesterday**, despite the underlying windows shifting both directions — a quant-only drift, no call-band flip anywhere. Leave-one-out −0.21/+0.52/−0.94/+0.18/−0.52 (drop

CLARITY/Iran/Tokenization/Fed/TA). Did NOT run run.py archive this cycle — archiving is tied to a score-set change, not a quant-only resync. Master, 00_START_HERE and the four qualitative pillar reports' own quoted-number lines were resynced in the same pass.

- **November 9, 2026 (cloud routine) — LIGHT DAILY touch (fresh git clone):** Preflight (Step 0) found no same-day duplicate "daily"/"weekly" commit on origin/master — proceeded normally. data/btc_usd_daily.csv's last bar is the FINALIZED November 8 close, **$75,680.00** (GitHub Actions relay), up 0.01% on the day; +29.3% off the June 30 low (unchanged). **None of the weekly, monthly or quarterly bars rolled over** (still dated 2026-11-08 / 2026-11-30 / 2026-12-31); as-is composites held exactly flat: weekly +16.0 (agreement 3/7, unchanged), monthly +4.4 (agreement 2/7, unchanged), quarterly +29.0 (agreement 3/7, unchanged); completed bars unchanged at +31.3 / +7.8 / +31.1. **Model P moved on one window: 1-month P 58 → 56** (Signal +0.96 → +0.72), as the 1-month cycle analog lost unanimity, 3-of-3 → 2-of-3 positive, median +7.4% → +10.8% (cycle-month 30.62 → 30.65) — the disclosed n=3 alignment fragility, not a new qualitative finding. The other four windows held: 3mo 57 (median +40.8% → +37.6%, still 2-of-3), 6mo 60 (median +83.6% → +89.8%, still 3-of-3), 1yr 69 (median +151.7% → +174.1%, still 3-of-3), 3yr 70 (median +942.4% → +984.9%, still 3-of-3) — none of these crossed a new rounded P value. No call-band boundary crossed on this pillar's own windows (1mo stays Mild Bull, |+0.72| < 1.5). Power-law fair $145,111 (from $145,026); price −48% vs fair (unchanged); −1σ $72,546, −2σ $36,268. No level flipped membership ($81,685 still resistance, +7.9% above price, from +8.0%, as price firmed slightly). Four independent WebSearch research passes, one per pillar, primary-source-first, ran against the active 2026-11-07_draft2 baseline (DRAFT, full weekly refresh, still awaiting Alex's stamp) and found **nothing clearing the sufficiency rule on any pillar**: **CLARITY Act** HELD at 10/25/43/70/91 (no Senate floor/committee/cloture action or SEC/CFTC release found dated Nov 7–9; AK and MS Senate races still uncalled as of ~Nov 5); **Iran War Risk** HELD at 1/1/9/29/65 (no new confirmed US strike, casualty, or Qatar-mediation outcome found beyond the already-priced Nov 7 Qeshm Island strike); **Tokenization RWA** HELD at 59/66/71/78/86 (no new GENIUS Act agency finalization; OKXICE objector-count reporting remains unreliable/mutually-conflicting across sources, variously reported 50–67 depending on aggregator, fails sufficiency; no fresher rwa.xyz snapshot); **Fed & Macro** HELD at 32/21/34/43/58 (October CPI confirmed due Nov 10 per BLS's own schedule, not yet posted; no new qualifying Fed-official statement found). **Research access was NOT degraded this cycle** — WebSearch returned usable results on all four pillars. **config/scores.json was NOT touched this cycle** — active_qual_set remains **2026-11-07_draft2**, still status DRAFT (full weekly refresh, categorically excluded from auto-stamp, unrelated to today's light-touch finding). Master (equal-weight) moved on the 1-month window only: 1mo −2.07 → **−2.12**; 3mo/6mo/1yr/3yr unchanged at −1.88/−0.77/+1.03/+2.80. **THE FINAL NUMBER −0.18 → −0.19 equal-weight (Neutral) / +0.37 → +0.36 horizon-weighted (Neutral)** — a quant-only drift, no call-band flip anywhere. Leave-one-out −0.20/+0.53/−0.93/+0.19/−0.52 (drop CLARITY/Iran/Tokenization/Fed/TA). Did NOT run run.py archive this cycle — archiving is tied to a score-set change, not a quant-only resync. Master, 00_START_HERE and the four qualitative pillar reports' own quoted-number lines were resynced in the same pass.

- **November 8, 2026 (cloud routine) — LIGHT DAILY touch (fresh git clone):** Preflight (Step 0) found no same-day duplicate "daily"/"weekly" commit on origin/master — proceeded normally. data/btc_usd_daily.csv's last bar is the FINALIZED November 7 close, **$75,668.82** (GitHub Actions relay), up 0.02% on the day; +29.3% off the June 30 low (unchanged). **None of the weekly, monthly or quarterly bars rolled over** (still dated 2026-11-08 / 2026-11-30 / 2026-12-31); as-is composites held exactly flat: weekly +16.0 (agreement 3/7, unchanged), monthly +4.4 (agreement 2/7, unchanged), quarterly +29.0 (agreement 3/7, unchanged); completed bars unchanged at +31.3 / +7.8 / +31.1. **Model P held unchanged on all five windows** at 58/57/60/69/70 — the tiny price move wasn't enough to shift any window, though the cycle-analog medians ticked (cycle-month 30.58→30.62; 1mo median +7.5%→+7.4%, 3mo +44.9%→+40.8%, 6mo +84.0%→+83.6%, 1yr +141.6%→+151.7%, 3yr +939.9%→+942.4%). Power-law fair $145,026 (from $144,941); price −48% vs fair (unchanged); −1σ $72,503, −2σ $36,246. No level flipped membership ($81,685 still resistance, +8.0% above price,

unchanged). Four independent WebSearch research passes, one per pillar, primary-source-first, ran against the active 2026-11-07_draft2 baseline (DRAFT, full weekly refresh, still awaiting Alex's stamp) and found **nothing clearing the sufficiency rule on any pillar**: **CLARITY Act** HELD at 10/25/43/70/91 (no Senate floor/committee/cloture action or SEC/CFTC release found dated Nov 7–8; AK and MS Senate races still uncalled); **Iran War Risk** HELD at 1/1/9/29/65 (no new confirmed US strike, casualty, or Qatar-mediation outcome found beyond the already-priced Nov 7 Qeshm Island strike); **Tokenization RWA** HELD at 59/66/71/78/86 (no new GENIUS Act agency finalization; OKXICE objector-count reporting remains unreliable/mutually-conflicting across sources, ranging roughly 9–67, fails sufficiency; no fresher rwa.xyz snapshot); **Fed & Macro** HELD at 32/21/34/43/58 (October CPI still due ~Nov 10, not yet posted; isolated hawkish Fed-official rhetoric, e.g. Hammack Nov 6, reinforces the already-priced path but is not new primary data). **Research access was NOT degraded this cycle** — WebSearch returned usable results on all four pillars. **config/scores.json was NOT touched this cycle** — active_qual_set remains **2026-11-07_draft2**, still status DRAFT (full weekly refresh, categorically excluded from auto-stamp, unrelated to today's light-touch finding). Master (equal-weight) unchanged at 1mo −2.07 / 3mo −1.88 / 6mo −0.77 / 1yr +1.03 / 3yr +2.80. **THE FINAL NUMBER UNCHANGED at −0.18 equal-weight (Neutral) / +0.37 horizon-weighted (Neutral)** — no call-band flip anywhere. Leave-one-out −0.19/+0.54/−0.92/+0.20/−0.52 (drop CLARITY/Iran/Tokenization/Fed/TA). Did NOT run run.py archive this cycle — archiving is tied to a score-set change, not a quant-only resync. Master, 00_START_HERE and the four qualitative pillar reports' own quoted-number lines were resynced in the same pass.

- **November 7, 2026 (cloud routine) — FULL WEEKLY refresh, same calendar day as the light daily touch below (fresh git clone):** Preflight (Step 0) found only today's own earlier daily-cycle commit on origin/master, no prior same-day "weekly" commit — proceeded normally. Quant data check: data/btc_usd_daily.csv's last bar remains the FINALIZED November 6 close, **$75,650.78**, one day old at run time, within the documented freshness window — **no run.py quant refresh was run or needed this cycle**; model P stands unchanged at 58/57/60/69/70, all composites and levels unchanged from the daily entry below. This was a FULL, primary-source-first research pass on all four qualitative pillars (more thorough than a light daily touch), re-checking every trigger-table row against the active 2026-11-07_draft committed baseline (this morning's daily touch), not just the delta since this morning: **CLARITY Act** HELD at 10/25/43/70/91 (dedicated extended search found nothing dated Nov 5–7 clearing the sufficiency bar; AK/MS Senate races still uncalled but don't change the already-priced chamber-control read); **Tokenization RWA** HELD at 59/66/71/78/86 (OCC remains the only GENIUS Act rule finalized; OKXICE objector-count reporting remains mutually-conflicting across low-quality aggregators, fails sufficiency; no fresher rwa.xyz snapshot); **Fed & Macro** HELD at 32/21/34/43/58 (October CPI confirmed not due until Nov 10 per BLS's own schedule; no new verifiably-dated Fed remarks found; re-rating further on this morning's jobs-report move with no new evidence would double-count the same fact). **Iran War Risk RE-RATED DOWN**, modestly, 1/1/11/30/65→**1/1/9/29/65** (6mo −2, 1yr −1; 1mo/3mo already at the P=1 floor; 3yr held): a NEW, independently-verified second US strike on Iranian air-defense targets near Qeshm Island, Friday Nov 7 — President Trump told reporters on the record that US forces carried out "minor strikes," corroborated by 4+ independent outlets (Al Jazeera, CNBC, Euronews, National Herald India); this is distinct from, and five days after, the already-priced Nov 2–3 Qeshm strike, confirming a sustained resumption pattern rather than a one-off. Iran's state-media claim of downing a US MQ-9 drone is single-source (IRIB only) and, per the sufficiency rule, reported but not used to move P; a separate IRGC mine claim near Hormuz (Nov 6) is explicitly disputed by CENTCOM and not used either. **Research access was NOT degraded this cycle** — WebSearch functioned normally across all four passes; the Iran strike fact was independently re-verified via a second, separate WebSearch pass before being accepted. **New score set 2026-11-07_draft2, status DRAFT** — per CLAUDE.md, full weekly refreshes are categorically excluded from delegated auto-stamp authority regardless of move size, so this set is LEFT AS DRAFT, flagged for Alex's manual review. Master (equal-weight) 1mo/3mo unchanged at −2.07/−1.88; 6mo −0.73→**−0.77**; 1yr +1.06→**+1.03**; 3yr unchanged at +2.80. **THE FINAL NUMBER −0.16→−0.18 equal-weight (Neutral) / +0.38→+0.37 horizon-weighted (Neutral)** — no call-band flip anywhere (1mo/3mo

