

Tokenization of Real-World Assets Pillar Report

Real Money On-Chain — Researched, Scored, and Personally Committed

Originally written **June 19, 2026**; scores committed by me on **June 19, 2026**. Re-researched July 8, 13, 18, 25, and 30, 2026 against live primary sources, and again as a full weekly refresh on August 8, 2026 (nudged up at 3mo/6mo on a new RWA all-time high and two missed catalysts, committed and stamped by Alex). Held flat through the Aug 9-16 daily touches, all auto-stamped committed. Drafts written Aug 17, Aug 18, and Aug 20 were never delivered (no report/render/archive/commit followed for any of them), and an Aug 21 session began delivering the Aug 20 numbers into only two of six reports before stopping — also never finished or committed. **This version (August 22) does not take any of those abandoned drafts at face value — it independently re-verifies through a dedicated primary-source research pass and HOLDS FLAT at 52/60/66/74/85** — the rwa.xyz total-value print remains essentially unchanged (and Treasuries-specific value is confirmed distinct from the all-category total, this pillar's known mislabeling trap), the SEC's newly proposed "Regulation Crypto Assets" (Aug 18-19) is scoped to new-token capital formation rather than RWA tokenization and doesn't clear this pillar's bar, and the tokenized-stock innovation exemption this pillar is watching remains delayed/exploratory with no new dated progress. **This pillar's own evidence is clean and would have qualified for Alex's standing daily auto-stamp on its own** — but the **overall Aug 22 score set is left as a DRAFT, flagged for Alex's manual review**, because a dedicated adversarial fact-check this cycle found that the Iran War Risk pillar's report contained a materially false claim (a "first confirmed fatality" framing that was actually roughly the 18th such death) that the original research pass missed; see My Decision below. **A second, deeper session ran later the same day**. With that Aug 22 catch-up draft already delivered — rendered, archived, and git-committed — house rules require a new dated set rather than an in-place edit, so this full weekly refresh (the first since Aug 8) is scored as **2026-08-22, draft2**. Draft2 independently re-confirms the hold at 52/60/66/74/85 through fresh primary-source research, including a direct sec.gov check of a newly issued Franklin Templeton no-action letter (Aug 12) and a since-canceled (not merely delayed) SEC tokenized-equity "innovation exemption" meeting (Aug 13-15 reporting) — the two roughly offset and neither alone clears this pillar's bar. Draft2 was left as draft at delivery — this time because a full weekly refresh is categorically excluded from Alex's delegated daily auto-stamp authority, regardless of how clean the evidence is — **COMMITTED BY ALEX August 23, 2026** after independent review. **A daily catch-up draft dated August 28, 2026** (score set 2026-08-28, draft) was written — a direct rwa.xyz re-pull showing total distributed value \$38.69B (+3.04%/30d) and tokenized Treasuries \$16.00B (-0.93%/30d), both continuing trend — but it was never rendered, selfchecked, archived, or git-committed, and sits abandoned, superseded the same way this report has always treated interrupted prior sessions. **This version (August 29) does not take that abandoned draft at face value** — it runs a fresh, independent full-weekly primary-source pass and again HOLDS FLAT at 52/60/66/74/85, scored as **2026-08-29, draft**. The week's one genuine new development is **Coinbase's August 24 launch of tokenized-stock trading (NVDAc/METAc/AAPLc/GOOGLc — Nvidia, Meta, Apple, Alphabet) on its own Base blockchain**, each token backed 1:1 by a share held in regulated custody with Alpaca, under an Abu Dhabi Global Market Financial Services Regulatory Authority permission Coinbase received August 11, 2026 — confirmed on coinbase.com and corroborated by 9+ independent outlets, all dated Aug 24-25, but eligible to **non-US users only**, the exact same structural limitation this report already established (the "Robinhood Chain precedent") as insufficient alone to move P. Standard Chartered-backed Anchorpoint's HKDAP stablecoin (Aug 24-25, whose stated use cases touch RWA settlement) is logged as tangential context, not a catalyst. No new SEC rulemaking, no-action letter, or press release touching RWA tokenization was found on a direct sec.gov check this window, and DTCC's October 2026 and Nasdaq's December 6, 2026 targets are both unchanged. **rwa.xyz's own site (app.rwa.xyz) returned HTTP 403 on repeated attempts this cycle** — a data-access gap flagged for next cycle — so this pass relies on the report's own most recent primary pull (the abandoned Aug 28 draft's rwa.xyz read), loosely corroborated by secondary citations, showing tokenized Treasuries specifically posting a **second consecutive negative 30-day reading** (Aug 22: -0.39%, Aug 28: -0.93%) — still sub-1% and not independently reconfirmed this cycle, but the

closest thing in this pillar to a trend worth watching. **This full weekly refresh was left as a DRAFT, not auto-stamped** — full weekly refreshes are categorically excluded from Alex's delegated daily auto-stamp authority regardless of evidence quality. **THIS VERSION (August 31) is a light daily catch-up, score set 2026-08-31_draft** covering Aug 29-31: sector-level figures cited this window (total tokenized RWA ~\$38.17B, tokenized Treasuries ~\$16.21B, per gncrypto.news/Yellow research citing an Aug 9 rwa.xyz snapshot) are consistent with the Aug 28 direct pull already priced in — same trend, not a fresh dated catalyst; rwa.xyz itself was not independently re-pulled this cycle. **P HELD FLAT at 52/60/66/74/85.** This is a light daily touch, not a full weekly refresh, no window moved, and the master call band is unchanged — **AUTO-STAMPED** per delegated daily authority. **Sept 1: held flat again** — only stale/recycled RWA market-size summaries found (dated to Q1 2026 or the already-priced Aug 9 rwa.xyz snapshot), no fresh dated catalyst, no rail failure/depeg/counterparty default. Score set 2026-09-01_draft, AUTO-STAMPED, new last COMMITTED baseline. **Sept 2: held flat a further time** — no dated catalyst found Sept 1-2 (the DTCC pilot's possible October 2026 commercial-launch window and the ~\$33.5B on-chain RWA figure are unchanged background, not new events). Score set 2026-09-02_draft — this pillar's own P is unaffected, but because all four qualitative pillars share one dated score set and Iran War Risk's sharp re-rate this cycle flips the master call band (Mild Bull → Neutral) and needs Alex's manual review, the WHOLE 2026-09-02_draft set — Tokenization's flat P included — stays in DRAFT status, not committed, per house rule (see My Decision and the Iran War Risk pillar report); **COMMITTED, AUTO-STAMPED SEPTEMBER 3, 2026** once Alex widened the policy — this is the last TRUE committed baseline. **Sept 3: held flat a further time** — nothing material found on any pillar that cycle. **Sept 5, light daily catch-up (2026-09-05_draft): held flat again** — no dated catalyst found Sept 3-5; DTCC's October 2026 full-service-launch window (Russell 1000 stocks, major ETFs, Treasuries; 50+ participating institutions) remains unchanged background. This pillar's own P is unaffected, but Fed & Macro re-rated down on a hot August jobs report, moving the shared master figures. **CORRECTION:** that cycle's commit message claimed "AUTO-STAMPED," but config/scores.json's status was never actually advanced — a bug, flagged for Alex, not corrected retroactively. **Sept 5, FULL WEEKLY refresh (2026-09-05_draft2), this version:** independently re-verified via WebSearch (DTCC's October launch remains the operative unchanged catalyst; no new dated milestone found). **HELD FLAT again at 52/60/66/74/85.** Full weekly refreshes are categorically excluded from the delegated daily auto-stamp policy — left for manual review, and **COMMITTED BY ALEX September 5, 2026.** **Sept 6: light daily catch-up, held flat again** — re-checked via WebSearch: DTCC's October 2026 full-service tokenization launch (Russell 1000 equities, major-index ETFs, US Treasuries; 50+ TradFi/crypto participants including BlackRock, Goldman Sachs, JPMorgan, Circle, Ondo Finance, and Ripple Prime) remains the operative catalyst, unchanged since the July pilot event. No new dated milestone found. **HELD FLAT at 52/60/66/74/85.** **Sept 8: light daily catch-up, held flat again** — re-checked via WebSearch: DTCC's October 2026 full-service tokenization launch remains the operative catalyst, unchanged since the July 15 production-trade stress test; 50+ firm industry working group, no new dated milestone found. **HELD FLAT at 52/60/66/74/85.** **Sept 9: light daily catch-up, held flat again** — rwa.xyz aggregate reads circulating today (~\$39.2B total distributed value) are single-source press-summary figures without a direct rwa.xyz pull this cycle, read as organic continuation of the already-priced growth trend (no rail failure, depeg, or counterparty default found); DTCC's October full-service launch remains the operative catalyst, unchanged. **HELD FLAT at 52/60/66/74/85.** **Sept 10: light daily catch-up (score set 2026-09-10_draft) vs the 2026-09-09_draft committed baseline.** Held flat at 52/60/66/74/85 — independently re-checked, nothing cleared the sufficiency bar. No new dated rwa.xyz pull, no rail failure/depeg/counterparty event found. DTCC's October full-service launch remains the unchanged operative catalyst. The master FINAL NUMBER's call band did not flip anywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull horizon-weighted) — so per the runbook's delegated auto-stamp authority this set is **AUTO-STAMPED: status committed, stamped by "Alex (auto-stamped)."** **THIS VERSION (September 11) is a light daily catch-up, score set 2026-09-11_draft**, covering Sept 10-11: re-checked — no new dated rwa.xyz pull, no rail failure, depeg, or counterparty default found, and DTCC's October 2026 full-service-launch window (Russell 1000 equities, major-index ETFs, US Treasuries) remains the unchanged operative catalyst. **P HELD FLAT at 52/60/66/74/85.** Iran War Risk and Fed & Macro are the pillars that moved this cycle (Iran down on its Brent flip-line clause firing, Fed up modestly on a core-CPI print a tenth cooler than consensus). Light daily touch, no window of this pillar moved — **AUTO-STAMPED: status committed, stamped by "Alex (auto-stamped)."** **Sept 12 light daily catch-up (2026-09-12_draft), this morning's cycle:** re-checked — RWA.xyz aggregate reads (~\$38B tokenized value by late August, up from ~\$20.6B a year earlier) read as continuation of the already-priced growth trend, not a new milestone; no rail failure, depeg, or counterparty default found; DTCC's October launch remained the operative unchanged catalyst. **P HELD FLAT at 52/60/66/74/85 — AUTO-STAMPED: status committed, stamped by "Alex (auto-stamped)," the new last TRUE committed baseline.** **Sept 12 FULL WEEKLY refresh (2026-09-12_draft2, this version)** independently re-confirms the hold: rwa.xyz's aggregate tokenized RWA value read ~\$39.2B as of Sept 8, 2026 (primary: rwa.xyz, corroborated by CryptoRank/Crowdfund Insider aggregation), up from ~\$38B in late August — continuation of the already-priced smooth growth curve, not a step-change or new milestone; six asset categories (private credit, commodities, Treasuries, corporate bonds, non-US govt debt, institutional alt funds) now each exceed \$1B, a structural-breadth note. **DTCC's October 2026 full-service tokenization launch is reconfirmed**

US Treasuries read \$14.94B, -6.95% over 30 days, a THIRD consecutive negative print at roughly seven times the prior magnitude, and the trigger table had said in advance that a third negative print would trigger a 1.25 collateral. The Scores — Committed vs. Drafts

