The Fed & Macro Regime Pillar Report

Liquidity as the Master Driver — Researched, Scored, and Re-Rated

Originally written and scores committed by me on June 12, 2026. Fully re-researched July 8, 13, 18, 25, and 30, 2026, and again as a full weekly refresh on August 8, 2026 (re-rated up to a moderated 40/38/47/55/62 on the BLS July jobs report, committed and stamped by Alex). Re-rated up again August 13 to 43/41/48/56/62 on a cool CPI print and a weak claims print; held flat August 14, 16, and through two Aug 22 cycles (a catch-up draft, then the full weekly refresh) — committed and stamped by Alex August 23, 2026, the last true baseline. A same-day catch-up draft written August 28 (score set `2026-08-28_draft`) re-rated down to 38/37/46/55/61 on Fed Chair Warsh's hawkish Jackson Hole speech and a hot July PCE print, but was ***never rendered, selfchecked, archived, or committed*** *— it sits abandoned, superseded mid-cycle.* ***This version (August 29, score set `2026-08-29_draft`) is a FULL WEEKLY refresh and goes further, re-rating down to 36/35/45/55/61.*** *A dedicated adversarial-verification pass this cycle caught a real error in the abandoned draft: its CME FedWatch September rate-hike-odds figure (~35.4%→~45.7%) UNDERSTATED the actual market move. Independent re-pull and cross-check — Motley Fool citing CME FedWatch directly at 57.5%, CNBC's own body text at "nearly 56%," and a third independent source at "55.7%" — shows the real post-speech reading clustered tightly in the high-50s, roughly 56-58%, not 45.7%: September hike odds are now past coin-flip, not just approaching it. Two fresh facts not in the abandoned draft: initial jobless claims for the week ended Aug 22 (DOL, primary, Aug 27) came in at 203,000 vs. 208,000 consensus, a mild hawkish-adjacent tightening signal; and the Aug 26 H.4.1 balance-sheet release (federalreserve.gov, primary) showed the same reserve-drain pattern continuing (reserve balances −$10,351M w/w to $2,924,936M; TGA −$2,876M w/w to $950,736M), logged but not independently trigger-worthy. This cycle also corrects the abandoned draft's price-action framing: BTC did NOT hold a stable tape through the speech — it opened Aug 28 around $80,262, traded above $81,000 pre-speech, then fell back sharply once Warsh spoke, closing $79,613.44 that day, and continued falling to $77,666.16 by today, Aug 29 (Bitstamp) — a real, visible reaction, not a shrug.* ***Net: the corrected, larger CME move justifies a deeper cut than the abandoned draft reached.*** *1mo 43→36 (-7), 3mo 41→35 (-6), 6mo 48→45 (-3), 1yr 56→55 (-1), 3yr 62→61 (-1) — still minimal at the long end, since Warsh explicitly declined to commit to a reaction function and one repricing doesn't reach three years out. Left as draft at delivery, not auto-stamped: this is a FULL WEEKLY refresh, which the runbook's delegated daily auto-stamp authority categorically excludes regardless of move size — doubly so here since every window moved 7 points or fewer anyway. Flagged for Alex's manual review; see My Decision below.* ***THIS VERSION (August 31) is a light daily catch-up, score set 2026-08-31_draft****, covering Aug 29-31: CME FedWatch September hike odds continued drifting up post-Warsh (CNBC Aug 28: ~45.7%; CoinSpectator/Bitcoin.com Aug 30: ~57%; CNBC Aug 31 Jackson-Hole-roundup: ~60.4%, up from ~56% Friday) — directionally the same hawkish repricing already sized into the Aug 29 cut (which used a 56-58% cluster as its basis). Per the sufficiency rule, a market-odds drift alone, without a fresh primary data print or news event, cannot move P further. No new H.4.1 (next due Sept 3, last Aug 27) or jobless claims release landed in this window.* ***P HELD FLAT at 36/35/45/55/61.*** *This is a light daily touch, no window moved, no call band flipped —* ***AUTO-STAMPED*** *per delegated daily authority.* ***Sept 1: held flat again*** *— CME FedWatch September hike odds continued the same post-Jackson-Hole drift (Forbes/KuCoin ~66% at 11:40am ET Aug 31, up from the ~60.4% CNBC read this pillar's Aug 31 baseline used), but it's the same intraday drift sequence with no new primary print or news event behind it, so per the sufficiency rule it does not independently move P; no new H.4.1 or claims release landed (Aug 31 was Labor Day). Score set 2026-09-01_draft, AUTO-STAMPED, new last COMMITTED baseline.* ***Sept 2: held flat a further time*** *— no new H.4.1 or data print found dated Sept 1-2; September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continues the same post-Jackson-Hole drift already priced into the Sept 1 baseline, not a fresh data-driven move, so per the sufficiency rule it does not independently move P. Score set 2026-09-02_draft*

— this pillar's own P is unaffected, but because all four qualitative pillars share one dated score set and Iran War Risk's sharp re-rate this cycle flips the master call band (Mild Bull → Neutral) and needs Alex's manual review, the WHOLE 2026-09-02_draft set — Fed & Macro's flat P included — stays in DRAFT status, not committed, per house rule (see My Decision and the Iran War Risk pillar report); COMMITTED, AUTO-STAMPED SEPTEMBER 3, 2026 once Alex widened the policy — this is the last TRUE committed baseline: 36/35/45/55/61. ***Sept 3: held flat a further time*** *— light daily catch-up found nothing material on any of the four qualitative pillars; config/scores.json untouched, blend re-run against fresh quant data only.* ***Sept 5, light daily catch-up (score set 2026-09-05_draft): RE-RATED DOWN a modest further step, 36/35/45/55/61 → 32/31/43/54/60.*** *The August jobs report (BLS, primary, released Sept 4) beat sharply — nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment steady at 4.1% — and markets repriced September 15-16 FOMC hike odds higher off of it (CNBC, Yahoo Finance, TheStreet, U.S. News, Investing.com/Reuters — point estimates vary 60-66% by source/timestamp but are directionally consistent and higher than the Sept 2 baseline's "~60% hold" framing). Same-day reaction: 2yr Treasury yield +5.3bp to its highest since January 2025; Dow −0.51%, S&P −0.38%, Nasdaq −0.29%; BTC fell ~2% same-day ($81,265.00 Sept 3 close → $79,676.60 Sept 4 close). Fed officials remain split (Warsh hawkish; Waller says he'd lean toward holding if inflation improves), with the Sept 11 CPI print now flagged as the likely decider before Sept 15-16. Move sized comparably to the Aug 22→28 catch-up cut on the Warsh Jackson Hole speech alone (a comparable single dated catalyst): 1mo −4, 3mo −4, 6mo −2, 1yr −1, 3yr −1, no window over 8 points.* ***CORRECTION:*** *that cycle's commit message claimed "AUTO-STAMPED SEPTEMBER 5, 2026," but config/scores.json's status field was never actually advanced to committed — a bug in that session, flagged here and not corrected retroactively (stamping is Alex's call).* ***Sept 5, FULL WEEKLY refresh (2026-09-05_draft2), this version:*** *independently re-verified via WebSearch — Fed Governor Waller's genuinely dovish-leaning Sept 3 speech ("give disinflation a chance") briefly cut CME hike odds to ~48% (Semafor, CNBC, Bloomberg, PBS) before the Sept 4 jobs beat reversed that back up to 60-66% (Forbes/CME FedWatch), a net hawkish drift for the week consistent with the Sept 5 cut. No further Fed commentary or data since; the Sept 11 CPI print has not yet landed.* ***HELD FLAT at this cycle's re-rated level, 32/31/43/54/60. Full weekly refreshes are categorically excluded from the delegated daily auto-stamp policy regardless of move size — left for manual review, and COMMITTED BY ALEX SEPTEMBER 5, 2026. Sept 6: light daily catch-up, held flat.*** *Re-checked via WebSearch: no new Fed speech, data release, or FOMC commentary since Sept 3-4 (Governor Waller's dovish-leaning Sept 3 speech and the Sept 4 BLS August payrolls beat were already captured in the Sept 5 re-rate). September 6 is a Saturday — markets and the Fed's own calendar are quiet, no data or speeches scheduled. The September 11 CPI print remains the next dated catalyst and has not yet landed.* ***HELD FLAT at 32/31/43/54/60. Sept 8: light daily catch-up, held flat again.*** *Re-checked via WebSearch: no new Fed speech, data release, or FOMC commentary since Sept 3-4; the Sept 11 CPI print and the Sept 15-16 FOMC meeting remain the next dated catalysts, not pre-empted this cycle.* ***HELD FLAT at 32/31/43/54/60. Sept 9: light daily catch-up, held flat again.*** *Re-checked directly against CME FedWatch-citing coverage — September 25bp-hike odds read ~58.7% (as of Sept 7, CNBC/cryptonews), consistent with the ~56-58% cluster already priced into the baseline, not a fresh move; no new FOMC meeting, no new BLS/DOL primary release since Sept 3-4. The Sept 11 CPI print and Sept 15-16 FOMC remain the next dated catalysts.* ***HELD FLAT at 32/31/43/54/60. Sept 10: light daily catch-up (score set 2026-09-10_draft) vs the 2026-09-09_draft committed baseline.*** *Held flat at 32/31/43/54/60 — independently re-checked, nothing cleared the sufficiency bar. The Aug CPI release (due Sept 11) and the FOMC meeting (Sept 15-16) are both still pending per BLS/Fed calendars — no new primary data since Sept 9. The master FINAL NUMBER's call band did not flip anywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull horizon-weighted) — so per the runbook's delegated auto-stamp authority this set is* ***AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)." THIS VERSION (September 11, score set 2026-09-11_draft) RE-RATES UP, modestly, to 34/33/44/54/60.*** *This cycle deliberately held its research window open past 8:30am ET for the print this pillar has been flagging for a week, and the August CPI print landed on schedule at 8:30am ET: BLS's own release (bls.gov, primary, fetched directly and re-fetched to confirm) has headline CPI-U* ***+0.4% m/m SA*** *in August after +0.1% in July and* ***+3.4% y/y NSA****, with core (all items less food and energy)* ***+0.3% m/m*** *after +0.2% in July and* ***+2.4% y/y****; energy rose 2.1% m/m and gasoline 3.9%, accounting for over a third of the monthly increase, while shelter rose 0.3%. Against the consensus circulating pre-print (headline +0.4% m/m / 3.4% y/y; core +0.4% m/m / 2.4% y/y), headline landed exactly in line and* ***core came in one tenth cooler on the month****, core y/y in line — a modest dovish surprise in the window that brackets the Sept 15-16 FOMC. It is tempered, not clean relief: headline accelerated from +0.1% to +0.4% and the acceleration is energy-driven — the same oil shock that fires the Iran pillar's "sustained Brent >$100" clause this cycle shows up here as headline inflation. Market-implied September hike odds circulating around the print (~70% for a 25bp move) are a market price, reported and not used to move P; the BLS*

