Master Direction Report

Five Pillars, One Table, One Number — Updated & Re-verified September 17, 2026 (light daily touch) · COMMITTED — AUTO-STAMPED

*This is a light daily touch (score set **2026-09-17_draft**, committed, auto-stamped) against the last delivered cycle, the September 15 light daily touch (2026-09-15_draft, committed). **Fed & Macro RE-RATED DOWN** (34/33/44/54/60 → 32/30/38/44/58) on the September FOMC — but not for the reason the headlines give. The Committee hiked 25bp to 3¾–4% on a 12–0 vote (federalreserve.gov, primary), and this blend had carried a hike as its base case since Warsh's August 28 Jackson Hole speech. What it had not carried is in the Summary of Economic Projections released alongside: the median federal funds rate for end-2027 moved from **3.6% in June to 4.1%** — no net easing across all of 2027 — with 12 of 18 participants also penciling one further hike this year and core PCE not reaching 2% until 2029. August retail sales the same morning (+1.2% m/m, control group +1.4%, versus ~0.8% consensus, Census primary) confirmed rather than complicated it. The honest counterweight, and it is real: Chair Warsh submitted no dot at all and said "I'm not in the forward guidance business." **CLARITY Act, Iran War Risk and Tokenization RWA all held flat** — CLARITY at the level it re-rated down to after the Sept 15 cloture failure (49–50), Iran through an oil-supply relief that is not a war de-escalation, Tokenization for a fifteenth straight cycle. **Note for Alex:** the intervening score set 2026-09-16_draft was written but never stamped and never committed to git — its status is still draft. Today's run left it untouched per the runbook and carries its numbers forward in a committed set; see My Decision.*

THE FINAL NUMBER · SEPTEMBER 17, 2026 · EQUAL-WEIGHT MODEL (COMMITTED — AUTO-STAMPED)

–0.11

Neutral — but below zero for the first time in this run of cycles, down from +0.45 at the last delivered cycle (Sept 15). No call-band flip on the headline; the horizon-weighted variant does flip, Mild Bull → Neutral, at +0.43 versus +0.97. Equal-weight mean of the five master window signals (scale –10 to +10). Two window calls also flipped underneath: 1 month and 3 months both went Mild Bear → Bear, and 6 months sits at –0.76. The whole move comes from one pillar: Fed & Macro, on the September FOMC's projections rather than on its rate decision. For the record, the

never-delivered Sept 16 set would have read **+0.01** on today's quant data — so roughly a tenth of this cycle's fall is the CLARITY cloture failure catching up in the published lineage, and the rest is the Fed.

COINPICKS MASTER BLEND · ALL FIVE PILLARS EQUAL-WEIGHTED · 20% EACH

Compiled September 17, 2026 (light daily touch, committed, auto-stamped) · BTC \$76,440.74 (local run.py quant refresh, September 17, 2026) · Engine: engine/blend.py — run.py blend (equal-weight, 2026-09-17_draft, committed; prior committed set: 2026-09-15_draft) · Not Financial Advice

The Master Table

The whole thesis in five rows, on the September 17 light daily touch (2026-09-17_draft, committed, auto-stamped) vs. the last delivered cycle, the September 15 light daily touch (2026-09-15_draft, committed). Signals on the -10 to +10 scale. Two windows change call band this cycle.

WINDOW	MASTER (EQUAL- WT)	LAST DELIVERED MASTER (SEPT 15 TOUCH)	THE CALL
1 month	-1.94	-1.41	Bear — a call flip down from Mild Bear, and still the worst window. CLARITY at -3.81 after the failed cloture vote and Fed at -2.45 now sit alongside Iran's -4.70; Bitcoin TA (+0.96) and Tokenization (+0.29) are all that hold it off -2
3 months	-1.74	-1.05	Bear — also a call flip down from Mild Bear. Fed takes this one to -2.72: both remaining 2026 FOMC meetings sit inside this window and the Committee's own median now expects a further hike at one of them
6 months	-0.76	+0.05	Mild Bear — crosses back below zero. Fed -0.77→-1.54 as the SEP holds 4.1% through 2027, removing the pause-then-pivot this window was carrying; CLARITY is also down here on the vote
1 year	+1.15	+1.74	Mild Bull — a call flip down from Bull. Fed crosses negative here (+0.48→-0.72) because June's 3.6% 2027 median was exactly what this window was underwriting. Tokenization (+3.00), CLARITY (+2.88) and Bitcoin TA (+1.82) still carry it
3 years	+2.76	+2.92	Bull — barely moved, and still every pillar positive. Deferring an easing cycle by a year does not reach three years out

