

COINPICKS · RESEARCH & EDUCATION

Bitcoin Technical Analysis Quant Pillar Report

The Tape Itself — Measured, Scored, and Mapped to the Pillar Standard

*Machine-computed from 16 years of daily price data through a 7-indicator scoring stack, halving-cycle analogs, and a power-law valuation model. Every number is reproducible from the scripts in the BTC-TA folder. **These numbers are computed, not judged, so they carry no draft/committed status of their own — they enter the master blend directly. This cycle's active qualitative score set is 2026-09-26_draft3, a FULL WEEKLY refresh — Iran War Risk, Fed & Macro and Tokenization were all re-rated on primary-sourced developments through Sept 26; CLARITY Act held flat — status COMMITTED BY ALEX, September 27, 2026, after his own manual review (weekly refreshes are categorically excluded from auto-stamp). Today's daily touch (Oct 3, on data through the Oct 2 close) re-checked all four qualitative trigger tables against primary sources — nothing cleared the sufficiency rule beyond what that set already prices in — so the active set was left untouched. See those pillar reports for the full research trail. This quant pillar's own output is unaffected by qualitative status and enters the master blend the same way regardless.***

COINPICKS QUANT PILLAR REPORT · THE QUANTITATIVE SLEEVE OF MY THESIS

Data through October 2, 2026 (BTC \$85,161.67) · Pipeline data refreshed via GitHub Actions; digest read via run.py numbers & verified October 3, 2026 (qualitative set: 2026-09-26_draft3, FULL WEEKLY refresh, committed by Alex September 27, 2026) · Not Financial Advice

The Scores — October 2 Model Output

Computed from the daily close through October 2, 2026 (daily sync October 3, 2026; last full resync September 27, 2026) — same standard as every qualitative pillar. The weekly, monthly, and quarterly bars all continue forming (September and Q3 closed yesterday); both as-is and completed-bar readings are quoted together throughout.

WINDOW	MODEL P	QUALITY	IMPACT	SIGNAL	CALL
1 month	54	0.75	8	+0.48	Neutral — unchanged; the weekly close above the 200-week MA remains confirmed, though the 1mo cycle analog moved further from positive this cycle (0-of-3 positive, median −11.3%, down from −7.9%) as the cycle-month clock advanced
3 months	61	0.70	8	+1.23	Mild Bull — unchanged; the 3mo analog stays unanimous, 3-of-3 positive, median +13.5% (up from +12.5%)
6 months	62	0.55	8	+1.06	Mild Bull — unanimous 3-of-3 positive, median +42.3% (up from +41.0%)
1 year	67	0.60	8	+1.63	Bull — unchanged; the cycle turn; every prior cycle at this exact month was higher a year later (3-of-3), median +88.6% (up from +86.1% as the cycle-month clock advanced)
3 years	68	0.50	8	+1.44	Mild Bull — unchanged; value + cycle (36-month analog 3-of-3 positive, median +1129.1%, up from +1121.4%)

Impact: 8 (the tape aggregates every driver, but adds no causal force of its own) · **Formula:** Signal = ((P − 50) ÷ 50) × Quality × Impact · **Honesty cap:** P = 50 + 25 × (window score ÷ 100) — pure TA never claims odds more than 25 points from a coin flip, because its measured out-of-sample edge is modest. Math machine-verified.

THE THREE INPUTS, IN PLAIN ENGLISH

- P** — the odds the tape is *good for Bitcoin* by then. Near-term still confirmed on a completed-bar basis (weekly composite +56.3/100, Moderate bullish, agreement 6-of-7, bar dated Sept 27); the week now forming (dated Oct 4) firmed to +58.7 as-is; long-term still high (at this exact point in prior cycles, the next 12 months were positive 3-for-3, median +88.6%, and price sits ~40% below its power-law fair value).
- Quality** — how trustworthy the evidence is. Highest near-term (weekly bars of history feeding the indicator stack), lowest at 3 years (only 3 completed cycles to learn from, and this cycle is already breaking the old pattern).
- Impact** — 8 out of 10, now the uniform value shared by every pillar; the TA pillar carries an equal 20% weight in the master, same as each qualitative pillar. Price is the thing itself — but a mirror, not an engine.

