

CoinPicks Market Direction

Research Package

Five pillars — four researched narratives and one pure-math read of the Bitcoin chart — scored on one standard, blended into one table, and distilled to one number. This is a **FULL WEEKLY refresh** current as of **October 3, 2026** (score set **2026-10-03_draft**), measured against the last committed baseline, **2026-09-26_draft3** (**COMMITTED BY ALEX, September 27, 2026**). Three of the four qualitative pillars held flat this cycle; Fed & Macro was re-rated up on the front three windows. The computed Bitcoin TA pillar is unchanged, last refreshed as of the Oct 2 close.

LEFT AS DRAFT — AWAITING ALEX'S MANUAL REVIEW (FULL WEEKLY refresh, score set 2026-10-03_draft). Full weekly refreshes are *categorically* excluded from the delegated auto-stamp authority in CLAUDE.md — the weekly is Alex's own review checkpoint — independent of how quiet or dramatic the cycle's findings are. **Three pillars held flat, one moved.** CLARITY Act (15/28/45/72/92) held: no flip-line clause fired, and the Senate's posted Oct 6–7 floor schedule carries no CLARITY item. Iran War Risk (1/2/15/34/66) held: the shipping war intensified (a Kuwaiti VLCC plus three more vessels struck in Hormuz, Sept 28–29) while diplomacy stayed deadlocked and Brent softened below \$100 on several sessions — these roughly offset. Tokenization RWA (57/65/70/77/86) held: its own trigger-relevant tokenized-Treasury figure is genuinely inaccessible for a second straight cycle, and an inaccessible datapoint can't move a score. Fed & Macro was re-rated **up** on the front three windows (27/25/34/43/58 → 30/27/35/43/58) on NY Fed President Williams' Sept 29 speech and the Oct 2 BLS jobs miss, offset at 6mo+ by Governor Barr's hawkishness, an ISM prices-paid spike, and a fresh 10-year yield high. **No call-band flips occurred this cycle** — every window's call is identical to the prior committed cycle, a quiet, small-net-move cycle in sharp contrast to the Sept 26 cycle's dramatic three-call-band-flip move. The leave-one-out range still changes sign depending on which single pillar you remove, so the headline remains fragile by construction even in a quiet cycle.

THE FINAL NUMBER · OCTOBER 3, 2026 · FULL WEEKLY REFRESH, SCORE SET 2026-10-03_DRAFT · STATUS: DRAFT, AWAITING ALEX'S MANUAL REVIEW · BTC \$85,161.67 (OCT 2 CLOSE, UNCHANGED)

−0.06 **Neutral — essentially flat versus the last committed set, no call-band flips**

Equal-weight mean of the five window signals below — every pillar counts 20% (scale −10 to +10). The headline reads −0.06 equal-weight, from −0.09 on the last committed set (2026-09-26_draft3); the horizon-weighted variant reads **+0.49**, up slightly from +0.47, still **Neutral**. **Only one of the four qualitative pillars moved this cycle** — Fed & Macro up on the front three windows; CLARITY Act, Iran War Risk and Tokenization RWA all held flat. The computed Bitcoin TA read is unchanged, last refreshed as of the Oct 2 close (\$85,161.67); no new quant refresh was needed this cycle. **No call bands flipped anywhere** — a quiet, small-net-move cycle, a sharp contrast with the Sept 26 cycle's dramatic three-call-band-flip move, and it should be read as exactly that rather than oversold.

