

CoinPicks Market Direction

Research Package

Five pillars — four researched narratives and one pure-math read of the Bitcoin chart — scored on one standard, blended into one table, and distilled to one number. Everything in this folder is current as of **September 2, 2026** (committed September 3, 2026) — a light daily catch-up cycle against the Sept 1 committed baseline. **This cycle's score set is COMMITTED — AUTO-STAMPED SEPTEMBER 3, 2026 — see the note below.**

COMMITTED — AUTO-STAMPED SEPTEMBER 3, 2026, researched September 2, 2026 (light daily catch-up). Three qualitative pillars (CLARITY Act, Tokenization RWA, Fed & Macro) were independently re-checked and held flat — nothing found cleared the sufficiency bar to move a score. **Iran War Risk re-rated down SHARPLY** (7/15/32/50/75 → 1/9/27/47/74) as the conflict escalated materially Sept 1-2: CENTCOM-confirmed US strikes hit nearly 100 targets across Iran (~50x the scale of the Aug 30 strike), including the war's first direct strikes on Iranian government oil tankers; a US strike reportedly hit a wedding party in Hormozgan (single-narrative-sourced, not itself used to move P); Iran's IRGC retaliated Sept 2 with coordinated strikes on FOUR countries at once (Jordan, Bahrain, Iraq, Kuwait — all repeat targets). This was **originally left as draft** for two independent reasons: the equal-weight FINAL NUMBER's call band FLIPS (Mild Bull → Neutral) versus the last stamped set, and Iran War Risk's own report separately declined to self-approve, given a single-narrative-sourced core fact, a genuinely novel escalation scale, and both sides now threatening still-larger responses. **On September 3, 2026, Alex widened the delegated daily auto-stamp policy** so a call-band flip and move size are no longer disqualifying on their own; since the research had no capability gap and verification passed clean, it now qualifies and is committed. See the Master Report's "My Decision" section for the full rationale.

THE FINAL NUMBER · SEPTEMBER 2, 2026 (COMMITTED — AUTO-STAMPED SEPT 3, 2026; QUANT RECOMPUTED ON SEPT 3'S PRICE, BTC \$77,893.11) · BTC \$76,581.44 ON SEPT 2

+0.49 Neutral — down from the last stamped set's (Sept 1) +0.56 Mild Bull, and the call band itself flips, on Iran War Risk's sharp re-rate

Equal-weight mean of the five window signals below — every pillar counts 20% (scale -10 to +10; horizon-weighted variant +1.04, down from Sept 1's +1.11 but still Mild Bull — no flip there). Positive-but-Neutral because the near-term Iran shock now offsets more of the far-window strength than it did yesterday — **not a buy-today signal**. Three qualitative pillars held flat this cycle; Iran War Risk re-rated down sharply on the Sept 1-2 escalation; Bitcoin TA (computed) barely moved — BTC \$76,581.44 on Sept 2, down from \$78,038.78 on Sept 1 on the Iran news (quant since recomputed on Sept 3's \$77,893.11 for this stamp).

THE FIVE WINDOWS UNDERNEATH IT

WINDOW	MASTER SIGNAL	CALL
1 month	-1.59	Bear — Iran's sharp re-rate pulls the near end down a full band from yesterday's Mild Bear
3 months	-1.13	Mild Bear — Iran drags harder; the September FOMC still sits inside this window
6 months	+0.17	Neutral — CLARITY/Tokenization structural strength vs. Iran's now-heavier drag
1 year	+1.92	Bull — four of five pillars positive; Iran alone turns negative here for the first time
3 years	+3.02	Strong Bull — law + adoption + cycle + valuation, barely moved

Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. Every leave-one-out drop stays positive (+0.06 to +1.09), but the headline itself is now Neutral, same as three of the five drops; **dropping Iran alone moves the reading to +1.09, Mild Bull** — the clearest sign yet that one pillar is driving today's call. See the Master Report's Robustness section.

Reading order

Twenty minutes to the whole picture; each report stands alone and can be checked independently — every fact is dated with sources on its last page.

#	FILE	WHAT IT IS
1	CoinPicks_Master_Direction_Report.pdf	The summary. The final number, the five-window table, the full pillar matrix, where the lenses agree/fight, six weeks of dated triggers, sensitivity.
2	CoinPicks_Bitcoin_TA_Quant_Pillar_Report.pdf	The math pillar. 7 indicators on 16 years of data, halving-cycle analogs, power-law valuation — with charts. Fully reproducible from code.
3	reports/current/pdf/ — the four pillar PDFs	The story pillars. CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro. Each: thesis, dated facts, honest bear case, dated triggers, and the full score lineage (June committed → Aug 22 committed → Aug 28/29 drafts → Aug 31 committed → Sept 1 committed → Sept 2 draft, this light daily catch-up cycle, Iran War Risk NOT yet re-stamped).
4	reports/archive/ + prior-work/	Every earlier version, preserved untouched — the score history is fully auditable.
—	run.py · engine/blend.py · data/master_blend.json	The blend engine (runnable Python — reproduce any score set with <code>run.py blend --set NAME</code>), its output, and README.md for regeneration.

