Master Direction Report

Five Pillars, One Table, One Number — Updated & Re-verified October 3, 2026 (FULL WEEKLY refresh, score set 2026-10-03_draft) · LEFT AS DRAFT, AWAITING ALEX'S MANUAL REVIEW · last committed set 2026-09-26_draft3, COMMITTED BY ALEX, September 27, 2026

*This is a **FULL WEEKLY refresh** (score set **2026-10-03_draft**, status: **draft**) against the last committed baseline (**2026-09-26_draft3, COMMITTED BY ALEX, September 27, 2026**). Four independent primary-source research passes, one per pillar. **Three of the four qualitative pillars HELD FLAT.** CLARITY Act (15/28/45/72/92): no flip-line clause fired, and the Senate's posted Oct 6–7 floor schedule — the week right after the stated Oct 5–Nov 6 recess begins — carries no CLARITY/H.R.3633 item. Iran War Risk (1/2/15/34/66): the shipping war intensified (UKMTO-confirmed — a Kuwaiti VLCC and three more vessels struck in the Strait of Hormuz, Sept 28–29, no casualties) while diplomacy stayed deadlocked on sequencing (Araghchi-Qatar talks Sept 29–30; Rubio had the Iranian UN delegation leave NYC early Sept 30) and Brent crude softened below \$100 on multiple sessions — enough to downgrade the sustained->\$100 flip-line clause from clean-fired to fired-but-weakening, not reversed; these roughly offset. Tokenization RWA (57/65/70/77/86): its own trigger-relevant tokenized-Treasury figure is genuinely inaccessible for a second straight cycle (rwa.xyz, sec.gov, cftc.gov and dtcc.com all egress-blocked in this sandbox) — an inaccessible datapoint can't move a score either way — and the SEC's live-venue trigger has structurally not fired yet. **Fed & Macro RE-RATED UP on the front three windows** (27/25/34/43/58 → 30/27/35/43/58), on two primary, multi-source-corroborated dovish developments the prior daily light touches had missed entirely: NY Fed President Williams' Sept 29 speech ("there is no need for urgency... one further upward adjustment may be appropriate late this year"), read as pushing an expected hike from October to December; and the Oct 2 BLS jobs report (nonfarm payrolls +29,000 vs. ~84–90,000 consensus, unemployment to 4.2%). Offsetting, which is why the move stops at 6mo: Governor Barr's reaffirmed hawkishness, an ISM prices-paid spike to 77.9, and a fresh 10-year yield high near 5.27–5.28%. **Bitcoin TA (computed) is unchanged** — quant data last refreshed as of the October 2, 2026 close (BTC \$85,161.67); no new quant refresh was needed this cycle, since the daily Auto-refresh commits already keep it current. **No call-band flips occurred this cycle** — every window's call (Bear / Bear / Mild Bear / Mild Bull / Bull) is identical to the prior committed cycle; only the magnitudes shifted slightly. This is a quiet, small-net-move*

cycle, a sharp contrast with the Sept 26 cycle's dramatic three-call-band-flip move, and it should be read as such rather than oversold. **LEFT AS DRAFT, NOT auto-stamped, AWAITING ALEX'S MANUAL REVIEW** — a full weekly refresh is categorically excluded from the delegated daily auto-stamp authority in *CLAUDE.md*, independent of findings or move size, because the weekly is Alex's own review checkpoint. (For the record, carried forward from the prior cycle: an earlier, abandoned September 24, 2026 draft — *2026-09-24_draft*, a score set and a full set of report edits — was never rendered, archived or committed, yet asserted a stamp that was never written; it remains flagged in this report's history for the audit trail.)

THE FINAL NUMBER · OCTOBER 3, 2026 · FULL WEEKLY REFRESH, SCORE SET 2026-10-03_DRAFT · EQUAL-WEIGHT MODEL · STATUS: DRAFT, AWAITING ALEX'S MANUAL REVIEW

−0.06

Neutral overall — −0.06 equal-weight, versus −0.09 on the last committed set (2026-09-26_draft3). The horizon-weighted variant reads +0.49, also Neutral, versus +0.47 on that baseline. Equal-weight mean of the five master window signals (scale −10 to +10). **No call-band flips occurred this cycle** — every window's call (Bear / Bear / Mild Bear / Mild Bull / Bull) is identical to the prior committed cycle; only the magnitudes shifted slightly, driven mainly by Fed & Macro's front-three-window dovish re-rate (27/25/34/43/58 → 30/27/35/43/58) on NY Fed President Williams' Sept 29 speech and the Oct 2 jobs miss, while CLARITY, Iran War Risk and Tokenization held flat and Bitcoin TA (computed) stayed unchanged. This is a quiet, small-net-move cycle — in clear contrast to the Sept 26 cycle's dramatic three-call-band-flip move, which this cycle does not repeat and should not be oversold as if it did. The leave-one-out range below still changes sign depending on which single pillar you drop, which is the honest state of the blend regardless of how quiet the headline move is.

