Tokenization of Real-World Assets Pillar Report

Real Money On-Chain — Researched, Scored, and Personally Committed

*Originally written **June 19, 2026**; scores committed by me on **June 19, 2026**. Re-researched July 8, 13, 18, 25, and 30, 2026 against live primary sources, and again as a full weekly refresh on August 8, 2026 (nudged up at 3mo/6mo on a new RWA all-time high and two missed catalysts, committed and stamped by Alex). Held flat through the Aug 9-16 daily touches, all auto-stamped committed. Drafts written Aug 17, Aug 18, and Aug 20 were never delivered (no report/render/archive/commit followed for any of them), and an Aug 21 session began delivering the Aug 20 numbers into only two of six reports before stopping — also never finished or committed. **This version (August 22) does not take any of those abandoned drafts at face value — it independently re-verifies through a dedicated primary-source research pass and HOLDS FLAT at 52/60/66/74/85** — the rwa.xyz total-value print remains essentially unchanged (and Treasuries-specific value is confirmed distinct from the all-category total, this pillar's known mislabeling trap), the SEC's newly proposed "Regulation Crypto Assets" (Aug 18-19) is scoped to new-token capital formation rather than RWA tokenization and doesn't clear this pillar's bar, and the tokenized-stock innovation exemption this pillar is watching remains delayed/exploratory with no new dated progress. **This pillar's own evidence is clean and would have qualified for Alex's standing daily auto-stamp on its own** — but the **overall Aug 22 score set is left as a DRAFT, flagged for Alex's manual review**, because a dedicated adversarial fact-check this cycle found that the Iran War Risk pillar's report contained a materially false claim (a "first confirmed fatality" framing that was actually roughly the 18th such death) that the original research pass missed; see My Decision below. **A second, deeper session ran later the same day.** With that Aug 22 catch-up draft already delivered — rendered, archived, and git-committed — house rules require a new dated set rather than an in-place edit, so this full weekly refresh (the first since Aug 8) is scored as **2026-08-22_draft2**. Draft2 independently re-confirms the hold at 52/60/66/74/85 through fresh primary-source research, including a direct sec.gov check of a newly issued Franklin Templeton no-action letter (Aug 12) and a since-canceled (not merely delayed) SEC tokenized-equity "innovation exemption" meeting (Aug 13-15 reporting) — the two roughly offset and neither alone clears this pillar's bar. Draft2 was left as draft at delivery — this time because a full weekly refresh is categorically excluded from Alex's delegated daily auto-stamp authority, regardless of how clean the evidence is — **COMMITTED BY ALEX August 23, 2026** after independent review. **A daily catch-up draft dated August 28, 2026** (score set 2026-08-28_draft) was written — a direct rwa.xyz re-pull showing total distributed value $38.69B (+3.04%/30d) and tokenized Treasuries $16.00B (-0.93%/30d), both continuing trend — but it was never rendered, selfchecked, archived, or git-committed, and sits abandoned, superseded the same way this report has always treated interrupted prior sessions. **This version (August 29) does not take that abandoned draft at face value** — it runs a fresh, independent full-weekly primary-source pass and again HOLDS FLAT at 52/60/66/74/85, scored as **2026-08-29_draft**. The week's one genuine new development is **Coinbase's August 24 launch of tokenized-stock trading (NVDAc/METAc/AAPLc/GOOGLc — Nvidia, Meta, Apple, Alphabet) on its own Base blockchain**, each token backed 1:1 by a share held in regulated custody with Alpaca, under an Abu Dhabi Global Market Financial Services Regulatory Authority permission Coinbase received August 11, 2026 — confirmed on coinbase.com and corroborated by 9+ independent outlets, all dated Aug 24-25, but eligible to **non-US users only**, the exact same structural limitation this report already established (the "Robinhood Chain precedent") as insufficient alone to move P. Standard Chartered-backed Anchorpoint's HKDAP stablecoin (Aug 24-25, whose stated use cases touch RWA settlement) is logged as tangential context, not a catalyst. No new SEC rulemaking, no-action letter, or press release touching RWA tokenization was found on a direct sec.gov check this window, and DTCC's October 2026 and Nasdaq's December 6, 2026 targets are both*