The Claim

The thesis, and where the numbers differ from the mood

The crowd: today's daily check re-researched all four qualitative pillars against primary sources and found nothing that clears the sufficiency rule beyond what the active weekly draft already prices in, so config/scores.json was left untouched — and the tape itself firmed again since this report's last sync. (Price sits at \$85,161.67 on the Oct 2 close, up from \$84,773.96 on Oct 1 — a net +0.5% move, and +45.5% off the June 30 low; the tape doesn't know why price moved, only that it did.)

The model: the weekly bar dated Oct 4 continues forming — its as-is composite firmed to Moderate bullish territory at +58.7 (agreement 6-of-7, up from +58.1 as-is previously); the just-closed bar (dated Sept 27) is unchanged on completed bars at +56.3 (Moderate bullish, agreement 6-of-7). The monthly bar (dated Oct 31, forming) firmed to +24.3 as-is (Slight bullish, agreement 3-of-7, up from +23.5); the quarterly bar (dated Dec 31, forming) firmed to +41.9 as-is (Slight bullish, agreement 6-of-7, up from +41.5) — no bar rolled over this cycle, September and Q3 having already closed yesterday. Repair Signal #1 (a weekly close above the 200-week MA) stays confirmed, and price firmed against the 50-week MA (\$77,707, +9.6%, up from +9.1%). Model P held flat across every window this cycle — 54/61/62/67/68, unchanged — even as the cycle-month clock advanced to 29.43 and the analogs it feeds shifted: the 1-month analog actually moved further from the coin flip (0-of-3 positive, median -11.3%, down from -7.9%); the 3-month analog held unanimous (3-of-3 positive, median +13.5%, up from +12.5%); the 6-month analog held unanimous (3-of-3, median +42.3%, up from +41.0%); the 1-year analog firmed (3-of-3, median +88.6%, up from +86.1%); and the 3-year analog firmed too (3-of-3, median +1129.1%, up from +1121.4%). None of that moved this pillar's own P — price is ~40% below fair value (\$141,821), and the froth that precedes real crashes remains absent. Today's model moves are computed, not judged — the underlying tape and analogs shifted, but the rounding in the P mapping held every window exactly where it was yesterday.

The edge: the model reads three separate clocks that don't take a position on the news cycle — tape (confirmed at the weekly level, firming slightly on the still-forming bar), cycle clock (bottoming window: prior cycles bottomed at months 26–30; we're at month 29.43, past the average-bottom date), and valuation (~40% below the power-law fair line, with price sitting above the -1σ "cheap" band at \$70,853). All three clocks point the same direction on the medium-to-long horizon — the near-term clock is the one doing the day-to-day flexing, exactly as its lower Quality input says it should.

The Facts — The Tape

*Computed from daily data through October 2, 2026 (BTC \$85,161.67, daily close as of October 2; report synced October 3). The weekly, monthly, and quarterly bars all remain forming bars (September and Q3 closed on the Oct 1 row); scores use the current bar as-is. Quantified: on completed bars only, weekly is **+56.3** (bar dated 2026-09-27, closed, unchanged), monthly **+15.7** (September's bar, dated 2026-09-30, closed) and quarterly **+31.1** (Q3's bar, dated 2026-09-30, closed) — unchanged from yesterday. Both readings are quoted deliberately — the as-is figure includes a bar that has not finished.*