COINPICKS MASTER BLEND · ALL FIVE PILLARS EQUAL-WEIGHTED · 20% EACH

Compiled October 3, 2026 (FULL WEEKLY refresh, score set **2026-10-03_draft**, status: **draft**, AWAITING ALEX'S MANUAL REVIEW); last committed set **2026-09-26_draft3 (COMMITTED BY ALEX, September 27, 2026)** · BTC \$85,161.67 (October 2, 2026 close; no new quant refresh needed this cycle — the daily Auto-refresh commits already keep it current) · Engine: engine/blend.py — run.py blend (equal-weight, 2026-10-03_draft, draft; prior committed set: 2026-09-26_draft3) · Not Financial Advice

The Master Table

The whole thesis in five rows, on the October 3 FULL WEEKLY refresh (2026-10-03_draft, status: draft) vs. the last committed baseline (2026-09-26_draft3, committed by Alex, September 27, 2026). Signals on the -10 to +10 scale.

WINDOW	MASTER (EQUAL- WT)	SEPT 26 (COMMITTED)	THE CALL
1 month	-2.14	-2.22	Bear — unchanged call band, eased slightly. Fed & Macro firmed to -2.72 from -3.13 on Williams' Sept 29 dovish speech and the Oct 2 jobs miss; CLARITY (-4.76), Iran (-4.70) and Tokenization (+1.01) all held flat, so the window eases a little rather than flipping.
3 months	-1.55	-1.61	Bear — unchanged call band , no boundary crossed. Fed firmed to -3.13 from -3.40 on the same Williams/jobs-report bundle; the other four pillars held flat.
6 months	-0.55	-0.57	Mild Bear — unchanged call band , still just above the 0.50 Neutral boundary. Fed firmed to -1.92 from -2.05; the other four pillars held flat.
1 year	+1.13	+1.13	Mild Bull — unchanged, bit-for-bit. Fed & Macro did not move at this horizon (held at P 43), and no other pillar moved either.
3 years	+2.82	+2.82	Bull — unchanged, bit-for-bit. No pillar moved at this horizon — none of this week's evidence speaks to 2029.

Formula: per pillar, $\text{Signal} = ((P - 50) \div 50) \times \text{Quality} \times \text{Impact}$, with Impact a uniform **8** for every pillar. **MASTER = the simple mean of all five pillar signals** — equal weight, 20% each (add a pillar and it auto-rebalances to 1/N). Bands: $|s| < 0.5$ Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. Machine-verified two ways (hand recompute of every pillar signal and every master window, cross-checked against run.py blend's own output).

THE FINAL NUMBER — HOW IT'S BUILT, AND WHAT MOVED THIS CYCLE

-0.06 = the equal-weight mean of the five MASTER signals above $((-2.14 - 1.55 - 0.55 + 1.13 + 2.82) \div 5)$, score set 2026-10-03_draft, a FULL WEEKLY refresh against the last committed baseline 2026-09-26_draft3). Weighting the longer windows harder (10/15/20/30/25%) gives **+0.49** — still **Neutral**, versus +0.47 on that baseline. **What moved this cycle:** Fed & Macro was re-rated UP three points on 1mo, two on 3mo and one on 6mo (27/25/34/43/58 → 30/27/35/43/58) on NY Fed President Williams' Sept 29 speech (read as pushing an expected hike from October to December) and the Oct 2 BLS jobs report (nonfarm payrolls +29,000 vs. ~84–90,000 consensus) — offset at 6mo and beyond by Governor Barr's reaffirmed hawkishness, an ISM prices-paid spike to 77.9, and a fresh 10-year yield high near 5.27–5.28%. CLARITY Act, Iran War Risk and Tokenization RWA all held flat after full independent re-research; Bitcoin TA (computed) is unchanged, last refreshed as of the Oct 2 close. **No call-band flips occurred this cycle** — every window's call is identical to the prior committed cycle, a quiet, small-net-move cycle that stands in clear contrast to the Sept 26 cycle's dramatic three-call-band-flip move and should not be oversold as dramatic when it plainly wasn't.

The Trend — Final Number, Cycle by Cycle

Every committed reading of THE FINAL NUMBER, in sequence — the record of how the call has actually moved, not just where it sits today. (Today's reading joins this history once archived.)

The Full Pillar Matrix

Every pillar's signal on every window — October 3 FULL WEEKLY refresh (2026-10-03_draft, status: draft), AWAITING ALEX'S MANUAL REVIEW, vs. the last committed baseline (2026-09-26_draft3, committed by Alex, September 27, 2026). Each pillar report shows its own full score lineage.

