

CoinPicks Market Direction

Research Package

Five pillars — four researched narratives and one pure-math read of the Bitcoin chart — scored on one standard, blended into one table, and distilled to one number. Everything in this folder is current as of **August 5, 2026** — a run of light daily re-checks since the last full weekly refresh on July 30.

THE FINAL NUMBER · AUGUST 5, 2026 · BTC \$64,661.55

+0.54 Mild Bull — time-arbitraged, and a touch less thin than a week ago

Equal-weight mean of the five window signals below — every pillar counts 20% (scale -10 to +10; horizon-weighted variant +1.11). Positive because the far windows outweigh the near ones — **not a buy-today signal**: the same table says outright Bear for next month. It is a "the storm is priced, the recovery isn't" number. The headline crossed back over the Neutral/Mild-Bull line this week (up from +0.45-0.48 on Aug 1-3, and above July 31's +0.47) mainly on Iran War Risk's cumulative front-end improvement, with Bitcoin TA's modest price recovery also helping at the margin.

THE FIVE WINDOWS UNDERNEATH IT

WINDOW	MASTER SIGNAL	CALL
1 month	-1.59	Bear — Iran War Risk still the heaviest drag despite a week of de-escalation signals; Fed & Macro's hawkish-FOMC drag unchanged
3 months	-1.10	Mild Bear — the September FOMC still sits inside this window at majority-hike-priced odds
6 months	+0.17	Neutral — CLARITY/Tokenization structural strength vs. Iran's and the Fed's drag, now slightly less offsetting
1 year	+2.09	Bull — all five pillars still positive
3 years	+3.11	Strong Bull — law + adoption + cycle + valuation, unchanged

Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. The Mild Bull conclusion stays positive under every leave-one-out drop (+0.17 to +0.84); dropping CLARITY or Tokenization still rounds down to **Neutral** on a strict read (both land just at the +0.17 boundary), essentially unchanged from last week's thinner-than-usual robustness result. See the Master Report's Robustness section.

Reading order

Twenty minutes to the whole picture; each report stands alone and can be checked independently — every fact is dated with sources on its last page.

#	FILE	WHAT IT IS
1	CoinPicks_Master_Direction_Report.pdf	The summary. The final number, the five-window table, the full pillar matrix, where the lenses agree/fight, six weeks of dated triggers, sensitivity.
2	CoinPicks_Bitcoin_TA_Quant_Pillar_Report.pdf	The math pillar. 7 indicators on 16 years of data, halving-cycle analogs, power-law valuation — with charts. Fully reproducible from code.
3	reports/current/pdf/ — the four pillar PDFs	The story pillars. CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro. Each: thesis, dated facts, honest bear case, dated triggers, and the full score lineage (June committed → every draft through August 5).
4	reports/archive/ + prior-work/	Every earlier version, preserved untouched — the score history is fully auditable.
—	run.py · engine/blend.py · data/master_blend.json	The blend engine (runnable Python — reproduce any score set with <code>run.py blend --set NAME</code>), its output, and README.md for regeneration.

How the scoring works — one paragraph

Every pillar answers the same question on five windows (1 month / 3 months / 6 months / 1 year / 3 years): **P** = the odds (0–100) that this force is *good for crypto* by then, **Quality** = how trustworthy the evidence is (0–1), and **Impact** = how hard this force moves the whole market (0–10). These combine into a **Signal** = $((P - 50) \div 50) \times \text{Quality} \times \text{Impact}$ (Impact is a uniform 8 for every pillar), so a coin-flip view scores zero no matter how loud the headlines are, and weak evidence can't shout. **All five pillars are equal-weighted** — the master for each window is the simple mean of the five signals (20% each; add a pillar and it auto-rebalances to 1/N) — and the Final Number averages the five master windows.