unchanged. **rwa.xyz's own site (app.rwa.xyz) returned HTTP 403 on repeated attempts this cycle** — a data-access gap flagged for next cycle — so this pass relies on the report's own most recent primary pull (the abandoned Aug 28 draft's rwa.xyz read), loosely corroborated by secondary citations, showing tokenized Treasuries specifically posting a **second consecutive negative 30-day reading** (Aug 22: -0.39%, Aug 28: -0.93%) — still sub-1% and not independently reconfirmed this cycle, but the closest thing in this pillar to a trend worth watching. **This full weekly refresh was left as a DRAFT, not auto-stamped** — full weekly refreshes are categorically excluded from Alex's delegated daily auto-stamp authority regardless of evidence quality. **THIS VERSION (August 31) is a light daily catch-up, score set 2026-08-31_draft**, covering Aug 29-31: sector-level figures cited this window (total tokenized RWA ~$38.17B, tokenized Treasuries ~$16.21B, per gncrypto.news/Yellow research citing an Aug 9 rwa.xyz snapshot) are consistent with the Aug 28 direct pull already priced in — same trend, not a fresh dated catalyst; rwa.xyz itself was not independently re-pulled this cycle. **P HELD FLAT at 52/60/66/74/85.** This is a light daily touch, not a full weekly refresh, no window moved, and the master call band is unchanged — **AUTO-STAMPED** per delegated daily authority. **Sept 1: held flat again** — only stale/recycled RWA market-size summaries found (dated to Q1 2026 or the already-priced Aug 9 rwa.xyz snapshot), no fresh dated catalyst, no rail failure/depeg/counterparty default. Score set 2026-09-01_draft, AUTO-STAMPED, new last COMMITTED baseline. **Sept 2: held flat a further time** — no dated catalyst found Sept 1-2 (the DTCC pilot's possible October 2026 commercial-launch window and the ~$33.5B on-chain RWA figure are unchanged background, not new events). Score set 2026-09-02_draft — this pillar's own P is unaffected, but because all four qualitative pillars share one dated score set and Iran War Risk's sharp re-rate this cycle flips the master call band (Mild Bull → Neutral) and needs Alex's manual review, the WHOLE 2026-09-02_draft set — Tokenization's flat P included — stays in DRAFT status, not committed, per house rule (see My Decision and the Iran War Risk pillar report); **COMMITTED, AUTO-STAMPED SEPTEMBER 3, 2026** once Alex widened the policy — this is the last TRUE committed baseline. **Sept 3: held flat a further time** — nothing material found on any pillar that cycle. **Sept 5, light daily catch-up (2026-09-05_draft): held flat again** — no dated catalyst found Sept 3-5; DTCC's October 2026 full-service-launch window (Russell 1000 stocks, major ETFs, Treasuries; 50+ participating institutions) remains unchanged background. This pillar's own P is unaffected, but Fed & Macro re-rated down on a hot August jobs report, moving the shared master figures. **CORRECTION:** that cycle's commit message claimed "AUTO-STAMPED," but config/scores.json's status was never actually advanced — a bug, flagged for Alex, not corrected retroactively. **Sept 5, FULL WEEKLY refresh (2026-09-05_draft2), this version:** independently re-verified via WebSearch (DTCC's October launch remains the operative unchanged catalyst; no new dated milestone found). **HELD FLAT again at 52/60/66/74/85. Full weekly refreshes are categorically excluded from the delegated daily auto-stamp policy — left for manual review, and COMMITTED BY ALEX September 5, 2026. Sept 6: light daily catch-up, held flat again** — re-checked via WebSearch: DTCC's October 2026 full-service tokenization launch (Russell 1000 equities, major-index ETFs, US Treasuries; 50+ TradFi/crypto participants including BlackRock, Goldman Sachs, JPMorgan, Circle, Ondo Finance, and Ripple Prime) remains the operative catalyst, unchanged since the July pilot event. No new dated milestone found. **HELD FLAT at 52/60/66/74/85. Sept 8: light daily catch-up, held flat again** — re-checked via WebSearch: DTCC's October 2026 full-service tokenization launch remains the operative catalyst, unchanged since the July 15 production-trade stress test; 50+ firm industry working group, no new dated milestone found. **HELD FLAT at 52/60/66/74/85. Sept 9: light daily catch-up, held flat again** — rwa.xyz aggregate reads circulating today (~$39.2B total distributed value) are single-source press-summary figures without a direct rwa.xyz pull this cycle, read as organic continuation of the already-priced growth trend (no rail failure, depeg, or counterparty default found); DTCC's October full-service launch remains the operative catalyst, unchanged. **HELD FLAT at 52/60/66/74/85. Sept 10: light daily catch-up (score set 2026-09-10_draft) vs the 2026-09-09_draft committed baseline.** Held flat at 52/60/66/74/85 — independently re-checked, nothing cleared the sufficiency bar. No new dated rwa.xyz pull, no rail failure/depeg/counterparty event found. DTCC's October full-service launch remains the unchanged operative catalyst. The master FINAL NUMBER's call band did not flip anywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull horizon-weighted) — so per the runbook's delegated auto-stamp authority this set is **AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)." THIS VERSION (September 11) is a light daily catch-up, score set 2026-09-11_draft**, covering Sept 10-11: re-checked — no new dated rwa.xyz pull, no rail failure, depeg, or counterparty default found, and DTCC's October 2026 full-service-launch window (Russell 1000 equities, major-index ETFs, US Treasuries) remains the unchanged operative catalyst. **P HELD FLAT at 52/60/66/74/85.** Iran War Risk and Fed & Macro are the pillars that moved this cycle (Iran down on its Brent flip-line clause firing, Fed up modestly on a core-CPI print a tenth cooler than consensus). Light daily touch, no window of this pillar moved — **AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)." Sept 12 light daily catch-up (2026-09-12_draft), this morning's cycle:** re-checked — RWA.xyz aggregate reads (~$38B tokenized value by late August, up from ~$20.6B a year earlier) read as