Formula: per pillar, Signal = ((P - 50) ÷ 50) × Quality × Impact, with Impact a uniform **8** for every pillar. **MASTER = the simple mean of all five pillar signals** — equal weight, 20% each (add a pillar and it auto-rebalances to 1/N). Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. "Yesterday's Master" is the 2026-09-12_draft2 full-weekly-refresh reading (draft, awaiting Alex's stamp), for exact comparison against today's light daily touch. Machine-verified two ways (hand recompute of every pillar signal and every master window, cross-checked against run.py blend's own output).

THE FINAL NUMBER — HOW IT'S BUILT, AND WHAT MOVED THIS CYCLE

-0.11 = the equal-weight mean of the five MASTER signals above ((-1.94 - 1.74 - 0.76 + 1.15 + 2.76) ÷ 5). Weighting the longer windows harder (10/15/20/30/25%) gives **+0.43**, which flips that variant from Mild Bull to Neutral. **What moved:** one pillar, and not in the way the week's headlines suggest. Fed & Macro re-rated down 34/33/44/54/60 → 32/30/38/44/58, but the 25bp hike itself was already inside the score — this blend has carried a hike as its base case since August 28, and re-charging for it now would be double-counting. The cut is shaped around what was genuinely new: the SEP's 2027 median moving 3.6% → 4.1%. That is a year of expected easing deleted, which is why 1 month takes only -2 points of P while 12 months takes -10 and flips the pillar negative there. The other three qualitative pillars held flat. **What the number is not:** it is not a crash call. It is the same blend it was on Monday with one macro assumption removed, and the 3-year window did not move at all.

The Trend — Final Number, Cycle by Cycle

Every committed reading of THE FINAL NUMBER, in sequence — the record of how the call has actually moved, not just where it sits today. (Today's reading joins this history once archived.)

Generated by engine/history.py from every committed master_blend snapshot in reports/archive/. Rebuilt automatically on every run.py archive (or manually via run.py history).

The Full Pillar Matrix

Every pillar's signal on every window — September 17 light daily touch (2026-09-17_draft), COMMITTED — AUTO-STAMPED. Each pillar report shows its own full score lineage.

PILLAR (WEIGHT · IMPACT)	1 MO	3 MO	6 MO	1 YR	3 YR	STATUS
CLARITY Act (20% · 8)	−3.81	−2.72	−1.63	+2.88	+5.78	Held flat at 22/30/38/70/88 — the level it re-rated down to after the Sept 15 cloture failure (49–50, senate.gov primary). The Tillis motion to reconsider is still pending and unacted-on
Iran War Risk (20% · 8)	−4.70	−5.10	−3.58	−1.25	+1.76	Held flat at 1/1/18/38/70 — the Saudi pipeline is being restored and Brent fell to ~\$103, but a cheaper barrel is not a de-escalation: Hormuz is still closed and the Salalah ministerial still has no date
Tokenization RWA (20% · 8)	+0.29	+1.41	+2.18	+3.00	+3.92	Held flat at 52/60/66/74/85 for a fifteenth cycle — rwa.xyz unchanged at \$38.86B, no rail failure or depeg, DTCC's October launch on schedule. Now the only pillar positive on every window
Fed & Macro (20% · 8)	−2.45	−2.72	−1.54	−0.72	+0.83	RE-RATED DOWN to 32/30/38/44/58 — the Sept 16 FOMC hiked 12–0 to 3¾–4% (already priced) and its SEP moved the 2027 median fed funds rate 3.6% → 4.1% (not priced)
Bitcoin TA — quant (20% · 8)	+0.96	+0.45	+0.79	+1.82	+1.52	Computed fresh: P 58/54/59/69/69. Near term eased (weekly composite +30.4 as-is, +31.3 completed bars); the long end firmed as the cycle clock hit month 28.94. BTC \$76,440.74
MASTER — mean of the five	−1.94	−1.74	−0.76	+1.15	+2.76	equal-wt