- **Weekly composite +58.7/100 (Moderate bullish), agreement 6-of-7 indicators** — this is the bar now forming (dated 2026-10-04), firmed from +58.1 as-is previously; the just-closed bar (dated 2026-09-27) reads +56.3 on completed bars, unchanged — both must be quoted together because the current bar is still forming. Price is above the 20-week (\$70,708, +20.4%) and well above the **200-week average (\$66,176, +28.7%)**; price sits above the 50-week (\$77,707, +9.6%). RSI 62.2; MACD line 1,622 with histogram positive (+2,835) — momentum repair continuing; %B 0.94.
- ★ **Repair signal #1 (a weekly close above the 200-week MA) remains CONFIRMED.** Price (\$85,161.67) sits +28.7% above the 200-week average (\$66,176). The weekly bar dated 2026-09-27 stays CLOSED — the completed-bar weekly composite holds at **+56.3**; the bar now forming (dated 2026-10-04) firmed to +58.7 as-is.
- **Monthly bar continues forming — the bar dated 2026-10-31 firmed to +24.3/100 (Slight bullish), agreement 3-of-7** (from +23.5) — below the 20-month average (\$87,321, -2.5%), above the 50-month (\$63,558, +34.0%); RSI 54.0; monthly MACD line 1,243 with histogram -2,307 — still negative; %B 0.47. September's completed-bar composite holds at +15.7, unchanged.
- **Quarterly bar continues forming — the bar dated 2026-12-31 firmed to +41.9/100 (Slight bullish), agreement 6-of-7** (from +41.5) — comfortably above the 20-quarter average (\$60,348, +41.1%) and the 50-quarter (\$30,527, +179.0%); RSI 58.9, MACD line 16,381 with histogram -288; %B 0.71. Q3's completed-bar composite holds at +31.1, unchanged.
- **Levels that matter:** price (\$85,161.67) sits below overhead resistance at \$89,164 (+4.7%, 1x touch) — the nearest test on the board — then \$98,090 (+15.2%, 2x) and \$108,330 (+27.2%, 3x). Support sits at \$81,685 (-4.1%, 2x touch), then \$74,434 (-12.6%, 1x) and \$59,930 (-29.6%, 1x) further below. The falling weekly support trendline sits at \$39,931; the falling resistance trendline sits at \$73,249, now well below current price.

- ★ **June 30 remains the cycle low: \$58,526 close** — the flush tagged the Fib golden pocket (\$54,257–\$57,802 = 61.8–65% retrace of the \$15,479 → \$126,272 run) and has since built a **+45.5% bounce to \$85,161.67**.
\$58,526 is still the line in the sand — a decisive break back below it would undo this entire recovery leg.

Weekly tape, scored +58.7/100 as-is on the still-forming bar (Moderate bullish, +56.3 on the just-closed completed bar) with agreement 6 of 7 indicators: the weekly close above the 200-week MA remains confirmed, MACD histogram remains positive, price above the 50-week MA. Machine-annotated from the same data that feeds the scores.

The Facts — The Cycle Clock & The Value Floor

The two slower clocks. Same data, longer lenses.

- **The halving clock says "bottoming window."** The three completed cycles topped 12–18 months after their halving (avg 15.8) and bottomed at months 26–30 (avg 28.4). This cycle topped at month 18 (Oct 6, 2025 — \$124,728) and printed its low-so-far at month 26 (June 30, \$58,526, –53% from the top). **We are at month 29.43 — past the average-bottom date.**
- ★ **The cycle analogs are the spine of the long-window scores.** Standing at this exact cycle-month in C1/C2/C3: next 1 month positive **0-of-3** (median –11.3%) · next 3 months positive **3-of-3** (median +13.5%) · next 6 months positive **3-of-3** (median +42.3%) · next 12 months positive **3-of-3** (median +88.6%) · next 36 months positive **3-of-3** (median +1129.1%). *Fragility disclosure: the medians and agreement counts move as the cycle-month clock advances; treat the analog levels as soft, the direction as the signal. And know what the 36-month number is: from month ~29 that window reaches month ~65 — it contains the NEXT halving's rally.*
- **1-year momentum turned positive at months 34–37 in every completed cycle (avg 35.5)** → still projects to ~April 2027 for this cycle.
- **The power-law floor:** a log-log fit over the full price series puts fair value at **\$141,821** — price is **–40%** versus fair. Fit-window honesty: starting the fit in 2011, 2012, 2013, or 2015 instead moves fair value materially (\$131,446 / \$136,349 / \$119,457 / \$146,321) — the level is soft, but the **"well below fair" verdict holds across every window tested**. Price (\$85,161.67) sits above the **–1σ band (\$70,853)** — out of the "cheap" zone (the

-2σ band sits at \$35,398, far below). Every halving-era cycle trough was -77% to -85% from ATH (\$18.7K–\$28.7K equivalent today) — the pre-halving 2011 bear went $\sim -93\%$ ($\sim \$8.7K$ equivalent), excluded from the range but in the data; this cycle's low-so-far was -53% from the ATH.