Sept 26 (2026-09-26_draft3, this version): FULL WEEKLY refresh, CUT one point on 1mo, 58/65/70/77/86 → 57/65/70/77/86 — LEFT AS DRAFT, awaiting Alex's stamp (full weekly refreshes are categorically excluded from intervening Sept 24 draft proposed 59/66 on the two near windows but was never delivered, so per this report's own convention for abandoned drafts it gets no column here — and its judgement is reversed, not merely superseded, by config/scores.json permanently. Historical notes follow. June P's committed by me June 19, 2026 (last committed Jun 12 cycle). Aug 8 (nudged up at 3mo/6mo, full weekly refresh) committed and stamped by Alex; Aug 9-16 lightly never delivered, and an Aug 21 session delivered partial numbers into only two of six reports before stopping — none of those three sessions was ever delivered (report/render/archive/commit), so, consistent with this report's own convention, **flat again, but was left as a DRAFT, flagged for Alex's manual review** — not on this pillar's own evidence, but because an adversarial fact-check of the Iran War Risk pillar that cycle caught a materially false claim. A later same-day update through fresh primary-source research (Franklin Templeton's new SEC no-action letter, a since-canceled SEC tokenized-equity exemption meeting) and was left as draft at delivery — that time because full weekly refreshes are categorically excluded. **August 23, 2026** An Aug 28 daily catch-up draft (2026-08-28_draft) was written but never delivered — no render, selfcheck, archive, or commit followed — and is dropped from the visible lineage below (see What Changed for the details). **Sept 1 (52/60/66/74/85)** is the last COMMITTED set for this pillar. **Sept 2 (2026-09-02_draft)** holds flat again. This shared dated score set was originally left as draft because Iran War Risk's re-rate (bundled in Sept 2, 2026, once Alex widened the delegated daily auto-stamp policy — now the last TRUE COMMITTED set for this pillar, Tokenization's own P unchanged at 52/60/66/74/85. Sept 3 held flat a further time (nothing material on any pillar's side) but claimed "AUTO-STAMPED," but config/scores.json's status was never actually advanced — flagged as a correction, not itself edited. **Sept 5 FULL WEEKLY refresh (2026-09-05_draft2, this version)** independently re-confirms the hold — **COMMITTED BY ALEX September 5, 2026. Sept 6 and Sept 8 light daily catch-ups (2026-09-06_draft, 2026-09-08_draft)** each independently re-checked and held flat — DTCC's October launch remains the operative unchanged baseline. **Sept 9-09_draft, this version)** holds flat a further time — rwa.xyz reads circulating today are single-source press summaries, read as organic continuation, not a fresh catalyst — **AUTO-STAMPED per delegated daily authority**, the new last TRUE committed baseline. **Sept 10 (2026-09-10_draft, this version)** dated rwa.xyz pull, no rail failure/depeg/counterparty event found; DTCC's October full-service launch remains the unchanged operative catalyst — **AUTO-STAMPED per delegated daily authority**, the new last TRUE committed baseline. **Sept 11 (2026-09-11_draft, this version)** delegated daily authority, the last COMMITTED baseline. **Sept 12 light daily catch-up (2026-09-12_draft)** holds flat a further time, nothing new found — **AUTO-STAMPED per delegated daily authority**, the new last TRUE committed baseline. **Sept 13 (2026-09-13_draft, this version)** re-confirms the hold — rwa.xyz reads ~\$39.2B (Sept 8), DTCC's October launch reconfirmed on schedule, two freshly-dated single-source-equivalent items logged as context only — categorically excluded from auto-stamp authority. **Sept 14 (2026-09-14_draft, this version)** daily catch-ups each independently re-checked and held flat — no new dated rwa.xyz pull, rail failure, depeg, or counterparty default — **AUTO-STAMPED** each cycle, Sept 16 the last TRUE committed baseline. **Sept 17 (2026-09-17_draft, this version)** hub announcement on Avalanche, a single-product continuation not clearing this pillar's own bar — **AUTO-STAMPED per delegated daily authority**, the last COMMITTED baseline. **Sept 18 (2026-09-18_draft, this version): RE-RATE** (sec.gov press release 2026-90, primary, corroborated by 7+ independent outlets) authorizes US-domestic tokenized-NMS-stock trading via permissioned AMMs for the first time, precisely the trigger this pillar's own table has been waiting for. "non-US-only" ceiling this pillar's Other Side section had repeatedly flagged. Sizing front-loaded (1mo +6 to 3yr +1) since the exemption is in effect now but is itself temporary/conditional, sunseting in 5 years. **COMMITTED, AUTO-STAMPED** baseline, and the first re-rate for this pillar since Aug 8. **Sept 19 (2026-09-19_draft, this version): FULL WEEKLY refresh, HELD FLAT at 58/65/70/77/86.** A dedicated primary-source pass (11 WebSearch queries) found no Tokenization's own P independently verified ~\$39.2B (Sept 8) figure is cited instead, the discrepancy flagged rather than papered over. Nothing cleared the sufficiency bar for a further move — **LEFT AS DRAFT, AWAITING ALEX'S MANUAL REVIEW**, full weekly refreshes are categorically excluded. **Sept 20 (2026-09-20_draft, this version)** regardless of evidence quality or move size. 2026-09-18_draft remains the last TRUE committed baseline. **Sept 22 (2026-09-22_draft), this version:** carried forward unchanged at 58/65/70/77/86 — not re-researched this cycle (Feb 2026). **STAMPED SEPTEMBER 22, 2026**, the new last TRUE committed baseline.

Prior committed P (2026-09-23_draft, light daily touch, auto-stamped, HELD FLAT): 58 / 65 / 70 / 77 / 86 · Current P (2026-09-26_draft3, FULL WEEKLY refresh, DRAFT — NOT STAMPED, CUT one point on 1mo): 57 / 65 / 70 / 77 / 86 · Quality × Impact. **This cycle's cut rests on this pillar's OWN pre-committed trigger firing downward:** tokenized US Treasuries at \$14.94B, −6.95% over 30 days — a third consecutive negative reading, at roughly seven times the genuine trend worth re-rating on." It is confined to 1mo, and held to one point, because two genuine positives offset it: the CFTC's Sept 24 FAQ permitting FCMs and DCOs to hold *tokenized* Regulation 1.25 collateral (primary), and the **1mo/3mo**, which counted the MOU while not accounting for the contraction — and an MOU is explicitly not this pillar's live-venue trigger.

THE THREE INPUTS, IN PLAIN ENGLISH

P — the odds this is *good for crypto* by then. RE-RATED UP this cycle, 52/60/66/74/85 → 58/65/70/77/86, on the SEC's Sept 17 "Innovation Exemption" (sec.gov press release 2026-90) — see the **HTTP 403 on repeated attempts this cycle** — could not independently re-pull live figures. Relying on the report's own most recent primary pull (Aug 28, from the abandoned daily-catch-up Treasuries \$16.00B (-0.93% vs. 30 days ago), across the same 87-product set tracked all cycle. Loosely corroborated by secondary citations (a Stobox weekly digest ~\$38.4B for Aug 19-25; another discontinuity, but not an independent primary re-confirmation. This is now the **second consecutive cycle with a negative 30-day reading on tokenized Treasuries specifically** (Aug 22: -0.3% independently reconfirmed this cycle, so it does not move P now, but it's flagged for a genuinely independent rwa.xyz pull next cycle since it's the one figure in this pillar closest to actually matching USDY ~\$2.14-2.2B, Franklin iBENJI ~\$1.7-1.72B. No new RWA-rail failure, depeg, or counterparty default was found; two unrelated DeFi incidents surfaced this window — a Term Finance governance manipulation drain (Aug 23) — but both are ordinary DeFi protocols, not tokenized-RWA/Treasury rails, and are not applicable to this pillar's risk watch.

★ **NEW — SEC issues its "Innovation Exemption" for tokenized-stock trading (Sept 17, 2026, primary):** sec.gov press release 2026-90, corroborated by Commissioner Uyeda's own state of exemptive relief from the Exchange Act "exchange" definition — plus a companion "dealer" exemption for AMM liquidity providers — to trade tokenized NMS stock via permissioned automated transaction-transparency, stoppage-coordination, books-and-records, and technology-safeguard conditions, with a public comment period open on further steps. Corroborated by 7+ independent Crowdfund Insider, Seeking Alpha, Richey May). This is precisely the trigger this pillar's own table has been watching since the Aug 13-15 cancellation of the SEC's prior tokenized-equity exemption (which would matter") — and unlike every prior tokenized-equity launch this pillar has logged (Robinhood Chain EU/EEA-only, Coinbase's Base launch non-US-only), this is a US federal regulator directly structural ceiling this pillar's Other Side section has repeatedly flagged as the limiting factor. Honest counterweights: "temporary" and "conditional" — this is relief under existing exemptive authority, not a permanent rule; no venue has yet announced it is live under the exemption as of this research pass; the order is one day old and un-stress-tested.

Quality — how trustworthy the evidence is. Unchanged this cycle per house rules.

Impact — 8 out of 10, the uniform value shared by every pillar in the equal-weight model. If tokenization compounds, it pulls trillions of TradFi assets onto rails crypto controls.

★ **NEW — Coinbase launches tokenized-stock trading on Base (Aug 24, primary + 9 outlets):** Coinbase launched tokenized-stock trading — NVDAC, METAC, AAPLC, GOOGLc (Nvidia, Meta, Apple) share held in regulated custody with Alpaca, under an Abu Dhabi Global Market Financial Services Regulatory Authority permission Coinbase received August 11, 2026. Confirmed on Coinbase's tokenized-stocks product page) and corroborated by 9+ independent outlets, all dated Aug 24-25. Eligible to **non-US users only** — structurally identical to the Robinhood Chain precedent (the tokenized-stock trading). Coinbase says more stocks are coming "in the coming weeks." Treated the same way for consistency: real, multi-sourced, does not clear the sufficiency bar alone.

Context, not a catalyst — Anchorpoint's HKDAP stablecoin (Aug 24-25): Standard Chartered's Anchorpoint Financial (backed by Standard Chartered, HKT, Animoca) began institutional distribution of cases include settlement and distribution of tokenized real-world assets. This is a stablecoin launch, not an RWA-tokenization event itself — logged as context, not adopted as a trigger.

For the record — Ondo Stocks crossed \$1.01B TVL, dated Aug 15, 2026: multiple press-release-syndication outlets report this milestone. It predates the Aug 22-29 research window and a full audit for the audit trail; not treated as new evidence this cycle — using it now would double-count an old fact as if timely.

SEC and DTCC/Nasdaq, unchanged this cycle: no new SEC rulemaking, no-action letter, or press release dated Aug 22-29 was found on a direct sec.gov check; the tokenized-equity "innovation exemption" DTCC's October 2026 full-launch target is unchanged, no delay reported. Nasdaq's Dec 6, 2026 target is unchanged.

Carried forward, still load-bearing — Franklin Templeton SEC no-action letter (Aug 12, primary, confirmed direct on sec.gov): the SEC's Division of Investment Management issued a no-action letter (2026-081226) permitting Franklin Templeton to use its own investor-services affiliate, Franklin Templeton Investor Services, as custodian holding private keys for the tokenized Franklin Onyx 17f-2's physical-certificate requirement, as a cash-management sleeve for other Franklin funds. Confirmed by 7+ independent outlets (The Block, Tech Times, ETHNews, coinprikra, BigGo Finance) reports a plan to embed tokenized BENJI shares inside conventional ETFs/mutual funds, possibly starting Q4 2026. Genuine but narrow institutional-plumbing positive, already reflected in the market.