Bear, 6mo Mild Bear, 1yr Mild Bull, 3yr Bull, all unchanged). Leave-one-out −0.19/+0.54/−0.92/+0.20/−0.52 (drop CLARITY/Iran/Tokenization/Fed/TA). All seven report sources (this one, Master, 00_START_HERE, and all four qualitative pillar reports) were updated, rendered, and selfchecked this pass; the pipeline's archive step runs next, with a -2 suffix on today's date since a 2026-11-07 archive already exists from this morning's daily touch.

- **November 7, 2026 (cloud routine) — LIGHT DAILY touch (fresh git clone):** Preflight (Step 0) found no same-day duplicate "daily"/"weekly" commit on origin/master — proceeded normally. data/btc_usd_daily.csv's last bar is the FINALIZED November 6 close, **$75,650.78** (GitHub Actions relay), down 0.44% on the day; +29.3% off the June 30 low (from +29.8%). **None of the weekly, monthly or quarterly bars rolled over** (still dated 2026-11-08 / 2026-11-30 / 2026-12-31); as-is composites eased slightly: weekly +17.4→**+16.0** (agreement 3/7, unchanged), monthly +5.0→**+4.4** (agreement 2/7, unchanged), quarterly +29.5→**+29.0** (agreement 3/7, unchanged); completed bars unchanged at +31.3 / +7.8 / +31.1. **Model P held unchanged on all five windows** at 58/57/60/69/70 — the small price move wasn't enough to shift any window. Power-law fair $144,941 (from $144,856); price −48% vs fair (unchanged); −1σ $72,460, −2σ $36,225. No level flipped membership ($81,685 still resistance, +8.0% above price, from +7.5%, as price eased further below it). Four independent WebSearch research passes, one per pillar, primary-source-first, ran against the active 2026-11-04_draft2 baseline (COMMITTED, AUTO-STAMPED NOVEMBER 4, 2026): three pillars found nothing clearing the sufficiency rule and HELD — **CLARITY Act** at 10/25/43/70/91 (Alaska and Mississippi Senate races still uncalled; Senate's confirmed Nov 9 return is confirmatory, not new; no CLARITY-specific floor/committee/cloture action found); **Iran War Risk** at 1/1/11/30/65 (continued Hormuz-area shipping incidents Nov 5–6 are single-source Iranian-military claims, not corroborated; no confirmed new US strike or Qatar-mediation outcome); **Tokenization RWA** at 59/66/71/78/86 (no new GENIUS Act agency finalization; OKXICE objector-count reporting since Nov 2 is unreliable/mutually-conflicting, fails sufficiency; no fresher rwa.xyz snapshot). **Fed & Macro RE-RATED DOWN** 34/23/34/43/58→**32/21/34/43/58** (1mo/3mo −2 each): the October 2026 Employment Situation (BLS, released Nov 6, 8:30am ET; multiply corroborated via CNBC/FXStreet/babypips/futunn since bls.gov itself was unreachable this cycle via WebFetch) showed nonfarm payrolls +165,000 against a consensus of roughly 59,000-70,000, unemployment down to 4.1% from 4.2%, average hourly earnings +0.4% m/m/+3.1% y/y — a large, hawkish beat ahead of the Dec 9 FOMC decision; 6mo/1yr/3yr held, since one jobs report doesn't move the medium/long-run picture. **Research access was NOT degraded this cycle** — WebSearch returned usable results on all four pillars; only WebFetch to a handful of arbitrary domains (bls.gov, aljazeera.com) hit the documented sandbox egress block, worked around via WebSearch. **New score set 2026-11-07_draft, status COMMITTED, AUTO-STAMPED NOVEMBER 7, 2026** — an ordinary light daily touch, research not degraded, verification passed clean (see commit message), so per the delegated auto-stamp authority it was stamped in the same pass. Master (equal-weight) 1mo −2.01→**−2.07**; 3mo −1.83→**−1.88**; 6mo/1yr/3yr unchanged at −0.73/+1.06/+2.80. **THE FINAL NUMBER −0.14→−0.16 equal-weight (Neutral) / +0.40→+0.38 horizon-weighted (Neutral)** — no call-band flip anywhere. Leave-one-out −0.17/+0.54/−0.90/+0.22/−0.51 (drop CLARITY/Iran/Tokenization/Fed/TA). Ran run.py archive this cycle (score-set change). Master, 00_START_HERE, the Fed & Macro pillar report and this report's own quoted-number lines were all updated in the same pass; CLARITY Act, Iran War Risk and Tokenization RWA pillar reports were not touched beyond their own quoted master/final-number lines (no content change — held flat).
- **November 6, 2026 (cloud routine) — LIGHT DAILY touch, quant-only resync (fresh git clone):** Preflight (Step 0) found no same-day duplicate "daily"/"weekly" commit on origin/master — proceeded normally. data/btc_usd_daily.csv's last bar is the FINALIZED November 5 close, **$75,982.72** (GitHub Actions relay) — the exchange also revised the Nov 4 row from $80,263.70 (quoted yesterday) to $80,434.13; this pillar's own figures resync to the Nov 5 close, down 5.53% on the day; +29.8% off the June 30 low (from +37.1%). **None of the weekly, monthly or quarterly bars rolled over** (still dated 2026-11-08 / 2026-11-30 / 2026-12-31); as-is composites eased with the drop: weekly +33.3→**+17.4** (agreement 4/7→3/7), monthly +13.2→**+5.0** (agreement 2/7, unchanged), quarterly +33.8→**+29.5** (agreement 4/7→3/7);

completed bars unchanged at +31.3 / +7.8 / +31.1. **Model P moved on four windows: 1mo 62→58, 3mo 58→57, 6mo 61→60 (all down), 3yr 69→70 (up)**; 1yr held at 69. Power-law fair $144,856 (from $144,771); price −48% vs fair (from −45%); −1σ $72,417, −2σ $36,203. No level flipped membership ($81,685 still resistance, +7.5% above price, from +1.8%, as price fell toward it). Four independent WebSearch research passes, one per pillar, primary-source-first, ran against the active 2026-11-04_draft2 baseline (COMMITTED, AUTO-STAMPED NOVEMBER 4, 2026) and found **nothing clearing the sufficiency rule on any pillar**: **CLARITY Act** HELD at 10/25/43/70/91 (no Senate floor/committee action, no SEC/CFTC release found dated Nov 5–6; AK and MS Senate races still uncalled); **Iran War Risk** HELD at 1/1/11/30/65 (no confirmed new strike, casualty or mediation outcome found dated Nov 5–6; Qatar-mediated talks remain under review by both sides); **Tokenization RWA** HELD at 59/66/71/78/86 (GENIUS Act rule-finalization unchanged, still only OCC final; no new SEC/CFTC action; rwa.xyz itself unreachable in this sandbox, no fresher snapshot obtained); **Fed & Macro** HELD at 34/23/34/43/58 (no new Fed remarks found; the October jobs report is due today but had not posted at research time, ~7:09 AM ET; October CPI remains ~Nov 10). **Research access was NOT degraded this cycle** — WebSearch returned usable results on all four pillars; nothing was found because nothing material has happened yet. **config/scores.json was NOT touched this cycle** — active_qual_set remains **2026-11-04_draft2**, still status COMMITTED. Master (equal-weight) 1mo −1.92→**−2.01**; 3mo −1.80→**−1.83**; 6mo −0.71→**−0.73**; 1yr unchanged at +1.06; 3yr +2.79→**+2.80**. **THE FINAL NUMBER −0.12→−0.14 equal-weight (Neutral) / +0.41→+0.40 horizon-weighted (Neutral)** — no call-band flip anywhere. Leave-one-out −0.14/+0.57/−0.87/+0.22/−0.48 (drop CLARITY/Iran/Tokenization/Fed/TA). Did NOT run run.py archive this cycle — archiving is tied to a score-set change, not a quant-only resync. Master, 00_START_HERE and this report's own quoted-number lines were resynced in the same pass; the four qualitative pillar reports were not touched (no content to update).