PILLAR (WEIGHT · IMPACT)	1 MO	3 MO	6 MO	1 YR	3 YR	STATUS
CLARITY Act (20% · 8)	−4.76	−2.99	−0.68	+3.17	+6.38	HELD FLAT at 15/28/45/72/92 — no flip-line clause fired (no floor date, no Democrat yes vote, no Republican reversal, no WH abandonment). New fact logged, not scored: the Senate's posted Oct 6–7 floor schedule, the week right after the Oct 5–Nov 6 recess begins, carries no CLARITY/H.R.3633 item
Iran War Risk (20% · 8)	−4.70	−4.99	−3.92	−1.66	+1.41	HELD FLAT at 1/2/15/34/66 — shipping war intensified (UKMTO-confirmed: a Kuwaiti VLCC plus three more vessels struck in Hormuz, Sept 28–29, no casualties) while diplomacy stayed deadlocked (Araghchi-Qatar talks Sept 29–30; Rubio had Iran's UN delegation leave NYC early) and Brent softened below \$100 on several sessions, downgrading the sustained->\$100 clause to fired-but-weakening. Roughly offsetting
Tokenization RWA (20% · 8)	+1.01	+2.11	+2.72	+3.37	+4.03	HELD FLAT at 57/65/70/77/86 — its own trigger-relevant tokenized-Treasury 30-day figure is genuinely inaccessible for a second straight cycle (rwa.xyz/sec.gov/cftc.gov/dtcc.com all egress-blocked in this sandbox); an inaccessible datapoint can't move a score. The SEC live-venue trigger structurally has not fired (an SEC official frames it as possible "as early as next quarter"); the earlier "Nasdaq Dec 6" date is now downgraded to likely-unreliable
Fed & Macro (20% · 8)	−2.72	−3.13	−1.92	−0.84	+0.83	RE-RATED UP on the front three windows to 30/27/35/43/58 — NY Fed President Williams' Sept 29 dovish speech and the Oct 2 BLS jobs report (nonfarm payrolls +29,000 vs. ~84–90,000 consensus) — offset by Barr's reaffirmed hawkishness, an ISM prices-paid spike to 77.9, and a fresh 10-year yield high ~5.27–5.28%, which is why the move stops at 6mo
Bitcoin TA — quant (20% · 8)	+0.48	+1.23	+1.06	+1.63	+1.44	Computed, unchanged methodology: P 54/61/62/67/68, BTC \$85,161.67 (unchanged). No new quant refresh this cycle — not needed, since the daily Auto-refresh commits already keep it current through the Oct 2 close
MASTER — mean of the five	−2.14	−1.55	−0.55	+1.13	+2.82	Equal weight, 20% each

P lineage (June → Jul 8 → ... → Sept 26 → Oct 3) — CLARITY 55/60/65/85/92 → ... → 15/28/45/72/92 (Sept 16–26, held flat) → **15/28/45/72/92** (Oct 3, held flat). Iran War Risk 50/55/62/75/85 → ... → 3/3/16/35/66 (Sept 23) → 1/2/15/34/66 (Sept 26, window split) → **1/2/15/34/66** (Oct 3, held flat). Tokenization 53/57/62/72/85 → ... → 58/65/70/77/86 (Sept 18–23) → 57/65/70/77/86 (Sept 26, cut one point on 1mo) → **57/65/70/77/86** (Oct 3, held flat). Fed & Macro 38/40/46/54/61 → ... → 31/29/37/44/58 (Sept 22–23) → 27/25/34/43/58 (Sept 26, re-rated down) → **30/27/35/43/58** (Oct 3, re-rated up on the front three windows). Bitcoin TA is computed every run: 58/61/62/67/68

(Sept 23) → 57/60/61/68/68 (Sept 26) → 55/59/61/68/69 (Sept 29) → 54/56/61/67/68 (Sept 30) → 54/61/62/67/68 (Oct 1) → 54/61/62/67/68 (Oct 2) → **54/61/62/67/68** (Oct 3, no new quant refresh, unchanged). The abandoned 2026-09-24_draft is omitted from this lineage because it was never delivered; it remains in config/scores.json permanently. Each pillar report carries its own full, column-by-column lineage table.

The Story, Window by Window

What the blend is saying on October 3, 2026, a FULL WEEKLY refresh (comparisons below are vs. the last committed baseline, 2026-09-26_draft3)

- **1 month — Bear (−2.14, from −2.22) — unchanged call band.** Fed & Macro firmed to −2.72 from −3.13 on NY Fed President Williams' Sept 29 dovish speech and the Oct 2 jobs miss; CLARITY (−4.76), Iran (−4.70) and Tokenization (+1.01) all held flat after full independent re-research. A small, quiet ease, not a flip.
- **3 months — Bear (−1.55, from −1.61) — unchanged call band.** Fed firmed to −3.13 from −3.40 on the same Williams/jobs-report bundle; the other four pillars held flat. No boundary crossed in either direction.
- **6 months — Mild Bear (−0.55, from −0.57) — unchanged call band.** Fed firmed to −1.92 from −2.05, offset at this horizon by Governor Barr's reaffirmed hawkishness and the ISM prices-paid spike; the other four pillars held flat.
- **1 year — Mild Bull (+1.13, unchanged, bit-for-bit).** Fed & Macro did not move at this horizon (held at P 43), and no other pillar moved either — CLARITY +3.17, Tokenization +3.37, Bitcoin TA +1.63, against Iran −1.66 and Fed −0.84.
- **3 years — Bull (+2.82, unchanged, bit-for-bit).** Every pillar still positive: CLARITY +6.38, Tokenization +4.03, Bitcoin TA +1.44, Iran +1.41, Fed +0.83. Nothing this cycle reached the multi-year windows — by design, since none of this week's evidence speaks to 2029.