release itself is the mover. Cross-source caution logged: several aggregator summaries of this print circulating within minutes carried figures inconsistent with the BLS release (e.g. a 3.1% core y/y) — discarded in favour of the primary document. Re-rated up on the windows bracketing the FOMC only: ***1mo 32→34, 3mo 31→33, 6mo 43→44****; 12mo and 36mo held flat at 54/60 — a single in-line-to-a-tenth-cooler print does not move the multi-year regime read.* ***AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)." Sept 16, light daily catch-up (2026-09-16_draft):*** *the September FOMC decision, statement, SEP and dot plot were scheduled for 2:00pm ET that day and had NOT been released at run time (~08:03 ET) — nothing new was knowable that cycle.* ***HELD FLAT at 34/33/44/54/60, AUTO-STAMPED. THIS VERSION (September 17, score set 2026-09-17_draft) RE-RATES DOWN, modestly, to 32/31/42/54/60.*** *The Sept 16 FOMC delivered its decision: the federal funds target range raised 25bp to 3.75%-4.00% (12-0 vote), the first hike in three years (federalreserve.gov statement, primary; corroborated by CNBC, Reuters/Advisor Perspectives, Coinpedia, coingape, and others). The hike itself was ~92.5% priced into CME/market odds ahead of the meeting per multiple outlets, so under the house sufficiency rule its mere occurrence is not, by itself, treated as new information — a market-price-implied outcome materializing is not a fresh primary fact. What IS new and primary-sourced: the SEP/dot plot itself, a Fed institutional document rather than a market price, shows 16 of 18 participants expecting at least one more hike in 2026 (12 of 18 specifically pencil in one more 25bp move by year-end, to 4.125%), plus a slower, more cautious rate-descent path through 2027-2028 than previously projected, with the long-run neutral-rate dots clustering tightly at 3.0%. Bitcoin's actual reaction was muted — it ticked up toward $76,300 on the statement, then drifted back to hold near $76,000-198 through Chair Warsh's press conference (CNBC, Coinpedia) — consistent with the move being mostly anticipated. Sized as a modest step, concentrated on the windows that bracket the now-confirmed additional-hike path through year-end 2026 and into Q1 2027:* ***1mo 34→32, 3mo 33→31, 6mo 44→42****; 12mo and 36mo HELD FLAT at 54/60, since the SEP's own longer-run dots (slow descent into 2027-2028, neutral rate anchored near 3.0%) are broadly consistent with what this pillar already carried, not a new multi-year signal. Light daily touch, master call band unchanged everywhere (Neutral → Neutral equal-weight) —* ***AUTO-STAMPED per delegated daily authority: status committed, stamped_by "Alex (auto-stamped)." Sept 18 (score set 2026-09-18_draft, this version) HOLDS FLAT at 32/30/38/44/58.*** *The Sept 16 FOMC dot-plot revision already drives this window's read in the currently committed set; a Sept 18 Motley Fool piece discussing "the most important number" in the SEP is single-source commentary on already-priced primary data (the same Fed projections table this pillar already cited), not a new dated fact — does not clear the sufficiency bar. AUTO-STAMPED per delegated daily authority.* ***Sept 19 (score set 2026-09-19_draft) is a FULL WEEKLY refresh that HOLDS FLAT again at 32/30/38/44/58*** *— confirmatory jobless-claims and housing prints, left as DRAFT for Alex's manual review since weekly refreshes are categorically excluded from auto-stamp regardless of finding.* ***THIS VERSION (September 22, score set 2026-09-22_draft) is a LIGHT DAILY touch, targeted single-pillar follow-up, and RE-RATES DOWN one point on the three near windows to 31/29/37/44/58.*** *Two independent primary regional Federal Reserve surveys, both dated September 2026 — the Philadelphia Fed Manufacturing Business Outlook Survey (released Sept 17: prices paid 40.9→48.6, prices received 17.7→31.3) and the New York Fed Empire State Manufacturing Survey (released Sept 15, primary, fetched directly: prices paid 58.1→63.1, the highest since July 2022, prices received 23.1→28.1) — both show headline activity cooling but input-cost and selling-price pressure re-accelerating to multi-month/multi-year highs. Two independent Fed district banks' own surveys, same week, same directional signal, clears the sufficiency bar; kept to one point because both are soft surveys whose own forward components (employment, future activity) fell, and because market pricing turned risk-on into Sept 18-19. 12mo/36mo HELD — two regional sentiment surveys say nothing about the 2027-2028 policy path. CLARITY Act, Iran War Risk, and Tokenization all carried forward unchanged this cycle. Per the runbook's delegated auto-stamp authority this is an ordinary light daily-type touch and the sourcing clears the sufficiency rule — AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)."*

Prior committed baseline (2026-11-07_draft, COMMITTED, AUTO-STAMPED NOVEMBER 7, 2026, LIGHT DAILY touch, RE-RATED DOWN on 1mo/3mo): 32 / 21 / 34 / 43 / 58 · **Current P (2026-11-07_draft2, DRAFT,** × 8 = −2.45; 3mo ((21 − 50) ÷ 50) × 0.85 × 8 = −3.94. The decisive new fact: the October 2026 Employment Situation (BLS, released Nov 6, 2026, 8:30am ET; multiply corroborated via CNBC/FXStreet/babypips/futur revised up a combined +84,000. Unambiguously hawkish ahead of the Dec 9 FOMC decision, which sits inside the 1mo window and close to the edge of the 3mo window — re-rated down −2 each. 6mo/12mo/36mo H with no verifiable date/text found; an updated CME FedWatch Dec 9 reading specific to post-jobs-report trading (market-price data in any case, never blended with institutional estimates). October CPI still due ~Nov

THE THREE INPUTS, IN PLAIN ENGLISH

P — the odds the macro regime is *good for crypto* by then — not "the Fed cuts by then." Re-rated down this cycle to **32 / 21 / 34 / 43 / 58** from the committed 34 / 23 / 34 / 43 / 5

Quality — how trustworthy the evidence is. Unchanged this cycle per house rules.

Impact — 8 out of 10, the uniform value every pillar now shares in the equal-weight model. Liquidity is the tide; it moves the whole market at once.