THE FIVE WINDOWS UNDERNEATH IT

WINDOW	MASTER SIGNAL	CALL
1 month	-2.14	Bear — unchanged call band, slightly easier than -2.22. Fed & Macro firmed to -2.72 from -3.13 on Williams’ Sept 29 dovish speech and the Oct 2 jobs miss; CLARITY (-4.76), Iran (-4.70) and Tokenization (+1.01) all held flat.
3 months	-1.55	Bear — unchanged call band, from -1.61. Fed firmed to -3.13 from -3.40 on the same bundle; the other four pillars held flat. No boundary crossed.
6 months	-0.55	Mild Bear — unchanged call band, from -0.57. Fed firmed to -1.92 from -2.05, offset at this horizon by Barr’s hawkishness and the ISM prices-paid spike.
1 year	+1.13	Mild Bull — unchanged, bit-for-bit. Fed did not move at this horizon; Tokenization leads at +3.37, alongside CLARITY (+3.17) and Bitcoin TA (+1.63)
3 years	+2.82	Bull — unchanged, bit-for-bit, every pillar still positive. No pillar moved at this horizon — none of this week’s evidence speaks to 2029

Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. The leave-one-out range this cycle is -0.73 to +0.62 — the sign flips positive (Mild Bull) when Iran War Risk is dropped (+0.62), and **dropping Tokenization alone pushes the reading to -0.73, Mild Bear**. With the headline at -0.06, removing any single pillar swings it by far more than the number itself. That is the honest state of the blend, unchanged by how quiet this cycle otherwise is — see the Master Report’s Robustness section.

Reading order

Twenty minutes to the whole picture; each report stands alone and can be checked independently — every fact is dated with sources on its last page.

#	FILE	WHAT IT IS
1	CoinPicks_Master_Direction_Report.pdf	The summary. The final number, the five-window table, the full pillar matrix, where the lenses agree/fight, six weeks of dated triggers, sensitivity.
2	CoinPicks_Bitcoin_TA_Quant_Pillar_Report.pdf	The math pillar. 7 indicators on 16 years of data, halving-cycle analogs, power-law valuation — with charts. Fully reproducible from code.
3	reports/current/pdf/ – the four pillar PDFs	The story pillars. CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro. Each: thesis, dated facts, honest bear case, dated triggers, and the full score lineage (June committed → ... → Sept 26 committed → Oct 3 draft, this version).
4	reports/archive/ + prior-work/	Every earlier version, preserved untouched — the score history is fully auditable.
—	run.py · engine/blend.py · data/master_blend.json	The blend engine (runnable Python — reproduce any score set with run.py blend --set NAME), its output, and README.md for regeneration.

How the scoring works — one paragraph

Every pillar answers the same question on five windows (1 month / 3 months / 6 months / 1 year / 3 years): **P** = the odds (0–100) that this force is *good for crypto* by then, **Quality** = how trustworthy the evidence is (0–1), and **Impact** = how hard this force moves the whole market (0–10). These combine into a **Signal** = $((P - 50) \div 50) \times \text{Quality} \times \text{Impact}$ (Impact is a uniform 8 for every pillar), so a coin-flip view scores zero no matter how loud the headlines are, and weak evidence can't shout. **All five pillars are equal-weighted** — the master for each window is the simple mean of the five signals (20% each; add a pillar and it auto-rebalances to 1/N) — and the Final Number averages the five master windows.

The five pillars at a glance (FULL WEEKLY refresh, October 3 — score set 2026-10-03_draft, status: draft, AWAITING ALEX'S MANUAL REVIEW)