The five pillars at a glance (August 5 committed P's — light daily re-checks since the July 30 full refresh)

PILLAR	1MO	3MO	6MO	1YR	3YR	ONE-LINE READ
CLARITY Act (law)	38	47	58	82	92	Held flat all week (Aug 1–5 daily checks): no cloture motion filed; Aug 5 is the filing deadline for a possible Aug 7 procedural vote (motion to proceed, not passage) before the Senate's actual Aug 10 recess
Iran War Risk	22	29	40	56	77	The pillar in motion all week — up on a quiet night and a Saudi-led naval coalition (Aug 1), down on fresh Hormuz tanker attacks (Aug 2), flat (Aug 3), up on Trump canceling a joint strike (Aug 4), up again on the first public terms of a 60-day interim Hormuz deal (Aug 5) — net +6/+4/+3/+1/0 since July 31, still unsigned
Tokenization (RWA)	50	57	65	74	85	Held flat all week — no new dated catalyst found Aug 1–5; tokenized Treasuries sit ~\$15.86B, essentially flat vs. the July 30 corrected baseline
Fed & Macro	34	33	45	54	62	Held flat all week — the next H.4.1 balance-sheet release and jobless-claims print are both due Aug 6; an unreconciled 218K claims figure surfaced but couldn't be traced to a DOL-primary release, so it wasn't used to move P
Bitcoin TA (quant)	38	36	44	68	70	Quant pillar refreshed on today's price (BTC \$64,661.55, +1.7% since July 31; weekly tape –26.3 slight bearish, monthly –38.1 slight bearish, quarterly +10.3 neutral; cycle month 27.53)

P values shown (50 = coin flip). Fed & Macro (judged) and Bitcoin TA (computed) remain close through 6 months — 45 vs 44, a 1-point gap.

Status & honesty notes

- **Score status:** the August 5 scores are evidence-driven and have been **reviewed and stamped committed by Alex**; every report prints the full lineage (June committed → every draft through August 5, now committed). Nothing hides its history.
- **Verification:** facts researched with primary-source discipline (Fed/DOL releases, CENTCOM-adjacent reporting, the Senate's own floor schedule, rwa.xyz direct pulls), independently fact-checked, and the whole package forensically audited; score math recomputed independently; price data cross-checked across two exchanges; models that failed out-of-sample testing were excluded and say so. This week's daily checks: tracked Iran War Risk through a real up-down-up arc (Aug 1 quiet night and Saudi-led naval coalition; Aug 2 fresh Hormuz tanker attacks reversed part of the gain; Aug 4 a canceled joint US-Israeli strike; Aug 5 the first public terms of a 60-day interim Hormuz transit deal); confirmed CLARITY still has no cloture motion filed as the Aug 5 filing deadline passed, and corrected an internal date error — the Senate's actual August recess starts Aug 10, not Aug 7 as earlier notes assumed; found no new Tokenization catalyst; and flagged (without scoring on) an unreconciled jobless-claims figure that didn't match the DOL-primary baseline. *Process note: reports/current was not regenerated for Aug 1–4 even though scores.json changed those days — this Aug 5 package is a catch-up covering the full week's moves in one pass; see each pillar's What Changed.*
- **Known limits, in print inside the reports:** cycle-analog claims rest on 3 completed cycles; the TA pillar caps its own conviction at $P = 50 \pm 25$; this week's clearest fragility example remains Iran War Risk, whose front-end P swung both directions on real but unconfirmed developments and is still not resting on a signed agreement; single-source items are labeled in-line; current chart bars are partial and the completed-bar numbers are printed; the Fed & Macro pillar still flags an irreconcilable conflict on jobless-claims figures that it declined to resolve or score on; the Robustness section shows dropping CLARITY or Tokenization still lands right at the Neutral/Mild-Bull boundary, a thinner margin than prior cycles.
- **The near-term calendar is the test:** DOL jobless claims + Fed H.4.1 Aug 6 · CLARITY's last realistic pre-recess floor window Aug 5–7 (formal recess starts Aug 10) · next FOMC (with SEP/dot plot) Sept 15-16 · Islamabad Memorandum expiry ~Aug 16 · GENIUS Act 18-month backstop effective Jan 18, 2027. Each pillar's trigger table says in advance what each outcome does to the scores.

This is research and education, not financial advice. The scores are probabilistic opinions with dated evidence — built to be argued with. If you check one thing manually, check the trigger tables: they are the falsifiable part.