- **November 5, 2026 (cloud routine) — LIGHT DAILY touch, quant-only resync (fresh git clone):** Preflight (Step 0) found no same-day duplicate “daily”/“weekly” commit on origin/master — proceeded normally. data/btc_usd_daily.csv's last bar is the FINALIZED November 4 close, **$80,263.70** (GitHub Actions relay) — this pillar's own figures resync from yesterday's $78,155.95 INTRADAY read to this finalized close, up 2.70%; +37.1% off the June 30 low (from +33.5%). **None of the weekly, monthly or quarterly bars rolled over** (still dated 2026-11-08 / 2026-11-30 / 2026-12-31); as-is composites firmed with the finalized close: weekly +25.7→**+33.3** (agreement 4/7, unchanged), monthly +9.4→**+13.2** (agreement 2/7, unchanged), quarterly +31.8→**+33.8** (agreement 4/7, unchanged); completed bars unchanged at +31.3 / +7.8 / +31.1. **Model P moved on two windows, both up: 1mo 61→62, 3mo 57→58** (Signals +1.32→+1.44 / +0.78→+0.90, both still Mild Bull); 6mo/1yr/3yr held at 61/69/69. Power-law fair $144,771 (from $144,769); price −45% vs fair (from −46%); −1σ $72,374, −2σ $36,181. No level flipped membership ($81,685 still resistance, +1.8% above price, from +4.5%). Four independent WebSearch research passes, one per pillar, primary-source-first, ran against the active 2026-11-04_draft2 baseline (COMMITTED, AUTO-STAMPED NOVEMBER 4, 2026) and found **nothing clearing the sufficiency rule on any pillar**: **CLARITY Act** HELD at 10/25/43/70/91 (no Senate floor/committee action, no SEC/CFTC release found; AK and MS Senate races still uncalled); **Iran War Risk** HELD at 1/1/11/30/65 (a US-Iran midterm-rhetoric exchange is posturing, not action; a Nov 5 Hormuz-area tanker-mine claim is IRGC-sourced only and unattributed, reported not scored; no new strikes, casualties or third-state involvement found); **Tokenization RWA** HELD at 59/66/71/78/86 (GENIUS Act rule-finalization unchanged, still only OCC final; no new SEC/CFTC action; no fresher rwa.xyz snapshot obtained); **Fed & Macro** HELD at 34/23/34/43/58 (no new Fed remarks found; October jobs due ~Nov 6; Treasury refunding-statement contents and current yield-curve levels could not be confirmed this cycle). **RESEARCH-ACCESS CAVEAT:** centcom.mil, fred.stlouisfed.org, home.treasury.gov, treasurydirect.gov, bls.gov and federalreserve.gov all failed DNS resolution directly in this sandbox this cycle; WebSearch was used as the documented fallback and was adequate for CLARITY Act and Tokenization (confident “nothing new” via secondary-source triangulation), but for Fed & Macro and part of Iran War Risk, WebSearch itself returned noisy, mismatched-year or unreliable results for current yield-curve/refunding-statement/Fed-remarks data — a genuine, if partial, research-

capability degradation on those two pillars specifically, beyond the documented WebFetch-blocked/WebSearch-fine pattern; flagged prominently for Alex. **config/scores.json was NOT touched this cycle** — active_qual_set remains **2026-11-04_draft2**, still status COMMITTED. Master (equal-weight) 1mo −1.94→**−1.92**; 3mo −1.83→**−1.80**; 6mo/1yr/3yr essentially unchanged at −0.71/+1.06/+2.79. **THE FINAL NUMBER −0.13→−0.12 equal-weight (Neutral) / +0.40→+0.41 horizon-weighted (Neutral)** — no call-band flip anywhere. Leave-one-out −0.11/+0.60/−0.84/+0.25/−0.48 (drop CLARITY/Iran/Tokenization/Fed/TA). Did NOT run run.py archive this cycle — archiving is tied to a score-set change, not a quant-only resync. Master, 00_START_HERE and this report's own quoted-number lines were resynced in the same pass; the four qualitative pillar reports were not touched (no content to update).

- **November 4, 2026 (local pass, 2026-11-04_draft2, stacked on the cloud set) — LIGHT DAILY touch (local run, Windows Task Scheduler, run.py quant, Bitstamp direct):** BTC **$78,155.95** is an INTRADAY Nov 4 read (the Nov 4 daily bar is partial; not a finalized close). The Nov 3 FINALIZED close (Bitstamp) was $77,345.00. Up 1.96% from yesterday's quoted $76,651.70 (Nov 2 finalized close, GitHub Actions relay); +33.5% off the June 30 low (from +31.0%). **None of the weekly, monthly or quarterly bars rolled over** (still dated 2026-11-08 / 2026-11-30 / 2026-12-31); as-is composites firmed with the higher price: weekly +20.5→**+25.7** (agreement 3/7→4/7), monthly +6.5→**+9.4** (agreement 2/7, unchanged), quarterly +30.5→**+31.8** (agreement 4/7, unchanged); completed bars unchanged at +31.3 / +7.8 / +31.1. **Model P moved on two windows: 1mo UP 59→61, 3mo DOWN 60→57** (Signals +1.08→+1.32 / +1.12→+0.78, both still Mild Bull). The 1mo move tracks the firmer weekly tape and a stronger 1-month analog (median +9.0%→+15.2%, still 3-of-3). The 3mo move is the cycle clock: month 30.45→30.52, and the 3-month analog **lost its unanimity**, 3-of-3→2-of-3 positive, median +44.3%→+40.8% — the disclosed n=3 alignment fragility (direction is the signal, levels soft), not new market information. 6mo/1yr/3yr held at P 61/69/69 (medians +87.9% / +135.9% / +916.4%, all 3-of-3). Power-law fair $144,769 (from $144,596; −1σ $72,373, −2σ $36,180; fit-start range $121,758–$148,596); price −46% vs fair (from −47%). No level flipped membership ($81,685 still resistance, +4.5% above price, from +6.6%). Qualitative, new set **2026-11-04_draft2 (COMMITTED, AUTO-STAMPED NOVEMBER 4, 2026)**, stacked on the cloud's committed 2026-11-04_draft: **CLARITY Act RE-RATED DOWN** 10/27/46/73/92→10/25/43/70/91 (signals −5.44 / −3.40 / −0.95 / +2.88 / +6.23) — Democrats projected to win both chambers in the Nov 3 midterms (AP, NBC News, CNBC projections, not certified; AK and MS Senate races uncalled); **Iran War Risk** carried at the cloud set's committed 1/1/11/30/65 (RE-RATED DOWN 12→11 / 31→30 / 66→65 in the cloud's 2026-11-04_draft; signals 6mo −4.37, 1yr −2.08 Bear, 3yr +1.32 Mild Bull) — this pass independently re-confirmed flip-line clause (b) firing on the US "defensive" strike on Qeshm Island, Nov 2 (NBC, CBS, Euronews, Trump on record; no CENTCOM release found) and had sized it at 6mo −1 only, but a judgment difference is not new evidence, so the committed 1yr/3yr cut stands; **Tokenization RWA** HELD 59/66/71/78/86 and **Fed & Macro** HELD 34/23/34/43/58 (with a logged correction: the Nov 2 cycle's Treasury 2-year figure quoted the 3-year column; the true 2y was 4.61→4.56). Master (vs the cloud's committed set) 1mo −1.96→**−1.94**; 3mo −1.77→**−1.83**; 6mo −0.63→**−0.71**; 1yr +1.14→**+1.06**; 3yr +2.82→**+2.79**. **THE FINAL NUMBER −0.08→−0.13 equal-weight (Neutral) / +0.46→+0.40 horizon-weighted (Neutral)** (Nov 3 delivered: −0.06 / +0.48); leave-one-out −0.12 / +0.59 / −0.85 / +0.24 / −0.48, range −0.85 to +0.59 (sign still flips). No call band flipped. The full weekly 2026-10-31_draft remains DRAFT, awaiting Alex's stamp.
- **November 4, 2026 (cloud pass, 2026-11-04_draft) — LIGHT DAILY touch (cloud routine, fresh git clone, committed b59f546 at 12:51 UTC; its quant figures are superseded by the local pass above, its committed score set is preserved unedited):** Preflight (Step 0) found no same-day duplicate "daily"/"weekly" commit on origin/master — proceeded normally. data/btc_usd_daily.csv's last bar is now the FINALIZED November 3 close, **$77,653.11** [correction, local pass: that relay row was fetched 18:31 UTC Nov 3, so it was an INTRADAY Nov 3 read, not a finalized close; Bitstamp's finalized Nov 3 close is $77,345.00] (GitHub Actions relay, pushed 18:31 UTC Nov 3 — after the Nov 3 cycle's own report sync ran, so this report had been one close stale, still quoting $76,651.70; corrected this cycle), up 1.31% from