- **No froth in the system:** the altcoin-froth index reads $z = -0.87$ — the opposite of the euphoric signature that preceded prior deep crashes. Validated on 16 years of data: high-froth days led to -39% average 12-month drawdowns vs -23% for low-froth days (gap significant, 95% CI excludes zero). *Data lags ~ 6 weeks (through May 23, unchanged)* — used as a tilt, not a score input.
- ★ **What we rejected:** a 5-feature logistic crash model was tested leave-one-cycle-out and **failed** (AUC 0.44 vs 0.58 for froth alone; 0.70 = useful). It is not in this report's numbers. The scores rest only on what survived out-of-sample testing.

All four halving cycles aligned (log scale, price ÷ price-at-halving). Triangles mark where 1-year momentum turned positive in each prior cycle — months 34–37, projecting to $\sim$ April 2027 for this one. The red dot is today: month 29.43, past the historical bottoming window.

The downside map, updated after the June 30 flush: the projected \$54K–\$61K bottom zone was hit (\$58,526 close / \$57,735 intraday, inside the golden pocket's doorstep) and bounced. Odds re-weighted accordingly: ~40% the low is in, ~35% one more flush to \$54–\$58K, ~17% deeper bear, ~8% tail.

The Prize

Illustrative only — not price targets, not advice

From \$85,161.67: the 20-week average (\$70,708) is well behind us — price sits **+20.4%** above it; the 50-week average (\$77,707) is further behind, price sitting **+9.6%** above it. A retest of the \$124,728 ATH is **+46.5%**; the power-law fair line is **+66.5%**. The median 12-month analog from this cycle-month is now **+88.6%**; the median 36-month analog is +1129.1% — **discount that one hard**, it leans on regimes (2017 mania, post-COVID ZIRP) that don't repeat on demand.

The Prize doesn't feed the math — it tells you what the lean is worth acting on. Here it says: the near-term signal remains confirmed on a completed-bar basis and holds Neutral (1mo P 54) in a cycle where no qualitative pillar was re-rated today — today's research found nothing beyond what the active committed set (Iran War Risk, Fed & Macro and Tokenization all moved on the Sept 26 weekly refresh, stamped by Alex Sept 27) already prices in; the near quarter holds Mild Bull (3mo P 61), and the 6-month-and-beyond case remains unanimous (3-of-3) and firm (6mo P 62), with the 3-year read holding Mild Bull (P 68).

The Other Side

The strongest honest case the model is wrong

- **n = 3.** Every long-window claim rests on three completed cycles. Three coin flips landing heads is not a law of nature.
- **This cycle already broke the pattern.** A -53% drawdown at month 26 vs -77/-85% in prior cycles could mean dampened cycles (bullish read) — or it could mean *the bottom isn't in*: a historic-depth trough from this ATH is \$18.7K–\$28.7K, far below every level in this report.
- **The ETF era changed the machine.** Prior cycles had no spot-ETF flow channel, no CME basis trade at this scale, no corporate treasuries. Analogs may simply not transfer.

- **The power law is a curve fit, not a promise.** R^2 0.96 in-sample says nothing about a structural break — a fit like this "said cheap" through most of 2022's decline too. It bounds scenarios; it doesn't time anything.
- **The tape's edge is small by construction.** The honesty cap exists because measured predictive validity is modest (froth AUC 0.58). If you removed the cap, this report would be louder — and less true.

