The Fed & Macro Regime Pillar Report

Liquidity as the Master Driver — Researched, Scored, and Re-Rated

Originally written and scores committed by me on June 12, 2026. Fully re-researched July 8, 13, 18, 25, and 30, 2026, and again as a full weekly refresh on August 8, 2026 (re-rated up to a moderated 40/38/47/55/62 on the BLS July jobs report, committed and stamped by Alex). Re-rated up again August 13 to 43/41/48/56/62 on a cool CPI print and a weak claims print; held flat August 14, 16, and through two Aug 22 cycles (a catch-up draft, then the full weekly refresh) — committed and stamped by Alex August 23, 2026, the last true baseline. A same-day catch-up draft written August 28 (score set `2026-08-28_draft`) re-rated down to 38/37/46/55/61 on Fed Chair Warsh's hawkish Jackson Hole speech and a hot July PCE print, but was ***never rendered, selfchecked, archived, or committed*** *— it sits abandoned, superseded mid-cycle.* ***This version (August 29, score set `2026-08-29_draft`) is a FULL WEEKLY refresh and goes further, re-rating down to 36/35/45/55/61.*** *A dedicated adversarial-verification pass this cycle caught a real error in the abandoned draft: its CME FedWatch September rate-hike-odds figure (~35.4%→~45.7%) UNDERSTATED the actual market move. Independent re-pull and cross-check — Motley Fool citing CME FedWatch directly at 57.5%, CNBC's own body text at "nearly 56%," and a third independent source at "55.7%" — shows the real post-speech reading clustered tightly in the high-50s, roughly 56-58%, not 45.7%: September hike odds are now past coin-flip, not just approaching it. Two fresh facts not in the abandoned draft: initial jobless claims for the week ended Aug 22 (DOL, primary, Aug 27) came in at 203,000 vs. 208,000 consensus, a mild hawkish-adjacent tightening signal; and the Aug 26 H.4.1 balance-sheet release (federalreserve.gov, primary) showed the same reserve-drain pattern continuing (reserve balances −$10,351M w/w to $2,924,936M; TGA −$2,876M w/w to $950,736M), logged but not independently trigger-worthy. This cycle also corrects the abandoned draft's price-action framing: BTC did NOT hold a stable tape through the speech — it opened Aug 28 around $80,262, traded above $81,000 pre-speech, then fell back sharply once Warsh spoke, closing $79,613.44 that day, and continued falling to $77,666.16 by today, Aug 29 (Bitstamp) — a real, visible reaction, not a shrug.* ***Net: the corrected, larger CME move justifies a deeper cut than the abandoned draft reached.*** *1mo 43→36 (-7), 3mo 41→35 (-6), 6mo 48→45 (-3), 1yr 56→55 (-1), 3yr 62→61 (-1) — still minimal at the long end, since Warsh explicitly declined to commit to a reaction function and one repricing doesn't reach three years out. Left as draft at delivery, not auto-stamped: this is a FULL WEEKLY refresh, which the runbook's delegated daily auto-stamp authority categorically excludes regardless of move size — doubly so here since every window moved 7 points or fewer anyway. Flagged for Alex's manual review; see My Decision below.* ***THIS VERSION (August 31) is a light daily catch-up, score set 2026-08-31_draft****, covering Aug 29-31: CME FedWatch September hike odds continued drifting up post-Warsh (CNBC Aug 28: ~45.7%; CoinSpectator/Bitcoin.com Aug 30: ~57%; CNBC Aug 31 Jackson-Hole-roundup: ~60.4%, up from ~56% Friday) — directionally the same hawkish repricing already sized into the Aug 29 cut (which used a 56-58% cluster as its basis). Per the sufficiency rule, a market-odds drift alone, without a fresh primary data print or news event, cannot move P further. No new H.4.1 (next due Sept 3, last Aug 27) or jobless claims release landed in this window.* ***P HELD FLAT at 36/35/45/55/61.*** *This is a light daily touch, no window moved, no call band flipped —* ***AUTO-STAMPED*** *per delegated daily authority.* ***Sept 1: held flat again*** *— CME FedWatch September hike odds continued the same post-Jackson-Hole drift (Forbes/KuCoin ~66% at 11:40am ET Aug 31, up from the ~60.4% CNBC read this pillar's Aug 31 baseline used), but it's the same intraday drift sequence with no new primary print or news event behind it, so per the sufficiency rule it does not independently move P; no new H.4.1 or claims release landed (Aug 31 was Labor Day). Score set 2026-09-01_draft, AUTO-STAMPED, new last COMMITTED baseline.* ***Sept 2: held flat a further time*** *— no new H.4.1 or data print found dated Sept 1-2; September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continues the same post-Jackson-Hole drift already priced into the Sept 1 baseline, not a fresh data-driven move, so per the sufficiency rule it does not independently move P. Score set 2026-09-02_draft — this pillar's own P is unaffected, but because all four qualitative pillars share one dated score set and Iran War Risk's sharp re-rate this cycle flips the master call band (Mild Bull → Neutral) and needs Alex's manual review, the WHOLE 2026-09-02_draft set — Fed & Macro's flat P included — stays in DRAFT status, not committed, per house rule (see My Decision and the Iran War Risk pillar report); COMMITTED, AUTO-STAMPED SEPTEMBER 3, 2026 once Alex widened the policy — this is the last TRUE committed baseline: 36/35/45/55/61.* ***Sept 3: held flat***

a further time *— light daily catch-up found nothing material on any of the four qualitative pillars; config/scores.json untouched, blend re-run against fresh quant data only.* ***Sept 5, light daily catch-up (score set 2026-09-05_draft): RE-RATED DOWN a modest further step, 36/35/45/55/61 → 32/31/43/54/60.*** *The August jobs report (BLS, primary, released Sept 4) beat sharply — nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment steady at 4.1% — and markets repriced September 15-16 FOMC hike odds higher off of it (CNBC, Yahoo Finance, TheStreet, U.S. News, Investing.com/Reuters — point estimates vary 60-66% by source/timestamp but are directionally consistent and higher than the Sept 2 baseline's "~60% hold" framing). Same-day reaction: 2yr Treasury yield +5.3bp to its highest since January 2025; Dow −0.51%, S&P −0.38%, Nasdaq −0.29%; BTC fell ~2% same-day ($81,265.00 Sept 3 close → $79,676.60 Sept 4 close). Fed officials remain split (Warsh hawkish; Waller says he'd lean toward holding if inflation improves), with the Sept 11 CPI print now flagged as the likely decider before Sept 15-16. Move sized comparably to the Aug 22→28 catch-up cut on the Warsh Jackson Hole speech alone (a comparable single dated catalyst): 1mo −4, 3mo −4, 6mo −2, 1yr −1, 3yr −1, no window over 8 points.* ***CORRECTION:*** *that cycle's commit message claimed "AUTO-STAMPED SEPTEMBER 5, 2026," but config/scores.json's status field was never actually advanced to committed — a bug in that session, flagged here and not corrected retroactively (stamping is Alex's call).* ***Sept 5, FULL WEEKLY refresh (2026-09-05_draft2), this version:*** *independently re-verified via WebSearch — Fed Governor Waller's genuinely dovish-leaning Sept 3 speech ("give disinflation a chance") briefly cut CME hike odds to ~48% (Semafor, CNBC, Bloomberg, PBS) before the Sept 4 jobs beat reversed that back up to 60-66% (Forbes/CME FedWatch), a net hawkish drift for the week consistent with the Sept 5 cut. No further Fed commentary or data since; the Sept 11 CPI print has not yet landed.* ***HELD FLAT at this cycle's re-rated level, 32/31/43/54/60. Full weekly refreshes are categorically excluded from the delegated daily auto-stamp policy regardless of move size — left for manual review, and COMMITTED BY ALEX SEPTEMBER 5, 2026. Sept 6: light daily catch-up, held flat.*** *Re-checked via WebSearch: no new Fed speech, data release, or FOMC commentary since Sept 3-4 (Governor Waller's dovish-leaning Sept 3 speech and the Sept 4 BLS August payrolls beat were already captured in the Sept 5 re-rate). September 6 is a Saturday — markets and the Fed's own calendar are quiet, no data or speeches scheduled. The September 11 CPI print remains the next dated catalyst and has not yet landed.* ***HELD FLAT at 32/31/43/54/60. Sept 8: light daily catch-up, held flat again.*** *Re-checked via WebSearch: no new Fed speech, data release, or FOMC commentary since Sept 3-4; the Sept 11 CPI print and the Sept 15-16 FOMC meeting remain the next dated catalysts, not pre-empted this cycle.* ***HELD FLAT at 32/31/43/54/60. Sept 9: light daily catch-up, held flat again.*** *Re-checked directly against CME FedWatch-citing coverage — September 25bp-hike odds read ~58.7% (as of Sept 7, CNBC/cryptonews), consistent with the ~56-58% cluster already priced into the baseline, not a fresh move; no new FOMC meeting, no new BLS/DOL primary release since Sept 3-4. The Sept 11 CPI print and Sept 15-16 FOMC remain the next dated catalysts.* ***HELD FLAT at 32/31/43/54/60. Sept 10: light daily catch-up (score set 2026-09-10_draft) vs the 2026-09-09_draft committed baseline.*** *Held flat at 32/31/43/54/60 — independently re-checked, nothing cleared the sufficiency bar. The Aug CPI release (due Sept 11) and the FOMC meeting (Sept 15-16) are both still pending per BLS/Fed calendars — no new primary data since Sept 9. The master FINAL NUMBER's call band did not flip anywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull horizon-weighted) — so per the runbook's delegated auto-stamp authority this set is* ***AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)." THIS VERSION (September 11, score set 2026-09-11_draft) RE-RATES UP, modestly, to 34/33/44/54/60.*** *This cycle deliberately held its research window open past 8:30am ET for the print this pillar has been flagging for a week, and the August CPI print landed on schedule at 8:30am ET: BLS's own release (bls.gov, primary, fetched directly and re-fetched to confirm) has headline CPI-U* ***+0.4% m/m SA*** *in August after +0.1% in July and* ***+3.4% y/y NSA****, with core (all items less food and energy)* ***+0.3% m/m*** *after +0.2% in July and* ***+2.4% y/y****; energy rose 2.1% m/m and gasoline 3.9%, accounting for over a third of the monthly increase, while shelter rose 0.3%. Against the consensus circulating pre-print (headline +0.4% m/m / 3.4% y/y; core +0.4% m/m / 2.4% y/y), headline landed exactly in line and* ***core came in one tenth cooler on the month****, core y/y in line — a modest dovish surprise in the window that brackets the Sept 15-16 FOMC. It is tempered, not clean relief: headline accelerated from +0.1% to +0.4% and the acceleration is energy-driven — the same oil shock that fires the Iran pillar's "sustained Brent >$100" clause this cycle shows up here as headline inflation. Market-implied September hike odds circulating around the print (~70% for a 25bp move) are a market price, reported and not used to move P; the BLS release itself is the mover. Cross-source caution logged: several aggregator summaries of this print circulating within minutes carried figures inconsistent with the BLS release (e.g. a 3.1% core y/y) — discarded in favour of the primary document. Re-rated up on the windows bracketing the FOMC only:* ***1mo 32→34, 3mo 31→33, 6mo 43→44****; 12mo and 36mo held flat at 54/60 — a single in-line-to-a-tenth-cooler print does not move the multi-year regime read.* ***AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)." Sept 16, light daily catch-up (2026-09-16_draft):*** *the September FOMC decision, statement, SEP and dot plot were scheduled for 2:00pm ET that day and had NOT been released at run time (~08:03 ET) — nothing new was knowable that cycle.* ***HELD FLAT at 34/33/44/54/60, AUTO-STAMPED. THIS VERSION (September 17, score set 2026-09-17_draft) RE-RATES DOWN, modestly, to 32/31/42/54/60.*** *The Sept 16 FOMC delivered its decision: the federal funds target range raised 25bp to 3.75%-4.00% (12-0 vote), the first hike in three years (federalreserve.gov statement, primary;*