the prior finalized close ($76,651.70, Nov 2); +32.7% off the June 30 low (from +31.0%). **None of the weekly, monthly or quarterly bars rolled over** (still dated 2026-11-08 / 2026-11-30 / 2026-12-31); as-is composites firmed with the higher close: weekly +20.5→**+24.0** (agreement 3/7→4/7), monthly +6.5→**+8.5** (agreement 2/7, unchanged), quarterly +30.5→**+31.4** (agreement 4/7, unchanged); completed bars unchanged at +31.3 / +7.8 / +31.1. **Model P moved on two windows: 1mo 59→60, 3mo 60→57** (Signals +1.08→+1.20 / +1.12→+0.78, both still Mild Bull), the 3-month move tracking an analog-alignment shift (3-of-3→2-of-3, disclosed fragility); cycle-month clock ticks to 30.49 (from 30.45). 6mo held at P 61/69/69 (1yr/3yr). Power-law fair $144,683 (from $144,596); no level flipped membership ($81,685 still resistance, +5.2% above price, from +6.6%). Four independent WebSearch research passes, one per pillar, primary-source-first, against the active 2026-11-02_draft baseline (status COMMITTED, AUTO-STAMPED) found one pillar clearing the sufficiency rule: **Iran War Risk RE-RATED DOWN 6mo/1yr/3yr (12/31/66→11/30/65; 1mo/3mo held at the 1/1 floor)** — multi-source (WSJ first, corroborated by CBS, CNN citing three named US officials, Al Jazeera, Asia Times and Iran International) confirmation of a US strike on Iran's Qeshm Island late Nov 2, hours before the midterms, after Iran's IRGC fired at a US fighter jet; this fires flip-line clause (b) (“no resumed US strikes, the pre-midterm pledge holds through Nov 3”) verbatim, the explicitly flagged watch item from the 2026-11-02_draft note. Not scored (sufficiency rule): Iranian state TV's single-source claim of 11 tankers “caught fire” in 9 days; an Indian dhow hit off Oman (Nov 2–3, one death) with unclear cause/attribution. **CLARITY Act** HELD FLAT (Senate still adjourned until Nov 9, unchanged; no floor/committee/cloture action or CFTC/SEC action found); **Tokenization RWA** HELD FLAT (DTCC/OKXICE picture re-corroborated, unchanged; no new rwa.xyz pull); **Fed & Macro** HELD FLAT (ISM Manufacturing and the Nov 4 Treasury refunding not yet confirmed in search results; no new Fed-official remarks found since Oct 30). US midterm election outcome (Nov 3): contradictory/unreliable signal across search results — treated as UNCONFIRMED this cycle and NOT used to move any P; flagged as a watch item pending a reconciled primary tally. New score set **2026-11-04_draft**, status COMMITTED, AUTO-STAMPED NOVEMBER 4, 2026. Master (equal-weight) 1mo −1.96, 3mo −1.77, 6mo −0.63, 1yr +1.14, 3yr +2.82. **THE FINAL NUMBER −0.05/+0.49 (last committed) → −0.08/+0.46 this draft**; leave-one-out range −0.80 to +0.65 (sign still flips). No call band flipped anywhere.

- **November 3, 2026 — LIGHT DAILY touch (cloud routine, fresh git clone):** Preflight (Step 0) found no same-day duplicate “daily”/“weekly” commit on origin/master — proceeded normally. data/btc_usd_daily.csv's last bar is now the FINALIZED November 2 close, **$76,651.70** (GitHub Actions relay), down 1.23% from yesterday's quoted $77,604.41 (Nov 2 intraday local read) and down 2.02% from the Nov 1 close of $78,233.25; +31.0% off the June 30 low (from +32.6%). **None of the weekly, monthly or quarterly bars rolled over** (still dated 2026-11-08 / 2026-11-30 / 2026-12-31); as-is composites eased with the lower close: weekly +24.0→**+20.5** (agreement 4/7→3/7), monthly +8.3→**+6.5** (agreement 2/7, unchanged), quarterly +31.5→**+30.5** (agreement 4/7, unchanged); completed bars unchanged at +31.3 / +7.8 / +31.1. **Model P moved DOWN on two windows: 1mo 60→59, 3mo 61→60** (Signals +1.20→+1.08 / +1.23→+1.12, both still Mild Bull), both tracking the softer as-is reads; cycle-month clock holds at 30.45 (same underlying bar date), analogs unchanged, unanimous 3-of-3 across all five windows. 6mo/1yr/3yr held at P 61/69/69. Power-law fair $144,596 (from $144,597, effectively flat); no level flipped membership ($81,685 still resistance, +6.6% above price, from +5.3%). Master 1mo −1.96→**−1.99**; 3mo −1.68→**−1.70**; 6mo/1yr/3yr unchanged at −0.60 / +1.16 / +2.84. **THE FINAL NUMBER −0.05→−0.06 equal-weight (Neutral) / +0.49→+0.48 horizon-weighted (Neutral)**; leave-one-out −0.10 / +0.66 / −0.77 / +0.32 / −0.40, range −0.77 to +0.66 (sign still flips). No call band flipped. Four independent WebSearch research passes, one per pillar, primary-source-first, against the active 2026-11-02_draft baseline (status COMMITTED, AUTO-STAMPED, unchanged) found nothing clearing the sufficiency rule: **CLARITY Act** (Senate still adjourned until Nov 9, unchanged; no floor/committee/cloture action or CFTC/SEC action found dated Nov 2–3); **Iran War Risk** (no new confirmed Strait-of-Hormuz incident or CENTCOM/UKMTO statement found dated Nov 2–3; none of the four flip-line clauses newly fired); **Tokenization RWA** (no new DTCC/rwa.xyz development found beyond the already-logged Oct 28 go-live); **Fed & Macro** (no

corroborated new Fed-official remarks found — a low-quality news-aggregator result attributing a remark to “Loretta Mester” was excluded as an unreliable attribution, since she left the Cleveland Fed presidency in 2024; October jobs still due ~Nov 6, October CPI ~Nov 10). Today is also Election Day (the Nov 3 midterms); results were not yet known at research time, so the CLARITY Act pillar's “await the result” 1yr/3yr note stands unresolved. No new score set: 2026-11-02_draft (committed, auto-stamped) remains active and unedited.

- **November 2, 2026 — LIGHT DAILY touch (local run, run.py quant, Bitstamp direct):** BTC **$77,604.41** is an INTRADAY Nov 2 read (the Nov 2 daily bar is partial; not the GitHub Actions relay, not a finalized close), up 0.17% from last cycle's $77,476.37 (Oct 31 relay close) and +32.6% off the June 30 low (from +32.4%). Basis note: the local Bitstamp-direct series prints the Oct 31 close at $77,429.98 and the Nov 1 close at $78,233.25. **The weekly bar ROLLED OVER:** the bar dated 2026-11-01 completed at **+31.3** (from +42.0 on the bar dated Oct 25); the new bar dated 2026-11-08 has about one day of data, +24.0 as-is (Slight bullish, 4-of-7). **The monthly bar ROLLED OVER too:** October completed at **+7.8** (from September's +15.7); the new November bar reads +8.3 as-is (Neutral, 2-of-7). Quarterly +31.5 as-is (unchanged), Q3 completed +31.1. **Model P moved DOWN on one window: 1mo 61→60** (Signal +1.32→+1.20, still Mild Bull), mostly the rollover: the 1-month window is 70% weekly tape, and the one-day bar reads +24.0 versus +28.9 on the six-day bar it replaced; cycle-month 30.39→30.45, analogs still unanimous 3-of-3 (medians 1mo +9.0% / 3mo +44.3% / 6mo +88.3% / 1yr +142.0% / 3yr +920.3%). 3mo/6mo held at P 61/61; 1yr/3yr at 69/69. Power-law fair $144,597 (−1σ $72,285, −2σ $36,136; fit-start range $121,626–$148,470; price still −46% vs fair). No level flipped membership ($81,685 still resistance, +5.3% above price). Master 1mo −1.97→**−1.96**, 3mo −1.71→**−1.68**; 6mo/1yr/3yr unchanged at −0.60 / +1.16 / +2.84. **THE FINAL NUMBER −0.06→−0.05 equal-weight (Neutral) / +0.48→+0.49 horizon-weighted (Neutral)**; leave-one-out −0.09 / +0.67 / −0.76 / +0.33 / −0.40, range −0.76 to +0.67 (sign still flips). No call band flipped. Qualitative: **Tokenization RE-RATED UP 1mo 58→59, 3mo 65→66** on DTCC's Oct 28 "Tokenization Service Goes Live" release (primary; 4 independent outlets), correcting the "unconfirmed" wording of the Oct 29–Nov 1 cycles; CLARITY Act, Iran War Risk and Fed & Macro HELD FLAT. New active set: 2026-11-02_draft (COMMITTED, AUTO-STAMPED NOVEMBER 2, 2026).
- **November 1, 2026 — LIGHT DAILY touch (cloud routine, fresh git clone):** Preflight (Step 0) found no same-day duplicate "daily"/"weekly" commit on origin/master — proceeded normally. data/btc_usd_daily.csv's last bar is now the FINALIZED October 31 close, **$77,476.37** (GitHub Actions data relay), up 0.28% from the Oct 30 finalized close of $77,256.82 and +32.4% off the June 30 low (from +32.0%). The weekly bar did NOT roll over (still the bar dated Nov 1, now six days into forming, Oct 26–31), reading +28.9 as-is (Slight bullish, 5-of-7, up from +28.2); monthly +7.9 as-is (Neutral, 2-of-7, from +7.6); quarterly +31.5 as-is (Slight bullish, 4-of-7, from +31.4); completed bars unchanged at +42.0 / +15.7 / +31.1. **Model P moved UP on one window: 1mo 60→61** (Signal +1.20→+1.32, still Mild Bull) as the slightly higher finalized close lifted the near-term tape composite; the cycle-month clock advanced 30.35→30.39 with the analogs staying unanimous 3-of-3 across all five windows — a tape-level move, not a new alignment-shift event. 3mo/6mo held at P 61/61; 1yr/3yr held at P 69/69. Power-law fair $144,424 (−1σ $72,197, −2σ $36,091, price still −46% vs fair); no level flipped membership ($81,685 still resistance, +5.4% above price, from +5.7% yesterday). Master 1mo −1.99 → **−1.97**; 3mo/6mo/1yr/3yr unchanged at −1.71 / −0.60 / +1.16 / +2.84. **THE FINAL NUMBER holds at −0.06 equal-weight (Neutral) / +0.48 horizon-weighted (Neutral)** — the 1mo nudge is real but too small to move either headline off its 2-decimal rounding this cycle; leave-one-out −0.10 / +0.66 / −0.75 / +0.32 / −0.41, range −0.75 to +0.66 (from −0.76/+0.65, sign still flips). No call band flipped. Four independent WebSearch research passes, one per pillar, found nothing clearing the sufficiency rule on any pillar, against the active 2026-10-31_draft baseline (status DRAFT, FULL WEEKLY refresh still awaiting Alex's manual review, identical P values to the Oct 29 committed baseline): **CLARITY Act** (Senate still in its State Work Period recess through ~Nov 6, unchanged; no floor/committee/cloture action found dated Oct 31–Nov 1; no fresher CFTC/SEC action beyond the already-logged Oct 5 ANPRM; no fresher whip-count or White House statement found across 6 distinct WebSearch queries); **Iran War Risk** (all four flip-line clauses unfired: DCAS still 21 US deaths;