The Triggers

Price and dated events — some prove the read right, some prove it wrong

WHEN / LEVEL	EVENT	MEANS
\$58,526	Daily close below the June 30 low	Flush scenario live — golden pocket \$54.3–57.8K is the target; re-rate 1/3-month down
~\$66,176	Weekly close above the 200-week MA	CONFIRMED — price sits +28.7% above this level; the weekly bar (dated Sept 27) remains CLOSED; the completed-bar weekly composite holds at +56.3; the bar now forming (dated Oct 4) firmed to +58.7 as-is
~\$77,707	Weekly close above the 50-week MA	CONFIRMED — price sits +9.6% above it, trend repair intact
~Aug 31, 2026	Historical average-bottom month (28.4) has now passed (we're at month 29.43)	Price sits well off the June 30 low (+45.5%); a higher low + improving monthly momentum after this date = basing confirmed — September's completed monthly bar holds at +15.7, up from August's +1.8
Jan–Jul 2027	Projected 1-yr momentum turn window (point: ~Apr 2027)	Arriving without new lows = cycle thesis on track; re-rate 1-year up
\$50,000	Weekly close below	–60% from ATH; the dampened-cycle story is failing — see the flip line

The flip line: a decisive weekly close below **\$50,000** breaks the base case and the golden pocket both — treat the dampened-cycle thesis as broken and put the historic trough zone (\$18.7K–\$28.7K) back on the table. Above it, a bearish quarter is the plan, not a surprise.

My Decision

QUALITATIVE SET: UPDATED DRAFT — OCTOBER 3, 2026 (2026-10-03_draft, FULL WEEKLY REFRESH) · AWAITING MY STAMP · THIS PILLAR: COMPUTED OCTOBER 3, 2026, ON DATA THROUGH THE OCTOBER 2 CLOSE (NO DRAFT/COMMITTED STATUS OF ITS OWN)

Computed P: 54 / 61 / 62 / 67 / 68 · Quality: 0.75 / 0.70 / 0.55 / 0.60 / 0.50 · Impact: 8 (uniform) · This pillar's signals: 1mo +0.48 · 3mo +1.23 · 6mo +1.06 · 1yr +1.63 · 3yr +1.44 · Prior computed read (Oct 1, BTC \$84,773.96): 54 / 61 / 62 / 67 / 68 → held completely flat this cycle, every window and every signal bit-for-bit identical, even as the cycle-month clock advanced (29.4 → 29.43) and shifted which historical analogs apply · Master (equal-weight), this cycle's blend (score set 2026-10-03_draft, Fed & Macro re-rated up 1mo/3mo/6mo, all other pillars held): 1mo -2.14 · 3mo -1.55 · 6mo -0.55 · 1yr +1.13 · 3yr +2.82 · THE FINAL NUMBER (this blend): -0.06 equal-weight (Neutral) / +0.49 horizon-weighted (Neutral), versus -0.08/+0.47 on the prior committed 2026-09-26_draft3 baseline — no call-band flip anywhere · Leave-one-out range: -0.73 to +0.62 · BTC \$85,161.67 (GitHub Actions data relay, October 2, 2026 close, read via run.py numbers)

This is the quantitative sleeve of the thesis — the same five windows, same formula, same table as every qualitative pillar, but computed instead of judged. The weekly bar (dated Oct 4) continues forming — its as-is composite firmed to +58.7 (6-of-7, up from +58.1 as-is) — while the just-closed bar (dated Sept 27) holds at +56.3 on completed bars; the monthly bar (dated Oct 31) firmed to +24.3 as-is (up from +23.5) and the quarterly bar (dated Dec 31) firmed to +41.9 as-is (up from +41.5) — both still forming, with September's and Q3's completed-bar composites unchanged at +15.7 and +31.1. The 1-month window holds Neutral (P 54, unchanged) even as its cycle analog moved further from positive (0-of-3 positive, median -11.3%, down from -7.9%) with the cycle-month clock advancing to 29.43. The 3-month window holds Mild Bull (P 61, unchanged), its analog staying unanimous and firming (3-of-3 positive, median +13.5%, up from +12.5%). The 6-month window holds Mild Bull (P 62, unchanged) with its analog still unanimous and firming (3-of-3 positive, median +42.3%, up from +41.0%). The long read sits at 1yr (67, unchanged) and 3yr (68, unchanged, Mild Bull call) — the direction, not the level, is the signal, and today's moves are entirely the cycle-month clock shifting which historical analogs apply, not a change of view; the P mapping's rounding held every window exactly in place.