continuation of the already-priced growth trend, not a new milestone; no rail failure, depeg, or counterparty default found; DTCC's October launch remained the operative unchanged catalyst. ***P HELD FLAT at 52/60/66/74/85 — AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)," the new last TRUE committed baseline. Two freshly-dated items this week were found but are each effectively single-source (a press release syndicated across aggregator sites, not independently reported) and incremental, not step-changes: Sept 7, Securitize expanded BlackRock BUIDL's use as off-exchange collateral across additional crypto prime brokers; Sept 7-8, MAKE Group launched "AstralBeam," a cross-chain bridge putting Casper onto the ERC-3643/T-REX Ledger tokenization standard network — both logged as context, not used to move P per the sufficiency rule. Corroborated by 7+ independent outlets (FXStreet, Securities.io, CryptoTimes, Blockonomi x2, KuCoin, Crowdfund Insider, Seeking Alpha, Richey May). This is precisely the trigger this report's own trigger table has been watching since the Aug 13-15 cancellation of the SEC's prior tokenized-equity exemption meeting, which explicitly said "a formally re-scheduled meeting or published framework would matter" — a published framework is now exactly what happened, and unlike every prior tokenized-equity launch this pillar has logged (Robinhood Chain, Coinbase's Base launch — both non-US-only), it is a US federal regulator directly authorizing on-chain tokenized-stock trading domestically, the specific structural ceiling this pillar's Other Side section had repeatedly flagged. Sizing front-loaded (1mo +6, 3mo +5, 6mo +4, 1yr +3, 3yr +1) because the exemption is in effect now and immediately actionable, with diminishing effect further out since the 3yr window was already near its practical ceiling and the exemption itself is temporary/conditional and sunsets in 5 years pending further Commission action — an honest counterweight, not a permanent rule, and no venue has yet announced it is live under the exemption as of this research pass. Quant (fully computed, unchanged methodology): P 59/54/59/68/69, BTC $78,046.80 (2026-09-18). Light daily touch, research capability fully available (WebSearch functioned normally; sec.gov and the Commissioner statement were both directly verifiable), verification passed clean —* ***COMMITTED, AUTO-STAMPED SEPTEMBER 18, 2026*** *per the delegated daily auto-stamp authority, under which neither the size of the move nor a call-band flip withholds the stamp on their own.*

P — the odds this is *good for crypto* by then. RE-RATED UP this cycle, 52/60/66/74/85 → 58/65/70/77/86, on the SEC's Sept 17 "Innovation Exemption" (sec.gov press release 20 **attempts this cycle** — could not independently re-pull live figures. ★ NEW — SEC issues its "Innovation Exemption" for tokenized-stock trading (Sept 17, 2026, primary): sec.gov press release 2026-90, corroborated by Commissioner Uyeda's Exchange Act "exchange" definition — plus a companion "dealer" exemption for AMM liquidity providers — to trade tokenized NMS stock via permissioned automated market ma books-and-records, and technology-safeguard conditions, with a public comment period open on further steps. Corroborated by 7+ independent outlets (FXStreet, Securities.io, this pillar's own table has been watching since the Aug 13-15 cancellation of the SEC's prior tokenized-equity exemption meeting ("a formally re-scheduled meeting or published EU/EEA-only, Coinbase's Base launch non-US-only), this is a US federal regulator directly authorizing on-chain tokenized-stock trading domestically, the exact structural ceiling th "conditional" — this is relief under existing exemptive authority while the Commission takes public comment on further steps, not a permanent rule; no venue has yet announced i

Quality — how trustworthy the evidence is. Unchanged this cycle per house rules.

Impact — 8 out of 10, the uniform value shared by every pillar in the equal-weight model. If tokenization compounds, it pulls trillions of TradFi assets onto rails crypto controls.

★ NEW — Coinbase launches tokenized-stock trading on Base (Aug 24, primary + 9 outlets): Coinbase launched tokenized-stock trading — NVDAc, METAc, AAPLc, GOOGLc custody with Alpaca, under an Abu Dhabi Global Market Financial Services Regulatory Authority permission Coinbase received August 11, 2026. Confirmed on Coinbase's own blo corroborated by 9+ independent outlets, all dated Aug 24-25. Eligible to **non-US users only** — structurally identical to the Robinhood Chain precedent this report already establish "in the coming weeks." Treated the same way for consistency: real, multi-sourced, does not clear the sufficiency bar alone.

Context, not a catalyst — Anchorpoint's HKDAP stablecoin (Aug 24-25): Standard Chartered's Anchorpoint Financial (backed by Standard Chartered, HKT, Animoca) began ins distribution of tokenized real-world assets. This is a stablecoin launch, not an RWA-tokenization event itself — logged as context, not adopted as a trigger.

For the record — Ondo Stocks crossed $1.01B TVL, dated Aug 15, 2026: multiple press-release-syndication outlets report this milestone. It predates the Aug 22-29 research win treated as new evidence this cycle — using it now would double-count an old fact as if timely.