Carried forward, still load-bearing: July PCE (bea.gov, primary, released Aug 26) printed a modestly hot headline read, +0.2% m/m / 3.7% y/y (0.1pp above consensus), core +0. a fiscal-deficit story, not a clean Fed signal; both already reflected in the committed baseline this cycle re-rates from.

The Claim

The thesis, and where I differ from the consensus — updated November 7, 2026 (LIGHT DAILY touch, score set 2026-11-07_draft, AUTO-STAMPED)

This cycle (Nov 7): the crowd will likely read the October jobs beat — nonfarm payrolls +165,000 against a consensus of roughly 59,000-70,000, unemployment down to 4.1% — as month window, so both take the same-sized cut (−2 each); 6mo/12mo/36mo hold, since labor-market resilience was already partly priced into the Nov 4 baseline's ISM/JOLTS readin or date — the BLS release itself is the mover. **P RE-RATED DOWN on two windows, 34/23/34/43/58 → 32/21/34/43/58** — 6mo/12mo/36mo held.

Prior cycle (Oct 15): the crowd will likely read the hot September CPI print — headline accelerating to 3.7% y/y, core to 2.6% y/y, both above consensus — as confirmation the Fed's pre-CPI ~17% to ~34% — still a hold favorite, which is why 1mo only takes −2, not a wholesale flip. December 9 is a different story: odds there are already elevated to 75–85% across **windows, 33/26/36/44/58 → 31/23/34/43/58** — 36mo held, since one print doesn't reach the 2029 liquidity regime.

Prior cycle (Sept 22): the crowd will likely read the Philadelphia Fed and NY Fed Empire State surveys by their falling headline-activity numbers — both surveys' general-conditions State prices paid hitting the highest level since July 2022. That is a genuine, if soft, re-acceleration in the inflation pipeline landing barely a week after the Sept 16 hike and hawkish c the CLARITY/Iran/Tokenization pillars are untouched this cycle — this is a single targeted follow-up, not a fresh weekly sweep. **P RE-RATED DOWN, modestly, to 31/29/37/44/58** —

Prior cycle (Sept 17): the crowd will likely read the Sept 16 FOMC's 25bp hike to 3.75%-4.00% itself as the headline event. **Me:** that hike was ~92.5% priced into market odds before a year-end move to 4.125%), and a slower projected descent through 2027-2028. Bitcoin's own reaction was a shrug (ticked up toward $76,300, then drifted back to hold near $76,0 concentrated on the windows bracketing the confirmed additional-hike path into Q1 2027; 12mo/36mo held, since the longer-run dots don't change this pillar's multi-year read.

Prior cycle (Sept 12, FULL WEEKLY refresh): the crowd will likely read the hot 5.4% y/y August PPI headline (BLS, Sept 10) — the highest of 2026 — as confirmation the inflation pict disinflationary surprise. That reinforces the already-priced cooler-than-consensus CPI read from last cycle rather than contradicting it — a fresh, primary-sourced, sufficiency-qualif catalyst. This is a FULL WEEKLY refresh, so — regardless of the flat finding — it is left as DRAFT for Alex's manual review, not auto-stamped.

Prior cycle (Sept 12 light daily catch-up): the crowd would likely read the ~90% market-implied hike odds circulating that morning as new information demanding a further hawkish primary fact, so per the house sufficiency rule it did not independently move P. **P HELD FLAT at 34/33/44/54/60,** AUTO-STAMPED.

Prior cycle (Sept 11): the crowd will take a headline that jumped from +0.1% to +0.4% m/m and read it as inflation re-accelerating into a hawkish FOMC. **Me:** look at what moved it — consensus, with core y/y in line at 2.4%. That is a modest dovish surprise in the windows that bracket the Sept 15-16 meeting, and it is why this pillar moves up two points at 1mo/3m

The crowd: might read Warsh's studied refusal to commit to forward guidance as him keeping his options open, and treat the hawkish framing as just rhetoric until an actual vote. Th

Me: now at 32/31/43/54/60, down from the 36/35/45/55/61 this pillar held through Aug 29-Sept 3. That Aug 29 cycle's dedicated adversarial-verification pass re-pulled the CME Fe print, so P held; a Sept 3 check found nothing material on any pillar. **Sept 5:** the August jobs report (BLS, primary, released Sept 4) beat sharply — nonfarm payrolls +162,000 vs. ~5 ($81,265.00 → $79,676.60). This is a fresh, dated, primary-sourced print — not odds drift — so it clears the sufficiency bar for a further modest cut, concentrated on the windows br inflation accelerating to 5.4% y/y — the highest 12-month reading of 2026 — corroborated across CNBC, Yahoo Finance, UPI, and The Washington Times, logged as context for the core a tenth cooler than consensus — see This Cycle above — moving P up to 34/33/44/54/60. **Sept 12, light daily catch-up (morning):** no new Fed speech or primary data release consensus — reinforces rather than contradicts the CPI read and does not move P; the CPI print was independently re-verified with no discrepancy. P HELD FLAT at 34/33/44/54/60

My edge: the discipline is in re-pulling the actual rate-odds venue rather than trusting the first number that circulates — this cycle that discipline caught a real error before it was eve Sept 15 FOMC itself remain the real tests — Warsh explicitly declined to pre-commit to a reaction function, so this re-rate prices in a repriced *risk*, not a foregone decision.

The Facts

Updated November 7, 2026 (LIGHT DAILY touch, active set 2026-11-07_draft (COMMITTED, AUTO-STAMPED NOVEMBER 7, 2026)) — the new dated items are in the first box below; the second box holds the Nov

★ NEW THIS CYCLE — NOVEMBER 6 – 7, 2026 (LOGGED NOVEMBER 7)

Data — a large, hawkish jobs beat. The October 2026 Employment Situation (BLS, released Friday Nov 6, 8:30am ET): nonfarm payrolls **+165,000** against a consensus of roughly combined +84,000. bls.gov itself was unreachable this cycle via WebFetch (sandbox egress block), so this rests on multiple independent outlets consistently reporting the same E

Could not confirm — not used. A cited Nov 2-6 Fedspeak roundup (Barkin/Daly/Musalem/Cook/Hammack) had no verifiable date or text behind it — flagged, not scored. An upda released.

NOVEMBER 2 – 4, 2026 (LOGGED NOVEMBER 4)

Data — firm activity, hot input prices. ISM Manufacturing PMI, October (released Nov 2): 55.5, up from 54.5; prices index 75.2 (ABA Banking Journal and Textile World reproduci already carries; neither adds a new hike.

Treasury — PRIMARY. Treasury's October–December 2026 marketable borrowing estimate: $618B (Nov 2, press release sb0675, home.treasury.gov). The quarterly refunding sta

Post-midterm price action — one day, no policy content. On Nov 4, after the Nov 3 midterms, the dollar index slipped to ~101.3–101.4, a one-month low, and the 10-year yield eas

Rate odds — MARKET PRICE, not an institutional estimate. Dec 9 hike odds (CME FedWatch, MARKET PRICE, thin sourcing): ~77% Nov 3 → ~82% Nov 4. This confirms the alre

CORRECTION to the November 2 cycle. That cycle quoted the Treasury par curve, Oct 29 → Oct 30, as "2y 4.73 → 4.65." Those were the **3-year** column's values. The true 2-yea

Calendar. October jobs report Fri Nov 6, 8:30 ET (bls.gov, PRIMARY); October CPI ~Nov 10. These are the next tests that could move P. **HELD FLAT at 34/23/34/43/58.**

PREVIOUS CYCLE — OCTOBER 29 – NOVEMBER 2, 2026 (LOGGED NOVEMBER 2)

Oct 30 hawkish Fed-president remarks, which the Oct 31 weekly missed. Dallas Fed President Logan (2026 voter), Oct 30: "the FOMC needs to implement at least two more 25 Fed President Barkin, Oct 30 (Reuters only — SINGLE-SOURCE, reported not scored). **Why no move:** they confirm the Dec 9 hike this pillar already prices; they do not add a new

★ NEW THIS CYCLE — OCTOBER 15, 2026

★ THE DECISIVE NEW FACT, and the reason P moves down this cycle — the September 2026 CPI print, Bureau of Labor Statistics, released October 14, 2026, 8:30am ET. PR +0.3% m/m. Driver: energy, specifically gasoline, **+9.1% m/m and +34.2% y/y**. This is a hawkish beat on BOTH headline and core — the core beat matters more for this pillar's pu HIKING stance (raised to 3.75-4.00% in September), not a cutting one — so a hot print here raises hike-continuation odds, not cut-delay odds, the way it would have in most of th