Where the Two Lenses Agree — and Where They Fight

The point of running qualitative and quantitative on the same standard

THE INDEPENDENT CONFIRMATION

One qualitative pillar moves on fresh research, three hold, and Bitcoin TA (computed) is unchanged: Fed & Macro was re-rated up on the front three windows on two primary, multi-source-corroborated dovish developments the prior daily light touches had missed entirely — NY Fed President Williams’ Sept 29 speech and the Oct 2 BLS jobs report. CLARITY Act, Iran War Risk and Tokenization RWA all held flat after full independent re-research: CLARITY because no flip-line clause fired; Iran because the shipping war’s intensification and the diplomatic deadlock roughly offset each other; Tokenization because its own trigger-relevant tokenized-Treasury figure is genuinely inaccessible for a second straight cycle, and an inaccessible datapoint can’t move a score either way. Bitcoin TA’s P held completely flat, last refreshed as of the Oct 2 close. **The result is a quiet, small-net-move cycle** — a sharp contrast with the Sept 26 cycle’s dramatic three-call-band-flip move, which this cycle does not repeat. No call-band flipped anywhere.

THE REAL DISAGREEMENT

Near-term: Tokenization (P 57) and Bitcoin TA (P 54) remain the strongest near-term pillars; Fed & Macro (P 30, up from 27) narrows the gap slightly but still sits well below, Iran (P 1, at the floor) sits lowest, and CLARITY (P 15) remains one of the weakest near-term reads. The master resolves it the same way as last cycle: Bear at 1 month and 3 months, unchanged call band, because the same three pillars still drag the same direction at once.

Long-term: the four story pillars average about +3.16 at 3 years (CLARITY +6.38, Tokenization +4.03, Iran +1.41, Fed +0.83) versus the Bitcoin-TA pillar’s +1.44 — still roughly 2.2× higher, unchanged from last cycle since nothing moved at this horizon. Remember why: the TA pillar is capped by construction (P never leaves 25–75) and its 3-year Quality is 0.50. Equal weight lets that gap show through honestly instead of burying it in a blend.

Trigger Watch — The Next Six Weeks, Re-Dated

A FULL WEEKLY refresh ran today, researching all four qualitative pillars from primary sources. Only one pillar’s trigger fired this cycle (Fed & Macro, upward); the other three checked their trigger tables and found nothing that cleared the sufficiency rule. These are the forward triggers; each pillar report carries the full table.

DATE / LEVEL	EVENT	RE-RATES
FIRED Sept 29 — PRIMARY, named Fed official on the record	NY Fed President Williams’ Sept 29 speech: “there is no need for urgency... one further upward adjustment may be appropriate late this year” — read by markets as pushing an expected hike from October to December. Oct-hike odds fell from ~70–77% to ~50% on futures, settling ~17–21% hike / ~78–84% hold on prediction markets by Oct 2	Fed & Macro: contributed to the RE-RATE UP on 1mo/3mo/6mo
FIRED Oct 2 — PRIMARY, BLS release	September jobs report: nonfarm payrolls +29,000 vs. ~84–90,000 consensus; unemployment to 4.2%; July/August revised down a combined –60,000	Fed & Macro: RE-RATED UP to 30/27/35/43/58 (+3/+2/+1/0/0)
Offsetting, same window — why the move stops at 6mo	Governor Barr’s reaffirmed hawkishness; an ISM prices-paid spike to 77.9 (highest since the Iran war started); a fresh 10-year Treasury yield high near 5.27–5.28%	Fed & Macro: no move at 1yr/3yr