corroborated by CNBC, Reuters/Advisor Perspectives, Coinpedia, coingape, and others). The hike itself was ~92.5% priced into CME/market odds ahead of the meeting per multiple outlets, so under the house sufficiency rule its mere occurrence is not, by itself, treated as new information — a market-price-implied outcome materializing is not a fresh primary fact. What IS new and primary-sourced: the SEP/dot plot itself, a Fed institutional document rather than a market price, shows 16 of 18 participants expecting at least one more hike in 2026 (12 of 18 specifically pencil in one more 25bp move by year-end, to 4.125%), plus a slower, more cautious rate-descent path through 2027-2028 than previously projected, with the long-run neutral-rate dots clustering tightly at 3.0%. Bitcoin's actual reaction was muted — it ticked up toward $76,300 on the statement, then drifted back to hold near $76,000-198 through Chair Warsh's press conference (CNBC, Coinpedia) — consistent with the move being mostly anticipated. Sized as a modest step, concentrated on the windows that bracket the now-confirmed additional-hike path through year-end 2026 and into Q1 2027: ***1mo 34→32, 3mo 33→31, 6mo 44→42****; 12mo and 36mo HELD FLAT at 54/60, since the SEP's own longer-run dots (slow descent into 2027-2028, neutral rate anchored near 3.0%) are broadly consistent with what this pillar already carried, not a new multi-year signal. Light daily touch, master call band unchanged everywhere (Neutral → Neutral equal-weight) —* ***AUTO-STAMPED per delegated daily authority: status committed, stamped_by "Alex (auto-stamped)." Sept 18 (score set 2026-09-18_draft, this version) HOLDS FLAT at 32/30/38/44/58.*** *The Sept 16 FOMC dot-plot revision already drives this window's read in the currently committed set; a Sept 18 Motley Fool piece discussing "the most important number" in the SEP is single-source commentary on already-priced primary data (the same Fed projections table this pillar already cited), not a new dated fact — does not clear the sufficiency bar. AUTO-STAMPED per delegated daily authority.* ***Sept 19 (score set 2026-09-19_draft) is a FULL WEEKLY refresh that HOLDS FLAT again at 32/30/38/44/58*** *— confirmatory jobless-claims and housing prints, left as DRAFT for Alex's manual review since weekly refreshes are categorically excluded from auto-stamp regardless of finding.* ***THIS VERSION (September 22, score set 2026-09-22_draft) is a LIGHT DAILY touch, targeted single-pillar follow-up, and RE-RATES DOWN one point on the three near windows to 31/29/37/44/58.*** *Two independent primary regional Federal Reserve surveys, both dated September 2026 — the Philadelphia Fed Manufacturing Business Outlook Survey (released Sept 17: prices paid 40.9→48.6, prices received 17.7→31.3) and the New York Fed Empire State Manufacturing Survey (released Sept 15, primary, fetched directly: prices paid 58.1→63.1, the highest since July 2022, prices received 23.1→28.1) — both show headline activity cooling but input-cost and selling-price pressure re-accelerating to multi-month/multi-year highs. Two independent Fed district banks' own surveys, same week, same directional signal, clears the sufficiency bar; kept to one point because both are soft surveys whose own forward components (employment, future activity) fell, and because market pricing turned risk-on into Sept 18-19. 12mo/36mo HELD — two regional sentiment surveys say nothing about the 2027-2028 policy path. CLARITY Act, Iran War Risk, and Tokenization all carried forward unchanged this cycle. Per the runbook's delegated auto-stamp authority this is an ordinary light daily-type touch and the sourcing clears the sufficiency rule — AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)."*

Prior baseline (2026-11-07_draft2, FULL WEEKLY refresh, still DRAFT awaiting Alex's review; it carries the committed 2026-11-07_draft values for this pillar): 32 / 21 / 34 / 43 / 58 · **Current P (2026-11-10_draft, COMMIT** 50) ÷ 50) × 0.80 × 8 = −2.18. The decisive new facts this cycle: October 2026 CPI (bls.gov, PRIMARY, released Tue Nov 10, 8:30am ET): headline **+0.4% m/m**, core **+0.3% m/m** (third straight 0.3% — Aug, Sept, Oct), energy +0.7% (af Conference, London, Nov 10 (federalreserve.gov, PRIMARY, verbatim): leaning toward +25bp in December, but "if the October CPI inflation data out later today are similar to the past two monthly readings, with core CPI inflation aro (FXStreet); a 100% figure attributed to TheStreet (via mlq.ai) is single-source and not used. 1yr/3yr HELD. Prior cycle's decisive fact: the October 2026 Employment Situation (BLS, released Nov 6, 2026, 8:30am ET; multiply corroborate Aug/Sept payrolls revised up a combined +84,000. Unambiguously hawkish ahead of the Dec 9 FOMC decision, which sits inside the 1mo window and close to the edge of the 3mo window — re-rated down −2 each. 6mo/12mo/36m verifiable date/text found; an updated CME FedWatch Dec 9 reading specific to post-jobs-report trading (market-price data in any case, never blended with institutional estimates). October CPI still due ~Nov 10, not yet released.

THE THREE INPUTS, IN PLAIN ENGLISH

P — the odds the macro regime is *good for crypto* by then — not "the Fed cuts by then." Re-rated down this cycle to **30 / 19 / 33 / 43 / 58** from 32 / 21 / 34 / 43 / 58: October CPI (BLS, prima

Quality — how trustworthy the evidence is. Unchanged this cycle per house rules.

Impact — 8 out of 10, the uniform value every pillar now shares in the equal-weight model. Liquidity is the tide; it moves the whole market at once.

Carried forward, still load-bearing: July PCE (bea.gov, primary, released Aug 26) printed a modestly hot headline read, +0.2% m/m / 3.7% y/y (0.1pp above consensus), core +0.2% m/m / 3. clean Fed signal; both already reflected in the committed baseline this cycle re-rates from.

The Claim

The thesis, and where I differ from the consensus — updated November 10, 2026 (LIGHT DAILY touch, score set 2026-11-10_draft, AUTO-STAMPED)

This cycle (Nov 10): the crowd will likely read October CPI as "inflation slowed" — headline eased to +0.4% m/m from +0.6%, and with no year-over-year number published, there is no scary an hike was already priced, so the move here is about the size and length of the hike path, which lands mostly on the 1mo and 3mo windows (−2 each), less on 6mo (−1). **P RE-RATED DOWN, 32/2**

Prior cycle (Nov 7): the crowd will likely read the October jobs beat — nonfarm payrolls +165,000 against a consensus of roughly 59,000-70,000, unemployment down to 4.1% — as a straightfo take the same-sized cut (−2 each); 6mo/12mo/36mo hold, since labor-market resilience was already partly priced into the Nov 4 baseline's ISM/JOLTS readings and one jobs report doesn't reach **RATED DOWN on two windows, 34/23/34/43/58 → 32/21/34/43/58** — 6mo/12mo/36mo held.

Prior cycle (Oct 15): the crowd will likely read the hot September CPI print — headline accelerating to 3.7% y/y, core to 2.6% y/y, both above consensus — as confirmation the Fed's hiking cycle still a hold favorite, which is why 1mo only takes −2, not a wholesale flip. December 9 is a different story: odds there are already elevated to 75–85% across sources, which is why 3mo takes the la held, since one print doesn't reach the 2029 liquidity regime.

Prior cycle (Sept 22): the crowd will likely read the Philadelphia Fed and NY Fed Empire State surveys by their falling headline-activity numbers — both surveys' general-conditions readings cool highest level since July 2022. That is a genuine, if soft, re-acceleration in the inflation pipeline landing barely a week after the Sept 16 hike and hawkish dot plot, and two independent Fed district cycle — this is a single targeted follow-up, not a fresh weekly sweep. **P RE-RATED DOWN, modestly, to 31/29/37/44/58** — 1mo/3mo/6mo down one point each; 12mo/36mo held, since two re

Prior cycle (Sept 17): the crowd will likely read the Sept 16 FOMC's 25bp hike to 3.75%-4.00% itself as the headline event. **Me:** that hike was ~92.5% priced into market odds beforehand, so its m 4.125%), and a slower projected descent through 2027-2028. Bitcoin's own reaction was a shrug (ticked up toward $76,300, then drifted back to hold near $76,000-198) — the market had this pri confirmed additional-hike path into Q1 2027; 12mo/36mo held, since the longer-run dots don't change this pillar's multi-year read.

Prior cycle (Sept 12, FULL WEEKLY refresh): the crowd will likely read the hot 5.4% y/y August PPI headline (BLS, Sept 10) — the highest of 2026 — as confirmation the inflation picture is worse reinforces the already-priced cooler-than-consensus CPI read from last cycle rather than contradicting it — a fresh, primary-sourced, sufficiency-qualified release that is nonetheless not a distinct flat finding — it is left as DRAFT for Alex's manual review, not auto-stamped.

Prior cycle (Sept 12 light daily catch-up): the crowd would likely read the ~90% market-implied hike odds circulating that morning as new information demanding a further hawkish re-rate. **M** house sufficiency rule it did not independently move P. **P HELD FLAT at 34/33/44/54/60,** AUTO-STAMPED.

Prior cycle (Sept 11): the crowd will take a headline that jumped from +0.1% to +0.4% m/m and read it as inflation re-accelerating into a hawkish FOMC. **Me:** look at what moved it — energy +2 in line at 2.4%. That is a modest dovish surprise in the windows that bracket the Sept 15-16 meeting, and it is why this pillar moves up two points at 1mo/3mo and one at 6mo rather than staying

The crowd: might read Warsh's studied refusal to commit to forward guidance as him keeping his options open, and treat the hawkish framing as just rhetoric until an actual vote. The abandone

Me: now at 32/31/43/54/60, down from the 36/35/45/55/61 this pillar held through Aug 29-Sept 3. That Aug 29 cycle's dedicated adversarial-verification pass re-pulled the CME FedWatch data c found nothing material on any pillar. **Sept 5:** the August jobs report (BLS, primary, released Sept 4) beat sharply — nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment steady at sourced print — not odds drift — so it clears the sufficiency bar for a further modest cut, concentrated on the windows bracketing the Sept 15-16 FOMC. **Sept 6 through Sept 10** (five further ligh

corroborated across CNBC, Yahoo Finance, UPI, and The Washington Times, logged as context for the CPI print due the next morning but not itself used to move P (the sufficiency bar for this pilla
light daily catch-up (morning): no new Fed speech or primary data release found since the CPI print; P HELD FLAT at 34/33/44/54/60, AUTO-STAMPED. **Sept 12, FULL WEEKLY refresh (afterno**
discrepancy. P HELD FLAT at 34/33/44/54/60, left as DRAFT for Alex's manual review since full weekly refreshes are categorically excluded from auto-stamp authority. The Sept 15-16 FOMC meeti

My edge: the discipline is in re-pulling the actual rate-odds venue rather than trusting the first number that circulates — this cycle that discipline caught a real error before it was ever delivered t
the real tests — Warsh explicitly declined to pre-commit to a reaction function, so this re-rate prices in a repriced *risk*, not a foregone decision.

The Facts

Updated November 10, 2026 (LIGHT DAILY touch, active set 2026-11-10_draft (COMMITTED, AUTO-STAMPED NOVEMBER 10, 2026)) — the new dated items are in the first box below; the second box holds the November 6–7 items,

★ NEW THIS CYCLE — NOVEMBER 10, 2026 (LOGGED NOVEMBER 10, LOCAL SECOND PASS)

Data — PRIMARY, a tenth hot on both measures. October 2026 CPI (bls.gov, PRIMARY, released Tue Nov 10, 8:30am ET): headline **+0.4% m/m**, core **+0.3% m/m** (third straight 0.3% — Au
outlets agree): a tenth hot on both. Core has now printed 0.3% in August, September and October.