MARKET PRICES, never blended with institutional estimates, labelled explicitly throughout. Kalshi/Polymarket-derived odds of an Oct 28 hike rose to roughly **34% (hold ~66%** hike odds are elevated further to roughly **75–85%** across sources (wide spread, consistent with this pillar's standing practice of not quoting a single settled figure for noisy marke

Also confirmed, not used to move P: New York Fed President Williams has previously floated "one further upward adjustment…late this year" (already partially logged in prior cyc

Score decision: P RE-RATED DOWN, 33/26/36/44/58 → 31/23/34/43/58 (−2/−3/−2/−1/0). This is an ordinary LIGHT DAILY touch, not a full weekly refresh — the sourcing (prim **under Alex's delegated daily authority: status committed, stamped_by "Alex (auto-stamped)."** Research capability was NOT degraded this cycle: WebSearch reached BLS-sou

★ CARRIED FORWARD — THE WEEK OF OCTOBER 3 – OCTOBER 10, 2026

★ A negative finding, stated plainly because it was deliberately checked for: there is NO government shutdown and no data disruption. BLS's own release calendar and the Fe economic data. *The exact H.4.1 reserve-balances dollar figure for the week ended Oct 7 could not be extracted from available sources this cycle; the release's normal-schedule*

★ THE DECISIVE NEW FACT, and the reason P moves down this cycle — Fed Governor Christopher Waller, Istanbul Economic Forum (hosted by the Central Bank of the Repub CONFIRMED. (a) Further rate increases are the likely next step if incoming data keep behaving as expected. (b) Inflation has been running above the Fed's 2% target for roughly 5 posture earlier in the year (spring 2026), not a restatement of an old position. (e) He explicitly DOWNPLAYED the weak September nonfarm-payrolls print (+29,000 vs. ~84,000 c 8–9 meeting) as the next hike candidate. **A sitting FOMC voter directly rebutting the dovish narrative behind the prior cycle's large upward move clears the sufficiency rule on**

★ PRIMARY — DOL initial jobless claims, week ended Oct 3, 2026, released Oct 8, 2026 (corroborated by multiple independent outlets via a Reuters-sourced wire): **197,000**, wi dovish move — read here as a continuation of labor-market resilience on the claims side, not a new deterioration signal, and NOT used to independently move any P — it is contex

MARKET PRICES, never blended with institutional estimates, labelled explicitly throughout. CME FedWatch-style pricing for the Oct 27–28 meeting barely moved despite Walle internally consistent across feeds (ranging roughly **62–84%** depending on source) but agree DIRECTIONALLY that implied December hike odds drifted higher since the prior cycle directional shift, concentrated at the meeting that sits inside the 3-month window, is why 3mo takes the larger cut (−3) versus 1mo's −2.

The 10-year Treasury yield was roughly FLAT this week — approximately **5.23% on Oct 8** versus approximately 5.24% on Oct 1 (the prior cycle's reading) — after an initial Walle week and the long end didn't move much. 12mo and 36mo HOLD FLAT — one week of Fed-speaker rhetoric and noisy market pricing is, per the sufficiency rule, insufficient to mo

Explicitly EXCLUDED this cycle — verification found these too weak/unreliable to use. A single wire report's claim that Goldman Sachs might shift to forecasting two more hikes aggregators and could not be resolved (FRED access was blocked this cycle) — no 2-year yield figure is quoted as fact. The exact H.4.1 reserve-balances dollar figure for the wee

Score decision: P RE-RATED DOWN, 35/29/37/44/58 → 33/26/36/44/58 (−2/−3/−1/0/0), a partial reversal of the prior cycle's large +8/+4/+3/+1/0 upward move. This is a FULL dol.gov, and five-plus independent outlets were all reached directly in two independent passes (one research, one adversarial verification).

★ CARRIED FORWARD — THE WEEK OF SEPTEMBER 26 – OCTOBER 3, 2026

★ PRIMARY — August PCE undershot, BEA, released Sept 30, 2026. Every element re-confirmed exact against bea.gov: headline PCE price index **+0.3% m/m and 3.4% y/y**; **c** the *annual update of the National Economic Accounts*, with revisions reaching back to January 2021, which is a genuine qualification on the level. Consensus figures are survey e

★ PRIMARY — the September jobs report, BLS, released Oct 2, 2026 at 8:30 a.m. ET, and it contradicts the Fed's own stated rationale. Nonfarm payrolls **+29,000** against an ~ **60,000** — July flipped from +21,000 to **−10,000** (−31,000) and August from +162,000 to +133,000 (−29,000); the arithmetic checks. **Three days earlier Governor Barr had said "**

★ PRIMARY — Vice Chair Philip N. Jefferson, "The U.S. Economy and Monetary Policy," Darden School of Business, University of Virginia, Oct 1, 2026. Quote re-verified verb outlook, and the balance of risks." A sitting Vice Chair explicitly slowing the pace. **NOT USED:** a secondary article placing this speech on Sept 30 is wrong — the Board's own cale re-rate.

★ THE HAWKISH COUNTERWEIGHTS, which are why this move is single-digit and stops at 12 months. (a) Governor Michael S. Barr, "Economic Conditions and Monetary Pol *have increased, while risks to the labor market have receded, so we need to recalibrate policy to get us in a better position that more evenly balances risks to both components o the latter two sentences while presenting them as verbatim: the full endings are restored above.* **Critically, Barr spoke on Sept 29 — before both the Sept 30 PCE and the Oct 2 j** 17, 2026. Remaining 2026 meetings: **Oct 27–28 and Dec 8–9**. **(b) Q2 GDP third estimate, BEA, Sept 30:** real GDP revised **UP to 2.2%** annualized from 1.5% (+0.7pp), real GDI +2.6 week average 200,000, −2,500 (prior average revised 202,250 → 202,500). **(d) The long end went the wrong way:** FRED DGS10 5.17% (Sept 25) → 5.24% → 5.26% → **5.29% (S** (Sept 29) → 4.88% (Sept 30) → **4.78% (Oct 1)**. **A falling 2-year against a rising 10-year is a steepening** — less near-term tightening priced, *more* long-run inflation risk — which

CORRECTED this cycle, and it kills a claim this system has been repeating: jobless claims are NOT at or near a 57-year low. The "near 57-year lows" / "lowest since 1969" fram of Jul 18) and **190,000** (Apr 25) both lower, besides 190,000 and 195,000 in Sept 2022 and 195,000 in Jan 2024; the series minimum is 162,000 (Nov 1968). **The level still does th**

MARKET PRICES, never blended with the SEP. CME FedWatch October-hike odds collapsed to roughly **17–23%** (hold ~77–81%) as of Oct 2, from about 36% a week earlier. For D 403, so this rests on conflicting secondary citations of a market price and is labelled accordingly. These are market prices, not institutional estimates.

H.4.1, week ended Sept 30 (PRIMARY, released Oct 1, re-confirmed exact): reserve balances **$2,948,090M** from $2,930,193M, **+$17,897M w/w** — last cycle's record −$83,601M

★ NEW THIS CYCLE — THE WEEK OF SEPTEMBER 19–26, 2026

★ PRIMARY — Fed Governor Michael S. Barr, "A Long-Term View on the Costs of Shelter," Sept 23, 2026, 10:05 a.m. EDT, at the Chicago Fed's Housing Affordability 2026 sum is above our 2 percent target and not clearly trending toward target in a timely way. Moreover, risks to achieving our inflation target have increased, while risks to the labor market he supported the Sept 16 hike. *Verification note, stated because it cuts against an earlier draft of this very cycle:* a first research pass reported the middle sentence as absent and

★ PRIMARY — S&P Global flash US PMI, Sept 23, 2026. The embargoed release ("Embargoed until 0945 EDT … 23 September 2026") was retrieved directly. Composite output **5** and transport costs — and reports selling-price inflation rising too, reversing August's nine-month low. *Figure deliberately not quoted:* an "input prices index 66.4 from 59.9" read

★ PRIMARY — University of Michigan Surveys of Consumers, FINAL September, released Sept 25, 2026. Sentiment **48.1**, down 7.0% month-on-month from 51.7; current condi **at 3.3%.**" The long-run break is the single most consequential figure in this pillar's cycle, because de-anchored long-run expectations are what extend a tightening cycle beyond

★ PRIMARY — DOL initial jobless claims, week ended Sept 19, 2026: advance figure **197,000** (the "near 57-year lows" characterisation carried here was later found FALSE and i counterweight to a further hike — and is, honestly, also a risk-on positive in its own right.