Trump's pre-Nov-3-midterm no-strike pledge holds, two days out; no new state entering with confirmed attribution; Brent-vs-$100 status remains genuinely UNRESOLVED — two uncorroborated single-source-grade snippets found, excluded under the sufficiency rule, not treated as resolving the question either way; the Vance letter/Qatar mediation track is unchanged since Oct 30); **Tokenization RWA** (Fed R-1899 and FDIC stablecoin rules remain at proposal stage, no finalization found; OKXICE's issuer-objection count has no corroboration newer than the already-logged Oct 26-28 figures, still effectively single-source via onebullex.com; DTCC's October full launch remains unconfirmed either way; rwa.xyz still stale, no November data); **Fed & Macro** (no new Fed-official remarks found Oct 31-Nov 1; the stopgap CR through Dec 11, 2026 confirmed intact; December 9 FOMC hike odds now readable across several MARKET-PRICE sources — CME FedWatch-derived ~85%, OIS-derived ~73%, a futures/Polymarket aggregator ~70% — but this sits within/around the already-priced ~74-79% band logged Oct 16, not a large, well-corroborated move by this pillar's own standing practice; contrast the Oct 16 Warsh-remarks re-rate, which required a primary-source remark corroborated by 7+ outlets, not odds alone; does not independently move P). No new score set: 2026-10-31_draft (status DRAFT) remains active and unedited, still awaiting Alex's manual review as a full weekly refresh (categorically excluded from auto-stamp).

- **October 31, 2026 — FULL WEEKLY refresh (cloud routine, run separately from and after this same day's light daily touch below):** this pillar's own figures are unchanged from this morning's light daily touch — data/btc_usd_daily.csv's last bar remains the FINALIZED October 30 close, **$77,256.82**, Model P 60/61/61/69/69, Master 1mo/3mo/6mo −1.99/−1.71/−0.60, 1yr/3yr +1.16/+2.84. The qualitative side ran four independent, deeper WebSearch research passes, one per pillar, against the committed 2026-10-29_draft baseline and found nothing clearing the sufficiency rule on any pillar: CLARITY Act, Iran War Risk, Tokenization and Fed & Macro all HELD FLAT. A new dated set, **2026-10-31_draft** (P values identical to 2026-10-29_draft), is now active_qual_set. **Per CLAUDE.md, a full weekly refresh is categorically excluded from auto-stamp regardless of research quality or how flat the result** — 2026-10-31_draft stays DRAFT, awaiting Alex's manual review. **THE FINAL NUMBER holds at −0.06 equal-weight / +0.48 horizon-weighted**, unchanged by this weekly checkpoint; no call band flipped anywhere.
- **October 31, 2026 — LIGHT DAILY touch (cloud routine), earlier today:** data/btc_usd_daily.csv's last bar is now the FINALIZED October 30 close, **$77,256.82** (GitHub Actions data relay), down 4.67% from the Oct 29 finalized close of $81,041.93 and +32.0% off the June 30 low (from +38.5%). The weekly bar did NOT roll over (still the bar dated Nov 1, now five days into forming, Oct 26–30), reading +28.2 as-is (Slight bullish, 5-of-7, down from +41.4); monthly +7.6 as-is (Neutral, 2-of-7, from +14.2); quarterly +31.4 as-is (Slight bullish, 4-of-7, from +35.3); completed bars unchanged at +42.0 / +15.7 / +31.1. **Model P moved DOWN on three windows: 1mo 62→60, 3mo/6mo 62→61** (Signals +1.44→+1.20 / +1.34→+1.23 / +1.06→+0.97, all still Mild Bull) as the sharply lower finalized close pulled down the near-term tape composite; the cycle-month clock advanced 30.32→30.35 with the analogs staying unanimous 3-of-3 across all five windows — a tape-level move, not a new alignment-shift event. 1yr/3yr held at P 69/69. Power-law fair $144,338 (−1σ $72,153, −2σ $36,068, price now −46% vs fair, from −44%); no level flipped membership ($81,685 still resistance, +5.7% above price, from +0.8% yesterday). Master 1mo −1.95 → **−1.99**; 3mo −1.69 → **−1.71**; 6mo −0.59 → **−0.60**; 1yr/3yr unchanged at +1.16 / +2.84. **THE FINAL NUMBER −0.04 → −0.06 equal-weight (Neutral) / +0.49 → +0.48 horizon-weighted (Neutral)**; leave-one-out −0.11 / +0.65 / −0.76 / +0.32 / −0.41, range −0.76 to +0.65 (sign still flips). No call band flipped. Four independent WebSearch research passes, one per pillar, found nothing clearing the sufficiency rule on any pillar, against the active 2026-10-29_draft baseline (status COMMITTED, AUTO-STAMPED, unchanged): CLARITY Act (Senate still in its State Work Period recess through ~Nov 6, unchanged; no floor/committee/cloture action found dated Oct 29–31; no CFTC/SEC rulemaking action beyond the already-logged Oct 5 ANPRM); Iran War Risk (DCAS still 21 US deaths, unchanged; no new US strike on Iran proper, no new state entering; Iran has still not accepted or rejected VP Vance's Oct 25 direct-talks offer on the record, and Trump's Oct 29 "medical supplies only" dispute remains unresolved); Tokenization RWA (no further GENIUS Act rule finalization beyond the already-logged OCC rule; this window's OKXICE objector-count sourcing is internally inconsistent and uncorroborated, excluded per

the sufficiency rule; DTCC's October launch remains unconfirmed either way); Fed & Macro (October jobs report not due until ~Nov 6, October CPI not due until ~Nov 10 — neither has landed; no new Fed-official remarks this window moving December odds beyond what's already priced). No new score set: 2026-10-29_draft (committed, auto-stamped) remains active and unedited.