SEC and DTCC/Nasdaq, unchanged this cycle: no new SEC rulemaking, no-action letter, or press release dated Aug 22-29 was found on a direct sec.gov check; the tokenized-e launch target is unchanged, no delay reported. Nasdaq's Dec 6, 2026 target is unchanged.

Carried forward, still load-bearing — Franklin Templeton SEC no-action letter (Aug 12, primary, confirmed direct on sec.gov): the SEC's Division of Investment Management is Templeton to use its own investor-services affiliate, Franklin Templeton Investor Services, as custodian holding private keys for the tokenized Franklin OnChain U.S. Government M management sleeve for other Franklin funds. Confirmed by 7+ independent outlets (The Block, Tech Times, ETHNews, coinpaprika, BigGo Finance, UEEx, KuCoin), all dated Aug 1 ETFs/mutual funds, possibly starting Q4 2026. Genuine but narrow institutional-plumbing positive, already reflected in the committed baseline.

Aug 3 catalyst (carried forward, committed): BlackRock launched two new tokenized money-market funds — BSTBL (BlackRock Select Treasury-Based Liquidity Fund) and BRS cash, short-term Treasuries, and repo agreements; BRSRV is purpose-built as a reserve asset for stablecoin issuers, targeting GENIUS Act eligibility. Securitize is transfer agent a

GENIUS Act status, unchanged this cycle: Treasury's Section 3 NPRM (Federal Register, Aug 18, comment deadline Oct 19) and the joint FinCEN/OCC/Fed/FDIC/NCUA Customer rulemaking action found Aug 22-29. No final rule expected until 2027. An unchanged, already-priced mild headwind against the Jan 18, 2027 statutory effective date — holds 12m

The crowd: is treating Coinbase's Aug 24 tokenized-stock launch on Base as the moment tokenized equities go mainstream. It's a real, well-documented development — 9+ indepen Chain launch this report already priced in as insufficient alone. Treating a geography-restricted product launch as the catalyst risks exactly the kind of overreach this report has repe to it either.

Me: RE-RATING UP, 52/60/66/74/85 → 58/65/70/77/86. The SEC's Sept 17 "Innovation Exemption" (sec.gov press release 2026-90, primary, plus Commissioner Uyeda's statement, trade tokenized NMS stock via permissioned AMMs — for the first time, this is US-domestic access, not another geography-restricted launch. It's exactly the trigger this report's own +6, tapering to 3yr +1) because the exemption is in effect now and immediately actionable, but I'm deliberately not treating it as a permanent regime change: it's temporary, condition That's why 3yr moves only +1 despite the exemption being the biggest structural development this pillar has logged all cycle — the honest read is "the ceiling cracked," not "the ceili

The Aug 29 full weekly dive (still the last full re-dig): a dedicated primary-source pass found one genuine, multi-sourced development that week (Coinbase's Base tokenized-stock (Anchorpoint's HKDAP), no new SEC rulemaking dated Aug 22-29, and unchanged DTCC/Nasdaq timelines. An Aug 28 daily catch-up draft was written but never delivered and was Sept 1, Sept 2).

My edge: this pillar's discipline is to notice when institutions actually ship product accessible to the broad market this pillar scores, not just when they announce intent or ship into a paper over them with secondary sources dressed up as primary ones. Today, for the first time, that discipline cuts the other way: the SEC's Innovation Exemption is exactly the "actu precisely because it's immediately actionable. 12mo/36mo move least, not because the GENIUS Act headwind changed, but because the exemption itself is temporary/conditional an

The Sept 19 full weekly dive (the first full re-dig since the Sept 18 re-rate): same discipline, applied against the new baseline — a dedicated primary-source pass (11 WebSearch que objection window) means "live" is unlikely before mid-October in most cases — exactly the kind of "announced intent, not shipped product" gap this pillar refuses to score early. SIF been filed. The ~1.9M-address holder-count figure is a real number but a continuation of an existing growth curve, not confirmation the exemption itself is working — the same distin And when this week's rwa.xyz reads came back internally inconsistent, the discipline is the same as ever: flag the gap, don't quietly substitute a number that can't be verified. The Facts

As of October 10, 2026 (FULL WEEKLY refresh, score set 2026-10-10_draft, LEFT AS DRAFT). Every figure below was independently re-derived from a primary source this cycle, with a second adversarial-verifi

★ NEW THIS CYCLE — THE WEEK OF OCTOBER 3 – 10, 2026

★ THE CYCLE'S DRIVER — OKX and ICE file to launch a Tokenized Securities Venue, Oct 4, 2026. OKX and Intercontinental Exchange (ICE, NYSE's parent) formed a 50/50 joint Venue (TSV) under the SEC's September 17, 2026 Innovation Exemption. The filing covers **60+ US-listed stocks** (several sources specifically say **63**) paired against stablecoins (blockchain, with a custom allowlist/soulbound-token permissioning hook layered on top (the **"OKXICE TSV Hook"**) — no central limit order book. Adversarially verified nearly poi CoinGape, and Crypto-Economy, plus what appears to be OKX's own hosted notice PDF. **One phrasing softened on verification:** several of these sources note the AMM pools' ac *non-custodial of end-user funds held in the pools* rather than a flat "no custody of participant assets."