★ PRIMARY — Federal Reserve H.4.1, week ended Sept 23, 2026. Reserve balances **$2,930,193M against $3,013,794M** the prior week — a fall of exactly **$83,601M in one wee** and is a direct liquidity negative for crypto. **Honest qualifier:** it is substantially a mechanical TGA/tax-date rebuild rather than policy tightening, which is why it supports the move

Two Fed voices, both DOWNGRADED on sourcing after verification — used as corroboration only, neither able to move P alone. *Boston Fed President Susan Collins, Sept 22:* t Reuters story, so it is **effectively single-agency** and labelled as such. It had never been scored by any prior cycle — a genuine coverage gap, now closed. *NY Fed President John* by the end of the year," and then adding "That seems to me a reasonable way of thinking about it. **But we have to see. We're going to collect the data.**" Presenting that as his own and CNBC) — the other eight carry the identical Reuters wire.

Also logged this cycle, not scoreable. The Fed's own *Senior Credit Officer Opinion Survey* (Sept 24, primary) reports dealer pricing and non-pricing terms "remained basically un which **contradicts this report's earlier "cooling rate-sensitive sectors" framing, and that framing is softened accordingly** (figure is secondary-sourced; the Census PDF would

MARKET PRICES — reported, and never blended with the SEP's institutional estimates. The 10-year Treasury yield rose **4.96% (Sept 22) → 5.11% (Sept 23) → 5.18% (Sept 24),** published Sept 23 at its research time) and *supersedes* its press-sourced "5.104%" intraday quote with the primary constant-maturity close. The 2-year is quoted at 4.947%, the and retires this report's earlier "Polymarket ~51% odds of a cut by June 2027" line. *A claimed data-integrity finding was RETRACTED rather than printed:* an initial pass reported t served by FRED. It is logged as an unresolved gap and is not presented as a finding. The 5.11/5.18 values are unaffected.

RE-CONFIRMED FROM PRIMARY — the Sept 16 FOMC and its dot plot. The statement reads "The Committee decided to raise the target range for the federal funds rate by 1/4 pe
longer-run. So this report's standing line — 16 of 18 officials seeing at least one more 2026 hike, 12 of 18 at exactly one more — is **correct as written** and survives re-verification.

THE TEST HAS LANDED, AND IT CAME BACK TWO-SIDED. August PCE and the Q2 GDP third estimate released **Sept 30** (BEA, primary). Core PCE printed 3.0% y/y, but roughly
or reversing the Sept 23-26 cut — held flat on the Oct 1 daily touch.

★ ★ **NEW this cycle — Philadelphia Fed Manufacturing Business Outlook Survey, released Sept 17, 2026 (primary source page confirmed at philadelphiafed.org; that month's**
to 37.8 from 47.4, but **prices paid rose to 48.6 from 40.9** (50.5% of respondents reporting higher prices vs. 1.9% lower) and **prices received rose to 31.3 from 17.7** — a re-accele

★ ★ **NEW this cycle — New York Fed Empire State Manufacturing Survey, released Sept 15, 2026 (PRIMARY, fetched directly from newyorkfed.org):** general business condition

- ★ **★ NEW this cycle — CME FedWatch (September meeting) independently re-verified directly, cross-venue:** ~68-70% hold probability across multiple contemporaneous reads already had the hawkish content priced in.
- ★ **★ DISCARDED — a separately-circulating claim of "93.6% September hike probability" was traced this cycle to a garbled data conflation.** It appears to be Kalshi's JULY mee
- **Jobless claims week ended Aug 15 (DOL, primary, released Aug 20): 206K, down 6K, vs. 210K consensus; 4-week average 204K.** Confirms the low-layoff, tight-labor trend al
- **Aug 22 score decision (superseded by this cycle):** the hawkish minutes detail and the noisy weak retail-sales print largely offset an already-priced rate-odds market — netted to
- **BTC closed at $77,266.84 on Aug 22 (Bitstamp)** — vs. $79,613.44 on Aug 28 and $77,666.16 on Aug 29 (see this cycle's facts above).

Carried forward from the Aug 22 draft1 catch-up cycle (independently re-confirmed, still load-bearing):

- **No new Fed H.4.1 release since the week ended Aug 19 (federalreserve.gov, primary, published Aug 20):** that remains the current release; the next H.4.1 is due Aug 27. No new
- **No new public remarks from Chair Warsh between the Jul 29 FOMC press conference and the Aug 28 Jackson Hole speech (see this cycle's facts above).**

Carried forward from Aug 20 (re-confirmed this cycle, still load-bearing):

- **FOMC minutes from the Jul 28-29 meeting confirm the known 9-3 hold vote and the Hammack/Kashkari/Logan dissent for an immediate 25bp hike.** Inflation risks characteriz given.
- **Offsetting signal, re-confirmed and expanded this cycle: CME FedWatch showed the odds of a September 16 hold rising to ~65% post-minutes, up from a pre-minutes ~50/5** minutes' release.

Carried forward from Aug 16 (still load-bearing):

- **July retail sales (Census Bureau, published Aug 14, primary release): headline −0.6% m/m vs. +0.1% expected, core (ex-auto) −0.2% m/m, still +5.0% y/y.** The first monthly house discipline against chasing single prints, this alone doesn't move P.
- **Recalled for continuity, not re-scored:** the Aug 17 Empire State Manufacturing Survey surged to 20.6 vs. 11.0 consensus, the highest since 2022 — a hot beat cutting against the

Carried forward from Aug 13-14 (still load-bearing):

- **Fed H.4.1, week ended Aug 12 (federalreserve.gov, published 4:30pm ET Aug 13): reserve balances $2,944,059M, down $49,290M w/w; Treasury General Account $963,95**

Carried forward from Aug 12-13 (still load-bearing):

- **July CPI (BLS, published Aug 12): headline +0.1% m/m / +3.4% y/y; core +0.2% m/m / +2.5% y/y** — landed cool, exactly in line with consensus, drove the Aug 13 re-rate up.
- **Initial jobless claims, week ended Aug 8 (DOL/ETA, published Aug 13): 209,000 actual vs. 202,000 expected** — a genuine weak-side miss, 8-week high, the second trigger be

Carried forward from Aug 8-10 (still load-bearing):

- **Initial jobless claims for the week ended Aug 6 (published Aug 8): 262,000 actual vs. 263,000 expected** — essentially in line with consensus, noise rather than a surprise.

Carried forward from Aug 8-9 (still load-bearing):

- ★ **BLS Employment Situation, July 2026: nonfarm payrolls FELL 23,000** versus a consensus estimate of ~83,000 (WSJ-sourced; a competing 95,000 Barron's-sourced figure is l reporting, all citing the same BLS release — meets the 2+ independent sufficiency bar.
- **May and June payrolls revised down a combined 103,000** — confirmed, matches the light draft exactly. (One Forbes-sourced fetch this cycle produced a garbled "-252,000 tot
- **Unemployment ticked down to 4.1% from 4.2%,** but the labor-force participation rate fell to 61.4% — its lowest level in over five years.

COINPICKS

- ★ **★ NEW this cycle — average hourly earnings rose just 3.2% y/y,** down from 3.4% in June and now trailing CPI (3.5% June y/y) — real wages softening, a detail the same-day li
- ★ **★ CORRECTED — CME FedWatch September-hold odds check out at ~56%,** not the light draft's ~60%. Two independent corroborating sources (CBS News, a Forbes-sourced research discipline) shows 65% hold.
- ★ **★ NEW this cycle — real forecaster disagreement on magnitude:** Bank of America explicitly called the report "a bit dovish on net" but is **sticking with its call for 75bp of hikes i** month window — will be the deciding factor for September, not this jobs report alone.
- ★ **Jobless claims for the week ended Aug 1: 199,000, 4-week average 198,750** — the lowest of this cycle, in real tension with the weak payrolls print. Points to "low-hire, low-fire"

Carried forward from Aug 7 (still load-bearing):

- ★ **Fed H.4.1 for the week ended Aug 5 (federalreserve.gov, direct pull):** total assets $6,748,567M, reserve balances $2,993,349M — reserves +$8.78B w/w, TGA -$3.45B w/w. An

Carried forward from Jul 30-Aug 5 (still load-bearing):