- **October 30, 2026 — LIGHT DAILY touch (cloud routine):** data/btc_usd_daily.csv's last bar is now the FINALIZED October 29 close, **$81,041.93** (GitHub Actions data relay), up 1.3% from yesterday's local-pass Oct 29 intraday read of $79,991.36 and +38.5% off the June 30 low. The weekly bar did NOT roll over (still the bar dated Nov 1, still four days into forming, Oct 26–29), reading +41.4 as-is (Slight bullish, 5-of-7, up from +37.4); monthly +14.2 as-is (Neutral, 2-of-7, from +12.4); quarterly +35.3 as-is (Slight bullish, 4-of-7, from +34.3); completed bars unchanged at +42.0 / +15.7 / +31.1. **Model P moved on three windows: 1mo/3mo/6mo 61 → 62** (Signals +1.32→+1.44 / +1.23→+1.34 / +0.97→+1.06, all still Mild Bull) as the higher finalized close lifted the near-term tape composite; the cycle-month clock holds at 30.32 — no new cycle-analog flip, unlike yesterday's move. 1yr/3yr held at P 69/69. Power-law fair $144,254 (−1σ $72,111, −2σ $36,047); no level flipped membership ($81,685 still resistance, +0.8% above price, from +2.1% yesterday). Master 1mo −1.97 → **−1.95**; 3mo −1.71 → **−1.69**; 6mo −0.60 → **−0.59**; 1yr/3yr unchanged at +1.16 / +2.84. **THE FINAL NUMBER −0.06 → −0.04 equal-weight (Neutral) / +0.48 → +0.49 horizon-weighted (Neutral)**; leave-one-out −0.08 / +0.68 / −0.74 / +0.34 / −0.41, range −0.74 to +0.68 (sign still flips). No call band flipped. Four independent WebSearch research passes, one per pillar, found nothing clearing the sufficiency rule on any pillar: CLARITY Act (Senate.gov's own tentative calendar confirms the State Work Period recess runs Oct 5–Nov 6, unchanged; no floor/committee/cloture action found dated Oct 29–30; no further CFTC/SEC action beyond the already-logged Oct 5 Reg CTX/Reg CAM ANPRM); Iran War Risk (no on-record Iranian acceptance or rejection of the Vance/Qatari talks offer found; no further Trump/US-official clarification of the letter's content beyond the Oct 29 dispute already logged; no new CENTCOM/DCAS casualty update or attack reporting found); Fed & Macro (October jobs and October CPI are not yet due — roughly Nov 6 and Nov 10 per secondary calendars, not BLS primary — and no new Fed-speaker guidance was found; current government-shutdown status for this window could not be independently confirmed either way, an open research gap, not a finding); Tokenization RWA (a single-outlet claim, OneBullEx, that OKXICE's objector count climbed to 33 is internally inconsistent across that outlet's own articles on the count's date and uncorroborated by Reuters/Cointelegraph/CoinDesk — single-source, excluded per the sufficiency rule, logged as a watch item pending corroboration; DTCC's launch remains unconfirmed either way; no GENIUS Act agency beyond the OCC has finalized a rule). No new score set: 2026-10-29_draft (committed, auto-stamped) remains active and unedited.
- **October 29, 2026 — LIGHT DAILY touch, SECOND same-day pass (LOCAL run, Windows Task Scheduler, ~8:45 AM ET):** run.py quant ran locally (Bitstamp reachable), delivering an Oct 29 intraday read of **$79,991.36** (the Oct 29 daily bar is partial), down 0.46% from the finalized Oct 28 close of $80,362.80 and +36.7% off the June 30 low. Weekly bar (dated Nov 1, forming) +37.4 as-is (from +39.4); monthly +12.4 (from +13.1); quarterly +34.3 (from +34.7); completed bars unchanged at +42.0 / +15.7 / +31.1. Cycle-month clock 30.29 → 30.32 **flipped the 1-month cycle analog from 1-of-3 to 3-of-3 positive** (median −1.5% → +3.9%) — it flipped the other way on Oct 28; the disclosed n=3 alignment fragility, not a trend change. Model P 55/61/61/69/69 → **61/61/61/69/69** (1mo Signal +0.60 → +1.32, still Mild Bull). Power-law fair $144,253 (−1σ $72,110, −2σ $36,047); no level flipped membership ($81,685 still resistance, +2.1% above price). Master 1mo −2.11 → **−1.97** (still Bear); 3mo/6mo/1yr/3yr unchanged at −1.71 / −0.60 / +1.16 / +2.84. **THE FINAL NUMBER −0.09 → −0.06 equal-weight (Neutral) / +0.47 → +0.48 horizon-weighted (Neutral)**; leave-one-out −0.10 / +0.66 / −0.75 / +0.32 / −0.41, range −0.75 to +0.66 (sign still flips). No call band flipped. Second research pass (all four qualitative pillars) found nothing clearing the sufficiency rule: BEA released September Personal Income & Outlays and the Q3 GDP advance estimate at 8:30 AM ET today (bea.gov, primary) — core PCE +0.3% m/m / 3.1% y/y and headline +0.5% m/m / 3.6% y/y, both at the pre-release consensus; Q3 real GDP +3.4% annualized, above the ~2.8–3.2% consensus range — an in-line inflation print plus a growth beat, logged in the Fed &

Macro report, not scored. FRED DCOILBRENTEU re-read directly from this machine: Brent $123.10 on Oct 27 (latest observation; Oct 23 $128.30) — the Iran pillar's Brent >$100 flip-line clause (d) stays CONFIRMED FIRING, already priced. No new score set: 2026-10-29_draft (committed, auto-stamped by the cloud pass) remains active and unedited.

★ **October 29, 2026 — LIGHT DAILY touch:** data/btc_usd_daily.csv's last bar is now the FINALIZED October 28 close, **$80,362.80** (GitHub Actions data relay), down 0.40% from yesterday's Oct 28 intraday read of $80,686.94 and +37.3% off the June 30 low. The weekly bar did NOT roll over (still the bar dated Nov 1, now four days into forming, Oct 26–29), reading +39.4 as-is (Slight bullish, 5-of-7); monthly +13.1 as-is (Neutral, 2-of-7); quarterly +34.7 as-is (Slight bullish, 4-of-7); completed bars unchanged at +42.0 / +15.7 / +31.1. **Model P moved on one window: 3mo 62 → 61** (Signal +1.34 → +1.23, still Mild Bull) as the finalized close ticked the 3-month cycle analog back slightly (median +45.2%, still unanimous 3-of-3) — the disclosed n=3 alignment fragility, not a new finding; 1mo/6mo/1yr/3yr held at P 55/61/69/69. Power-law fair value $144,164 (unchanged; −1σ $72,064, −2σ $36,023); no level flipped membership ($81,685 still resistance, +1.6% above price, from +1.2%). Master 1mo −2.11 (unchanged, still Bear); 3mo −1.71 (from −1.69, still Bear); 6mo −0.60 (from −0.63, Mild Bear); 1yr +1.16 (from +1.14, Mild Bull); 3yr +2.84 (unchanged, Bull); **THE FINAL NUMBER moved to −0.09 equal-weight / +0.47 horizon-weighted** (from −0.09/+0.46 yesterday) — no call-band flip anywhere; leave-one-out −0.14 / +0.62 / −0.79 / +0.29 / −0.41, range −0.79 to +0.62 (sign still flips). Four independent WebSearch research passes, one per pillar, found: CLARITY Act and Iran War Risk **HELD FLAT** (a multi-sourced Oct 25 VP Vance letter to Iran proposing direct talks is logged in that pillar's report as a watch item, not scored — unaccepted by Iran, disputed by Trump himself). Fed & Macro **HELD FLAT**: the Oct 28 FOMC held rates 10-2 (Cook and Hammack dissenting for a hike) — primary federalreserve.gov, multiply corroborated — but this confirms, rather than exceeds, the consensus already priced in the baseline, so it is logged but not scored. Tokenization **RE-RATED UP on 6mo/1yr only (70/77 → 71/78)**: the OCC finalized its GENIUS Act stablecoin rule Oct 21 (primary OCC/Federal Register, corroborated by 8+ independent outlets) — the first of six agencies to finalize, front-running this pillar's own Jan 2027 resolution point. **config/scores.json gained a new dated set this cycle** (**2026-10-29_draft**, now active, **AUTO-STAMPED** per Alex's delegated daily authority — status committed, stamped_by "Alex (auto-stamped)"). Master, 00_START_HERE and the three other qualitative pillar reports' quoted-number lines were resynced in the same pass.

★ **October 28, 2026 — LIGHT DAILY touch, SECOND same-day pass (LOCAL run, Windows Task Scheduler, ~8:45 AM ET):** run.py quant ran locally (Bitstamp reachable), delivering an Oct 28 intraday read of **$80,686.94** (the Oct 28 daily bar is partial), up 0.29% from the $80,453.34 Oct 27 close via GitHub Actions (this morning's cloud reading) and +37.9% off the June 30 low. The weekly bar did NOT roll over (still the bar dated Nov 1, now three days into forming, Oct 26–28), reading +40.2 as-is (Slight bullish, 5-of-7, from +39.5); monthly +13.7 as-is (Neutral, 2-of-7, from +13.3); quarterly +35.1 as-is (Slight bullish, 4-of-7, from +34.9); completed bars unchanged at +42.0 / +15.7 / +31.1. **Model P moved on one window: 1mo 58 → 55** (Signal +0.96 → +0.60, still Mild Bull) as the 1-month cycle analog flipped from 2-of-3 positive (median +0.4%) to 1-of-3 positive (median −1.5%) with the cycle-month clock advancing 30.26 → 30.29 — the disclosed n=3 alignment fragility, not a new finding; 3mo/6mo/1yr/3yr held at P 62/61/69/69 (medians +45.2% / +73.4% / +144.4% / +1084.9%, all still 3-of-3). Power-law fair value $144,164 (from $144,075; −1σ $72,064, −2σ $36,023); no level flipped membership ($81,685 still resistance, +1.2% above price, from +1.5%). Master 1mo −2.04 → −2.11 (still Bear), the other four master windows unchanged (−1.69 / −0.63 / +1.14 / +2.84); **THE FINAL NUMBER moved to −0.09 equal-weight / +0.46 horizon-weighted** (from −0.08/+0.47 this morning) — no call-band flip anywhere; leave-one-out −0.14 / +0.62 / −0.78 / +0.28 / −0.43, range −0.78 to +0.62 (sign still flips). A second research pass re-checked all four qualitative pillars (WebSearch and WebFetch both working from this machine, access NOT degraded): all four **HELD FLAT**, **config/scores.json again NOT touched** — active_qual_set remains **2026-10-24_draft**, still status DRAFT, awaiting Alex's manual review. One standing fact corrected: the Brent >$100 flip-line clause behind Iran War Risk, carried as “unverifiable in this sandbox” since Oct 10, was re-verified directly on FRED DCOILBRENTEU (primary, EIA Europe Brent spot FOB) from this machine

— Oct 20 $115.22, the latest observation (Oct 8 high $130.18) — so it is CONFIRMED still firing (already priced since it first fired) and the multi-week open item is closed; the Kalshi-implied ~$92–97 read cited this morning is contradicted by the primary spot series. Master, 00_START_HERE and the four qualitative pillar reports' quoted-number lines were resynced in the same pass.