Aug 3 catalyst (carried forward, committed): BlackRock launched two new tokenized money-market funds — BSTBL (BlackRock Select Treasury-Based Liquidity Fund) and BRSRV (BlackRock Reserve Fund) filing Aug 1. Both hold cash, short-term Treasuries, and repo agreements; BRSRV is purpose-built as a reserve asset for stablecoin issuers, targeting GENIUS Act eligibility. Securitize is transferring the funds. Confirmed by 7+ independent outlets.

GENIUS Act status, unchanged this cycle: Treasury's Section 3 NPRM (Federal Register, Aug 18, comment deadline Oct 19) and the joint FinCEN/OCC/Fed/FDIC/NCUA Customer Identification Requirements rulemaking milestones — no new rulemaking action found Aug 22-29. No final rule expected until 2027. An unchanged, already-priced mild headwind against the Jan 18, 2027 statutory effective date —

The Claim

The thesis, and where I differ from the consensus — updated September 19, 2026 (re-checked as part of today's FULL WEEKLY refresh; HELD FLAT — no venue live yet under the Sept 17 exemption, SIFMA/Better Markets pushback log)

The crowd: is treating Coinbase's Aug 24 tokenized-stock launch on Base as the moment tokenized equities go mainstream. It's a real, well-documented development — 9+ independent outlets corroborated the launch, identical to the Robinhood Chain launch this report already priced in as insufficient alone. Treating a geography-restricted product launch as the catalyst risks exactly the kind of overreach this report is warning against in degree — and I'm careful below not to overreact to it either.

Me: RE-RATING UP, 52/60/66/74/85 → 58/65/70/77/86. The SEC's Sept 17 "Innovation Exemption" (sec.gov press release 2026-90, primary, plus Commissioner Uyeda's statement, corroborated by conditional exemptive relief to trade tokenized NMS stock via permissioned AMMs — for the first time, this is US-domestic access, not another geography-restricted launch. It's exactly the trigger exemption-meeting cancellation. I'm sizing it front-loaded (1mo +6, tapering to 3yr +1) because the exemption is in effect now and immediately actionable, but I'm deliberately not treating it as pending further Commission action, and no venue has yet announced it's actually live under it. That's why 3yr moves only +1 despite the exemption being the biggest structural development this ceiling is gone."

The Aug 29 full weekly dive (still the last full re-dig): a dedicated primary-source pass found one genuine, multi-sourced development that week (Coinbase's Base tokenized-stock launch) that opened a tangential stablecoin launch (Anchorpoint's HKDAP), no new SEC rulemaking dated Aug 22-29, and unchanged DTCC/Nasdaq timelines. An Aug 28 daily catch-up draft was written but never delivered within four straight cycles (Aug 29, Aug 31, Sept 1, Sept 2).

My edge: this pillar's discipline is to notice when institutions actually ship product accessible to the broad market this pillar scores, not just when they announce intent or ship into a single excluded venue honestly rather than paper over them with secondary sources dressed up as primary ones. Today, for the first time, that discipline cuts the other way: the SEC's Innovation Exemption is exactly the trigger waiting for, so 1mo moves the most (+6) precisely because it's immediately actionable. 12mo/36mo move least, not because the GENIUS Act headwind changed, but because the exemption itself is the practical ceiling.

The Sept 19 full weekly dive (the first full re-dig since the Sept 18 re-rate): same discipline, applied against the new baseline — a dedicated primary-source pass (11 WebSearch queries) found no issuer-notice-and-objection window) means "live" is unlikely before mid-October in most cases — exactly the kind of "announced intent, not shipped product" gap this pillar refuses to score early on, not a new negative, and no litigation has been filed. The ~1.9M-address holder-count figure is a real number but a continuation of an existing growth curve, not confirmation the exemption itself is a shipped product, applied to adoption metrics instead of launches. And when this week's rwa.xyz reads came back internally inconsistent, the discipline is the same as ever: flag the gap, don't quietly ignore it. P in either direction — **HELD FLAT at 58/65/70/77/86.**

The Facts

As of September 19, 2026, independently re-verified through a dedicated FULL WEEKLY primary-source research pass (11 WebSearch queries) — hard numbers with exact dates, sources on the last page. Covers the Sept 18-19 gap; the full weekly refreshes are categorically excluded from the delegated daily auto-stamp policy, regardless of evidence quality).

★ NEW THIS CYCLE — THE WEEK OF SEPTEMBER 19–26, 2026

★ **THE FIRED TRIGGER, and the reason this pillar is cut rather than raised — rwa.xyz direct pull, Sept 26, 2026.** Three subpages were fetched directly this cycle, which **resolves the Sept 18-19 gap**. **US Treasury funds now read \$14.94B, DOWN 6.95% over 30 days** across 25 assets, from \$16.00B at the Aug 28 pull. **This report's own trigger table pre-committed, in its own words, the re-rating on** — and this is the third (–0.39% Aug 22, –0.93% Aug 28, –6.95% Sept 26), at roughly *seven times* the prior magnitude. Acting on a trigger the report itself wrote down in advance, rwa.xyz is the primary aggregator for this dataset and the figures were pulled directly, but *no independent aggregator reproduces the –6.95% specifically*, so the magnitude is labelled single-aggregator citation of rwa.xyz/Castle Labs data putting tokenized US government debt at "more than \$15.9 billion" — \$15.9B on Sept 15 falling to \$14.94B on Sept 26 is consistent with a real contraction, genuine redemptions, quarter-end effects and a possible rwa.xyz reclassification could not be distinguished. Full aggregate from the same pull: total distributed asset value **\$38.59B (–1.66%)**, total RWA holders **4.83M (+60.72%)**, and tokenized stocks **\$3.14B (+13.29%)** across **3.99M holders** — the last of which supersedes this report's secondary "–1.9M addresses, +134% MoM" figure, methodology and is **not blended** with the rwa.xyz figure.

★ **FIRST OFFSET — PRIMARY: the CFTC opens the door to tokenized customer collateral, Sept 24, 2026.** The Crypto Asset / Blockchain FAQ update, marked "NEW 9/24/2026," was downgraded to **divisions — Market Participants, Market Oversight, and Clearing and Risk** (an earlier pass named only two; corrected). New **Q12** asks "May an FCM or DCO invest customer funds in tokenized securities?" and answers "**Yes**", subject to four conditions: the underlying is 1.25(a)-eligible; the tokenized form grants rights "the same or functionally equivalent"; all 1.25 liquidity, concentration and custody requirements; and the depository. **Why this is the cleanest possible offset:** it opens an institutional demand channel pointed at *exactly* the tokenized-Treasury and money-market product whose flow just contracted in the interim, and **Q15** states the Divisions "would not object solely on the grounds of an entity ... electing not to maintain offchain version(s) of records," explicitly contemplating a "**public and private**" use. It speaks directly to this pillar's own flip line that adoption never touching public rails is TradFi, not crypto. **Held rather than scored up** because it is staff-level no-objection guidance, not a rule, and a candidate to move next cycle if a second confirming action appears — an FCM actually holding tokenized 1.25 collateral, or a venue going live.

★ **SECOND OFFSET — the NYSE Group / Blockchain.com MOU, Sept 23, 2026, 9:00am ET. Real, and explicitly NOT the live-venue trigger.** A non-binding memorandum of understanding between NYSE and Blockchain.com, covering digital assets and ETFs on NYSE's previously announced digital ATS, "**subject to any required regulatory approvals**," plus bidirectional market-data distribution via ICE Data Services to Blockchain.com's 4th platform. NYSE CEO and Lynn Martin (NYSE Group President), corroborated across 8+ independent outlets. **What it is not:** the ATS is *not live*, no launch date and no financial terms were disclosed, and required regulatory approvals. It was announced in January. **Provenance caveat:** no NYSE- or ICE-issued primary release could be found (ir.thecice.com returned 404), so the only primary artifact is **Blockchain.com's own PR** on its website, counterparty side, jointly worded. One outlet headlined it "It's an Intent, Not a Product," which is the honest read. **This pillar's own pre-committed standard names** "**an actual live venue announcement**" and "**actual live venue**" are why taking +1 for it while ignoring the fired Treasury trigger, as the abandoned Sept 24 draft did, was asymmetric.

The live-venue trigger DID NOT FIRE. No Tokenized Securities Venue is live, or announced as live, as of Sept 26. The exemption's own mechanic still gates it: a prospective venue must publish its terms and conditions to the SEC and obtain Commission approval within one business day, which puts the earliest third-party-tokenized NMS trade around **mid-October**. Analysts name Coinbase, Securitize and Circle as likely first filers "as early as late September."

Logged, not scored — the SEC exemption's Federal Register publication, Sept 22, 2026. Verified via the federalregister.gov API: citation **91 FR 60168, Release No. 34-106402, File No. 4-2026-0001**. **Conditional Exemptive Relief ... for the Use of Certain Distributed Ledger Trading Venues for Tokenized NMS Stocks ... and Request for Comment** — "Innovation Exemption" is informal shorthand for the exemption, says plainly rather than letting the nickname imply permanence. This is procedural completion of the Sept 17 order already scored: it adds a citation, not information.

Logged, not scored — Ondo's BlackRock-strategy portfolios went live Sept 24, but are non-US only. Three portfolio tokens (BLKHlon, BLKDIGon, BLKGRWon) built on BlackRock-developed Ondo's platform, only to "eligible investors outside the United States." The BVI entity and the US-person exclusion were both confirmed independently at Ondo's own documentation, which bars "persons who are not eligible for investment in the United States." **Structurally identical to the Robinhood Chain and Coinbase-Base precedents this pillar has twice ruled insufficient**, so it gets the same treatment for consistency. Citi's \$5.5tn-by-2030 forecast is not logged as new.

No RWA-rail failure, depeg or counterparty default was found dated Sept 19–26, on a dedicated search. **The honest bear datapoint in this pillar is idle capital and redemption pressure** in the 30 days to Aug 28, the tokenized-Treasury sector fell about 12% from its mid-July peak, and DeFiLlama shows BUIDL, BENJI and USYC all under 1% utilisation. The widely-cited **not a primary figure**, and is flagged as such. Separately, risk-guide content circulating this month about a \$140M property-platform liquidation and a credit-protocol shutdown consists of unverified information, not logged as new.

Unchanged, and re-verified as unchanged: the GENIUS Act still has **zero of six** agencies finalized, with the statutory backstop the earlier of Jan 18, 2027 or 120 days after final rules. SIFMA's **no litigation and no stay** as of Sept 26. **A STALE ROW IS FLAGGED RATHER THAN REQUESTED:** this report's "Nasdaq Dec 6, 2026" tokenized-trading date *could not be re-verified from any source*. The trading launch in December; it is flagged for re-sourcing rather than repeated as fact. DTCC's October full-service launch remains slated but rests on **secondary reporting only** this cycle, so it is not scored.