- ★ **★ CONFIRMED, PRIMARY SOURCE — the FOMC held rates at 3.50-3.75% on Jul 29, 2026, on a 9-3 vote.** Three regional-bank presidents — Beth Hammack (Cleveland), Neel K this meeting (not a projections meeting; next SEP is Sept 15-16, 2026).
- ★ **Chair Warsh's press conference was unusually combative and offered no forward guidance:** "there is no soft inflation target... not on this committee's watch"; "the five-plus ye 5.21%, its highest since July 2007 — a "bear steepener" consistent with rising inflation-credibility concern.
- ★ **★ CONFIRMED, PRIMARY SOURCE — jobless claims for the week ended Jul 25 came in at 197,000** (DOL/ETA release, fetched and read directly), a genuine +9,000 increase; th factors expected — meaning the "lowest since 1969" framing was real but mechanically set to partially reverse, exactly as it did.
- ★ **The September hike-odds figure could not be reconciled to a single number this cycle, despite four direct attempts.** Live pulls produced 55.8% (Fox Business, Jul 28), 62.4% point figure.
- **H.4.1 balance sheet: no new release found for the week ended Jul 29** as of this check (normal Thursday-afternoon publication timing); the most recent confirmed release remai
- **Bank of America projects three 25bp hikes in 2026** (to 4.25-4.50%) — single-source (Forbes, citing BofA), flagged not scored.
- **Carried forward, not re-verified this cycle:** June CPI (-0.4% m/m) and PPI (-0.3% m/m), both BLS-primary-confirmed in a prior cycle; Warsh's Jul 14/15 congressional testimony
- **The labor market cracked in slow motion, then partially un-cracked this week** — June payrolls +57K vs ~115K consensus (carried forward); this cycle's 197K claims print, while
- **Policy rate and balance sheet: 3.50-3.75%, next FOMC (with SEP/dot plot) is Sept 15-16, 2026.** Fed communications blackout ended with the Jul 29 meeting; watch for the first
- **BTC closed at $64,706.50 (Jul 30)** — holding up despite the hawkish FOMC surprise and confirmed equity/bond-market risk-off reaction. **Updated: BTC closed at $64,661.55 o**

The Prize

Illustrative only — not price targets, not advice

The canonical anchor: **2020-21 ZIRP + QE** ran BTC ~$3,800 → $69,044 (~15–18×) — a unique COVID/zero-rate/open-ended-QE setup, not a repeatable base case. The **2024-25** FOMC hike and hawkish SEP are already priced into this pillar's current committed score; nothing new since then moved this pillar). From here, a retest of the $126K high ≈ **+53.6**

Discount it hard, twice. First: easing is not an automatic catalyst — the last cycle topped on a non-Fed shock. Second: the Sept 16 hike and its hawkish SEP already reflect a real r next test. A major forecaster (BofA) has been calling for 75bp of 2026 hikes since early August and no longer looks like an outlier after the Sept 16 hike. The Prize doesn't feed the

The Other Side

The strongest honest case my re-rate — even the moderated one — is still wrong

- **This re-rate might not be conservative enough a read on BofA's stance.** Bank of America has been calling for 75bp of 2026 hikes since early August, straight through the cool C
- **Warsh explicitly avoided committing to a reaction function — this report may be over-reading a rhetorical signal into a real repricing.** The CME odds move is real, quantified, a appeared.
- **The adversarial-verification pass caught one error in the abandoned draft's CME figure — it may not have caught all of them.** This cycle corrected 45.7% to the high-50s clus
- **I may still be over-reacting to one speech and one data print.** This pillar has already seen a claims number ("lowest since 1969") partially reverse the following week on a seasor report) lands.
- **The FOMC's own hawkish dissent hasn't gone away and now looks more, not less, mainstream.** Three regional presidents voted for an immediate hike on Jul 29, and Warsh's A
- **Downward revisions can themselves get revised.** The BLS's own benchmark process regularly adjusts prior months; May-June's combined 103,000 downward payroll revision i
- **Weak labor data plus a still-elevated inflation/oil backdrop (Iran-driven, and this cycle's Iran pillar got worse, not better) is stagflation risk, not straightforwardly bullish.** If th

The Triggers

Ongoing	Iran/Hormuz oil-inflation risk — see Iran War Risk pillar for the current read

The flip line, updated Oct 1 — RESOLVED, and it came back two-sided, not a confirmation. The test this pillar set for itself was whether "the next hard CPI/PCE/PPI print or FOMC communication co printed 3.0% y/y — but a telegraphed BEA methodology change (pre-announced June 2026) mechanically accounts for roughly 0.15-0.2 points of that apparent cooling, so it is not read as a clean c stands as this cycle's read, held flat on the Oct 1 daily touch. A government shutdown was separately averted through Dec 11, removing a near-term data-disruption risk. The genuinely two-sided fac

Prior flip line, Sept 11: the Aug 13 cool CPI and weak claims print were the last genuine dovish confirmation this pillar found. Since then, the Aug 19 minutes' wider hawkish bloc, Warsh's Jackson Ho ~56-60% range across sources — past coin-flip. Still not a confirmed pivot: Warsh explicitly declined to commit to a reaction function, and Fed officials remain publicly split (Warsh hawkish, Waller d odds move, treat that as evidence the hawkish rhetoric outran the committee, and re-rate back up.

My Decision

HELD FLAT — NOVEMBER 7, 2026 (2026-11-07_draft2, FULL WEEKLY refresh, DRAFT, AWAITING ALEX'S STAMP; builds on 2026-11-07_draft, COMMIT RATE (34/23/34/43/58 → 32/21/34/43/58 ON THE OCT JOBS REPORT) CARRIES FORWARD UNCHANGED

P (2026-11-07_draft2, FULL WEEKLY follow-up; HELD FLAT against this morning's committed 2026-11-07_draft, which itself RE-RATED DOWN unchanged) · My Weight: 20% (equal) · Impact: 8 (uniform) · This pillar's signals: 1mo −2.45 (Bear) · 3mo −3.94 (Strong Bear) · 6mo −2.05 (Be NUMBER (this blend): -0.18 equal-weight (Neutral) / +0.37 horizon-weighted (Neutral), versus −0.16 / +0.38 this morning — this pillar did not itself held unchanged at 58/57/60/69/70) — no call band flipped anywhere, on any window or either FINAL NUMBER variant · Leave-one-out close, GitHub Actions relay; down 0.44% from the Nov 5 close of $75,982.72)

November 7, 2026 — LIGHT DAILY touch (this pillar RE-RATED DOWN; CLARITY Act, Iran War Risk and Tokenization all held, see those reports): re-checked this pillar's trigger table agains FXStreet, babypips, futunn — consistently reporting the same release, which meets the sufficiency bar): nonfarm payrolls +165,000 against a consensus of roughly 59,000-70,000, a large bea and at the edge of the 3-month window. Could not confirm, not used: a cited Nov 2-6 Fedspeak roundup (Barkin/Daly/Musalem/Cook/Hammack) with no verifiable date/text found; an updated jobs report doesn't move the medium/long-run macro picture and labor-market resilience was already partly reflected in the Nov 4 baseline's ISM/JOLTS readings. The active set is now **2026** pass. THE FINAL NUMBER moves to −0.16 equal-weight / +0.38 horizon-weighted (from −0.14 / +0.40), both Neutral; master 1mo −2.07 / 3mo −1.88 / 6mo −0.73 / 1yr +1.06 / 3yr +2.80, no cal

November 4, 2026 — LIGHT DAILY touch (this pillar HELD FLAT; CLARITY re-rated down after the Nov 3 midterms in this pass; Iran War Risk carried at the cloud set's committed 11/30/65 September (Nov 3, bls.gov, PRIMARY): openings 7.5M, little changed. Treasury Oct–Dec borrowing estimate $618B (Nov 2, sb0675, PRIMARY); refunding statement not yet posted at research Nov 4 (CME FedWatch, MARKET PRICE, thin sourcing) — confirms the already-priced hike. No new Fed remarks Nov 2–4 (federalreserve.gov, PRIMARY). **CORRECTION:** the Nov 2 cycle's Tre **04_draft2 (COMMITTED, AUTO-STAMPED NOVEMBER 4, 2026)**, stacked on the cloud's committed 2026-11-04_draft. 2026-10-31_draft (FULL WEEKLY refresh) remains DRAFT, awaiting Alex 6, 8:30 ET (bls.gov); October CPI ~Nov 10.