Checked Sept 28–29 — UKMTO-confirmed, no scorable change	Iran War Risk: a Kuwaiti VLCC plus three more vessels struck in the Strait of Hormuz, no casualties. Shipping-war intensification, but no new US combat death, no new US strike on Iran, and no widening to a new state	Iran War Risk: held flat; contributes to offsetting the diplomatic deadlock below
Checked Sept 29–30 — diplomacy stayed deadlocked	Iran War Risk: Araghchi-Qatar talks on sequencing (Sept 29–30) produced no breakthrough; Rubio had the Iranian UN delegation leave NYC early on Sept 30	Iran War Risk: held flat at 1/2/15/34/66
Checked Sept 29–Oct 2 — the pillar's own Brent flip-line clause, downgraded not reversed	Brent crude softened below \$100 on multiple sessions (Sept 29 \$96.16, Sept 30 \$97.46, Oct 1 \$102.25, Oct 2 ~\$99.5)	Iran War Risk: the sustained->\$100 clause moves from clean-fired to fired-but-weakening — not enough on its own to call it reversed
Checked this cycle — a second straight cycle of the pillar's own metric being inaccessible	Tokenization RWA: the tokenized-Treasury 30-day-trend figure could not be fetched — a broad direct-fetch attempt across rwa.xyz, sec.gov, cftc.gov and dtcc.com all returned EGRESS_BLOCKED in this sandbox. An inaccessible datapoint can't move a score either way	Tokenization: held flat at 57/65/70/77/86
Checked this cycle — live-venue trigger still not fired	Tokenization RWA: an SEC official frames the first Tokenized Securities Venues going live as possible “as early as next quarter” — not yet. The previously-flagged “Nasdaq Dec 6, 2026” date is now downgraded to likely-unreliable; other reporting points to H1/Q2 2027 instead	Tokenization: no live-venue confirmation yet; held flat
Checked this cycle — no scorable change	CLARITY Act: no new floor scheduling, no Democrat yes vote, no Republican reversal, no WH abandonment of the statute. New fact logged, not scored: the Senate's posted Oct 6–7 floor schedule — the week right after the stated Oct 5–Nov 6 recess begins — carries no CLARITY/H.R.3633 item	CLARITY Act: held flat at 15/28/45/72/92
WATCH — Oct 5 – Nov 6, 2026	The Senate's stated five-week recess. The one session week that followed it on the posted schedule (Oct 6–7) carries no CLARITY item; the lame-duck session after the Nov 3 midterms remains the only realistic 2026 path	CLARITY Act: no re-vote expected before the recess ends
WATCH — whether the Araghchi-Qatar track revives or formally dies	Talks on sequencing continued Sept 29–30 without resolution; Rubio had Iran's UN delegation leave NYC early. Trump's Sept 26 rejection of the seven-day plan stands unrevised	Iran War Risk: the next concrete signal either way. A named US or Iranian official reviving or formally burying the track is what would move this pillar next
WATCH — whether Brent re-crosses \$100 on a sustained basis	Brent has traded both sides of \$100 since Sept 29 (as low as \$96.16, as high as \$102.25); a clean multi-session close back above \$100 would re-confirm the clause, while a sustained run below it would be the first real downgrade signal	Iran War Risk: the Brent flip-line clause, currently fired-but-weakening
Oct 27–28, 2026	Next scheduled FOMC meeting. Prediction markets settled ~17–21% hike / ~78–84% hold by Oct 2, down sharply from the ~70–77% hike odds priced before Williams' Sept 29 speech and the Oct 2 jobs report (market prices, not scored)	Fed & Macro: confirmation or reversal of this cycle's dovish re-rate

~next quarter at the earliest (per SEC official)	First possible live Tokenized Securities Venue under the SEC's Sept 18 exemption. The "Nasdaq Dec 6, 2026" date reported previously is now downgraded to likely-unreliable; other reporting points to H1/Q2 2027	Tokenization: the next genuine upside confirmation, now pushed further out
Power-law fair value \$141,272	BTC \$85,161.67 sits well below fair value	1yr/3yr windows: the structural bull case's core, and a reminder that the fit swings with its start year (2011–2015 fits span roughly \$119k–\$146k) — quote it as a range, not a target

The master flip line — one of four Iran clauses weakened, none newly fired: a confirmed new US combat death, a resumption of direct US strikes on Iran proper, independent confirmation the conflict has widened to a further new state, or a sustained Brent close above \$100. **The Brent clause, fired since Sept 10–11, is now FIRED-BUT-WEAKENING rather than clean-fired** — Brent traded below \$100 on several sessions this week (Sept 29 \$96.16, Sept 30 \$97.46, Oct 2 ~\$99.5) against one session back above it (Oct 1 \$102.25); this is a genuine softening, not (yet) a reversal, and is named as such rather than left at its old clean-fired status. **The strikes clause remains DORMANT, now over five weeks since the last announced US strike on Iranian territory** (Sept 1), still wire-derived rather than primary-verified since centcom.mil remains inaccessible in this sandbox. **The combat-death clause did NOT fire:** no new confirmed US combat death this cycle; the Sept 28–29 Hormuz vessel strikes caused no casualties at all, let alone a US service member. **Widening did NOT fire:** all struck vessels and theatres this cycle are within the already-active Hormuz shipping campaign. **The Iran upside flip line (a signed, US-accepted deal holding a clean week) remains NOT met** — the Araghchi-Qatar sequencing talks produced no breakthrough and Trump's Sept 26 rejection stands unrevised; Rubio having Iran's UN delegation leave NYC early on Sept 30 reads as a further cooling of the mediated track, not a revival. **On CLARITY, the flip line fired on the downside Sept 16** and remains fired; the Senate's posted Oct 6–7 session carries no CLARITY item, so the lame duck is still the only realistic 2026 path. **On Fed & Macro, the flip line reads dovish this cycle for the first time since the Sept 16 hike** — Williams' Sept 29 speech and the Oct 2 jobs miss are both primary and multi-source-corroborated, but Barr's reaffirmed hawkishness, the ISM prices-paid spike and the fresh 10-year yield high keep the move from reaching 1yr/3yr. **On Tokenization, the flip line is unchanged** — a live US venue trading under the exemption would be the upside confirmation, now pushed to "next quarter" at the earliest per an SEC official; the exemption drifting unused toward its five-year sunset, or a rescission during the comment period, would be the downside flip. The TA flip line (weekly close under \$50,000) is unchanged and far from current price.