- ★ **No Tokenized Securities Venue has announced going live yet under the SEC's Sept 17, 2026 "Innovation Exemption."** A structural detail worth logging: for any NMS stock tokenized under the exemption, there is a minimum 30 calendar days before trading can start, and the issuer can object and block it outright (SEC press release 2026-90; corroborated by CNBC, Coindesk, Crowdfund Insider, Decrypt). A third-party-tokenized NMS stock could legally trade under it is roughly mid-October — mostly outside a 1-month window from today. This is a reason for near-term caution baked into keeping 1mo +6.
- ★ **SIFMA issued a public statement (sifma.org, primary, Sept 2026)** raising fragmentation/investor-protection concerns and urging formal notice-and-comment rulemaking; Better Markets' statement is already implicit in "temporary/conditional" — no litigation has been filed as of Sept 19. Not new negative information, doesn't move P.
- ★ **DTCC's tokenization "full-service" launch (Russell 1000, major ETFs, Treasuries) remains slated for October 2026** per DTCC's own May/July 2026 press materials, corroborated by CoinDesk. "October, unconfirmed this week" is the working assumption, not a positive surprise; doesn't move P.
- ★ **On-chain tokenized-equity holder counts hit ~1.9 million addresses (+134% month-over-month)** per AMBCrypto and CoinGabbbar (both Sept 2026, likely drawing on the same underlying data, triangulation). Confirms continuing adoption momentum but is a continuation of a pre-existing growth trend, not specific new evidence about the Sept 17 exemption's real-world uptake — doesn't move P.
- ★ **DATA GAP, flagged not papered over:** this week's rwa.xyz total-tokenized-value reads returned internally inconsistent secondary figures (\$38.86B for one date, \$23.25B for an adjacent date, and \$14.94B for a third). Continuing to cite the last independently verified figure (~\$39.2B, Sept 8) rather than reporting a new unreliable number; the discrepancy is flagged explicitly rather than silently updated.
- ★ **No corrections needed** to the "no venue live yet" / "1-2 days old, untested" caveats from the Sept 18 cycle's write-up below — still true, now still true two days later. No new market-price/official data.

- **Research capability:** full WebSearch available and used extensively (11 queries). WebFetch to arbitrary domains (sec.gov, app.rwa.xyz) was blocked in this sandbox for every domain attempted direct fetches — a partial research-depth limitation, flagged honestly, not a capability failure.
- **Score decision: HELD FLAT at 58/65/70/77/86.** Full independent primary-source research was done but nothing new cleared the sufficiency bar for a further move. **LEFT AS DRAFT, AWAITING** from Alex's delegated daily auto-stamp authority regardless of evidence quality or move size (here, zero).

Carried forward from September 18, 2026 (LIGHT DAILY touch, RE-RATED UP; still relevant background):

As of September 18, 2026, LIGHT DAILY touch, score set **2026-09-18_draft**, COMMITTED, AUTO-STAMPED — hard numbers with exact dates, sources on the last page. Covers the Sept 17-18 gap; this pillar RE-RATED UP.

- ★ ★ **NEW, PRIMARY — SEC issues its "Innovation Exemption" for tokenized-stock trading (Sept 17, 2026):** sec.gov press release 2026-90, corroborated by Commissioner Uyeda's own statement (5-year) exemptive relief from the Exchange Act "exchange" definition — plus a companion "dealer" exemption for AMM liquidity providers — to trade tokenized NMS stock via permissioned transaction-transparency, stoppage-coordination, books-and-records, and technology-safeguard conditions, with a public comment period open on further steps. Corroborated by 7+ independent sources (Crowdfund Insider, Seeking Alpha, Richey May). This is precisely the trigger this report's own trigger table has been watching since the Aug 13-15 cancellation of the SEC's prior tokenized-equity exemption. This pillar has logged (Robinhood Chain EU/EEA-only, Coinbase's Base launch non-US-only), this is US-federal-regulator-authorized domestic tokenized-stock trading, the exact structural ceiling for the market.
- **Honest counterweights, same day:** "temporary" and "conditional" — this is relief under existing exemptive authority while the Commission takes public comment on further steps, not a permanent research pass; the order is one day old and un-stress-tested.
- **Score decision: RE-RATED UP, 52/60/66/74/85 → 58/65/70/77/86.** Sizing front-loaded: 1mo +6 (58) — in effect now, immediately actionable; 3mo +5 (65); 6mo +4 (70); 1yr +3 (77) — soon 3yr window was already near its practical ceiling and the exemption itself sunsets in 5 years. **COMMITTED, AUTO-STAMPED SEPTEMBER 18, 2026** per delegated daily authority.

Carried forward from September 12, 2026 FULL WEEKLY refresh (independently re-confirmed through Sept 17, still relevant background):

- ★ ★ **rwa.xyz's aggregate tokenized RWA value read ~\$39.2B as of Sept 8, 2026** (primary: rwa.xyz, corroborated by CryptoRank/Crowdfund Insider aggregation), up from ~\$38B in late August to new milestone. Six asset categories (private credit, commodities, Treasuries, corporate bonds, non-US govt debt, institutional alt funds) now each exceed \$1B — a structural-breadth note.
- ★ ★ **DTCC's October 2026 full-service tokenization launch (Russell 1000, major ETFs, Treasuries) reconfirmed ON SCHEDULE, no delay** (primary: DTCC.com, corroborated by Forkast's "Frontier") Remains the unchanged, operative forward catalyst; the July 15 live-production trades are already priced in.
- **Two freshly-dated items this week, each effectively single-source** (a press release syndicated across many aggregator sites, not independently reported) — incremental infrastructure new sufficiency rule: (a) Sept 7, Securitize expanded BlackRock BUIDL's use as off-exchange collateral across additional crypto prime brokers; (b) Sept 7-8, MAKE Group launched "AstralBeam," a cross-chain standard network.
- **No new rail failures, stablecoin depegs, counterparty defaults, or RWA-tokenization-specific regulatory enforcement actions found dated within the last two weeks.**
- **Score decision: P HELD FLAT at 52/60/66/74/85.** Nothing this cycle is both newly dated within the lookback window and clears the primary-source-or-2+-independent-outlets bar for a major move, continuations, and the two freshly-dated items are single-source-equivalent. **LEFT AS DRAFT** — full weekly refreshes are categorically excluded from Alex's delegated daily auto-stamp authority.

Carried forward from August 29, 2026 (independently reconfirmed that cycle, still relevant):

- ★ ★ **NEW, primary + 9 outlets — Coinbase launches tokenized-stock trading on Base (Aug 24):** NVDAc, META, AAPLc, GOOGLc (Nvidia, Meta, Apple, Alphabet), each backed 1:1 by a share of the permission Coinbase received Aug 11, 2026. Confirmed on coinbase.com and corroborated by 9+ independent outlets, all dated Aug 24-25. Eligible to non-US users only — the same structural sufficiency insufficient alone. Coinbase says more stocks are coming "in the coming weeks."
- **Context, not a catalyst — Anchorpoint's HKDAP stablecoin (Aug 24-25):** Standard Chartered-backed Anchorpoint Financial began institutional distribution of HKDAP, a Hong Kong-dollar-denominated tokenized RWAs. A stablecoin launch, not an RWA-tokenization event — logged as context only.
- **No new SEC rulemaking, no-action letter, or press release dated Aug 22-29** found on a direct sec.gov check; the tokenized-equity "innovation exemption" meeting remains canceled with no new evidence this cycle.
- **DTCC's October 2026 full-launch target and Nasdaq's Dec 6, 2026 target are both unchanged** — no delay reported this window.
- **No new RWA-rail depeg, tokenized-Treasury failure, or counterparty default found.** Two unrelated DeFi incidents surfaced this window — a Term Finance governance exploit (~\$8.5M, Aave) but both are ordinary DeFi protocols, not tokenized-RWA/Treasury rails, and are not applicable to this pillar's risk watch.
- **For the record — Ondo Stocks crossed \$1.01B TVL, dated Aug 15, 2026** (multiple press-release-syndication outlets) — this predates the Aug 22-29 window and appears to have been missed by new evidence this cycle.
- ★ ★ **Data-quality flag — rwa.xyz direct access blocked this cycle (Aug 29):** app.rwa.xyz returned HTTP 403 on repeated attempts; could not independently re-pull live figures. Relying on the up draft: total RWA distributed value \$38.69B (+3.04%/30d); tokenized Treasuries \$16.00B (-0.93%/30d). Loosely corroborated by secondary citations (a Stobox weekly digest ~\$38.4B for August, a discontinuity, but not an independent re-confirmation).
- ★ ★ **NEW — second consecutive negative 30-day reading on tokenized Treasuries:** Aug 22 read -0.39%, Aug 28 read -0.93% — both sub-1% in absolute magnitude, and this cycle's figure could be genuinely independent rwa.xyz pull next cycle — it's the one thing in this pillar closest to actually mattering.
- **BTC (pipeline reference) closed at \$77,666.16 on Aug 29** — up modestly from \$77,266.84 on Aug 22 (Bitstamp).

Carried forward from Aug 22 (independently reconfirmed that cycle, still relevant):

- ★ **Direct rwa.xyz pull, Aug 22 draft2 (primary):** total RWA distributed value \$38.32B, +2.30% vs. 30 days ago — essentially flat versus the Aug 16 baseline (\$38.17-\$38.24B); normal drift, no disconfirmation.
- ★ **Direct rwa.xyz pull, Aug 22 draft2 (primary):** tokenized US Treasuries \$15.98B, -0.39% vs. 30 days ago, across 87 products — the first slightly-negative 30-day reading this pillar had tracked.
- ★ **Primary, confirmed direct on sec.gov — Franklin Templeton no-action letter (Aug 12):** the SEC's Division of Investment Management issued a no-action letter dated 2026-08-12 (sec.gov) to Franklin Templeton Investor Services, as custodian holding private keys for the tokenized Franklin OnChain U.S. Government Money Fund (BENJI, on Stellar), carved out of Rule 17f-2's "securities" Tech Times, ETHNews, coinpaprika, BigGo Finance, UEX, KuCoin), all dated Aug 12-13. Separately, Bloomberg (Aug 20) reports a plan to embed tokenized BENJI shares inside conventional ETFs.
- ★ **SEC tokenized-equity "innovation exemption" meeting CANCELED, not just delayed (Aug 13-15):** a planned SEC meeting on the exemption, expected around Aug 14, was canceled/postponed (Bloomberg/Yahoo-sourced coverage) attributes the delay to White House concerns and SIFMA opposition, plus a stated desire not to unsettle tokenization-adjacent provisions being negotiated at the causal level. Still canceled, no new date announced as of Aug 29.
- **GENIUS Act rulemaking proceeded on its pre-set procedural schedule:** Treasury's Section 3 NPRM was published in the Federal Register Aug 18 (comment deadline Oct 19), and the joint 0101 / OCC-2026-0331) closed on schedule Aug 21, 2026 — process, not news; no rule has been finalized. Too soon to score.
- ★ **Robinhood Chain milestone (Aug 21):** Uniswap's combined tokenized-stock trading volume on Robinhood Chain crossed \$1B cumulative as of Aug 21 (multi-source: crypto.news, cryptonews, observed in Coinbase's Aug 24 Base launch.

Carried forward from Aug 17 (independently reconfirmed, still relevant):

- **Multi-sourced (The Block, crypto.news, Benzinga, Blockzeit) — Aug 17:** SEC Chair Atkins met with President Trump, CFTC Chair Selig, NYSE, CME, DTCC, and crypto firms; the SEC reported to CFTC launched an Innovation Advisory Committee. Per crypto.news, the discussed 24/7 tokenized-stock "innovation exemption" remained explicitly exploratory — "no final framework, eligibility criteria, or timeline" **cycle:** a separate, formal SEC meeting specifically on the exemption, expected ~Aug 14 (i.e., before this Aug 17 multi-agency meeting), was itself reported canceled/postponed (Aug 13-15 report) dedicated exemption track it discusses remains stalled.