PILLAR	1MO	3MO	6MO	1YR	3YR	ONE-LINE READ
CLARITY Act (law)	15	28	45	72	92	HELD FLAT — no flip-line clause fired. New fact logged, not scored: the Senate's posted Oct 6–7 floor schedule, the week right after the stated Oct 5–Nov 6 recess begins, carries no CLARITY/H.R.3633 item
Iran War Risk	1	2	15	34	66	HELD FLAT at 1/2/15/34/66. Shipping war intensified (UKMTO-confirmed: a Kuwaiti VLCC plus three more vessels struck in Hormuz, Sept 28–29, no casualties) while diplomacy stayed deadlocked (Araghchi-Qatar talks Sept 29–30; Rubio had Iran's UN delegation leave NYC early) and Brent softened below \$100 on several sessions — downgrading the sustained->\$100 clause to fired-but-weakening, not reversed. Roughly offsetting
Tokenization (RWA)	57	65	70	77	86	HELD FLAT at 57/65/70/77/86. Its own trigger-relevant tokenized-Treasury figure is genuinely inaccessible for a second straight cycle (rwa.xyz/sec.gov/cftc.gov/dtcc.com all egress-blocked in this sandbox) — an inaccessible datapoint can't move a score. The SEC live-venue trigger hasn't fired (an SEC official frames it as possible "next quarter"); the earlier "Nasdaq Dec 6" date is now downgraded to likely-unreliable
Fed & Macro	30	27	35	43	58	RE-RATED UP on the front three windows from 27/25/34/43/58, on NY Fed President Williams' Sept 29 dovish speech and the Oct 2 BLS jobs report (nonfarm payrolls +29,000 vs. ~84–90,000 consensus) — offset by Governor Barr's reaffirmed hawkishness, an ISM prices-paid spike to 77.9, and a fresh 10-year yield high ~5.27–5.28%, which is why it stops at 6mo
Bitcoin TA (quant)	54	61	62	67	68	Computed, unchanged methodology (BTC \$85,161.67, unchanged from Oct 2). No new quant refresh needed this cycle — the daily Auto-refresh commits already keep it current

P values shown (50 = coin flip). All four qualitative pillars were researched from primary sources this cycle. Only one pillar moved (Fed & Macro, up on the front three windows); CLARITY Act, Iran War Risk and Tokenization RWA all held flat. No call band flipped anywhere this cycle. The Bitcoin TA pillar is computed by the pipeline and never hand-edited.

Status & honesty notes

- Score status — today was a FULL WEEKLY refresh, and it is left as draft, awaiting Alex's manual review.** One new score set, 2026-10-03_draft, measured against the last committed baseline (2026-09-26_draft3, COMMITTED BY ALEX September 27, 2026). **One pillar re-rated** — Fed & Macro up on the front three windows (27/25/34/43/58 → 30/27/35/43/58). **Three held flat** (CLARITY Act, Iran War Risk, Tokenization RWA). Per CLAUDE.md, full weekly refreshes are *categorically* excluded from the delegated auto-stamp authority — independent of how large the moves are, how good the sourcing is, or how quiet the resulting cycle turns out to be — because the weekly is Alex's own review checkpoint. Status in config/scores.json: draft, stamped_by: null.
- No call-band flips this cycle — a quiet week, and worth saying so plainly.** Every window's call (Bear / Bear / Mild Bear / Mild Bull / Bull) is identical to the prior committed cycle; only the magnitudes shifted, mostly because Fed & Macro's front three windows moved dovish while the other three qualitative pillars held flat and Bitcoin TA (computed) stayed unchanged. This stands in sharp contrast to the Sept 26 cycle, which flipped three call bands on a dramatic week of offsetting moves. Neither cycle should be mis-described as the other: this one is genuinely quiet, and it is reported that way rather than oversold.
- Why Fed & Macro moved, so you can judge it yourself.** Two developments the prior daily light touches had missed entirely, both primary and corroborated by multiple outlets. First, NY Fed President Williams' Sept 29 speech: "there is no need for urgency... one further upward adjustment may be appropriate late this year" — read by markets as pushing an expected hike from October to December; October-hike odds fell from roughly 70–77% to about 50% on futures, settling around 17–21% hike / 78–84% hold on prediction markets by Oct 2. Second, the Oct 2 BLS jobs report: nonfarm payrolls +29,000 against a consensus of roughly 84,000–90,000, unemployment ticking up to 4.2%, and July/August revised down a combined –60,000. **Honest counterweight:** Governor Barr reaffirmed his hawkish base case, the ISM prices-paid index spiked to 77.9 (its highest reading since the Iran war began), and the 10-year Treasury yield set a fresh high near 5.27–5.28% — which is why the move stops at 6 months and does not reach the 1-year or 3-year windows.
- Why Iran War Risk held, even though two real things happened.** UKMTO confirmed a Kuwaiti-flagged VLCC and three more vessels struck in the Strait of Hormuz on Sept 28–29 — a genuine intensification of the shipping war, with no casualties reported. At the same time, the diplomatic track that the last cycle watched Trump reject on Sept 26 did not die outright: Araghchi and Qatari mediators held further talks on sequencing Sept 29–30, though without a breakthrough, while Secretary Rubio had the Iranian UN delegation leave New York early on Sept 30. **Worth flagging on its own:** Brent crude softened below \$100 on several sessions this week (\$96.16 Sept 29, \$97.46 Sept 30, back to \$102.25 Oct 1, ~\$99.5 Oct 2), downgrading this pillar's own sustained->\$100 flip-line clause from clean-fired to fired-but-weakening — a real change in the evidence, though not (yet) a reversal. No new US combat death, no new US strike on Iranian territory, no widening. The escalation and the diplomatic signal roughly cancel, which is why the score holds.
- Why Tokenization held — and why a blocked data source is reported rather than guessed at.** This pillar's own trigger table depends on the tokenized-Treasury 30-day trend figure, and for a second consecutive cycle it could not be fetched: rwa.xyz, sec.gov, cftc.gov and dtcc.com all returned EGRESS_BLOCKED from this sandbox. The honest response to a blocked primary source is to say so and hold, not to guess at a direction or quietly carry an old reading forward as current. Separately, the SEC's live-venue trigger has still not structurally fired — an SEC official frames the first live venues as possible "as early as next quarter" — and the previously-reported "Nasdaq Dec 6, 2026" date is now downgraded to likely-unreliable, with other reporting pointing to H1/Q2 2027 instead.
- Why CLARITY held, plainly.** No Senate floor date got scheduled, no Democrat committed a yes vote, no Republican reversed position, and the White House did not abandon the statute. The one new fact is negative evidence: the Senate's own posted floor schedule for Oct 6–7 — the week right after the stated Oct 5–Nov 6 recess begins — carries no CLARITY Act / H.R.3633 item on it, confirming the lame-duck session after the Nov 3 midterms remains the only realistic 2026 path.