Fed — PRIMARY. Governor Waller, Bank of England Watchers Conference, London, Nov 10 (federalreserve.gov, PRIMARY, verbatim): leaning toward +25bp in December, but "if the October C
credibility at risk". He added that if inflation came in "substantially higher" than he expected, "more robust action" might be needed. Core printed exactly at his 0.3% line.

Rate odds — MARKET PRICE, not an institutional estimate. CME FedWatch implied ~80% odds of a December 25bp hike before the release (FXStreet); a Reuters poll headline cited by FXSt

Corrected this cycle. The Hill cited a Cleveland Fed nowcast of ~3.7% annual inflation; BLS published no 12-month rate for October, so that figure is a model estimate, not a BLS number, and

NOVEMBER 6 – 7, 2026 (LOGGED NOVEMBER 7)

Data — a large, hawkish jobs beat. The October 2026 Employment Situation (BLS, released Friday Nov 6, 8:30am ET): nonfarm payrolls **+165,000** against a consensus of roughly 59,000-70,0
itself was unreachable this cycle via WebFetch (sandbox egress block), so this rests on multiple independent outlets consistently reporting the same BLS release — CNBC (two separate pieces),

Could not confirm — not used. A cited Nov 2-6 Fedspeak roundup (Barkin/Daly/Musalem/Cook/Hammack) had no verifiable date or text behind it — flagged, not scored. An updated CME F

NOVEMBER 2 – 4, 2026 (LOGGED NOVEMBER 4)

Data — firm activity, hot input prices. ISM Manufacturing PMI, October (released Nov 2): 55.5, up from 54.5; prices index 75.2 (ABA Banking Journal and Textile World reproducing the releas
a new hike.

Treasury — PRIMARY. Treasury's October–December 2026 marketable borrowing estimate: $618B (Nov 2, press release sb0675, home.treasury.gov). The quarterly refunding statement was no

Post-midterm price action — one day, no policy content. On Nov 4, after the Nov 3 midterms, the dollar index slipped to ~101.3–101.4, a one-month low, and the 10-year yield eased ~2–3

Rate odds — MARKET PRICE, not an institutional estimate. Dec 9 hike odds (CME FedWatch, MARKET PRICE, thin sourcing): ~77% Nov 3 → ~82% Nov 4. This confirms the already-priced D

CORRECTION to the November 2 cycle. That cycle quoted the Treasury par curve, Oct 29 → Oct 30, as "2y 4.73 → 4.65." Those were the **3-year** column's values. The true 2-year was **4.61** → 4

Calendar. October jobs report Fri Nov 6, 8:30 ET (bls.gov, PRIMARY); October CPI ~Nov 10. These are the next tests that could move P. **HELD FLAT at 34/23/34/43/58.**

PREVIOUS CYCLE — OCTOBER 29 – NOVEMBER 2, 2026 (LOGGED NOVEMBER 2)

Oct 30 hawkish Fed-president remarks, which the Oct 31 weekly missed. Dallas Fed President Logan (2026 voter), Oct 30: "the FOMC needs to implement at least two more 25-basis-point
(Reuters only — SINGLE-SOURCE, reported not scored). **Why no move:** they confirm the Dec 9 hike this pillar already prices; they do not add a new one. Logan's "at least two more" reaches p

Rate odds — MARKET PRICE, not an institutional estimate. Dec 9 hike odds (MARKET PRICE, CME FedWatch, not an institutional estimate): ~85% just after the Oct 28 decision, back to ~73

PRIMARY — the curve eased despite the remarks. Treasury par yield curve (PRIMARY, home.treasury.gov), Oct 29 → Oct 30: 2y 4.61 → 4.56 [CORRECTED Nov 4: originally printed as 4.73 → 4

Calendar. No Board or Chair remarks Oct 31 – Nov 2 (federalreserve.gov, PRIMARY). ISM Manufacturing (October data) was due Nov 2, 10:00 ET and was not out at research time. Treasury refu

★ NEW THIS CYCLE — OCTOBER 15, 2026

★ **THE DECISIVE NEW FACT, and the reason P moves down this cycle — the September 2026 CPI print, Bureau of Labor Statistics, released October 14, 2026, 8:30am ET.** PRIMARY (b
energy, specifically gasoline, **+9.1% m/m and +34.2% y/y**. This is a hawkish beat on BOTH headline and core — the core beat matters more for this pillar's purposes, since it's the measure th
September), not a cutting one — so a hot print here raises hike-continuation odds, not cut-delay odds, the way it would have in most of this pillar's history earlier in 2026.

MARKET PRICES, never blended with institutional estimates, labelled explicitly throughout. Kalshi/Polymarket-derived odds of an Oct 28 hike rose to roughly **34% (hold ~66%)** as of O
further to roughly **75–85%** across sources (wide spread, consistent with this pillar's standing practice of not quoting a single settled figure for noisy market pricing). This is why 3mo takes the

Also confirmed, not used to move P: New York Fed President Williams has previously floated "one further upward adjustment…late this year" (already partially logged in prior cycles) — cons

Score decision: P RE-RATED DOWN, 33/26/36/44/58 → 31/23/34/43/58 (−2/−3/−2/−1/0). This is an ordinary LIGHT DAILY touch, not a full weekly refresh — the sourcing (primary BLS da
delegated daily authority: status committed, stamped_by "Alex (auto-stamped)." Research capability was NOT degraded this cycle: WebSearch reached BLS-sourced reporting and multip

★ CARRIED FORWARD — THE WEEK OF OCTOBER 3 – OCTOBER 10, 2026

★ **A negative finding, stated plainly because it was deliberately checked for: there is NO government shutdown and no data disruption.** BLS's own release calendar and the Federal Re
exact H.4.1 reserve-balances dollar figure for the week ended Oct 7 could not be extracted from available sources this cycle; the release's normal-schedule occurrence is used only as "no shutdown"

★ **THE DECISIVE NEW FACT, and the reason P moves down this cycle — Fed Governor Christopher Waller, Istanbul Economic Forum (hosted by the Central Bank of the Republic of T**
increases are the likely next step if incoming data keep behaving as expected. (b) Inflation has been running above the Fed's 2% target for roughly 5.5 years. (c) The US economy strengthened
an old position. (e) He explicitly DOWNPLAYED the weak September nonfarm-payrolls print (+29,000 vs. ~84,000 consensus), describing the labor market as "solid and stable" despite the lowe
dovish narrative behind the prior cycle's large upward move clears the sufficiency rule on its own — it does not need a second corroborating primary source because it IS itself primary

★ **PRIMARY — DOL initial jobless claims, week ended Oct 3, 2026, released Oct 8, 2026** (corroborated by multiple independent outlets via a Reuters-sourced wire): **197,000**, with the PRIO
here as a continuation of labor-market resilience on the claims side, not a new deterioration signal, and NOT used to independently move any P — it is context, not a driver.

MARKET PRICES, never blended with institutional estimates, labelled explicitly throughout. CME FedWatch-style pricing for the Oct 27–28 meeting barely moved despite Waller's remark
across feeds (ranging roughly **62–84%** depending on source) but agree DIRECTIONALLY that implied December hike odds drifted higher since the prior cycle's reported "mid-60s to mid-70s%
inside the 3-month window, is why 3mo takes the larger cut (−3) versus 1mo's −2.

The 10-year Treasury yield was roughly FLAT this week — approximately **5.23% on Oct 8** versus approximately 5.24% on Oct 1 (the prior cycle's reading) — after an initial Waller-driven sp
didn't move much. 12mo and 36mo HOLD FLAT — one week of Fed-speaker rhetoric and noisy market pricing is, per the sufficiency rule, insufficient to move these longer horizons; no primar

Explicitly EXCLUDED this cycle — verification found these too weak/unreliable to use. A single wire report's claim that Goldman Sachs might shift to forecasting two more hikes is interna
resolved (FRED access was blocked this cycle) — no 2-year yield figure is quoted as fact. The exact H.4.1 reserve-balances dollar figure for the week ended Oct 7 could not be extracted from a

Score decision: P RE-RATED DOWN, 35/29/37/44/58 → 33/26/36/44/58 (−2/−3/−1/0/0), a partial reversal of the prior cycle's large +8/+4/+3/+1/0 upward move. This is a FULL WEEKLY independent outlets were all reached directly in two independent passes (one research, one adversarial verification).

★ CARRIED FORWARD — THE WEEK OF SEPTEMBER 26 – OCTOBER 3, 2026

★ **PRIMARY — August PCE undershot, BEA, released Sept 30, 2026.** Every element re-confirmed exact against bea.gov: headline PCE price index **+0.3% m/m and 3.4% y/y**; **core +0.2% m** *National Economic Accounts*, with revisions reaching back to January 2021, which is a genuine qualification on the level. Consensus figures are survey expectations, not institutional estimates; E

★ **PRIMARY — the September jobs report, BLS, released Oct 2, 2026 at 8:30 a.m. ET, and it contradicts the Fed's own stated rationale.** Nonfarm payrolls **+29,000** against an ~84,000 c from +21,000 to **−10,000** (−31,000) and August from +162,000 to +133,000 (−29,000); the arithmetic checks. **Three days earlier Governor Barr had said "risks to the labor market have re**

★ **PRIMARY — Vice Chair Philip N. Jefferson, "The U.S. Economy and Monetary Policy," Darden School of Business, University of Virginia, Oct 1, 2026.** Quote re-verified verbatim and of risks." A sitting Vice Chair explicitly slowing the pace. **NOT USED:** a secondary article placing this speech on Sept 30 is wrong — the Board's own calendar puts it Oct 1, and Sept 30 was a W

★ **THE HAWKISH COUNTERWEIGHTS, which are why this move is single-digit and stops at 12 months. (a) Governor Michael S. Barr, "Economic Conditions and Monetary Policy," D** *to the labor market have receded, so we need to recalibrate policy to get us in a better position that more evenly balances risks to both components of our dual mandate.*" and "*Earlier this month, endings are restored above.* **Critically, Barr spoke on Sept 29 — before both the Sept 30 PCE and the Oct 2 jobs report — so his remarks are not a response to either.** The September FO **estimate, BEA, Sept 30:** real GDP revised **UP to 2.2%** annualized from 1.5% (+0.7pp), real GDI +2.6% (+0.4pp), the GDP/GDI average +2.4% (+0.6pp). Growth is accelerating, not cracking. **(c) wrong way:** FRED DGS10 5.17% (Sept 25) → 5.24% → 5.26% → **5.29% (Sept 30)** → 5.24% (Oct 1), the series ending Oct 1 — there is no Oct 2 observation and none is asserted; a widely circula priced, *more* long-run inflation risk — which is exactly the de-anchoring this pillar tracks.

CORRECTED this cycle, and it kills a claim this system has been repeating: jobless claims are NOT at or near a 57-year low. The "near 57-year lows" / "lowest since 1969" framing carried **190,000** (Apr 25) both lower, besides 190,000 and 195,000 in Sept 2022 and 195,000 in Jan 2024; the series minimum is 162,000 (Nov 1968). **The level still does the analytical work without**

MARKET PRICES, never blended with the SEP. CME FedWatch October-hike odds collapsed to roughly **17–23%** (hold ~77–81%) as of Oct 2, from about 36% a week earlier. For December, c conflicting secondary citations of a market price and is labelled accordingly. These are market prices, not institutional estimates.