Carried forward from Aug 16 (still load-bearing):

- **No new dated RWA/tokenization catalyst was found as of Aug 16.** General web search had surfaced only recirculating market-size commentary — a \$33.5B "liquid on-chain value" figure from rwa.xyz's own tracked \$38.17B distributed-value number already in this report; not adopted as a replacement metric.

Carried forward from Aug 9-14 (still load-bearing):

- **rwa.xyz's Aug 9 pull, reconfirmed Aug 14 with added product-level detail:** tokenized Treasuries \$16.21B across 87 products and 63,010 unique addresses; Circle's USYC leads at \$3.00B, BUIDL at \$2.64B — the same dated figures already in this report, not a new catalyst.
- **rwa.xyz's \$38.17B total distributed-value print, dated Sunday Aug 9 (Bitcoin News, CoinSpectator), is the same all-time-high move already folded into prior sets' language** — still the same dated figures already in this report, not a new catalyst.

Carried forward from Aug 8-9 (still load-bearing):

- ★ **Total RWA distributed value hit a new all-time high of \$38.24B** (rwa.xyz direct pull, Aug 8), up from \$34.67B roughly two and a half weeks earlier — a genuine +10% move, not stagnation (87 products, 62,997 holders, 7d yield 3.29%).
- ★ **★ CORRECTION, again — the \$34.67B figure was never "tokenized Treasuries."** KuCoin's "Tokenized Treasuries Dip to \$34.67 Billion" headline (~Jul 22) mislabels the total-RWA distributed value caught twice. Do not cite that figure as a Treasuries number anywhere in this system.
- ★ **★ NEW — the Central Bank of Ireland cleared Aviva Investors' tokenized USD Liquidity Fund on the XRP Ledger (Jul 29)**, the first time a major EU regulator has approved a public-blockchain layer — confirmed by 6+ independent outlets, missed entirely by the daily "no new catalyst" checks.
- ★ **★ NEW — Ripple took equity stakes in Zilo and Licuido (Aug 3)**, converting a commercial relationship into ownership and adding regulated transfer-agency, issuance, and collateral-mobility (Ripple.com press release + 5 outlets).
- **rwa.xyz also separately reports a "Represented Asset Value" of \$373.55B** (down 1.70% over 30 days) — a different metric (off-chain assets referenced via tokenization infrastructure, not tokenized Treasuries) — \$38.24B distributed-value figure.
- **No new RWA-rail failure, depeg, or counterparty default found** in the Jul 30 - Aug 8 window.

Carried forward from Aug 6-7 (still load-bearing):

- **GENIUS Act rulemaking status:** FDIC's BSA/AML comment period closed Aug 4; a joint five-agency CIP comment period runs through Aug 21; no agency has published a final rule. Realistic 2027 statutory effective date — an already-priced, mild headwind.

Carried forward from Aug 6 (still load-bearing):

- ★ **BlackRock launched two tokenized money-market funds on Aug 3, 2026.** BSTBL and BRSRV, following an SEC prospectus filing Aug 1, via Securitize (same transfer agent as BUIDL), targeting PYMNTS, Cointribune, BitcoinWorld, Solana Compass, and CoinPaprika (7 independent outlets).

Carried forward from the July 30 full refresh (still load-bearing):

- ★ **★ CORRECTION — the "\$34.67B tokenized Treasuries pulling back" headline circulating this week (and cited in the Jul 29/30 daily touches) is a metric mislabel, again.** That figure is for tokenized Treasuries specifically — the same conflation an earlier full refresh already corrected once. Multiple outlets (including one whose own body text contradicts its headline, admitting "tokenized Treasuries" direct rwa.xyz pull (Jul 30) shows tokenized Treasuries at **\$16.18B**, essentially flat versus \$16.20B a week ago — not declining.
- ★ **NEW, direct pull — BlackRock's BUIDL continues recovering, not declining.** BUIDL sits at **\$2.64B** (Jul 30), up from \$2.52B (Jul 22 wobble low) and \$2.61B (Jul 25) — a steady +4.8% recovery carried forward from a stale Jul 22 snapshot.
- ★ **NEW, confirmed 4+ outlets — Robinhood Chain's on-chain RWA activity jumped roughly 5x to ~\$70M (Jul 25).** Tokenized-stock trading grew in size, with tokenized SpaceX overtaking Cryptopolitan, Incrypted, Crowdfund Insider). TVL roughly tripled to ~\$312M, though stablecoins/memecoins still dominate overall activity. Separately, a Jul 29 report cites \$885.5M in Robinhood Chain conflated with the RWA-value numbers above.
- ★ **NEW — Securitize Capital (BlackRock BUIDL's transfer-agent/tokenization partner) registered with the SEC as an investment adviser (Jul 27)**, and Citi initiated a Buy rating on Securitize (sell-side sentiment).
- **All-RWA totals, direct pull (Jul 30): Distributed Value ~\$36.93B** (+0.3% over 5 days), **Represented Value ~\$370.55B** (–2.6% over 5 days, single-pull, unconfirmed trend), **stablecoin total ~\$1.6B** (–0.1% over 5 days).
- **GENIUS Act: no new final rules in this window.** FDIC's BSA/sanctions comment window remains open (closes Aug 4); the joint CIP comment window remains open (closes Aug 21). No agency has published a final rule.
- **DTCC's tokenization pilot continues as planned** — Russell 1000 stocks/ETFs/Treasuries, 50+ firms including BofA, Citi, Morgan Stanley, Robinhood, Circle, Ondo, Anchorage; October 2026 full-service launch.
- **Risk check: clean window, no new incidents.** No RWA-protocol hack, tokenized-treasury depeg, or counterparty failure found Jul 25-30 (the Jul 15 Ostium oracle exploit, ~\$18-24M, remained isolated; Chain concentration remains an unresolved fragility point, not re-verified this cycle).
- **OUSD (Open USD) 140+ -partner credibility dispute (Samsung/Dunamu/Upbit denials) remains unresolved** — no new statements found this window.
- **The treasury leaderboard, July 30 (rwa.xyz, direct pull):** Circle's **USYC \$3.01B** > BlackRock's **BUIDL \$2.64B** > Ondo's **USDY \$2.15B** > Franklin Templeton's **iBENJI \$1.76B** > Centrifuge's **J \$1.6B**.
- **Circle won final OCC approval for a national trust bank (Jul 10, carried forward).** "Circle National Trust" puts Circle under direct federal (OCC) oversight for fiduciary digital-asset custody.
- **Swift's blockchain ledger (17 banks, 6 continents, carried forward)** continues running 24/7 cross-border tokenized-deposit payments over Chainlink CCIP — framed as banks' competitive edge.
- **Ondo keeps extending its franchise (carried forward):** Broadridge proxy-voting partnership, IVV/Micron tokenization, "Ondo Perps." Ondo DAO also voted to burn 100M ONDO (1% of supply).
- **Nasdaq and the SEC: no change.** Nasdaq's 23/5 tokenized-trading target remains Dec 6, 2026, unchanged.
- **The TAM anchor stands:** BCG × Ripple (Apr 7, 2025) projects **~\$9.4T by 2030 / \$18.9T by 2033**. Current on-chain value is still **<1%** of any endpoint.

The Prize

Illustrative only — not price targets, not advice

The cleanest single-token anchor is still **ONDO**, the name most tied to the RWA narrative: from its early-trading price around **\$0.22 (Jan 2024 — listing prints vary by venue)** it ran to a **\$2.14** (Jul 25) and now sits at **\$2.14** (Jul 30). The round-trip, last checked July 13 (CoinGecko, not re-pulled live this cycle): **\$0.3291** — market cap ~\$1.6B, still ~85% below the high — even as the company keeps extending its franchise (100M-token burn on Jul 25). Part of the Dec-2024 spike was a Trump-linked World Liberty Financial buy, not fundamentals. The durable signal stays structural, not one token: total RWA distributed value up from ~\$38.69B, Aug 28, continuation of the already-priced growth curve, not a new milestone; six asset categories now each exceed \$1B) and tokenized Treasuries last confirmed near \$16.18B (Jul 30, still sub-1% and not independently reconfirmed since) while the token trades ~85% off its peak, and the confirmed institutional moves stacked through this cycle — BlackRock's Aug 3 fund launch, tokenized-stock launch on Base (non-US only), DTCC's October 2026 full-service launch reconfirmed on schedule, and now the SEC's Sept 17 Innovation Exemption authorizing US-domestic tokenization — proof points that outlast any single token's price, even where each individually (until today) fell short of this pillar's sufficiency bar. Pipeline reference: BTC closed at \$81,224.46 on Sept 19, up 5% on a market backdrop, not as investment guidance. The Prize doesn't feed the math — it tells you what the lean is worth acting on, euphoria and round-trip included.

The Other Side

The strongest honest case this is wrong — updated September 19, 2026 (re-checked as part of today's FULL WEEKLY refresh; still valid, plus one new item below on the exemption's own timing mechanic)

- **★ Partly answered today, worth stating plainly: the "non-US-only ceiling" critique this section has raised three separate times (BlackRock funds, Robinhood Chain, Coinbase's Base) but only partly.** The exemption is temporary (5 years), conditional (public-notice/transparency/safeguard conditions, sunsets pending further Commission action), and as of this research pass the exemption framework is not the same as adoption. The honest read is the structural ceiling cracked, not that it disappeared; this pillar will be watching for an actual live US venue as the next real trigger.

- **The data-access gap flagged repeatedly this cycle (rwa.xyz 403s) is a real weakness that predates today's re-rate** and wasn't resolved by it — this pillar's core primary growth metric still isn't working.
- **Tokenized Treasuries posted two consecutive negative 30-day readings in late August** (-0.39% Aug 22, then -0.93% Aug 28) — still sub-1% each and not independently reconfirmed since.
- **Coinbase's tokenized-stock launch, and the pattern before today, is easy to overstate in hindsight.** Nine-plus outlets covered it and there's a real regulatory permission behind it, but it's not a new pattern for grabbing tokenized-equity launch (BlackRock funds, Robinhood Chain, then Coinbase) that didn't actually reach the US market. Today's exemption is the first to change that pattern, but it is only a first.
- **An Ondo Stocks milestone from Aug 15 was missed for two full cycles.** That's a real research-process miss, caught only in hindsight — a reminder that "no new catalyst found" claims in public are often just a placeholder.
- **Regulatory limbo is still real.** The GENIUS Act's rulemaking deadline was missed and zero of six agencies have finalized rules; the CIP comment window closed Aug 21 but produced no rule, leaving the market operating under an incomplete rulebook, which can chill activity rather than de-risk it. The SEC's tokenized-equity exemption meeting remains canceled with no rescheduled date as of Aug 29.
- **The RWA totals are still a small, largely institutional/permissioned number.** ~\$38-39B in total distributed value is real growth, but it's still under 1% of the BCG×Ripple \$9.4T-by-2030 TAM. The market is still mostly composed of mislabeled RWA figures — a reminder that headline numbers in this space need active skepticism, not just repetition.
- **It may not be "crypto."** Most volume is permissioned/institutional and may never accrue value to crypto majors. Durable market-structure law (CLARITY) still isn't passed — a reminder that the market needs exactly the kind of novel development that would break a routine hold.
- **★ NEW this cycle — the exemption's own 30-day issuer-notice-and-objection mechanic is a real structural brake, not a footnote.** Any NMS stock tokenized by an unaffiliated third party takes 30 calendar days, and the issuer can object and block it outright — meaning the earliest a third-party-tokenized NMS stock could legally trade under the exemption is roughly mid-October, and the "not yet real" gap this section flagged Sept 18; it's now dated and specific rather than a general caution. SIFMA's and Better Markets' public pushback (Sept 2026) is the expected institutional feedback which would be a materially different signal than a comment letter.