- **Known limits, in print inside the reports:** cycle-analog claims rest on 3 completed cycles ($n=3$), so direction is the signal and levels are soft; the current weekly, monthly and quarterly bars are PARTIAL and the completed-bar composites are quoted alongside them; the power-law fair value (\$141,272) swings with its fit window, so it is quoted as a range (\$119k–\$146k across 2011–2015 start years) and never as a target; the quant pillar's P is capped at 50 ± 25 by design because measured technical edge is modest, and a 5-feature crash model that failed out-of-sample (AUC 0.44) stays excluded; froth data lags about six weeks and is a robustness tilt only, never a score input.
- **The near-term calendar, in order of what actually matters:** whether the Araghchi-Qatar sequencing track revives or is formally abandoned, and whether Brent re-crosses \$100 on a sustained basis in either direction · whether the Fed delivers, skips, or reverses course at the Oct 27–28 FOMC, now that Williams and the jobs report have pulled pricing dovish · whether rwa.xyz or another primary source becomes reachable again so the tokenized-Treasury trend can finally be checked · whether any Tokenized Securities Venue actually goes live under the SEC exemption, now understood as unlikely before next quarter at the earliest · whether anything moves on CLARITY once the Senate returns from its Oct 5–Nov 6 recess.

This is research and education, not financial advice. The scores are probabilistic opinions with dated evidence — built to be argued with. If you check one thing manually, check any pillar's What Changed section this cycle — three ran independent fresh research and are honest about finding nothing that cleared the bar, rather than manufacturing a move, while Fed & Macro explains exactly what did clear it. The Iran War Risk pillar's trigger table is worth a look too: it now flags the pillar's own Brent flip-line clause as fired-but-weakening, genuinely live in either direction next cycle.