Robustness — Does Any One Pillar Drive the Call?

Equal weight is now the fixed model — there is no qual/quant mix knob to tune. The test that matters instead: drop any single pillar and see whether the conclusion holds.

— drop CLARITY Act	−0.13	Neutral
— drop Iran War Risk	+0.62	Mild Bull · yes
— drop Tokenization RWA	−0.73	Mild Bear · yes
— drop Fed & Macro	+0.32	Neutral
— drop Bitcoin TA	−0.36	Neutral
all five in (headline)	−0.06	Neutral

Leave-one-out final (drop any one pillar): −0.73 to +0.62 — SIGN STILL FLIPS (fragile), a similar spread to the Sept 26 cycle’s −0.77 to +0.58. Drop CLARITY −0.13 · drop Iran +0.62 · drop Tokenization −0.73 · drop Fed +0.32 · drop Bitcoin TA −0.36 (FULL WEEKLY refresh, October 3, 2026, score set 2026-10-03_draft — BTC \$85,161.67, Fed & Macro re-rated up on the front three windows, the other three qualitative pillars held flat). Read this before you read the headline: with the final number at −0.06, removing any single pillar swings it by far more than the number itself, and the sign is not robust. That is the honest state of the blend, not a footnote to it — and it holds just as true in a quiet, small-net-move cycle like this one as it did in the dramatic Sept 26 cycle.

My Decision

LEFT AS DRAFT — AWAITING ALEX'S MANUAL REVIEW (2026-10-03_draft) · FULL WEEKLY REFRESH · FED UP (FRONT 3) · CLARITY/IRAN/TOKENIZATION FLAT · NO CALL-BAND FLIPS · A QUIET CYCLE

MASTER: -2.14 / -1.55 / -0.55 / +1.13 / +2.82 · THE FINAL NUMBER: -0.06 equal-weight (Neutral) / +0.49 horizon-weighted (Neutral) · Leave-one-out range: -0.73 to +0.62 (sign still flips) · Score set 2026-10-03_draft, status: draft, left for Alex's manual review (full weekly refreshes are categorically excluded from delegated auto-stamp authority) · Last committed set: 2026-09-26_draft3, COMMITTED BY ALEX September 27, 2026, which read -0.09 / +0.47 · NO call bands flipped this cycle — every window's call is identical to the prior committed cycle · BTC \$85,161.67 (October 2, 2026 close; no new quant refresh this cycle — the daily Auto-refresh commits already keep it current)

This is a **FULL WEEKLY refresh** (score set 2026-10-03_draft) against the last committed baseline (2026-09-26_draft3, COMMITTED BY ALEX September 27, 2026): four independent primary-source research passes, one per pillar. **Three of the four qualitative pillars held flat, and one moved. CLARITY Act** held at 15/28/45/72/92 — no flip-line clause fired, and the Senate's posted Oct 6–7 floor schedule carries no CLARITY/H.R.3633 item. **Iran War Risk** held at 1/2/15/34/66 — the shipping war intensified (a Kuwaiti VLCC plus three more vessels struck in Hormuz, Sept 28–29) while diplomacy stayed deadlocked and Brent softened below \$100 on several sessions, and these roughly offset. **Tokenization RWA** held at 57/65/70/77/86 — its own trigger-relevant tokenized-Treasury figure is genuinely inaccessible for a second straight cycle, and an inaccessible datapoint can't move a score either way. **Fed & Macro was RE-RATED UP** on the front three windows, 27/25/34/43/58 → 30/27/35/43/58 (+3/+2/+1/0/0), on NY Fed President Williams' Sept 29 speech and the Oct 2 BLS jobs report, offset at 6mo and beyond by Governor Barr's reaffirmed hawkishness, an ISM prices-paid spike and a fresh 10-year yield high. The computed Bitcoin TA read is unchanged, last refreshed as of the Oct 2 close (\$85,161.67); no new quant refresh was needed this cycle. **No call band flipped anywhere** — every window's call (Bear / Bear / Mild Bear / Mild Bull / Bull) is identical to the prior committed cycle, and the headline moved only three-hundredths (-0.09 → -0.06). **This is worth stating plainly, in contrast with the last cycle:** the Sept 26 weekly flipped three call bands on a dramatic week of offsetting moves; this cycle is a quiet, small-net-move week where one pillar moved and the rest held, and it should be reported as exactly that — not dressed up as more dramatic than it is, and not undersold either.