H.4.1, week ended Sept 30 (PRIMARY, released Oct 1, re-confirmed exact): reserve balances **$2,948,090M** from $2,930,193M, **+$17,897M w/w** — last cycle's record −$83,601M drain has *re*

★ NEW THIS CYCLE — THE WEEK OF SEPTEMBER 19–26, 2026

★ **PRIMARY — Fed Governor Michael S. Barr, "A Long-Term View on the Costs of Shelter," Sept 23, 2026, 10:05 a.m. EDT**, at the Chicago Fed's Housing Affordability 2026 summit. All th target and not clearly trending toward target in a timely way. Moreover, risks to achieving our inflation target have increased, while risks to the labor market have receded. We needed to recal *note, stated because it cuts against an earlier draft of this very cycle:* a first research pass reported the middle sentence as absent and the start time as 10:20 a.m.; both "corrections" were WRON

★ **PRIMARY — S&P Global flash US PMI, Sept 23, 2026.** The embargoed release ("Embargoed until 0945 EDT … 23 September 2026") was retrieved directly. Composite output **58.4** (from 5 reports selling-price inflation rising too, reversing August's nine-month low. *Figure deliberately not quoted:* an "input prices index 66.4 from 59.9" reading circulated in secondary coverage doe

★ **PRIMARY — University of Michigan Surveys of Consumers, FINAL September, released Sept 25, 2026.** Sentiment **48.1**, down 7.0% month-on-month from 51.7; current conditions 50.9 run break is the single most consequential figure in this pillar's cycle, because de-anchored long-run expectations are what extend a tightening cycle beyond one meeting — and it is the spec

★ **PRIMARY — DOL initial jobless claims, week ended Sept 19, 2026:** advance figure **197,000** (the "near 57-year lows" characterisation carried here was later found FALSE and is withdrawn and is, honestly, also a risk-on positive in its own right.

★ **PRIMARY — Federal Reserve H.4.1, week ended Sept 23, 2026.** Reserve balances **$2,930,193M against $3,013,794M** the prior week — a fall of exactly **$83,601M in one week**, arithme negative for crypto. **Honest qualifier:** it is substantially a mechanical TGA/tax-date rebuild rather than policy tightening, which is why it supports the move without driving it.

Two Fed voices, both DOWNGRADED on sourcing after verification — used as corroboration only, neither able to move P alone. *Boston Fed President Susan Collins, Sept 22:* the quote **effectively single-agency** and labelled as such. It had never been scored by any prior cycle — a genuine coverage gap, now closed. *NY Fed President John Williams, Sept 24, at NIESR's Londor* seems to me a reasonable way of thinking about it. **But we have to see. We're going to collect the data.**" Presenting that as his own flat assertion would be exactly the market-expectation-

Also logged this cycle, not scoreable. The Fed's own *Senior Credit Officer Opinion Survey* (Sept 24, primary) reports dealer pricing and non-pricing terms "remained basically unchanged, on **earlier "cooling rate-sensitive sectors" framing, and that framing is softened accordingly** (figure is secondary-sourced; the Census PDF would not parse). Census advance durable goods

MARKET PRICES — reported, and never blended with the SEP's institutional estimates. The 10-year Treasury yield rose **4.96% (Sept 22) → 5.11% (Sept 23) → 5.18% (Sept 24)**, the high research time) and *supersedes* its press-sourced "5.104%" intraday quote with the primary constant-maturity close. The 2-year is quoted at 4.947%, the highest since May 2024 (secondary). CM odds of a cut by June 2027" line. *A claimed data-integrity finding was RETRACTED rather than printed:* an initial pass reported that FRED's plain-text DGS10 endpoint returns September 2026 v finding. The 5.11/5.18 values are unaffected.

RE-CONFIRMED FROM PRIMARY — the Sept 16 FOMC and its dot plot. The statement reads "The Committee decided to raise the target range for the federal funds rate by 1/4 percentag report's standing line — 16 of 18 officials seeing at least one more 2026 hike, 12 of 18 at exactly one more — is **correct as written** and survives re-verification.

THE TEST HAS LANDED, AND IT CAME BACK TWO-SIDED. August PCE and the Q2 GDP third estimate released **Sept 30** (BEA, primary). Core PCE printed 3.0% y/y, but roughly 0.15-0.2 poi 23-26 cut — held flat on the Oct 1 daily touch.

★ ★ **NEW this cycle — Philadelphia Fed Manufacturing Business Outlook Survey, released Sept 17, 2026 (primary source page confirmed at philadelphiafed.org; that month's PDF di** from 47.4, but **prices paid rose to 48.6 from 40.9** (50.5% of respondents reporting higher prices vs. 1.9% lower) and **prices received rose to 31.3 from 17.7** — a re-acceleration in the inflat

★ ★ **NEW this cycle — New York Fed Empire State Manufacturing Survey, released Sept 15, 2026 (PRIMARY, fetched directly from newyorkfed.org):** general business conditions cooled

- **Why this clears the sufficiency bar:** two independent Federal Reserve district banks' own primary surveys, dated the same week, showing the same directional signal (headline activity coolin
- **Why only one point:** both are soft/sentiment surveys, not hard CPI/PCE prints; both releases' own headline-activity and forward-looking components (employment, future activity, general co
- **12mo/36mo HELD** — two regional sentiment surveys say nothing about the 2027-2028 policy path those windows price.
- **Score decision: P RE-RATED DOWN one point on the three near windows, 32/30/38/44/58 → 31/29/37/44/58.** Research capability fully available this cycle (WebSearch clean; WebFetch

Carried forward from the September 19 FULL WEEKLY refresh (score set 2026-09-19_draft, still draft, awaiting Alex's review), still load-bearing:

★ ★ **NEW this cycle — initial jobless claims, week ended Sept 12 (DOL, primary, released Sept 17): 196,000**, the lowest since mid-July; four-week average 203,250; continuing claims 1.730

★ ★ **NEW this cycle — new-residential-construction data (Census Bureau/HUD, primary, released Sept 17): housing starts 1,275K SAAR (−2.6% m/m), permits 1.394M (−2.7% m/m).** sufficiency rule; flagged for next cycle if the cooling repeats.

- ★ **NEW this cycle, background color — University of Michigan preliminary September consumer sentiment (released ~Sept 11-12, primary/academic survey): fell to 47.8 from 51.7** re-rate.
- **Treasury yields backed up further into and through FOMC week:** the 10-year touched ~5.04% intraweek, a 19-year high, before settling near 4.94-4.95% by Sept 18 as oil prices eased; 2-5
- **CME FedWatch (market price, not scored):** the October 27-28 FOMC meeting priced a **55.1% probability of another 25bp hike** as of Sept 17, 2026 — compare pre-Sept-16-meeting pricin
- **A high-profile political story broke in parallel: President Trump and senior administration officials (the Vice President, the Treasury Secretary, and an economic counselor) publicly** Hill, Bloomberg). A governance/Fed-independence storyline, not new economic evidence — the Fed didn't capitulate, if anything this reinforces the hawkish path holding — logged, not score
- **Bank-forecaster reactions, logged not scored:** Goldman Sachs's post-meeting note expects an October hike with no December hike in its base case; an earlier BofA call for three 2026 hikes
- **Fed Vice Chair Bowman's Sept 18 speech in London (Mansion House, federalreserve.gov, primary)** covered bank stress-testing rule finalization — not a monetary-policy or rate signal, n

- **Score decision: P HELD FLAT at 32/30/38/44/58.** Full independent primary-source research this cycle (~15 targeted WebSearches, no capability degradation); nothing above clears the suffi

Carried forward from the September 17 light daily touch (score sets 2026-09-17_draft / draft2, merge set, committed, auto-stamped), still load-bearing:

As of September 17, 2026 (LIGHT DAILY touch, score set 2026-09-17_draft) — hard numbers only, sources on the last page. New this cycle: the Sept 16 FOMC decision and its SEP/dot plot; the Sept 12 weekly-refresh material further

★ ★ **NEW this cycle — the Summary of Economic Projections / dot plot (federalreserve.gov, primary).** 16 of 18 participants project at least one more 2026 rate increase; 12 of 18 specifica document, not a market price, and clears the sufficiency bar on its own.

- **Bitcoin's reaction was muted:** ticked up toward $76,300 on the statement, then drifted back to hold near $76,000-198 through Chair Warsh's press conference (CNBC, Coinpedia) — consiste
- **Score decision: P RE-RATED DOWN, modestly, to 32/31/42/54/60** — 1mo 34→32, 3mo 33→31, 6mo 44→42; 12mo/36mo HELD FLAT at 54/60. Light daily touch, master call band unchang

★ **Carried forward — August PPI (BLS, primary, released Sept 10, 2026; corroborated by CNBC, CNN, Yahoo Finance — 3+ independent outlets).** Headline final demand **+0.4% m/m** (in (+0.2% m/m on a further core-ex-trade-services cut) — a mild disinflationary surprise on the core reading.

- **Score-relevant read on the PPI print:** reinforces, rather than contradicts, the already-priced "cooler than consensus" August CPI narrative — **not a distinct new directional catalyst**, so it do
- **Re-verified August CPI (BLS, released Sept 11) independently this cycle:** headline +0.4% m/m / +3.4% y/y, core +0.3% m/m / +2.4% y/y, shelter +0.3% m/m / +3.0% y/y — matches the fi
- **DOL initial jobless claims, week ending Sept 5 (released ~Sept 11, primary): 206,000, down 1,000 w/w, 4-week average 206,000** — steady, unremarkable, no signal.
- **CME FedWatch-tracked market-implied odds of a 25bp hike at the Sept 15-16 FOMC read ~62-69% this week (as of Sept 10-11)** — a *market price* only, not an institutional estimate, e editorialized on.
- **Fed Chair Warsh: no new substantive remarks since the Aug 28 Jackson Hole speech.** A Sept 9 Marketplace piece characterizing him as withholding forward guidance ahead of the meeti
- **The Sept 15-16, 2026 FOMC meeting had NOT yet occurred** as of the Sept 12 research pass — it has since occurred and fired; see the NEW facts above.
- **Historical score decision (Sept 12 cycle, superseded):** P HELD FLAT at 34/33/44/54/60 — FULL WEEKLY REFRESH, left as DRAFT for Alex's manual review at the time (weekly refreshes are ca

Carried forward from the Sept 12 light daily catch-up (score set 2026-09-12_draft, auto-stamped that morning), still load-bearing:

- **Re-checked — no new Fed speech or primary data release found since the Sept 11 CPI print.** Coverage of ~90% market-implied hike odds circulating that morning traced to Fed Chair W

★ **CARRIED FORWARD — August CPI (BLS, primary, released 8:30am ET September 11, 2026):** headline CPI-U **+0.4% m/m seasonally adjusted** after +0.1% in July, **+3.4% y/y NSA**. Core

- **CARRIED FORWARD — versus consensus:** pre-print expectations circulating were headline +0.4% m/m / 3.4% y/y and core +0.4% m/m / 2.4% y/y. **Headline landed exactly in line; core ca**
- **Market-implied September hike odds around the print read ~70% for a 25bp move** — a *market price*, not an institutional estimate, reported for context and explicitly not used to move P
- **Data-hygiene note, logged:** several aggregator summaries of this print published within minutes carried figures inconsistent with the BLS release (for example a 3.1% core y/y). They were di

Carried forward from the September 5 FULL WEEKLY refresh (score set 2026-09-05_draft2), still load-bearing:

★ ★ **NEW — August jobs report (BLS, primary, released Sept 4): nonfarm payrolls +162,000 vs. ~53-55,000 consensus; unemployment steady at 4.1%.** A sharp upside beat, corroborate

★ ★ **NEW — markets repriced September 15-16 FOMC hike odds higher off the jobs beat.** Point estimates vary by source/timestamp (roughly 60-66% hike probability cited across CNBC, F Chair Warsh reiterated the need to keep fighting inflation; Governor Waller said he'd lean toward holding if inflation data improves. Market commentary (Morgan Stanley-style framing, echoe

★ ★ **NEW — same-day market reaction, Sept 4 (multi-source corroborated): 2-year Treasury yield +5.3bp to its highest level since January 2025;** Dow −271.86 pts (−0.51%) to 53,414.2