★ Cerebras Systems exercises the exemption's issuer opt-out — the first reported real-world use. Cerebras Systems filed a written objection to having its own stock included objection mechanism — meaning the framework is now genuinely being used on both sides: a venue filing an Issuer Notice, and an issuer blocking inclusion. Under the exemptio **2026** — an inference from the Oct 4 filing date, not itself independently reported. **As of October 10, 2026, OKXICE is NOT yet live.**

★ DTCC's Tokenization Service remains NOT CONFIRMED LIVE — and a single filer's claim to the contrary is EXCLUDED. Direct dtcc.com access was blocked in the research s recent relevant release remains the July 15, 2026 pilot-milestone one, and "expected October 2026" is the latest confirmed framing. **One company, Black Titan Corp, filed an SE** filer's own characterization, not corroborated by DTCC itself or by independent reporting as a full-launch confirmation. Per the sufficiency rule, this is **EXCLUDED** and is not adopt

★ rwa.xyz UNUSABLE for a THIRD straight cycle — the basis keeps shifting. A search-derived figure this cycle (~**$14.95B** distributed value, **−5.91%** over 30 days, **109 assets**, has now logged "87 products," then "25 assets," now "109 assets." None of these are apples-to-apples with each other. This figure could not be independently re-pulled directly f plainly for Alex: rwa.xyz's basis keeps shifting cycle to cycle, and period-over-period comparisons of its asset/product counts should be treated as unreliable until its methodolog then.

Also found, not a score driver. Four independent outlets (Decrypt, Unlock-BC, a TD Securities commentary, Crypto Briefing) converge this cycle on **H1/Q2 2027** for Nasdaq toker skepticism of that date into something closer to confirmed; not itself a score driver. No new GENIUS Act stablecoin rule has been finalized this window — Treasury's Section 3 NP redemption run was found.

Score decision: RE-RATED UP modestly, 56/64/70/77/86 → 58/65/70/77/86 (+2/+1/0/0/0). Sizing: 1mo +2 and 3mo +1 for the OKXICE filing being a concrete institutional step - nothing is live yet and DTCC remains unconfirmed; a nudge, not a re-rate. 6mo/12mo/36mo HOLD — nothing here changes the medium/long-run picture already priced in. Resear pass using different sources); verification passed clean. **This is a FULL WEEKLY refresh, categorically excluded from Alex's delegated daily auto-stamp authority regardless of 10_draft**.

★ NEW THE PRIOR CYCLE — THE WEEK OF SEPTEMBER 26 – OCTOBER 3, 2026

★ The flow reading, confirmed exact to the digit. A direct rwa.xyz pull as of **Oct 3** returns tokenized US Treasuries distributed value **$14.77B, "down 7.30% from 30d ago"**; repr of **$14.94B at −6.95% / 30d on the same 25-asset basis**, both the level fell and the rate of decline worsened. **That week-over-week, like-for-like comparison is the part that ca** Note too that the holder count is *rising* while value falls: more holders, less value each, reported rather than spun either way.

WITHDRAWN this cycle — the "fourth consecutive negative reading" framing, and the trigger claim built on it. Adversarial verification found three defects. (1) A **denominator c** — 87 to 25 is a metric and scope *redefinition by the aggregator*, not a market event, so the four readings are not apples-to-apples. (2) The Aug 28–29 reading was **never indepen** independently re-pull live figures." (3) An **observation gap** between Aug 29 and Sept 26 means "fourth consecutive" is fourth consecutive *observation*, not a continuous streak — **trend claim built on top of it was not, and this pillar's pre-committed "third consecutive negative" trigger cannot be treated as cleanly fired on a redefined series.**

SOURCING GRADE, stated plainly. These are **aggregator** figures with an undefined and evidently *changing* basis. rwa.xyz does not define "distributed" versus "represented" on- magnitude; nothing on sec.gov or treasury.gov corroborates it; the Sept 26 comparable is confirmed only against this system's own archive rather than any external source; and t a narrative.

★ THE DECISIVE NEGATIVE FINDING — DTCC's tokenization service has NOT launched. dtcc.com's own tokenization page is forward-looking as of today: "paving the way for t service itself is **July 15, 2026** ("DTCC Turns Tokenization into Reality"), which says the production-trade milestone "sets the stage for the DTCC Tokenization Service to launch in Oasis Pro Markets as first tokenization member), makes no mention of the service's launch status. **Corrected detail:** the July production trades involved "more than 30 firms," not near-term catalyst for this pillar is confirmed not live, in either direction, and is **logged, not scored** — contracting flow against an unrealised catalyst is precisely the 1-month cut.