Why Fed & Macro moved, and why it stops at 6mo. Two developments the prior daily light touches had missed entirely, both primary and multi-source-corroborated. First, NY Fed President Williams' Sept 29 speech: "there is no need for urgency... one further upward adjustment may be appropriate late this year" — read by markets as pushing an expected hike from October to December. The market reaction was visible and immediate: October-hike odds fell from roughly 70–77% to about 50% on futures, and settled around 17–21% hike / 78–84% hold on prediction markets by Oct 2. Second, the Oct 2 BLS jobs report: nonfarm payrolls +29,000 against a consensus of roughly 84,000–90,000, unemployment ticking up to 4.2%, and July/August revised down a combined -60,000 — a clear miss on a release this report treats as primary. Together these are the strongest dovish signal this pillar has logged in weeks, and the move is weighted toward the front of the curve (+3/+2/+1) because both catalysts bear on the Oct 27–28 FOMC and the next few months, not on 2029. **Why it stops there:** Governor Barr reaffirmed his hawkish base case in the same window; the ISM prices-paid index spiked to 77.9, its highest reading since the Iran war began, which is exactly the kind of cost-pressure signal this pillar treats as an offsetting risk; and the 10-year Treasury yield set a fresh high near 5.27–5.28%, which a purely dovish re-rate would not produce. Net: a real, well-sourced easing at the front of the curve, deliberately not carried through to 1yr/3yr.

Why Iran War Risk held, even though two real things happened. This cycle had the ingredients for a move in either direction and they offset. On the escalatory side: UKMTO confirmed a Kuwaiti-flagged VLCC and three more vessels struck in the Strait of Hormuz on Sept 28–29 — a genuine intensification of the shipping war, though with no casualties reported. On the other side, the diplomatic track that the last cycle had just watched Trump reject on Sept 26 did not die outright: Araghchi and Qatari mediators held further talks on sequencing Sept 29–30, though they produced no breakthrough, and Secretary Rubio had the Iranian UN delegation leave New York early on Sept 30 —

a cooling signal on the US side, not a reviving one. **The pillar's own Brent flip-line clause is the most interesting development, and it is named honestly rather than left unchanged:** Brent crude softened below \$100 on multiple sessions this week — \$96.16 on Sept 29, \$97.46 on Sept 30, back up to \$102.25 on Oct 1, then ~\$99.5 on Oct 2 — enough to downgrade the clause from clean-fired (where it has sat since Sept 10–11) to fired-but-weakening. That is a real change in the evidence, but a softening Brent print across a handful of volatile sessions is not by itself a sustained reversal, so it moves the clause's label without moving the score. No new US combat death, no new US strike on Iranian territory, and no widening to a new state. The net effect of a real escalation and a real (if inconclusive) diplomatic signal is to roughly cancel, which is why the score holds rather than moving either way.

Why Tokenization held, and why an inaccessible datapoint is reported rather than guessed at. This pillar's own trigger table is built around the tokenized-Treasury 30-day trend figure, and for a second consecutive cycle that figure could not be fetched: a broad direct-fetch attempt across [rwa.xyz](#), [sec.gov](#), [cftc.gov](#) and [dtcc.com](#) returned `EGRESS_BLOCKED` from this sandbox on every attempt. The honest response to a blocked primary source is to say so and hold the score, not to carry forward an old reading as if it were current or to guess at a direction — an inaccessible datapoint cannot move a score either way, by the same sufficiency logic that governs every other pillar. Separately, the live-venue trigger under the SEC's Sept 18 exemption has still not structurally fired: an SEC official is on record framing the first live Tokenized Securities Venues as possible "as early as next quarter," not now. And the previously-flagged "Nasdaq Dec 6, 2026" date, carried in earlier cycles as a near-term catalyst to watch, is now downgraded to likely-unreliable — other reporting this cycle points to H1/Q2 2027 instead, which pushes the pillar's clearest remaining upside trigger further out than previously understood, itself worth flagging even though it does not move the score.

Why CLARITY held, plainly. Nothing fired any of this pillar's flip-line clauses this cycle: no Senate floor date got scheduled, no Democrat cast or committed to a yes vote, no Republican reversed position, and the White House did not abandon the statute. The one new fact worth logging is negative evidence, not positive: the Senate's own posted floor schedule for Oct 6–7 — the single session week sitting right after the stated Oct 5–Nov 6 recess begins — carries no CLARITY Act or H.R.3633 item on it. That confirms, rather than changes, the standing read that the lame-duck session after the Nov 3 midterms remains the only realistic path for this bill in 2026.

Stamp decision: LEFT AS DRAFT — NOT auto-stamped — awaiting Alex's review. The governing reason is categorical, not a judgment about this cycle's findings: this is a **full weekly refresh**, which CLAUDE.md's delegated auto-stamp authority excludes regardless of move size, call-band flips, or how novel the underlying news is — the weekly is Alex's own periodic review checkpoint, unchanged by the Sept 2 widening of daily auto-stamp authority. That this cycle happens to be quiet — no call-band flips, modest magnitudes — is not a reason to treat it differently; the exclusion applies independent of findings. Research capability was *not* degraded this cycle: primary fetches succeeded for the Williams speech, the BLS jobs report, UKMTO's vessel confirmations, Brent pricing, and the Senate's posted schedule. The one genuine access gap — [rwa.xyz/sec.gov/cftc.gov/dtcc.com](#) all blocked for the tokenized-Treasury figure — is a single datapoint within one pillar, not a capability failure across the cycle, and it was handled the correct way: held, not guessed at. Status: draft, stamped_by: null.