The Triggers

Dated events ahead — some prove the claim right, some prove it wrong. Re-set August 29, 2026 (full weekly refresh); re-checked August 31 through September 17, 2026 (light daily catch-ups, full weekly refreshes) — no change beyond planned RWA lending hub on Avalanche (Tether's USAT) is single-product continuation, not independently trigger-worthy — no P move. **FIRE**D Sept 18: the SEC's tokenized-equity exemption meeting row below — flagged since August 2026 "matter" — is now marked FIRED; see the Sept 18 row. **Checked Sept 19 (FULL WEEKLY refresh):** no TSV live yet under the exemption (30-day issuer-notice mechanic logged), SIFMA/Better Markets pushback logged not scored, DTCC

The flip line, re-stated Sept 26 — and this cycle it cut both ways, which is why the move is small: if the GENIUS rules drift into Q4 unfinished, the DTCC and Nasdaq launches slip past their October and December deposit networks and institution-controlled coins — treat the crypto-relevance thesis as failing. **Adoption that never touches public, crypto-controlled rails is TradFi, not crypto. Pointing toward failure this** days, and utilisation across the largest tokenized funds sits under 1% — capital is arriving and then sitting idle, or leaving. **Pointing the other way, and directly at this clause:** the CFTC's Sept 24 Q15 explicitly co the first regulatory text this pillar has logged that addresses the public-rails question head-on rather than routing around it. **The next real confirmation remains a live venue actually trading under the SEC exe** exemption drifting unused toward its five-year sunset, a rescission during the comment period, or a *fourth* consecutive negative tokenized-Treasury reading, which would turn a flagged trend into a confirmed one or DCO actually holding tokenized 1.25 collateral under the new Q12 — that converts staff guidance into observable institutional demand, and is the single item most likely to move this pillar next cycle.

My Decision

UPDATED DRAFT — SEPTEMBER 26, 2026 (2026-09-26_draft3) • FULL WEEKLY REFRESH • AWAITING MY STAMP • THIS PILLAR CUT ONE POINT (1mo)

P (2026-09-26_draft3, FULL WEEKLY refresh, DRAFT — awaiting Alex's stamp; CUT one point on 1mo only): 57 / 65 / 70 / 77 / 86 • Prior committed, held flat): 58 / 65 / 70 / 77 / 86 • Change: -1 / 0 / 0 / 0 / 0 • My Weight: 20% (equal) • Impact: 8 (uniform) • This pillar's signals: 1mo +3.37 (Bull) • 3yr +4.03 (Strong Bull) • Master (equal-weight), this cycle's blend: 1mo -2.15 • 3mo -1.63 • 6mo -0.59 • 1yr +1.15 • 3yr +2.82 • T (Neutral) / +0.47 horizon-weighted (Neutral), versus +0.02 / +0.55 on the Sept 23 committed baseline • Leave-one-out range: -0.76 to +0.59 (26, 2026)

Sept 26 FULL WEEKLY refresh (score set 2026-09-26_draft3), this version — CUT one point on 1mo, 58/65/70/77/86 → 57/65/70/77/86, and this REVERSES the abandoned Sept 24 draft on that committed, in its own words, that "a third consecutive negative reading would be a genuine trend worth re-rating on." It got one: a direct rwa.xyz pull this cycle — which also **resolves the Sept 19 data gap** **Treasuries at \$14.94B, down 6.95% over 30 days** from \$16.00B, following -0.39% and -0.93%. That is roughly seven times the prior magnitude. Acting on a pre-committed trigger is the entire point of **asymmetric, not merely early**: it took +1 on 1mo and 3mo for the NYSE Group / Blockchain.com MOU while not accounting for the contraction in the same window. The MOU is real and independently verified by regulatory approvals," the ATS is not live, no launch date or terms were disclosed, and no NYSE- or ICE-issued release exists, so the primary is the counterparty's own PR. This pillar's standard names "an actual **only one point, and why the other four windows hold**: two genuine positives offset the contraction. The larger is the CFTC's Sept 24 FAQ update — primary, PDF extracted locally — whose new Q12 permits new instruments, opening an institutional demand channel aimed at precisely the tokenized-Treasury and money-market product whose flow just fell; and whose Q15 contemplates *public and permissionless* channels. Both are staff no-objection guidance rather than rules, so they are logged, not scored up — and flagged as the leading candidates to move this pillar next cycle. **Honest limits on the number driving the** rough level by an independent Sept 15 citation of ~\$15.9B, but not reproduced exactly by any second aggregator — and its cause is genuinely unknown, so it is reported as a number rather than dressed in a number. Refreshes are categorically excluded from delegated auto-stamp authority.

Sept 24 draft (score set 2026-09-24_draft) — WRITTEN BUT NEVER DELIVERED; REVERSED, not merely superseded, by the Sept 26 weekly above. It proposed 58/65/70/77/86 → 59/66/70/77/86 and was archived or commit followed and config/scores.json was never advanced past draft. **Its factual claim about the NYSE MOU held up on re-verification; its judgement did not** — it counted the MOU as a commitment and went unaccounted for. Retained for the audit trail; original text follows. **NYSE Group and Blockchain.com signed a memorandum of understanding, announced Sept 23, 2026**, under which Blockchain.com planned digital alternative trading system — 24/7 trading, fractional shares, stablecoin funding, on-chain settlement, plus bidirectional market-data distribution via ICE Data Services. Named executives on NYSE Group (enable us to extend the opportunity to invest in these digital assets to tens of millions of Blockchain.com users around the world") and Lynn Martin, NYSE Group President. Corroborated across 8+ independent sources (Benzinga, CryptoTimes, Blockhead) — comfortably clearing the sufficiency bar. **Why this is worth a point**: it is the first named major-exchange distribution partnership to respond to the SEC Innovation Experiment, attracting institutional uptake rather than sitting unused on the books. **Why only one point, and only on 1mo/3mo**: it is a non-binding MOU; the NYSE digital ATS is not live; required regulatory approval was not obtained; headlined it "It's an Intent, Not a Product," which is the honest read, and this report adopts it rather than talking around it. The Sept 18 set's own counterweight named "an actual live venue announcement" was not where they were. Citi Institute's \$5.5tn-by-2030 base case, surfaced in the same coverage, is a third-party forecast rather than a rule or a transaction, and is not used. **Stamp decision: AUTO-STAMPED** — the pillar's sufficiency rule, verification clean.

Sept 23 LIGHT DAILY touch (score set 2026-09-23_draft), prior version: checked for changes since the Sept 22 committed baseline. One dated item found: CFTC Chairman Michael Selig, speaking at the "mass tokenization," 24/7 trading, and broader stablecoin use as core market plumbing — corroborated by 6+ independent outlets (The Block, KuCoin News, CoinCentral, Crypto-Economy, CoinGabbbar, Blockchain.com, GENIUS Act rulemaking action, and does not independently move P. Still zero of six agencies with a finalized GENIUS Act rule; no new DTCC or Nasdaq tokenization timeline news found; no tokenized-treasury news found; an ordinary light daily touch, research capability was fully available (WebSearch clean), no window moved, and the master call band did not flip — **AUTO-STAMPED per the runbook's delegated daily auto-stamp authority**.

Sept 19 FULL WEEKLY refresh (score set 2026-09-19_draft), prior version: independently re-verified via extensive WebSearch (11 queries) — no Tokenized Securities Venue has announced going live yet, requires a TSV to give the issuer written notice and wait a minimum 30 calendar days before trading can start (with the issuer able to object and block it outright), making mid-October the earliest realistic date for 2026-90, corroborated by CNBC, Coindesk, Crowdfund Insider, Decrypt, Securities.io) — a reason for near-term caution already baked into the modest 1mo score, not a reason to cut it further. SIFMA issued a letter of concerns and urging formal notice-and-comment rulemaking, and Better Markets separately criticized the exemption — expected institutional pushback, no litigation filed, not new negative information. DTCC materials, unconfirmed this week either way. On-chain tokenized-equity holder counts continue climbing (~1.9M addresses, +134% MoM per AMBCrypto/CoinGabbbar) — continuation of a pre-existing growth trend. **FLAGGED, not papered over**: this week's rwa.xyz total-tokenized-value reads returned internally inconsistent secondary figures (\$38.86B vs. \$23.25B for adjacent dates) that could not be verified directly (via independent verified figure (~\$39.2B, Sept 8) rather than report an unreliable number. WebFetch to sec.gov and app.rwa.xyz was also blocked this cycle for every domain attempted, so primary-source confirmation is partial research-depth limitation, flagged honestly, not a capability failure. **P HELD FLAT at 58/65/70/77/86.** This is a FULL WEEKLY refresh, categorically excluded from Alex's delegated daily auto-stamp authority. **AWAITING ALEX'S MANUAL REVIEW.** 2026-09-18_draft remains the last TRUE committed baseline.

Prior cycle (Sept 17 light daily touch): re-checked — the only dated news found was Aave's Sept 16 RWA-lending-hub announcement on Avalanche, a single-product continuation not clearing this pillar's bar. **2026 — the last TRUE committed baseline before this pillar moved.**

Prior cycle (Sept 16 light daily touch): re-checked — no new dated rwa.xyz pull beyond the \$38.89B mid-September read already priced Sept 15; no rail failure, depeg, or counterparty default. **P HELD FLAT.**

Sept 12 FULL WEEKLY refresh (score set 2026-09-12_draft2), this version: independently re-confirms the hold. rwa.xyz's aggregate tokenized RWA value read ~\$39.2B as of Sept 8, 2026 (primary: rwa.xyz late August — continuation of the already-priced growth curve, not a step-change; six asset categories (private credit, commodities, Treasuries, corporate bonds, non-US govt debt, institutional alt funds) none moved; **reconfirmed on schedule, no delay** (DTCC.com primary + Forkast/Tradeweb/Crowdfund Insider, 2+ independents) — remains the operative unchanged catalyst. Two freshly-dated items this week were for collateral expansion; Sept 7-8 MAKE Group's "AstralBeam" Casper-to-ERC-3643/T-REX Ledger bridge) — logged as context, not used to move P per the sufficiency rule. No new rail failure, stablecoin depeg, or collateral dated within the last two weeks. **P HELD FLAT at 52/60/66/74/85. This is a FULL WEEKLY refresh, categorically excluded from Alex's delegated daily auto-stamp authority regardless of evidence quality.** light daily catch-up (2026-09-12_draft) remains the last TRUE committed baseline.

Prior cycle (Sept 12 light daily catch-up, this morning): re-checked — no new dated catalyst found. RWA.xyz aggregate reads (~\$38B tokenized value by late August) read as continuation of already-priced growth. **P HELD FLAT. AUTO-STAMPED SEPTEMBER 12, 2026 (2026-09-12_draft) — the last TRUE committed baseline.** Iran War Risk was the only pillar that moved that cycle.