November 2, 2026 — LIGHT DAILY touch (this pillar HELD FLAT; Tokenization re-rated up on 1mo/3mo, see that report): re-checked this pillar's trigger table against primary sources. Logge President Musalem, Oct 30: "Additional firming of monetary policy will be necessary, and soon" (Reuters + investinglive/24/7 Wall St); Richmond Fed President Barkin, Oct 30 (Reuters only — Treasury par yield curve (PRIMARY, home.treasury.gov), Oct 29 → Oct 30: 2y 4.61 → 4.56 [CORRECTED Nov 4: originally printed as 4.73 → 4.65, which was the 3-year column, not the 2-year (bls.gov, PRIMARY). October CPI ~Nov 10. Stopgap CR through Dec 11 unchanged. **HOLD FLAT — nothing cleared the sufficiency rule for a move.** The active set is now **2026-11-02_draft (CO** 3mo −1.68 / 6mo −0.60 / 1yr +1.16 / 3yr +2.84, no call band flipped. The drift is Tokenization's 1mo/3mo re-rate plus the Bitcoin TA pillar's 1mo (61→60) on the weekly/monthly bar rollover (BTC

November 1, 2026 — LIGHT DAILY touch (this pillar held flat; no qualitative pillar moved this cycle): re-checked this pillar's trigger table against primary sources via WebSearch. No new Fe **flagged last cycle is now partially resolved:** multiple independent market-price sources, mostly dated Oct 28–31 (CME FedWatch-derived desk calc ~85%, OIS-derived rateprobability.com ~ band logged Oct 16 off Chair Warsh's remarks, and is not a large, well-corroborated move by this pillar's own standing practice (contrast the Oct 16 Warsh re-rate itself, which required a prima weekly refresh awaiting Alex's manual review. The computed Bitcoin TA pillar nudged up, on the now-finalized Oct 31 close ($77,476.37 via GitHub Actions, up 0.28% from the Oct 30 finalized score.

October 31, 2026 — FULL WEEKLY refresh (this pillar held flat; a deeper research pass run separately from, and after, this same day's light daily touch below): four independent, primary- not scored. No new Fed-official remarks were found dated Oct 29-31 from Warsh, Cook, Hammack, Williams, Barr, Collins, Bostic, or Logan. A stopgap continuing resolution (3-outlet seconda **Research access note:** WebSearch ran without a tool-wide outage, but returned materially thin, often off-target (pre-release-preview or prior-year) results specifically for post-FOMC/post-PC and jobs-report calendar were all confirmable), so it does not meet CLAUDE.md's bar for "research capability materially degraded this cycle" — but it is flagged prominently for Alex as worth now active_qual_set. **STAMP DECISION: per CLAUDE.md, a full weekly refresh is categorically excluded from auto-stamp regardless of research quality or how flat the result** — 2026-10-3

October 30, 2026 — LIGHT DAILY touch (this pillar held flat; no qualitative pillar moved this cycle): re-checked via WebSearch. October jobs (BLS Employment Situation) and October CPI ar were found dated Oct 29-30. Current government-shutdown status for this specific window could not be independently confirmed either way — an open research gap, not a finding of shutdo the now-finalized Oct 29 close ($81,041.93 via GitHub Actions, up 1.3% from yesterday's $79,991.36 intraday read) — lifting its own 1mo/3mo/6mo P 61→62 — so THE FINAL NUMBER ticked t

October 15, 2026, LIGHT DAILY touch (score set 2026-10-15_draft), this version — RE-RATED DOWN, 33/26/36/44/58 → 31/23/34/43/58 (−2/−3/−2/−1/0). THE DECISIVE NEW FACT: the m/m headline matching estimates, driven by energy/gasoline (+9.1% m/m, +34.2% y/y). This is a hawkish beat on BOTH legs, extending — not merely reiterating — the Oct 8 Waller hawkish s (~66%) favored. 3mo takes the largest cut, −3, since the Dec 9 meeting sits inside that window and market-priced December hike odds are already elevated to roughly 75–85% across source however primary-sourced, does not reach the 2029 liquidity regime. **Stamp decision:** this is an ordinary LIGHT DAILY touch, sourcing clears the sufficiency rule (primary BLS data plus 4+ ind **(auto-stamped)."**

October 10, 2026 FULL WEEKLY refresh (score set 2026-10-10_draft), prior version — RE-RATED DOWN, 35/29/37/44/58 → 33/26/36/44/58 (−2/−3/−1/0/0), a partial reversal of the Oct five-plus independent outlets not used in the first research pass (FXStreet, Dailysabah, HousingWire, Newsquawk, Bloomberg Tax); every sub-claim confirmed. He said further rate increases driven demand as upside inflationary pressures — a genuine hawkish *shift* from his more dovish, wait-and-see spring-2026 posture, not a restatement. He explicitly downplayed the weak Sep flagging December (the Dec 8–9 meeting) as the next hike candidate. A sitting FOMC voter directly rebutting the dovish narrative behind the Oct 3 cycle's large upward move clears the sufficie H.4.1 (week ended Oct 7, released Oct 8 as usual) both ran on normal schedule, confirming Public Law 119-103's funding through Dec 11, 2026 holds. DOL initial jobless claims, week ended Oc market resilience in tension with, not confirmation of, the weak September payrolls print; context, not a driver, and not independently scored. **Sizing:** 1mo takes only −2 because CME FedWatc inside this window and is where the hawkish signal concentrates: sources on December hike-implied odds are noisy and not internally consistent (ranging roughly 62–84% depending on sour an initial Waller-driven spike partially reversed following a Trump comment ruling out a US strike on Iran before the November midterms and a solid 30-year Treasury bond auction — no new c **Explicitly excluded this cycle, too weak/unreliable to use:** a single wire report's claim that Goldman Sachs might shift to forecasting two more hikes is internally inconsistent (the same article H.4.1 reserve-balances dollar figure for the week ended Oct 7 could not be extracted from available sources, even though the release's normal-schedule occurrence is itself used as "no shutd **for Alex's manual review.**

October 3, 2026 FULL WEEKLY refresh (score set 2026-10-03_draft2), prior version — RE-RATED UP, 27/25/34/43/58 → 35/29/37/44/58 (+8/+4/+3/+1/0), the largest move of that cycle unemployment up to 4.2% and 60,000 of downward revisions (BLS, Oct 2) — directly contradicting Governor Barr's Sept 29 claim that "risks to the labor market have receded." The Oct 27–28 percent); 6mo +3 on core PCE at 3.0% and softer wage growth; 12mo +1 only, since the 10-year rose to 5.29% even as the 2-year fell to 4.78%, a steepening that caps the longer-horizon reac

Sept 26 FULL WEEKLY refresh (score set 2026-09-26_draft3), this version — RE-RATED DOWN, 31/29/37/44/58 → 27/25/34/43/58 (−4/−4/−3/−1/0), the largest move of this cycle. This our 2 percent target and not clearly trending toward target in a timely way," "risks to achieving our inflation target have increased, while risks to the labor market have receded," and "in my ba September survey, year-ahead inflation expectations 4.0% → 4.6% and *long-run* 3.3% → 3.4%, breaking three straight months. **PRIMARY:** DOL claims at 197,000, with the prior week revised warning traces entirely to one Reuters story, so both are corroboration only. **Why this size:** one unambiguous primary-sourced Governor plus hard data on costs, expectations, labour and liqu abandoned Sept 24 draft's −1 *specifically* because that draft had no expectations data. 12mo takes only −1, since one survey month and a few speeches say little about H2-2027, and 36mo ho report's earlier cooling-housing read and is corrected accordingly; the Fed's own SCOOS shows credit terms basically unchanged; and the large reserve drain is substantially a mechanical TG and stamped it. **The next test is four days out:** August PCE on Sept 30 is the first hard print since any of this, and if it comes in soft this is the first move to revisit.

Sept 24 draft (score set 2026-09-24_draft) — WRITTEN BUT NEVER DELIVERED; SUPERSEDED by the Sept 26 weekly above. It proposed 31/29/37/44/58 → 29/27/36/44/58 and its report confirmed, and two later "corrections" to them were themselves wrong and withdrawn — so it is superseded because more evidence landed after it, not because it was mistaken. Its original te parsed directly from `federalreserve.gov` (`barr20260923a.pdf`), not read through an outlet's summary. Verbatim: "Economic growth is strong and the labor market is solid, but inflation is a comes down to target in a timely fashion." A sitting Governor who supported the Sept 16 hike, guiding on the record toward more. **(2)** The **S&P Global flash US PMI, released Sept 23**: compos **inflation rose too** — reversing August, when selling-price inflation had slowed to a nine-month low. S&P Global's own release page returned HTTP 403 to automated fetch, so those figures are is the headline PMI quoted here. **Why two points and not more:** Barr's remark is largely *consistent with* already-known guidance rather than new information — the Sept 16 SEP already had 16 one month of flash PMI and one Governor's base case say little about the 2027-2028 path those windows price. **Market prices, reported and explicitly not scored:** the 10-year Treasury yield Governors) was fetched directly and its latest published observation is Sept 22 at 4.96% — FRED posts with a one-day lag, so the 5.104% figure rests on press reporting only, is *not* primary-c capability fully available, sourcing clears the sufficiency rule, verification clean.