★ **October 28, 2026 — LIGHT DAILY touch (cloud routine, earlier this morning, on the Oct 27 close — its figures superseded by the local pass above):** four independent WebSearch research passes, one per pillar, primary-source-first, against the active 2026-10-24_draft baseline. All four pillars **HELD FLAT**, a twelfth straight cycle with no qualitative move: CLARITY Act (no reporting dated Oct 24-28 found on Senate floor/committee action, negotiator statements, or CFTC/SEC action; recess through ~Nov 6 stands); Iran War Risk (a single-source Oct 24 Shafaq News claim of another struck tanker in the Strait found no independent corroboration and no casualties reported, not scored; none of the four flip-line clauses fired; a Kalshi Oct-30-expiry market now implies Brent ~$92-97, market-priced, the first indirect signal in weeks suggesting Brent sits below the $100 flip-line, though the primary spot-price access gap remains open); Tokenization RWA (OKXICE's issuer-objection count grew further to 22, Reuters Oct 24, 16 Nasdaq + 6 NYSE-listed issuers led by Wells Fargo — continuation of the already-scored friction pattern, not a status change; a single-source, internally-inconsistent claim of 25 objectors excluded as unreliable; a single-source claim of three new SEC Innovation Exemption filers found but uncorroborated against SEC.gov, excluded per the sufficiency rule; DTCC's October launch remains unconfirmed); Fed & Macro (today, Oct 28, IS the FOMC decision date itself, due at 2:00/2:30pm ET, after this cycle's research pass — no outcome exists yet to score; pre-meeting consensus ~80-87% hold/~13-20% hike unchanged from the Warsh-driven baseline; tomorrow's cycle must pick up the actual outcome once public). **config/scores.json was NOT touched** — active_qual_set remains **2026-10-24_draft**, still status DRAFT, awaiting Alex's manual review. This quant pillar's own output MOVED this cycle (GitHub Actions' Oct 27 daily bar, $80,453.34, up from $80,225.46; the weekly bar did NOT roll over, still the bar dated Nov 1, now reading +39.5 as-is, up from +38.7; Model P moved on one window, 58/62/61/69/69 from 58/61/61/69/69, as the 3-month cycle analog firmed further, still unanimous 3-of-3 positive). THE FINAL NUMBER moved to −0.08 equal-weight / +0.47 horizon-weighted (from −0.08/+0.46) — no call-band flip, entirely on the quant side.

★ **October 27, 2026 — LIGHT DAILY touch:** four independent WebSearch research passes, one per pillar, primary-source-first, against the active 2026-10-24_draft baseline. All four pillars **HELD FLAT**, an eleventh straight cycle with no qualitative move: CLARITY Act (Senate still in recess through ~Nov 6, no floor/committee action found dated Oct 26-27); Iran War Risk (no new confirmed Strait-of-Hormuz incident dated Oct 26-27; none of the four flip-line clauses fired; the Brent >$100 flip-line clause remains independently unverifiable in this sandbox, a standing multi-week gap); Tokenization RWA (WebSearch again surfaced only the Oct 19 objector notice, 16 objectors; no newer count or go-live confirmation found; DTCC's October launch target remains unconfirmed either way); Fed & Macro (the Oct 27-28 FOMC meeting is underway today, decision due tomorrow; FOMC blackout continues, no new primary data print or Fed-speaker remark found). **config/scores.json was NOT touched** — active_qual_set remains **2026-10-24_draft**, still status DRAFT, awaiting Alex's manual review. This quant pillar's own output MOVED this cycle (GitHub Actions' Oct 26 daily bar, $80,225.46, down from $80,532.72; the weekly bar also ROLLED OVER this cycle, the bar dated Oct 25 closing at a final +42.0; Model P moved on one window, 58/61/61/69/69 from 56/61/61/69/69, as the 1-month cycle analog flipped back from 1-of-3 to 2-of-3 positive). Also corrected a stale pair of weekly trendline figures quoted in prose ($37,084/$75,151) that had drifted out of sync with data/trendlines.csv; now reads $36,135/$74,373, matching the data exactly. THE FINAL NUMBER moved to −0.08 equal-weight / +0.46 horizon-weighted (from −0.09/+0.46) — no call-band flip, entirely on the quant side.

★ **October 26, 2026 — LIGHT DAILY touch:** four independent WebSearch research passes, one per pillar, primary-source-first, against the active 2026-10-24_draft baseline. All four pillars **HELD FLAT**, a tenth straight cycle with no qualitative move: CLARITY Act (Senate still in recess through ~Nov 6, no floor/committee action found dated Oct 25-26); Iran War Risk (no new confirmed Strait-of-Hormuz

incident dated Oct 25-26; none of the four flip-line clauses fired; the Brent >$100 flip-line clause remains independently unverifiable in this sandbox, a standing multi-week gap); Tokenization RWA (WebSearch surfaced only the stale Oct 15 objector notice, no newer count or go-live confirmation found beyond the baseline's own Oct 19 figure of 16); Fed & Macro (the Oct 27-28 FOMC decision is now two days out, current hold/hike odds ~83-87%/~13-17% sit within the band the Oct 24 weekly already priced off Chair Warsh's Oct 16 remarks; FOMC blackout continues). **config/scores.json was NOT touched** — active_qual_set remains **2026-10-24_draft**, still status DRAFT, awaiting Alex's manual review. This quant pillar's own output MOVED sharply this cycle (GitHub Actions' Oct 25 daily bar, $80,532.72, up from $80,035.37; Model P moved on one window, 56/61/61/69/69 from 62/61/61/69/69, as the 1-month cycle analog flipped from unanimous 3-of-3 positive to 1-of-3). THE FINAL NUMBER moved to −0.09 equal-weight / +0.46 horizon-weighted (from −0.06/+0.47) — no call-band flip, entirely on the quant side.

★ **October 25, 2026 — LIGHT DAILY touch:** four independent WebSearch research passes, one per pillar, primary-source-first, against the active 2026-10-24_draft baseline. All four pillars **HELD FLAT**, a ninth straight cycle with no qualitative move: CLARITY Act (Senate still in recess through ~Nov 6, nothing beyond the Oct 24 weekly's own findings); Iran War Risk (attack tempo stays elevated, latest confirmed incidents unchanged since the Oct 24 weekly; EIA's own October STEO data — Brent averaged $114/bbl in September, Q4 forecast $104.69/bbl — corroborates but does not newly fire this pillar's already-"last confirmed FIRED" sustained→$100 flip-line clause; Petro Dolphin's 2 missing crew remain unresolved; none of the four flip-line clauses fired fresh); Tokenization RWA (OKXICE's objector count unchanged at 16; still not live; DTCC's October launch remains unconfirmed); Fed & Macro (Oct 28 FOMC three days out, current hold/hike odds ~84-87%/~13-16% sit within the band the Oct 24 weekly already priced off Chair Warsh's Oct 16 remarks; FOMC blackout continues). **config/scores.json was NOT touched** — active_qual_set remains **2026-10-24_draft**, still status DRAFT, awaiting Alex's manual review. This quant pillar's own output MOVED this cycle (GitHub Actions' Oct 24 daily bar, $80,035.37, down from $81,500.31; Model P moved on three windows, 62/61/61/69/69 from 61/61/62/68/69). THE FINAL NUMBER moved to −0.06 equal-weight / +0.47 horizon-weighted (from −0.07/+0.47) — no call-band flip, entirely on the quant side.

- **October 24, 2026 — FULL WEEKLY refresh:** four independent parallel WebSearch research passes, one per pillar, primary-source-first. CLARITY Act, Iran War Risk and Tokenization all **HELD FLAT**: CLARITY Act (Senate still in its State Work Period through ~Nov 6, no floor/committee action found; a second, firmer-sourced read on the CFTC-ANPRM's Dec 14 comment deadline is procedural, not scored); Iran War Risk (attack tempo stays elevated but eased in the back half of October, no new deaths; Petro Dolphin's 2 missing crew remain unresolved with no new reporting either way; none of the four flip-line clauses fired); Tokenization RWA (OKXICE still not live under its 30-day issuer-notice clock; its disclosed objector count grew from 9 to 16, including Microsoft, Alphabet and Goldman Sachs — friction, not a launch; DTCC's launch remains unconfirmed). **Fed & Macro RE-RATED UP, 1mo only, 31→34:** Fed Chair Kevin Warsh's Oct 16 remarks at an IMF event in Bangkok (primary, 7+ independent outlets) declined to preview remaining 2026 FOMC decisions; Oct 28 hike odds then collapsed from ~33-47% to ~13-15%/~14% (market-priced). This quant pillar's own output is unchanged this cycle (GitHub Actions' Oct 23 daily bar, $81,500.31, same as this morning's sync; Model P 61/61/62/68/69 unchanged). **config/scores.json updated** — active_qual_set now points to **2026-10-24_draft**, still status DRAFT, awaiting Alex's manual review (a full weekly refresh, categorically never auto-stamped). THE FINAL NUMBER moved to −0.07 equal-weight / +0.47 horizon-weighted (from −0.08/+0.46 this morning) — no call-band flip, entirely on the qualitative side.
- **October 24, 2026 — LIGHT DAILY touch (earlier this morning, superseded by the full weekly above):** GitHub Actions' price-data relay delivered the October 23, 2026 daily bar, closing at **$81,500.31**, down 0.12% from the $81,597.19 Oct 22 close. This nudges the three tape composites and the weekly/monthly/quarterly SMA/RSI/MACD readings slightly (see below) and moves Model P on the 1-month window only (64→61), nudging THE FINAL NUMBER. All four qualitative pillars were independently re-checked via WebSearch this cycle and again **HELD FLAT**, an eighth straight cycle with no qualitative

move — nothing cleared the sufficiency rule: CLARITY Act (Senate still in recess through Nov 9, no floor/committee action found; a dated Oct 23 report notes CLARITY backers cut Q3 lobbying spend, immaterial); Iran War Risk (an Oct 22 IRGC claim of 7 more tankers damaged, and Brent reportedly above $111/bbl around the same date, were both reported but neither independently confirmed nor verifiable against this pillar's own primary-source Brent threshold in this sandbox; none of the four flip-line clauses fired; the Petro Dolphin crew and Al Maqam claim remain unresolved/unconfirmed); Tokenization RWA (OKXICE still not live under its 30-day issuer-notice clock; its disclosed objector count grew to 16, including Microsoft, Alphabet and Goldman Sachs, more friction but no change to not-live status; DTCC's launch remains unconfirmed); Fed & Macro (FOMC blackout period, Oct 17-29, continues ahead of the Oct 27–28 meeting; no verifiable new data prints; no shutdown/funding status change). **config/scores.json was NOT touched** — active_qual_set remains **2026-10-17_draft**, still status DRAFT, awaiting Alex's manual review. THE FINAL NUMBER moved to −0.08 equal-weight / +0.46 horizon-weighted (from −0.07/+0.47) — no call-band flip.