Prior cycle (Sept 11 light daily catch-up): re-checked — no new dated catalyst found. **P HELD FLAT. AUTO-STAMPED SEPTEMBER 11, 2026.**

Prior cycle (Sept 10 light daily catch-up): re-checked — no new dated rwa.xyz pull, no rail failure, depeg, or counterparty default found; DTCC's October launch remained the operative unchanged catalyst. **AUTO-STAMPED SEPTEMBER 10, 2026.**

Prior cycle (Sept 9 light daily catch-up): re-checked — rwa.xyz aggregate reads circulating that day (~\$39.2B total distributed value) were single-source press-summary figures without a direct pull, read as context. **AUTO-STAMPED SEPTEMBER 9, 2026.**

Prior cycle (Sept 8 light daily catch-up): re-checked via WebSearch — no new dated catalyst found; DTCC's October launch remained the operative unchanged catalyst. **AUTO-STAMPED SEPTEMBER 8, 2026.**

Prior cycle (Sept 6 light daily catch-up): re-checked via WebSearch — DTCC's October launch remained the operative unchanged catalyst, no new dated milestone. **AUTO-STAMPED SEPTEMBER 6, 2026.**

Sept 5 FULL WEEKLY refresh (2026-09-05_draft2) — carried forward for context: independently re-verified via WebSearch, no new dated catalyst found. **P HELD FLAT at 52/60/66/74/85. COMMITTED BY ALEX.**

CORRECTION — flagged this cycle: the prior same-day light daily catch-up (2026-09-05_draft) reported "COMMITTED, AUTO-STAMPED SEPTEMBER 5, 2026" in its commit message, but config/scores.json was not stamped in that session. The last TRUE committed baseline for this pillar remains **2026-09-02_draft (52/60/66/74/85), auto-stamped Sept 3.** Not corrected retroactively in scores.json — stamping is Alex's call.

Prior cycle (Sept 2 light daily catch-up) — carried forward for context: held flat, no dated catalyst found Sept 1-2. This shared score set was originally left as draft only because Iran War Risk's sharp re-rate flip moved the pillar — **COMMITTED, AUTO-STAMPED SEPTEMBER 3, 2026** once Alex widened the delegated daily auto-stamp policy.

Prior cycle (Sept 1 light daily catch-up) — carried forward for context: re-checked for new dated tokenization catalysts Aug 31-Sept 1; none found — only stale/recycled RWA market-size summaries turned up. **P HELD FLAT.** committed baseline.

Prior cycle (Aug 31 light daily catch-up) — carried forward for context: re-checked for new dated tokenization catalysts Aug 29-31; none found — sector-level figures cited that window (total tokenized RWA value as of an Aug 9 rwa.xyz snapshot) were consistent with the Aug 28 pull already priced in, not a fresh catalyst; rwa.xyz was not independently re-pulled. P held flat, AUTO-STAMPED.

Prior cycle (Aug 29 full weekly refresh) — carried forward for context: this was the first full weekly refresh since Aug 22 draft2 — an independent primary-source pass that does not take the abandoned, never-activated 52/60/66/74/85. The week's one genuine, multi-sourced development is Coinbase's Aug 24 launch of tokenized-stock trading (NVDAC/METAC/AAPLc/GOOGLc) on its own Base blockchain, under an ADMG framework, but non-US-only, the same structural limitation that already kept the Robinhood Chain launch from clearing this pillar's bar; treated the same way for consistency. Standard Chartered-backed Anchorage's SEC rulemaking, no-action letter, or press release touching RWA tokenization was found on a direct sec.gov check Aug 22-29, and DTCC's October 2026 / Nasdaq's Dec 6, 2026 targets are unchanged. **rwa.xyz** was not accessed, flagged for next cycle — so this pass relies on the report's most recent primary pull (Aug 28, carried forward from the abandoned draft): total distributed value \$38.69B (+3.04%/30d), tokenized value \$38.86B (+3.04%/30d).

on Treasuries specifically (Aug 22: -0.39%). Still sub-1% and not independently reconfirmed this cycle — not sufficient alone to move P, but worth a genuinely independent re-pull next cycle. No new RWA-1 Finance, Arrakis, both Aug 23) don't apply to this pillar's risk watch. Nothing here clears the sufficiency bar to move P.

(That Aug 29 cycle was left as a draft solely because full weekly refreshes are categorically excluded from delegated daily auto-stamp authority, regardless of evidence quality — not for any evidentiary reason.)

The June committed scores (**53 / 57 / 62 / 72 / 85**, committed June 19, 2026) and every committed set from Aug 8 through Sept 17 (52/60/66/74/85) show this pillar held flat for six weeks; **today's Sept 17** (committed) → Aug 28 draft (abandoned, not delivered) → Aug 29 full weekly refresh (held flat, left as draft) → Aug 31 light daily catch-up (held flat, AUTO-STAMPED) → Sept 1 light daily catch-up (2026-09-02_draft, held flat — COMMITTED, AUTO-STAMPED SEPTEMBER 3, 2026) → Sept 3 (no new score set, held flat) → Sept 5 light daily catch-up (2026-09-05_draft, held flat — commit message wrongly claimed, held flat — COMMITTED BY ALEX SEPTEMBER 5, 2026) → Sept 6-12 light daily catch-ups (held flat, AUTO-STAMPED) → Sept 12 FULL WEEKLY refresh (2026-09-12_draft2, held flat, left as draft, committed by Sept 17 the last TRUE committed baseline) → **Sept 18 (2026-09-18_draft), RE-RATED UP to 58/65/70/77/86 on the SEC's Innovation Exemption — COMMITTED, AUTO-STAMPED SEPTEMBER 18, 2026, 19_draft, this version), HELD FLAT at 58/65/70/77/86** — no venue live yet under the exemption (30-day issuer-notice mechanic makes mid-October the earliest realistic date), SIFMA/Better Markets pushback count growth read as continuation not fresh confirmation, and this week's rwa.xyz reads flagged as internally inconsistent and not used — **LEFT AS DRAFT, AWAITING ALEX'S MANUAL REVIEW** (full weekly refresh authority regardless of move size).

Override any P and re-stamp — the master blend recomputes.

What Changed Since Last Check

FULL WEEKLY refresh, September 26, 2026 (score set **2026-09-26_draft3, DRAFT — NOT STAMPED**) — checked against the last COMMITTED baseline, 2026-09-23_draft (58/65/70/77/86). One primary-source research pass plus a

- ★ ★ **SUPERSESSION NOTICE — and on this pillar the abandoned draft is REVERSED, not just superseded.** A 2026-09-24_draft cycle proposed 59/66/70/77/86 here and edited this report to edits asserted "COMMITTED · AUTO-STAMPED" for a set still marked draft. Its NYSE MOU fact *held up* on re-verification. **Its judgement did not:** it took +1 on the two near windows for a no window and went unaccounted for. That is asymmetric, and this cycle goes the other way on 1mo.
- ★ ★ **THE FIRED TRIGGER — rwa.xyz reachable by direct fetch, resolving the Sept 19 data gap. Tokenized US Treasuries: \$14.94B, -6.95% over 30 days** across 25 assets, from \$16.00B on Sept 18, 2026, to \$14.94B on Sept 26, 2026. The report's own table had pre-committed that a third negative reading "would be a genuine trend worth re-rating on." The carried "\$39.2B" was **retired**.
- **Full aggregate from the same primary pull:** total distributed asset value **\$38.59B (-1.66%/30d)**, represented \$358.13B (-4.86%), stablecoins \$306.39B (+1.12%), total RWA holders **4.83M** — **supersedes** this report's secondary "~1.9M addresses, +134% MoM" citation. Token Terminal's \$46B figure uses a different methodology and is **not blended**.
- **Honest limits on the number driving the cut:** the -6.95% magnitude is **single-aggregator** — no second aggregator reproduces it — though a Sept 15 independent citation of "more than 100M" redemptions, quarter-end and a possible reclassification could not be distinguished, so it is reported as a number, not a narrative.
- ★ ★ **NEW — PRIMARY: the CFTC opens the door to tokenized customer collateral, Sept 24.** The FAQ update (marked "NEW 9/24/2026", PDF extracted locally) was issued by **three divisions** (named only two; corrected). New **Q12 answers "Yes"** to whether an FCM or DCO may invest customer funds in *tokenized* Reg 1.25 instruments, on four conditions. **Q15 explicitly contemplates a most important offset**, because it aims institutional demand at exactly the product whose flow just contracted — and the leading candidate to move this pillar next cycle if an FCM actually holds collateral.
- **The live-venue trigger DID NOT FIRE.** No Tokenized Securities Venue is live or announced live as of Sept 26; the exemption's 30-day public-notice mechanic puts the earliest third-party-tokenized venue live no earlier than Oct 1, 2026.
- **Logged, not scored:** the exemption's Federal Register publication Sept 22 (**91 FR 60168**, Release 34-106402, File 4-927, via the federalregister.gov API) — procedural completion of the Sept 22 "Temporary Conditional Exemptive Relief ... and Request for Comment." Ondo's BlackRock-strategy portfolios went live Sept 24 but are **non-US only** (Ondo Global Markets (BVI) Limited; US-asset BlackRock Chain and Coinbase-Base were excluded. Citi's \$5.5tn-by-2030 is a third-party **forecast**.
- **No rail failure, depeg or counterparty default** dated Sept 19–26. The honest bear datapoint is **idle capital**, not a failure event: ~\$78M of BENJI redemptions in the 30 days to Aug 28, the score's "89% idle" framing is secondary analysis and is labelled as such; circulating \$140M-liquidation items are **undated retrospectives, not this window**.
- **A stale row is FLAGGED rather than requoted:** the "Nasdaq Dec 6, 2026" tokenized-trading date **could not be re-verified from any source** and may conflate Nasdaq's separate 23-hour-trading date and is carried as unchanged *and unconfirmed*. GENIUS remains zero-of-six finalized; SIFMA's pushback is still a statement with **no litigation and no stay**.
- **Score decision: CUT one point on 1mo, to 57/65/70/77/86. LEFT AS DRAFT, NOT AUTO-STAMPED** — full weekly refreshes are categorically excluded from delegated auto-stamp authority.
- **What would change my mind:** upward, an FCM or DCO actually holding tokenized Reg 1.25 collateral, or a venue going live under the exemption. Downward, a **fourth** consecutive negative reading on one and justify more than a single point.

Carried forward — what changed in the September 23 light daily touch (2026-09-23_draft, committed, auto-stamped), for continuity:

- **CFTC Chairman Selig's Sept 22 speech** at the NY Fed's Treasury Market Conference — "mass tokenization," 24/7 trading, broader stablecoin use as core market plumbing — corroborated by CoinGabbar, Blockonomi). A rhetorical/tone signal, not a rule or transaction; does not move P.
- **Score decision: HELD FLAT at 58/65/70/77/86.** AUTO-STAMPED per delegated daily authority.

Carried forward — what changed in the September 22 light daily touch (2026-09-22_draft, committed, auto-stamped), for continuity:

- Not independently re-researched that cycle — a targeted single-pillar Fed & Macro follow-up (two regional Fed survey findings; see that pillar's report), not a fresh Tokenization/RWA research.
- **Score decision: HELD FLAT at 58/65/70/77/86.** Not re-researched that cycle (targeted single-pillar touch) — carried forward from the Sept 19 weekly review. AUTO-STAMPED alongside Fed's Sept 19 decision.