★ CORRECTED, and it is a genuine positive this report had wrong: GENIUS is no longer zero-of-six. Treasury issued the **first binding GENIUS rulemaking on Sept 30, 2026** — **61688**, an **interim final rule**, effective on publication and therefore binding law, though not a concluded notice-and-comment final rule. The honest formulation, replacing the old *now exists*, with the Fed's two NPRMs (91 FR 61346 and 91 FR 61580, both Sept 29) and Treasury's Section 3 NPRM (91 FR 53368) still proposed. **This is a principal reason the 6-** Arc chain (Oct 1).

CORRECTED — the SEC order's "30-day" mechanic was mis-described in the prior version. Re-verified via the Federal Register API (document 2026-19388): "Order Granting T Comment," published **Sept 22, 2026**, **91 FR 60168**, Release No. **34-106402**, File No. **4-927**, signed Sept 17. The Federal Register text has **no comment deadline and no DATES se** commence until at least 30 calendar days from the date when the issuer receives the Issuer Notice" — *not* a public comment window; and the relief is **temporary for five years**, w third-party-tokenized NMS trade around mid-October does not follow from the text and is withdrawn.

Structural anchors re-verified from primary documents, which is why 12mo and 36mo hold. The **CFTC's Sept 24 FAQ**, extracted and read directly from cftc.gov/media/14671, is footnote 4. New **Q12** answers "Yes, so long as…" on whether an FCM or DCO may invest customer funds in tokenized forms of otherwise-permitted Regulation 1.25 investments, s functionally equivalent" legal and economic rights; satisfaction of all Reg 1.25 terms including liquidity, concentration limits, time-to-maturity and instrument-feature restrictions; a network (as opposed to a private and/or permissioned blockchain network)." **Honesty note:** the FAQ states it represents "only the views of the Divisions," creates no rights, and is

NOT SCORED, re-confirmed as caveats. The **NYSE Group / Blockchain.com** arrangement of Sept 23 is a **non-binding MOU** for distribution on NYSE's "previously announced dig remains Blockchain.com's own PR Newswire release 302887041. Searches of *ir.theice.com* and *nyse.com* return no Blockchain.com release — and because ICE's IR newsroom *do* Exchange Develops Tokenized Securities Platform" release that itself says "subject to regulatory approvals"), **that absence is meaningful rather than a search artifact**. The ATS i stablecoin depeg or counterparty default surfaced Sept 26 – Oct 3 — absence of evidence rather than primary confirmation of absence. A "$46.2B total RWA across 36 chains" f with it. The "Nasdaq Dec 6, 2026" row still could not be re-verified and stays flagged.

★ NEW THIS CYCLE — THE WEEK OF SEPTEMBER 19–26, 2026

★ THE FIRED TRIGGER, and the reason this pillar is cut rather than raised — rwa.xyz direct pull, Sept 26, 2026. Three subpages were fetched directly this cycle, which **resolve read $14.94B, DOWN 6.95% over 30 days** across 25 assets, from $16.00B at the Aug 28 pull. **This report's own trigger table pre-committed, in its own words, that "a third con** −0.93% Aug 28, −6.95% Sept 26), at roughly *seven times* the prior magnitude. Acting on a trigger the report itself wrote down in advance is the entire point of writing it down. **So** directly, but *no independent aggregator reproduces the −6.95% specifically*, so the magnitude is labelled single-aggregator. It is corroborated in *direction and rough level* by a Se billion" — $15.9B on Sept 15 falling to $14.94B on Sept 26 is consistent with a real contraction. **The cause is unknown and is reported as a number, not a narrative:** genuine reder the same pull: total distributed asset value **$38.59B (−1.66% / 30d)**, represented value $358.13B (−4.86%), stablecoins $306.39B (+1.12%), total RWA holders **4.83M (+60.72%)**, secondary "~1.9M addresses, +134% MoM" citation. Token Terminal's separate $46B aggregate (Sept 24) uses a different methodology and is **not blended** with the rwa.xyz figur

★ FIRST OFFSET — PRIMARY: the CFTC opens the door to tokenized customer collateral, Sept 24, 2026. The Crypto Asset / Blockchain FAQ update, marked "NEW 9/24/2026," **Market Oversight, and Clearing and Risk** (an earlier pass named only two; corrected). New **Q12** asks "May an FCM or DCO invest customer funds in tokenized forms of otherwise underlying is 1.25(a)-eligible; the tokenized form grants rights "the same or functionally equivalent"; all 1.25 liquidity, concentration and time-to-maturity terms are met; and the as channel pointed at *exactly* the tokenized-Treasury and money-market product whose flow just contracted. New **Q13 and Q14** call Regulations 1.31 and 45.2 "technology neutral" v offchain version(s) of records," explicitly contemplating a **"public and permissionless blockchain network"** subject to retrieval controls — which speaks directly to this pillar's ow staff-level no-objection guidance, not a rule, and no CFTC pressroom release accompanied it. Logged as the leading candidate to move next cycle if a second confirming action a