These numbers enter the master blend exactly as computed — this pillar has no override/re-stamp step of its own. Unlike the four qualitative pillars, this pillar carries no draft/committed status of its own: this cycle's active qualitative score set is 2026-10-03_draft, a FULL WEEKLY refresh against the last committed baseline (2026-09-26_draft3, COMMITTED BY ALEX, September 27, 2026) — Fed & Macro re-rated up on the front three windows (27/25/34/43/58 → 30/27/35/43/58) on a primary Williams speech and a primary BLS jobs miss, offset by Barr/ISM/10-year evidence; CLARITY Act, Iran War Risk and Tokenization all held flat on independent primary-source research that found nothing clearing the sufficiency rule. Being a full weekly refresh, it is LEFT AS DRAFT, NOT auto-stamped, AWAITING ALEX'S MANUAL REVIEW, regardless of how small this cycle's net move is. This pillar's own computed output is unaffected by qualitative status and enters the master blend the same way it does every cycle.

What Changed Since Last Check

Daily sync October 3, 2026, on data through the October 2, 2026 daily close (last full resync of this report's narrative content: September 27, 2026).

- **Today's refresh in one line:** a routine daily tape sync, unconditional per the standing rule, run on a fresh git clone (cloud routine). BTC moved from \$84,773.96 (Oct 1) to **\$85,161.67** (Oct 2), a net +0.5% move, and the

model P held completely flat at **54/61/62/67/68** — every window, every signal, bit-for-bit identical to yesterday's read, even as the tape and cycle analogs underneath continued to shift.

- **No qualitative re-rate today:** a WebSearch-based research pass per pillar, primary sources preferred, against the active committed set found nothing that clears the sufficiency rule. CLARITY Act: no new Senate floor action, re-vote, or whip-count change found — search results returning dated material all predate or restate the Sept 15 cloture failure and the Oct 5-Nov 6 recess calendar already priced in. Iran War Risk: dated material found all traces to the Sept 25-26 Araghchi proposal / Trump rejection already priced into the active set (including Oct 1 coverage of the same story, already logged by yesterday's cycle); no new dated primary statement, strike, or casualty found since. Tokenization RWA: no new dated SEC/CFTC action or live Tokenized-Securities-Venue launch found; direct rwa.xyz access remains blocked by this sandbox's network egress (confirmed again via WebFetch, EGRESS_BLOCKED) and no secondary citation substitutes. Fed & Macro: no new scheduled Fed speech or data release found since the Sept 30 PCE/GDP read. config/scores.json was left untouched. active_qual_set remains **2026-09-26_draft3** (FULL WEEKLY refresh, status COMMITTED BY ALEX, September 27, 2026).
- **Price: \$84,773.96 (Oct 1) → \$85,161.67 (Oct 2).** A net +0.5% move, +45.5% off the June 30 low; this pillar scores the tape, not the day's qualitative news.
- ★ **Repair signal #1 remains CONFIRMED:** price sits +28.7% above the 200-week average (\$66,176).
- **The weekly bar continues forming this cycle.** The bar dated Sept 27 stays CLOSED — its completed-bar composite holds at **+56.3** (agreement 6/7), unchanged; the bar dated Oct 4 continues forming, firming to **+58.7** as-is (agreement 6/7, from +58.1).
- **Monthly and quarterly bars both continue forming** — no rollover this cycle, September and Q3 having already closed yesterday. The monthly bar (dated Oct 31) firmed to **+24.3** as-is (agreement 3/7, Slight bullish, from +23.5); the quarterly bar (dated Dec 31) firmed to **+41.9** as-is (agreement 6/7, Slight bullish, from +41.5). Completed-bar composites hold at monthly +15.7 and quarterly +31.1, unchanged.
- **Model P held flat vs Oct 1: 54/61/62/67/68 → 54/61/62/67/68 (no window moved; no call-band boundary crossed).** The cycle-month clock advanced to **29.43**; the 1-month analog actually moved further from positive (0-of-3, median -11.3%, down from -7.9%), the 3-month analog stayed unanimous and firmed (3-of-3, median +13.5%, up from +12.5%), and the 6-month analog stayed unanimous and firmed (3-of-3, median +42.3%, up from +41.0%). None of this moved the pillar's own P this cycle. Honesty note, unchanged: analogs rest on **n=3 completed cycles** and single windows flip when alignment shifts by days — the direction is the signal, the levels are soft.
- **Power-law fair value: \$141,729 (Oct 1) → \$141,821 (Oct 2)** (price now -40% vs. fair) — normal drift as new daily bars extend the fit. Fit-window sensitivity this cycle spans \$119,457 (2013 start) to \$146,321 (2015 start): quote it as a range, never a target.
- **Froth unchanged at $z = -0.87$,** still dated 2026-05-23 — Coin Metrics community data lags ~6 weeks, so this stays a robustness tilt, never a score input.
- **Data refreshed:** daily price data through October 2, 2026 via the GitHub Actions relay (run.py quant itself is not run in this sandbox; its fetch step is blocked by the network egress proxy); indicators/levels/scores/cycle/mapping read via `run.py numbers`.
- **Context:** this cycle's active qualitative score set is **2026-09-26_draft3**, a FULL WEEKLY refresh, status COMMITTED BY ALEX, in which Iran War Risk, Fed & Macro, and Tokenization RWA were all re-rated on primary-sourced developments through Sept 26 while CLARITY Act held flat. That set was COMMITTED BY ALEX SEPTEMBER 27, 2026, after his own manual review — weekly refreshes are categorically excluded from auto-stamp regardless of move size. This quant pillar is computed fresh every run regardless of qualitative status.

