

CoinPicks Market Direction

Research Package

Five pillars — four researched narratives and one pure-math read of the Bitcoin chart — scored on one standard, blended into one table, and distilled to one number. Everything in this folder is current as of **September 14, 2026** — a light daily touch against yesterday's light daily touch (2026-09-13_draft, committed).

COMMITTED — AUTO-STAMPED (light daily touch, score set 2026-09-14_draft). CLARITY Act, Tokenization RWA, and Fed & Macro were re-checked and held flat — nothing found cleared the sufficiency bar. **Iran War Risk RE-RATED DOWN** (3/3/19/39/70 → 1/1/18/38/70), retracing yesterday's up-move: the Sept 14 Iran-GCC foreign ministers' meeting in Salalah, Oman — the entire basis for that lift — was **postponed by Oman on Sept 13 with no new date** (Oman News Agency statement, primary; corroborated by Arab News, the Washington Post, CNN, Gulf News and Malay Mail), after Bahrain ruled out attending and no GCC state confirmed participation. Ordinary light daily touch, full research access, verification clean — auto-stamped per the runbook's delegated authority.

THE FINAL NUMBER · SEPTEMBER 14, 2026 (COMMITTED — AUTO-STAMPED, LIGHT DAILY TOUCH) · BTC \$77,866.59 ON SEPT 14

+0.33 Neutral — down from yesterday's +0.36, no call-band flip

Equal-weight mean of the five window signals below — every pillar counts 20% (scale -10 to +10; horizon-weighted variant +0.87, versus yesterday's +0.90, still Mild Bull). CLARITY, Tokenization, and Fed & Macro held flat; Iran War Risk re-rated down as the announced Sept 14 Iran-GCC Hormuz ministerial in Oman was called off; Bitcoin TA (computed) eased slightly on today's bar.

THE FIVE WINDOWS UNDERNEATH IT

WINDOW	MASTER SIGNAL	CALL
1 month	-1.59	Bear — still the worst window, and back near its recent lows: Iran returns to its floor as the Oman meeting is postponed
3 months	-1.33	Mild Bear — a touch deeper on Iran's re-rate down; the Sept 15-16 FOMC and the Sept 15 CLARITY cloture vote both sit inside this window, undecided
6 months	-0.06	Neutral — CLARITY/Tokenization structural strength against Iran's drag; a hair below zero, well inside the Neutral band
1 year	+1.71	Bull — four of five pillars positive; Iran alone negative here
3 years	+2.92	Bull — law + adoption + cycle + valuation, unmoved this cycle

Bands: $|s| < 0.5$ Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. The leave-one-out range this cycle is -0.12 to $+1.06$ — the sign still flips negative when CLARITY or Tokenization are dropped individually; **dropping Iran alone moves the reading to +1.06, Mild Bull**, and dropping Fed & Macro alone also crosses into Mild Bull ($+0.64$). See the Master Report's Robustness section.

Reading order

Twenty minutes to the whole picture; each report stands alone and can be checked independently — every fact is dated with sources on its last page.

#	FILE	WHAT IT IS
1	CoinPicks_Master_Direction_Report.pdf	The summary. The final number, the five-window table, the full pillar matrix, where the lenses agree/fight, six weeks of dated triggers, sensitivity.
2	CoinPicks_Bitcoin_TA_Quant_Pillar_Report.pdf	The math pillar. 7 indicators on 16 years of data, halving-cycle analogs, power-law valuation — with charts. Fully reproducible from code.
3	reports/current/pdf/ — the four pillar PDFs	The story pillars. CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro. Each: thesis, dated facts, honest bear case, dated triggers, and the full score lineage (June committed → Aug 22 committed → Aug 28/29 drafts → Aug 31 committed → Sept 1 committed → Sept 2 committed → Sept 5 committed → Sept 6 committed → Sept 8 committed → Sept 9 committed → Sept 10 committed → Sept 11 committed → Sept 12 committed, auto-stamped, light daily → Sept 12 draft2, this full weekly refresh, draft, awaiting Alex's review).
4	reports/archive/ + prior-work/	Every earlier version, preserved untouched — the score history is fully auditable.
—	run.py · engine/blend.py · data/master_blend.json	The blend engine (runnable Python — reproduce any score set with <code>run.py blend --set NAME</code>), its output, and README.md for regeneration.

How the scoring works — one paragraph

Every pillar answers the same question on five windows (1 month / 3 months / 6 months / 1 year / 3 years): **P** = the odds (0–100) that this force is *good for crypto* by then, **Quality** = how trustworthy the evidence is (0–1), and **Impact** = how hard this force moves the whole market (0–10). These combine into a **Signal** = $((P - 50) \div 50) \times \text{Quality} \times \text{Impact}$ (Impact is a uniform 8 for every pillar), so a coin-flip view scores zero no matter how loud the headlines are, and weak evidence can't shout. **All five pillars are equal-weighted** — the master for each window is the simple mean of the five signals (20% each; add a pillar and it auto-rebalances to 1/N) — and the Final Number averages the five master windows.