- **BTC fell ~2% same-day: $81,265.00 (Sept 3 close) → $79,676.60 (Sept 4 close)** (data/btc_usd_daily.csv) — consistent with a hawkish-surprise risk-off reaction; BTC $79,646.11 Sept 5.
- **Score decision:** this is a fresh, dated, primary-sourced print (not odds drift alone), sized comparably to the Aug 22→28 catch-up cut for a comparable single dated catalyst — P re-rated down

Carried forward from the Sept 3 light daily catch-up (no new score set — nothing material found on any pillar that cycle):

- **Re-checked CME FedWatch and the H.4.1/data calendar; found no fresh primary print or news event dated Sept 2-3.** config/scores.json untouched; run.py blend re-run against fresh q

Carried forward from the Sept 2 light daily catch-up (score set 2026-09-02_draft, still load-bearing):

- **No new H.4.1 or data print found dated Sept 1-2.** September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continued the same post-Jackson-Hole drift already priced in
- **BTC traded at $76,581.44 on Sept 2** — down from $78,038.78 on Sept 1 (Bitstamp) — a real pullback, but driven by the Iran War Risk escalation covered in that pillar's report, not by anythin

Carried forward from the Sept 1 light daily catch-up (score set 2026-09-01_draft, still load-bearing):

- **CME FedWatch September hike odds read ~66% around 11:40am ET Aug 31** (Forbes/KuCoin), up from the ~60.4% CNBC read already priced into the Aug 31 baseline — the same intrada
- **No new H.4.1 or jobless claims release Aug 31-Sept 1** — Aug 31 was Labor Day, a US federal holiday; next H.4.1 is due Sept 3.
- **BTC traded at $78,038.78 on Sept 1** — down from $78,447.16 on Aug 31 (Bitstamp).

Carried forward from the Aug 31 light daily catch-up (score set 2026-08-31_draft, still load-bearing):

- **CME FedWatch September hike odds drifted to ~60.4% by Aug 31** (CNBC Jackson-Hole-analyst-roundup, up from ~56% Friday, Aug 28), continuing the same repricing already sized into

Carried forward from the Aug 29 full weekly refresh (still load-bearing):

★ ★ **ADVERSARIAL CORRECTION — the abandoned Aug 28 draft's CME FedWatch September hike-odds figure (~35.4%→~45.7%) UNDERSTATED the real market move.** A dedicated own body text says "nearly 56%" (its "coin flip" headline rounds that down, it does not contradict it); a third independently-sourced read says "55.7%... about 20 points higher than a day ago." cluster. **Corrected characterization: ~35% to roughly 56-58%** — past coin-flip, into hike-more-likely-than-not territory, a bigger move than first drafted.

★ ★ **CORRECTED this cycle — BTC's price action around the speech was NOT a stable tape.** The abandoned Aug 28 draft's framing ("stable tape... not one BTC visibly flinched") is corrected today. BTC did react to the speech, with continued downward drift into this cycle.

★ ★ **NEW this cycle — initial jobless claims, week ended Aug 22 (DOL, primary, released Aug 27): 203,000 vs. 208,000 consensus,** down from the prior week's revised 207,000; continuing

★ ★ **NEW this cycle — Fed H.4.1, week ended Aug 26 (federalreserve.gov, primary): reserve balances $2,924,936M (−$10,351M w/w); Treasury General Account $950,736M (−$2,876**

- **No new CPI/PPI release in this window** — next releases Sept 10-11, unchanged from the prior baseline. No public pushback found from any other Fed official on Warsh's hawkish tone this
- **Score decision:** the corrected, larger CME move justifies a deeper cut than the abandoned Aug 28 draft's 38/37/46/55/61 — P re-rated down to 36/35/45/55/61, concentrated on the 1mo/3r

Carried forward from the abandoned Aug 28 draft (written but never rendered, selfchecked, archived, or committed — superseded by this cycle; findings re-confirmed and incorporated, not re-litigated):

★ **Fed Chair Kevin Warsh's first Jackson Hole speech as Chair, Aug 28, 10:00am ET (federalreserve.gov, primary transcript, confirmed verbatim this cycle via direct fetch; corroborated** "And while this summer's PCE and CPI readings were better than expected, they do not tell me that underlying trends have meaningfully improved." Also: "We must be confident that underlyi paraphrase used independently by CNBC, Yahoo Finance, Forbes, and Spectrum News (well-corroborated as a characterization), not a direct Warsh quote; flagged as paraphrase here. This was

★ **July PCE (bea.gov, primary, released Aug 26): headline +0.2% m/m, 3.7% y/y (0.1pp hot vs. consensus); core +0.2% m/m, 3.3% y/y (in line).** Consumer spending +0.2% m/m ($36.3B)

- **2-year Treasury yield rose to a roughly one-month high: confirmed +6.6bp to 4.29% intraday-close** (one source cites a peak of +9bp to 4.32%); the 30-year yield eased about 1.5bp; sto
- **BTC closed at $79,613.44 on Aug 28 (Bitstamp)** — this price point is now superseded by today's $77,666.16 close (Aug 29); see the corrected price-action fact above.

Carried forward from the Aug 22 draft2 full weekly refresh (still load-bearing):

★ **The Jul 28-29 FOMC minutes' hawkish bloc runs wider than previously known (federalreserve.gov, primary, published Aug 19; corroborated by CNBC, Quartz, Newsquawk, goldsil** Inflation cited: PCE 4.1% (May actual), core 3.4%; the June staff estimate was 3.7% headline / 3.3% core, "remains elevated." Labor cited: unemployment steady at 4.2% (June), wage growth 3.5

★ **★ NEW this cycle — the 30-year Treasury yield hit 5.31-5.33%, a ~19-year high (highest since 2007), around Aug 17-18** (Bloomberg, CNBC, Axios). Driven substantially by fiscal/deficit

★ **★ NEW this cycle — equities sold off Aug 20:** S&P 500 −0.87% to 7,641.16; Dow −703.84 pts (−1.32%) to 52,759.21 (partly a ~9% Walmart-earnings-driven drop, not purely Fed-driven); Na

★ **★ NEW this cycle — CME FedWatch (September meeting) independently re-verified directly, cross-venue:** ~68-70% hold probability across multiple contemporaneous reads as of Aug content priced in.

★ **★ DISCARDED — a separately-circulating claim of "93.6% September hike probability" was traced this cycle to a garbled data conflation.** It appears to be Kalshi's JULY meeting hold-

- **Jobless claims week ended Aug 15 (DOL, primary, released Aug 20): 206K, down 6K, vs. 210K consensus; 4-week average 204K.** Confirms the low-layoff, tight-labor trend already in th
- **Aug 22 score decision (superseded by this cycle):** the hawkish minutes detail and the noisy weak retail-sales print largely offset an already-priced rate-odds market — netted to a wash; P h
- **BTC closed at $77,266.84 on Aug 22 (Bitstamp)** — vs. $79,613.44 on Aug 28 and $77,666.16 on Aug 29 (see this cycle's facts above).

Carried forward from the Aug 22 draft1 catch-up cycle (independently re-confirmed, still load-bearing):

- **No new Fed H.4.1 release since the week ended Aug 19 (federalreserve.gov, primary, published Aug 20):** that remains the current release; the next H.4.1 is due Aug 27. No new CPI (nex
- **No new public remarks from Chair Warsh between the Jul 29 FOMC press conference and the Aug 28 Jackson Hole speech (see this cycle's facts above).**

Carried forward from Aug 20 (re-confirmed this cycle, still load-bearing):

- **FOMC minutes from the Jul 28-29 meeting confirm the known 9-3 hold vote and the Hammack/Kashkari/Logan dissent for an immediate 25bp hike.** Inflation risks characterized as t
- **Offsetting signal, re-confirmed and expanded this cycle: CME FedWatch showed the odds of a September 16 hold rising to ~65% post-minutes, up from a pre-minutes ~50/50** (Ne

Carried forward from Aug 16 (still load-bearing):

- **July retail sales (Census Bureau, published Aug 14, primary release): headline −0.6% m/m vs. +0.1% expected, core (ex-auto) −0.2% m/m, still +5.0% y/y.** The first monthly decline i against chasing single prints, this alone doesn't move P.
- **Recalled for continuity, not re-scored:** the Aug 17 Empire State Manufacturing Survey surged to 20.6 vs. 11.0 consensus, the highest since 2022 — a hot beat cutting against the recent cool

Carried forward from Aug 13-14 (still load-bearing):

- **Fed H.4.1, week ended Aug 12 (federalreserve.gov, published 4:30pm ET Aug 13): reserve balances $2,944,059M, down $49,290M w/w; Treasury General Account $963,950M, up $**

Carried forward from Aug 12-13 (still load-bearing):

- **July CPI (BLS, published Aug 12): headline +0.1% m/m / +3.4% y/y; core +0.2% m/m / +2.5% y/y** — landed cool, exactly in line with consensus, drove the Aug 13 re-rate up.
- **Initial jobless claims, week ended Aug 8 (DOL/ETA, published Aug 13): 209,000 actual vs. 202,000 expected** — a genuine weak-side miss, 8-week high, the second trigger behind the A

Carried forward from Aug 8-10 (still load-bearing):

- **Initial jobless claims for the week ended Aug 6 (published Aug 8): 262,000 actual vs. 263,000 expected** — essentially in line with consensus, noise rather than a surprise.

Carried forward from Aug 8-9 (still load-bearing):

★ **BLS Employment Situation, July 2026: nonfarm payrolls FELL 23,000** versus a consensus estimate of ~83,000 (WSJ-sourced; a competing 95,000 Barron's-sourced figure is less corroborate BLS release — meets the 2+ independent sufficiency bar.

- **May and June payrolls revised down a combined 103,000** — confirmed, matches the light draft exactly. (One Forbes-sourced fetch this cycle produced a garbled "-252,000 total" figure tha
- **Unemployment ticked down to 4.1% from 4.2%,** but the labor-force participation rate fell to 61.4% — its lowest level in over five years.

★ **★ NEW this cycle — average hourly earnings rose just 3.2% y/y,** down from 3.4% in June and now trailing CPI (3.5% June y/y) — real wages softening, a detail the same-day light draft did

★ **★ CORRECTED — CME FedWatch September-hold odds check out at ~56%,** not the light draft's ~60%. Two independent corroborating sources (CBS News, a Forbes-sourced pull) both ci 65% hold.

★ **★ NEW this cycle — real forecaster disagreement on magnitude:** Bank of America explicitly called the report "a bit dovish on net" but is **sticking with its call for 75bp of hikes in 2026** (S the deciding factor for September, not this jobs report alone.

★ **Jobless claims for the week ended Aug 1: 199,000, 4-week average 198,750** — the lowest of this cycle, in real tension with the weak payrolls print. Points to "low-hire, low-fire" stagnation

Carried forward from Aug 7 (still load-bearing):

★ **Fed H.4.1 for the week ended Aug 5 (federalreserve.gov, direct pull):** total assets $6,748,567M, reserve balances $2,993,349M — reserves +$8.78B w/w, TGA -$3.45B w/w. An unremarkabl

Carried forward from Jul 30-Aug 5 (still load-bearing):

★ **★ CONFIRMED, PRIMARY SOURCE — the FOMC held rates at 3.50-3.75% on Jul 29, 2026, on a 9-3 vote.** Three regional-bank presidents — Beth Hammack (Cleveland), Neel Kashkari (M projections meeting; next SEP is Sept 15-16, 2026).

★ **Chair Warsh's press conference was unusually combative and offered no forward guidance:** "there is no soft inflation target... not on this committee's watch"; "the five-plus years of infla July 2007 — a "bear steepener" consistent with rising inflation-credibility concern.