★ SECOND OFFSET — the NYSE Group / Blockchain.com MOU, Sept 23, 2026, 9:00am ET. Real, and explicitly NOT the live-venue trigger. A non-binding memorandum of und previously announced digital ATS, **"subject to any required regulatory approvals,"** plus bidirectional market-data distribution via ICE Data Services to Blockchain.com's 44M+ co President), corroborated across 8+ independent outlets. **What it is not:** the ATS is *not live*, no launch date and no financial terms were disclosed, and required approvals are outst NYSE- or ICE-issued primary release could be found (ir.theice.com returned 404), so the only primary artifact is **Blockchain.com's own PR Newswire release (302887041)** — co which is the honest read. **This pillar's own pre-committed standard names "an actual live venue announcement" as the trigger, and an MOU is not that** — which is precisely wh

The live-venue trigger DID NOT FIRE. No Tokenized Securities Venue is live, or announced as live, as of Sept 26. The exemption's own mechanic still gates it: a prospective venue business day, which puts the earliest third-party-tokenized NMS trade around **mid-October**. Analysts name Coinbase, Securitize and Circle as likely first filers "as early as Q4 20

Logged, not scored — the SEC exemption's Federal Register publication, Sept 22, 2026. DTCC's October full-service launch remains slated but rests on **secondary reporting only** this cycle, so it is carried as unchanged *and unco*

COINPICKS

- **Multi-sourced (The Block, crypto.news, Benzinga, Blockzeit) — Aug 17:** SEC Chair Atkins met with President Trump, CFTC Chair Selig, NYSE, CME, DTCC, and crypto firms; the Innovation Advisory Committee. Per crypto.news, the discussed 24/7 tokenized-stock "innovation exemption" remained explicitly exploratory — "no final framework, eligibility cri specifically on the exemption, expected ~Aug 14 (i.e., before this Aug 17 multi-agency meeting), was itself reported canceled/postponed (Aug 13-15 reporting) — see the finding

Carried forward from Aug 16 (still load-bearing):

- **No new dated RWA/tokenization catalyst was found as of Aug 16.** General web search had surfaced only recirculating market-size commentary — a $33.5B "liquid on-chain val distributed-value number already in this report; not adopted as a replacement metric.

Carried forward from Aug 9-14 (still load-bearing):

- **rwa.xyz's Aug 9 pull, reconfirmed Aug 14 with added product-level detail:** tokenized Treasuries $16.21B across 87 products and 63,010 unique addresses; Circle's USYC leads figures already in this report, not a new catalyst.
- **rwa.xyz's $38.17B total distributed-value print, dated Sunday Aug 9 (Bitcoin News, CoinSpectator), is the same all-time-high move already folded into prior sets' language –**

Carried forward from Aug 8-9 (still load-bearing):

- ★ **Total RWA distributed value hit a new all-time high of $38.24B** (rwa.xyz direct pull, Aug 8), up from $34.67B roughly two and a half weeks earlier — a genuine +10% move, not holders, 7d yield 3.29%).
- ★ **★ CORRECTION, again — the $34.67B figure was never "tokenized Treasuries."** KuCoin's "Tokenized Treasuries Dip to $34.67 Billion" headline (~Jul 22) mislabels the total-RW cite that figure as a Treasuries number anywhere in this system.

The Prize

Illustrative only — not price targets, not advice

The cleanest single-token anchor is still **ONDO**, the name most tied to the RWA narrative: from its early-trading price around **$0.22 (Jan 2024** — listing prints vary by venue**)** it ra

The round-trip, last checked July 13 (CoinGecko, not re-pulled live this cycle): **$0.3291** — market cap ~$1.6B, still ~85% below the high — even as the company keeps extending Part of the Dec-2024 spike was a Trump-linked World Liberty Financial buy, not fundamentals. The durable signal stays structural, not one token: total RWA distributed value sits already-priced growth curve, not a new milestone; six asset categories now each exceed $1B) and tokenized Treasuries last confirmed near $16.00B (-0.93%/30d, a second cons token trades ~85% off its peak, and the confirmed institutional moves stacked through this cycle — BlackRock's Aug 3 fund launch, Franklin Templeton's Aug 12 no-action letter, reconfirmed on schedule, and now the SEC's Sept 17 Innovation Exemption authorizing US-domestic tokenized-stock trading for the first time — are exactly the kind of adoption p sufficiency bar. Pipeline reference: BTC closed at $81,224.46 on Sept 19, up sharply from $78,046.80 on Sept 18 — noted here only as context for the market backdrop, not as inv round-trip included.

The Other Side

The strongest honest case this is wrong — updated September 19, 2026 (re-checked as part of today's FULL WEEKLY refresh; still valid, plus one new item below on the exemption's own timing mechanic)