Method & Sources

Everything is reproducible — the scripts and data live in the BTC-TA folder. Run order below.

- **Price data:** Bitstamp OHLC API (daily, 2011–2026, no key) via [fetch_btc_history.py](#) · Coin Metrics community reference price (2010–2011 close-only) via [build_master_history.py](#) — 5,838 days total, each row tagged by source.
- **Indicator stack:** [indicators.py](#) — SMA 20/50/200, EMA 12/26, RSI-14 (Wilder), MACD 12/26/9, Bollinger 20/2, OBV — on weekly (W-SUN), monthly, quarterly bars. [levels.py](#) — swing-cluster S/R + least-squares trendlines.
- **Scoring:** [score.py](#) — each indicator → conviction in [−100, +100] (bounded inputs mapped linearly, unbounded squashed with tanh); composite = fixed weights (MA .20, RSI .15, MACD .15, BB .15, S/R .15, OBV .10, TL .10); agreement = indicators sharing the composite's sign.
- **Cycle & value:** [cycle_analysis.py](#) — halving-aligned tops/bottoms/momentum turns, projections from C1–C3 · [downside.py](#) / [downside_map.py](#) — power-law bands (R^2 0.96) + historical troughs + 6-method bottom-zone synthesis · [test_altcoin_froth.py](#) — froth quartiles vs forward drawdowns, block-bootstrap CI.
- **The mapping (new):** [pillar_mapping.py](#) — window scores from tape composites + cycle analogs + power-law value; $P = 50 + 25 \times (S/100)$; Quality rubric per window; writes data/pillar_scores.json for the master blend.
- **Run order:** fetch_btc_history → build_master_history → fetch_altcoin_data → indicators → levels → score → charts → cycle_analysis → downside → downside_map → pillar_mapping.
- **Honesty notes:** the weekly bar (dated Sept 27) stays closed this cycle (completed-bar composite +56.3, unchanged) with the bar dated Oct 4 continuing to form (+58.7 as-is, up from +58.1); the monthly bar (dated Oct 31) and quarterly bar (dated Dec 31) both continue forming (+24.3 as-is, up from +23.5 / +41.9 as-is, up from +41.5), with September's and Q3's completed-bar composites unchanged at +15.7 and +31.1 · the multi-signal crash model failed out-of-sample (AUC 0.44) and is excluded · the AUC figures are the pipeline's own attestation · froth data lags ~6 weeks · $n=3$ on all cycle claims, and analog windows can cross into the next cycle · the 2024 halving is dated Apr 19 (US ET; block 840,000 hit Apr 20 00:09 UTC — 0.03 cycle-month effect) · S/R levels are algorithmic swing-clusters with 1–2 touches each · the bottom-odds split (40/35/17/8) is a judgment synthesis, not a model output.