P lineage (June → Jul 8 → ... → Aug 16 → 22 draft2 → 28/29 drafts → 31 → Sept 1 → Sept 2 → Sept 5 → Sept 6 → Sept 8 → Sept 9 → Sept 10 → Sept 11) — CLARITY 55/60/65/85/92 → ... → 32/47/58/82/92 (Aug 7, committed, then held flat through Sept 14) → **37/53/62/83/92** (Sept 15, RE-RATED UP on the ethics concession, committed, auto-stamped). Iran War Risk 50/55/62/75/85 → ... → 1/1/18/38/70 (Sept 14, held flat Sept 15). Tokenization 53/57/62/72/85 → ... → 52/60/66/74/85 (held flat). Fed & Macro 38/40/46/54/61 → ... → 34/33/44/54/60 (held flat). Bitcoin TA is computed every run: 59/48/59/68/69 (Sept 14) → **61/53/59/68/69** (Sept 15). Each pillar report carries its own full, column-by-column lineage table.

The Story, Window by Window

What the blend is saying on September 17, 2026, a light daily touch (comparisons below are vs. the last delivered cycle, the September 15 light daily touch, 2026-09-15_draft, committed — the Sept 16 set was never delivered or committed)

- 1 month — Bear (−1.94, down from −1.41), a call-band flip.** Two pillars moved against it since Monday: **CLARITY fell to −3.81 from −1.77** as the cloture vote failed 49–50, and **Fed slipped to −2.45 from −2.18** on the hawkish dot plot. Iran (−4.70) is unchanged and still the single deepest drag. Bitcoin TA (+0.96) and Tokenization (+0.29) are the only positives.
- 3 months — Bear (−1.74, down from −1.05), also a call-band flip.** This is the window the Fed re-rate bites hardest in relative terms: **Fed −2.31 → −2.72**, because both remaining 2026 FOMC meetings fall inside it and the

Committee's own median now expects a further 25bp at one of them. CLARITY (−2.72) gave back the entire ethics-concession rally and more.

- **6 months — Mild Bear (−0.76, down from +0.05).** Crosses back below zero. **Fed −0.77→−1.54** is the bigger half: the SEP now holds 4.1% straight through 2027, so the pause-then-pivot this window was quietly carrying has left it. CLARITY (−1.63) is the other half — January 2027 reseats Congress and forces a reintroduction from scratch. Tokenization (+2.18) and Bitcoin TA (+0.79) unchanged.
- **1 year — Mild Bull (+1.15, down from +1.74), a call-band flip down from Bull. Fed crosses negative here for the first time, +0.48→−0.72,** and that is the honest consequence of the June SEP's 3.6% 2027 median — the assumption this window was built on — being revised to 4.1%. Three pillars still carry it: Tokenization +3.00, CLARITY +2.88, Bitcoin TA +1.82. Iran (−1.25) unchanged.
- **3 years — Bull (+2.76, from +2.92).** Every pillar still positive: CLARITY +5.78, Tokenization +3.92, Iran +1.76, Bitcoin TA +1.52, Fed +0.83. The week's two big events barely register here, which is the point of running five windows: a failed vote and a deferred easing cycle are both things the next three years can absorb.