★ **★ CONFIRMED, PRIMARY SOURCE — jobless claims for the week ended Jul 25 came in at 197,000** (DOL/ETA release, fetched and read directly), a genuine +9,000 increase; the prior wee meaning the "lowest since 1969" framing was real but mechanically set to partially reverse, exactly as it did.

★ **The September hike-odds figure could not be reconciled to a single number this cycle, despite four direct attempts.** Live pulls produced 55.8% (Fox Business, Jul 28), 62.4% (Investing.c

- **H.4.1 balance sheet: no new release found for the week ended Jul 29** as of this check (normal Thursday-afternoon publication timing); the most recent confirmed release remains Jul 23 (w
- **Bank of America projects three 25bp hikes in 2026** (to 4.25-4.50%) — single-source (Forbes, citing BofA), flagged not scored.
- **Carried forward, not re-verified this cycle:** June CPI (-0.4% m/m) and PPI (-0.3% m/m), both BLS-primary-confirmed in a prior cycle; Warsh's Jul 14/15 congressional testimony; the June FO
- **The labor market cracked in slow motion, then partially un-cracked this week** — June payrolls +57K vs ~115K consensus (carried forward); this cycle's 197K claims print, while up from 18
- **Policy rate and balance sheet: 3.50-3.75%, next FOMC (with SEP/dot plot) is Sept 15-16, 2026.** Fed communications blackout ended with the Jul 29 meeting; watch for the first round of
- **BTC closed at $64,706.50 (Jul 30)** — holding up despite the hawkish FOMC surprise and confirmed equity/bond-market risk-off reaction. **Updated: BTC closed at $64,661.55 on Aug 5**, ess

The Prize

Illustrative only — not price targets, not advice

The canonical anchor: **2020-21 ZIRP + QE** ran BTC ~$3,800 → $69,044 (~15–18×) — a unique COVID/zero-rate/open-ended-QE setup, not a repeatable base case. The **2024-25 cuts** ran ~$60
already priced into this pillar's current committed score; nothing new since then moved this pillar). From here, a retest of the $126K high ≈ **+53.6%**.

Discount it hard, twice. First: easing is not an automatic catalyst — the last cycle topped on a non-Fed shock. Second: the Sept 16 hike and its hawkish SEP already reflect a real repricing of nea
forecaster (BofA) has been calling for 75bp of 2026 hikes since early August and no longer looks like an outlier after the Sept 16 hike. The Prize doesn't feed the math — it tells you what the 3

The Other Side

The strongest honest case my re-rate — even the moderated one — is still wrong

- **This re-rate might not be conservative enough a read on BofA's stance.** Bank of America has been calling for 75bp of 2026 hikes since early August, straight through the cool CPI print thi
- **Warsh explicitly avoided committing to a reaction function — this report may be over-reading a rhetorical signal into a real repricing.** The CME odds move is real, quantified, and now
- **The adversarial-verification pass caught one error in the abandoned draft's CME figure — it may not have caught all of them.** This cycle corrected 45.7% to the high-50s cluster, but th
- **I may still be over-reacting to one speech and one data print.** This pillar has already seen a claims number ("lowest since 1969") partially reverse the following week on a seasonal-adjustm
- **The FOMC's own hawkish dissent hasn't gone away and now looks more, not less, mainstream.** Three regional presidents voted for an immediate hike on Jul 29, and Warsh's Aug 28 rem
- **Downward revisions can themselves get revised.** The BLS's own benchmark process regularly adjusts prior months; May-June's combined 103,000 downward payroll revision is a real, prima
- **Weak labor data plus a still-elevated inflation/oil backdrop (Iran-driven, and this cycle's Iran pillar got worse, not better) is stagflation risk, not straightforwardly bullish.** If the Fed

The Triggers

Dated events — some prove the claim right, some prove it wrong. ***Checked Nov 10, 2026 (LIGHT DAILY touch, 2026-11-10_draft (COMMITTED, AUTO-STAMPED NOVEMBER 10, 2026)) — a trigger FIRED: October CPI (BLS and retail sales, the FOMC minutes, then the Dec 8–9 FOMC. Checked Nov 7, 2026 (LIGHT DAILY touch, 2026-11-07_draft (COMMITTED, AUTO-STAMPED NOVEMBER 7, 2026)) — a trigger FIRED: the October jobs rep (LIGHT DAILY touch, 2026-11-04_draft2 (COMMITTED, AUTO-STAMPED NOVEMBER 4, 2026)) — no trigger fired. ISM Manufacturing October 55.5 (prices 75.2) and JOLTS September 7.5M (bls.gov) fit the priced haw president remarks (Logan, Musalem; Barkin single-source), missed by the Oct 31 weekly, are now logged; they confirm the already-priced Dec 9 hike (CME FedWatch ~73–76%, MARKET PRICE, inside the ~74–79% b multiple market-price sources (~70-85%, within the already-priced band) — does not independently move P. Checked Oct 30 and again Oct 31, 2026 — no change; October jobs (~Nov 6) and October CPI (~Nov 10) DAILY touch) — FOMC Oct 28 decision: HELD at 3.75-4.00%, 10-2 (Cook/Hammack dissent) — CONFIRMS baseline, no re-rate. Checked Oct 24, 2026 (FULL WEEKLY refresh) — DOVISH fired, 1mo re-rated up.*** *Fed Ch primary-verified, Williams hedged, Collins single-agency) confirmed the prices-paid re-acceleration, but no hard CPI/PCE/PPI print has landed.* ***August PCE and the Q2 GDP third estimate on Sept 30 are the test****, four days out.*

DATE	EVENT
FIRED Nov 10, 8:30am ET — HAWKISH, PRIMARY (bls.gov + federalreserve.gov)	**October 2026 CPI:** headline +0.4% m/m (vs. +0.3% consensus), core +0.3% m/m (vs. +0.2%), the third straight 0.3% core print; energy +0.7% after +5 print around 0.3% means a 50bp December hike "should be considered." MARKET PRICE (labelled distinctly): ~80% December-hike odds pre-release (
Checked Nov 4, 2026 — LOGGED, CONFIRMS BASELINE (JOLTS via bls.gov PRIMARY; Treasury borrowing estimate and par curve PRIMARY)	**Nov 2–4 data:** ISM Manufacturing October 55.5 from 54.5, prices 75.2 (ABA Banking Journal, Textile World, Bloomberg headline; ismworld.org paywal PRIMARY, Nov 2). RESOLVED — Sept 15-16, 2026 (carried forward)	FOMC hiked, confirming the corrected, larger hawkish repricing this cycle's Aug 29 re-rate anticipated
Ongoing	Iran/Hormuz oil-inflation risk — see Iran War Risk pillar for the current read

The flip line, updated Oct 1 — RESOLVED, and it came back two-sided, not a confirmation. The test this pillar set for itself was whether "the next hard CPI/PCE/PPI print or FOMC communication confirms the telegraphed BEA methodology change (pre-announced June 2026) mechanically accounts for roughly 0.15-0.2 points of that apparent cooling, so it is not read as a clean confirmation of disinflation. Q2 GDP was r touch. A government shutdown was separately averted through Dec 11, removing a near-term data-disruption risk. The genuinely two-sided facts to keep in view either way: growth is strong, layoffs are not rising

Prior flip line, Sept 11: the Aug 13 cool CPI and weak claims print were the last genuine dovish confirmation this pillar found. Since then, the Aug 19 minutes' wider hawkish bloc, Warsh's Jackson Hole words, a h — past coin-flip. Still not a confirmed pivot: Warsh explicitly declined to commit to a reaction function, and Fed officials remain publicly split (Warsh hawkish, Waller conditionally dovish). The August CPI print, due the committee, and re-rate back up.

My Decision

November 10, 2026 — LIGHT DAILY touch, local second pass (this pillar RE-RATED DOWN; CLARITY Act, Iran War Risk and Tokenization held, see those reports): the cloud's ~8:03am ET pass ran changes (October 2025 data were never collected during the shutdown). Consensus was +0.3% headline / +0.2% core (LSEG via Fox Business; FXStreet — two independent outlets agree): a tenth hot on bo even higher" then "a 50 basis point hike in the policy rate should be considered at the December meeting. Hiking only 25 basis points would put our credibility at risk". Both are primary sources, and the co about the same size as the October 14 re-rate on the hot September CPI.

November 7, 2026 — LIGHT DAILY touch (this pillar RE-RATED DOWN; CLARITY Act, Iran War Risk and Tokenization all held, see those reports): re-checked this pillar's trigger table against primary consistently reporting the same release, which meets the sufficiency bar): nonfarm payrolls +165,000 against a consensus of roughly 59,000-70,000, a large beat; unemployment fell to 4.1% from 4.2%; aver not used: a cited Nov 2-6 Fedspeak roundup (Barkin/Daly/Musalem/Cook/Hammack) with no verifiable date/text found; an updated CME FedWatch Dec 9 reading specific to post-jobs-report trading, no re resilience was already partly reflected in the Nov 4 baseline's ISM/JOLTS readings. The active set is now **2026-11-07_draft (COMMITTED, AUTO-STAMPED NOVEMBER 7, 2026)** — an ordinary light daily both Neutral; master 1mo −2.07 / 3mo −1.88 / 6mo −0.73 / 1yr +1.06 / 3yr +2.80, no call band flipped. October CPI ~Nov 10 remains the next dated catalyst.

November 4, 2026 — LIGHT DAILY touch (this pillar HELD FLAT; CLARITY re-rated down after the Nov 3 midterms in this pass; Iran War Risk carried at the cloud set's committed 11/30/65 on 6
bls.gov, PRIMARY): openings 7.5M, little changed. Treasury Oct–Dec borrowing estimate $618B (Nov 2, sb0675, PRIMARY); refunding statement not yet posted at research time. Treasury par curve (PRIMARY sourcing) — confirms the already-priced hike. No new Fed remarks Nov 2–4 (federalreserve.gov, PRIMARY). **CORRECTION:** the Nov 2 cycle's Treasury-curve figure "Oct 29 → 30: 2y 4.73 → 4.65" quoted the the cloud's committed 2026-11-04_draft. 2026-10-31_draft (FULL WEEKLY refresh) remains DRAFT, awaiting Alex's stamp. THE FINAL NUMBER moves to -0.13 equal-weight / +0.40 horizon-weighted (from

November 2, 2026 — LIGHT DAILY touch (this pillar HELD FLAT; Tokenization re-rated up on 1mo/3mo, see that report): re-checked this pillar's trigger table against primary sources. Logged the thr 30: "Additional firming of monetary policy will be necessary, and soon" (Reuters + investinglive/24/7 Wall St); Richmond Fed President Barkin, Oct 30 (Reuters only — SINGLE-SOURCE, reported not scored). Oct 29 → Oct 30: 2y 4.61 → 4.56 [CORRECTED Nov 4: originally printed as 4.73 → 4.65, which was the 3-year column, not the 2-year], 10y 4.98 → 4.94, 30y 5.32 → 5.31. No Board or Chair remarks Oct 31 – N **— nothing cleared the sufficiency rule for a move.** The active set is now **2026-11-02_draft (COMMITTED, AUTO-STAMPED NOVEMBER 2, 2026)**, at the same values as 2026-10-31_draft (FULL WEEKL the Bitcoin TA pillar's 1mo (61→60) on the weekly/monthly bar rollover (BTC $77,604.41, Nov 2 intraday, local run, Bitstamp direct) — not this pillar.