COINPICKS

- ★ **Partly answered today, worth stating plainly: the "non-US-only ceiling" critique this section has raised three separate times (BlackRock funds, Robinhood Chain, Coinbas** exemption is temporary (5 years), conditional (public-notice/transparency/safeguard conditions, sunsets pending further Commission action), and as of this research pass no ver honest read is the structural ceiling cracked, not that it disappeared; this pillar will be watching for an actual live US venue as the next real trigger.
- **The data-access gap flagged repeatedly this cycle (rwa.xyz 403s) is a real weakness that predates today's re-rate** and wasn't resolved by it — this pillar's core primary growt
- **Tokenized Treasuries posted two consecutive negative 30-day readings in late August** (-0.39% Aug 22, then -0.93% Aug 28) — still sub-1% each and not independently reco
- **Coinbase's tokenized-stock launch, and the pattern before today, is easy to overstate in hindsight.** Nine-plus outlets covered it and there's a real regulatory permission behind launch (BlackRock funds, Robinhood Chain, then Coinbase) that didn't actually reach the US market. Today's exemption is the first to change that pattern, but it is one day old.
- **An Ondo Stocks milestone from Aug 15 was missed for two full cycles.** That's a real research-process miss, caught only in hindsight — a reminder that "no new catalyst found"
- **Regulatory limbo is still real.** The GENIUS Act's rulemaking deadline was missed and zero of six agencies have finalized rules; the CIP comment window closed Aug 21 but produ incomplete rulebook, which can chill activity rather than de-risk it. The SEC's tokenized-equity exemption meeting remains canceled with no rescheduled date as of Aug 29.
- **The RWA totals are still a small, largely institutional/permissioned number.** ~$38-39B in total distributed value is real growth, but it's still under 1% of the BCG×Ripple $9.4T-by — a reminder that headline numbers in this space need active skepticism, not just repetition.
- **It may not be "crypto."** Most volume is permissioned/institutional and may never accrue value to crypto majors. Durable market-structure law (CLARITY) still isn't passed — a rer development that would break a routine hold.
- ★ **NEW this cycle — the exemption's own 30-day issuer-notice-and-objection mechanic is a real structural brake, not a footnote.** Any NMS stock tokenized by an unaffiliated object and block it outright — meaning the earliest a third-party-tokenized NMS stock could legally trade under the exemption is roughly mid-October, and issuers that object can dated and specific rather than a general caution. SIFMA's and Better Markets' public pushback (Sept 2026) is the expected institutional friction this section anticipated — worth w

The flip line, re-stated Sept 26 — and this cycle it cut both ways, which is why the move is small: if the GENIUS rules drift into Q4 unfinished, the DTCC and Nasdaq launches slip past their Octobe institution-controlled coins — treat the crypto-relevance thesis as failing. **Adoption that never touches public, crypto-controlled rails is TradFi, not crypto. Pointing toward failure this cycle:** token funds sits under 1% — capital is arriving and then sitting idle, or leaving. **Pointing the other way, and directly at this clause:** the CFTC's Sept 24 Q15 explicitly contemplates *public and permissionles* question head-on rather than routing around it. **The next real confirmation remains a live venue actually trading under the SEC exemption** — not an MOU, and not a staff FAQ. **The downside flip** w consecutive negative tokenized-Treasury reading, which would turn a flagged trend into a confirmed one and justify more than a single point. **What would change my mind upward:** an FCM or DCO and is the single item most likely to move this pillar next cycle.

October 3, 2026 — FULL WEEKLY refresh (2026-10-03_draft2), LEFT AS DRAFT: CUT on 1mo and 3mo, 57/65/70/77/86 → 56/64/70/77/86. This is the clearest case this cycle o The first pass scored −2/−1/−1. Verification then found that the "four consecutive negative readings" rationale would not hold: the aggregator had changed scope from **87 products t** $15.98B → $14.77B decline fell inside an unobserved Aug 29 – Sept 26 gap. What survives is the clean, like-for-like, week-over-week comparison — $14.94B → $14.77B on the same **56:** contracting flow against a catalyst that is confirmed *not live*, since dtcc.com still describes its October launch as "expected." **3mo 65 → 64:** DTCC's launch now falls inside this w this report had recorded wrongly — **GENIUS is no longer zero-of-six**, Treasury having issued the first binding interim final rule on Sept 30 (91 FR 61688). **12mo and 36mo held at 77/** is an *issuer-notice* period, not a public comment window, and the relief runs five years; and DTCC's July production trades involved "more than 30 firms," not 50+.

GENIUS Act rule **nothing cleared the sufficiency rule.** config/scores.json untouched; active set remains 2026-09-26_draft3.
- ★ **★ SUPERSESSION NOTICE — and on this pillar the abandoned draft is REVERSED, not just superseded.** A `2026-09-24_draft` cycle proposed 59/66/70/77/86 here and edited "COMMITTED · AUTO-STAMPED" for a set still marked `draft`. Its NYSE MOU fact *held up* on re-verification. **Its judgement did not:** it took +1 on the two near windows for a non- asymmetric, and this cycle goes the other way on 1mo.

- **Full aggregate from the same primary pull:** total distributed asset value **$38.59B (−1.66%/30d)**, represented $358.13B (−4.86%), stablecoins $306.39B (+1.12%), total RWA hold secondary "~1.9M addresses, +134% MoM" citation. Token Terminal's $46B figure uses a different methodology and is **not blended**.
- **Honest limits on the number driving the cut:** the −6.95% magnitude is **single-aggregator** — no second aggregator reproduces it — though a Sept 15 independent citation of "mo reclassification could not be distinguished, so it is reported as a number, not a narrative.