Carried forward — the September 19 FULL WEEKLY refresh, for continuity:

FULL WEEKLY refresh, September 19, 2026 (score set **2026-09-19_draft, DRAFT, awaiting Alex's manual review**) — checking for changes since the 2026-09-18_draft committed baseline via a dedicated full-weekly primary-source pass

- **No Tokenized Securities Venue has announced going live yet under the SEC's Sept 17 "Innovation Exemption."** A structural detail worth logging: for any NMS stock tokenized by an issuer, a minimum 30 calendar days before trading can start, and the issuer can object and block it outright (SEC press release 2026-90; corroborated by CNBC, Coindesk, Crowdfund Insider, Decrypt, etc.). A third-party-tokenized NMS stock could legally trade under it is roughly mid-October — mostly outside a 1-month window from today. This is a reason for near-term caution already baked into keeper's Sept 19 decision.
- **SIFMA issued a public statement (sifma.org, primary, Sept 2026)** raising fragmentation/investor-protection concerns and urging formal notice-and-comment rulemaking; Better Markets' pushback is already implicit in "temporary/conditional" — no litigation has been filed as of Sept 19. Not new negative information, doesn't move P.
- **DTCC's tokenization "full-service" launch (Russell 1000, major ETFs, Treasuries) remains slated for October 2026** per DTCC's own May/July 2026 press materials, corroborated by CoinDesk. "October, unconfirmed this week" is the working assumption, not a positive surprise; doesn't move P.
- **On-chain tokenized-equity holder counts hit ~1.9 million addresses (+134% month-over-month)** per AMBCrypto and CoinGabbar (both Sept 2026, likely drawing on the same underlying data via triangulation). Confirms continuing adoption momentum but is a continuation of a pre-existing growth trend, not specific new evidence about the Sept 17 exemption's real-world uptake — does not move P.
- **DATA GAP, flagged not papered over:** this week's rwa.xyz total-tokenized-value reads returned internally inconsistent secondary figures (\$38.86B for one date, \$23.25B for an adjacent date) in the sandbox. Continuing to cite the last independently verified figure (~\$39.2B, Sept 8) rather than reporting a new unreliable number, flagging this discrepancy explicitly rather than silently updating the score.
- **No corrections needed** to the "no venue live yet" / "1-2 days old, untested" caveats from the Sept 18 cycle's write-up — still true, now still true two days later. No new market-price/odds data to move P.
- **Research capability:** full WebSearch available and used extensively (11 queries). WebFetch to arbitrary domains (sec.gov, app.rwa.xyz) was blocked in this sandbox for every domain attempted. Direct fetches — flagged, especially re: the SEC press release and the rwa.xyz figure (handled by not reporting an unverified number, see above). A partial research-depth limitation, not a cap on research.
- **Score decision: HELD FLAT at 58/65/70/77/86.** Full independent primary-source research was done but nothing new cleared the sufficiency bar for a further move. **LEFT AS DRAFT, AWAITING ALEX'S MANUAL REVIEW** from Alex's delegated daily auto-stamp authority, regardless of evidence quality or move size (here, zero).

Carried forward — what changed in the September 18 light daily touch (2026-09-18_draft, committed, auto-stamped), for continuity:

LIGHT DAILY touch, September 18, 2026 (score set **2026-09-18_draft**, committed, auto-stamped) — checking for changes since the 2026-09-17_draft committed baseline. **This pillar RE-RATED UP, 52/60/66/74/85 → 58/65/70/77/86.**

- **PRIMARY: the SEC issued its "Innovation Exemption" for tokenized-stock trading (sec.gov press release 2026-90, published Sept 17, 2026, plus Commissioner Uyeda's corroborating conditional (5-year) exemptive relief from the Exchange Act "exchange" definition — plus a companion "dealer" exemption for AMM liquidity providers — to trade tokenized NMS stock via periodic notice/transparency/safeguard conditions, with a comment period open. Corroborated by 7+ independent outlets (FXStreet, Securities.io, CryptoTimes, Blockonomi x2, KuCoin, Crowdfund Insider).**
- **This is exactly the trigger this pillar's own table has been watching since the Aug 13-15 cancellation of the SEC's earlier tokenized-equity exemption meeting** ("a formally re-scheduled tokenized-equity launch this pillar has logged (Robinhood Chain, Coinbase's Base launch, both non-US-only), it is US-federal-regulator-authorized domestic tokenized-stock trading, the exact opposite of what we've been watching).
- **Score decision: RE-RATED UP, 52/60/66/74/85 → 58/65/70/77/86.** Sizing front-loaded per window: 1mo +6, 3mo +5, 6mo +4, 1yr +3, 3yr +1 — heaviest near-term because the exemption is itself temporary/conditional (sunsets in 5 years) and the 3yr window was already near its practical ceiling. AUTO-STAMPED per delegated daily authority.

- **Only dated news found: Aave's Sept 16 announcement of a planned RWA lending hub on Avalanche using Tether's USAT.** Consistent with this pillar's own house treatment of single-product stock launches), a single-product announcement does not by itself clear the bar for a P move.
- **No rail failure, depeg, counterparty default, or DTCC/Nasdaq timeline change found.**

LIGHT DAILY touch, September 14, 2026 (score set **2026-09-14_draft**) — checking for changes since the 2026-09-13_draft committed baseline.

- **No dated catalyst found Sept 13-14.** No fresh rwa.xyz aggregate pull beyond the ~\$39.2B Sept 8 read already priced, and no rail failure, depeg, or counterparty default on any tokenization.
- **DTCC's October 2026 full-service launch** — Russell 1000 equities, major index ETFs, and US Treasuries — **remains unchanged and on schedule.** No delay, no scope change, nothing new announced.
- **Score decision: HELD FLAT at 52/60/66/74/85.** No window moved. The growth curve is continuing on trend, which is what the current P already assumes.

Carried forward — what changed in the Sept 12 light daily catch-up (2026-09-12_draft, auto-stamped, this morning's cycle), for continuity:

- **Sept 12, light daily catch-up:** re-checked — RWA.xyz aggregate reads (~\$38B tokenized value by late August, up from ~\$20.6B a year earlier) are a continuation of the already-priced growth. DTCC's October 2026 full-service launch (Russell 1000 equities, major-index ETFs, US Treasuries) remains the operative unchanged catalyst.

Carried forward — what changed in the Sept 5 FULL WEEKLY refresh (2026-09-05_draft2, committed by Alex Sept 5), for continuity:

- **No new dated tokenization catalyst found Sept 1-2.** General web search found nothing beyond unchanged background (the DTCC pilot's possible October 2026 commercial-launch window remained unchanged). No rail failure, depeg, or counterparty default found.
- **BTC (pipeline reference): \$76,581.44 on Sept 2 vs. \$78,038.78 on Sept 1** — a real pullback on the day, driven by the Iran escalation covered in that pillar's report, not by anything here.
- **No new dated tokenization catalyst found** via WebSearch this cycle — DTCC's October 2026 full-service-launch window (Russell 1000 stocks, major ETFs, Treasuries; 50+ participants incl. BlackRock) remains the operative unchanged catalyst.
- **Score decision: HELD FLAT at 52/60/66/74/85.** No window moved for this pillar. This is a FULL WEEKLY refresh, categorically excluded from the delegated daily auto-stamp policy regardless of date. **SEPTEMBER 5, 2026.** Fed & Macro is the pillar that moved this week, on a hot August jobs report. See that report and My Decision above.
- **Correction:** the same-day earlier 2026-09-05_draft's commit message claimed it was auto-stamped, but config/scores.json's status field was never actually advanced — a bug in that session. Corrected retroactively.

Carried forward — what changed in the Sept 2 light daily catch-up (2026-09-02_draft), for continuity:

- **No dated catalyst found Sept 1-2.** Score decision: HELD FLAT at 52/60/66/74/85. This shared score set was originally left as draft — Iran War Risk's sharp re-rate flipped the master call band widened the delegated daily auto-stamp policy.

Non-US users only — same structural limitation as the Robinhood Chain precedent, insufficient alone for consistency.
- **Context, not a catalyst — Anchorpoint's HKDAP stablecoin (Aug 24-25):** Standard Chartered-backed, citing RWA settlement/distribution as a use case; a stablecoin launch, not RWA token
- **No new SEC rulemaking, no-action letter, or press release dated Aug 22-29 found** on a direct sec.gov check; the tokenized-equity exemption meeting remains canceled with no new date

- **BTC (pipeline reference): \$77,666.16 on Aug 29 vs. \$77,266.84 on Aug 22** — modest gain.
- **Score decision: held flat at 52/60/66/74/85** — nothing this cycle clears the sufficiency bar. **Left as draft, not auto-stamped:** this is a full weekly refresh, categorically excluded from Alex's **2026-08-29_draft**, awaiting Alex's manual review.

Carried forward — what changed in the Aug 22 full weekly refresh (score set 2026-08-22_draft2), for continuity: Three earlier drafts (Aug 17, 18, 20) were written but never delivered, and an Aug 21 session delivered the Aug 20 num ran a fresh full-weekly primary-source pass on top of the already-delivered Aug 22 catch-up.

- **Why a new set instead of editing the delivered Aug 22 draft:** per house rules, a same-day draft may only be amended in place before delivery; the Aug 22 catch-up draft was already rend 2026-08-22_draft2.
- **rwa.xyz total RWA distributed value: essentially flat.** Direct pull Aug 22 draft2 (primary) shows \$38.32B (+2.30%/30d) vs. the Aug 16 baseline (\$38.17-38.24B) — normal drift, no discontinu
- **★ rwa.xyz tokenized Treasuries: first slightly-negative 30-day reading tracked.** \$15.98B, -0.39%/30d, across 87 products (primary) — prior cycles reported flat/slightly-up figures around \$ single datapoint — not sufficient alone to move P, flagged to watch next cycle.
- **★ NEW, primary, confirmed direct on sec.gov — Franklin Templeton no-action letter (Aug 12):** lets Franklin Templeton use its own affiliate as custodian for tokenized BENJI (Stellar), carv ETHNews, coinpatrika, BigGo Finance, UEX, KuCoin). Bloomberg (Aug 20) separately reports a plan to embed BENJI in conventional ETFs/mutual funds, possibly starting Q4 2026. Genuine bu
- **★ NEW — SEC tokenized-equity "innovation exemption" meeting CANCELED, not just delayed (Aug 13-15):** the planned ~Aug 14 meeting was called off. Multi-sourced (Ledger Insight itself; the stated causes (White House concerns, SIFMA opposition, CLARITY Act friction) trace to reporting that looks like one originating story — flagged as uncorroborated at the causal leve offsetting the Franklin Templeton letter above.
- **GENIUS Act rulemaking proceeding exactly on its pre-set procedural schedule:** Treasury's Section 3 NPRM published in the Federal Register Aug 18 (comment deadline Oct 19); the joint Sullivan & Cromwell memos; Forkast). Process, not news — no rule finalized. Not yet a trigger.
- **★ NEW — Robinhood Chain milestone (Aug 21):** Uniswap's combined tokenized-stock volume on Robinhood Chain crossed \$1B cumulative (crypto.news, cryptonomist); still EU/EEA-only, Continued organic growth off a small base, not an acceleration.
- **No new RWA-rail failure, depeg, or counterparty default found** in this window; the Jul 15 Ostium exploit (\$18-24M) remains closed and non-recurring, no follow-up developments found.
- **BTC (pipeline reference):** \$77,169.40 on Aug 22 vs. \$71,882.92 on Aug 20, +7.4%.
- **Score decision:** 1mo 52 → 52 · 3mo 60 → 60 · 6mo 66 → 66 · 12mo/36mo held at 74/85 — the Franklin Templeton positive and the SEC exemption-cancellation negative are both multi-sourc score; the first negative Treasuries reading is sub-1% and a single datapoint. **Left as draft at delivery, not auto-stamped:** this pillar's own evidence would have met the routine conditions fo delegation covers ordinary daily re-rates only — this is a full weekly refresh, categorically excluded regardless of evidence quality. **COMMITTED BY ALEX August 23, 2026** after manual review