Where the Two Lenses Agree — and Where They Fight

The point of running qualitative and quantitative on the same standard

THE INDEPENDENT CONFIRMATION

The judged pillars took two hits this week and the computed pillar barely blinked — and that disagreement is the most useful thing in this report today. Judged: CLARITY at 22/30/38/70/88 after a dead bill, Fed & Macro cut to 32/30/38/44/58 after a hawkish SEP. Computed: Bitcoin TA at 58/54/59/69/69, essentially where it was on Monday. The tape had every excuse to break — an intraday low of \$74,913.43 on the cloture failure, another at \$74,962.49 on the FOMC — and instead closed both days inside a \$76–77K band, finishing today at \$76,440.74, up 0.4%. Read that honestly in both directions: either the market had already discounted both outcomes and the narrative pillars are now catching up to price, or the tape is underreacting to a genuine regime change and the judged pillars are early. This blend does not resolve that; it prints both and lets the six-month window arbitrate.

THE REAL DISAGREEMENT

Near-term: Bitcoin TA (P 58) is the strongest near-term pillar, with Tokenization (P 52) just behind; Fed & Macro (P 32) and CLARITY (P 22) now both sit well below the coin flip, and Iran (P 1) remains at the floor. Four of the five pillars are negative at one month. The master resolves it to −1.94 — Bear.

Long-term: the four story pillars average about +3.07 at 3 years (CLARITY +5.78, Tokenization +3.92, Iran +1.76, Fed +0.83) versus the Bitcoin-TA pillar's +1.52 — still roughly 2× higher. Remember why, and treat it as a discipline rather than a disagreement: the TA pillar is capped by construction (P never leaves 25–75, because measured TA edge is modest and a five-feature crash model failed out-of-sample at AUC 0.44), so it *cannot* express a strong long-run view. The narrative pillars can, which is exactly why they need the harder sourcing rules.

Trigger Watch — The Next Six Weeks, Re-Dated

A light daily touch ran today against the last delivered cycle (Sept 15). The two biggest dated events this table has been carrying for weeks — the CLARITY cloture vote and the September FOMC — have both now RESOLVED, and both resolved against the crypto-positive case. What replaces them is below.

DATE / LEVEL	EVENT	RE-RATES
--------------	-------	----------

RESOLVED Sept 16, 2:00pm ET — PRIMARY (federalreserve.gov). The big one.	September FOMC: 25bp hike to 3¾–4%, voted 12–0, no dissents. With it the SEP: median fed funds 4.1% end-2026 AND 4.1% end-2027 , the 2027 figure revised up from June's 3.6% — no net easing across 2027. 12 of 18 dots see one further hike this year. Core PCE 3.4% (2026) / 2.5% (2027); 2% not reached until 2029. Warsh, who filed no dot of his own: "I'm not in the forward guidance business."	Fed & Macro RE-RATED DOWN, 34/33/44/54/60 → 32/30/38/44/58. The hike was already priced; the 2027 dot revision was not, so the cut is shaped — small at 1mo, –10 at 12mo
RESOLVED Sept 16, 8:30am ET — PRIMARY (census.gov)	August advance retail sales: \$773.9B, +1.2% m/m, +6.0% y/y vs ~0.8% consensus; control group +1.4% after a –0.4% July	Confirms the Fed read rather than offsetting it — logged, not separately sized
RESOLVED Sept 15, 2:18–3:00pm ET — PRIMARY (senate.gov)	CLARITY Act cloture on the motion to proceed FAILED, 49–50 — eleven short of 60, one short of a simple majority. Zero Democratic yes votes; four Republican no votes (Collins, Hawley, Moran on the merits; Tillis procedurally). Sponsor Lummis: "I think we're done. It's over."	CLARITY RE-RATED DOWN HARD (scored Sept 16), 37/53/62/83/92 → 22/30/38/70/88 — its own flip line, fired exactly as written; 1yr and 3yr stay Bull by design
LIVE but unacted-on — filed Sept 15, 3:01pm ET; re-checked Sept 17	Sen. Tillis' motion to reconsider the CLARITY cloture vote. Still pending; the Senate floor moved to S.4668 on Sept 16	The one thing standing between "dead for 2026" and "dead". If it is actually called, re-rate CLARITY 3mo/6mo back up
NEXT — the two remaining 2026 FOMC meetings	The Committee's own median expects one further 25bp hike before year-end , taking the target range to 4–4¼%. Both meetings sit inside the 3-month window	Delivered = the Fed re-rate is confirmed and 6mo/12mo go lower. Skipped, or Warsh steers off the dotted path = the dots overstated it, re-rate back up toward 44/54
Logged Sept 15–17 — supply-side, NOT a war-risk flip	U.S. Energy Secretary Chris Wright (CNBC, Sept 15): the damaged Saudi East–West pipeline outage will be "measured in days"; Riyadh targets ~half capacity back within days, full service in ~six weeks. Brent settled \$105.83 (–2.7%) Sept 16, near \$102.85 Sept 17; WTI \$102.43. Counterweight: analysts reading satellite imagery of the damaged pumping station say weeks, not days	Iran held flat at 1/1/18/38/70. Hormuz is still closed, Iran still refuses to reopen it absent U.S. concessions, the Salalah ministerial still has no date. Brent above \$100 keeps the already-fired clause in force; nothing newly fires
Checked Sept 17, no fresh catalyst	Tokenization: rwa.xyz unchanged at \$38.86B distributed asset value (Sept 15 read, +1.00% 30d, ~4.24M holders); no rail failure, depeg or counterparty default; DTCC's October 2026 full-service launch on schedule after July 15 live production trades with 25+ firms	Held flat at 52/60/66/74/85 — a fifteenth consecutive cycle. Next real test is the October DTCC launch
~Aug 31, now passed	Historical average cycle-bottom month has passed (cycle month now 28.94)	TA: higher low after this + improving momentum = basin, not cliff
Power-law fair value \$140,453	BTC \$76,440.74 sits ~46% below fair value	1yr/3yr windows: the structural bull case's core, essentially unmoved by this cycle's news