Sept 23 LIGHT DAILY touch (score set 2026-09-23_draft), prior version: checked for changes since the Sept 22 committed baseline. Three dated items found, none clearing the sufficiency pulled from CME's own site); and Fed Vice Chair Jefferson's Sept 22 speech at the NY Fed's Treasury Market Conference (primary, federalreserve.gov) was on discount-window/Treasury-ma was fully available (WebSearch clean), no window moved, and the master call band did not flip — **AUTO-STAMPED per the runbook's delegated daily authority.** Iran War Risk is the only pilla

Sept 22 LIGHT DAILY touch (score set 2026-09-22_draft), prior version: a targeted single-pillar follow-up, not a full four-pillar pass — CLARITY Act, Iran War Risk, and Tokenization are carri Survey (released Sept 17, primary source page confirmed at philadelphiafed.org, 5+ independent corroborating outlets) showed general activity falling to 37.8 from 47.4 while **prices paid rose 63.1 from 58.1** — the highest since July 2022 — and **prices received rose to 28.1 from 23.1**, a three-month high. Two independent Federal Reserve district banks' own primary surveys, dated Kept to one point because both are soft/sentiment surveys, not hard CPI/PCE prints; both releases' own forward-looking components (employment, future activity, general conditions) fell in th **windows: 32/30/38/44/58 → 31/29/37/44/58.** 12mo/36mo HELD — two regional sentiment surveys say nothing about the 2027-2028 policy path those windows price. Research capability f **STAMPED: status committed, stamped_by "Alex (auto-stamped)"; left as "pending" here since that verification pass has not yet run.** No other pillar's data was touched this cycle.

Prior cycle (Sept 19 FULL WEEKLY refresh, score set 2026-09-19_draft): a full independent primary-source research pass (~15 targeted WebSearches, no capability degradation) re-checked showed starts −2.6% m/m and permits −2.7% m/m, and NAR existing-home sales (primary, Sept 10) fell −2.0% m/m — a genuine but single-month, internally mixed cooling signal that did not a governance/Fed-independence storyline, not new economic evidence, logged rather than scored. Nothing that cycle cleared the sufficiency bar for a further move. **P HELD FLAT at 32/30/3**

Prior cycle (Sept 18 light daily touch, score set 2026-09-18_draft): re-checked — the Sept 16 FOMC dot-plot revision already drives this window's read in the current committed set; a Sept 18 — **AUTO-STAMPED SEPTEMBER 18, 2026** per the runbook's delegated authority. Tokenization RWA is the only pillar that moved that cycle — see that report.

Prior cycle (Sept 17 MERGE SET, 2026-09-17_draft2) — why there were two Sept 17 sets, and what actually differed: two independent runs researched that day: the cloud routine's, which com untouched. Its CLARITY and Iran readings rested on dated facts the local run did not independently surface (Sen. Kennedy's lame-duck remark, the Senate's early-October midterm recess, th

This pillar is the one thing corrected, and the disagreement is narrow and factual. Both runs agree the hike was priced and the SEP is the mover; they differ on how far out it reaches. This ru described the 2027–28 path qualitatively as "a slower, more cautious descent", put the long-run neutral cluster at 3.0% where the table's longer-run median is 3.2%, and held 12mo and 36mo median was underwriting. Five-plus independent outlets lead on that same revision. So 3mo goes one point deeper than the cloud set, 6mo four, and **12mo ten**, flipping this pillar Mild Bull → M

Why 44 and not lower. The strongest argument against this correction is not a number but a person: Chair Warsh submitted no dot at all — "I have refrained from offering any projections of m than cancelled; the SEP pairs the tighter path with 2.3–2.4% real GDP and a flat 4.1% unemployment rate; and the bond market's first move on the hike was a yield drop. Census retail sales the

One correction to an earlier committed note, logged here rather than edited there. The committed `2026-09-16_draft` note states that Thune filed the motion to reconsider on the CLARITY attribution is corrected for the record here; no P value is affected.

Stamp decision: AUTO-STAMPED. Ordinary light daily touch, not a weekly refresh; research capability fully available, with both Federal Reserve primary documents fetched directly rather tha

Sept 16 light daily catch-up (score set 2026-09-16_draft), prior cycle: the FOMC decision, statement, SEP and dot plot were scheduled for 2:00pm ET that day and had NOT been released a that cycle on the Senate cloture failure and the IAEA/NPT developments — see those reports.

Prior cycle (Sept 12 FULL WEEKLY refresh, score set 2026-09-12_draft2): the week's deeper research turned up one genuinely new primary-sourced release — the August PPI (BLS, primary, actually undershot consensus (+0.3% m/m, or +0.2% m/m on a further core-ex-trade-services cut) — a mild disinflationary surprise that reinforces, rather than contradicts, the already-priced Sept 15-16 hike odds read ~62-69% this week (as of Sept 10-11) — a market price, not used to move P, and flagged for the record as meaningfully lower than the ~90% figure the prior daily cy event, and does not move P. The Sept 15-16 FOMC meeting itself has NOT yet occurred as of this research — it remains this pillar's next real catalyst, most acute on the 1mo/3mo windows. **P** itself is inconclusive/reinforcing, not a fresh directional catalyst), so **this set is left as DRAFT, status "draft," awaiting Alex's manual review.** Iran War Risk, CLARITY Act, and Tokenization eac

Prior cycle (Sept 12 light daily catch-up, score set 2026-09-12_draft): re-checked — no new Fed speech or primary data release found since the Sept 11 CPI print. That morning's coverage of house sufficiency rule. **P HELD FLAT at 34/33/44/54/60.** Light daily touch, no window moved, master call band unchanged anywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull h

Sept 11 light daily catch-up (score set 2026-09-11_draft), prior cycle: the August CPI print landed on schedule at 8:30am ET: BLS's own release (bls.gov, primary, fetched directly and re-fetc increase, while shelter rose 0.3%. Against the consensus circulating pre-print (headline +0.4% m/m / 3.4% y/y; core +0.4% m/m / 2.4% y/y), headline landed exactly in line and **core came in** driven — the same oil shock that fires the Iran pillar's "sustained Brent >$100" clause this cycle shows up here as headline inflation. Market-implied September hike odds circulating around th core y/y) — discarded in favour of the primary document. **P RE-RATED UP, modestly, to 34/33/44/54/60** — 1mo 32→34, 3mo 31→33, 6mo 43→44, concentrated on the windows bracketing t band unchanged everywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull horizon-weighted) — so per the runbook's delegated daily auto-stamp authority, **this set is AUTO-STAMP**

Sept 10 light daily catch-up (score set 2026-09-10_draft), prior cycle: re-checked — the Aug CPI release (due Sept 11) and the Sept 15-16 FOMC meeting both remain pending per BLS/Fed c delegated daily auto-stamp authority, **this set is AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)."** Iran War Risk is the pillar that moved this cycle — see that report.

Prior cycle (Sept 9 light daily catch-up): re-checked directly against CME FedWatch-citing coverage — September hike odds read ~58.7%, consistent with the already-priced cluster; no new

Prior cycle (Sept 8 light daily catch-up): re-checked via WebSearch — no new Fed speech, data release, or FOMC commentary since Sept 3-4; the Sept 11 CPI print and Sept 15-16 FOMC mee

Prior cycle (Sept 6 light daily catch-up): re-checked via WebSearch — no new Fed speech or data release since Sept 3-4; Sept 6 was a Saturday, markets and the Fed's calendar quiet. **AUTO**

Sept 5 FULL WEEKLY refresh (2026-09-05_draft2) — carried forward for context: independently re-verified via WebSearch: Fed Governor Waller's genuinely dovish-leaning Sept 3 speech ("g **COMMITTED BY ALEX SEPTEMBER 5, 2026.** Iran War Risk, CLARITY Act, and Tokenization all held flat that cycle.

CORRECTION — flagged this cycle: the prior same-day light daily catch-up (2026-09-05_draft) reported "COMMITTED — AUTO-STAMPED SEPTEMBER 5, 2026" in its commit message, but is Alex's call.

Prior cycle (Sept 2 light daily catch-up) — carried forward for context: held flat at 36/35/45/55/61; originally left as draft only because Iran War Risk's re-rate flipped the master call band, not