How the scoring works — one paragraph

Every pillar answers the same question on five windows (1 month / 3 months / 6 months / 1 year / 3 years): **P** = the odds (0–100) that this force is *good for crypto* by then, **Quality** = how trustworthy the evidence is (0–1), and **Impact** = how hard this force moves the whole market (0–10). These combine into a **Signal = ((P – 50) ÷ 50) × Quality × Impact** (Impact is a uniform 8 for every pillar), so a coin-flip view scores zero no matter how loud the headlines are, and weak evidence can't shout. **All five pillars are equal-weighted** — the master for each window is the simple mean of the five signals (20% each; add a pillar and it auto-rebalances to 1/N) — and the Final Number averages the five master windows.

The five pillars at a glance (September 2 P's — light daily catch-up, three pillars held flat, Iran War Risk re-rated down sharply, COMMITTED, auto-stamped Sept 3)

PILLAR	1MO	3MO	6MO	1YR	3YR	ONE-LINE READ
CLARITY Act (law)	32	47	58	82	92	Held flat: Sept 15 2:15pm ET cloture vote remains the only scheduled action; no White House sign-off on the ethics text found
Iran War Risk	1	9	27	47	74	RE-RATED DOWN SHARPLY, COMMITTED: ~50x-larger US strike wave, first-ever tanker strikes, four-country Iranian retaliation (all repeat targets); single-narrative wedding-strike claim NOT used to move P; auto-stamped Sept 3
Tokenization (RWA)	52	60	66	74	85	Held flat: no dated catalyst found Sept 1-2
Fed & Macro	36	35	45	55	61	Held flat: no new H.4.1 or data print; CME pricing continues the same post-Jackson-Hole drift already priced in
Bitcoin TA (quant)	57	47	59	68	69	Quant pillar recomputed on today's price (BTC \$76,581.44, down from Sept 1's \$78,038.78 on the Iran escalation) — 3mo ticked up slightly on the day's data refresh

P values shown (50 = coin flip). Three qualitative pillars held flat this cycle; Iran War Risk re-rated down sharply on the Sept 1-2 escalation and is COMMITTED, auto-stamped Sept 3, 2026.

Status & honesty notes

- **Score status:** September 2 score set (2026-09-02_draft) — a **light daily catch-up** against the Sept 1 committed baseline (2026-09-01_draft, auto-stamped) — is **COMMITTED — AUTO-STAMPED SEPTEMBER 3, 2026**. Three qualitative pillars (CLARITY Act, Tokenization RWA, Fed & Macro) were independently re-checked and held flat. **Iran War Risk re-rated down sharply** as the conflict escalated materially Sept 1-2. This was originally left as draft for two independent reasons: the equal-weight FINAL NUMBER's call band flips (Mild Bull → Neutral) versus the last stamped set, and Iran War Risk's own report separately declined to self-approve given a single-narrative-sourced core fact, a genuinely novel escalation scale, and both sides now threatening still-larger responses. On September 3, 2026, Alex widened the delegated daily auto-stamp policy so neither of those is disqualifying on its own anymore — only a genuine research-capability gap or an unresolved verification issue still holds a daily set, and this cycle had neither. Every report prints the full lineage (June committed → Aug 22 committed → Aug 28/29 drafts → Aug 31 committed → Sept 1 committed → Sept 2 committed, auto-stamped Sept 3).
- **Verification:** facts researched with primary-source discipline corroborated by multiple independent outlets per claim. Results: the Sept 1-2 CENTCOM strike wave (nearly 100 targets) and the first-ever direct US strikes on Iranian tankers are confirmed across 9 independent outlets; the Kuhestak, Hormozgan wedding-strike casualty claim is explicitly flagged single-narrative-sourced (Iranian state/local authorities; CENTCOM has neither confirmed nor denied it) and is NOT used to move P; Iran's Sept 2 four-country retaliation and its all-repeat-target status are multi-source confirmed; no new dated catalyst was found for CLARITY Act, Tokenization RWA, or Fed & Macro.
- **Known limits, in print inside the reports:** cycle-analog claims rest on 3 completed cycles, a disclosed fragility this report has repeatedly flagged; the TA pillar caps its own conviction at $P = 50 \pm 25$; single-source items are labeled in-line — today's wedding-strike claim is the clearest example, driving a major score move without itself being scored; current chart bars are partial and the completed-bar numbers are printed; the Robustness section shows dropping Iran alone flips the headline from Neutral back to Mild Bull — the clearest single-pillar dependency this report has flagged in weeks.
- **The near-term calendar is the test:** the next FOMC (with SEP/dot plot), Sept 15, 2026 · the first CLARITY cloture vote, precisely dated 2:15pm ET Sept 15 · whether either side's threatened "much larger"/"significantly larger" response to today's exchange actually materializes — the real test for Iran War Risk next cycle · GENIUS Act 18-month backstop effective Jan 18, 2027. Each pillar's trigger table says in advance what each outcome does to the scores.

This is research and education, not financial advice. The scores are probabilistic opinions with dated evidence — built to be argued with. Today's Iran War Risk move is a draft precisely so it can be argued with before it's stamped — if you check one thing manually, check that report's My Decision section and the trigger tables: they are the falsifiable part.