The five pillars at a glance (September 14 P's — light daily touch, Iran War Risk re-rated DOWN; COMMITTED — AUTO-STAMPED)

PILLAR	1MO	3MO	6MO	1YR	3YR	ONE-LINE READ
CLARITY Act (law)	32	47	58	82	92	Held flat: the Sept 15, 2:15pm ET cloture vote has not occurred; the Senate returned Sept 14 and the whip math is unchanged. Polymarket ~16% and Galaxy ~10% are a market price and a house estimate — reported, not scored
Iran War Risk	1	1	17	38	70	RE-RATED DOWN — the Salalah Iran-GCC ministerial that lifted this pillar yesterday was postponed by Oman on Sept 13 with no new date (Oman News Agency, primary, plus 5+ independent outlets); Bahrain ruled out attending and no GCC state confirmed
Tokenization (RWA)	52	60	66	74	85	Held flat: no dated catalyst Sept 13-14, no rail failure or depeg; rwa.xyz's \$39.2B Sept 8 read and DTCC's October launch both already priced
Fed & Macro	34	33	44	54	60	Held flat: no new BLS/Fed/BEA primary release since the Aug CPI (Sept 11) and PPI (Sept 10) prints; the Sept 15-16 FOMC has not occurred. Market-implied hike odds (66-83%) are market prices, not used to move P
Bitcoin TA (quant)	59	48	59	68	69	Recomputed on a local quant refresh (BTC \$77,866.59) — weekly composite +35.8 as-is, +31.3 on completed bars only; the 1mo read eased a point. Cycle analogs still rest on n=3, the fragility this report keeps flagging

P values shown (50 = coin flip). CLARITY, Tokenization, and Fed & Macro held flat this cycle; Iran War Risk re-rated down, and this set (light daily touch, 2026-09-14_draft) is COMMITTED — AUTO-STAMPED. The Sept 12 full weekly refresh (2026-09-12_draft2) remains a draft awaiting Alex's manual review — weekly refreshes are categorically excluded from the delegated daily auto-stamp.

Status & honesty notes

- **Score status:** the September 14 light daily score set (2026-09-14_draft) builds on yesterday's light daily touch (2026-09-13_draft, committed). CLARITY Act, Tokenization RWA, and Fed & Macro were re-checked and held flat. **Iran War Risk re-rated DOWN** (3/3/19/39/70 → 1/1/18/38/70), retracing yesterday's lift because the meeting that justified it was postponed. The 1-year window was held one point above the Sept 12 level rather than fully retraced: the Iran-Oman bilateral lane framework (navigational charts drawn, draft joint statement prepared) survives the postponement, and Oman's foreign minister publicly recommitted to dialogue.
- **Verification:** facts researched with primary-source discipline, corroborated by multiple independent outlets per claim. This cycle's load-bearing fact — the postponement of the Sept 14 Salalah ministerial — rests on the Oman News Agency's own statement plus five independent outlets. Two claims were deliberately *not* used to move the score: Iran's assertion that Saudi Arabia requested the delay (single-party-sourced to Iranian officials), and the oil-price reaction (Brent past \$107, WTI \$102.34 — a market price, not an estimate). One search result was checked and rejected outright: drone strikes on Oman's Salalah and Duqm ports surfaced without dates and are in fact from March 2026, not September.
- **Known limits, in print inside the reports:** cycle-analog claims rest on 3 completed cycles, a disclosed fragility this report has repeatedly flagged — and this cycle it cut *in favour* of the number, which is worth naming; the TA pillar caps its own conviction at $P = 50 \pm 25$; single-source items are labeled in-line; current chart bars are partial and the completed-bar numbers are printed; the Robustness section shows dropping Iran alone still flips the headline to Mild Bull (+1.06), and dropping Fed & Macro alone does too (+0.64) — two pillars this report flags as doing most of the work on the headline number, and the leave-one-out range this cycle (−0.09 to +1.06) genuinely crosses zero.
- **The near-term calendar is the test, and tomorrow is the densest day in weeks:** the first CLARITY cloture vote, precisely dated 2:15pm ET Sept 15, 60 votes required — a failure likely kills the bill for 2026 · the FOMC decision with SEP/dot plot, Sept 15-16 · and, on the Iran pillar, whether Oman names a firm new date for the Salalah ministerial with Saudi and Bahraini attendance confirmed, which would re-fire the de-escalation read faster than it retraced.

This is research and education, not financial advice. The scores are probabilistic opinions with dated evidence — built to be argued with. If you check one thing manually, check the Iran War Risk pillar's My Decision section and trigger table — this is the cycle where a diplomatic opening that had just moved the number was withdrawn a day later, and you can see exactly how much of the previous move was taken back, and how much was deliberately left standing.