What to watch next, in order: (1) whether the Araghchi-Qatar sequencing track revives or is formally abandoned, and whether Brent re-crosses \$100 on a sustained basis in either direction — the pillar's own flip-line clause is now genuinely live in both directions; (2) whether the Fed delivers, skips, or reverses course at the Oct 27–28 FOMC, now that Williams and the jobs report have pulled pricing dovish; (3) whether [rwa.xyz](#) or another primary source becomes reachable again so the tokenized-Treasury trend can finally be checked for a second cycle running; (4) whether any Tokenized Securities Venue actually goes live under the SEC exemption, now understood as unlikely before next quarter at the earliest; (5) whether anything moves on CLARITY once the Senate returns from its Oct 5–Nov 6 recess, with the post-midterm lame duck remaining the base case.

Read as an investment posture: the near windows are still Bear, the one-year window is still Mild Bull, the three-year window is still Bull, and nothing flipped call band this cycle — the headline moved from -0.09 to -0.06 , essentially unchanged. This was a quiet week for the blend even though it was not a quiet week for the news (shipping strikes, a Fed speech that moved futures pricing, a sizable jobs miss), because the moves offset rather than compound. Read the robustness table before the headline regardless: dropping Tokenization alone puts the reading at -0.73 (Mild Bear) while dropping Iran puts it at $+0.62$ (Mild Bull), so the leave-one-out range still straddles zero and the sign is not robust. That fragility is unchanged by how quiet this particular cycle was, and it is the reason this number is published with its workings rather than on its own.

Sources

Each pillar report carries its full, freshly-checked source list. The master adds the engine and headline references for this October 3 FULL WEEKLY refresh.

- **The pillars:** the sibling reports in this folder — CoinPicks_CLARITY_Act / Iran_War / Tokenization_RWA / Fed_Macro Pillar Reports (all four independently re-researched this cycle from primary sources, see each report's own What Changed and Sources) and the computed Bitcoin TA Quant Pillar Report.
- **The engine:** engine/blend.py → data/master_blend.json (score set 2026-10-03_draft in config/scores.json, status: draft, active_qual_set; prior committed set 2026-09-26_draft3, COMMITTED BY ALEX September 27, 2026; full lineage back to 2026-06-19_committed; final-number window weights in config/settings.json "final_weights") · engine/mapping.py → data/pillar_scores.json (data through Oct 3, 2026).
- **October 3 full weekly refresh — the load-bearing facts checked this cycle:** UKMTO (primary advisory), Reuters, Al Jazeera (Sept 28–29, a Kuwaiti VLCC plus three more vessels struck in the Strait of Hormuz) · wire coverage of the Araghchi-Qatar sequencing talks, Sept 29–30, and Rubio's early departure of the Iranian UN delegation from NYC, Sept 30 · Brent crude daily closes Sept 29–Oct 2 (market prices, not scored, used only to assess the pillar's own flip-line clause) · senate.gov's posted Oct 6–7 floor schedule (primary) · direct-fetch attempts against rwa.xyz, sec.gov, cftc.gov and dtcc.com, all returning EGRESS_BLOCKED in this sandbox (documented as inaccessible, not scored) · reporting on the SEC's live-venue timeline ("as early as next quarter," per an SEC official) and the downgraded "Nasdaq Dec 6, 2026" date (other reporting points to H1/Q2 2027) · federalreserve.gov / newyorkfed.org (primary, NY Fed President Williams' Sept 29 speech) · bls.gov (primary, the Oct 2 September jobs report: nonfarm payrolls +29,000, unemployment 4.2%) · ISM prices-paid index (77.9) and 10-year Treasury yield data (~5.27–5.28%), both used as offsetting evidence against the Fed re-rate.
- **Carried forward from the September 26 full weekly refresh, not re-checked this cycle:** federalreserve.gov (Governor Barr's Sept 23 speech, local PDF extraction), S&P Global flash PMI, University of Michigan Surveys of Consumers, DOL claims, Fed H.4.1 · AP, Reuters, Al Jazeera (Araghchi's Sept 25 seven-day plan); CNN, Fox News Digital, Al Jazeera (Trump's Sept 26 rejection) · rwa.xyz (the Sept 26 tokenized-Treasury contraction) and the CFTC's Sept 24 tokenized-collateral FAQ · Lummis's CLARITY text summary and Roll Call 234.
- **Price:** BTC/USD \$85,161.67 (October 2, 2026 close, data/btc_usd_daily.csv) — unchanged this cycle, no new quant refresh needed; cycle low \$58,526 (2026-06-30), cycle top \$124,728 (2025-10-06).