November 1, 2026 — LIGHT DAILY touch (this pillar held flat; no qualitative pillar moved this cycle): re-checked this pillar's trigger table against primary sources via WebSearch. No new Fed-official r **partially resolved:** multiple independent market-price sources, mostly dated Oct 28–31 (CME FedWatch-derived desk calc ~85%, OIS-derived rateprobability.com ~73%, a futures/Polymarket aggregator ~ not a large, well-corroborated move by this pillar's own standing practice (contrast the Oct 16 Warsh re-rate itself, which required a primary-source remark corroborated by 7+ outlets, not odds alone) — **d** nudged up, on the now-finalized Oct 31 close ($77,476.37 via GitHub Actions, up 0.28% from the Oct 30 finalized close of $77,256.82) — lifting its own 1mo P (60→61) — so THE FINAL NUMBER holds at −

October 31, 2026 — FULL WEEKLY refresh (this pillar held flat; a deeper research pass run separately from, and after, this same day's light daily touch below): four independent, primary-source-fi official remarks were found dated Oct 29-31 from Warsh, Cook, Hammack, Williams, Barr, Collins, Bostic, or Logan. A stopgap continuing resolution (3-outlet secondary corroboration: Fox News, Bloomberg wide outage, but returned materially thin, often off-target (pre-release-preview or prior-year) results specifically for post-FOMC/post-PCE market-reaction coverage dated Oct 29-31 — no confirmed Decer for "research capability materially degraded this cycle" — but it is flagged prominently for Alex as worth a manual spot-check of December FedWatch/Polymarket odds before treating "no move" here as fu **auto-stamp regardless of research quality or how flat the result** — 2026-10-31_draft stays DRAFT, awaiting Alex's manual review. THE FINAL NUMBER holds at −0.06 equal-weight / +0.48 horizon-weig

October 30, 2026 — LIGHT DAILY touch (this pillar held flat; no qualitative pillar moved this cycle): re-checked via WebSearch. October jobs (BLS Employment Situation) and October CPI are not yet 29-30. Current government-shutdown status for this specific window could not be independently confirmed either way — an open research gap, not a finding of shutdown or no-shutdown. **HOLD FLAT —** GitHub Actions, up 1.3% from yesterday's $79,991.36 intraday read) — lifting its own 1mo/3mo/6mo P 61→62 — so THE FINAL NUMBER ticked to −0.04 equal-weight / +0.49 horizon-weighted this cycle, a

October 15, 2026, LIGHT DAILY touch (score set 2026-10-15_draft), this version — RE-RATED DOWN, 33/26/36/44/58 → 31/23/34/43/58 (−2/−3/−2/−1/0). THE DECISIVE NEW FACT: the Septen estimates, driven by energy/gasoline (+9.1% m/m, +34.2% y/y). This is a hawkish beat on BOTH legs, extending — not merely reiterating — the Oct 8 Waller hawkish shift already priced into the baseline, a Dec 9 meeting sits inside that window and market-priced December hike odds are already elevated to roughly 75–85% across sources (noisy, no single figure settled). 6mo takes −2 because the core beat s is an ordinary LIGHT DAILY touch, sourcing clears the sufficiency rule (primary BLS data plus 4+ independent outlets; market-price hike odds explicitly labelled and kept distinct from institutional estimates),

October 10, 2026 FULL WEEKLY refresh (score set 2026-10-10_draft), prior version — RE-RATED DOWN, 35/29/37/44/58 → 33/26/36/44/58 (−2/−3/−1/0/0), a partial reversal of the Oct 3 cycle outlets not used in the first research pass (FXStreet, Dailysabah, HousingWire, Newsquawk, Bloomberg Tax); every sub-claim confirmed. He said further rate increases are the likely next step if incoming data genuine hawkish *shift* from his more dovish, wait-and-see spring-2026 posture, not a restatement. He explicitly downplayed the weak September nonfarm-payrolls print (+29,000 vs. ~84,000 consensus), de voter directly rebutting the dovish narrative behind the Oct 3 cycle's large upward move clears the sufficiency rule on its own; it does not need a second corroborating primary source because it IS itself pri 103's funding through Dec 11, 2026 holds. DOL initial jobless claims, week ended Oct 3 (released Oct 8, primary, corroborated via a Reuters-sourced wire across multiple independent outlets): **197,000**, with scored. **Sizing:** 1mo takes only −2 because CME FedWatch-style pricing for Oct 27–28 barely moved despite Waller's remarks (roughly 78–82% hold odds, a market price, versus the prior cycle's reported 7 62–84% depending on source) but agree directionally that implied odds drifted higher since the prior cycle's reported "mid-60s to mid-70s%" read — no single precise figure is quoted as settled. 6mo take quarterly GDP/PCE data landed and the long end didn't move much. 12mo and 36mo HOLD FLAT: one week of Fed-speaker rhetoric and noisy market pricing is, per the sufficiency rule, insufficient to move remains just one December hike) — not used; the 2-year Treasury yield's move this week is reported in conflicting directions by two low-quality aggregators and could not be resolved (FRED access was blo **decision: this is a FULL WEEKLY refresh, categorically excluded from delegated auto-stamp authority regardless of move size, call-band stability, or how cleanly the sufficiency rule was satisfied**

October 3, 2026 FULL WEEKLY refresh (score set 2026-10-03_draft2), prior version — RE-RATED UP, 27/25/34/43/58 → 35/29/37/44/58 (+8/+4/+3/+1/0), the largest move of that cycle and this 60,000 of downward revisions (BLS, Oct 2) — directly contradicting Governor Barr's Sept 29 claim that "risks to the labor market have receded." The Oct 27–28 FOMC, sitting inside the 1mo window, re-price growth; 12mo +1 only, since the 10-year rose to 5.29% even as the 2-year fell to 4.78%, a steepening that caps the longer-horizon read; 36mo held, nothing structural changed. This was a FULL WEEKLY refr

Sept 26 FULL WEEKLY refresh (score set 2026-09-26_draft3), this version — RE-RATED DOWN, 31/29/37/44/58 → 27/25/34/43/58 (−4/−4/−3/−1/0), the largest move of this cycle. This is a week and not clearly trending toward target in a timely way," "risks to achieving our inflation target have increased, while risks to the labor market have receded," and "in my base case, further policy adjustments expectations 4.0% → 4.6% and *long-run* 3.3% → 3.4%, breaking three straight months. **PRIMARY:** DOL claims at 197,000, with the prior week revised up to 198,000. **PRIMARY:** H.4.1 reserve balances down corroboration only. **Why this size:** one unambiguous primary-sourced Governor plus hard data on costs, expectations, labour and liquidity moves an October hike from coin-flip to base case. Sized against 12mo takes only −1, since one survey month and a few speeches say little about H2-2027, and 36mo holds at 58 because nothing dated bears on 2029. **The honest other side, and why the move is singl** unchanged; and the large reserve drain is substantially a mechanical TGA rebuild. **Stamp decision: COMMITTED BY ALEX, September 27, 2026, after his own manual review** — full weekly refreshes are move to revisit.

Sept 24 draft (score set 2026-09-24_draft) — WRITTEN BUT NEVER DELIVERED; SUPERSEDED by the Sept 26 weekly above. It proposed 31/29/37/44/58 → 29/27/36/44/58 and its report edits claim "corrections" to them were themselves wrong and withdrawn — so it is superseded because more evidence landed after it, not because it was mistaken. Its original text follows. Two independent, same-day (`barr20260923a.pdf`), not read through an outlet's summary. Verbatim: "Economic growth is strong and the labor market is solid, but inflation is above our 2 percent target and not clearly trending toward supported the Sept 16 hike, guiding on the record toward more. **(2)** The **S&P Global flash US PMI, released Sept 23**: composite output **58.4** (from 56.0), the strongest private-sector expansion since July month low. S&P Global's own release page returned HTTP 403 to automated fetch, so those figures are carried on 5+ independent outlets reporting identical values (Newsquawk, investinglive, FXStreet, Tra known guidance rather than new information — the Sept 16 SEP already had 16 of 18 officials seeing at least one more 25bp hike this year — and the PMI's strength is genuinely two-sided for crypto, since **and explicitly not scored:** the 10-year Treasury yield rose more than 13bp to **5.104%** on Sept 23, a 19-year high and the largest one-day move in nearly 18 months, with a poorly-bid 5-year auction also c is *not* primary-confirmed, and is not used to justify any part of this move. CME FedWatch odds of an Oct 28 hike rising to 66.4% from 55% are likewise a market price, never blended with the institutional SE

Sept 23 LIGHT DAILY touch (score set 2026-09-23_draft), prior version: checked for changes since the Sept 22 committed baseline. Three dated items found, none clearing the sufficiency bar: the 10-ye Fed Vice Chair Jefferson's Sept 22 speech at the NY Fed's Treasury Market Conference (primary, federalreserve.gov) was on discount-window/Treasury-market plumbing, off-topic for this pillar's P (no inflati master call band did not flip — **AUTO-STAMPED per the runbook's delegated daily authority.** Iran War Risk is the only pillar that moved this cycle — see that report.

Sept 22 LIGHT DAILY touch (score set 2026-09-22_draft), prior version: a targeted single-pillar follow-up, not a full four-pillar pass — CLARITY Act, Iran War Risk, and Tokenization are carried forward u primary source page confirmed at philadelphiafed.org, 5+ independent corroborating outlets) showed general activity falling to 37.8 from 47.4 while **prices paid rose to 48.6 from 40.9** and **prices receive** and **prices received rose to 28.1 from 23.1**, a three-month high. Two independent Federal Reserve district banks' own primary surveys, dated the same week, showing the same directional signal (headline prints; both releases' own forward-looking components (employment, future activity, general conditions) fell in the same reports; and market pricing actually turned risk-on into Sept 18-19 (10-year backed

nothing about the 2027-2028 policy path those windows price. Research capability fully available this cycle (WebSearch clean; WebFetch reached newyorkfed.org directly). **Stamp decision: per CLAUDE.md run.** No other pillar's data was touched this cycle.

Prior cycle (Sept 19 FULL WEEKLY refresh, score set 2026-09-19_draft): a full independent primary-source research pass (~15 targeted WebSearches, no capability degradation) re-checked every open thread. −2.7% m/m, and NAR existing-home sales (primary, Sept 10) fell −2.0% m/m — a genuine but single-month, internally mixed cooling signal that did not clear the sufficiency bar alone. A high-profile politic evidence, logged rather than scored. Nothing that cycle cleared the sufficiency bar for a further move. **P HELD FLAT at 32/30/38/44/58.** This was a FULL WEEKLY refresh, categorically excluded from the d

Prior cycle (Sept 18 light daily touch, score set 2026-09-18_draft): re-checked — the Sept 16 FOMC dot-plot revision already drives this window's read in the current committed set; a Sept 18 Motley Fool pie **SEPTEMBER 18, 2026** per the runbook's delegated authority. Tokenization RWA is the only pillar that moved that cycle — see that report.

Prior cycle (Sept 17 MERGE SET, 2026-09-17_draft2) — why there were two Sept 17 sets, and what actually differed: two independent runs researched that day: the cloud routine's, which committed and push readings rested on dated facts the local run did not independently surface (Sen. Kennedy's lame-duck remark, the Senate's early-October midterm recess, the Polymarket collapse reported as a market price

This pillar is the one thing corrected, and the disagreement is narrow and factual. Both runs agree the hike was priced and the SEP is the mover; they differ on how far out it reaches. This run fetched qualitatively as "a slower, more cautious descent", put the long-run neutral cluster at 3.0% where the table's longer-run median is 3.2%, and held 12mo and 36mo flat as "broadly consistent with what the p lead on that same revision. So 3mo goes one point deeper than the cloud set, 6mo four, and **12mo ten**, flipping this pillar Mild Bull → Mild Bear at one year.

Why 44 and not lower. The strongest argument against this correction is not a number but a person: Chair Warsh submitted no dot at all — "I have refrained from offering any projections of my own, cons pairs the tighter path with 2.3–2.4% real GDP and a flat 4.1% unemployment rate; and the bond market's first move on the hike was a yield drop. Census retail sales the same morning (+1.2% m/m, control

One correction to an earlier committed note, logged here rather than edited there. The committed `2026-09-16_draft` note states that Thune filed the motion to reconsider on the CLARITY cloture v record here; no P value is affected.