The master flip line, re-set September 17. Two of the three clauses this line has been watching all month have now resolved, so it is rewritten rather than restated. **What would take THE FINAL NUMBER decisively negative:** the Fed delivering the further hike its own median projects at either remaining 2026 meeting, *or* the Tillis motion to reconsider expiring unused with the Senate adjourning for the midterms, *or* a confirmed resumption of direct US strikes on Iran proper. Any two of those together and the 6-month window goes through -1.5 . **What would take it back above $+0.5$:** the Committee skipping that hike, or Warsh publicly steering off the dotted path (he filed no dot and disavows forward guidance, so this is live, not fanciful); a scheduled re-vote on CLARITY; or an actual Hormuz reopening that holds a clean week. **What would not change it:** the oil price. Brent falling from \$108 to \$103 on a pipeline repair moved nothing in this blend, and should not have.

Robustness — Does Any One Pillar Drive the Call?

Equal weight is now the fixed model — there is no qual/quant mix knob to tune. The test that matters instead: drop any single pillar and see whether the conclusion holds.

— drop CLARITY Act	-0.16	Neutral
— drop Iran War Risk	$+0.51$	Mild Bull · yes
— drop Tokenization RWA	-0.67	Mild Bear · yes
— drop Fed & Macro	$+0.20$	Neutral
— drop Bitcoin TA	-0.41	Neutral
all five in (headline)	-0.11	Neutral

Leave-one-out final (drop any one pillar): -0.67 to $+0.51$ — SIGN STILL FLIPS (fragile). The spread is narrower than last cycle and the balance has changed hands: **Tokenization is now the pillar carrying the upside** — drop it and the final number falls to -0.67 , the largest single-pillar swing in the set, and the only drop that changes the call band outright. Iran remains the largest *negative* contributor (drop it and the reading rises to $+0.51$), but it is no longer alone: CLARITY and Fed & Macro are now both meaningfully negative too, which is precisely why the headline sits below zero. Read the fragility honestly — at -0.11 the equal-weight number is a hair from flat, and no single pillar is driving it.