- **October 23, 2026 refresh (prior cycle) in one line:** a routine daily tape sync on GitHub Actions' finalized Oct 22 close ($81,597.19, revised down from the $81,694.28 intraday read); Model P, this pillar's signals and THE FINAL NUMBER were unchanged by that revision, though the $81,685 level read back as resistance. Qualitative research again found nothing material on any of the four pillars.
- **Qualitative research today — a light daily touch, WebSearch against all four pillars, nothing material:** CLARITY Act: searched for Senate floor/committee action — found none; recess through Nov 9 stands. Iran War Risk: searched for new Strait-of-Hormuz developments — an Oct 22 IRGC claim of 7 tankers damaged is Iran's own unconfirmed claim; Brent reportedly above $111/bbl around the same date could not be independently verified against a primary series in this sandbox; the Petro Dolphin crew's status and the Al Maqam claim remain unresolved/unconfirmed; none of the four flip-line clauses fired. Tokenization RWA: OKXICE's objector count grew to 16 (from 9) per an Oct 19 update, including Microsoft, Alphabet and Goldman Sachs — friction, not a launch; DTCC's October target remains unconfirmed. Fed & Macro: confirmed the FOMC blackout period (Oct 17-29) continues; no Fed speakers, no verifiable new data prints. Nothing cleared the sufficiency rule on any pillar, so all four HELD FLAT and **config/scores.json was NOT touched** — active_qual_set remains **2026-10-17_draft**, still status DRAFT, awaiting Alex's manual review of the Oct 17 full weekly checkpoint.
- **Price: $81,500.31 close (Oct 23), down 0.12% from the $81,597.19 Oct 22 close.** This pillar scores the tape, not the day's qualitative news.
- ★ **Repair signal #1 remains CONFIRMED:** price sits +21.3% above the 200-week average ($67,166).
- **The weekly bar (dated Oct 25) continues forming this cycle — no rollover.** Its as-is composite eased to **+46.3** (agreement 6/7), essentially flat vs. yesterday's +46.7 and below the just-closed bar dated Oct 18 at +49.9.
- **Monthly and quarterly bars remain in the bars opened by the Oct 1 rollover** — no new rollover this cycle. October (monthly) reads **+15.5** as-is (agreement 2/7, Neutral); Q4 (quarterly) reads **+36.3** as-is (agreement 4/7, down from 5/7, Slight bullish); the completed September and Q3 bars hold at **+15.7** and **+31.1**.
- ★ **Model P moved on one window: 1mo 64 → 61** (Signal +1.68 → +1.32); 3mo 61, 6mo 62, 1yr 68, 3yr 69 all held (Signals +1.23 / +1.06 / +1.73 / +1.52). The cycle-month clock advanced to **30.12**; the 1-month cycle-analog median eased from +9.0% (unanimous 3-of-3) to +7.3% (back to 2-of-3) — the driver of the P move; the other analogs ticked too (3mo +33.6%→+31.4%; 6mo +65.1%→+63.8%; 1yr +123.7%→+126.2%; 3yr +1052.1%→+1081.5%) without crossing a new rounded P value. Honesty note: analogs rest on **n=3 completed cycles** and single windows flip when alignment shifts by days — the direction is the signal, the levels are soft.
- **Power-law fair value: $143,721** (up from $143,632; price now −43% vs. fair). Fit-window sensitivity spans $120,950 (2013 start) to $147,815 (2015 start): quote it as a range, never a target.

- **Froth unchanged at z = −0.87**, still dated 2026-05-23 — Coin Metrics community data lags ~6 weeks, so this stays a robustness tilt, never a score input.
- **Levels note: no classification flip this cycle** — $81,685 (2x touch) remains resistance, price pulling further below it (+0.2%, up from +0.1%). The next resistance up is $88,269 (+8.3%, 2x). The falling trendlines are unchanged (support $37,084, resistance $75,151).
- **Data refreshed:** daily price data through the October 23, 2026 close via the GitHub Actions data relay; indicators/levels/scores/cycle/mapping read via `run.py numbers` (run.py quant itself is not run in this sandbox — its fetch step hits bitstamp.net, which this environment's egress proxy blocks).
- **Context:** this cycle's active qualitative score set is **2026-10-17_draft**, a FULL WEEKLY refresh built on the Oct 15 committed baseline (2026-10-15_draft, which re-rated Fed & Macro and Iran War Risk; CLARITY Act and Tokenization RWA held flat). All four qualitative pillars confirmed held flat again this cycle; status remains DRAFT, awaiting Alex's manual review. This quant pillar is computed fresh every run regardless of qualitative status.
- ★ **Master blend MOVED this cycle, on the quant side only:** THE FINAL NUMBER moved from −0.07 to −0.08 equal-weight (still Neutral); horizon-weighted moved from +0.47 to +0.46 (still Neutral). Only the 1-month master window moved (−1.98→−2.05, still Bear), tracking this pillar's own signal move — no qualitative pillar re-rated, no call-band flip anywhere. **Because THE FINAL NUMBER itself moved (even though config/scores.json did not), the Master report, 00_START_HERE and the four qualitative pillar reports' own quoted-number lines were updated this cycle too** — to keep run.py selfcheck's prose-consistency guard passing — while their qualitative research content stays untouched; this TA report resyncs fully every cycle per the standing rule.

Method & Sources

Everything is reproducible — the scripts and data live in the BTC-TA folder. Run order below.

- **Price data:** Bitstamp OHLC API (daily, 2011–2026, no key) via fetch_btc_history.py · Coin Metrics community reference price (2010–2011 close-only) via build_master_history.py — 5,838 days total, each row tagged by source.
- **Indicator stack:** indicators.py — SMA 20/50/200, EMA 12/26, RSI-14 (Wilder), MACD 12/26/9, Bollinger 20/2, OBV — on weekly (W-SUN), monthly, quarterly bars. levels.py — swing-cluster S/R + least-squares trendlines.
- **Scoring:** score.py — each indicator → conviction in [−100, +100] (bounded inputs mapped linearly, unbounded squashed with tanh); composite = fixed weights (MA .20, RSI .15, MACD .15, BB .15, S/R .15, OBV .10, TL .10); agreement = indicators sharing the composite's sign.
- **Cycle & value:** cycle_analysis.py — halving-aligned tops/bottoms/momentum turns, projections from C1–C3 · downside.py / downside_map.py — power-law bands (R^2 0.96) + historical troughs + 6-method bottom-zone synthesis · test_altcoin_froth.py — froth quartiles vs forward drawdowns, block-bootstrap CI.
- **The mapping (new):** pillar_mapping.py — window scores from tape composites + cycle analogs + power-law value; P = 50 + 25×(S/100); Quality rubric per window; writes data/pillar_scores.json for the master blend.
- **Run order:** fetch_btc_history → build_master_history → fetch_altcoin_data → indicators → levels → score → charts → cycle_analysis → downside → downside_map → pillar_mapping.
- **Honesty notes:** none of the weekly, monthly or quarterly bars rolled over this cycle — the weekly bar dated Nov 1 stays completed at +31.3 and the bar dated Nov 8 (about seven days of data) reads +16.0 as-is; October's monthly bar stays completed at +7.8 and the November bar (about eight days of data) reads +4.4 as-is; the quarterly bar continues forming at +29.0 as-is, with Q3's completed bar at +31.1 · today's price ($75,680.00) is the FINALIZED Nov 8 close (GitHub Actions relay); Bitstamp-direct and the GitHub Actions relay can differ slightly on the same day's close, and bars can be revised after first posting · the 1-month analog lost unanimity, 3-of-3 → 2-of-3 positive (median +7.4% → +10.8%) — the disclosed n=3 alignment fragility this report has always carried · the multi-signal crash model failed out-of-sample (AUC 0.44) and is excluded · the AUC figures are the pipeline's own attestation · froth data lags ~6 weeks · n=3 on all cycle claims, and analog windows can cross into the next cycle · the 2024 halving is dated Apr 19 (US ET; block 840,000 hit Apr 20 00:09 UTC — 0.03 cycle-month effect) · S/R levels are algorithmic swing-clusters with 1–2 touches each and can change membership day to day (as $81,685 has over recent cycles, resistance ↔ support) · the bottom-odds split

(40/35/17/8) is a judgment synthesis, not a model output · research-access note this cycle: WebSearch returned usable results on all four pillars; nothing cleared the sufficiency rule on any pillar today — see What Changed.