Stamp decision: AUTO-STAMPED. Ordinary light daily touch, not a weekly refresh; research capability fully available, with both Federal Reserve primary documents fetched directly rather than read throug

Sept 16 light daily catch-up (score set 2026-09-16_draft), prior cycle: the FOMC decision, statement, SEP and dot plot were scheduled for 2:00pm ET that day and had NOT been released at run time (~ cloture failure and the IAEA/NPT developments — see those reports.

Prior cycle (Sept 12 FULL WEEKLY refresh, score set 2026-09-12_draft2): the week's deeper research turned up one genuinely new primary-sourced release — the August PPI (BLS, primary, released Sept 10, c (+0.3% m/m, or +0.2% m/m on a further core-ex-trade-services cut) — a mild disinflationary surprise that reinforces, rather than contradicts, the already-priced cooler-than-consensus August CPI read. This — a market price, not used to move P, and flagged for the record as meaningfully lower than the ~90% figure the prior daily cycle's background note referenced; both are market-price snapshots at differe this research — it remains this pillar's next real catalyst, most acute on the 1mo/3mo windows. **P HELD FLAT at 34/33/44/54/60.** This is a FULL WEEKLY refresh — per the runbook, weekly refreshes are cat **Alex's manual review.** Iran War Risk, CLARITY Act, and Tokenization each report their own weekly research separately — see those reports.

Prior cycle (Sept 12 light daily catch-up, score set 2026-09-12_draft): re-checked — no new Fed speech or primary data release found since the Sept 11 CPI print. That morning's coverage of ~90% market-im **FLAT at 34/33/44/54/60.** Light daily touch, no window moved, master call band unchanged anywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull horizon-weighted) — so per the runbook's de

Sept 11 light daily catch-up (score set 2026-09-11_draft), prior cycle: the August CPI print landed on schedule at 8:30am ET: BLS's own release (bls.gov, primary, fetched directly and re-fetched to confi 0.3%. Against the consensus circulating pre-print (headline +0.4% m/m / 3.4% y/y; core +0.4% m/m / 2.4% y/y), headline landed exactly in line and **core came in one tenth cooler on the month**, core y/y "sustained Brent >$100" clause this cycle shows up here as headline inflation. Market-implied September hike odds circulating around the print (~70% for a 25bp move) are a *market price*, reported and no **modestly, to 34/33/44/54/60** — 1mo 32→34, 3mo 31→33, 6mo 43→44, concentrated on the windows bracketing the Sept 15-16 FOMC; 12mo and 36mo held flat at 54/60, because one print a tenth off c weighted) — so per the runbook's delegated daily auto-stamp authority, **this set is AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)."** Iran War Risk also moved this cycle, down,

Sept 10 light daily catch-up (score set 2026-09-10_draft), prior cycle: re-checked — the Aug CPI release (due Sept 11) and the Sept 15-16 FOMC meeting both remain pending per BLS/Fed calendars; r authority, **this set is AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)."** Iran War Risk is the pillar that moved this cycle — see that report.

Prior cycle (Sept 9 light daily catch-up): re-checked directly against CME FedWatch-citing coverage — September hike odds read ~58.7%, consistent with the already-priced cluster; no new FOMC meeting,

Prior cycle (Sept 8 light daily catch-up): re-checked via WebSearch — no new Fed speech, data release, or FOMC commentary since Sept 3-4; the Sept 11 CPI print and Sept 15-16 FOMC meeting remained

Prior cycle (Sept 6 light daily catch-up): re-checked via WebSearch — no new Fed speech or data release since Sept 3-4; Sept 6 was a Saturday, markets and the Fed's calendar quiet. **AUTO-STAMPED SEPT**

Sept 5 FULL WEEKLY refresh (2026-09-05_draft2) — carried forward for context: independently re-verified via WebSearch: Fed Governor Waller's genuinely dovish-leaning Sept 3 speech ("give disinflation a c **SEPTEMBER 5, 2026.** Iran War Risk, CLARITY Act, and Tokenization all held flat that cycle.

CORRECTION — flagged this cycle: the prior same-day light daily catch-up (2026-09-05_draft) reported "COMMITTED — AUTO-STAMPED SEPTEMBER 5, 2026" in its commit message, but config/scores.js

- **Score decision: HELD FLAT at 32/31/43/54/60.** No window moved; nothing this cycle clears the sufficiency bar for a further move in either direction.

Carried forward — what changed in the Sept 5 FULL WEEKLY refresh (2026-09-05_draft2, committed by Alex Sept 5), for continuity:

- ★ **★ NEW — August jobs report (BLS, primary, Sept 4): nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment steady 4.1%.** Corroborated by CNBC, Yahoo Finance, TheS
- ★ **★ NEW — Sept 15-16 FOMC hike-odds pricing moved higher off the jobs beat** (roughly 60-66% across sources, up from the Sept 2 baseline's "~60% hold" framing); 2yr yield +5.3bp to it
- **Score decision: RE-CONFIRMED the re-rate at 32/31/43/54/60** (1mo -4, 3mo -4, 6mo -2, 1yr -1, 3yr -1 vs. the Sept 2 TRUE committed baseline) — the fresh, dated, primary-sourced jobs-re **2026**.
- **Correction:** the same-day earlier 2026-09-05_draft's commit message claimed it was auto-stamped, but config/scores.json's status field was never actually advanced — a bug in that session.

Carried forward — what changed in the Sept 3 light daily catch-up (no new score set), for continuity:

- **Re-checked CME FedWatch and the H.4.1/data calendar; nothing material found on any pillar dated Sept 2-3.** config/scores.json untouched; blend re-run against fresh quant data only

Carried forward — what changed in the Sept 2 light daily catch-up (2026-09-02_draft), for continuity:

- **No new H.4.1 or data print found dated Sept 1-2.** September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continued the same post-Jackson-Hole drift already priced in
- **BTC traded at $76,581.44 on Sept 2** — down from $78,038.78 on Sept 1 (Bitstamp), a real pullback driven by the Iran War Risk escalation covered in that pillar's report, not by anything here.
- **Score decision: HELD FLAT at 36/35/45/55/61.** No window moved for this pillar. This cycle's shared score set (2026-09-02_draft) was originally left as draft — Iran War Risk's sharp re-rate fl

Carried forward — what changed in the Sept 1 light daily catch-up (2026-09-01_draft, auto-stamped), for continuity:

- **CME FedWatch September hike odds continued drifting up, not a fresh shock:** ~60.4% (Aug 31 baseline, CNBC) → ~66% (Forbes/KuCoin, 11:40am ET Aug 31) — the same post-Jackson-
- **No new H.4.1 or jobless claims release landed Aug 31-Sept 1** — Aug 31 was Labor Day, a US federal holiday; next H.4.1 is due Sept 3.
- **BTC traded at $78,038.78 on Sept 1** — down from $78,447.16 on Aug 31 (Bitstamp).
- **Score decision: HELD FLAT at 36/35/45/55/61.** Light daily touch, no window moved, no call band flipped — **AUTO-STAMPED** per delegated daily authority, then the committed baseline. I

Carried forward — what changed in the Aug 31 light daily catch-up (2026-08-31_draft, auto-stamped), for continuity:

- **CME FedWatch September hike odds continued drifting up, not a fresh shock:** ~56-58% (Aug 29 baseline) → ~57% (CoinSpectator/Bitcoin.com, Aug 30) → ~60.4% (CNBC Jackson-Hole-
- **No new H.4.1 (next due Sept 3, last Aug 27) or jobless claims release landed in this window.**
- **BTC traded at $78,447.16 on Aug 31** — up from $77,666.16 on Aug 29 (Bitstamp).
- **Score decision: HELD FLAT at 36/35/45/55/61.** AUTO-STAMPED per delegated daily authority.

Carried forward — what changed in the Aug 29 full weekly refresh (2026-08-29_draft, now superseded), for continuity:

- ★ **★ ADVERSARIAL CORRECTION — the abandoned Aug 28 draft's CME FedWatch September hike-odds figure was wrong.** Corrected from ~35.4%→~45.7% to the real ~35%→~56-58%
- ★ **★ CORRECTED — BTC's reaction to the speech.** Not a stable tape: BTC fell from above $81,000 pre-speech to $79,613.44 (Aug 28 close), continuing to $77,666.16 by Aug 29.
- ★ **★ NEW — jobless claims, week ended Aug 22 (DOL, primary, Aug 27): 203K vs. 208K consensus.** Mildly hawkish-adjacent, not independently trigger-worthy.
- ★ **★ NEW — Fed H.4.1, week ended Aug 26 (federalreserve.gov, primary): reserves −$10,351M w/w to $2,924,936M; TGA −$2,876M w/w to $950,736M.** Routine continuation of the k
- **Carried forward, re-confirmed, not re-litigated — Fed Chair Warsh's first Jackson Hole speech as Chair (Aug 28) and July PCE (bea.gov, Aug 26, 3.7% y/y headline, 0.1pp hot).** Both
- **Score re-rate: 43/41/48/56/62 → 36/35/45/55/61** — 1mo -7, 3mo -6, 6mo -3, 1yr -1, 3yr -1, deeper than the abandoned draft's -5/-4/-2/-1/-1 because the corrected market move is bigge
- **Status decision:** left as a draft, NOT auto-stamped, and flagged for Alex's manual review — this is a FULL WEEKLY refresh, categorically excluded from delegated daily auto-stamp authority re

Carried forward — the abandoned Aug 28 catch-up draft (2026-08-28_draft) was written but never rendered, selfchecked, archived, or committed, for continuity:

- **That draft re-rated P to 38/37/46/55/61** on the same Warsh speech and PCE print this cycle re-verifies, using a since-corrected CME odds figure (~45.7%, now corrected to ~56-58%) and a

Carried forward — what changed in the Aug 22 full weekly refresh (score set 2026-08-22_draft2), for continuity:

- **NEW — FOMC minutes' hawkish bloc wider than previously known:** beyond the three named dissenters, "several participants" also favored a hike and "many participants" saw tightening
- **NEW — 30-year Treasury yield hit 5.31-5.33%, a ~19-year high,** around Aug 17-18, driven substantially by the CBO's raised $2.1T FY deficit projection and heavy long-bond supply, not pu
- **NEW — equities sold off Aug 20** (S&P −0.87%, Dow −1.32% partly Walmart-driven, Nasdaq −1%) with a partial Aug 21 recovery, attributed to a mix of the hawkish minutes and rising yields
- **NEW — CME FedWatch/Kalshi/Polymarket/investing.com/defirate.com independently re-pulled and cross-checked directly:** September-hold odds cluster ~68-70% across all five, esse
- **NEW — a circulating "93.6% September hike probability" claim was traced this cycle to a garbled conflation with Kalshi's July-meeting hold odds (~92-93% hold) and confirmed r**
- **Re-confirmed, not new — jobless claims week ended Aug 15: 206K vs. 210K consensus, 4-week average 204K** (DOL, primary, Aug 20) — confirms the low-layoff trend already in the bas
- **Re-confirmed, not new — July retail sales miss (-0.6% m/m vs. +0.1% consensus, still +5.0% y/y)** — a genuine but noisy dovish-leaning counter-signal, per this pillar's discipline against
- **Score decision:** P held flat at 43 / 41 / 48 / 56 / 62 — the hawkish minutes detail and the noisy weak retail-sales print largely offset an already-priced rate-odds market; nets to a wash.
- **New pending triggers logged for the next cycle:** PCE (July data, bea.gov) due Aug 26; Chair Warsh's first speech as Chair at Jackson Hole, Aug 28, 10:00am ET, theme "Financial Innovation:
- **Status decision:** this score set was **left as a draft at delivery, not auto-stamped**, because it is a FULL WEEKLY refresh, categorically excluded from Alex's delegated daily auto-stamp authori