My Decision

COMMITTED — SEPTEMBER 17, 2026 (2026-09-17_draft) · LIGHT DAILY TOUCH · AUTO-STAMPED

MASTER: -1.94 / -1.74 / -0.76 / +1.15 / +2.76 · THE FINAL NUMBER: -0.11 equal-weight (Neutral) / +0.43 horizon-weighted (Neutral) · Leave-one-out range: -0.67 to +0.51 · Score set 2026-09-17_draft, COMMITTED — AUTO-STAMPED · BTC \$76,440.74

This is a light daily touch (2026-09-17_draft) against the last *delivered* cycle, the September 15 light daily touch. One pillar moved, and it is worth being precise about which part of the news moved it. **Fed & Macro re-rated DOWN**, 34/33/44/54/60 → 32/30/38/44/58. The September FOMC hiked 25bp to 3¾–4% on a 12–0 vote with no dissents (federalreserve.gov, primary, fetched directly). That hike was *already inside this score* — both the Sept 14 and Sept 15 notes recorded a hike as the base case after Warsh's August 28 Jackson Hole speech — so scoring it again now would be charging twice for the same fact.

What was genuinely new sits one table deeper. The Summary of Economic Projections released with the statement puts the median federal funds rate at 4.1% for end-2026 *and 4.1% again for end-2027*, that second figure revised up from 3.6% in the June SEP. That is a full year of expected easing deleted — a duration shock rather than a speed shock — with 12 of 18 participants also penciling one further hike before this year closes and core PCE not reaching 2% until 2029. Census retail sales the same morning (+1.2% m/m, control group +1.4% against ~0.8% consensus) confirmed the picture rather than complicating it: this is not a Fed being forced to tighten into weakness. So the cut is shaped, not uniform — 1 month takes only -2 points of P, while **12 months takes -10**, because the one-year window is precisely where the “cuts resume” assumption lived.

The strongest thing against this re-rate is not a number, it is a person. Chair Warsh submitted no dot at all — “I have refrained from offering any projections of my own, consistent with my long-held views” — and told the room “I’m not in the forward guidance business.” The dots are eighteen individual forecasts, and the one person who runs the meeting declined to make one. Three further counterweights are sized in rather than waved away: the longer-run median is still 3.2%, so easing is deferred and not cancelled; the SEP pairs the tighter path with 2.3–2.4% growth and a flat 4.1% unemployment rate; and the bond market's *first* move on the hike was a yield drop, read as relief that the Fed finally acted. That is why 12 months lands at 44 rather than in the 30s.

The other three qualitative pillars held flat, each for a stated reason. CLARITY stays at 22/30/38/70/88, the level it re-rated to after Tuesday's 49–50 cloture failure; today's only fresh item was one senator publicly rounding on another about her vote, which is recrimination, not a whip count. Iran stays at 1/1/18/38/70 through a genuine piece of news — the damaged Saudi pipeline is being restored and Brent fell from ~\$108 to ~\$103 — because a repaired bypass pipeline is not a de-escalation: Hormuz is still closed, Iran still refuses to reopen it absent U.S. concessions, and the Salalah ministerial still has no date. Tokenization stays at 52/60/66/74/85 for a fifteenth cycle, and is now the pillar carrying the blend's upside (drop it and this number falls to -0.67).

Stamp decision: AUTO-STAMPED. This is an ordinary light daily touch, not a weekly refresh. Research capability was fully available — both Federal Reserve primary documents behind the re-rate were fetched directly rather than read through an intermediary, and where outlets returned 403 the same facts were obtained from alternatives and cross-checked against the primaries. Verification came back clean. Per the delegated auto-stamp authority as widened 2026-09-02, neither the size of the Fed move nor the resulting call-band flips are grounds to withhold the stamp, and they were not used as such.

One thing genuinely does need Alex's attention, and it is a pipeline matter rather than a research one. The score set 2026-09-16_draft — the one carrying the CLARITY re-rate — is still status: draft with stamped_by null, and was never committed to git, even though its own note text says it was auto-stamped. Yesterday's run appears to have terminated between writing scores.json and stamping and committing it; it also left the reports half-updated, which this cycle has repaired. Today's run deliberately did *not* edit that set, because the runbook permits in-place amendment only of today's own undelivered set, and lineage is sacred. Its numbers are carried forward into

today's committed set and the score tables show it honestly as an unstamped draft. Your call whether to stamp it retroactively or leave the record as it stands.

What to watch next, in order: (1) whether the Fed delivers the further hike its own median projects, at either remaining 2026 meeting — that confirms this re-rate and takes 6mo/12mo lower; (2) whether the Tillis motion to reconsider is ever actually called — if it is, CLARITY's 3mo/6mo come back up; (3) the October DTCC full-service tokenization launch, which is the next real test of the pillar currently holding up the whole blend; (4) any Warsh remarks that distance the Committee from the dots he declined to contribute to.

Read as an investment posture: the near windows are Bear and the one-year window has slipped to Mild Bull, so this is not a month to chase; but the number is -0.11 , a hair below flat, not a crash call, and the 3-year window did not meaningfully move. The windows that pay are still 6-plus months out, and the dates and levels that would change this reading are printed above. Note the balance has shifted: Iran is still the largest single negative, but Tokenization is now the pillar holding the whole thing up.

Sources

Each pillar report carries its full, freshly-checked source list. The master adds the engine and headline references for this September 17 light daily touch.

- **This cycle's two primary documents, both fetched directly:**
[federalreserve.gov/newsevents/pressreleases/monetary20260916a.htm](https://www.federalreserve.gov/newsevents/pressreleases/monetary20260916a.htm) — FOMC statement, Sept 16, 2026 (25bp to $3\frac{3}{4}$ –4%, 12–0, no dissents) · **[federalreserve.gov/monetarypolicy/fomcproptabl20260916.htm](https://www.federalreserve.gov/monetarypolicy/fomcproptabl20260916.htm)** — Summary of Economic Projections, Table 1 (median fed funds 4.1% 2026 / 4.1% 2027 / 3.9% 2028 / 3.6% 2029 / 3.2% longer run) · **[census.gov](https://www.census.gov)** — Advance Monthly Sales for Retail and Food Services, August 2026 · **[senate.gov](https://www.senate.gov)** — Daily Press Gallery record of the Sept 15 cloture vote on H.R. 3633 (49–50).
- **The pillars:** the sibling reports in this folder — CoinPicks_CLARITY_Act (re-rated UP Sept 15) / Iran_War / Tokenization_RWA / Fed_Macro Pillar Reports (all three re-checked Sept 15, held flat) and the computed Bitcoin TA Quant Pillar Report.
- **The engine:** engine/blend.py → data/master_blend.json (score set 2026-09-15_draft in config/scores.json, status: committed, stamped_by "Alex (auto-stamped)", active_qual_set; the prior set 2026-09-12_draft2 remains status: draft, a full weekly refresh awaiting Alex's manual review; full lineage back to 2026-06-19_committed; final-number window weights in config/settings.json "final_weights") · engine/mapping.py → data/pillar_scores.json (data through Sept 13, 2026).
- **September 15 light daily touch — the load-bearing new facts:** [The Block on the final CLARITY text \(sunset dropped, state-AG enforcement restored, penalties raised\)](#) · [The Defiant — Republicans post the final text a day before cloture](#) · [CNBC — Trump agrees to ethics requirements \(Sept 14\)](#) · [CNBC — Warren to rip the Clarity Act on the floor \(Sept 14\)](#) · [CoinDesk — Democrats send a counteroffer \(Sept 15; SINGLE-SOURCE on the presidential carve-out\)](#) · [Forbes — Polymarket ~34.5% \(MARKET PRICE, reported not scored\)](#).
- **Price:** BTC/USD \$76,440.74 (Sept 17, 2026, data/btc_usd_daily.csv via a local run.py quant refresh) — up 0.4% from \$76,138.60 (Sept 16), after intraday lows of \$74,913.43 on the Sept 15 cloture failure and \$74,962.49 on the Sept 16 FOMC; cycle low \$58,526 close (June 30, 2026).
